Baseline Water Quality Data

Inventory and Analysis

Timucuan
Ecological and Historic Preserve

Water Resources Division and Servicewide Inventory and Monitoring Program

National Park Service - Department of the Interior
Fort Collins - Denver - Washington

The National Park Service Water Resources Division is responsible for providing water resources management policy and guidelines, planning, technical assistance, training, and operational support to units of the National Park System. Program areas include water rights, water resources planning, regulatory guidance and review, hydrology, water quality, watershed management, watershed studies, and aquatic ecology.

Technical Reports

The National Park Service disseminates the results of biological, physical, and social research through the Natural Resources Technical Report Series. Natural resources inventories and monitoring activities, scientific literature reviews, bibliographies, and proceedings of technical workshops and conferences are also disseminated through this series.

Mention of trade names or commercial products does not constitute endorsement or recommendation for use by the National Park Service.

National Park Service
Washington, D.C.

EXECUTIVE SUMMARY

This document presents the results of surface-water-quality data retrievals for Timucuan Ecological and Historic Preserve (TIMU) and Fort Caroline National Memorial (FOCA) from six of the United States Environmental Protection Agency's (EPA) national databases: (1) Storage and Retrieval (STORET) water quality database management system; (2) River Reach File (RF3); (3) Industrial Facilities Discharge (IFD); (4) Drinking Water Supplies (DRINKS); (5) Water Gages (GAGES); and (6) Water Impoundments (DAMS). This document is one product resulting from a cooperative contractual endeavor between the National Park Service's (NPS) Servicewide Inventory and Monitoring Program, the National Park Service's Water Resources Division (WRD), and Horizon Systems Corporation to retrieve, format, and analyze surface water quality data for all units of the National Park System containing significant water resources. The primary goal of the project is to provide descriptive water quality information in a manner and format that is both consistent with the goals of the Servicewide Inventory and Monitoring Program and useable by park resource managers. The document provides: (1) a complete inventory of all retrieved water quality parameter data, water quality stations, and the entities responsible for the data collection; (2) descriptive statistics and appropriate graphical plots of water quality data characterizing period of record, annual, and seasonal central tendencies and trends; (3) a comparison of the park's water quality data to relevant EPA and WRD water quality screening criteria; and (4) an Inventory Data Evaluation and Analysis (IDEA) to determine what Servicewide Inventory and Monitoring Program "Level I" water quality parameters have been measured within the study area. Accompanying the report are disks containing digital copies of all data used in the report, as well as all components of the report (tables, figures, etc.).

The results of the retrievals for the study area from the IFD, DRINKS, GAGES, and DAMS databases located 24 industrial/municipal dischargers; no drinking water intakes; 18 active or inactive U.S. Geological Survey (USGS) and U.S. National Ocean Service water gages (including stream, estuary, well and climate); and one water impoundment. The results of the STORET retrieval for the study area yielded 493,316 observations for 532 separate parameters collected by the NPS, USGS, EPA, Florida Department of Environmental Protection (FDEP), City of Jacksonville Air and Water Quality Division, Watershed Action Volunteers, Jacksonville Electric Authority, and St. Johns River Water Management District at 445 monitoring stations from 1961 through 1998. Approximately 81 percent of the 493,316 observations within the study area were entered by the NPS from data collected from 1972 through 1998. Of the 400,249 observations entered into STORET by the NPS, approximately 97 percent were reported at two stations (TIMU 0178, TIMU 0213) equipped with data logging instruments within the TIMU park boundary. These data were provided by the USGS Biological Resources Division from a study that included water quality parameters in open and closed tidal creeks. Of the 445 monitoring stations, 175 stations were located within the TIMU park boundary and four stations were located within the FOCA park boundary (see Station Period of Record Tabulation). Forty-two stations within the study area (18 within the TIMU park boundary) were established but contained no data. Six stations within the study area (one within the TIMU park boundary) were established but did not contain data appropriate for statistical analysis. Twenty-three of the 445 monitoring stations contained data locked by the FDEP[†]. These locked data are not included in the 493,316 total observations retrieved from STORET for the TIMU and FOCA study area.

Many of the monitoring stations represent either one-time or intensive single-year sampling efforts by the collecting agencies. One-hundred-two stations within the study area (43 within the TIMU park boundary) yielded longer-term records consisting of multiple observations for several important water quality parameters (see Station Period of Record Tabulation). The stations yielding the longest-term records within the park boundaries are: (1) Sisters Creek south of the confluence with the Fort George River (TIMU 0114); (2) St. Johns River near Marker 34 (TIMU 0188); (3) Intracoastal Waterway (ICWW) at Buoy No. 9 (TIMU 0120); (4) St. Johns River near Marker 34 (TIMU 0191); and (5) Nassau River at the U.S. Route 17 Bridge (TIMU 0405). The stations yielding the longest-term records within the study area, but outside of the park boundaries, are: (1) (South) Amelia River at ICWW Marker 1 (TIMU 0165); (2) St. Johns River near Dames Point (TIMU 0315); (3) St. Johns River at the

[†]When data are entered into STORET and locked by the controlling agency (FDEP), results of a STORET retrieval are limited to general station information and any "unlocked" portions of the data. Additional data must be obtained by contacting the controlling agency (FDEP).

Dames Point Bridge (TIMU 0343); (4) St. Johns River at Marker 60 (TIMU 0408); and (5) ICWW No. 3 at Marker 15 (TIMU 0077)[††].

Screening criteria consisting of published EPA water-quality criteria and instantaneous concentration values selected by the WRD were used to identify potential water quality problems within the study area. While the criteria represent important threshold concentrations of pollutants, it is important to remember that criteria may have been exceeded due to any number of natural or anthropogenic factors, including errors in field, laboratory, and/or recording procedures. The reader is advised to read the Introduction for additional caveats in interpreting the exceeded criteria in this report. The results of the TIMU and FOCA water quality criteria screen found 17 groups of parameters that exceeded screening criteria at least once within the study area. Dissolved oxygen, pH, chloride, cadmium, copper, lead, silver, and zinc exceeded their respective EPA criteria for the protection of freshwater aquatic life. Dissolved oxygen, pH, cadmium, copper, lead, mercury, nickel, silver, and zinc exceeded their respective EPA criteria for the protection of marine aquatic life. Chloride, fluoride, sulfate, arsenic, cadmium, chromium, lead, and nickel exceeded their respective EPA drinking water criteria. Fecal-indicator bacteria concentrations (total coliform and fecal coliform) and turbidity exceeded the WRD screening limits for freshwater and marine bathing and aquatic life, respectively.

Dissolved oxygen concentrations were measured 48,723 times at 234 monitoring stations from 1961 through 1998. Of the 48,721 observations used in the criteria analysis (see Remark Code Screen in the Methodology and EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), 6,211 concentrations at 74 stations were less than or equal to the 4 milligrams per liter (mg/L) EPA criterion for the protection of aquatic life from 1964 through 1998. Approximately 95 percent of the observations less than or equal to 4 mg/L were reported at two stations equipped with data logging instruments within the TIMU park boundary in Cedar Point Creek north of the State Route 105 Bridge (TIMU 0178) and Clapboard Creek near the State Route 105 Bridge (TIMU 0213) during 1997 and 1998.

The pH was measured 54,932 times at 268 monitoring stations from 1961 through 1998. Of the 54,930 observations used in the criteria analysis (see Remark Code Screen in the Methodology for explanation), 594 observations at 94 stations were outside the pH ranges of 6.5 to 8.5 standard units (SU) (EPA chronic criteria for marine aquatic life) or 6.5 to 9.0 SU (EPA chronic criteria for freshwater aquatic life) from 1965 through 1998. Five-hundred-seventy-nine observations at 92 stations were less than or equal to pH 6.5 from 1965 through 1998. Fifteen concentrations at two estuary stations, within the TIMU park boundary in Clapboard Creek near the State Route 105 Bridge (TIMU 0213) and outside the park boundaries in the St. Johns River at Dames Point Turn (TIMU 0340), were greater than or equal to pH 8.5 during 1973 and 1998. The highest pH of 9.9 SU was reported in the St. Johns River at Dames Point Turn (TIMU 0340) in March 1973. The lowest pH of 3.3 SU was reported at ICWW Marker 46 at the junction of the South Amelia and Nassau Rivers (TIMU 0139) in July 1978.

Turbidity concentrations were measured 52,661 times at 199 monitoring stations from 1962 through 1998. Two-thousand-four observations at ten stations, within the TIMU park boundary in Cedar Point Creek north of the State Route 105 Bridge (TIMU 0178), Clapboard Creek near the State Route 105 Bridge (TIMU 0213), Garden Creek and its tributaries (TIMU 0058, TIMU 0060, TIMU 0098), and Deep Creek near ICWW Marker 79 (TIMU 0122) and outside the park boundaries in the St. Johns River at Buoy 59 (TIMU 0395), St. Johns River near Dames Point (TIMU 0315), Dunn Creek near the St. Johns River (TIMU 0372), and Broward River at the State Route 105 Bridge (TIMU 0388), equaled or exceeded the WRD screening criterion of 50 Jackson Candle/Formazin/Nephelometric Turbidity Units (JTU/FTU/NTU) from 1969 through 1998. All but ten of these 2,004 concentrations were reported at two stations equipped with data logging instruments within the TIMU park boundary in Cedar Point Creek north of the State Route 105 Bridge (TIMU 0178) and Clapboard Creek near the State Route 105 Bridge (TIMU 0213) during 1997 and 1998, including the highest concentration of 927 NTU in Clapboard Creek (TIMU 0213) in March 1998.

[††]Water quality station location descriptions are verbatim from STORET. Any misspellings and abbreviations in STORET are replicated in this document.

Total coliform concentrations were measured 2,664 times at 157 monitoring stations from 1965 through 1998. Of the 2,663 observations used in the criteria analysis (see Remark Code Screen in the Methodology for explanation), 622 concentrations at 89 stations equaled or exceeded the WRD bathing water screening criterion of 1,000 Colony Forming Units/Most Probable Number per 100 milliliters (CFU/MPN/100 ml) from 1965 through 1998. The highest concentration of 300,000 CFU/100 ml was reported in the South Amelia River at ICWW Marker 1 (TIMU 0165) in January 1994. Fecal coliform concentrations were measured 2,803 times at 165 monitoring stations from 1965 through 1998. Of the 2,802 observations used in the criteria analysis (see EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), 673 concentrations at 98 stations equaled or exceeded the WRD bathing water screening criterion of 200 CFU/MPN/100 ml from 1965 through 1998. The highest concentration of 160,000 MPN/100 ml was reported in Terrapin Creek at the Alta Road Bridge (TIMU 0361) in January 1994.

Total chloride concentrations were measured 2,687 times at 215 monitoring stations from 1962 through 1998. Of the 1,759 observations used in the criteria analysis (see Remark Code Screen in the Methodology for explanation)[†††], 1,551 concentrations at 73 stations equaled or exceeded the secondary drinking water criterion of 250 mg/L from 1962 through 1998. One-thousand-five-hundred-twelve of these 1,551 concentrations also exceeded the acute freshwater criterion of 860 mg/L. The highest concentration of 34,530 mg/L was reported in the South Amelia River at ICWW Marker 1 (TIMU 0165) in October 1977.

Fluoride concentrations (including dissolved and total) were measured 326 times at 46 monitoring stations from 1961 through 1998. Of the 197 observations used in the criteria analysis[†††], nine total concentrations, ranging from 110 mg/L to 800 mg/L at eight stations in the Saint Johns River, within the TIMU park boundary near Sisters Creek (TIMU 0142) and near Marker 34 (TIMU 0188) and outside the park boundaries near the mouth of the St. Johns River (TIMU 0010, TIMU 0014), near Browns Creek (TIMU 0230), near Blount Island at Marker 42 (TIMU 0231), at Mill Cove entrance (TIMU 0256), and near the Broward River and Green Marker 57 (TIMU 0376), exceeded the drinking water criterion of 4 mg/L during 1991 and 1992. The highest concentration of 800 mg/L was reported in the St. Johns River near the Broward River and Green Marker 57 (TIMU 0376) in August 1991.

Total sulfate concentrations were measured 353 times at 57 monitoring stations from 1962 through 1998. Of the 295 observations used in the criteria analysis[†††], 146 concentrations at 19 stations equaled or exceeded the secondary drinking water criterion of 250 mg/L from 1962 through 1998. The highest concentration of 14,000 mg/L was reported in the Nassau River east of Nassauville near the Interstate Route 95 Bridge (TIMU 0421) in March 1983.

Arsenic concentrations (including dissolved, suspended, total, and total recoverable) were measured 394 times at 63 monitoring stations from 1972 through 1998. Of the 393 observations used in the criteria analysis (see EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), one total concentration of 50 micrograms per liter (µg/L) in the South Amelia River at ICWW Marker 1 (TIMU 0165) equaled the drinking water criterion of 50 µg/L in July 1982.

Cadmium concentrations (including dissolved, suspended, total, and total recoverable) were measured 732 times at 100 monitoring stations from 1973 through 1998. Of the 722 observations used in the criteria analysis (see Remark Code Screen in the Methodology and EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), fifty-two concentrations at 24 marine stations equaled or exceeded the acute marine criterion of 43 µg/L from 1973 through 1990. Six concentrations, ranging from 41 µg/L to 100 µg/L at six stream stations (TIMU 0165, TIMU 0264, TIMU 0352, TIMU 0363, TIMU 0387, TIMU 0402),

[†††]Water quality observations collected at marine stations were excluded from the criteria analysis due to the absence of applicable marine criteria for this parameter; however, observations collected at tidally influenced riverine stations may have been included. Depending on tidal conditions at the time of measurement, comparisons of data from tidally influenced riverine stations against the chloride, fluoride, sulfate, and chromium drinking water or acute freshwater criteria may not be appropriate.

exceeded the acute freshwater criterion of 3.9 µg/L and drinking water criterion of 5 µg/L from 1981 through 1987[††††]. The highest concentration of 200 µg/L was reported within the TIMU park boundary in the St. Johns River near Marker 34 (TIMU 0191) in May 1974.

Chromium concentrations (including dissolved, suspended, total, and total recoverable) were measured 675 times at 112 monitoring stations from 1964 through 1998. Of the 138 observations used in the criteria analysis (see Remark Code Screen in the Methodology for explanation)[†††], three total concentrations, ranging from 120 µg/L to 220 µg/L at three non-marine stations, near the Jacksonville Electric Authority Northside Power Plant (TIMU 0325, TIMU 0327) and in the Amelia River at ICWW Marker 1 (TIMU 0165), exceeded the drinking water criterion of 100 µg/L during 1977 and 1981. The highest concentration of 220 µg/L was reported in the South Amelia River at ICWW Marker 1 (TIMU 0165) in May 1981.

Copper concentrations (including dissolved, suspended, total, and total recoverable) were measured 989 times at 131 monitoring stations from 1972 through 1998. Of the 894 observations used in the criteria analysis (see Remark Code Screen in the Methodology and EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), 408 concentrations at 59 marine stations exceeded the acute marine criterion of 2.9 µg/L from 1975 through 1998. Twenty-eight concentrations at 14 non-marine stations exceeded the acute freshwater criterion of 18 µg/L from 1973 through 1995[††††]. The highest concentration of 490 µg/L was reported in the South Amelia River at ICWW Marker 1 (TIMU 0165) in May 1981.

Lead concentrations (including dissolved, suspended, total, and total recoverable) were measured 920 times at 125 monitoring stations from 1972 through 1998. Of the 909 observations used in the criteria analysis (see Remark Code Screen in the Methodology for explanation), 38 concentrations at 15 marine stations equaled or exceeded the acute marine criterion of 220 µg/L from 1975 through 1990. Twelve concentrations ranging from 15 µg/L to 920 µg/L at six non-marine stations, within the FOCA park boundary at Spanish Pond (TIMU 0179) and outside the park boundaries in the Nassau River at the U.S. Route 17 Bridge (TIMU 0402), South Amelia River at ICWW Marker 1 (TIMU 0165), St. Johns River at Red Marker 10 (TIMU 0010), St. Johns River at Dames Point Bridge (TIMU 0343), and the St. Johns River at Marker 60 (TIMU 0408), equaled or exceeded the drinking water criterion of 15 µg/L from 1973 through 1997. Three of these 12 concentrations also exceeded the acute freshwater criterion of 82 µg/L during 1981 and 1987[††††]. The highest concentration of 920 µg/L was reported in the Nassau River at the U.S. Route 17 Bridge (TIMU 0402) in November 1987.

Mercury concentrations (including dissolved, suspended, total, and total recoverable) were measured 430 times at 96 monitoring stations from 1972 through 1998. Of the 424 observations used in the criteria analysis (see EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), 15 concentrations at seven marine stations, within the TIMU park boundary in the St. Johns River near Marker 34 (TIMU 0187, TIMU 0191, TIMU 0196) and outside the park boundaries in the St. Johns River, at the mouth of Browns Creek (TIMU 0234), Blount Island Channel (TIMU 0270), Dames Point Turn (TIMU 0324), and near Broward River (TIMU 0377), exceeded the acute marine criterion of 2.1 µg/L from 1973 through 1986. The highest concentration of 6.4 µg/L was reported in the St. Johns River near Broward River (TIMU 0377) in October 1973.

[†††]Water quality observations collected at marine stations were excluded from the criteria analysis due to the absence of applicable marine criteria for this parameter; however observations collected at tidally influenced riverine stations may have been included. Depending on tidal conditions at the time of measurement, comparisons of data from tidally influenced riverine stations against the chloride, fluoride, sulfate, and chromium drinking water or acute freshwater criteria may not be appropriate.

[††††]Water quality criteria applied to the data at a particular station are based on the collecting agency's classification of the station (i.e. station type) in STORET. Some agencies and/or programs have classified stations near the same location differently. For example, the St. Johns River near Drummond Point is the site of both marine (TIMU 0377, TIMU 0395, TIMU 0396) and non-marine (TIMU 0387, TIMU 0388, TIMU 0394) stations. Consequently, both marine and freshwater criteria are applied near the location.

Nickel concentrations (including dissolved, suspended, total, and total recoverable) were measured 462 times at 80 monitoring stations from 1972 through 1998. Twenty-eight total recoverable concentrations at 16 estuary stations exceeded the acute marine criterion of 75 µg/L from 1987 through 1991. Three concentrations, ranging from 270 µg/L to 450 µg/L at three non-marine stations, near Jacksonville Electric Authority Northside Power Plant (TIMU 0325, TIMU 0327) and the Nassau River at the U.S. Route 17 Bridge (TIMU 0402), exceeded the drinking water criterion of 100 µg/L during 1977 and 1989[††††]. The highest concentration of 1,000 µg/L was reported within the TIMU park boundary in Sisters Creek near the Fort George River (TIMU 0115) in March 1990.

Silver concentrations (including dissolved, total, and total recoverable) were measured 243 times at 55 monitoring stations from 1982 through 1998. Of the 119 observations used in the criteria analysis (see Remark Code Screen in the Methodology and EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), 27 concentrations at 16 estuary stations exceeded the acute marine criterion of 0.12 µg/L from 1989 through 1997. One concentration of 5 µg/L in the Nassau River at the U.S. Route 17 Bridge (TIMU 0402) exceeded the acute freshwater criterion of 4.1 µg/L in July 1987[††††]. The highest concentration of 2,400 µg/L was reported within the TIMU park boundary in Edwards Creek at the second bend (TIMU 0276) in May 1990.

Zinc concentrations (including dissolved, suspended, total, and total recoverable) were measured 934 times at 132 monitoring stations from 1972 through 1998. Of the 924 observations used in the criteria analysis (see Remark Code Screen in the Methodology and EPA Water Quality Criteria Analysis for Station in the Interpretive Guide To Water Quality Results for explanation), 63 concentrations at 31 estuary stations exceeded the acute marine criterion of 95 µg/L from 1973 through 1997. Ten concentrations, ranging from 124 µg/L to 355 µg/L at four stream stations, in the South Amelia River at ICWW Marker 1 (TIMU 0165), Nassau River at the U.S. Route 17 Bridge (TIMU 0402, TIMU 405), and the Nassau River near Italia (TIMU 0437), exceeded the acute freshwater criterion of 120 µg/L from 1974 through 1995[††††]. The highest concentration of 4,950 µg/L was reported in the St. Johns River near Dames Point (TIMU 0315) in June 1997.

The IDEA conducted for TIMU and FOCA indicates that STORET data exist for all 13 Level I parameter groups in the study area. For the parameter group Flow, no observations were recorded since 1984. Overall, approximately 89 percent of the observations for Level I parameter groups were recorded since 1985. Data for six groups (Alkalinity, Flow, Chlorophyll, Sulfates/Total Dissolved Solids/Hardness, Bacteria, and Toxic Elements) were recorded at less than half of the 403 monitoring stations with data. Relative to other parameter groups, data were limited for the group Flow. Results for 24 of the 126 EPA priority toxic pollutants (consisting of general inorganic parameters, metals, and pesticides) were retrieved from STORET.

Surface water resources in the TIMU and FOCA study area include the Atlantic Ocean; portions of the Intracoastal Waterway; St. Johns, Fort George, Nassau, South Amelia, and other rivers; Dunn, Clapboard, Browns, Cedar Point, Edwards, and many other creeks; Sample, Clapboard, and numerous other swamps and marshes; many interconnected lakes and lagoons; and some small impoundments. Many of these water resources are influenced by tidal flow and contain fresh and saline waters in transition. Based on the data inventories and analyses contained in this report, surface water quality within the study area appears to have been impacted by human activities. Potential anthropogenic sources of contaminants include municipal and industrial wastewater discharges; commercial and residential development; agricultural operations; marine traffic; stormwater runoff; recreational activities; and atmospheric deposition.

[††††]Water quality criteria applied to the data at a particular station are based on the collecting agency's classification of the station (i.e. station type) in STORET. Some agencies and/or programs have classified stations near the same location differently. For example, the St. Johns River near Drummond Point is the site of both marine (TIMU 0377, TIMU 0395, TIMU 0396) and non-marine (TIMU 0387, TIMU 0388, TIMU 0394) stations. Consequently, both marine and freshwater criteria are applied near the location.

INTRODUCTION

The National Park Service's (NPS) Organic Act of 1916 states that the mission of the NPS is to promote and regulate the use of national parks, monuments, and other units "... to conserve the scenery and the natural and historic objects and wildlife therein and to provide for the enjoyment of the same in such a manner and by such means as will leave them unimpaired for the enjoyment of future generations." One task embodied by this mission is preserving and protecting water resources and water dependent environments in parks. Ensuring the integrity of park water quality, due to its importance in sustaining natural, aquatic park ecosystems and supporting human consumptive and recreational use, is fundamental to successfully addressing this task. The first step in ensuring the integrity of park water quality is defining historic and extant water quality.

This document represents one product of an ongoing effort by the NPS Water Resources Division (WRD) and the Servicewide Inventory and Monitoring Program to characterize baseline water quality using existing data at park units containing significant natural resources. This effort was initiated in 1993 by the award of a contract to Horizon Systems Corporation to retrieve, format, and analyze surface water quality data from the Environmental Protection Agency's (EPA) Storage and Retrieval (STORET) database system. The scope of work identified in the Request For Proposals outlined several sequential, interrelated project phases, including, but not limited to: (1) determining the water quality retrieval/query area around each park; (2) downloading and assessing the quality of the data from STORET; (3) generating basic water quality summary statistics and graphic plots; (4) reformatting water quality data for compatibility with the park-based Water Quality Data Management System presently under-development; and (5) providing recommendations concerning possible hardware, software, and personnel options for storing combined park databases in a centralized NPS water quality database. This report documents the results of phases one through four of this effort for this park unit.

Goal

The goal of this document is to provide descriptive water quality information in a format usable for park planning purposes (eg. Water Resources Management Plans, Resource Management Plans, and General Management Plans). The report is designed to characterize baseline water quality rather than assess specific water quality problems at a park. This is consistent with the Servicewide Inventory and Monitoring Program's goal of obtaining basic, "Level I", water quality parameters for key waterbodies at each park (National Park Service 1993). Consequently, this report is best used as a reference document to help design new goal-driven water quality monitoring programs rather than as conclusive evidence of previous or existing water quality problems.

Purpose

The purpose of this report is to inventory existing park water quality data; establish baseline water quality at the park; identify potential water quality problems; and establish a park water quality database. This report is intended to enable park resource managers to compare and contrast water quality data collected as part of ongoing inventory and monitoring programs with historical water quality trends. Additionally, this report is intended to foster better designed park-based water quality inventory and monitoring programs in the future. The water quality databases which accompany this report will also lay the groundwork for establishing a NPS water quality database that will allow Regions and Washington Offices to generate regional and national assessments of park water quality.

Objectives

Specific objectives of the study documented in this report are to:

1. Retrieve water quality and related data from the EPA's STORET and other database systems;

2. Develop a complete inventory of all retrieved data;

3. Produce descriptive statistics and appropriate time series and box-and-whiskers plots of water quality data to characterize period of record, annual, and seasonal central tendencies and trends;

4. Compare water quality data with relevant national EPA water quality criteria on a station-by-station and study area basis;

5. Determine the presence and/or absence of the Servicewide Inventory and Monitoring Program's "Level I" water quality parameters within the study area; and

6. Reformat water quality and other related data for use in the park-based Water Quality Data Management System, presently under-development, and other appropriate analytical tools.

Document Overview

This report is comprised of five chapters. The first chapter, this Introduction, provides a brief statement of the study's background; goal, purpose, and objectives; and the key personnel who helped produce the document. This chapter also contains this brief overview of the document's contents and important interpretive caveats to consider when referring to and using this document. The second chapter focuses on the methods, procedures, and databases that were employed to retrieve and analyze water quality data for the park. The third chapter is the user's interpretive guide to chapter four. Chapter three explains how to interpret all the tables and figures presented in chapter four. Chapter four, which likely comprises the majority of the document (unless there isn't much water quality data for the park), contains detailed inventories, descriptive statistics, graphics, and national EPA water quality criteria comparisons characterizing the park unit's water quality data on a station-by-station basis and over the entire study area. This chapter also contains a comparison of park water quality data with the Servicewide Inventory and Monitoring Program's "Level I" water quality inventory parameters and a listing of water quality observations that were outside the STORET edit criteria range. Chapter five, the Appendices, contains more specialized materials such as the file names and database structures included on floppy disk(s) with this report; STORET edit criteria; national EPA water quality criteria; Servicewide Inventory and Monitoring Program's "Level I" water quality inventory parameters; selected water quality references; and other materials which provide background on the methods, procedures, and databases used or produced by this study.

The water quality and other related data referenced in this report accompany the document on floppy disk. The water quality parameter data file is in DBASE III+[1] format and will be useable in the park-based Water Quality Data Management System presently under-development. The water quality stations, industrial facilities discharges, drinking water intakes, water gages, water impoundments, and River Reach databases are also in DBASE III+ and/or ASCII format for ready-use in Geographic Information Systems (GIS), Computer-Aided Design Systems, or Desktop Mapping Systems.

Caveats

While intended primarily as a reference document, it is important that users peruse the first three chapters and Appendices of this report to better understand and interpret the results presented in chapter four. As a means for identifying potential areas for more intensive study, comparisons of the park's water quality data with relevant national EPA water quality criteria for appropriate designated uses[2] and with the Servicewide Inventory and

[1]The use and/or mention of specific proprietary hardware or software packages is for informational purposes only and is not intended to connote or denote an endorsement.

[2]The Environmental Protection Agency's Quality Criteria for Water 1995 Final Draft (Silver Book) was the primary source of water quality criteria. In the spirit of the other caveats offered in this section, it is important to recognize that water quality criteria are often revised when new or better information become available.

Monitoring Program's "Level I" water quality inventory parameters have been made. Extreme caution must be exercised in interpreting the results of these comparisons. Observations that exceed water quality criteria may have occurred due to any number of natural or anthropogenic factors, as well as other reasons. For example, STORET is a "user-beware" water quality database system. While there is some rudimentary edit (bounds) checking of any data entered in STORET (See Appendix C), users are basically free to enter their own data. Beyond data entry errors, the possibility of inaccurate data entering the system due to inappropriate measurement techniques, sample mistreatment, and other reasons is a serious concern. Consequently, if observations for a particular parameter frequently exceed the EPA water quality criterion over a prolonged time period, the best approach is to examine in detail the data exceeding the criterion. Questions which should be asked regarding the data include: What water source(s) are manifesting the problem? Does the data make sense? Was it collected by a reputable organization following a sound study plan and employing accepted techniques? If the answers to these questions still cause concern, a specific cause and effect water quality investigation focusing on the parameters of concern may be warranted. Similarly, the absence of particular Servicewide Inventory and Monitoring Program "Level I" water quality parameters from the park only means that no entity or organization has collected and entered this data into the EPA's STORET database. Too frequently, data that are collected in and around NPS units never make it into the EPA's national water quality database. These data may exist in published or unpublished reports, file cabinets, or other databases. Before definitively concluding that no baseline data exist for a particular parameter, these alternative resting grounds for data should be investigated. Such a detailed exploration, however, was beyond the scope of this study.

Key Personnel

Many individuals contributed to the design and implementation of this project. The primary contributors and their roles in the project are briefly mentioned below.

National Park Service, Water Resources Division:

Dean Tucker was the Contracting Officer's Technical Representative responsible for designing, coordinating, and implementing all aspects of this effort.

Mike Matz coordinated and managed the team which prepared all components of the report.

Gary Rosenlieb provided administrative oversight and was involved in quality control for all tasks related to this project.

Barry Long and Roy Irwin reviewed technical tasks and provided water quality expertise related to data analysis.

Gary Smillie provided hydrologic expertise in the determination of hydrologic seasons.

Clint Bassett, Amy Benton, Josh Johnson, and Scott Ratchford helped prepare reports and write the Executive Summaries.

Elizabeth Eisenhauer, Scott Ratchford, Valdete Celaj, Sonny Emmert, Chris Woodward, and Nils Babel provided digital cartographic support, both in determining retrieval/query areas and producing maps and graphics.

Kelli O'Connor, Ryan Shy, Adriane Petersen, Ronda Burns, and Melanie Schnier uploaded water quality data to STORET prior to report preparation.

Jacquie Nolan designed the cover.

Horizon Systems:

Cindy McKay served as Project Manager for Horizon Systems, performed the initial requirements analysis, and was involved in all quality control tasks related to the project.

Alan Cahoon was responsible for automating the procedures which produced the water quality databases and Water Quality Results chapter.

Sue Hanson, P.E., provided technical advice for writing this document.

Dr. Jim Loftis was the data quality analyst for the project.

Armando F. Ballofet, P.E., served as the local technical liaison between Horizon Systems and the NPS.

Other National Park Service:

Several other individuals provided invaluable technical review, comments, administrative support, and/or other assistance, including: Dan Kimball, Bill Jackson, Mark Flora, Gary Williams, John Karish, Brendhan Zubricki, Richard Hammerschlag, Randy Ferrin, Gary Vequist, Mike Martin, Kevin Berghoff, and Dyra Monroe.

METHODOLOGY

This section provides an overview of the procedures and criteria used to retrieve and analyze water quality data for each park unit. Generating baseline water quality data inventories and analyses for all NPS units is a monumental task. To accomplish this undertaking given a very limited budget, the procedures employed to produce each report had to be as generic and automated as possible. Consequently, customization of reports to individual park needs and issues was not feasible. Moreover, such customization was beyond the scope of this effort which was simply intended to produce baseline water quality data inventories for all parks rather than customized issue-driven reports. During the procedure-development stages of the project, specifications for the final product evolved, within the context of the aforementioned resource constraints, to focus on comprehensive water quality baseline data inventories and concise, descriptive statistical examinations of the available water quality data for each park unit. Detailed below are the data sources and final methods and procedures that were used to create the baseline water quality inventories, analyses, databases, and other products for each park unit. A thorough understanding of the limitations of the data sources and procedures described in this chapter and the next (Interpretive Guide to Water Quality Results) is a prerequisite to intelligent use of the results presented in this document.

Delineation of Park Study Area

The first step in retrieving water resources-related data for each park was deciding on a procedure to determine the study area boundary. Since water flows through parks, utilizing the park boundary as a simple query/study area was deemed inadequate. On the other end of the continuum, using the entire watershed as the study area was considered superfluous given: (1) the areal extent of certain park watersheds (eg. the entire Mississippi River); (2) the sheer volume of potentially irrelevant data such a large study area could generate; and (3) the resources required to specify the watershed for each park unit. The approach which was ultimately adopted - a modified hydrologic boundary - reflects a compromise between the park boundary and the entire watershed. Thus the study area employed for each park is an area extending at least three miles upstream and one mile downstream from the park boundary. Although these distances are somewhat arbitrary, this approach is easy to automate and was felt to limit the data retrieved, in most instances, to that of most importance to the park. Extending the query area one mile downstream of the park was intended to capture any data immediately downstream of the park which may reflect the quality of the water in the park. A current (as possible) copy of each park's boundary was obtained in digital format directly from the park or digitized from Regional land status maps, U.S. Geological Survey (USGS) quadrangles, or other sources. Using GIS techniques, the boundary was used to create the three miles upstream, one mile downstream buffer. For a few parks with which WRD water quality specialists were very familiar with potential water quality threats and/or valuable sources of data that may lie just outside the study area, the study area may have been tweaked (enlarged) to cover these areas of concern or interest. Unfortunately, a customized study area was not feasible for all park units. Hence, the three miles upstream, one mile downstream buffer was the primary study area employed for most parks. This study area was transferred to the EPA mainframe computer and used as the basis for all water resources-related data retrievals from the data sources described below.

Data Sources

The EPA maintains many mainframe data systems related to national water resources (U.S. Environmental Protection Agency 1992). Six of these data systems were used for this project:

- STOrage and RETrieval System (STORET) - water quality parameter data, locations of sampling stations, descriptive elements about stations and parameters;
- Industrial Facilities Discharge (IFD) - locations of industrial and municipal point source discharge facilities;

- Drinking Water Supplies (DRINKS) - locations of intake pipes for drinking water supplies;
- Water Gages (GAGES) - locations of USGS and other water gages;
- Water Impoundments (DAMS) - locations of most large water impoundments (greater than 10,000 acre feet at normal pool volume) and many smaller impoundments; and
- River Reach File, Version 3 (RF3) - 1:100,000 scale geographical representation of surface waters (rivers, lakes, etc.) with a unique identifier assigned to each surface water segment and connectivity information useful for routing and navigation.

STORET is the national water quality data repository (U.S. Environmental Protection Agency 1989). Water quality data is entered in STORET by public agencies (federal, state, or local) that collect water samples and/or perform laboratory analysis. As such, STORET is a "user-beware" data system. Although the EPA manages the STORET data system and, since November 1983, has imposed some minimum quality control criteria on the data (See Appendix C), data are generated and input to STORET by the "owner" agencies. Consequently, the EPA does not certify any data within STORET. Currently, there are over 800,000 active and inactive sampling stations and more than 225 million observations covering in excess of 13,000 water quality parameters entered in STORET. The earliest data dates back to the turn of the century. Using the bi-monthly update cycle, user agencies may store results of recent monitoring activities in STORET. Included in STORET is USGS WATSTORE water quality data, which is updated on a monthly basis. Although STORET contains a phenomenal amount of data, it is important to note that data exist in STORET only if the collectors decide to upload their data to the system. Since many agencies and researchers do not upload their data to STORET, the absence of water quality data in the system for a particular area doesn't mean that there has never been any water quality data collected for the area. The data may exist in published or unpublished reports, file cabinets, or in agency-specific databases. Identifying and retrieving these other sources of data were beyond the scope of the present effort. All parameter data and water quality station location data downloaded from STORET within the park's study area are included in DBASE III+ format files on disk(s) accompanying this report (See Appendices A and B).

The data within the IFD database are extracted from the EPA's Permit Compliance System (PCS). IFD contains the facility locations of all industrial and municipal dischargers which require a National Pollutant Discharge Elimination System (NPDES) permit to operate. Over 7,100 municipal, federal, and industrial facilities discharging into the waters of the United States are tracked by PCS and IFD. If any industrial facilities discharges exist within the study area, a file in DBASE III+ format documenting a variety of information about each discharge accompanies this report on disk (See Appendices A and B).

The EPA DRINKS database identifies locations of drinking water supply intakes. This file contains data for 850 supplies which serve more than 25,000 people, and 6,800 supplies which serve between 1,000 and 25,000 people. If any drinking water intakes exist within the study area, a file in DBASE III+ format documenting a variety of information about each intake accompanies this report on disk (See Appendices A and B).

The GAGES data originates primarily with the USGS and copies are maintained on the EPA mainframe computer for ease of integration with other EPA national data systems. Although other agency's water gages, as well as some artificial gages, may appear in GAGES, the vast majority of gages are stream gages belonging to the USGS. The GAGES database contains approximately 36,000 records for both active and inactive gaging stations. If any USGS or other agency stream gages occur within the study area, a file in DBASE III+ format documenting several fields of information about each gage accompanies this report on disk (See Appendices A and B).

The Water Impoundment database was originally compiled by the U.S. Army Corps of Engineers in response to a Congressional inquiry on dam safety hazards (GKY and Associates 1990). The EPA subsequently modified the database for use in water quality investigations. Of the 68,155 dams in the database, 2,125 are considered large (impounding 10,000 acre feet or more at normal pool volume). It is important to note that while the database includes entries for 66,030 smaller dams, estimates place the actual number of dams in the U.S. at several million

(including small farm ponds). If any water impoundments occur within the study area, a file in DBASE III+ format documenting several fields of information about each impoundment accompanies this report on disk (See Appendices A and B).

The RF3 data system is a hydrologic database of surface water features across the U.S. (excluding, at present, Idaho, Oregon and Washington, which currently operate a different system - although this data is expected to be converted to RF3 soon, Alaska and Hawaii). RF3 was created primarily from 1:100,000 scale USGS Digital Line Graph data. RF3 is made up of over 3,000,000 individual "reaches". A reach is generally defined as a portion of surface water between two confluences (U.S. Environmental Protection Agency 1993). The linework underlying RF3 contains over 95,000,000 coordinate points. RF3 is designed to facilitate hydrologic routing, identifying upstream and downstream elements, and specifying the exact location of any point on a stream network. RF3 data exists as a series of traces with associated attributes. The EPA project which is producing RF3 is being conducted in three phases: Compilation, Assessment, and Revision. The Compilation phase is complete except for Idaho, Washington, Oregon, and Alaska. The Assessment phase was completed during the first half of 1994; while the Revision phase was begun in March 1994. One important outcome of the Revision phase is that the reach codes which uniquely identify each surface water feature will change. Consequently, these codes should not be used, at this time, as keys for relating other data to RF3. The RF3 data provided with this document is provisional and should be used only to provide a geographic backdrop for the park's water quality data. RF3 data covering each USGS catalog unit (a geographic area representing a single or multiple drainage basin(s), or some other distinct hydrologic feature (U.S. Geological Survey 1982)) touched by the park's study area is included in ASCII export and DBASE III+ formats on the disk(s) accompanying this report (See Appendices A and B).

For additional information on any of these data systems, contact the EPA Office of Water at (202) 260-7028.

Data Retrieval and Analysis Procedures

The six EPA data systems discussed above reside on the EPA mainframe computer located in Research Triangle Park, N.C. Horizon Systems used a dedicated, leased telephone line with a data transfer rate of 9600 bits per second to download data occurring within the park's study area from all the databases. The bisynchronous communication software and hardware provided error checking during all data transfer procedures.

As described above, the park study/query area boundary was used to select the water quality stations, industrial facilities discharges, drinking water intakes, water gages, water impoundments, and river reaches associated with the park unit. For various reasons, screening criteria (described later in this section) were employed to select appropriate water quality stations, parameters, and observations. Horizon Systems wrote several mainframe programs to automate, to the greatest extent feasible, the STORET data retrieval and storage procedures. Once the data were extracted from the EPA data systems, they were downloaded to a microcomputer for statistical analyses and reformatted into DBASE III+ compatible format.

Specifically, once on the PC, the data were processed to:

(1) Reformat the data into DBASE III+ format and other database structures;
(2) Eliminate questionable data outside the STORET edit criteria ranges (See Appendix C);
(3) Display on a map the location of water quality monitoring stations and other water resources themes;
(4) Determine the frequency of water quality observations by station, parameter, and station/parameter;
(5) Generate descriptive period-of-record water quality statistics in a tabular format;
(6) Generate appropriate descriptive annual and seasonal analyses of the water quality data in a tabular format;
(7) Plot appropriate period of record time series and annual and seasonal box-and-whisker graphs;
(8) Compare the water quality data against relevant EPA national criteria; and

(9) Compare the water quality data against the NPS Servicewide Inventory and Monitoring Program's "Level I" water quality parameters.

Special customized microcomputer programs (primarily written in Clipper and Microsoft Professional BASIC) and procedures were created to address each of these tasks. All reformatted database files are included on disk(s) accompanying this document. The contents of these databases are described briefly below. Complete database structures are included in Appendices A and B. The descriptive water quality tabular statistics (see "Statistical Analyses" below) were computed based upon NPS specifications. Command or batch files were generated to drive STATGRAPHICS 7.0 in order to produce all the time series and box-and-whiskers plots.

Park Unit Databases

Up to seven digital databases in DBASE III+ and other formats have been created for the park by querying the water resources-related data sources described above. The disk(s) containing these databases accompany the report. The contents of each of these databases are discussed briefly below. More detailed documentation of these databases is included in Appendices A and B.

(A) Water Quality Parameter Data: This database includes all the water quality parameter data downloaded from STORET that passed the STORET Edit Criteria, Date, Station Type, and Phase 0 Parameter screens (described below) and is summarized tabularly and graphically in this document. This constitutes the park's baseline water quality data. Since it is already in digital format, more sophisticated analysis of the data is possible than the descriptive statistics and graphics presented here.

(B) Water Quality Station Locations: This database consists of the STORET header information describing each station where water quality data was collected. As the latitude and longitude of the station are included in the database, this file is easily imported into the park's GIS.

(C) Industrial Facility Discharge Locations: This database includes any industrial or municipal point source discharges located within the park's study area. As the latitude and longitude of each discharge facility are included in the database, this file is easily imported into the park's GIS.

(D) Drinking Water Intake Locations: This database includes any drinking water intakes located within the park's study area. As the latitude and longitude of each intake are included in the database, this file is easily imported into the park's GIS.

(E) Water Gage Locations: This database includes water (stream, lake, estuary, well, spring, climate, or other) gages located within the park's study area. Most of the gages will likely be stream gages belonging to the USGS. As the latitude and longitude of each gage are included in the database, this file is easily imported into the park's GIS.

(F) Water Impoundment Locations: This database includes any water impoundments (dams) located within the park's study area. As the latitude and longitude of each impoundment are included in the database, this file is easily imported into the park's GIS.

(G) River Reach Data: This database includes all stream traces (1:100,000 scale) and attributes for reaches falling within any USGS catalog unit that touches the park's study area. The traces are geo-referenced in ASCII format. The attributes are in both ASCII export and DBASE III+ formats. This information is also readily incorporated into the park's GIS.

The absence of any of these seven files from the disk(s) accompanying the report indicates that there was either no data of this type within the park's study area or the data was unavailable. Several other files are included on the disk(s) accompanying this report, including digital copies of all the figures and tables contained in the document and some other items. Refer to Appendices A and B for detailed documentation of these files. Not included on

disk is an Encyclopedia File (for WRD reference) that documents the minimum and maximum values for each water quality parameter and the parks in which those values were recorded. When Baseline Water Quality Data Inventory and Analysis reports have been completed for all parks, this Encyclopedia File will be available upon request from the NPS WRD.

Screening Methodologies and Procedures

Developing automated or semi-automated procedures to produce baseline water quality inventories and analyses for all national park units required constant testing and debugging of procedures. Three parks, Rock Creek Park, Yellowstone National Park, and Indiana Dunes National Lakeshore, were used to pilot test and refine the automated procedures. It became evident, after a preliminary analysis of all the downloaded STORET data, especially for Indiana Dunes National Lakeshore, that the specifications for the graphical analyses could generate hundreds (possibly thousands) of plots, many of which would not necessarily be useful. Also, there were many stations; parameters; and/or observations downloaded that were not part of the study's objectives; not overly useful; or of dubious quality. In order to reduce the number of graphical plots (time series, annual and seasonal box-and-whiskers) to fit within project resources, various screening criteria were investigated. Ultimately, a comprehensive set of screening criteria were developed to reduce the number of graphical plots. After initial counts of the total number of possible time series and annual and seasonal box-and-whiskers plots were generated, these counts were used to decide which screening criteria would be applied to limit the number of these plots produced for the park unit. Additional screening criteria were employed to restrict the tabular descriptive statistics results to only those deemed useful to the park. Table A provides the categories of screening criteria and to which analyses the screens were applied. A "yes" entry in the table means that the screening category eliminated or prevented data from appearing in certain tables and plots contained in the document. Consequently, in understanding how data from STORET was used in this report, it may be helpful to keep in mind the three general types of screening criteria: (1) screens that apply to stations; (2) screens that apply to certain parameters at stations; and/or (3) screens that apply only to particular observations of parameters at stations. A detailed description of each of the screening criteria categories follows this table. *It is important to note that statistics in "Inventory" reports may not be consistent with statistics in "Overview" reports since different categories of screening criteria were applied*. Also, if attempting to replicate the results of the statistical and graphical analyses presented in this document, be sure to follow the same screening methodologies.

STORET Edit Criteria

As mentioned previously, STORET is a "user-beware" data system. As the EPA doesn't certify any data in STORET, public agencies enter and are responsible for the quality of their own data. Only data entered since November 1983 have been subjected to any rudimentary edit/bounds checking. Agencies entering data since this date can elect to override the edit/bounds checking for individual observations. USGS WATSTORE water quality data is entered into STORET without any EPA edit/bounds checking to ensure data integrity between WATSTORE and STORET. Unfortunately, during the course of our pilot tests, erroneous USGS and EPA water quality data values were discovered. In order to eliminate as much "bad" data as possible, all water quality data downloaded from STORET was subjected to automatic edit/bounds checking (STORET Edit Criteria contained in Appendix C) for the 190 most common parameters. Observations falling outside the STORET Edit Criteria were documented (See the Water Quality Observations Outside STORET Edit Criteria for Park section in the Water Quality Results chapter) and then retained or discarded from the database and all tables and plots based on whether the value was judged as being in the realm of possibility. Although the STORET Edit Criteria screen likely removed some "bad" data for these common parameters, the probability of other erroneous data in the database is high. Be sure to consult the Caveat section in the Introduction.

Table A. Categories of Screening Criteria and to Which Output Products They Apply (A "yes" Entry Means the Screening Category Eliminated or Prevented Data From Being Used in the Product):

Screening Category	Data Download	Overview Tables	Inventory Tables	Annual Tables	Seasonal Tables	Standards Tables	Plots (All)
STORET Edit Criteria	yes	yes	yes	yes	yes	yes	yes
Date	yes	yes	yes	yes	yes	yes	yes
Station Type	yes	yes	yes	yes	yes	yes	yes
Phase 0 Parameter	yes	yes	yes	yes	yes	yes	yes
Phase 1 Parameter	no	no	yes	yes	yes	yes	yes
Media Type	no	no	yes	yes	yes	yes	yes
Remark Codes	no	no	yes	yes	yes	yes	yes
Composite Type	no	no	yes	yes	yes	yes	yes
Phase 2 Parameter	no	no	no	no	no	no	yes
Observations/Period of Record	no	no	no	yes	yes	no	yes

Date Screen

Every water quality observation in STORET typically has a sampling date associated with it. Unfortunately, STORET does not prevent users from entering incorrect dates. Consequently, any water quality observation with an incorrect and/or suspect date (eg. a month greater than 12; a day greater than 31; or a sample date later than the STORET retrieval date) were discarded.

Station Type Screen

STORET contains data from a wide variety of stations classified by the type of waterbody in which samples were collected. As this project's purpose was to inventory and analyze surface-water quality, the following surface-water station types were retrieved (clarification provided in parentheses):

Station Types Included In Retrieval
(a) STREAM
(b) CANAL
(c) LAKE

Ground water and/or other station type data may have been retrieved if the entering agency classified the station type incorrectly. Rectifying this error was beyond the scope and resources of this project.

Phase 0 Parameter Screen

Nearly all water quality parameters associated with each station type listed above were retrieved. The only exception to this was the exclusion of most of the STORET administrative parameters. A complete list of STORET administrative parameters is included in Appendix D. The few administrative parameters that were included in the retrievals are as follows:

Code	STORET Administrative Parameter Description
00027	Code No. for Agency Collecting Sample
00028	Code No. for Agency Analyzing Sample
00063	Sampling Points, Number of In a Cross Section
00111	Ratio of Fecal Coliform to Fecal Streptococci
00115	Sample Treatment Code (1=Raw, 2=Treated)
34772	NPDES Number, Cross Reference
45580	Method of Analysis
74065	Stream Flow Class
74066	Annual Runoff
74067	Soil Classification
74068	Water Quality Designated Use Classification

Phase 1 Parameter Screen

Some of the data retrieved from STORET was not suitable for statistical or graphical analysis. Consequently, this screening criterion eliminated all parameters which were not suitable for statistical or graphical analysis within the context of this project. The full list of these parameters is presented in Appendix E. Examples of parameters excluded from statistical and graphical analysis include the administrative parameters mentioned above, land use acreage, encoded values, dates, latitude/longitude, etc. Excluded parameters do, however, appear in the Parameter Period of Record and Station/Parameter Period of Record (two of the "Overview" Tables), as well as in the water quality parameter file included on disk(s) accompanying this report.

Media Type Screen

Water quality samples can be taken in a variety of aqueous media. Water quality data were retrieved from STORET only if the media were WATER or VERT (vertically integrated). WATER and VERT samples comprise the overwhelming majority of samples in STORET. The media screen eliminated the following water quality sampling media:

Media Screen	Description
BOTTOM	Sampled At the Bottom
DREDGE	Sampled By Dredge
PORE	Pore Sample
CORE	Core Sample

Remark Code Screen

STORET enables the agency collecting water quality samples to provide a qualifying remark for each parameter observation. These remarks provide additional information about the measured or observed value entered into STORET (See Appendix B - Parameter Data File for a complete listing and description of all remark codes). Based on the STORET remark codes, two potential screens were applied to water quality observations based on whether the measured value was used in subsequent analyses: (1) Elimination or (2) Modification/Inclusion.

Elimination:
Non-composite water quality parameters with the remark codes presented in Table B were eliminated from the period of record, annual, and seasonal descriptive statistics and graphics. Not including observations with these remarks was justified by the fact that most of the remarks: (A) indicate either less confidence in the measured value; (B) are remarks for nominal or categorical data that doesn't lend itself to statistical analysis; or, (C) complicate the statistical analysis beyond the scope of this effort. Observations containing these remark codes comprise a very small fraction of the data. Although statistical analyses weren't undertaken on this data, all water quality observations, regardless of remark code, are included on disk(s) accompanying this report. If you re-analyze this data in order to replicate the results presented here, be sure to eliminate all non-composite observations with the remark codes presented in Table B.

Table B. Non-composite Parameters With the Following Remark Codes Were Eliminated From Statistical and Graphical Analysis:

Remark Code	Description of STORET Remark Code
F	Female Species.
J	Estimated, Not the Result of Analytic Measurement.
M	Presence Verified, But Not Quantified, Below Quantification Limit. For Species, Male. For Oxygen Reduction Potential, Indicates Negative Value.
N	Presumptive Evidence of Presence.
O	Analysis Lost.
V	Analyte Was Detected In Sample and Method Blank.
W	Less Than Lowest Value Reportable Under Remark "T".
Z	Too Many Colonies Were Present to Count (TNTC), Value Represents Filtration Value.

Modification/Inclusion:
Water quality parameter observations with the remark codes presented in Table C were halved prior to inclusion in period of record, annual, and seasonal descriptive statistics and graphics. These remark codes deal with observations that were below the detection limit for the parameter. The common water quality data analysis convention for these remark codes is to use half of the detection limit in statistical analyses (Ward, Loftis, and McBride 1990; Gilbert 1987). Although this is a somewhat defensible treatment of observations below the detection limit, the statistics that may be computed using these halved values may not be defensible. Consequently, any computed statistics in inventory, annual, or seasonal tables that are comprised of 50% or more K, T, and U remark codes are footnoted "Computed with 50% or more of the total observations as values that were half the detection limit." This will provide the user with some caution in using and interpreting these results. Water quality data included on disk(s) accompanying this report that may have these remark codes are stored as the original entry (detection limit). If you re-analyze this data in order to replicate the results presented here, be sure to substitute half the detection limit value in the database whenever these remark codes are encountered.

Table C. The Value of Water Quality Parameters With the Following Remark Codes Were Halved (Half of the Detection Limit Entered In STORET) Prior to Inclusion In Descriptive Statistics and Graphics:	
Remark Code	**Description of STORET Remark Code**
K	Off-scale Low, Actual Value Not Known, But Known to Be Less Than Value Shown.
T	Less Than Detection Criteria.
U	Analyzed For But Not Detected, Value is Detection Limit For Process Used. If Species, Undetermined.

Composite Type Screen

Sometimes data entered in STORET represent something other than a single measurement at one location at one point in time. These samples are typically referred to as composite samples due to the fact that they vary temporally and spatially. Consequently, the observation entered into STORET for composite data is typically a computed value that summarizes the data over time and/or space. Such data complicate statistical and graphical analyses and must be handled separately. Such treatment was beyond the scope of this study; although composite values typically represent only a fraction of STORET observations. The composite type screen eliminates all composite observations from statistical and graphical analyses, except those with a composite type code of "A" that have a one day or less sampling period and those with a composite type code "D". All water quality observations, regardless of composite type code, are included on disk(s) accompanying this report. If you re-analyze this data in order to replicate the results presented here, be sure to exclude all composite observations except those with a code of "A" that have a one day or less sampling period and those with a code of "D". Table D presents a list of possible STORET composite type codes.

Table D. Possible STORET Composite Type Codes

Composite Type Code	STORET Composite Type Description
A	Average
H	Maximum
L	Minimum
N	Number of Observations
#	Number of Observations
S	Standard Deviation
U	Sum of Squares
V	Variance
C	Coefficient of Error
X	Coefficient of Variance
E	Skewness
F	Kurtosis
Z	Number of Obs. That Exceed An Established Limit
%	Precision
$	Accuracy
B	N/A
D	Indicates Replicate Sample

Phase 2 Parameter Screen

Due to budgetary limitations, the number of graphical plots (time series, annual and seasonal box-and-whiskers) produced had to be manageable - typically no more than 100 total plots. After scrutinizing the results of the pilot tests and the Baseline Water Quality Data Inventory and Analysis Reports produced for the first group of parks, the 19 parameters which, typically, were the most frequently measured at nearly all stations were water temperature, stage, discharge, and various meteorological measurements (See Table E). Consequently, most of the graphical plots produced would be of water temperature, stage, discharge, and meteorological conditions. Although these are important parameters, particularly in conjunction with other water quality parameters, it was felt that plotting resources would be better allocated to other water quality parameters. Consequently the STORET parameter codes listed in Table E never generated graphical plots. It is important to note, however, that these parameters are included in all other aspects of the project, including all applicable period of record, annual, and seasonal descriptive statistics tables.

Table E. Frequently Measured STORET Codes That Were Prevented From Generating Plots	
STORET Parameter Code	**STORET Parameter Description**
00003	Sampling Station Location, Vertical (Feet)
00010	Water Temperature (Degrees Centigrade)
00020	Temperature, Air (Degrees Centigrade)
00021	Temperature, Air (Degrees Fahrenheit)
00025	Barometric Pressure (MM of HG)
00032	Cloud Cover (Percent)
00035	Wind Velocity (Miles Per Hour)
00036	Wind Direction in Degrees from Trun N (Clockwise)
00040	Wind Direction (Azimuth)
00045	Precipitation, Total (Inches Per Day)
00046	Precipitation, Total (Inches Per Week)
00052	Humidity, Relative (Percent)
00061	Stream Flow, Instantaneous (CFS)
00065	Stream Stage (Feet)
81903	Depth of Bottom of Water @ Sample Site (Feet)
82553	Rainfall In 1 Day Inclusive Prior to Sample (Inches)
82554	Rainfall In 7 Days Inclusive Prior to Sample (Inches)
82371	Rainfall In 3 Days Inclusive Prior to Sample (Inches)
82372	Rainfall In 14 Days Inclusive Prior to Sample (Inches)
85599	Precipitation, Total/Period-Rain Equivalent (Cm/Sample)

Observations/Period of Record Screen

Despite never plotting water temperature, stage, discharge, and meteorological measurements, the number of plots generated by some parks still exceeded the 100 plot limit. Also, some rationale was needed to plot only those parameters with sufficient data density to make a meaningful statistical graphic. For example, time series plots comprised of only a few observations or annual or seasonal box-and-whiskers plots with limited observations and/or data in only one or two years or seasons are not very informative. Consequently, a number of plotting criteria were developed to limit the number of time series and box-and-whiskers plots to, at most, 100 informative graphics by using each parameter's number of observations and period of record. Similar, albeit less stringent criteria, were used for including results of annual and seasonal analyses in descriptive statistics tables. Consequently, there are more summaries of annual and seasonal results in tables than in graphics. Whenever an entry in an annual or seasonal table generated a plot, this entry was footnoted to notify the reader of the presence of the graphic. Due to differing quantities of data at parks, different screening criteria were employed. The same

criteria for appearance in seasonal and annual tables were used for all parks. Table F presents the least stringent plot screens.

Table F. Least Stringent Plot Screening Criteria Used to Limit the Number of Plots Generated

Time Series: To generate a time series plot, a station/parameter combination must have a period of record of at least 2 years and a total of at least 8 observations. Annual Analysis: To generate an annual box-and-whiskers plot, a station/parameter combination must have at least 9 observations in each of at least 4 years. The years do not have to be consecutive. Seasonal Analysis: To generate a seasonal box-and-whiskers plot, a station/parameter combination must have at least 9 observations in each of 2 seasons and a period of record of at least 6 years and observations in at least 3 of the 6 years. The years do not have to be consecutive.

The exact three plot screens used varied by park unit and are documented in the Overview section of the Water Quality Results chapter. If your park's plotting criteria deviated from these least stringent criteria, it is because too many plots would have been generated using these criteria.

The criteria used for appearance of station/parameter combinations in annual and seasonal analysis tables are presented in Table G. These tabular criteria, which are actually the least stringent plotting criteria, were constant from park to park.

Table G. Criteria Used for Generating Entries in Annual and Seasonal Analysis Tables

Annual Analysis: For an entry to appear in an annual table, a station/parameter combination must have at least 9 observations in each of at least 4 years. The years do not have to be consecutive. Seasonal Analysis: For an entry to appear in a seasonal table, a station/parameter combination must have at least 9 observations in each of 2 seasons and a period of record of at least 6 years and observations in at least 3 of the 6 years. The years do not have to be consecutive.

Statistical Definitions

Since this report is intended only to characterize historical and/or existing water quality at the park rather than address specific water quality problems, only simple descriptive statistics are presented. Inferential and non-parametric statistical analysis to examine relationships and trends were beyond the scope of the study. The complete water quality dataset is provided on disk accompanying this report to afford the opportunity for more detailed exploratory data analysis. The descriptive statistics are included in the inventory, annual, and seasonal tables. Table H provides a brief definition of each descriptive statistic provided for each parameter at a station.

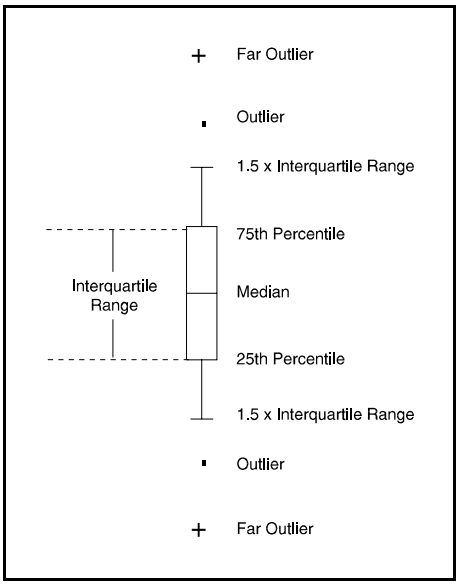

Table H. Definition of Descriptive Statistics Contained in Inventory, Annual, and Seasonal Tables

Observations:	The number of samples collected.
Median:	The median is the 50th percentile or the value in a dataset sorted in ascending order that exceeds 50% of all observations, yet is also exceeded by the remaining 50% of all observations.
Mean:	The sum of all observations collected divided by the number of observations.
Maximum:	The maximum value observed.
Minimum:	The minimum value observed.
Variance:	This is a measure of variability or dispersion of the observations; or, in other words, describes how many observations are close (or far), from the mean. It is calculated as the weighted average of the squared deviations from the mean.
Standard Deviation:	The positive square root of the variance.
10th Percentile:	The value in a dataset sorted in ascending order that exceeds 10% of all observations, yet is itself exceeded by the remaining 90% of all observations.
25th Percentile:	The value in a dataset sorted in ascending order that exceeds 25% of all observations, yet is itself exceeded by the remaining 75% of all observations. The 25th percentile is also known as the first quartile.
75th Percentile:	The value in a dataset sorted in ascending order that exceeds 75% of all observations, yet is itself exceeded by the remaining 25% of all observations. The 75th percentile is also known as the third quartile.
90th Percentile:	The value in a dataset sorted in ascending order that exceeds 90% of all observations, yet is itself exceeded by the remaining 10% of all observations.

As with the tabular descriptive statistics, the scope of the project limited the generation of exploratory graphics to time series plots and annual and seasonal box-and-whiskers plots. Plots were only generated, however, provided the parameter met or exceeded the relevant plotting criteria specified in the previous section.

Time series plots display the parameter concentration on the Y-axis and the date on the X-axis. This provides the user with a visual feeling for not only the parameter's concentration and variability over time, but also the density of data in different time periods. The time series plots provide a visual representation of the data in the basic station inventory. Due to software limitations, a line connects each measured value in sequence regardless of the time period between samples. Readers are cautioned not to assume that the concentration of the parameter between any two data points can be represented by a straight line. It is likely that the concentration varied between any two observations, particularly if the observations are separated by a significant time period.

The annual and seasonal box-and-whisker plots provide a graphical overview of the measured data and give the user a better understanding of the data's distribution and possible outliers. In essence, the box-and-whisker plots provide a visual representation of the data contained in the annual and/or seasonal tables. The interpretation of the boxes is provided in the figure to the right. Each box encompasses the middle 50 percent of measured values (from the 75th to 25th percentiles). The difference between the 75th and 25th percentiles is also known as the interquartile range. The horizontal line inside each box is the median or 50th percentile. The lines which extend out from each end of the box are the whiskers. The whiskers extend out from first quartile (25th percentile) and third quartile (75th percentile) to the smallest data point within 1.5 interquartile ranges from the first and third quartiles. Observations that extend beyond the whiskers are known as outliers. Far outliers are observations whose values lie more than three interquartile ranges below the first quartile or above the third quartile. These are designated with plus signs.

INTERPRETIVE GUIDE

TO WATER QUALITY RESULTS

This interpretive guide discusses each of the products presented in the next chapter - Water Quality Results. This chapter highlights how each of the tables and figures were prepared and how they can be used. Each subheading in this chapter corresponds to a particular product in the subsequent Water Quality Results chapter.

Overview

The Overview provides a brief one-page summary of the results of the various database retrievals for both the study area and the park. The study area results include the park results since the study area encompasses the park and all lands and waters within at least 3 miles upstream and 1 mile downstream of the park. Thus, the GIS estimated acreage of the study area should always be greater than the park acreage. The park acreage was computed from the digital boundary that was obtained for the park. More than likely this acreage will differ, perhaps significantly, from the "official" published acreage for the park due to the spatial and temporal accuracy of the digital boundary, treatment of inholdings, and other concerns. The number of STORET stations is the number of locations within the study area and park where an agency monitored (or intended to monitor) water quality. The number of stations with no data reveals the number of stations created in STORET for which water quality data were never entered. The number of stations with no statistical analysis reports the number of stations in the study area and park that contain data not amenable to normal parametric statistics. The number of longer term stations indicates the number of stations in the study area and park with at least 6 parameters having periods-of-record extending 2 years with an average of at least 1 observation per year over the period-of-record. The date of STORET retrieval is the calendar date when Horizon Systems downloaded all the data from STORET. Thus, the report documents all data entered in STORET prior to the retrieval date. Keep in mind that an agency can upload archival data at any time. Consequently, a retrieval date only guarantees that as of that date, this report contains all the data that had been entered into STORET. The period of record is the earliest date for which water quality data exist in STORET for the study area and park up to the date when the most recent data were entered prior to the retrieval date. The number of parameters measured is the number of unique water quality parameters measured within the study area and park and entered in STORET. The number of water quality observations is the sum of the total number of observations across all parameters within the study area and park. The number of industrial/municipal facilities discharges, drinking water intakes, water gages, and water impoundments are the number of each of these entities found within the study area and park. The number of time series, annual, and seasonal plots are the number of these different types of graphics produced by station/parameter combinations within the study area and park using the plotting criteria described in the previous chapter. The hydrologic seasons, described below, are the seasons used for the seasonal water quality data analysis. The time series, annual, and seasonal criteria are the plot and tabular screening criteria described in the previous chapter.

Regional Location Map

The Regional Location Map provides a small scale, general representation of the park and study area location within the United States. Digital, reproducible copies of this graphic are included on the disk(s) accompanying this report.

Water Quality Monitoring Locations Map(s)

The Water Quality Monitoring Locations Map(s) usually provides a larger scale representation of the park and study area than the Regional Location Map. This map indicates the locations within the study area where water quality has been monitored and the data entered into STORET. The water quality monitoring stations are labelled sequentially with the rightmost significant digits. The station names were assigned in numerically ascending order by latitude (for parks with a greater north-south extent than east-west) or longitude (for parks with a greater east-

west extent than north-south). Thus, this map serves as a visual index to the water quality data contained in the report. Since the 1:100,000 scale hydrography (from the River Reach File Ver. 3.0 or other sources) is displayed on the map, users can refer to the map to locate the station number on the reach in which they are interested and then find the appropriate section in the report that documents the water quality at that station. If the scale allows, USGS catalog units are also displayed on the map to provide an approximation of drainage basins. More than one Water Quality Monitoring Location map may be presented if the scale requires breaking the area into multiple maps for legibility. If multiple maps are necessary, an index map showing the geographic extent of each sub-map or panel will be present. Digital, reproducible copies of this graphic are included on the disk(s) accompanying this report. The digital, geo-referenced data files documented in Appendices A and B will allow the park to create water quality monitoring stations as a coverage in their GIS.

Dischargers, Drinking Intakes, Gages, and Impoundments Map(s)

The Dischargers, Drinking Intakes, Gages, and Impoundments Map(s) displays the same information as the Water Quality Monitoring Location Map(s) except the water quality stations are replaced by industrial/municipal facilities discharges, drinking water intakes, active and inactive gage locations, and water impoundments. This map also serves as a visual index allowing the user to determine the identification code of each discharger, drinking intake, gage, or impoundment. This number can then be used to obtain additional information about the entity on the following page of the report or to refer to the more detailed database files accompanying the report on disk. These more detailed database files are geo-referenced (See Appendices A and B), thus allowing the park to create these coverages in their GIS. More than one Dischargers, Drinking Intakes, Gages, and Impoundments map may be presented if the scale requires breaking the area into multiple maps for legibility. If multiple maps are necessary, an index map showing the geographic extent of each sub-map or panel will be present. Digital, reproducible copies of this graphic are also included on the disk(s) accompanying this report.

Industrial Facilities Discharges, Drinking Water Intakes, Water Gages, and Water Impoundments Table

This table provides some additional information about each of the discharges, drinking intakes, water gages, and water impoundments displayed on the previous map(s). This information generally includes the site identification number; the station or facility name; an address or some other indication of location; and some other pertinent information. More detailed information about each of these entities is contained in the database files on disk accompanying the report (See Appendices A and B).

Representative Mean Annual Hydrograph for Seasonal Analysis

One component of the water quality data analysis contained in the document is a seasonal analysis of the data (where adequate data exist). In order to undertake this analysis, some representation of the park's seasons was required. Seasons can be based on many factors (eg. hydrologic, climatic, recreational use, etc.). Since project resources did not allow us to contact every park and discuss with resource management staff what appropriate seasons may be for the park, WRD staff elected to adopt primarily a hydrologic/climatic definition of the seasons which uses a process of hydrograph separation to glean seasons from stream discharge patterns. The procedure employed to make these determinations was as follows:

(1) Find the nearest USGS Hydro-Climatic Data Network (HCDN) station (U.S. Geological Survey 1992) to the park that is most representative of streamflow conditions at the park. The HCDN is basically a subset of USGS streamflow stations, including only those stations that are unaffected by artificial diversions, storage, or other disruptions of the natural channel. All HCDN stations generally have at least a 20 year period of record. Consequently, discharge patterns at these stations should reflect only hydrologic and climatic influences. For the most part, selected HCDN sites were typically within 15-20 miles of the park. In some parks where WRD staff were aware of the existence of a stream gage located within the park that would be more representative of park waters even though it wasn't an HCDN site, this gage was selected.

(2) Retrieve the daily discharge values for the selected station from the USGS Daily Values File and generate a mean annual hydrograph and a box-and-whiskers plot of daily flows by month.

(3) Interpret the plots based on our knowledge of the hydrologic regime at these parks and assign seasons.

This approach, used for the majority of parks, assumes that most water quality data at the park will be found in streams and that the discharge pattern of the selected stream is representative of the seasons for all park waterbodies. Although this assumption may be weak for certain parks, project resources did not allow a more thorough investigation. For parks where there wasn't any stream gage (HCDN or otherwise) deemed representative of park waters, precipitation records from a nearby meteorological station were obtained from the National Climatic Data Center. Plotting daily average precipitation and box-and-whiskers of monthly precipitation sums allowed WRD hydrologists to make a rough approximation of climatic seasons for use in analyzing the water quality data.

Again, it is important to note the many ways of defining "seasons" and thus the limitations of the seasonal analysis contained in this document. For certain parks it may be more useful to perform a seasonal analysis with seasons defined by recreational use patterns or some other natural or anthropogenic factor. This option is available to the park since all the water quality data analyzed in this document is contained on disk(s) accompanying this report. Digital, reproducible copies of this seasonal analysis graphic are also included on the disk(s) accompanying this report.

Contacts for Agency Codes Retrieved

This table provides a list of the organizations who have entered data into STORET. A contact name at the organization and a phone number are also supplied. The agency code in the first column is the key for identifying which stations belong to that agency. This code will appear in the first line of each station's inventory. Although the agencies listed in this table are potential partners for future water quality monitoring or management endeavors, don't be surprised if the name of the contact and/or the telephone number is out of date. This information is entered when an agency first creates a station. The agency may not update this information when the initial contact moves on or the telephone number changes. Nonetheless, it is likely that the contact or someone else at the agency may be able to provide you with project reports or other information relative to the agency's data. A digital copy of this table accompanies this report on disk (See Appendices A and B).

Quantity of Data Retrieved by Agency Code

This table displays the period-of-record; numbers of water quality stations, longer-term stations, and stations without data; total number of water quality observations; and the number of unique water quality parameters measured by each agency within the study area and park boundary. Using this table, a park can quickly determine which agencies collect the most data in and around the park and whether they have monitored recently. A digital copy of this table accompanies this report on disk (See Appendices A and B).

Station Period of Record Tabulation

The Station Period of Record Tabulation provides a quick overview of the names of all the stations within the study area where water quality has been monitored and data entered into STORET. It also furnishes the total number of observations taken at each station and the frequency of observations between certain dates: (1) 01/01/85 until the most recent date data were measured; (2) 01/01/75 - 12/31/84; and (3) prior to 01/01/75. The station identification number, the four character park abbreviation code followed by a four digit number, provides the means to jump from a particular station in the table to the statistical and graphical analyses for this station contained in the Station-By-Station Results section. The Station Period of Record Tabulation reveals which water

quality stations were situated within the park as defined by the park's GIS boundary. The Station Period of Record Tabulation also footnotes longer-term water quality stations. Longer-term stations are those that have at least 6 parameters with an average of one or more observations per year for those parameters during a period of record extending at least two years. Note that although a station may not be flagged as longer-term, it can still harbor much important data (albeit for only a few parameters or over a very long term with just a few observations). A digital copy of this table accompanies this report on disk (See Appendices A and B).

Parameter Period of Record Tabulation

The Parameter Period of Record Tabulation provides a complete listing of every water quality parameter ever measured in the study area and entered into STORET. This table is a summation of all the water quality observations for each parameter across all stations in the study area. Like the Station Period of Record Tabulation, the total number of observations for each parameter and the frequency of observations between: (1) 01/01/85 until the most recent date data were measured; (2) 01/01/75 - 12/31/84; and (3) prior to 01/01/75 are provided. This table is handy for quickly assessing whether particular parameters have been measured in the study area. The Parameter Period of Record Tabulation also shows how many in-park (and total) water quality stations contained data for each parameter. Some administrative parameters and parameters not suitable for statistical analysis within the context of this project (as discussed in the Screening Methodologies and Procedures section of the Methodology chapter) are listed in the Parameter Period of Record Tabulation, but not in the Station-By-Station Results section. A digital copy of this table accompanies this report on disk (See Appendices A and B).

Station/Parameter Period of Record Tabulation

The Station/Parameter Period of Record Tabulation combines the information found in the Station Period of Record Tabulation and the Parameter Period of Record Tabulation. This table provides a listing of all the stations where a particular water quality parameter was measured in the study area and the data entered into STORET. The table provides the start and end dates of the period of record of each parameter at each station; the number of years of measurement (computed from the start and end dates); whether the station/parameter combination occurred within the park boundary; the total number of observations for each parameter at each station, and whether a time series (T), annual (A), and/or seasonal (S) plot was generated for the station/parameter combination in the Station-By-Station Results section. This table is very useful when you need to determine at which locations within the study area (or park) particular parameters were monitored and how much data was collected there. Some administrative parameters and parameters not suitable for statistical analysis within the context of this project (as discussed in the Screening Methodologies and Procedures section of the Methodology chapter) are listed in the Station/Parameter Period of Record Tabulation, but not in the Station-By-Station Results section. A digital copy of this table accompanies this report on disk (See Appendices A and B).

Station-By-Station Results

Probably the most voluminous portion of the document is the Station-By-Station Results. Here the results of the water quality analyses for each station are presented in sequence. The results include the station inventory; parameter inventory; EPA water quality criteria analysis; and, as applicable, time series graphics and annual and seasonal tables and box-and-whiskers graphics. Each of these products are discussed below.

Station Inventory for Station

Each station's data commences with its Station Inventory. The Station Inventory provides the descriptive attributes about each water quality monitoring station contained in STORET. This includes a variety of locational information such as a verbal description, the Federal Information Processing codes for county and state, latitude and longitude, and other items; the station type (stream, spring, estuary, etc.); monitoring agency; creation date; indices to the River Reach File; whether the station lies within the park boundary; and several other attributes. This water quality station location data is also contained on disk(s) accompanying the report (See Appendices A and B).

Parameter Inventory for Station

Following the descriptive attributes about a station is the Parameter Inventory for the station. The Parameter Inventory provides a complete inventory and descriptive summary of all the water quality parameter data for the station. This table furnishes the parameter STORET code and name; the period of record for this parameter at this station; and the descriptive statistics defined in the Statistical Definitions in the previous chapter. Three different footnotes can appear on a parameter's descriptive statistics. Two asterisks (**) in the 10th, 25th, 75th, or 90th percentile columns indicates that there was insufficient data to compute these statistics for this parameter. Percentiles were not computed unless the parameter had at least 9 observations. Two number signs (##) next to the number of observations indicates that more than 50 percent of the observations entered into the computations as values that were taken to be half the detection limit. Caution should be employed in interpreting and using statistical results when more than half the values are set to half the detection limit. The letter "p" following a numeric STORET parameter code in the Parameter Inventory indicates that a time series plot was produced for this parameter at this station. Digital, reproducible copies of the Parameter Inventory tables are contained on the disk(s) accompanying this report.

Two downloaded parameter groups, pH and bacteriological, received special treatment whenever descriptive statistics were computed in the Parameter Inventory (as well as subsequent annual and seasonal tables). Whenever pH appears in a descriptive statistics table, the entry is increased to 3 entries: (1) the original pH entry; (2) pH computed from conversion to and from μeq/l H^+; and (3) μeq/l H^+. The reason for these conversions is that pH is actually the negative logarithm of the hydrogen ion concentration. To be technically correct in computing descriptive statistics, pH values must be converted to μeq/l H^+ (Kunkle and Wilson 1984). Once the descriptive statistics are computed using the pH values expressed as μeq/l H^+, the results can be converted back to pH. The three pH entries in the descriptive statistics table will all have the same STORET code.

Whenever a bacteriological parameter appears in a descriptive statistics table, the entry is increased to 3 entries: (1) the original bacteriological entry; (2) an entry computed using the log of each measured value; and (3) an entry that simply reports the geometric mean. The reason for converting to logs and displaying the geometric mean is convention. Bacteriological water quality standards typically reference the geometric mean rather than the arithmetic. The three bacteriological entries in the descriptive statistics tables will all have the same STORET code.

EPA Water Quality Criteria Analysis for Station

The EPA Water Quality Criteria Analysis table follows the Parameter Inventory. This table presents a comparison between the station's STORET water quality data and applicable national water quality criteria for freshwater and marine aquatic organisms; drinking water; and other concerns. Comparison against applicable State water quality criteria was not feasible given project resources. Appendix F provides the relevant national EPA water quality criteria values. In most cases, the EPA water quality criteria values are single sample concentrations that can be directly compared to single sample STORET entries. There are, however, two notable exceptions to this single sample/single value comparison: ammonia and fecal-indicator bacteria. For these two parameters, criteria are either derived from or depend on the results of other chemical characteristics of the water or require a time series statistical treatment of multiple samples to determine whether the criterion has been exceeded. The EPA ammonia criterion is pH and temperature dependent. To calculate the criterion for each ammonia sample value was beyond

the scope of this project. Consequently, ammonia criteria were not included in Appendix F or the EPA Water Quality Criteria Analyses. Un-ionized ammonia criteria can be determined from formula table values included in the EPA Silver Book (Environmental Protection Agency 1995).

For the purposes of this project, fecal-indicator bacteria data were flagged as exceeding criteria when their concentrations exceeded 200, 1000, 126, and 33 (fresh)/35 (salt) colony forming units or most probable number for single samples of fecal coliform, total coliform, E. coli, and enterococci, respectively. These values represent only approximations of the criteria for primary contact recreation waters where criteria are typically expressed in terms of a geometric mean computed with no less than 5 samples during a given month. When a fecal-indicator bacterial observation exceeds a criterion in the EPA Water Quality Criteria Analysis section, the reader should refer to the corresponding geometric mean calculations in the preceding Parameter Inventory. Long-term geometric means that exceed the respective water quality criteria for multiple samples are more indicative of chronic bacteriological problems than single sample values.

Water quality observations carrying non-detection or below-detection limit remark codes (K, T, and U) required special treatment in the EPA Water Quality Criteria Analysis. As with the statistics in the Parameter Inventory, half the detection limit was the value used in the EPA Water Quality Criteria Analysis. For certain observations, however, half the detection limit may exceed a water quality criterion. For those observations it would be inappropriate to classify them as exceeding a criterion since the actual value wasn't known. Thus, it was decided that any below detection limit or non-detect observations that exceed a water quality criterion using half the detection value would be excluded from the EPA Water Quality Criteria Analysis. If non-detect or below detection limit values are excluded from the EPA Water Quality Criteria Analysis for a particular parameter, the total observations for that parameter will be footnoted with an ampersand (&). This will also explain the difference between the total observations in the Parameter Inventory and the EPA Water Quality Criteria Analysis. Non-detect or below detection limit values are included in the EPA Water Quality Criteria Analysis, however, if half the detection limit doesn't exceed the parameter's criterion.

The EPA Water Quality Criteria Analysis for each station lists the parameter; the standard type and value; the total number of observations for the parameter at this station; the number of observations that exceeded the standard value; and the proportion of observations that exceeded the standard value. Water quality observations are considered as having exceeded a criterion regardless of whether the criterion represents a maximum acceptable value or a minimum acceptable value. The table also breaks down the water quality criteria analysis on a seasonal basis to allow the reader to discern whether parameter observations tend to exceed criteria during only certain seasons or year round. Although the EPA Water Quality Criteria Analysis table is a good starting point for assessing potential water quality problems at the station, the reader is strongly encouraged to read the caveat section in the Introduction concerning drawing conclusions about water quality problems from this table. Digital, reproducible copies of these tables accompany the report on disk (See Appendices A and B).

Time Series Plots for Station

Following the EPA Water Quality Criteria analysis will be any Time Series Plots for each parameter that met the time series plot screening criterion selected for the park unit. If a time series plot is generated for a particular parameter at a station, a "p" will appear next to the STORET parameter code in the Parameter Inventory. If no time series plots are present for the particular station, the data did not meet the time series screening criterion listed in the Overview section of the Water Quality Results chapter. The x-axis on these plots is the period of record, listing only the 2-digit calendar year for clarity (i.e. 1983 is presented as 83). The y-axis is the concentration of the selected parameter in its measurement units. In general, the units for a given parameter are given either on the y-axis or in the parameter description in the subtitle of the graph. Subtitle and/or y-axis parameter descriptions may be truncated on the plots so as to not exceed the maximum number of plotting characters. Y-axis values less than zero are sometimes shown for better representation of the entire plot. The station identification code, parameter description, and parameter STORET code are presented in the main title. The footnote provides a descriptive location name. Observations on the plot are represented as squares. Lines are drawn connecting each successive observation. As mentioned previously in the Statistical Definitions section of the Methodology chapter, the interconnecting line is drawn only for ease of reading and provides no indication of what the actual parameter

values were between the two observed measurements. Digital, reproducible copies of all time series plots accompany the report on disk (See Appendices A and B).

For time series plots of pH, the original pH values are plotted. For time series plots of bacteriological data, the log of the measured value is plotted. Hence, the y-axis of a time series plot for bacteriological parameters is log-linear.

Annual Analysis for Station

If more than 9 observations exist in each of at least 4 years for a particular parameter at a station, an Annual Analysis table will be generated. Entries will be made in the table for each parameter having more than 9 observations in each of at least 4 years. The Annual Analysis presents the same descriptive statistics as the Parameter Inventory table, except that it provides the statistics by year, rather than the entire period of record. Although some of the years may not contain 9 observations, these years still have an entry in the table. A parameter needs only to have 9 observations in any 4 years of its period of record to qualify for the Annual Analysis table. Like the Parameter Inventory, percentiles with fewer than 9 observations are not computed and entries computed with greater than 50 percent of the data values set to half the detection limit are flagged. Entries in the Annual Analysis table that also meet the annual analysis box-and-whisker plot screening criterion will be flagged with a "p" next to the STORET code. Digital, reproducible copies of these tables accompany the report on disk (See Appendices A and B).

Annual Box-and-Whiskers Plots for Station

Entries in the Annual Analysis table that meet the annual box-and-whisker plot screening criterion will generate Annual Box-and-Whiskers Plots. The interpretation of box-and-whiskers plots is explained in the Statistical Definitions section of the Methodology chapter. A box is generated for each year of the period of record, even if less than 9 observations were recorded in the year. The axis labeling and plot titling is the same as for the time series plots. Digital, reproducible copies of these graphics accompany the report on disk (See Appendices A and B).

For annual box-and-whiskers plots of pH, μeq/l H^+ are plotted. For annual box-and-whiskers plots of bacteriological data, the log of the measured value is plotted. Hence, the y-axis of an annual box-and-whiskers plot for bacteriological parameters is log-linear.

Seasonal Analysis for Station

As explained above, a park's hydrologic seasons for seasonal water quality analysis were determined using a process of hydrograph separation and other techniques. If a parameter has more than 9 observations in each of 2 seasons with a period of record of at least 6 years and observations in at least 3 of the 6 years, a Seasonal Analysis table will be generated for the station. The Seasonal Analysis presents the same descriptive statistics as the Parameter Inventory table, except that it provides the statistics by season, rather than the entire period of record. Although certain parameters for a season at a station may not contain 9 observations, these parameters can still have an entry in the table. A parameter needs only to have 9 observations in each of 2 seasons with a period of record of at least 6 years and observations in at least 3 of the 6 years to qualify for the Seasonal Analysis table. Consequently, some of the parameters could have fewer than 9 observations in a particular season but still generate a table entry. Like the Parameter Inventory and Annual Analysis, percentiles with fewer than 9 observations are not computed and entries computed with greater than 50 percent of the data values set to half the detection limit are flagged. Entries in the Seasonal Analysis table that also meet the seasonal analysis box-and-whisker plot screening criterion will be flagged with a "p" next to the STORET code. Digital, reproducible copies of these tables accompany the report on disk (See Appendices A and B).

Seasonal Box-and-Whiskers Plots for Station

Entries in the Seasonal Analysis table that meet the seasonal box-and-whisker plot screening criterion will generate Seasonal Box-and-Whiskers Plots. The interpretation of box-and-whiskers plots is explained in the Statistical Definitions section of the Methodology chapter. A box is generated for each season of the period of record, even if less than 9 observations were recorded in the season. On the x-axis, the seasons are labeled 1 through the number of seasons defined for the park through hydrograph separation. The actual calendar dates that correspond to these numerically labeled seasons exist in the Overview section and the Seasonal Analysis tables in the Water Quality Results chapter. The axis labeling and plot titling are the same as for the time series and annual box-and-whiskers plots. Digital, reproducible copies of these graphics accompany the report on disk (See Appendices A and B).

For seasonal box-and-whiskers plots of pH, μeq/l H^+ are plotted. For seasonal box-and-whiskers plots of bacteriological data, the log of the measured value is plotted. Hence, the y-axis of a seasonal box-and-whiskers plot for bacteriological parameters is log-linear.

EPA Water Quality Criteria Analysis for Entire Park Study Area

This table essentially summarizes all the individual station-by-station EPA water quality criteria analyses in the study area. (Refer to the EPA Water Quality Criteria Analysis for Station section above for more detailed information on the treatment of special cases in the EPA Water Quality Criteria Analysis for Entire Park Study Area.) This table presents a comparison between the study area's STORET water quality data and applicable national water quality criteria for freshwater and marine aquatic organisms; drinking water; and other concerns. Comparison against applicable State water quality criteria was not feasible given project resources. Appendix F provides the relevant national EPA water quality criteria values. The EPA Water Quality Criteria Analysis for the Entire Park Study Area lists the parameter; the standard type and value; the total number of observations for the parameter at this station; the number of observations that exceeded the standard value; and the proportion of observations that exceeded the standard value. Water quality observations are considered as having exceeded a criterion regardless of whether the criterion represents a maximum acceptable value or a minimum acceptable value. The table also breaks down the water quality criteria analysis on a seasonal basis to allow the reader to discern whether parameter observations tend to exceed criteria during only certain seasons or year round. Although the EPA Water Quality Criteria Analysis for the Entire Park Study Area is a good starting point for assessing potential water quality problems at the park, the reader is strongly encouraged to read the caveat section in the Introduction before drawing conclusions about water quality problems from this table. A digital, reproducible copy of this table accompanies the report on disk (See Appendices A and B).

NPS Servicewide Inventory and Monitoring Program
Level I Water Quality Inventory Data Evaluation and Analysis (IDEA)

One of the objectives of this Baseline Water Quality Data Inventory and Analysis project is to perform an IDEA - an Inventory Data Evaluation and Analysis - to determine the presence and/or absence of Servicewide Inventory and Monitoring Program "Level I" water quality parameter groups in the park's study area. The Strategic Plan for Conducting Baseline Natural Resource Inventories in the National Park Service (National Park Service 1993) identified the basic water quality parameters displayed in Table I as the parameters that all parks must have for "key" waterbodies (determined on the basis of size, uniqueness, threats, etc.) within park boundaries. Since these parameters can be measured in different ways and with different units, there are multiple STORET codes associated with each parameter; hence the concept of parameter groups. The Strategic Plan distinguishes between those parameter groups required for all parks and parameter groups required only on a case-by-case basis.

The IDEA basically compares the parameters listed in the Parameter Period of Record Tabulation and Station/Parameter Period of Record Tabulation with the "Level I" Servicewide Inventory and Monitoring water quality parameter groups, listed in Table I and in Appendix G, and notes, not only the presence or absence of each parameter group, but the total number of observations for each parameter present in the group; the number of

observations between certain time periods; and the total number of stations within the study area at which the parameter was measured. The total number of different (unique) stations measuring parameters for the group is in parentheses on each parameter group's summary line.

The first page of the IDEA lists the missing Servicewide Inventory and Monitoring Program "Level I" groups. If a parameter group appears on this list, no data for any of the parameters defining the group (See Appendix G) was retrieved for it within the study area. So-called non-priority parameter groups may appear in the missing list. Non-priority parameters are park-specific parameters (case-by-case) which may not be applicable to your park. Consequently, if you believe a particular parameter, not included in IDEA (See Appendix G), to be important for your park, you will have to consult the Parameter and Station/Parameter Period of Record Tabulations to determine the presence or absence of this parameter for the park. Although considered a "Level I" parameter, biological data, obtained through rapid bioassessment or other means, is not considered in this report which deals specifically with surface water chemistry. Following the Missing Level I Group list is the Present Level I Group list which displays the summary results for each Servicewide Inventory and Monitoring "Level I" water quality parameter group that was found.

Table I. Basic "Level I" Water Quality Parameters Identified as Required and Optional By the Servicewide Inventory and Monitoring Program for "Key" Park Waterbodies

Required Parameter Groups:
(1) Alkalinity
(2) pH
(3) Conductivity
(4) Dissolved Oxygen
(5) Rapid Bioassessment Baseline (EPA/State protocols, involving fish and macroinvertebrates)
(6) Temperature
(7) Flow

Case-By-Case Parameters Groups:
(8) Toxic Elements
(9) Clarity/Turbidity
(10) Nitrate/Nitrogen
(11) Phosphate/Phosphorus
(12) Chlorophyll
(13) Sulfates
(14) Bacteria

The last page of the IDEA summarizes the information from the Missing and Present Level I Group lists. This page provides information on the temporal and spatial distributions of the data. Included in this table are the total number of observations for each parameter group; the number of observations since January 1, 1985; the percent of the total observations since January 1, 1985; the number of stations measuring each parameter group; the percent of the total number of stations with data measuring the parameter group; the number of observations per station with data; the period-of-record for this parameter group; and the average number of observations per year of the period-of-record.

In interpreting the results of the IDEA, the reader should first consult the Missing Level I Group list. For the parameter groups listed, there was no baseline water quality data within the study area entered in STORET. Consequently, these parameter groups could be a higher priority for data collection. It is important, however, to realize that data within these parameter groups may have been already collected but not entered into STORET. The resources for this project did not enable us to pursue thorough literature and file cabinet reviews to dredge up

every last iota of data. If data exists for certain Servicewide Inventory and Monitoring Program "Level I" water quality parameter groups in a park's file cabinet, it is the park's responsibility to factor that data into their IDEA. Consequently, the listing of a parameter group on the Missing "Level I" Group list is not a WRD endorsement to launch a study to collect these data. The IDEA is intended to simply note that no data exist for these parameter groups in STORET for the park. It is the park's responsibility to ascertain whether such data has already been collected by the park or other entities before embarking on a new study. In fact, in the future the WRD will require that any park study plan proposing to collect baseline water quality data show that they have consulted their Baseline Water Quality Data Inventory and Analysis report and searched in other locations (file cabinets, published literature, etc.) for the data they propose to collect. A similar interpretation springs from the Present "Level I" Group list. Insufficient data density in certain time periods for particular parameter groups is not necessarily cause for launching a new inventory and/or monitoring program. The park should still consult with other potential sources of data. Again, the IDEA is designed to provide only a quick check on data in STORET for the Servicewide Inventory and Monitoring Program "Level I" water quality parameter groups.

Water Quality Observations Outside STORET Edit Criteria for Park

STORET data entered after November 1983 were subjected to rudimentary edit/bounds checking for 190 common parameters (See the STORET Edit Criteria in Appendix C). None of the data entered into STORET prior to that time has been subjected to edit/bounds checking. Moreover, to maintain exact comparability with USGS WATSTORE data, WATSTORE data entered into STORET has never been subjected to the EPA edit/bounds checking. During the pilot test phase of this project, obviously incorrect data was identified from both USGS and other agency data in STORET. As a consequence, all data downloaded from STORET was filtered through the STORET edit criteria to identify parameter observation values that fall outside any edit criterion ranges. This section documents the station name, parameter, date, time, parameter value, agency, and STORET station name of every observation that fell outside the range of an edit criterion. Not all data falling outside an edit criterion are necessarily incorrect. Such data may represent unique or special conditions. Consequently, every observation falling outside a STORET edit criterion was scrutinized to determine, in our best professional judgement, whether the value was in the realm of possibility or obviously incorrect. Water quality observations that appeared to be obviously incorrect are marked with an "X" in the Disposition column of this table. These values were not retrieved or included in any of the inventory tables or graphs. Water quality values outside a STORET edit criterion but within the realm of possibility were retained and included in inventory tables and graphs. The Water Quality Observations Outside STORET Edit Criteria for Park table documents all values that were outside an edit criterion range. This documentation is also necessitated by the fact that agencies can override the STORET edit criteria for individual observations. Although the edit criteria eliminate some potentially "bad" data from the report, the probability of other incorrect data, for both the 190 parameters that are edit/bound checked and all the other STORET parameters that aren't error checked, is high. Readers should consult the Caveat section in the Introduction for guidelines on the use and interpretation of STORET data. The responsibility for correcting these observations rests with the collecting agency.

WATER QUALITY RESULTS

OVERVIEW FOR TIMU/FOCA

Study Area Boundary Description

The study area includes the park and all areas within at least 3 miles upstream of the park unit boundary and at least 1 mile downstream.

	Study Area	Park
GIS Estimated Acreage:	212118	45728
# STORET Stations:	445	179
# Stations With No Data:	42	18
# Stations With No Stat. Analysis:	6	1
# Longer Term Stations:	102	43
Date of STORET Retrieval:	12/21/99	12/21/99
Period of Record:	10/17/61-12/30/98	10/17/61-12/30/98
# Parameters Measured:	532	427
# Water Quality Observations:	493316	423978
# Industrial/Municipal Facilities:	24	2
# Drinking Water Intakes:	0	0
# Water Gages:	18	4
# Water Impoundments:	1	0
# Total Plots:	159	38
# Time Series:	74	17
# Annual:	48	16
# Seasonal:	37	5

Hydrologic Definition of Seasons:

1. April 15 - November 14
2. November 15 - April 14

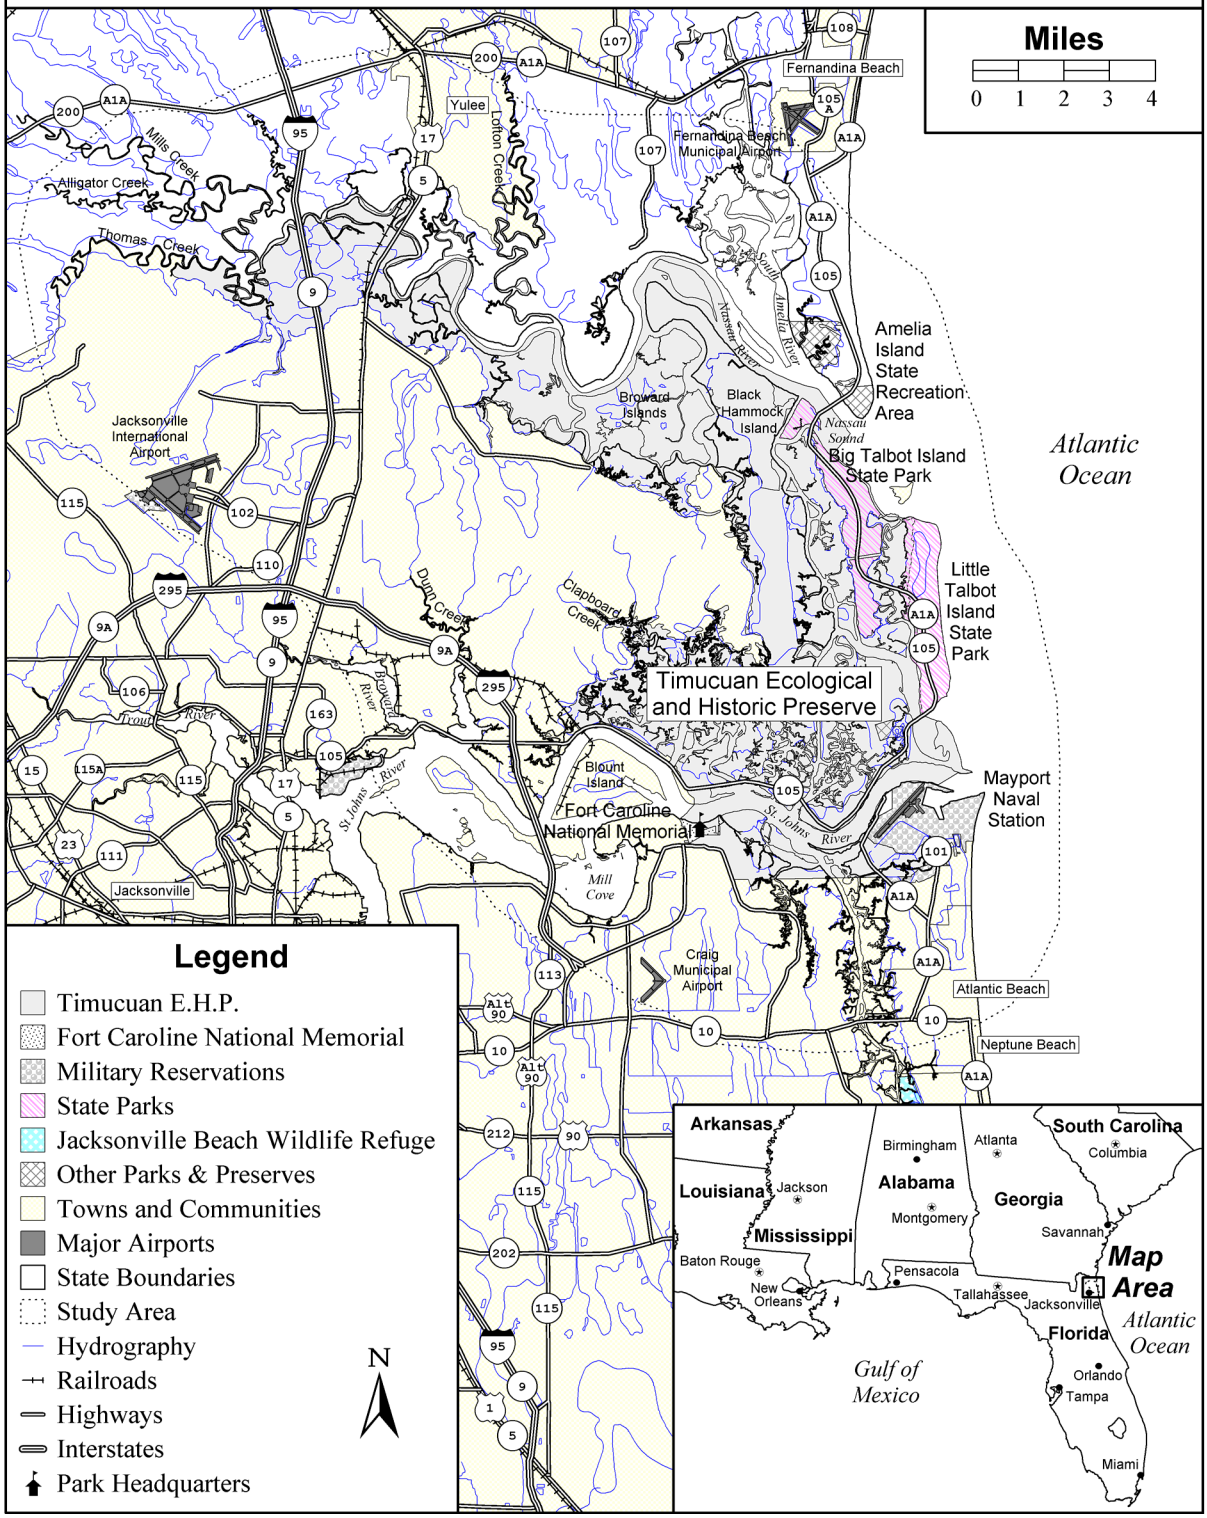
Time Series Plot Criteria:

To be included in the time series plots, a station/parameter combination must have at least 12 years and at least 56 observations.

Annual Analysis Criteria:

To be included in the annual box-and-whisker plots, a station/parameter combination must have at least 9 observations in each of at least 6 years.

To be included in the annual analysis tables, a station/parameter combination must have at least 9 observations in each of at least 4 years.



Seasonal Analysis Criteria:

To be included in the seasonal box-and-whisker plots, a station/parameter combination must have at least 9 observations in each of 2 seasons and a period of record of at least 22 years and observations in at least 4 of the 22 years.

To be included in the seasonal analysis tables, a station/parameter combination must have at least 9 observations in each of 2 seasons and a period of record of at least 6 years and observations in at least 3 of the 6 years.

REPRESENTATIVE MEAN ANNUAL HYDROGRAPH FOR SEASONAL ANALYSIS

TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE
Thomas Creek near Crawford, FL
02231280, 22 year record

Representative mean annual hydrograph (top) and distribution of daily flows by month (bottom) for hydrologic season determination. Box and whiskers represent a five number summary; bottom whisker cap is 10th percentile, bottom of box is 25th percentile, internal line is median, top of box is 75th percentile, and top whisker is 90th percentile. Hydrologic seasons for Timucuan Ecological and Historic Preserve are: Apr. 15 to Nov. 14, and Nov. 15 to Apr. 14.

Description:
THE STATION IS LOCATED ON THE MAYPORT FLORIDA-DUVAL CO. 7.5' SERIES TOPOGRAPHIC QUADRANGLE. STATION SJR-01 WAS IN THE ATLANTIC OCEAN APPROXIMATELY 100 FEET SOUTH OF THE SOUTH JETTY TIP; SOUTH OF BUOY NUMBER 7 OUTSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE PARK BOUNDARY. THE SITE WAS SAMPLED AS PART OF A BIOLOGICAL SURVEY OF THE ST. JOHNS RIVER BY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL REGULATIONS. THIRTEEN STATIONS WERE SAMPLED FOR WATER QUALITY AND CHEMISTRY PARAMETERS; SPECIES DIVERSITY; BENTHIC MACROINVERTEBRATES; CHLOROPHYLL; AND BOTTOM TYPE. DATA WERE PUBLISHED IN THE REPORTS "ST. JOHNS RIVER BIOLOGICAL SURVEY; DUVAL COUNTY; 20.3BA" BY TECHNICAL ASSISTANCE JACKSONVILLE FOR APRIL 1982; AUGUST 1982; AND SEPTEMBER 1983. DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 03 WAS AT THE MOUTH OF SIMPSON CREEK AT THE CONFLUENCE WITH THE FORT GEORGE RIVER INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 3 WAS AT FORT GEORGE RIVER AT THE COUNTRY CLUB MARINA INLET ON FORT GEORGE ISLAND INSIDE OF TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU). THE RIVER WAS SAMPLED BY THE ENVIRONMENTAL SCIENCE AND ENGINEERING COMPANY AS PART OF THE FORT GEORGE ISLAND PROJECT. DATA WERE PUBLISHED IN MISCELLANEOUS DATA SHEETS AND A FIELD TRIP REPORT OF DECEMBER 12 THROUGH DECEMBER 17 OF 1983. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 01 WAS AT THE FORT GEORGE RIVER AT THE MARINA INLET ON FORT GEORGE ISLAND INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL CO. 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 11 WAS AT FORT GEORGE RIVER AT THE NORTHEAST CORNER OF FORT GEORGE ISLAND INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. STATION 11 PREVIOUSLY WAS LABELED FG3. THE CREEK WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES TIMF; TIML; TIMH; AND TIMTRIB CREATED BY BETSY DEUERLING; AN ENVIRONMENTAL SCIENTIST WITH THE CITY OF JACKSONVILLE. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 02 WAS AT THE MARINA BAY AT FORT GEORGE ISLAND INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT FLORIDA-DUVAL CO. 7.5' SERIES TOPOGRAPHIC QUADRANGLE. STATION SJR-02 WAS AT THE ST. JOHNS RIVER AT THE DOWNRIVER NAVIGATION MARKER NEAR FORT GEORGE CREEK INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE PARK BOUNDARIES. THE SITE WAS SAMPLED AS PART OF A BIOLOGICAL SURVEY OF THE ST. JOHNS RIVER BY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL REGULATIONS. THIRTEEN STATIONS WERE SAMPLED FOR WATER QUALITY AND CHEMISTRY PARAMETERS; SPECIES DIVERSITY; BENTHIC MACROINVERTEBRATES; CHLOROPHYLL; AND BOTTOM TYPE. DATA WERE PUBLISHED IN THE REPORTS "ST. JOHNS RIVER BIOLOGICAL SURVEY; DUVAL COUNTY; 20.3BA" BY TECHNICAL ASSISTANCE JACKSONVILLE FOR APRIL 1982; AUGUST 1982; AND SEPTEMBER 1983. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NPS-WRD; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 04 WAS AT THE FORT GEORGE RIVER AT THE NORTHEAST CORNER OF FORT GEORGE ISLAND INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE JACKSONVILLE BEACH; FLORIDA-DUVAL CO. 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 18 WAS AT SHERMAN CREEK SOUTH OF MAYPORT NAVAL STATION CREEK INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE CREEK WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES TIMF; TIML; TIMH; AND TIMTRIB CREATED BY BETSY DEUERLING; AN ENVIRONMENTAL SCIENTIST WITH THE CITY OF JACKSONVILLE. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 6E WAS AT AN UNKNOWN TRIBUTARY TO GARDEN CREEK AT FORT GEORGE ISLAND AT PALMETTO AVENUE INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 6C WAS AT AN UNKNOWN TRIBUTARY TO GARDEN CREEK AT FORT GEORGE ISLAND AT PALMETTO AVENUE INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT FLORIDA-DUVAL CO. 7.5' SERIES TOPOGRAPHIC QUADRANGLE. STATION SJR-03 WAS AT THE ST. JOHNS RIVER IMMEDIATELY UPRIVER FROM THE U.S. COAST GUARD STATION IN THE EDDY AREA INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE PARK BOUNDARY. THE SITE WAS SAMPLED AS PART OF A BIOLOGICAL SURVEY OF THE ST. JOHNS RIVER BY THE FLORIDA DEPARTMENT OF ENVIRONMENTAL REGULATIONS. THIRTEEN STATIONS WERE SAMPLED FOR WATER QUALITY AND CHEMISTRY PARAMETERS; SPECIES DIVERSITY; BENTHIC MACROINVERTEBRATES; CHLOROPHYLL; AND BOTTOM TYPE. DATA WERE PUBLISHED IN THE REPORTS "ST. JOHNS RIVER BIOLOGICAL SURVEY; DUVAL COUNTY; 20.3BA" BY TECHNICAL ASSISTANCE JACKSONVILLE FOR APRIL 1982; AUGUST 1982; AND SEPTEMBER 1983. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-6417155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NPS-WRD; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 05 WAS AT THE MOUTH OF MUD RIVER AT THE CONFLUENCE WITH THE FORT GEORGE RIVER INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 6B WAS AT GARDEN CREEK NEAR THE MOUTH OF THE NORTHERNMOST UNKNOWN TRIBUTARY ON FORT GEORGE ISLAND INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 6A WAS AT GARDEN CREEK AT THE NORTHWEST SIDE OF FORT GEORGE ISLAND INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 7 WAS AT DEEP CREEK OFF OF SISTERS CREEK AT THE WESTERN SIDE OF FORT GEORGE ISLAND INSIDE OF TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU). THE RIVER WAS SAMPLED BY THE ENVIRONMENTAL SCIENCE AND ENGINEERING COMPANY AS PART OF THE FORT GEORGE ISLAND PROJECT. DATA WERE PUBLISHED IN MISCELLANEOUS DATA SHEETS AND A FIELD TRIP REPORT OF DECEMBER 12 THROUGH DECEMBER 17 OF 1983. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL CO. 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 10 WAS AT GARDEN CREEK FIFTY METERS UPSTREAM FROM THE MOUTH INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. STATION 10 PREVIOUSLY WAS LABELED FG6. THE CREEK WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES TIMF; TIML; TIMH; AND TIMTRIB CREATED BY BETSY DEUERLING; AN ENVIRONMENTAL SCIENTIST WITH THE CITY OF JACKSONVILLE. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 06 WAS APPROXIMATELY 1000 FEET UPSTREAM OF THE MOUTH OF GARDEN CREEK INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 07 WAS AT SISTERS CREEK (INTRACOASTAL WATERWAY AT THE SPLIT WITH THE FORT GEORGE RIVER INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL CO. 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 12 WAS AT INTERCOASTAL WATER WAY (ICWW)/SISTERS CREEK MARKER 77 NEAR THE MOUTH OF CEDAR POINT CREEK INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. STATION 12 PREVIOUSLY WAS LABELED FG8. THE CREEK WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES TIMF; TIML; TIMH; AND TIMTRIB CREATED BY BETSY DEUERLING; AN ENVIRONMENTAL SCIENTIST WITH THE CITY OF JACKSONVILLE. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL COUNTY 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 09 WAS AT THE INTRACOASTAL WATERWAY GUNNISON CUT UPSTREAM OF THE MOUTH OF BROWARD CREEK INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM AROUND FORT GEORGE ISLAND CONDUCTED BY THE BIO-ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM MISCELLANEOUS LABORATORY SHEETS. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE MAYPORT; FLORIDA-DUVAL CO. 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 09 WAS AT INTERCOASTAL WATER WAY (ICWW)/SISTERS CREEK MARKER 61 INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. STATION 09 PREVIOUSLY WAS LABELED FG9. THE CREEK WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES TIMF; TIML; TIMH; AND TIMTRIB CREATED BY BETSY DEUERLING; AN ENVIRONMENTAL SCIENTIST WITH THE CITY OF JACKSONVILLE. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE JACKSONVILLE BEACH; FLORIDA-DUVAL CO. 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION 17 WAS AT GREENVILLE CREEK EAST OF BUCCANEER POINT OUTSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE CREEK WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES TIMF; TIML; TIMH; AND TIMTRIB CREATED BY BETSY DEUERLING; AN ENVIRONMENTAL SCIENTIST WITH THE CITY OF JACKSONVILLE. FOR MORE INFORMATION CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

Description:
THE STATION IS LOCATED ON THE AMELIA CITY; FLORIDA 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION NR02 WAS AT THE NASSAU RIVER AT THE INTRACOASTAL WATERWAY AT CHANNEL MARKER 46 INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES NR_HY; NR_L; AND NR_M. FOR MORE INFORMATION ABOUT THE PARK CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).

RF3 Index: 03080103010402.68 RF3 Mile Point: 3.16 Distance from RF3: 0.58 On/Off RF3:
Description:
THE STATION IS LOCATED ON THE AMELIA CITY; FLORIDA 7.5' SERIES (TOPOGRAPHIC) QUADRANGLE. STATION NR01 WAS AT THE INTRACOASTAL WATERWAY JUST SOUTH OF SAWPIT CREEK AT CHANNEL MARKER 49 INSIDE OF THE TIMUCUAN ECOLOGICAL AND HISTORIC PRESERVE (TIMU) PARK BOUNDARIES. THE RIVER WAS SAMPLED AS PART OF THE AMBIENT WATER QUALITY MONITORING PROGRAM CONDUCTED BY THE REGULATORY AND ENVIRONMENTAL SERVICES DEPARTMENT; AIR AND WATER QUALITY DIVISION OF THE CITY OF JACKSONVILLE; FLORIDA. DATA ARE FROM THE EXCEL FILES NR_HY; NR_L; AND NR_M. FOR MORE INFORMATION ABOUT THE PARK CONTACT TIMU'S CHIEF OF RESOURCES AT 13165 MT. PLEASANT ROAD; JACKSONVILLE FL 32225 (TEL. 904-641-7155). DATA WERE PROCESSED AND UPLOADED TO STORET BY RYAN SHY; NATIONAL PARK SERVICE WATER RESOURCES DIVISION; 1201 OAK RIDGE DRIVE SUITE 250; FORT COLLINS CO 80525 (TEL. 970-225-3516).
