00-00-0000: water rights in grand teton national park

WATER RIGHTS IN GRAND TETON

NATIONAL PARK

Introduction

For many years the National Park Service and other Federal Agencies such as the Forest Service operated on the premise that all waters within the boundaries of its reservation i.e. park, monument, forest, was the property of the United States for development or any use thought proper.

Water systems were built, moved and destroyed without regard for water rights, which were state administered. In 1936, by act of Congress, a water rights Section was established in the National Park Service. The purpose of this section was to perfect and protect water rights within Parks and Monuments. Thus, since that time, the National Park Service has been cognizant of the necessity of perfecting and protecting water rights under the provisions of situs states, and considerable work has been accomplished along this line. However, with an ever increasing competition for water, in areas heretofore unaffected, the National Park Service must vigorously protect the water rights it holds, and perfect, in every detail, new water rights which it has reason to obtain.

Under the provision of Interstate Water Compacts, water allotments are dealt with over entire drainage basins, such as the Colorado River Basin, which often includes several states and thousands of square miles. Areas which have water in short

supply, either through natural shortage or depletion of ground water supplies, i.e. Central Arizona, are constantly attempting to gain supplementary water supplies from states, such as Wyoming, that ostensibly have a water surplus, due to the fact that consumptive water use is less than available supply. As additional compacts are made or as the provisions of present compacts are enforced, water could become premium in areas heretofore unaffected.

WATER RIGHTS IN GRAND TETON NATIONAL PARK

There are 258 adjudicated water rights owned by the National Park Service within the boundaries of Grand Teton National Park. In addition there are 19 unadjudicated water rights, most needing only proof of beneficial water use to perfect and be adjudicated. Consequently, there are a total of 277 water rights held by the Park Service. This class of water rights will be hereinafter referred to as Federal Water Rights. Certificates, plats and other pertinent information are contained in Dockets 1 through 53 in the Park Water Rights file and listed in the attached tabulations of Adjudicated Water Rights, pages 1 through 6.

There are 68 alien water rights within the Park boundary, 60 adjudicated and 8 unadjudicated. This category of water rights are those in which the irrigated land or place of domestic water use and/or the point of diversion and/or the means of conveyance are located within the Park boundary. Some are attached to

remaining inholdings in the Park and will become Federal Water Rights when the inholding is purchased. Others involve only ditch rights with headgates inside the boundary and consequently infringe upon government owned land. Certificates, plats and other pertinent information are contained in Alien Water Rights Dockets 1 through 21, and listed in the attached tabulation of adjudicated Water Rights, page 7 and 8.

In addition to the above, 11 Dockets have been maintained in the 100 series. These are also Alien Water Right, 20 in number, and involve water rights which are adjacent to the Park boundary, but where the irrigated land, the point of diversion and means of conveyance are outside of the Park boundary. Most of this category involves water from either the Gros Ventre or the Snake Rivers. Research and inquiry has failed to disclose the reason this category of Water Right was originally docketed and maintained as such. The only conceivable alien infringement is the use of the water of the Snake and Gros Ventre Rivers and without a Park Service proprietory interest in these Rivers there appears to be no justification for the maintenance of this class of docket. It is consequently recommended that they are removed from the docket system.

ORIGIN OF WATER RIGHTS IN THE PARK

Most of the present Federal Water Rights in Grand Teton were

obtained by the National Park Service by conveyance of land. The Wyoming Law[1] states: "Water being always the property of the State, rights to its use shall attach to the land for irrigation or to such other purposes or object for which acquired ....Water rights for the direct use of the natural unstored flow of any stream cannot be detached from the lands, place or purpose for which they are acquired". The only exception is contained in Section 41-3 pertaining to preferred use and order of preference and authorizing condemnation proceedings to supply water for preferred use over less preferred use.

Consequently, since water rights attach to the land in Wyoming they convey with the land and cannot be detached and conveyed separately, as for instance, is possible in Colorado.

PRIORITY OF WATER RIGHTS

Wyoming has the Prior Appropriation System of Water Rights or what is known as the Colorado Doctrine of Appropriation as opposed to the California Doctrine which includes both riparian and appropriation systems. The Wyoming Supreme Court in the case of Willey v. Decker[2] held that the riparian doctrine "had never obtained in this jurisdiction". Consequently, Wyoming has had the appropriation doctrine from the beginning of statehood.

The basic concept of the appropriation doctrine as applied in Wyoming is:

---

1 Wyoming Water and Irrigation Laws, 1959, Chapter 2, Article 1, Section 41-2.

2 11 Wyo. 496, 222 P. 11.

(1) "First in time, first in right" - subsequent appropriators must take their turn in times of shortage.

(2) The appropriation right is attached to and appurtenant to the lands involved.

(3) It embraces any beneficial use, but does not include such things as keeping a live stream for the propogation of fish, scenic values, recreation, etc.

(4) Water can be used on any lands where it can be applied to a beneficial use - in fact, no appropriation can be denied by the State Board of Control except when such denial is in the public interest.[3]

With the appropriation system the earliest priority date has the best right. Most of the Water Rights in Grand Teton have priority dates prior to 1940. Of the total of 278 adjudicated and unadjudicated rights only 11 have priority dates of 1940 and later, while 22 have priority dates of 1900 and earlier, and the majority of the remaining 245 have priority dates between 1900 and 1930.

PREFERRED USE

Section 41-3 outlines preferred water use and giver preference rights as follows: (1) Water for drinking purposes for both man and beast (2) Water for municipal purposes (3) Water for use of steam engines and for general railway use, water for culinary, laundry, bathing, refrigeration (including the

---

[3] Farm Investment Co. v. Carpenter, 9 Wyo. 110, 61 P.258; Willey v. Decker, 11 Wyo. 496, 222 P. 111; Wyoming Hereford Ranch v. Hammond Packing Company 33 Wyo. 14, 236 P. 764.

manufacturing of ice), for steam and hot water heating plants and steam power plants (4) Industrial purposes. The use of water for irrigation is superior and preferred only to any use where water turbines or impulse water wheels are installed for power purposes.

It should be noted that propogation of fish, recreation, scenic values, maintenance of aquatic life, etc. or in fact the majority of those values vital to the maintenance and operations of a National Park are not included in any form in preferred uses. Consequently, this fact coupled with the absence in Wyoming Law of a doctrine of equity or equality[4] provides no priority for any type of recreation use.

In August of both 1966 and 1967 the Gros Ventre River was virtually dried up for a distance from 4 to 6 miles upstream from its junction with the Snake River due to a large recent diversion which diverts waters to the South Park District in the Jackson area. This, of course, destroyed all fish and aquatic life in the dry portions of the river and has an adverse effect on fish propogation in much of the Gros Ventre River. If the appropriators, diverting water from the new diversion are not taking more water than their appropriation entitles them to, there is apparently no provision in the Wyoming Law to require them to leave sufficient water in the river for fish maintenance, scenic or recreation purposes.

[4] If an appropriator has an adjudicated water right, he can dry up a stream if necessary to fulfill the terms of the right.

Eventually, such provisions may be added to the Wyoming Law. However, if it is added, unless it is given a reasonable standing in preferred use it will probably be of little effect.

WATER RIGHT PERMITS

Article 8, Section 1 of the Wyoming Constitution states: "The water of all natural streams, springs, lakes or other collection of still water within the boundaries of the State, are hereby declared to be the property of the State".

Since all of the water in the State of Wyoming belongs to the State the only manner in which a water right can be obtained is by permit by the State. The 1925 case of Wyoming Hereford Ranch v. Hammond Packing Company[5] verified this point. The Wyoming Supreme Court made several findings in the case but most important was the statement "a permit is a condition precedent to the right to divert and appropriate water".

Wyoming does not recognize that a valid water right can be acquired by adverse possession, or a prescriptive right.

The procedure for obtaining a permit is contained in detail in Article 5, Wyoming Water and Irrigation Laws but is basically as follows:

(1) File an application for a permit with the State Engineer. The application must be accompanied with a map, in duplicate, showing the location and extent of the proposed work, the course of the river stream or other

---

5 33 Wyo. 14, 326 P. 764

source of supply, the location of lands to be irrigated or place of use. All other pertinent information and a surveyors certificate.

(2) When the application is approved, authority is given to commence construction, which must commence within one year and be completed within 5 years after date of approval.

(3) Notice of Commencement of Work made to the State Engineer.

(4) Notice of Completion of Work made to State Engineer.

(5) Notice of Application of Water to Beneficial Use made to State Engineer.

To perfect the Water Right the following steps are necessary:

(1) Notify the Superintendent of the Water Division that final proof of appropriation of water can be made.

(2) When final proof is made the permit will be considered by the State Board of Control and if found satisfactory the Board will issue a Certificate of Appropriation which will constitute a completed water right, with priority from the date of the original filing.

UNIT OF MEASURE AND DUTY OF WATER IN WYOMING

The standard water measure in Wyoming is the cubic foot per second and the acre foot. A cubic foot per second is the amount of water that will pass through a cubic foot of space in one

second of time. An acre foot is in the amount of water that will cover an acre of land to a depth of one foot.

The duty of water in Wyoming is one cubic foot per second per 70 acres, and all appropriations are based on that standard. However, in 1957 the State Legislature modified the law to include the Surplus Water Act. Surplus Water was defined as all waters in natural streams above the actual accumulated appropriations. This Act granted an additional one cubic foot per second per seventy acres to all water rights with a priority date prior to March 1, 1945 if the water was available in that amount, or otherwise, a prorata share of all surplus water.

There are only 7 Federal Water Rights within Grand Teton that are not subject to the Surplus Water Act, having priority dates subsequent to March 1, 1945.

The accumulative total of Federal Water Rights is approximately 257 cubic feet per second. Under the provision of the Surplus Water Act this amount is effectively doubled, for a total of approximately 500 cubic feet per second, without the seven Water Rights not subject to the Act.

ABANDONEMENT OF WATER RIGHTS

Section 41-47 of the Wyoming Law states in part "....if the owner or owners of a ditch, canal or reservoir shall fail to use the water therefrom for irrigation or other beneficial use during any five successive years, they shall be considered as

having abandoned the same and shall forfeit all water rights, easements and privileges, appurtant thereto, and the waters formerly appropriated to them may again be appropriated....".

Section 41-48 states in part "When persuant to the provision of Section 41-47 any water user who might be affected by a declaration of abandonement of existing water rights, desires to bring about a legal declaration of such abandonement, he shall present his case in writing to the Board of Control".

It appears from the above that the State does not automatically cancel permits if water is not used over a five year period. Instead, an adverse action is necessary to bring about a legal declaration of abandonement.[6]

If the 5 year non-use period were the only controlling factor, all but approximately eight Federal Water Rights in Grand Teton would be considered abandoned. The majority of these water rights were obtained from approximately 1900 through 1930 when most of the valley was involved in cattle ranching and the water was used for irrigation of pastures and hay meadows. As land was purchased or withdrawn to be included in the Park, the irrigation endeavors ceased and most of the ditches have not been used since that time. The exception has been those ditches which were also used all or partially for domestic water supplies.

The question then arises, as to what disposition should be made of those water rights, which have not been used in many years and the probability of making use of them for any Park purpose is

---

[6] Lincoln Land Company v. Davis, 27 Fed. Supp. 1006 and Horse Creek Conservation District v. Lincoln Land Company 50 Wyo. 229, 59 P. 2d 763.

extremely doubtful.

From a legal standpoint, all water rights in the Park appear to be legally vested and secure. Since, as indicated above, an adverse action is necessary to bring about a legal declaration of abandonement, it is questionable if an adverse action against a government interest would be possible. However, pressure by the State of Wyoming and/or other political entities might be brought to bear on the Park Service to relinquish all but those water rights actually used, especially if a water shortage occurs in subsequent years.

There is no question that many of the existing water rights could be relinquished without detriment to the Park Service. However, this could set a precedent, that would eventually result in relinquishment of all water rights in the park in the immediate non-use category. It is doubtful that this is a course the Park Service would want to follow.

In view of the above, it is recommended that no action be taken at the present time to relinquish any of the water rights now existing in Grand Teton National Park. If and when relinquishment of any of the rights is necessary, a review should be made at that time to determine which rights could be relinquished with the least detriment to the Park.

ADP-Dockets

Memorandum

August 4, 1969

To: Chief, Division of Water Resources, WASO
Attention: Supervisory Hydraulic Engineer

From: Supervisory Hydrologist, Division of Water Resources, SSC

Subject: ADP Summary Presentation of Water Rights Dockets, SSC

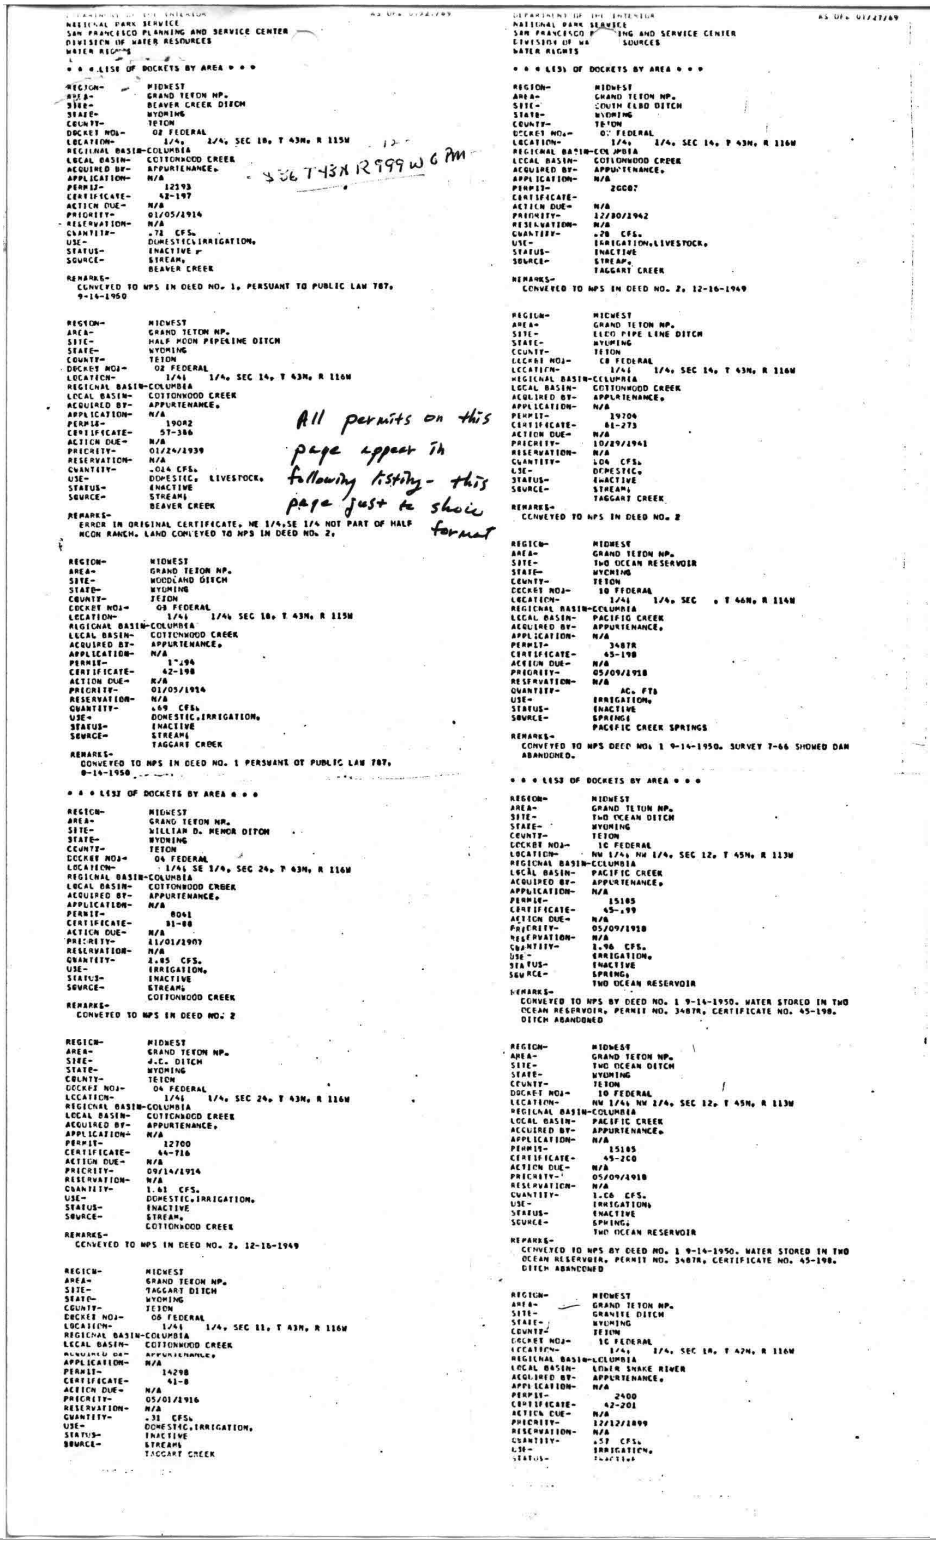

To further supplement my July 22, 1969, memorandum, I have already sent an ADP printout for the water rights dockets at Grand Teton under separate cover for your examination and recommendations.

I have enclosed with this letter a smaller reproduction (it was zeroxed - the original is sharper) where it is possible to get 12 dockets on one sheet of legal-size paper. Perhaps this would be the best way to exhibit this information as it will take less storage. However, in that this ADP printout was set up for three dockets per page, we have presented the Grand Teton in this manner. You will note that the information can be retrieved from the ADP system by the information in the left-hand column; for example, Region, Area, Site, State, County, Docket Number, etcetera.

(SGD) GERARD S. WITUCKI

Re: GRTE Docket #161 (Title: Miscellaneous)

This docket contains a yellow 10" x 12" envelope titled "Overlays of Photos of Grand Teton National Park". This envelope contains a set of overlay sheets with pencil markings, depicting ditch systems and irrigation areas. Area of coverage: unknown. Date of production: unknown, but date stamp on envelope suggests early 1950's.

These were not scanned but can be found in the hardcopy docket folder.

04-30-1952: list of areas/water: lists which need more prints ordered and which don't
