

Acadia National Park
Bar Harbor, Maine

February 27, 1964

LOCATION DESCRIPTIONS

GREEN AREAS - Areas where no control of beaver is necessary

- 1 G - Schooner Head Road. Excellent interpretative location.
Accessible to visitor by 200 yard walk.
- 2 G - Kebo. Accessible to visitor by 1/2 mile walk by trail and cross country.
- 3 G - Otter Creek. Accessible to Park visitor by 300 yard trail.
- 4 G - Jordan Pond Inlet. Accessible to visitor by 2 mile walk by carriage road.
- 5 G - Richardson Brook. Accessible to visitor by 1 1/2 mile walk
&
6 G or carriage road and cross country.
- 7 G - Southwest Valley Brook. Same as above)
- 8 G - Upper Hadlock. Available for interpretative use.
1/4 mile walk by trail and carriage road.
- 9 G - Marshall Brook. Accessible by trail and cross country walk of 2 miles.
- 10 G - Heath Brook. Accessible to Park visitor by 3/4 mile walk via trail and cross country.
- 11 G - Round Pond. Ownership divided between Federal Government and State. Pond borders State Route 102.

YELLOW AREAS - Areas where beaver population must be regulated

- 1 Y - Witch Hole Pond. Excellent area for interpretative purposes, necessary to regulate population numbers to perpetuate beaver in this location. Non regulation of population would result in depletion of food resources and subsequent evacuation of area.

2 Y, 3 Y, 4 Y, 5 Y, 6 Y, 7 Y - Same as for 1 Y.

8 Y - Eagle Lake. Town water supply. Regulations necessary to prevent damaging of tributary brooks and preventing the rise of water level. Inlet streams are spawning areas for trout and must be maintained without impediments for free movement of spawning trout. Outlet stream is spawning area for land locked salmon (*Salmo Sebago*). Young remain there a year and return to lake. Inlet streams too small for salmon spawning.

9 Y - Sieur de Monts Spring. Periodic reduction necessary to maintain appropriate water levels for Rhodora and prevent public water supply contamination. Food supply limited. Excellent interpretation location.

10 Y - Beaver Dam Pool. Excellent interpretation location. Food supply needs protection, periodic cropping necessary. Culverts being plugged.

11 Y - Schooner Head Road. Excellent interpretative location. Regulation necessary to protect diminishing food
&
12 Y supply, to regulate water levels, and prevent road damage.

13 Y - Jordan Pond Inlet. Accessible to public. Currently overpopulated in relationship to food supply. Necessary to regulate population to perpetuate beaver here.

14 Y - Gilmore Meadow. Regulation necessary to control water levels, protect carriage roads and perpetuate beaver for interpretative purposes.

15 Y - Hodgdon Pond. Regulate to prevent damage to Park road, regulate water level. Food supply not acute problem. Good interpretation opportunity.

RED AREAS - Areas where beaver must be eliminated

1 R, 2 R, 3 R - Duck Brook. Waters must be kept open to permit trout and salmon to negotiate there for spawning purposes. Salmon go down in October and winter in the stream, returning in the spring. The young salmon return to the lake after they are a year to a year and a half old.

4 R - Liscomb Brook and Marshall Brook. Beaver must be eliminated
& from these areas due to flood-
8 R ing of private lands and water
supply associated with beaver
dam construction.

5 R - Southwest Valley and Breakneck Brook. Beaver must be eliminated
& to preserve a cedar swamp
6 R and red maple stand which
is in danger of being lost
entirely by flooding.

7 R - Lakewood. Swimming beach. Beaver must be eliminated entirely.
Out stream dammed, not allowing
debris and stagnant water to flow
out of swimming area which is adjacent.

RED LINED STREAMS - Great Brook, Lurvey Brook, Bubble Brook and
Inlets to Eagle Lake

None of these areas currently have beaver population.
Beaver dams in these streams prevent trout and
salmon from traveling to spawning beds.
