HOW TO GUIDE FOR SPOTLIGHT FORM

Observations are numbered 1 - 25, in the event that there are more deer sighted subsequent forms will be used and numbered sequentially (ie. form #1 = deer 1-25, form #2 = deer 26-50, etc.).

Groups of deer will be circled (ie. deer 3-7, notice circled area on data sheet above).

Cover types are: fields (**F**), brush (**B**), woods (**W**), roadside (**R**), notice example on data sheet.

State refers to the state of the animal **immediately** upon observation. Categories for state:

bedded with eyes (**B E**), bedded no eyes (**B**)

standing with eyes (**S E**), standing no eyes (**S**)

moving with eyes (**M E**), moving no eyes (**M**)

unknown (**U**)

Bedded refers to the deer lying, standing refers to the deer standing and movement refers to movement (trotting etc.). **Eyes** refers to whether or not the observer upon **immediately** sighting the deer notices the reflection from the tapetum lucidum (ie. **eye shine**). Notice examples on data sheet.

Distance refers to the approximate distance in meters that the deer is away from the tour road. The following categories will used: 0-100 (**1**), 101-300 (**2**), 301-500 (**3**), >500 (**4**). The observer can refer to the map that has the approximate distance bands along the tour road to aid in determining where a deer is seen. Notice examples on data sheet.

Comments column is provided for the observer to record anything of importance concerning the particular observation or the spotlight count in general.
