Subject RE: Notice of Ops for Lemon ST1008 #1

Bill,

Thank you for providing the documentation that we requested for your proposed workover of the ST1008 #1 well within the park. I have forwarded the documentation to the appropriate NPS personnel for review. Usually the review process for this type of activity takes up to 5 business days. I have, however, requested an expedited review of these documents and hopefully that can be accomplished. Once the review is completed, and the activities are approved, we will notify BNP and you may begin moving the rig and associated equipment to the location. I am hopeful that the review will be completed by the time you want to move the rig in on the 10th of July.

While the park understands the industry demands for equipment, the park is also required to ensure that actions taken by operators will not harm the resources and that the activities are covered in an approved plan. Most approved plans speak to workovers in very general terms with very little detail as to specific actions since all wells are different. Once a workover is proposed, more in-depth documents are required to better detail the exact actions proposed for the well in question. Until these documents can be reviewed and approved, we can not allow any workover activities to occur within the park.

If the plans can be reviewed and approved prior to the July 10th date you have mentioned, the park will notify BNP and the 1008 #1 well workover activities can then begin. For future reference, please be aware that the submission of more specific, detailed plans, like the ones you have provided for this well and others in the past, will be required before workover activities can occur within the park and that the same timeframe of up to 5 days for review will apply prior to any work being permitted.

I would like to thank you once again for providing the requested documentation in a timely manner for review. I will notify you once the review is complete. In the mean time, feel free to contact me if you have any questions.

Mark

Mark

Here is our plan and wellbore diagram.

I would like to reiterate what Victor has stated that the industry is very busy and when a rig becomes available we have to take it and start paying day rate immediately.

We appreciate all the guidance you can give us in order to expedite this process.

I would like to clarify Victor's note was intended to be the 5 days advance notice. We were planning on getting the rig +/- July 10.

If you require any further information or have any questions please do not hesitate to call me.

Thanks

Victor,

I have received guidance from NPS Region personnel regarding BNP's plans to move a workover rig in to the Lemon ST 1008 #1 well that will clarify the process BNP must follow. Prior to moving the workover rig to ST 1008 #1, BNP will need to provide detailed information specific to the workover planned which the NPS will then review. Once the review is complete (5 working days) and the workover is approved, BNP will need to give us 5 days advance notice before proceeding with the workover as per mitigation measure 48 in the Supt's letter supplementing the plan. No equipment can be moved into the park, or work begun, until this process has been completed. Again, we will also require daily drilling logs of the workover once it is approved and work has started.

If you have any questions give me a call or email.

Mark

Notice of Ops for Lemon ST1008 #1

Mark,

I have composed a notice letter which my assistant Monta Knippa will be sending to you today. Contrary to what I told you last week, we are moving a workover rig down the beach as early as next week. As you know, the industry is very busy and all equipment is hard to come by leaving the smaller operators at the mercy of the contractors. This workover rig has become available and BNP is taking advantage of the opportunity. All efforts will be taken to ensure uneventful convoy down the beach.

Thanks,
Victor Lopez
