Subject: Blow, Blow, Blow the Well Down

Hi Arlene,

Let's try this...

The process of "blow down" as described in the comment and the reasons for doing it do not occur as part the production process of the gas wells at Padre Island. We do not anticipate the process to be necessary in the future. The impacts of such operations are therefore not a consideration in this assessment.

Subject: Re: Question??

Hi Arlene,

In my opinion, this is not a reasonably foreseeable event.

Subject: Question??

Good Morning Pat,

I need your help in explaining this question, so I can finally get these responses out of here.

[Our original] Response # 24. The process of "blow down" and the reasons for doing it don't occur at Padre Island as part of routine operations. The impacts of such operations are therefore not a consideration in this assessment. The review team added: Actually, if this is a reasonable foreseeable future effect, we are required to analyze it. You should explain why this does not apply.

Thanks for the help
Arlene
