Subject: Soil Analysis Testing

On August 25, 1989, under the direction of Jennifer Bjork, I was sent to the Amaco site to take soil samples from the pit, water samples from the pipe flowing into the pit, and insect samples from the area surrounding the pit and in the pit. The soil samples were sent to Gulf Coast Testing on August 2, 1989 to be tested (G C Mass Spec.) to determine exactly what type of hydrocarbons were present in the soil and determine their concentrations. The identity of the sample was AP2 (Amaco Pit, sample # 2). Water from the pit had been tested previously (8/12/89) and shown to contain oil & grease. A copy of the actual report for AP2 dated October 6, 1989 is attached.
