Re: Pipeline Integrity Test
South Sprint

Ms. Arlene Wimer
Natural Resources Specialist
National Park Service
Padre Island National Seashore
Division of Resources Management
P.O. Box 181300
Corpus Christi, Texas 78480

Dear Arlene:

EOG Resources, Inc. will conduct a line integrity test on Wednesday, April 23, 2003 on a pipeline that runs from South Sprint shore Production Facility to the Production Platform located in the Gulf of Mexico Block 981.

The purpose of the test is to insure that the pipeline is sound and operating as it was designed. During the test it will be necessary for the employees performing the test to move back and forth between the shore facility and the offshore platform by helicopter to evaluate pressure, temperature and flowing pressures.

The number of times the helicopter will need to land on the shore facility is dependent on how the pipeline is responding to the test. However, I would estimate that three or four landing should complete the process. The test should conclude in approximately four hours.

During the period the test is being conducted EOG will have a designated landing site in front of the shore surface facility which is located behind the dune line with a locked gate. We will also have an employee stationed on the beach at the entrance to our road to keep all on looker's way and safe from our operations.

Air Logistic of Rockport, Texas, is providing the helicopter. They provide helicopters for all oil companies operating in the Gulf of Mexico.

Should you have any questions concerning this project please call Peyton McNeill 361-813-0616 or pager 361-812-3024.

Sincerely,

Peyton McNeill
Senior ROW/Lease Operation Landman
