

River Recreation Research Published

"Some Recent Products of River Recreation Research" is the title of a USDA Forest Service General Technical Report (NC-63) published by the North Central Forest Experiment Station, 1992 Folwell Ave., St. Paul, MN 55108. David W. Lime of the Forest Experimental Station and Donald R. Field, Associate Director for Science and Technology in the NPS Pacific Northwest Region did the technical coordination of the nine papers, originally presented at the Second Conference on Scientific Research in National Parks, Nov. 26-30, 1979, in San Francisco. An introductory "Highlights" statement observes: "One conclusion from the Conference was that the future of social science research in support of resource management hinges upon the accumulation of national and regional data. Once established, the data base could provide the foundation to determine whether management concerns and issues associated with a specific site require additional research . . . and might likewise provide trend information on changing patterns of recreation use, changes in the composition of user populations, and provide comparisons in recreation use between Forest Service, Park Service, and Bureau of Land Management areas . . . Finally, a national and regional data base might well provide the basis upon which management objectives and policies are examined, leading to a more effective resource management policy."
