

Environmental Magazine Online

Science and the Environment is an online, bimonthly magazine specializing in providing world news summaries on a wide array of environmental issues. Published by Voyage Press, the magazine is designed for high school and university educators and students; it may also interest NPS interpreters who concentrate on natural resource issues interpretation.

The publication takes a multidisciplinary and nonpartisan approach to its coverage, which includes the latest scientific findings, developing government policies, and emerging technologies. The information is organized around eight chapters, including, biodiversity and wildlife health, population and agriculture, marine ecology, clean water, alternative energy and fuels, climate change and atmospheric studies, waste management and recycling, and clean air. Recent features have covered the congressional effort to relax federal wetlands regulations, preserving stopover sites for migratory birds, the spotted owl controversy and prosperity

of local economies, and exotic species threats to native Hawaiian plants and animals.

The editors review over 500 magazines, specialized journals, and newspapers to produce each issue, which contains 80 of the most interesting and relevant news stories on important environmental topics. Each story cites the original source and lists contacts for future reference. The publication can be found on the World Wide Web at "<http://www.cais.net/publish/voyage.htm#homeport>."
