

Water Resources

From William Jackson, Chief of Water Operations Branch, comes word that Nancy Driver has won the 1989 American Water Resources Assn.'s Boggess Award, established in 1973 to honor the author of the best paper published in the *Water Resources Bulletin* the previous year. Driver's paper, co-authored with Gary Tasker, "Nationwide Regression Models for Predicting Urban Runoff Water Quality at Unmonitored Sites," was published in the October 1988 Bulletin and was prepared while Driver was a hydrologist with the Colorado District of the USGS.

Driver joined the NPS Water Resources Division in March 1989 and serves as a senior water quality specialist in the Water Operations branch.

Marshall Flug, hydrologist with the Division, chaired two sessions at the recent meeting of the American Society of Civil Engineers 1989 National Water Conference and LIFE (Legal, Institutional, Financial and Environmental) Symposium. One session was on hydrologic modeling; the other on generating alternative instream flow benefits for environmental and natural resource management. Three papers co-authored by Flug also were presented, all addressing instream flows.
