Bill,

Yes they were all adult weirs on Prairie Creek.

I think the first two entries for spawning year 1994-95 were associated with the hatchbox program that Mitch Farro ran under contract with CalTrans as mitigation for the Bypass 101 fiasco when all the construction sediment came into the Prairie Creek watershed in Oct 1989 OR it was the first year after Mitch's program stopped and the HSU Fish Coop/Fisheries Department took over monitoring and ran an adult trap at the same site. They must of moved the weir during the spawning season to another better site within the Prairie Creek Redwoods State Park campground.

The third entry in year 1983 - 84 was probably from a trap/weir that Prairie Creek Hatchery had on Prairie Creek to collect fish for the hatchery. (They had weir panel on Lost Man Creek too to direct fish into the ladder. One year I remember they could only run the traps/weir 24 hours on and 24 hrs off after we complained about the lack of fish going up Lost Man into the park, so they put one in at Prairie Creek too. I don't remember if it was upstream or downstream the confluence of Lost Man Creek.)

David

AM MST

we are looking at redwfish.dbf (scale collection file)

i wanted to confirm that

PRAIRIE CREEK WEIR, STATION 23+65 (years 1994, 1995) - an adult weir on prairie creek?

PRAIRIE CREEK WEIR, STATION 19+30 (years 1994, 1995) - an adult weir on prairie creek?

PRAIRIE CREEK TRAP (years 1983, 1984) - an adult weir on prairie creek?

thanks, i owe you

Bill,

Go with Randy's thesis observation.

David

Subject: hi dave - we
have a question about coho presence in pilchuck creek
04/08/2005 12:52

PM MST

i attached a pdf - randy's thesis attributes coho presence to pilchuck
but this compilation does not. should i go with randy's observation?
thanks for your help
