Appendix D: Field Key to Vegetation Associations

Field Key to Vegetation Associations

This appendix is a field key to vegetation associations (plant communities) of the Appalachian National Scenic Trail (APPA; also referred to as the "AT corridor" for Appalachian Trail corridor). The vegetation associations in this vegetation field key represent a subset of the U.S. National Vegetation Classification (USNVC) and were initially identified from field data collected for the APPA vegetation mapping project of the National Park Service Vegetation Mapping Inventory Program. For each vegetation association in the vegetation field key, the common name for the association in the USNVC is given followed by the Community Element Global code (CEGL00####). The scientific name for the association also is given in brackets. At the onset of the APPA vegetation mapping project, conifer forest plantations were listed in the natural (including ruderal) portion the USNVC. Toward the close of the vegetation mapping project, conifer forest plantations were moved to the cultural portion of the USNVC; however, those forest plantations remain in this vegetation field key and are identified by their Cultural Subtype code (CST00####).

Guidance on Using the Vegetation Field Key

The vegetation field key consists mostly of dichotomous options that ultimately lead to a USNVC association; in a few cases, a lead goes to three, rather than two, options. The vegetation field key quickly separates into four main field keys, one for each of the four APPA project areas. The four APPA project areas and corresponding field keys are as follows: (1) Southern Blue Ridge (SBR), (2) Central Appalachian (CAP), (3) Lower New England (LNE), and (4) Northern Appalachian (NAP). Each of these four field keys provides a narrowing focus on vegetation associations existing within their respective APPA project area, rather than a broad view of the entire AT corridor. Several vegetation associations exist in more than one APPA project area, especially when associations exist near convergence of those project areas. Some vegetation associations exist in all four APPA project areas and are included in each project area field key.

To determine which field key by APPA project area to classify from, use the "Key to Field Keys by Project Area." A map showing the extent of each APPA project area (SBR, CAP, LNE, and NAP) is provided on pages D-8–D-11. The field key for each of the four APPA projects is divided into sub-keys to narrow the focus toward groupings of vegetation associations having similar characteristics (e.g., vegetation physiognomy, vegetation dominance, hydrology, and disturbance).

The classification of a stand of vegetation should first be undertaken assuming that it is a natural community, unless the species composition or landscape has obvious evidence of being disturbed. If a reasonable answer is not obtained as a natural community, then the classification of the stand as a disturbed or ruderal community should be attempted.

The USNVC global association names are provided for each vegetation association in the vegetation field key. These global association names reflect the general presentation of an association across its global range, but neglect local variation. Thus, vegetation associations that exist along the AT corridor may not have all the plant species present in the global association name and will probably have many other additional plant species present. The local condition of the vegetation association is described within the relevant couplet in the vegetation field key and should be the ultimate descriptor for keying vegetation.

For best results, all assessments of vegetation associations in the field should be done on a defined area of homogeneous (uniform) vegetation (i.e., a single vegetation association). For vegetation associations that are larger scale (greater than 0.5 hectare [ha]), a half hectare area (5,000 square meters [m]) is used, which is equivalent to a 40-m radius around a center point or to a 50- by 100-m rectangle. For vegetation associations that are smaller scale (0.25–0.5 ha), a quarter ha area (2,500 square m) is used, which is equivalent to a 28-m radius around a center point or to a 50- by 50-m square. For vegetation associations at the smallest scale (0.125–0.25 ha), an eighth ha area (1,250-m squared) is used, which is equivalent to a 20-m radius around a center point or to a 35- by 35-m square.

Each of the four APPA project area field keys provides guidance to the scale that vegetation associations were mapped to for the APPA vegetation mapping project; these scales were determined by the minimum mapping unit (MMU) of the map classes that represents the vegetation associations. Some vegetation associations exist only as small-scale patches and may not be mappable (e.g., subcanopy seeps in forests); however, all associations are included in the vegetation field key regardless of their mappable status.

"Appendix C: Descriptions of Vegetation Associations" in this report for the APPA vegetation mapping project is recommended to complement this vegetation field key to determine a correct assessment of vegetation classification.

Field Key to Vegetation Associations of the Southern Blue Ridge Project Area

This field key provides classification to USNVC associations that were identified during the APPA vegetation mapping project for the SBR project area (see Figure D–1 in the "Key to Field Keys by Project Area"). The SBR project area includes APPA lands between the southern terminus of the AT corridor on Springer Mountain in Georgia and Dickey Gap in Virginia (Corners Creek Road near State Highway 16).

Notes about Scale for the Southern Blue Ridge Project Area

All forest associations were mapped to a 0.5-ha MMU (a circle with a 40-m radius) and all nonforest associations were mapped to a 0.25-ha MMU (a circle with a 28-m radius). Some of the smaller-scale associations mapped to a MMU of 0.25 ha include: CEGL003752, CEGL003814, CEGL003818, CEGL003819, CEGL003849, CEGL003882, CEGL003890, CEGL003891, CEGL003892, CEGL003893, CEGL003895, CEGL003913, CEGL004094, CEGL004184, CEGL004242, CEGL004732, CEGL004819, CEGL007443, CEGL007690, and CEGL007876.

Key to Keys for the Southern Blue Ridge Project Area

1a. Wetland Vegetation (alluvial and non-alluvial). **2**
1b. Upland Vegetation. **4**

2a. Alluvial vegetation occurring along banks or channels of rivers and streams and adjacent levees, at least occasionally flooded. Also includes beaver pond areas that are part of larger alluvial systems. ..... **Alluvial Vegetation (Key #1, p. D–15)**
2b. Non-alluvial (palustrine) vegetation; site is seepage-fed, rarely if ever flooded by alluvial waters; includes seepage-fed beaver pond and man-made impoundments and seepage-fed boulderfields and coves. **3**

3a. Forested sites and sites generally with overhanging canopy of trees. Canopies vary widely depending upon elevation, fertility, and rockiness, but all examples have rich, diverse herbaceous layers. ..... **Forested Seeps (Key #2, p. D-16)**
3b. Non-forested sites, herb- and forb-dominated, with deep soils and nearly completely vegetated (does not include seepy rock outcrops). ..... **Bogs and Fens (Key #3, p. D-17)**

4a. Vegetation (dominated by trees, shrubs, forbs, grasses, and/or vines) strongly altered by recent human disturbance, dominated by disturbance-oriented (ruderal) native species and/or non-native species, (e.g., *Paulownia tomentosa* (princesstree), *Ailanthus altissima* (tree of heaven)) or certain disturbance-oriented (ruderal) native species, often in monotypic stands [e.g., *Pinus virginiana* (Virginia pine), *Liriodendron tulipifera* (tuliptree), *Betula alleghaniensis* (yellow birch), *Acer rubrum* (red maple), *Robinia pseudoacacia* (black locust), *Juglans nigra* (black walnut)]; possibly in mixed and highly variable stands. Many examples of these are near to or associated with roads, former fields, former human settlements, etc. ..... **Successional and Ruderal Vegetation (Key #4, p. D-19)**
4b. Naturally occurring vegetation, dominated by native trees, shrubs, forbs, grasses, and/or vines; structure and/or composition determined by a spontaneously growing set of primarily native plant species shaped by ecological processes; includes forested and non-forested vegetation communities. **5**

5a. Non-forested vegetation (canopy trees over 6 m absent or sparse, covering less than 25% of the assessment area); sparse woodlands, shrublands, grasslands, nonvascular vegetation, or bare rock; some associated with very shallow soils or rock outcrops, others without substantial areas of exposed rock, including grass and shrub balds and successional vegetation; also includes savanna-like areas and glades with widely spaced, open-grown trees (or small clumps of trees) over otherwise herbaceous vegetation. **6**
5b. Forest and woodland vegetation with canopy trees over 6 m tall covering at least 25%, and usually above 60% of the assessment area; understory varies. **8**

6a. Sparse woodlands (10-25% tree canopy cover), shrublands, grasslands, or bare rock; associated with very shallow soils or rock outcrops. ..... **Sparse Woodlands, Glades, Barrens, Rocky Summits, Cliffs, and Granite Domes (Key #5, p. D-23)**
6b. Shrublands or grasslands without substantial areas of exposed rock. **7**

7a. Successional or altered (ruderal) shrubland or grassland vegetation resulting from human disturbance. ..... **Successional and Ruderal Vegetation (Key #4, p. D-19)**
7b. Natural or ruderal shrubland or grassland vegetation; either shrub or grass-dominant (typically above 1,525 m [5,000 feet]). ..... **Sparse Woodlands, Glades, Barrens, Rocky Summits, Cliffs, and Granite Domes (Key #5, p. D-23)**

8a. Forest vegetation occurring at or above 1,220 m (4,000 feet) elevation (e.g., Spruce-Fir Forests, Northern Hardwoods, Dry-Subxeric Pine Forests, High-elevation Oak Forests). **9**
8b. Forest vegetation occurring below 1,220 m (4,000 feet) elevation, but occurring up to 1,370 m (4,500 feet) in some exceptions. **11**

9a. Canopy dominated by deciduous trees (at least 50% deciduous), including *Betula alleghaniensis* (yellow birch), *Betula lenta* (sweet birch), *Fraxinus americana* (white ash), *Aesculus flava* (yellow buckeye), and *Acer saccharum* (sugar maple). ..... **Mesophytic Hardwoods and Rich Mesic Forests (Key #6, p. D-28)**
9b. Canopy dominated by coniferous species (at least 50% coniferous) including *Picea rubens* (red spruce), *Abies fraseri* (Fraser fir), and *Pinus* (pine) spp. **10**

10a. Spruce and/or fir dominate ..... **Spruce and Fir Forests (Key #7, p. D-33)**
10b. Pine dominates. ..... **Dry - Subxeric Forests and Woodlands (Key #8, p. D-35)**

11a. Deciduous, evergreen, or mixed dry and subxeric forests; **either** dominated by evergreen trees of dry habitats (e.g., *Pinus pungens* (table mountain pine), *Pinus rigida* (pitch pine), *Pinus virginiana* (Virginia pine), *Tsuga caroliniana* (Carolina hemlock)) **or** these codominant with deciduous trees of dry habitats (*Quercus coccinea* (scarlet oak) and *Quercus prinus* (chestnut oak)); **or** dominated by a mixture of dry to dry-mesic oak species (*Quercus coccinea* (scarlet oak) and *Quercus prinus* (chestnut oak) over *Kalmia latifolia* (mountain laurel) and occurring on exposed ridges and upper slopes. Also occasionally includes mesic slopes with traditionally dry-habitat canopy trees (*Tsuga caroliniana* (Carolina hemlock), *Quercus prinus* (chestnut oak)) over a dense shrub layer of *Kalmia latifolia* (mountain laurel). Mixed *Pinus strobus* (eastern white pine) - dry *Quercus* (oak) stands should be keyed here as well [see CEGL007519 at Sect. 8, 6a; and Sect. 9, 2b]. ..... **Dry - Subxeric Forests and Woodlands (Key #8, p. D-35)**

11b. Primarily deciduous mesic and dry-mesic forests, although *Tsuga canadensis* (eastern hemlock) and/or *Pinus strobus* (eastern white pine), may be present in some examples; dominated by **either** mesophytic species, e.g., *Tilia americana* (American basswood; including var. *heterophylla*), *Acer saccharum* (sugar maple), *Aesculus flava* (yellow buckeye), *Fraxinus americana* (white ash), and/or *Liriodendron tulipifera* (tuliptree) with (*Tsuga canadensis* (eastern hemlock), *Pinus strobus* (eastern white pine), **or** dry-mesic tree species, e.g., *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), and/or *Quercus alba* (white oak). **12**

12a. Stands dominated by dry-mesic to mesic oaks (e.g., *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), dry to subxeric oaks (*Quercus coccinea* (scarlet oak) or *Quercus falcata* (southern red oak)), or codominant with other dry-mesic trees including *Carya glabra* (pignut hickory), as well as *Liriodendron tulipifera* (tuliptree). .... **Dry-Mesic Forests (Key #9, p. D-40)**

12b. Stands dominated by mesophytic tree species [e.g., *Acer saccharum* (sugar maple), *Tilia americana* (American basswood; including var. *heterophylla*), *Fraxinus americana* (white ash), and/or *Liriodendron tulipifera* (tuliptree)], dominated or codominated by *Tsuga canadensis* (eastern hemlock) or *Pinus strobus* (eastern white pine) in some cases..... **13**

13a. Forest canopy codominated by deciduous mesophytic trees and variable amounts of *Tsuga canadensis* (eastern hemlock) or *Pinus strobus* (eastern white pine) **and** usually with high abundance of *Rhododendron maximum* (great laurel). Some associations may not have *Tsuga canadensis* (eastern hemlock) but are of acidic composition and **lack** an abundance of canopy species indicative of nutrient-rich substrates (e.g., *Tilia americana* (American basswood; including var. *heterophylla*), *Fraxinus americana* (white ash), *Aesculus flava* (yellow buckeye), and *Acer saccharum* (sugar maple)]. ..... **Acidic Mesic and Rich Forests (Key #10, p. D-45)**

13b. Forest canopy of most associations dominated by deciduous trees indicative of nutrient-rich substrates *Tilia americana* (American basswood) including var. *heterophylla, Fraxinus* (ash) spp., *Aesculus flava* (yellow buckeye), and *Acer saccharum* (sugar maple); usually without substantial *Tsuga canadensis* (eastern hemlock) and *Rhododendron maximum* (great laurel)..... ..... **Mesophytic Hardwoods and Rich Mesic Forests (Key #6, p. D-28)**

1. Alluvial Vegetation

1a. Forested vegetation communities, usually with greater than 60% tree canopy coverage, possibly as low as 40% in examples with damage to canopy trees from flooding and debris transport. Canopy typically dominated by *Platanus occidentalis* (American sycamore), *Liriodendron tulipifera* (tuliptree), *Fraxinus americana* (white ash), *Betula lenta* (sweet birch), and *Betula alleghaniensis* (yellow birch). Evergreen tree species few to none. Shrub layer often dense with *Rhododendron maximum* (great laurel) and *Leucothoe fontanesiana* (highland doghobble). Other shrubs may include *Alnus serrulata* (hazel alder), *Xanthorhiza simplicissima* (yellowroot), *Corylus americana* (American hazelnut), *Cornus amomum* (silky dogwood), *Hamamelis virginiana* (American witch-hazel), *Euonymus americanus* (bursting-heart), and *Hydrangea arborescens* (wild hydrangea). Vine species such as *Parthenocissus quinquefolia* (Virginia creeper), *Aristolochia macrophylla* (pipevine), *Smilax glauca* (cat greenbrier), and *Smilax rotundifolia* (roundleaf greenbrier). Sites associated with narrow, rocky floodplains and islands in medium-sized rivers. [A "rich" variant of this may have a canopy with *Acer saccharum* (sugar maple), *Betula lenta* (sweet birch), *Acer rubrum* (red maple), *Tilia americana* var. *heterophylla* (Appalachian basswood), and *Carya cordiformis* (bitternut hickory). Shrubs include *Carpinus caroliniana* (American hornbeam) and *Lindera benzoin* (northern spicebush).] ..... **Appalachian Montane Alluvial Forest (CEGL004691)**
[*Platanus occidentalis - Liriodendron tulipifera - (Betula alleghaniensis) / Alnus serrulata - Leucothoe fontanesiana* Floodplain Forest]

1b. Shrublands on rocky or gravelly substrates along narrow river margins. Characteristic species are *Alnus serrulata* (hazel alder) and *Xanthorhiza simplicissima* (yellowroot), but these may not always be dominant. Other species may include *Arundinaria gigantea* (giant cane), *Diervilla sessilifolia* (southern bush-honeysuckle), *Salix nigra* (black willow), *Salix sericea* (silky willow), *Rhododendron arborescens* (smooth azalea), *Rhododendron viscosum* (swamp azalea), *Rhododendron maximum* (great laurel), *Rhododendron periclymenoides* (pink azalea), *Kalmia latifolia* (mountain laurel), *Leucothoe fontanesiana* (highland doghobble), *Cornus foemina* (stiff dogwood), *Cornus amomum* (silky dogwood), *Physocarpus opulifolius* (common ninebark), *Itea virginica* (Virginia sweetspire), and *Viburnum nudum* var. *cassinoides* (withe-rod). .... **Rocky Bar and Shore (Alder - Yellowroot Type) (CEGL003895)**
[*Alnus serrulata - Xanthorhiza simplicissima* Wet Shrubland]

2. Forested Seeps[16]

1a. Found on slopes above 1,100 m (3,600 feet) elevation; primarily open seep, small patch in matrix of rich coves and rich northern hardwood forests from 1,100 to 1,525 m (3,600-5,000 feet) elevation. Herbaceous layer dominated by forbs including *Impatiens pallida* (pale touch-me-not), *Monarda didyma* (scarlet beebalm), and *Rudbeckia laciniata* (cutleaf coneflower). ..... **Rich Montane Seep (High-Elevation Type) (CEGL004293)**
[*Impatiens (capensis, pallida) - Monarda didyma - Rudbeckia laciniata* var. *humilis* Herbaceous Seep]

1b. Found on slopes and some flat areas; best developed below 1,100 m (3,600 feet) elevation, some apparent examples may occur higher; more-or-less forested seep (typically under closed canopy). **2**

2a. Canopy dominated by *Nyssa sylvatica* (blackgum), understory dominated by *Rhododendron maximum* (great laurel); streamhead swales on broad ridges on sandy, saturated soils derived from shales and sandstones. ..... **Appalachian Forested Acidic Seep (CEGL007443)**
[*Acer rubrum* var. *trilobum - Nyssa sylvatica / Osmunda cinnamomea - Carex intumescens / Sphagnum lescurii* Seep Forest]

2b. Herbaceous seep vegetation abundant. **3**

3a. Sedge-dominated, seepage slopes scattered throughout the high elevations (>1524 m [5,000 feet]) of the Southern Blue Ridge; well-developed sphagnum mats present; characteristic species include *Carex gynandra* (nodding sedge), *Carex ruthii* (Ruth's sedge), *Carex atlantica* (prickly bog sedge), and *Carex debilis* var. *rudgei* (white edge sedge). ..... **Southern Blue Ridge High-Elevation Seep (Sedge Type) (CEGL007697)**
[*Carex gynandra - Platanthera clavellata - Drosera rotundifolia - Carex ruthii / Sphagnum* spp. Herbaceous Seep]

3b. Sedges may be present to common but not dominant. **4**

4a. Seepage on mid and lower slopes in matrix of cove forests. Usually canopy either partially or fully covered by cove forest trees from adjacent communities. Characteristic species include *Diphylleia cymosa* (American umbrellaleaf), *Saxifraga micranthidifolia* (lettuceleaf saxifrage), and *Laportea canadensis* (Canadian woodnettle). [Umbrellaleaf may occur up to 1,585 m (5,200 feet).] ..... **Rich Montane Seep (Cove Type) (CEGL004296)**
[*Diphylleia cymosa - Saxifraga micranthidifolia - Laportea canadensis* Forested Herbaceous Seep]

4b. Seepage area on slight slopes or flat areas near small to large creeks with characteristic species including *Glyceria striata* (fowl mannagrass), *Glyceria melicaria* (melic mannagrass), *Osmunda cinnamomea* (cinnamon fern), *Carex gynandra* (nodding sedge), *Symphyotrichum puniceum* (purple-stem aster), *Solidago patula* var. *patula* (roundleaf goldenrod), *Chelone glabra* (white turtlehead), and *Sphagnum recurvum* (recurved sphagnum). ..... **Southern Appalachian Wet Seepage Meadow (CEGL008438)**
[*Glyceria striata - Carex gynandra - Chelone glabra - Symphyotrichum puniceum / Sphagnum* spp. Herbaceous Seep]

[16]Seeps are small scale and are not represented directly by any one map class. Seeps are included for completeness of the vegetation field key, and the surrounding matrix vegetation should be recognized.

3. Bogs and Fens

1a. Forest with a closed or open canopy and an open to dense shrub layer, interspersed with small *Sphagnum*- (sphagnum moss) and herb-dominated depressions. Canopy composed of various mixtures of evergreen and deciduous species, often dominated by *Tsuga canadensis* (eastern hemlock) and *Acer rubrum* (red maple), and less often by *Liriodendron tulipifera* (tuliptree), *Nyssa sylvatica* (blackgum), *Pinus strobus* (eastern white pine), or *Pinus rigida* (pitch pine)..... **Swamp Forest - Bog (Typic Type) (CEGL007565)**
[*Tsuga canadensis - Acer rubrum - (Nyssa sylvatica) / Rhododendron maximum / Sphagnum* spp. Seep Forest]

1b. Non-forested boggy areas (tree canopy less than 20%)..... **2**

2a. Shrub-dominated saturated wetlands and seeps..... **3**
2b. Herb-dominated saturated seepage wetlands (seepage bog, or fen). **4**

3a. *Rhododendron maximum* (great laurel) dominated shrubland occurring within mountain stream floodplains. This association includes some bogs in the Southern Appalachians. ..... **Southern Appalachian Bog (Rhododendron Type) (CEGL003849)**
[*Rhododendron maximum / Sphagnum* spp. Seepage Shrubland]

3b. Low-elevation stream headwaters seep dominated by *Alnus serrulata* (hazel alder), *Lyonia ligustrina* (maleberry), *Kalmia latifolia* (mountain laurel), *Lindera benzoin* var. *benzoin* (northern spicebush), and *Vaccinium fuscatum* (black highbush blueberry); herbaceous species include *Scutellaria lateriflora* (blue skullcap), *Thelypteris noveboracensis* (New York fern), *Mimulus ringens* (Allegheny monkeyflower), *Osmunda cinnamomea* (cinnamon fern), and *Ludwigia palustris* (marsh seedbox). Physiognomy is variable and may include herbaceous-dominated patches, shrubby areas, and areas with an open canopy of trees..... **Montane Low-Elevation Seep (CEGL003909)**
[*Alnus serrulata - Lindera benzoin* / *Scutellaria lateriflora - Thelypteris noveboracensis* Seepage Shrubland]

4a. Streamside seepage area with *Glyceria striata* (fowl mannagrass), *Glyceria melicaria* (melic mannagrass), *Osmunda cinnamomea* (cinnamon fern), *Carex gynandra* (nodding sedge), *Symphyotrichum puniceum* (purple-stem aster), *Solidago patula* var. *patula* (roundleaf goldenrod), *Chelone glabra* (white turtlehead), and *Sphagnum recurvum* (recurved sphagnum). ..... **Southern Appalachian Wet Seepage Meadow (CEGL008438)**
[*Glyceria striata - Carex gynandra - Chelone glabra - Symphyotrichum puniceum / Sphagnum* spp. Herbaceous Seep]

4b. Rare fen community. *Picea rubens* (red spruce), *Abies fraseri* (Fraser fir), *Pinus strobus* (eastern white pine), and *Tsuga canadensis* (eastern hemlock) may be scattered throughout or may dominate in patches or on the edges. Dominant shrubs include *Salix sericea* (silky willow), *Viburnum nudum* var. *cassinoides* (withe-rod), *Ilex collina* (longstalk holly), *Rhododendron catawbiense* (Catawba rosebay), and *Rhododendron maximum* (great laurel). Other characteristic species include *Taxus canadensis* (Canada yew) (Long Hope Valley only), *Picea rubens* (red spruce), *Rosa palustris* (swamp rose), *Salix humilis* (prairie willow), *Carex atlantica* (prickly bog sedge), *Carex baileyi* (Bailey's sedge), *Carex echinata* (star sedge), *Carex gynandra* (nodding sedge), *Carex leptalea* (bristly-stalked sedge), *Carex lurida* (shallow sedge), *Carex trisperma* (three-seeded sedge), *Eriophorum virginicum* (tawny cottongrass), *Galium asprellum* (rough bedstraw), *Houstonia serpyllifolia* (thymeleaf bluet), *Juncus effusus* (common rush), *Osmunda cinnamomea* (cinnamon fern), *Oxypolis rigidior* (stiff cowbane), *Rhynchospora capitellata* (brownish beaksedge), *Scirpus*

cyperinus (woolgrass), *Scirpus expansus* (woodland bulrush), *Scirpus polyphyllus* (leafy bulrush), *Packera aurea* (golden ragwort), *Solidago patula* var. *patula* (roundleaf goldenrod), *Sphagnum fuscum* (brown peatmoss), *Sphagnum recurvum* (recurved sphagnum), and *Rhizomnium appalachianum* (Appalachian rhizomnium moss). Known from Grayson Highlands State Park, VA, as small patches..... **Southern Appalachian Shrub Bog (Long Hope Valley Type) (CEGL003913)**

[*Rhododendron (maximum, catawbiense) - Ilex collina - Salix sericea / Eriophorum virginicum* Seepage Shrubland]

4. Successional and Ruderal Vegetation (forested and non-forested)

1a. Successional fields/meadows/shrublands/woodlands (less than 60% cover of trees in canopy and subcanopy/understory combined). **2**
1b. Successional or planted forests (typically greater than 60% cover of canopy/overstory combined). **9**

2a. Shrub- or vine-dominated (less than 50% herbaceous). Primarily naturally disturbed areas (possibly managed), longer disturbance interval than 2b below, created and maintained by blowdowns, tree die-offs, and occasional mowing (3- to 6-year cycle). **3**
2b. Herbaceous-dominated (greater than 50% herbaceous cover). Shorter disturbance interval than 2a (above). Frequently, and anthropogenically, disturbed/managed, created and maintained by yearly mowing or grazing. The grazing/mowing regime does not distinguish these two, but primarily elevation does..... **8**

3a. Shrublands..... **4**
3b. Vine-dominated stands. **7**

4a. Shrubland found above 915 m (3,000 feet) composed of *Rhododendron maximum* (great laurel) generally found in areas where tree canopy has died or been blown down. ..... **Montane Rhododendron Thicket (CEGL003819)**
[*Rhododendron maximum* Upland Scrub]
4b. Shrubland with *Rubus* (blackberry) spp. dominant or codominant (at least 25-50% cover; on the lower end if in a more diverse mixture of successional shrub and vine species)..... **5**

5a. Low- to moderate-elevation shrubland, stand composed of a mixture of *Rubus* (blackberry) spp. (primarily with *Rubus argutus* (sawtooth blackberry), also possibly *Rubus allegheniensis* (Allegheny blackberry)); possibly with *Rosa multiflora* (multiflora rose), *Smilax* (greenbrier) spp., other successional and exotic shrub and vine species. These are anthropogenically managed/disturbed areas, not associated with "true" Appalachian balds, but with pastures, meadows, etc. They will be associated with Grazed Montane Grassland / Fire Meadow (CEGL004018) or Cultivated Grassland (CEGL004048) depending on elevation. ..... **Ruderal Blackberry - Greenbrier Shrub Thicket (CEGL004732)**
[*Rubus (argutus, trivialis) - Smilax (glauca, rotundifolia)* Ruderal Shrubland]
5b. High-elevation shrublands or woodlands (above 1,370 m [4,500 feet]) with at least 50% cover of *Rubus* (blackberry) spp. **6**

6a. High-elevation (above 1,370 m [4,500 feet]) blackberry thickets composed of *Rubus canadensis* (smooth blackberry) and/or *Rubus allegheniensis* (Allegheny blackberry), adjacent to or interspersed with high-elevation forests; arising from severe fire or extreme spruce-fir or beech die-off. Examples can include an open, woodland canopy of *Prunus pensylvanica* (pin cherry) covering up to 60% of the understory. NOTE: This *Rubus*- (blackberry) dominated type mapped in two conditions: (a) when *Rubus* (blackberry) is in or near balds (and bordering/integrating with degraded trees) at three locations: Whitetop Mtn (VA); Carvers Gap/Roan Mtn (TN/NC); and Big Bald (TN/NC); and (b) in ruderal circumstances, e.g., with CEGL004018 (which can mimic a grassy bald but without the right origin or composition). There may be confusion with CEGL003892 (higher) or CEGL004732 (below). ..... **High-Elevation Blackberry Thicket (CEGL003893)**
[*Rubus canadensis - (Rubus idaeus* ssp. *strigosus) / Athyrium filix-femina - Solidago glomerata* Shrubland]

6b. High-elevation (above 1,525 m [5,000 feet]) *Rubus canadensis* (smooth blackberry) and/or *Rubus allegheniensis* (Allegheny blackberry) thickets found adjacent to or interspersed with natural grasslands; arising from successional processes on natural grass balds following grazing or natural processes such as fire. NOTE: This *Rubus*- (blackberry) dominated type mapped only when *Rubus* (blackberry) is in or near balds (and patches surrounded by grassland) at three locations: Whitetop Mtn (VA); Carvers Gap/Roan Mtn (TN/NC); and Big Bald (TN/NC)..... **Southern Appalachian Blackberry Bald (CEGL003892)**
[*Rubus allegheniensis - Rubus canadensis / Carex pensylvanica* Shrubland]

7a. Dominated almost entirely by the exotic *Pueraria montana* (kudzu)..... **Ruderal Kudzu Vineland (CEGL003882)**
[*Pueraria montana* var. *lobata* Ruderal Vine-Shrubland]
7b. Grapevine-dominated patch in forest (so-called "grapehole") usually with greater than 25% coverage in various strata of the native *Vitis aestivalis* (summer grape) and a patchy canopy of trees. . ..... **Montane Grape Opening (CEGL003890)**
[*Vitis aestivalis* Vine-Scrub]

8a. Low to intermediate elevation (below 915 m [3,000 feet]). Herbaceous layer dominated by mixtures of introduced *Lolium (= Festuca)* spp. (meadow, tall fescue, etc.) and other grasses and/or forb species. This vegetation may be associated or interspersed with Ruderal Blackberry - Greenbrier Shrub Thicket (CEGL004732).....**Cultivated Grassland (CEGL004048)**
[*Lolium (arundinaceum, pratense)* Ruderal Grassland]
8b. High-elevation (above 915 m [3,000 feet]) pasture dominated by *Phleum pratense* (timothy) and *Bromus* (brome) spp. These are less diverse pastures of anthropogenic origin, lacking conservative native species characteristic of more natural Grassy Balds (i.e., CEGL004242); found in section 5. .....**Grazed Montane Grassland / Fire Meadow (CEGL004018)**
[*Phleum pratense - Bromus pubescens - Helenium autumnale* Ruderal Meadow]

9a. Canopy dominated by evergreen trees (at least 50% evergreen trees in canopy). **10**
9b. Canopy dominated by hardwood deciduous trees (at least 50% deciduous canopy). **12**

10a. *Pinus virginiana* (Virginia pine) a dominant component of association, either greater than 50% of canopy, or at least prevalent over other evergreens..... **Ruderal Virginia Pine Forest (CEGL002591)**
[*Pinus virginiana* Ruderal Forest]
10b. *Pinus strobus* (eastern white pine) a dominant component of association, greater than 50% of canopy. **11**

11a. Planted stand, even-aged with obvious indications of silviculture and few other species..... **Eastern White Pine Plantation (CST007178)**
[*Pinus strobus* Forest Plantation]
11b. Successional forest, even-aged or mixed-age and possibly including a mixture of other successional species. Arising from disturbance, but not evidently planted. Some examples may contain *Quercus* (oak) spp., but these are even-aged and similar in age to the dominant *Pinus strobus* (eastern white pine).....**Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

12a. Communities found at higher elevation (up to 1,525 m [5,000 feet]), adjacent to grass or shrub balds, or at upper edge of Northern Hardwood stands. Canopy composed of *Crataegus* (hawthorn) spp., possibly mixed with some combination of *Quercus rubra* (northern red oak), *Betula alleghaniensis* (yellow birch), *Prunus pensylvanica* (pin cherry), and/or *Aesculus flava* (yellow buckeye). Forest or shrubland of moderate stature (5-15 m). [Note: some examples of High-Elevation Red Oak Forest (Tall Herb Type) (CEGL007298) may have a *Crataegus* (hawthorn) understory.]. ....**Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata - Crataegus flabellata* Ruderal Forest]
12b. Communities not restricted to higher elevations, mostly found at lower elevations (below 1,440 m [4,000 feet]). **13**

13a. Canopy dominated by *Liriodendron tulipifera* (tuliptree) (greater than 50% of canopy). These are earlier-successional, postdisturbance forests, which are typically 50-75 years old. **14**
13b. Canopy with less than 50% *Liriodendron tulipifera* (tuliptree)..... **16**

14a. *Liriodendron tulipifera* (tuliptree) forest with a large presence of understory species indicative of high calcium or base rich soils such as *Cercis canadensis* (eastern redbud), *Symphoricarpos orbiculatus* (coralberry), or *Lindera* (spicebush). This is a relatively uncommon community in the SBR project area, and is mostly restricted to VA. ....**Ruderal Tuliptree Forest (Rich Type) (CEGL007220)**
[*Liriodendron tulipifera / (Cercis canadensis) / (Lindera benzoin)* Ruderal Forest]
14b. Widely distributed and common successional *Liriodendron tulipifera* (tuliptree) forests with understory and canopy species indicative of acidic soils [less than 10% cover of *Cercis canadensis* (eastern redbud) and/or *Lindera benzoin* (northern spicebush)]. **15**

15a. Younger forest dominated by *Liriodendron tulipifera* (tuliptree) and/or sometimes codominated by *Robinia pseudoacacia* (black locust), and/or *Acer rubrum* (red maple) with less than 25% cover of oaks. This also keys below as a diverse and variable successional hardwood forest that may not be dominated by tuliptree (below). ..... **Appalachian Ruderal Hardwood Forest (CEGL007219)**
[*Liriodendron tulipifera - Acer rubrum - Robinia pseudoacacia* Ruderal Forest]
15b. Dominated by *Liriodendron tulipifera* (tuliptree) sometimes codominated by young *Quercus* (oak) spp., *Acer rubrum* (red maple), and/or *Betula alleghaniensis* (yellow birch). ....**Ruderal Tuliptree Forest (Typic Type) (CEGL007221)**
[*Liriodendron tulipifera - Quercus* spp. Ruderal Forest]

16a. Forest a more-or less monospecific successional stand of either *Juglans nigra* (black walnut) or *Robinia pseudoacacia* (black locust). **17**
16b. Diverse forest dominated by a variable mixture of successional hardwoods **18**

17a. Forest dominated by *Juglans nigra* (black walnut) with an understory of *Verbesina* (crownbeard) spp. and/or *Symphoricarpos orbiculatus* (coralberry). Frequently found on postcultivation soil or former orchard sites around old home-sites. ....**Ruderal Black Walnut Forest (CEGL007879)**
[*Juglans nigra / Verbesina alternifolia* Ruderal Forest]
17b. Forest dominated by *Robinia pseudoacacia* (black locust). Frequently found in abandoned fields and other postcultivation lands. ..... **Ruderal Black Locust Forest (CEGL007279)**
[*Robinia pseudoacacia* Ruderal Forest]

18a. Successional forest vegetation found in areas that have undergone severe disturbance, including repeated canopy removal (clearcutting), cultivation, mining, grading, etc. Typically on benches, relatively gentle slopes, and other more easily cleared terrain. Canopy dominated by some combination of *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), and *Betula lenta* (sweet birch). Stands may also contain lesser amounts of *Betula alleghaniensis* (yellow birch), *Oxydendrum arboreum* (sourwood), *Amelanchier laevis* (Allegheny serviceberry), *Nyssa sylvatica* (blackgum), and *Magnolia fraseri* (mountain magnolia). Some examples may contain *Pinus virginiana* (Virginia pine). Shrubs, when present, are typically deciduous ones, but some *Kalmia latifolia* (mountain laurel) may be present..... ..... **Appalachian Ruderal Hardwood Forest (CEGL007219)**

[*Liriodendron tulipifera - Acer rubrum - Robinia pseudoacacia* Ruderal Forest]

18b. Forests composed of successional species, but typically composed of larger and older trees than the preceding. Found on midslopes and saddles of various aspects and of varying topographic complexity. These stands are thought to have originated from episodes of logging and/or fire, but not severe soil disturbance such as cultivation or site clearing. This community may have originally been dominated by *Castanea dentata* (American chestnut) until its decline due to chestnut blight. This released the other hardwood species in the understory, resulting in this composition. In higher elevation examples, this community may be a long-term postdisturbance example of Southern Appalachian Northern Hardwood Forest (Typic Type) (CEGL007285). Canopy dominated by some combination of *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Magnolia fraseri* (mountain magnolia), *Nyssa sylvatica* (blackgum), *Oxydendrum arboreum* (sourwood), *Betula alleghaniensis* (yellow birch), but **not** strongly dominated by yellow birch. Shrub species are typically primarily evergreen ones, and *Kalmia latifolia* (mountain laurel) and *Rhododendron maximum* (great laurel) can be very dense. NOTE: CEGL007219 and CEGL008558 can both have high cover of red maple, sourwood, and mountain magnolia, but CEGL008558 typically does **not** have a large component of tuliptree or yellow birch. Oak may be present in the canopy, but generally at less than 25% cover. The trees in stands of CEGL008558 are older (greater than 70 years), larger, and more mature than in CEGL007219. ....**Southern Appalachian Ruderal Acidic Mixed Hardwood Forest (CEGL008558)**

[*Acer rubrum* var. *rubrum - Betula lenta - Magnolia fraseri / (Rhododendron maximum, Kalmia latifolia)* Ruderal Forest]

5. Sparse Woodlands, Balds, Glades, Barrens, Rocky Summits, Cliffs, and Granite Domes

1a. Vineland; stand with greater than 25% cover of *Vitis aestivalis* (summer grape) in various strata... ..... **Montane Grape Opening (CEGL003890)**
[*Vitis aestivalis* Vine-Scrub]
1b. Not a vineland. Stand dominated by trees, shrubs, forbs and graminoids or sparse vegetation..... **2**

2a. Stands lacking trees; grass/sedge- and shrub-dominated (heath etc.) balds and rocky summits and cliffs with sparse vegetation; these are distinctive, non-forested communities generally occurring at higher elevations, above 1,220 m (4,000 feet) elevation (but rarely down to 1,065 m [3,500 feet]); some types are further restricted to locations above 1,370 m (4,500 feet) or 1,525 m (5,000 feet) in elevation. **3**
2b. Stands with trees present to dominant at low to moderate cover; pine- or hardwood-dominated rocky woodlands, boulderfields (woodland phases of these associations), Hawthorn "orchards" and exfoliation domes. Found at middle- to lower-elevations generally below 1,220 m (4,000 feet) elevation (but rarely up to 1,340 m [4,400 feet], and 1,525 m [5,000 feet] in the case of the Hawthorn "orchard"). **13**

3a. Densely vegetated herb/shrub- or herb-dominated communities. [NOTE: true, natural balds are found on or near the AT corridor in only three limited areas: Whitetop Mountain area (southern VA), the Carvers Gap - Roan Mountain area (TN/NC), and Big Bald (TN/NC.]
[Southern Appalachian Shrub and Grass Balds] **4**
3b. Sparsely vegetated communities occupying vertical to horizontal rock outcrops of peaks, ridges, cliffs, upper slopes, and other topographically exposed positions. Short-statured herbs, mosses, and lichens are the most prevalent lifeforms with shrubs and graminoids sometimes encountered.
[Southern Appalachian Rocky Summits] **11**

4a. Communities dominated by shrub species Note: *Rubus*- (blackberry) dominated communities are found in Section 4 (Successional and Ruderal Vegetation). **5**
4b. Communities dominated by graminoid species (Poaceae and Cyperaceae). These following are natural grass- or sedge-dominated balds, which are only found at three locations: Whitetop Mtn (VA); Carvers Gap/Roan Mtn (TN/NC); and Big Bald (TN/NC). Some examples may contain some *Phleum pratense* (timothy), but these should not be confused with *Phleum*- (timothy) dominated pastures or hayfields of anthropogenic origin at lower elevations (CEGL004018). Some examples may have tall herbs, *Rubus* (blackberry) spp., or other shrubs at less than 25% cover, perhaps confounding the determination and/or signature. [Note: non-native herbaceous communities are found in Section 4.] **10**

5a. Shrubland primarily composed of *Alnus viridis* ssp. *crispa* (mountain alder); this vegetation of limited distribution at and near Carvers Gap on Roan Mountain. Cover of *Alnus* (alder) usually >35%, but maybe 25% when mixed with *Rhododendron catawbiense* (Catawba rosebay); sometimes with *Rubus canadensis* (smooth blackberry) codominant. Other common species include *Vaccinium corymbosum* (highbush blueberry), *Vaccinium simulatum* (upland highbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and *Crataegus* (hawthorn) spp. This community should be generously applied in this local area; there may be confusion with shrublands dominated by *Rhododendron catawbiense* (Catawba rosebay). ..... **Southern Appalachian Alder Bald (CEGL003891)**
[*Alnus viridis* ssp. *crispa / Carex pensylvanica* Shrubland]
5b. Shrubland dominated by ericaceous species (*Rhododendron* (rhododendron), *Vaccinium* (blueberry), etc.). **6**

6a. Primarily deciduous ericaceous shrublands **7**
6b. Primarily evergreen ericaceous shrublands. In the vicinity of Carvers Gap on Roan Mountain, there may be confusion with Southern Appalachian Alder Bald (CEGL003891), and a stand containing a mixture of *Alnus* (alder) and *Rhododendron* (rhododendron) spp. should be interpreted as CEGL003891 unless it is clearly dominated by *Rhododendron* (>75% cover). **8**

7a. Deciduous shrubland codominated by *Menziesia pilosa* (minniebush), stunted *Sorbus americana* (American mountain-ash), and either *Vaccinium simulatum* (upland highbush blueberry) or *Vaccinium erythrocarpum* (southern mountain cranberry), or both. Restricted to the Rogers - Whitetop massif of the southern VA Blue Ridge. Primarily associated with, and adjacent to, rock outcrops..... **Southern Appalachian Deciduous Heath Bald (CEGL004819)**
[*Menziesia pilosa - Vaccinium (erythrocarpum, simulatum, corymbosum) - Sorbus americana* Shrubland]
7b. Primarily deciduous to mixed shrubland dominated by *Vaccinium simulatum* (upland highbush blueberry) and *Rhododendron catawbiense* (Catawba rosebay), without *Menziesia pilosa* (minniebush) or *Sorbus americana* (American mountain-ash), not adjacent to or directly associated with rock outcrops (this vegetation seen at Grayson Highlands State Park, VA; could be present in other areas of the Rogers - Whitetop massif and other parts of the higher elevation (>1,370 m [4,500 feet]), Southern Blue Ridge as well. [Deciduous/mixed variant of]. ..... **Southern Appalachian Catawba Rosebay Heath Bald (CEGL003818)**
[*Rhododendron catawbiense* Shrubland]

8a. Shrub thicket composed almost entirely of *Rhododendron catawbiense* (Catawba rosebay). Other scattered trees and shrubs can include *Photinia melanocarpa* (black chokeberry), *Abies fraseri* (Fraser fir), and *Picea rubens* (red spruce). Generally higher elevation than CEGL003814. ..... **Southern Appalachian Catawba Rosebay Heath Bald (CEGL003818)**
[*Rhododendron catawbiense* Shrubland]
8b. *Rhododendron catawbiense* (Catawba rosebay) present, but occurring with other species including *Kalmia latifolia* (mountain laurel), *Rhododendron carolinianum* (Carolina azalea), *Gaylussacia baccata* (black huckleberry), *Pieris floribunda* (mountain fetterbush), *Vaccinium* (blueberry) spp., *Sorbus americana* (American mountain-ash), and *Leiophyllum buxifolium* (sand-myrtle). **9**

9a. Dense shrub thickets 1 to 4 m (3.3-13 feet) tall; mostly evergreen, but may have local dominance by deciduous shrubs. Dominant shrubs are *Kalmia latifolia* (mountain laurel), *Rhododendron catawbiense* (Catawba rosebay), *Gaylussacia baccata* (black huckleberry), *Pieris floribunda* (mountain fetterbush), or *Vaccinium corymbosum* (highbush blueberry). Sites are southerly exposed ridges and steep slopes typically below 1,525 m (5,000 feet) elevation. ..... **Southern Appalachian Mountain Laurel Bald (CEGL003814)**
[*Kalmia latifolia - Rhododendron catawbiense - (Gaylussacia baccata, Pieris floribunda, Vaccinium corymbosum)* Shrubland]
9b. Open to dense shrub-dominated vegetation 0.5 to 4 m (0.6-3.3 feet) tall. Dominant shrubs include *Rhododendron carolinianum* (Carolina azalea), *Rhododendron catawbiense* (Catawba rosebay), and *Leiophyllum buxifolium* (sand-myrtle); also *Vaccinium corymbosum* (highbush blueberry), *Vaccinium simulatum* (upland highbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry). Sites are typically above 1,525 m (5,000 feet) elevation, in the spruce-fir zone. ..... **Southern Appalachian Heath Bald (CEGL007876)**
[*Rhododendron carolinianum - Rhododendron catawbiense - Leiophyllum buxifolium* Shrubland]

10a. Natural grassy bald type, usually with a high percentage of *Danthonia compressa* (flattened oatgrass), which will be more-or-less evident depending on the season of the year. Other native species that may be present include *Sibbaldiopsis tridentata* (shrubby fivefingers), *Angelica triquinata* (filmy angelica), *Oclemena acuminata* (whorled wood aster), *Carex pensylvanica* (Pennsylvania sedge), other *Carex* (sedge) spp., *Gentiana austromontana* (Appalachian gentian), *Gentianella quinquefolia* (agueweed), *Houstonia serpyllifolia* (thymeleaf bluet), *Lysimachia quadrifolia* (whorled yellow loosestrife), *Packera schweinitziana* (Schweinitz's ragwort), *Potentilla canadensis* (dwarf cinquefoil), *Prenanthes roanensis* (Roan Mountain rattlesnakeroot), *Solidago bicolor* (white goldenrod), *Solidago glomerata* (clustered goldenrod), and *Stachys clingmanii* (Clingman's hedgenettle). ..... **Grassy Bald (Southern Grass Type) (CEGL004242)**
[*Danthonia compressa - (Sibbaldiopsis tridentata)* Grassland]
10b. Less common grassy bald type, with similar species as CEGL004242 but with *Carex pensylvanica* (Pennsylvania sedge) dominant. Small patches (below MMU) of *Carex* (sedge) may represent inclusions. (Not all *Carex* is *Carex pensylvanica*). ..... **Grassy Bald (Sedge Type) (CEGL004094)**
[*Carex pensylvanica* Grassland]

11a. Cliff sparse vegetation characterized by *Asplenium montanum* (mountain spleenwort) and *Heuchera villosa* (hairy alumroot); mosses and lichens abundant; occurring on felsic, metamorphic and igneous vertical rock faces and cliffs. ..... **Appalachian Felsic Cliff (CEGL004980)**
[*Asplenium montanum - Heuchera villosa* Felsic Cliff Sparse Vegetation]
11b. Herbaceous rocky summit vegetation..... **12**

12a. Found above 1,810 m (5,940 feet) elevation. ..... **Southern Appalachian High-Elevation Rocky Summit (High Peak Type) (CEGL004277)**
[*Saxifraga michauxii - Carex misera - Oclemena acuminata - Solidago glomerata* Grassland]
12b. Found between 1,065 and 1,810 m (3,500-5,940 feet) elevation ..... **Southern Appalachian High-Elevation Rocky Summit (Typic Type) (CEGL004279)**
[*Saxifraga michauxii - Carex misera - Danthonia spicata - Krigia montana* Grassland]

13a. Rooting substrate contains less than 50% and usually less than 10% surface rocks and boulders; well-developed soil layer present. Canopy composed of *Crataegus* (hawthorn) spp., possibly mixed with some combination of *Quercus rubra* (northern red oak), *Betula alleghaniensis* (yellow birch), *Prunus pensylvanica* (pin cherry), and/or *Aesculus flava* (yellow buckeye). Ruderal Forest or shrubland of moderate stature (5-15 m). [Note: some examples of High-Elevation Red Oak Forest (Tall Herb Type) (CEGL007298) may have a *Crataegus* (hawthorn) understory.] ..... **Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata - Crataegus flabellata* Ruderal Forest]
13b. Rooting substrate contains greater than 50% surface rocks and boulders; well-developed soil layer present or absent; boulderfields, rocky woodlands, and shrubby exfoliation domes..... **14**

14a. Boulderfields (open canopy [woodland]) examples. Rooting substrate composed of large rocks and boulders with very little soil development. Canopy includes mesophytic species including *Aesculus flava* (yellow buckeye), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Tilia americana* (American basswood), etc. *Crataegus* (hawthorn) spp. not dominant **15**
14b. Rocky woodlands or herbaceous/shrubby exfoliation domes..... **16**

15a. Typically occurring above 1,220 m (4,000 feet) elevation. Canopy strongly dominated by *Betula alleghaniensis* (yellow birch). Other species that may form a minor canopy component include *Aesculus flava* (yellow buckeye), *Prunus pensylvanica* (pin cherry), and *Sorbus americana* (American mountain-ash). ..... **Southern Appalachian Boulderfield Forest (Currant & Rockcap Fern Type) (CEGL006124)**
[*Betula alleghaniensis / Ribes glandulosum / Polypodium appalachianum* Forest]

15b. Typically occurring below 1,220 m (4,000 feet) elevation. Canopy more diverse. Typically dominated by *Betula alleghaniensis* (yellow birch) and *Aesculus flava* (yellow buckeye) with associates including *Betula lenta* (sweet birch) and *Tilia americana* (American basswood). Common shrubs and subcanopy trees are *Acer spicatum* (mountain maple), *Hydrangea arborescens* (wild hydrangea), *Euonymus obovatus* (running strawberry-bush), and *Ribes* (currant) spp. ..... **Southern Appalachian Hardwood Rich Boulderfield Forest (CEGL004982)**
[*Betula alleghaniensis - Tilia americana* var. *heterophylla / Acer spicatum / Ribes cynosbati / Dryopteris marginalis* Forest]

16a. Rocky woodlands **or** herbaceous/shrubby exfoliation domes whose stands have presence of (but not necessarily dominance by) circumneutral indicator taxa such as *Carya* (hickory) species, *Philadelphus hirsutus* (streambank mock orange), *Ostrya virginiana* (hophornbeam), *Acer leucoderme* (chalk maple), *Cornus florida* (flowering dogwood), *Celtis tenuifolia* (dwarf hackberry), *Staphylea trifolia* (American bladdernut), *Cercis canadensis* (eastern redbud), and *Chionanthus virginicus* (white fringetree). Dominants may include *Pinus virginiana* (Virginia pine), *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), *Juniperus virginiana* var. *virginiana* (eastern red-cedar), *Pinus virginiana* (Virginia pine), and *Acer rubrum* (red maple). **17**

16b. Rocky woodlands, dominated by hardwoods, pines, or a variable mixture of these. Dominants include *Pinus virginiana* (Virginia pine), *Pinus pungens* (Table Mountain pine), *Pinus rigida* (pitch pine), *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), *Kalmia latifolia* (mountain laurel), *Vaccinium stamineum* (deerberry), and *Vaccinium pallidum* (Blue Ridge blueberry). Some examples have *Quercus ilicifolia* (bear oak). Stands lack circumneutral indicator taxa such as *Carya* (hickory) spp., *Philadelphus hirsutus* (streambank mock orange), *Ostrya virginiana* (hophornbeam), *Acer leucoderme* (chalk maple), *Cornus florida* (flowering dogwood), *Celtis tenuifolia* (dwarf hackberry), *Staphylea trifolia* (American bladdernut), *Cercis canadensis* (eastern redbud), and *Chionanthus virginicus* (white fringetree). **18**

17a. Granitic exfoliation domes. Trees are at low cover (generally below 35%), and may be scattered individuals or small patches. Vegetation consists primarily of lichens on bare rock, or of shallow mats generally dominated by *Selaginella rupestris* (northern selaginella). Other characteristic herbaceous species are *Baptisia tinctoria* (horseflyweed), *Cheilanthes lanosa* (hairy lipfern), *Coreopsis major* (greater tickseed), *Corydalis sempervirens* (rock harlequin), *Danthonia sericea* (downy danthonia), *Lindernia monticola* (piedmont false pimpernel), *Phlox nivalis* (trailing phlox), *Schizachyrium scoparium* (little bluestem), *Scleria triglomerata* (whip nutrush), and *Talinum teretifolium* (quill fameflower). Woody species are scattered but may include *Carya pallida* (sand hickory), *Chionanthus virginicus* (white fringetree), *Fraxinus americana* (white ash), *Juniperus virginiana* (eastern red-cedar), *Kalmia latifolia* (mountain laurel), *Pinus rigida* (pitch pine), and *Quercus prinus* (chestnut oak). ..... **Appalachian Low-Elevation Granitic Dome (CEGL007690)**
[*Selaginella rupestris - Schizachyrium scoparium - Hypericum gentianoides - Bulbostylis capillaris* Rocky Grassland]

17b. Rocky woodlands over mafic biotite gneiss or calcareous shale geology of northeast GA, primarily dominated by trees, perhaps in heterogeneous patches, typically with canopy density from 35-60%, with some instances of higher and lower densities. **19**

18a. Vegetation associated with mafic biotite gneiss geology with veins of base-rich hornblende gneiss. Canopy composed of scattered *Carya glabra* (pignut hickory), *Fraxinus americana* (white ash), *Quercus prinus* (chestnut oak), *Ostrya virginiana* (hophornbeam), and *Chionanthus virginicus* (white fringetree). *Juniperus virginiana* (eastern red-cedar) is frequent but not always present. Shrubs are scattered and may include *Ptelea trifoliata* (common hoptree), *Physocarpus opulifolius* (common ninebark), *Hypericum prolificum* (shrubby St. John's-wort), *Vaccinium stamineum* (deerberry), *Vaccinium pallidum* (Blue Ridge blueberry), *Lonicera flava* (yellow honeysuckle), *Amelanchier sanguinea* (roundleaf serviceberry), and *Rosa carolina* (Carolina rose). ....**Montane Basic Hardwood - Red-cedar Woodland (CEGL003752)**
[*Carya (glabra, alba) - Fraxinus americana - (Juniperus virginiana* var. *virginiana)* Woodland]
18b. Deciduous or mostly deciduous small-patch, rocky woodlands on shale, typically dominated by *Quercus prinus* (chestnut oak), *Juniperus virginiana* var. *virginiana* (eastern red-cedar), *Pinus virginiana* (Virginia pine), and *Acer rubrum* (red maple). Some stands have *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Carya carolinae-septentrionalis* (southern shagbark hickory), and *Fraxinus americana* (white ash). Typical shrubs include *Philadelphus hirsutus* (streambank mock orange) and *Ostrya virginiana* (hophornbeam). Other shrubs and small trees may include *Acer leucoderme* (chalk maple), *Cornus florida* (flowering dogwood), *Celtis tenuifolia* (dwarf hackberry), *Staphylea trifolia* (American bladdernut), *Cercis canadensis* (eastern redbud), *Chionanthus virginicus* (white fringetree), *Ulmus rubra* (slippery elm), *Ptelea trifoliata* (common hoptree), and *Symphoricarpos orbiculatus* (coralberry). ....**Blue Ridge Calcareous Shale Slope Woodland (CEGL007720)**
[*Quercus prinus - Juniperus virginiana - (Pinus virginiana) / Philadelphus hirsutus - Celtis occidentalis* Woodland]

19a. Canopy dominated by *Pinus pungens* (Table Mountain pine) and/or *Pinus rigida* (pitch pine), possibly with *Pinus virginiana* (Virginia pine), but this not dominant. Characteristic shrubs include *Kalmia latifolia* (mountain laurel), *Vaccinium pallidum* (Blue Ridge blueberry), *Gaylussacia baccata* (black huckleberry), *Lyonia ligustrina* var. *ligustrina* (maleberry), and *Vaccinium stamineum* (deerberry). Southern Appalachian examples are generally found above 610 m (2,000 feet) elevation. .....**Blue Ridge Table Mountain Pine - Pitch Pine Woodland (Typic Type) (CEGL007097)**
[*Pinus pungens - Pinus rigida - (Quercus prinus) / Kalmia latifolia - Vaccinium pallidum* Woodland]
19b. Canopy primarily dominated by *Pinus virginiana* (Virginia pine), with *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak) sometimes present. Generally found below 610 m (2,000 feet) elevation. Canopy 5-25 m tall, 25-75% cover. **20**

20a. Canopy primarily dominated by *Pinus virginiana* (Virginia pine), with *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak) sometimes present in substantial numbers in less extreme habitats. The shrub layer is very sparse and may include scattered individuals of *Kalmia latifolia* (mountain laurel), *Vaccinium stamineum* (deerberry), and *Vaccinium pallidum* (Blue Ridge blueberry). This should be a distinctive community on a distinctive substrate, with a stunted canopy, with a sparse herb and shrub strata, and characterized by species able to grow in loose shale fragments..... **Blue Ridge Acidic Shale Woodland (CEGL003624)**
[*Pinus virginiana / Vaccinium pallidum / Schizachyrium scoparium - Carex pensylvanica* Woodland]
20b. Very rare dry pine woodland / low density forest, primarily dominated by *Pinus virginiana* (Virginia pine), with at least 10% cover of diverse herbs with dry woodland species such as *Schizachyrium scoparium* (little bluestem), *Tephrosia virginiana* (Virginia tephrosia), *Solidago odora* (anise-scented goldenrod), etc. ....**Appalachian Low-Elevation Mixed Pine / Little Bluestem Forest (CEGL008500)**
[*Pinus virginiana - (Pinus rigida, Pinus pungens) / Schizachyrium scoparium* Forest]

6. Mesophytic Hardwoods and Rich Mesic Forests

1a. Boulderfields: rooting substrate composed of large rocks and boulders with very little soil development. Canopy includes mesophytic species including *Aesculus flava* (yellow buckeye), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Tilia americana* (American basswood), etc. **[Southern Appalachian Northern Hardwoods]** **2**
1b. Rooting substrate contains less than 50% and usually less than 10% surface rocks and boulders; well-developed soil layer present, canopy various. **[Three Choices]** **3**

2a. Typically occurring above 1,220 m (4,000 feet) elevation. Canopy strongly dominated by *Betula alleghaniensis* (yellow birch). Other species that may form a minor canopy component include *Aesculus flava* (yellow buckeye), *Prunus pensylvanica* (pin cherry), and *Sorbus americana* (American mountain-ash). ..... **Southern Appalachian Boulderfield Forest (Currant & Rockcap Fern Type) (CEGL006124)**
[*Betula alleghaniensis / Ribes glandulosum / Polypodium appalachianum* Forest**]**
2b. Typically occurring below 1,220 m (4,000 feet) elevation. Canopy more diverse. Typically dominated by *Betula alleghaniensis* (yellow birch) and *Aesculus flava* (yellow buckeye) with associates including *Betula lenta* (sweet birch) and *Tilia americana* (American basswood). Common shrubs and subcanopy trees are *Acer spicatum* (mountain maple), *Hydrangea arborescens* (wild hydrangea), *Euonymus obovatus* (running strawberry-bush), and *Ribes* (currant) spp. ..... **Southern Appalachian Hardwood Rich Boulderfield Forest (CEGL004982)**
[*Betula alleghaniensis - Tilia americana* var. *heterophylla / Acer spicatum / Ribes cynosbati / Dryopteris marginalis* Forest]

3a. Canopy composed of *Crataegus* (hawthorn) spp., possibly mixed with some combination of *Quercus rubra* (northern red oak), *Betula alleghaniensis* (yellow birch), *Prunus pensylvanica* (pin cherry), and/or *Aesculus flava* (yellow buckeye). Forest or shrubland of moderate stature (5-15 m). [Note: some examples of High-Elevation Red Oak Forest (Tall Herb Type) (CEGL007298) may have a *Crataegus* (hawthorn) understory.] ..... **Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata - Crataegus flabellata* Ruderal Forest]
3b. Canopy typically dominated (or nearly so) by *Quercus rubra* (northern red oak) or occasionally by *Quercus alba* (white oak) in the case of CEGL007692. Greater than 50% oak cover in canopy..... **4**
3c. Forest dominated by *Betula alleghaniensis* (yellow birch) and/or *Fagus grandifolia* (American beech) and/or *Aesculus flava* (yellow buckeye), or an herbaceous wetland. Canopy dominated neither by *Quercus rubra* (northern red oak) nor by *Crataegus* (hawthorn) spp.; oaks represent less than 50% of canopy cover. [Southern Appalachian Red Oak Forest (CEGL007878) keys out below here, and may be oak-dominated, despite the "less than 50% canopy cover" of oak statement above. This type keys in two places to accommodate this variation.] **[Northern Hardwood Forests]** **8**

4a. *Quercus rubra* (northern red oak) forest in sheltered coves with *Fraxinus americana* (white ash) and/or *Tilia americana* (American basswood); may also contain *Halesia* (silverbell), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech); rich and diverse herbaceous layer. Some examples may be codominated by white ash. Elevation primarily 915 to 1,220 m (3,000-4,000 feet (sometimes up to 1,430 m [4,700 feet]) and sometimes higher. Found from the Smokies south into GA. [This keys in two places to accommodate variation.] ..... **Southern Appalachian Red Oak Cove Forest (CEGL007878)**
[*Quercus rubra - Tilia americana* var. *heterophylla - (Halesia tetraptera* var. *monticola) / Collinsonia canadensis - Prosartes lanuginosa* Forest]

4b. High-elevation *Quercus rubra* (northern red oak) forests with less diverse canopies than cove forests (generally more than 75%, but sometimes down to 50%, *Quercus rubra* (northern red oak)). Elevation above 1,065 m (3,500 feet) in NC, 945 m (3,100 feet) in VA.
[Southern Appalachian Montane Oak Forests] **5**

5a. Mid- to high-elevation *Quercus alba* (white oak)-dominated (generally greater than 50%) forests, often mixed with other *Quercus* (oak) spp. Community found from about 610 to 1,370 m (2,000-4,500 feet) elevation, composed of 25-75% *Quercus alba* (white oak), often with some *Castanea dentata* (American chestnut) and *Quercus rubra* (northern red oak) usually present. Diverse, well-developed herbaceous layer and deep soils with species such as *Podophyllum peltatum* (mayapple) and *Collinsonia canadensis* (richweed). Intergrades with higher elevation oak forests. ..... **Appalachian Montane Oak - Hickory Forest (Rich Type) (CEGL007692)**
[*Quercus alba - Quercus rubra - Quercus prinus / Collinsonia canadensis - Podophyllum peltatum* Forest]

5b. Dominated by *Quercus rubra* (northern red oak) and not *Quercus alba* (white oak). **6**

6a. Less than 20% shrub cover, and well-developed herb layer dominated by *Carex pensylvanica* (Pennsylvania sedge), *Ageratina altissima* var. *roanensis* (white snakeroot), *Eurybia chlorolepis* (mountain aster), *Angelica triquinata* (filmy angelica), and/or *Oclemena acuminata* (whorled wood aster). Stands can be stunted, reduced in height by harsh weather. Some examples may have a *Crataegus* (hawthorn) understory [see CEGL004184 for *Crataegus*-(hawthorn) dominated stands]..... **High-Elevation Red Oak Forest (Tall Herb Type) (CEGL007298)**
[*Quercus rubra / Carex pensylvanica - Ageratina altissima* var. *roanensis* Forest]

6b. Greater than 20% shrub cover, and herb layer less well-developed and lacking species listed above. **7**

7a. Shrub layer mainly deciduous shrubs. ..... **Southern Appalachian High-Elevation Red Oak Forest (Deciduous Shrub Type) (CEGL007300)**
[*Quercus rubra / (Vaccinium simulatum, Rhododendron calendulaceum) / (Dennstaedtia punctilobula, Thelypteris noveboracensis)* Forest]

7b. Shrub layer mainly evergreen, greater than 20%, usually about 100% *Rhododendron* (rhododendron) and/or *Kalmia latifolia* (mountain laurel). ..... **Southern Appalachian High-Elevation Red Oak Forest (Evergreen Shrub Type) (CEGL007299)**
[*Quercus rubra / (Kalmia latifolia, Rhododendron catawbiense, Rhododendron maximum) / Galax urceolata* Forest]

8a. Canopy entirely dominated (or nearly so) by *Fagus grandifolia* (American beech). Stands found above 1,370 m (4,500 feet) elevation. Indicator species include *Poa alsodes* (grove bluegrass), *Luzula* (woodrush) spp. Common species include *Fagus grandifolia* (American beech), *Ageratina altissima* (white snakeroot), *Carex pensylvanica* (Pennsylvania sedge), *Arisaema triphyllum* (Jack in the pulpit), *Luzula* (woodrush) spp., *Solidago curtisii* (mountain decumbent goldenrod), *Viola* (violet) spp., *Aesculus flava* (yellow buckeye). ..... **Southern Appalachian Beech Gap (CEGL006130)**
[*Fagus grandifolia / Carex pensylvanica - Ageratina altissima* var. *roanensis* Forest]
8b. Canopy not entirely dominated by *Fagus grandifolia* (American beech). Elevations various **9**

9a. Elevation usually greater than 1,100 m (3,600 feet), but as low as 975 m (3,200 feet) in some cases. Canopy codominated by *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and *Aesculus flava* (yellow buckeye). Indicator species include *Viburnum lantanoides* (hobblebush), *Prunus serotina* (black cherry), *Allium burdickii* (narrowleaf wild leek). Common species include *Betula alleghaniensis* (yellow birch), *Ageratina altissima* (white snakeroot), *Fagus grandifolia* (American beech), *Acer pensylvanicum* (striped maple), *Acer saccharum* (sugar maple). **10**
9b. Elevation generally below 1,100 m (3,600 feet), though sometimes as high as 1,220-1,370 m (4,000-4,500 feet). Canopy variously codominated by *Acer saccharum* (sugar maple), *Aesculus flava* (yellow buckeye), *Liriodendron tulipifera* (tuliptree), *Betula lenta* (sweet birch), *Tilia americana* (American basswood); particularly var. *heterophylla* (Appalachian basswood), *Fraxinus americana* (white ash), *Quercus rubra* (northern red oak), *Halesia tetraptera* var. *monticola* (mountain silverbell), *Prunus serotina* (black cherry). Common species include *Arisaema triphyllum* (Jack in the pulpit), *Caulophyllum thalictroides* (blue cohosh), *Actaea racemosa* (black baneberry), *Laportea canadensis* (Canadian woodnettle), *Prosartes lanuginosa* (yellow fairybells), and *Viola* (violet) spp. **[Central and Southern Appalachian Cove Forests]** **14**

10a. Wetland or seep within matrix of cove or northern hardwood forests. ..... **Key to SBR Keys #2**
10b. Mesic forest, but not a wetland. **11**

11a. Mixed northern hardwood forest, with or without *Tsuga canadensis* (eastern hemlock), at elevations of 1,035 to 1,525 (1,585) m (3,400-5,000 (5,200) feet); with a strong *Betula alleghaniensis* (yellow birch) component over a dense *Rhododendron* (rhododendron) cover and few herbs. *Picea rubens* (red spruce) may be a component. ..... **Blue Ridge Hemlock - Northern Hardwood Forest (CEGL007861)**
[*Betula alleghaniensis - (Tsuga canadensis) / Rhododendron maximum / (Leucothoe fontanesiana)* Forest]
11b. Primarily deciduous forest (northern hardwoods and a possibly related type of ambiguous origin); common species include *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple), *Aesculus flava* (yellow buckeye), *Acer pensylvanicum* (striped maple); the 'possibly related type' will include *Betula lenta* (sweet birch), *Magnolia fraseri* (mountain magnolia), *Nyssa sylvatica* (blackgum), and *Oxydendrum arboreum* (sourwood) **12**

12a. Forest which may resemble a northern hardwoods forest, but its highly variable stands are composed of larger and older specimens of transgressive subcanopy ("successional") species. Canopy dominated by some combination of *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Magnolia fraseri* (mountain magnolia), *Nyssa sylvatica* (blackgum), *Oxydendrum arboreum* (sourwood), and *Betula alleghaniensis* (yellow birch), but not strongly dominated by yellow birch. Shrub species are primarily evergreen, and *Kalmia latifolia* (mountain laurel) and *Rhododendron maximum* (great

laurel) can be very dense. Oak may be present in the canopy, but generally at less than 25% cover. Found on midslopes and saddles of various aspects and of varying topographic complexity. These stands are thought to have originated from episodes of logging and/or fire, but not severe soil disturbance such as cultivation or site clearing. This community may have originally been dominated by *Castanea dentata* (American chestnut) until its decline due to chestnut blight. This released the other hardwood species in the understory, resulting in this composition. In higher elevation examples, this community may be a long-term postdisturbance example of Southern Appalachian Northern Hardwood Forest (Typic Type) (CEGL007285). ..... **Southern Appalachian Ruderal Acidic Mixed Hardwood Forest (CEGL008558)**

[*Acer rubrum* var. *rubrum - Betula lenta - Magnolia fraseri / (Rhododendron maximum, Kalmia latifolia)* Ruderal Forest]

12b. True northern hardwoods forests, lacking dominance by successional species. Dominance or codominance by *Betula alleghaniensis* (yellow birch) is typical. **13**

13a. Rich mesic herbaceous layer approaching that of a cove forest. Canopy usually divided among *Betula alleghaniensis* (yellow birch), *Aesculus flava* (yellow buckeye), and *Acer saccharum* (sugar maple); also with *Fraxinus americana* (white ash) and *Tilia americana* var. *heterophylla* (Appalachian basswood). Sometimes intergrades with rich coves around 1,065 to 1,220 m (3,500-4,000 feet) elevation. Species indicative of high base status include *Caulophyllum thalictroides* (blue cohosh), *Actaea racemosa* (black baneberry), *Collinsonia canadensis* (richweed), *Laportea canadensis* (Canadian woodnettle), and *Campanulastrum americanum* (American bellflower). ..... **Southern Appalachian Northern Hardwood Forest (Rich Type) (CEGL004973)**

[*Aesculus flava - Betula alleghaniensis - Acer saccharum / Caulophyllum thalictroides - Actaea podocarpa* Forest]

13b. Less diverse herbaceous layer, lacking high base indicators mentioned above. Stands tend to be dominated by *Betula alleghaniensis* (yellow birch) with smaller amounts of *Fagus grandifolia* (American beech), *Aesculus* (buckeye), and *Acer saccharum* (sugar maple) in canopy. This type tends to be more common than CEGL004973. Indicator species include *Viburnum lantanoides* (hobblebush), *Ageratina altissima* var. *roanensis* (white snakeroot), *Eurybia chlorolepis* (mountain aster), *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Carex pensylvanica* (Pennsylvania sedge), *Solidago curtisii* (mountain decumbent goldenrod). [Note: some stands may appear "mixed," with some *Picea rubens* (red spruce) in the subcanopy or as a canopy component.] ..... **Southern Appalachian Northern Hardwood Forest (Typic Type) (CEGL007285)**

[*Betula alleghaniensis - Fagus grandifolia / Viburnum lantanoides / Eurybia chlorolepis - Dryopteris intermedia* Forest]

14a. Mesic forest with a canopy containing *Quercus rubra* (northern red oak) ranging from 10-25% cover (a significant component but not dominant); on sheltered slopes or coves with *Fraxinus americana* (white ash) and/or *Tilia americana* (American basswood); may also contain *Halesia* (silverbell), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech); rich and diverse herbaceous layer. Some examples may be codominated by white ash. Elevation 915-1,220 (1,430) m (3,000-4,000 [4,700] feet) and sometimes higher. Found from the Smokies south into GA. (This keys in two places to accommodate variations.) ..... **Southern Appalachian Red Oak Cove Forest (CEGL007878)**

[*Quercus rubra - Tilia americana* var. *heterophylla - (Halesia tetraptera* var. *monticola) / Collinsonia canadensis - Prosartes lanuginosa* Forest]

14b. Mesic forest with a canopy containing *Acer saccharum* (sugar maple), *Tilia americana* (American basswood), *Aesculus flava* (yellow buckeye), *Prunus serotina* (black cherry), and *Fraxinus americana* (white ash), possibly with *Liriodendron tulipifera* (tuliptree)..... **15**

15a. Cove forest, canopy generally including *Liriodendron tulipifera* (tuliptree), its coverage highly variable, often 40%, but sometimes close to 100%. Also with *Fraxinus americana* (white ash), *Tilia americana* var. *heterophylla* (Appalachian basswood), *Aesculus flava* (yellow buckeye), and *Magnolia acuminata* (cucumber-tree). Indicator species can include *Carya cordiformis* (bitternut hickory), *Trillium vaseyi* (sweet wakerobin), *Galearis spectabilis* (showy orchid), *Sanicula canadensis* (Canadian black-snakeroot), and *Phegopteris hexagonoptera* (broad beechfern). Mean elevation ca. 750 m (2,460 feet)..... **Southern Appalachian Rich Cove Forest (Typic Type) (CEGL007710)**
[*Liriodendron tulipifera - Fraxinus americana - (Aesculus flava) / Actaea racemosa - Laportea canadensis* Forest]

15b. Canopy diverse, often with *Acer saccharum* (sugar maple), *Tilia americana* (American basswood); particularly var. *heterophylla* (Appalachian basswood), *Aesculus flava* (yellow buckeye), *Prunus serotina* (black cherry), and *Fraxinus americana* (white ash) all as part of canopy. Extremely diverse and rich herbaceous layer. Indicator species (including calciphiles) can include *Hydrophyllum canadense* (bluntleaf waterleaf), *Asplenium rhizophyllum* (walking fern), *Asarum canadense* (Canadian wildginger), *Cystopteris* (bladderfern) sp., and *Hepatica nobilis* var. *acuta* (sharp-lobe hepatica). Mean elevation ca. 1,000 m (3,280 feet). This association does not list *Liriodendron tulipifera* (tuliptree) as a component, but it is found within the elevational range of tuliptree. ..... **Southern Appalachian Rich Cove Forest (Montane Calcareous Type) (CEGL007695)**
[*Aesculus flava - Acer saccharum - (Tilia americana* var. *heterophylla) / Hydrophyllum canadense - Solidago flexicaulis* Forest]

7. Spruce and Fir Forests

1a. Primarily evergreen tree canopy, at least 75% cover by evergreen needle-leaved trees [e.g., *Abies fraseri* (Fraser fir) and/or *Picea rubens* (red spruce)]. **2**
1b. Mixed evergreen-deciduous tree canopy, from 25% to 50% cover by evergreen needle-leaved trees [e.g., *Abies* (fir) and/or *Picea* (spruce)] and from 25% to 50% cover by deciduous broad-leaved trees [e.g., *Betula* (birch) and/or *Aesculus flava* (yellow buckeye) or other species). **6**

2a. Mostly evergreen shrub layer..... **3**
2b. Deciduous shrub layer present or shrub layer dominated by spruce or fir, diverse herb layer present with *Oxalis montana* (mountain woodsorrel), *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Dryopteris campyloptera* (mountain woodfern), *Clintonia borealis* (bluebead), *Oclemena acuminata* (whorled wood aster), and *Eurybia chlorolepis* (mountain aster) common. **5**

3a. *Picea rubens* (red spruce) sometimes with *Tsuga canadensis* (eastern hemlock); moist protected slope forests with as shrub layer dominated by *Rhododendron maximum* (great laurel). ..... **Red Spruce Forest (Protected Slope Type) (CEGL006152)**
[*Picea rubens* - (*Tsuga canadensis*) / *Rhododendron maximum* Forest]
3b. *Abies fraseri* (Fraser fir) present..... **4**

4a. *Rhododendron catawbiense* (Catawba rosebay) and *Rhododendron maximum* (great laurel) (>75% cover of evergreens); occurring at a broad range of elevations within the spruce-fir zone (above 1,555 m [5,100 feet]) dominated by *Abies fraseri* (Fraser fir) and/or *Picea rubens* (red spruce). ..... **Red Spruce - Fraser Fir Forest (Evergreen Shrub Type) (CEGL007130)**
[*Picea rubens - (Abies fraseri) / (Rhododendron catawbiense, Rhododendron maximum)* Forest]
4b. *Abies fraseri* (Fraser fir) dominant, occurring over a shrub stratum dominated by evergreen species, typically *Rhododendron catawbiense* (Catawba rosebay), *Rhododendron maximum*, and *Rhododendron carolinianum* (Carolina azalea). ..... **Fraser Fir Forest (Evergreen Shrub Type) (CEGL006308)**
[*Abies fraseri* / (*Rhododendron catawbiense*, *Rhododendron carolinianum*) Forest]

5a. Occurring at lower elevations within the spruce-fir zone (1,675-1,890 m [5,500-6,200 feet]) and more strongly dominated by *Picea rubens* (red spruce), usually on slightly more sheltered sites. ..... **Red Spruce - Fraser Fir Forest (Deciduous Shrub Type) (CEGL007131)**
[*Picea rubens - (Abies fraseri) / Vaccinium erythrocarpum / Dryopteris campyloptera / Hylocomium splendens* Forest]
5b. Occurring at highest elevations (above 1,830 m [6,000 feet]) and in areas formerly strongly dominated by *Abies fraseri* (Fraser fir), now with many standing and dead trees, occurring as isolated islands on exposed summits, usually with heavy fir regeneration. Some stands are so dense they have no herb layer. ..... **Fraser Fir Forest (Deciduous Shrub Type) (CEGL006049)**
[*Abies fraseri / Viburnum lantanoides / Dryopteris campyloptera - Oxalis montana / Hylocomium splendens* Forest]

6a. Canopy composed of *Picea rubens* (red spruce) with *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and *Aesculus flava* (yellow buckeye). Shrub stratum open to absent; herbaceous stratum well-developed, may be lush and diverse. Typical herbs include *Oclemena acuminata* (whorled wood aster), *Carex pensylvanica* (Pennsylvania sedge), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Maianthemum canadense* (Canada mayflower), *Oxalis montana* (mountain woodsorrel), and others. ....**Red Spruce - Northern Hardwood Forest (Herb Type) (CEGL006256)**
[*Picea rubens - (Betula alleghaniensis, Aesculus flava) / Viburnum lantanoides / Solidago glomerata* Forest]

6b. Canopy composed of *Picea rubens* (red spruce) with *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and *Aesculus flava* (yellow buckeye). Shrub layer well-developed, dominated by *Rhododendron maximum* (great laurel) or *Rhododendron catawbiense* (Catawba rosebay). In the Great Smoky Mountains, *Leucothoe fontanesiana* (highland doghobble) can be dominant. .....**Red Spruce - Northern Hardwood Forest (Shrub Type) (CEGL004983)**
[*Picea rubens - (Betula alleghaniensis, Aesculus flava) / Rhododendron (maximum, catawbiense)* Forest]

8. Dry - Subxeric Forests and Woodlands

1a. Stands with trees present to dominant, from 60% to 100% cover (forests), found at a variety of elevations **2**
1b. Stands with trees present to dominant at low to moderate cover 25% to 60% cover; rocky woodlands dominated by pines, oaks or other hardwoods; or boulderfields (woodland phases of these associations). Found at middle- to lower-elevations generally below 1,220 m (4,000 feet) elevation.... ..... **12**

2a. Evergreen or mixed forests dominated by *Tsuga caroliniana* (Carolina hemlock). Indicator species include *Tsuga caroliniana* (Carolina hemlock), *Goodyera repens* (lesser rattlesnake-plantain), *Leucothoe recurva* (red-twig doghobble), *Rhododendron carolinianum* (Carolina azalea), *Rhododendron minus* (piedmont rhododendron), *Rhododendron maximum* (great laurel), *Rhododendron catawbiense* (Catawba rosebay), *Betula lenta* (sweet birch), *Hexastylis* (heartleaf) spp., *Polypodium appalachianum* (Appalachian polypody), *Trillium undulatum* (painted trillium), *Clethra acuminata* (mountain sweet-pepperbush), *Hamamelis virginiana* (American witch-hazel). Other common species include *Kalmia latifolia* (mountain laurel), *Sassafras albidum* (sassafras), *Galax urceolata* (beetleweed). **3**
2b. Evergreen or mixed forests dominated by *Pinus* (pine) spp. with or without xerophytic deciduous oak species, **or** deciduous forests dominated by (dry-mesic) dry to subxeric *Quercus* (oak) species. **[Southern Appalachian Montane Pine Forests and Woodlands]** **4**

3a. Open shrub layer; canopy dominated by *Tsuga caroliniana* (Carolina hemlock), with codominance of *Pinus* (pine) spp. and some dry-site oaks and hardwoods. The canopy varies from closed to open depending on disturbance history and environment, and the shrub layer is patchy to open, with *Rhododendron minus* (piedmont rhododendron), *Vaccinium pallidum* (Blue Ridge blueberry), and *Gaultheria procumbens* (eastern teaberry). .... **Carolina Hemlock Forest (Pine Type) (CEGL006178)**
[*Tsuga caroliniana - Pinus (rigida, pungens, virginiana)* Forest]
3b. Dense ericaceous shrub layer, canopy dominated by *Tsuga caroliniana* (Carolina hemlock), with little or no pines; (*Quercus prinus* (chestnut oak), *Quercus alba* (white oak), and/or *Quercus rubra* (northern red oak) may be present). Shrub strata tend to be dense and dominated by ericaceous species such as *Kalmia latifolia* (mountain laurel), *Rhododendron catawbiense* (Catawba rosebay), and *Rhododendron minus* (piedmont rhododendron). .... **Carolina Hemlock Forest (Typic Type) (CEGL007139)**
[*Tsuga caroliniana / Kalmia latifolia - Rhododendron catawbiense* Forest]

4a. Canopy dominated largely by dry to subxeric *Quercus* (oak) species..... **5**
4b. Canopy dominated by or including substantial cover by *Pinus* (pine) species..... **7**

5a. Primarily Southern Appalachian forest; canopy dominated largely by dry to subxeric oak species, primarily *Quercus prinus* (chestnut oak) or *Quercus coccinea* (scarlet oak), sometimes *Quercus alba* (white oak), usually (not always) occurring over a nearly completely closed shrub layer of *Kalmia latifolia* (mountain laurel), located on upper slopes and exposed ridgetops. .... **Chestnut Oak Forest (Subxeric Ridge Type) (CEGL006271)**
[*Quercus (prinus, coccinea) / Kalmia latifolia / (Galax urceolata, Gaultheria procumbens)* Forest]

5b. Frequent in the Central Appalachians, ranging south almost to the VA-NC line; a north- or northwest-facing oak forest occurring on convex, upper slopes, cliff tops, and spur crests at elevations from 305 to over 975 m (1,000-3,200 feet) dominated by *Quercus prinus* (chestnut oak) with dense cover of *Rhododendron catawbiense* (Catawba rosebay). This is an exceptionally species-poor, open- to closed-canopy, forest of often stunted (<10 m tall), gnarled trees over a dense evergreen tall-shrub layer..... .....**Central Appalachian Chestnut Oak / Catawba Rosebay Forest (CEGL008524)**
[*Quercus prinus / Rhododendron catawbiense* - *Kalmia latifolia* Forest]

6a. Canopy trees include a mixture of *Pinus strobus* (eastern white pine) (greater than or equal to 25% cover), with *Quercus* (oak) spp. and other hardwoods. **7**
6b. Canopy trees include pines generally associated with subxeric to dry forests (southern yellow pines), especially *Pinus echinata* (shortleaf pine), *Pinus virginiana* (Virginia pine), *Pinus rigida* (pitch pine), and *Pinus pungens* (Table Mountain pine). Pine cover in these communities should be at least 50% (possibly lower [40%] overall in a large heterogeneous mixed stand). These pines require more relative dominance rather than being indicator species by their presence at low cover. *Pinus strobus* (eastern white pine) may be present at low cover, but is not an indicator of this type. **8**

7a. Natural mixed-age forest, canopy trees include a mixture of *Pinus strobus* (eastern white pine), *Quercus coccinea* (scarlet oak), *Quercus prinus* (chestnut oak), and *Quercus velutina* (black oak). Other common species include *Kalmia latifolia* (mountain laurel), *Quercus alba* (white oak), *Nyssa sylvatica* (blackgum), *Oxydendrum arboreum* (sourwood), *Vaccinium pallidum* (Blue Ridge blueberry). Pine cover may be as little as 25% in this and other white pine types, *Pinus strobus* (eastern white pine) being an indicator species. ....**Appalachian White Pine - Subxeric Oak Forest (CEGL007519)**
[*Pinus strobus - Quercus (coccinea, prinus) / (Gaylussacia ursina, Vaccinium stamineum)* Forest]
7b. Successional forest, even-aged or mixed-age and possibly including a mixture of other successional species. Arising from disturbance, but not evidently planted. Some examples may contain *Quercus* (oak) spp., but these are even-aged and similar in age to the dominant *Pinus strobus* (eastern white pine). Pine cover typically 40%, or more. ....**Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

8a. Trees include *Pinus pungens* (Table Mountain pine) and/or *Pinus rigida* (pitch pine). Other trees and tall shrubs include *Kalmia latifolia* (mountain laurel) and *Quercus prinus* (chestnut oak). Found above 610 m (2,000 feet) elevation, though occasionally down to 490 m (1,600 feet). ....**Blue Ridge Table Mountain Pine - Pitch Pine Woodland (Typic Type) (CEGL007097)**
[*Pinus pungens - Pinus rigida - (Quercus prinus) / Kalmia latifolia - Vaccinium pallidum* Woodland]
8b. Canopy trees include *Pinus echinata* (shortleaf pine), *Pinus virginiana* (Virginia pine), *Quercus falcata* (southern red oak), *Quercus stellata* (post oak). Other indicator species include *Carya pallida* (sand hickory), *Cornus florida* (flowering dogwood), *Ilex opaca* var. *opaca* (American holly). Other trees include *Quercus coccinea* var. *coccinea* (scarlet oak), *Quercus alba* (white oak). Can be found below 610 m (2,000 feet) elevation. **[Southern Appalachian Low Mountain Pine Forests]** **9**

9a. Early-successional forest disturbed less than 25 years ago; dominated primarily by *Pinus virginiana* (Virginia pine) or occasionally by *Pinus echinata* (shortleaf pine) or *Pinus rigida* (pitch pine) with little to no *Quercus* (oak) except sometimes abundant *Quercus prinus* (chestnut oak) in extremely fire-suppressed examples. Few herbaceous or understory species. .... **Ruderal Virginia Pine Forest (CEGL002591)**
[*Pinus virginiana* Ruderal Forest]

9b. Later-successional forest (disturbed more than 25 years ago) with more diverse structure and species composition; dominated primarily by *Pinus virginiana* (Virginia pine) or with admixtures of *Pinus echinata* (shortleaf pine) and/or *Pinus rigida* (pitch pine); typically found below 610 m (2,000 feet) elevation..... **10**

10a. Very uncommon dry pine forest with open canopy, approaching a woodland physiognomy, with at least 10% cover of diverse herbs with dry woodland species such as *Schizachyrium scoparium* (little bluestem), *Tephrosia virginiana* (Virginia tephrosia), and *Solidago odora* (anise-scented goldenrod), among others. ....**Appalachian Low-Elevation Mixed Pine / Little Bluestem Forest (CEGL008500)**
[*Pinus virginiana - (Pinus rigida, Pinus pungens) / Schizachyrium scoparium* Forest]

10b. More common dry pine forest with closed canopy, mostly *Vaccinium pallidum* (Blue Ridge blueberry) in low-shrub layer and very little herbaceous cover..... .....**Appalachian Low-Elevation Mixed Pine / Blue Ridge Blueberry Forest (CEGL007119)**
[*Pinus virginiana - Pinus (rigida, echinata) - (Quercus prinus) / Vaccinium pallidum* Forest]

11a. Rocky woodlands, dominated by pines, oaks, other hardwoods, or a variable mixture of these. **12**

11b. Woodland versions of boulderfields; rooting substrate contains greater than 50% surface rocks and boulders. Canopy includes mesophytic species including *Aesculus flava* (yellow buckeye), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Tilia americana* (American basswood), etc..... **16**

12a. Rocky woodlands occurring over mafic biotite gneiss or calcareous shale geology in northeastern GA, primarily dominated by trees, perhaps in heterogeneous patches, typically with canopy density from 35-60%, with some instances of higher and lower densities whose stands have presence of (but not necessarily dominance by) circumneutral indicator taxa such as *Carya* (hickory) species, *Philadelphus hirsutus* (streambank mock orange), *Ostrya virginiana* (hophornbeam), *Acer leucoderme* (chalk maple), *Cornus florida* (flowering dogwood), *Celtis tenuifolia* (dwarf hackberry), *Staphylea trifolia* (American bladdernut), *Cercis canadensis* (eastern redbud), and *Chionanthus virginicus* (white fringetree). Dominants may include *Pinus virginiana* (Virginia pine), *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), *Juniperus virginiana* var. *virginiana* (eastern red-cedar), *Pinus virginiana* (Virginia pine), and *Acer rubrum* (red maple). **13**

12b. Rocky woodlands occurring over more commonly found geologic strata (other than mafic biotite gneiss or calcareous shale), dominated by oaks, other hardwoods, pines, or a variable mixture of these. Dominants include *Pinus virginiana* (Virginia pine), *Pinus pungens* (Table Mountain pine), *Pinus rigida* (pitch pine), *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), *Kalmia latifolia* (mountain laurel), *Vaccinium stamineum* (deerberry), and *Vaccinium pallidum* (Blue Ridge blueberry). Some examples have *Quercus ilicifolia* (bear oak). Stands lack circumneutral indicator taxa such as *Carya* (hickory) spp., *Philadelphus hirsutus* (streambank mock orange), *Ostrya virginiana* (hophornbeam), *Acer leucoderme* (chalk maple), *Cornus florida* (flowering dogwood), *Celtis tenuifolia* (dwarf hackberry), *Staphylea trifolia* (American bladdernut), *Cercis canadensis* (eastern redbud), and *Chionanthus virginicus* (white fringetree). **14**

13a. Vegetation associated with mafic biotite gneiss geology with veins of base-rich hornblende gneiss. Canopy composed of scattered *Carya glabra* (pignut hickory), *Fraxinus americana* (white ash), *Quercus prinus* (chestnut oak), *Ostrya virginiana* (hophornbeam), and *Chionanthus virginicus* (white fringetree). *Juniperus virginiana* (eastern red-cedar) is frequent but not always present. Scattered shrub layer may include *Ptelea trifoliata* (common hoptree), *Physocarpus opulifolius* (common ninebark), *Hypericum prolificum* (shrubby St. John's-wort), *Vaccinium stamineum* (deerberry), *Vaccinium pallidum* (Blue Ridge blueberry), *Lonicera flava* (yellow honeysuckle), *Amelanchier sanguinea* (roundleaf serviceberry), and *Rosa carolina* (Carolina rose)..... .....**Montane Basic Hardwood - Red-cedar Woodland (CEGL003752)**
[*Carya (glabra, alba) - Fraxinus americana - (Juniperus virginiana* var. *virginiana)* Woodland]
13b. Deciduous or mostly deciduous small-patch, rocky woodlands on calcareous shale, dominated by *Quercus prinus* (chestnut oak), *Juniperus virginiana* var. *virginiana* (eastern red-cedar), *Pinus virginiana* (Virginia pine), and *Acer rubrum* (red maple). Some stands have *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Carya carolinae-septentrionalis* (southern shagbark hickory), and *Fraxinus americana* (white ash). Shrubs include *Philadelphus hirsutus* (streambank mock orange) and *Ostrya virginiana* (hophornbeam). Other shrubs and small trees may include *Acer leucoderme* (chalk maple), *Cornus florida* (flowering dogwood), *Celtis tenuifolia* (dwarf hackberry), *Staphylea trifolia* (American bladdernut), *Cercis canadensis* (eastern redbud), *Chionanthus virginicus* (white fringetree), *Ulmus rubra* (slippery elm), *Ptelea trifoliata* (common hoptree), and *Symphoricarpos orbiculatus* (coralberry). ....**Blue Ridge Calcareous Shale Slope Woodland (CEGL007720)**
[*Quercus prinus - Juniperus virginiana - (Pinus virginiana) / Philadelphus hirsutus - Celtis occidentalis* Woodland]

14a. Canopy dominated by *Pinus pungens* (Table Mountain pine) and/or *Pinus rigida* (pitch pine), possibly with *Pinus virginiana* (Virginia pine), but this not dominant. Characteristic shrubs include *Kalmia latifolia* (mountain laurel), *Vaccinium pallidum* (Blue Ridge blueberry), *Gaylussacia baccata* (black huckleberry), *Lyonia ligustrina* var. *ligustrina* (maleberry), and *Vaccinium stamineum* (deerberry). Southern Appalachian examples are generally found above 610 m (2,000 feet) elevation. .....**Blue Ridge Table Mountain Pine - Pitch Pine Woodland (Typic Type) (CEGL007097)**
[*Pinus pungens - Pinus rigida - (Quercus prinus) / Kalmia latifolia - Vaccinium pallidum* Woodland]
14b. Canopy primarily dominated by *Pinus virginiana* (Virginia pine), with *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak) sometimes present. Generally found below 610 m (2,000 feet) elevation. Canopy 5-25 m tall, 25-75% cover. **15**

15a. Canopy primarily dominated by *Pinus virginiana* (Virginia pine), with *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak) sometimes present in substantial numbers in less extreme habitats. The shrub layer is very sparse and may include scattered individuals of *Kalmia latifolia* (mountain laurel), *Vaccinium stamineum* (deerberry), and *Vaccinium pallidum* (Blue Ridge blueberry). This should be a distinctive type on a distinctive substrate, with a stunted canopy and sparse herb and shrub strata characterized by species able to grow in loose shale fragments..... ..... **Blue Ridge Acidic Shale Woodland (CEGL003624)**
[*Pinus virginiana / Vaccinium pallidum / Schizachyrium scoparium - Carex pensylvanica* Woodland]
15b. Very rare dry pine woodland / low density forest, primarily dominated by *Pinus virginiana* (Virginia pine), with at least 10% cover of diverse herbs with dry woodland species such as *Schizachyrium scoparium* (little bluestem), *Tephrosia virginiana* (Virginia tephrosia), *Solidago odora* (anise-scented goldenrod), etc. ....**Appalachian Low-Elevation Mixed Pine / Little Bluestem Forest (CEGL008500)**
[*Pinus virginiana - (Pinus rigida, Pinus pungens) / Schizachyrium scoparium* Forest]

16a. Typically occurring above 1,220 m (4,000 feet) elevation. Canopy strongly dominated by *Betula alleghaniensis* (yellow birch). Other species that may form a minor canopy component include *Aesculus flava* (yellow buckeye), *Prunus pensylvanica* (pin cherry), and *Sorbus americana* (American mountain-ash). ..... **Southern Appalachian Boulderfield Forest (Currant & Rockcap Fern Type) (CEGL006124)**
[*Betula alleghaniensis / Ribes glandulosum / Polypodium appalachianum* Forest]

16b. Typically occurring below 1,220 m (4,000 feet) elevation. Canopy more diverse. Typically dominated by *Betula alleghaniensis* (yellow birch) and *Aesculus flava* (yellow buckeye) with associates including *Betula lenta* (sweet birch) and *Tilia americana* (American basswood). Common shrubs and subcanopy trees are *Acer spicatum* (mountain maple), *Hydrangea arborescens* (wild hydrangea), *Euonymus obovatus* (running strawberry-bush), and *Ribes* (currant) spp. ..... **Southern Appalachian Hardwood Rich Boulderfield Forest (CEGL004982)**
[*Betula alleghaniensis* - *Tilia americana* var. *heterophylla / Acer spicatum / Ribes cynosbati / Dryopteris marginalis* Forest]

9. Dry-Mesic Forests

1a. Dry-mesic mixed to predominantly evergreen forests containing at least 25%, and up to 75%, *Pinus strobus* (eastern white pine) in the canopy and/or subcanopy **2**
1b. Dry-mesic predominantly deciduous forests containing less than 25% evergreen trees. **3**

2a. Dry-mesic to mesic mixed forest containing at least 25% *Pinus strobus* (eastern white pine) with any or all of the following: *Quercus alba* (white oak), *Quercus prinus* (chestnut oak), and *Quercus velutina* (black oak), possibly with *Carya* (hickory) spp. and/or *Liriodendron tulipifera* (tuliptree). In contrast to CEGL007519, this type should not have *Quercus coccinea* (scarlet oak). ..... **Appalachian White Pine - Mesic Oak Forest (CEGL007517)**
[*Pinus strobus - Quercus alba - (Carya alba) / Gaylussacia ursina* Forest]
2b. Dry-mesic to subxeric forest containing at least 25% *Pinus strobus* (eastern white pine) with any or all of the following: *Quercus coccinea* (scarlet oak), *Quercus prinus* (chestnut oak), and *Quercus velutina* (black oak). Other common species include *Kalmia latifolia* (mountain laurel), *Quercus alba* (white oak), *Nyssa sylvatica* (blackgum), and *Oxydendrum arboreum* (sourwood)..... **Appalachian White Pine - Subxeric Oak Forest (CEGL007519)**
[*Pinus strobus - Quercus (coccinea, prinus) / (Gaylussacia ursina, Vaccinium stamineum)* Forest]

3a. Communities at greater than 1,065 m (3,500 feet) elevation and occurring on upper ridges and summits (usually found above 1,370 m [4,500 feet]). **4**
3b. Communities found below 1,220 m (4,000 feet) elevation and occurring on midslopes to lower slopes sometimes occurring on lower, broad ridgetops (occasionally reaching 1,370 m [4,500 feet]). **9**

4a. Canopy largely dominated by *Quercus rubra* (northern red oak) (usually greater than 75%), lacking *Carya* (hickory) species but sometimes with substantial *Quercus prinus* (chestnut oak)..... **5**
4b. Canopy a mix of *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and/or *Quercus prinus* (chestnut oak), usually with *Carya* (hickory) spp., or forests dominated by species other than *Quercus rubra* (northern red oak). **7**

5a. Less than 20% shrub cover in shrub layer; well-developed and diverse herb layer with *Carex pensylvanica* (Pennsylvania sedge), *Ageratina altissima* var. *roanensis* (white snakeroot), *Thelypteris noveboracensis* (New York fern), *Dennstaedtia punctilobula* (eastern hayscented fern), *Eurybia chlorolepis* (mountain aster), and *Oclemena acuminata* (whorled wood aster). ..... **High-Elevation Red Oak Forest (Tall Herb Type) (CEGL007298)**
[*Quercus rubra / Carex pensylvanica - Ageratina altissima* var. *roanensis* Forest]
5b. Greater than 20% shrub cover in shrub layer, generally sparse herb layer..... **6**

6a. Shrub layer mainly deciduous shrubs. ..... **Southern Appalachian High-Elevation Red Oak Forest (Deciduous Shrub Type) (CEGL007300)**
[*Quercus rubra / (Vaccinium simulatum, Rhododendron calendulaceum) / (Dennstaedtia punctilobula, Thelypteris noveboracensis)* Forest]
6b. Shrub layer mainly evergreen, greater than 20%, often about 100% evergreen *Rhododendron* (rhododendron) and *Kalmia latifolia* (mountain laurel). ..... **Southern Appalachian High-Elevation Red Oak Forest (Evergreen Shrub Type) (CEGL007299)**
[*Quercus rubra / (Kalmia latifolia, Rhododendron catawbiense, Rhododendron maximum) / Galax urceolata* Forest]

7a. Very heavy cover (approaching 100% in most cases) of *Rhododendron maximum* (great laurel) in shrub layer. Forest dominated by a mix of *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak), often on north aspect slopes. ..... **Chestnut Oak Forest (Mesic Slope Heath Type) (CEGL006286)**
[*Quercus prinus - Quercus rubra / Rhododendron maximum / Galax urceolata* Forest]
7b. Low to moderate levels of *Rhododendron maximum* (great laurel) in shrub layer. **8**

8a. Forest found from 610 to 1,370 m (2,000-4,500 feet) elevation; 25-75% *Quercus alba* (white oak) canopy cover with *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), and *Carya* (hickory) species also usually present. Canopy can also include *Fraxinus* (ash) and *Tilia americana* (American basswood). Also with a well-developed, diverse herbaceous layer much like a rich cove. Intergrades with higher-elevation oak forests. ..... **Appalachian Montane Oak - Hickory Forest (Rich Type) (CEGL007692)**
[*Quercus alba - Quercus rubra - Quercus prinus / Collinsonia canadensis - Podophyllum peltatum* Forest]
8b. Forest occurring at similar elevations but with more acidic composition. *Gaylussacia* (huckleberry) or *Rhododendron maximum* (great laurel) sometimes present; sparse to moderate herb layer often dominated by ferns. Much less species-rich than CEGL007692. ..... **Appalachian Montane Oak - Hickory Forest (Red Oak Type) (CEGL006192)**
[*Quercus rubra - Acer rubrum / Pyrularia pubera / Thelypteris noveboracensis* Forest]

9a. Canopy dominated or codominated (greater than 50% cover) by *Quercus prinus* (chestnut oak), sometimes (but not always) with abundant *Carya* (hickory) spp. component. Other indicator species include *Galax urceolata* (beetleweed), *Rhododendron maximum* (great laurel). Common species include *Acer rubrum* (red maple), *Kalmia latifolia* (mountain laurel), *Quercus rubra* (northern red oak), *Oxydendrum arboreum* (sourwood), and *Smilax rotundifolia* (roundleaf greenbrier)..... **10**
9b. Canopy not dominated by *Quercus prinus* (chestnut oak) (less than 50% canopy cover). **14**

10a. Mesic *Quercus prinus* (chestnut oak) forest with a dominant shrub layer of *Rhododendron maximum* (great laurel); often on north-facing slopes. ..... **Chestnut Oak Forest (Mesic Slope Heath Type) (CEGL006286)**
[*Quercus prinus - Quercus rubra / Rhododendron maximum / Galax urceolata* Forest]
10b. Mesic to dry forest without a dominant shrub layer of *Rhododendron maximum* (great laurel). **11**

11a. Forests occurring on upper slopes and dry ridges with a nearly closed *Kalmia latifolia* (mountain laurel) layer. Stands may contain *Quercus coccinea* (scarlet oak). ..... **Chestnut Oak Forest (Subxeric Ridge Type) (CEGL006271)**
[*Quercus (prinus, coccinea) / Kalmia latifolia / (Galax urceolata, Gaultheria procumbens)* Forest]
11b. Somewhat protected forests occurring on lower and mid to upper slopes. Dry-mesic, usually diverse canopy of *Quercus alba* (white oak), *Quercus prinus* (chestnut oak), and *Quercus rubra* (northern red oak). Occasionally up to ridgeline, not necessarily dominated by *Quercus prinus* (chestnut oak). **12**

12a. Forests with a strong (sometimes dominant) *Quercus alba* (white oak) component and prominent shrub layer dominated by *Rhododendron calendulaceum* (flame azalea), *Vaccinium pallidum* (Blue Ridge blueberry), *Kalmia latifolia* (mountain laurel), and *Gaylussacia baccata* (black huckleberry). Some stands may have an herbaceous layer of *Carex pensylvanica* (Pennsylvania sedge). Usually at 610 to 1,370 m (2,000-4,500 feet) elevation, but sheltered and more mesic; found down to about 305 m (1,000 feet) in GA, but generally occurs about 670 m (2,200 feet) elsewhere. ..... **Appalachian Montane Oak - Hickory Forest (Typic Acidic Type) (CEGL007230)**
[*Quercus alba - Quercus (rubra, prinus) / Rhododendron calendulaceum - (Gaylussacia ursina)* Forest]

12b. Forests without any clear dominant in the shrub layer, but with a prominent subcanopy dominated by *Cornus florida* (flowering dogwood), *Magnolia* (magnolia) spp. and/or *Acer pensylvanicum* (striped maple). **13**

13a. *Quercus prinus* (chestnut oak) typically dominant or occasionally codominant with *Quercus rubra* (northern red oak). Canopy associates include *Carya glabra* (pignut hickory), *Carya alba* (mockernut hickory), *Carya ovata* (shagbark hickory) with a subcanopy dominated by *Cornus florida* (flowering dogwood). ..... **Appalachian Montane Oak - Hickory Forest (Chestnut Oak Type) (CEGL007267)**
[*Quercus prinus - (Quercus rubra) - Carya spp. / Oxydendrum arboreum - Cornus florida* Forest]

13b. *Quercus rubra* (northern red oak) typically dominant or codominant with *Quercus prinus* (chestnut oak) with a subcanopy of *Magnolia fraseri* (mountain magnolia) or *Magnolia acuminata* (cucumber-tree). *Acer pensylvanicum* (striped maple) is dominant in the short-tree layer. ..... **Southern Appalachian Montane Northern Red Oak - Chestnut Oak Forest (CEGL004817)**
[*Quercus rubra - Quercus prinus - Magnolia (acuminata, fraseri) / Acer pensylvanicum* Forest]

14a. Forest canopy dominated by some combination of *Quercus alba* (white oak), *Quercus velutina* (black oak), *Quercus rubra* (northern red oak), with *Carya glabra* (pignut hickory), *Carya alba* (mockernut hickory), and/or *Carya ovalis* (red hickory). Mesic herbs common or mesic heath shrub layer present with few to no herbs. **15**

14b. Forest canopy usually dominated by *Quercus alba* (white oak), a mixture of *Quercus* (oak) and *Carya* (hickory) or *Pinus strobus* (eastern white pine) and oaks, but not *Quercus rubra* (northern red oak) or *Quercus prinus* (chestnut oak) (at least not greater than 50% of canopy). Includes most of the *Quercus alba* (white oak)-dominated types below 1,220 m (4,000 feet) elevation. Other indicator species include *Quercus coccinea* (scarlet oak), *Quercus falcata* (southern red oak), *Gaylussacia ursina* (bear huckleberry), *Vaccinium pallidum* (Blue Ridge blueberry), *Pinus strobus* (eastern white pine). Other common species include *Acer rubrum* (red maple), *Oxydendrum arboreum* (sourwood), *Nyssa sylvatica* (blackgum), *Smilax glauca* (cat greenbrier), *Kalmia latifolia* (mountain laurel), *Chimaphila maculata* (striped prince's pine). **16**

15a. Very acidic forest that can have well-developed herbaceous cover but is usually sparse to moderate and not very diverse; often greater than 50% cover of *Thelypteris noveboracensis* (New York fern) or *Dennstaedtia punctilobula* (eastern hayscented fern) or other acid-loving species in herbaceous layer..... **Appalachian Montane Oak - Hickory Forest (Red Oak Type) (CEGL006192)**
[*Quercus rubra - Acer rubrum / Pyrularia pubera / Thelypteris noveboracensis* Forest]

15b. Rich oak-hickory forest on basic soils with herbaceous layer approaching a cove in richness and diversity. Canopy dominated by *Quercus alba* (white oak), *Quercus velutina* (black oak), and/or *Quercus rubra* (northern red oak), with *Carya glabra* (pignut hickory), *Carya alba* (mockernut hickory), and/or *Carya ovalis* (red hickory), and lacking abundant *Fraxinus americana* (white ash). Found south of the Roanoke River in the Southern Appalachians. ..... **Appalachian Montane Oak - Hickory Forest (Rich Type) (CEGL007692)**
[*Quercus alba - Quercus rubra - Quercus prinus / Collinsonia canadensis - Podophyllum peltatum* Forest]

16a. Canopy containing at least 25% *Pinus strobus* (eastern white pine) **17**
16b. Canopy without significant cover of *Pinus strobus* (eastern white pine). **18**

17a. Natural uneven-aged mixed forest, typically with 25-50%, and possibly up to 75%, *Pinus strobus* (eastern white pine); can include any or all of the following: *Quercus alba* (white oak), *Quercus prinus* (chestnut oak), and *Quercus velutina* (black oak), possibly with *Carya* (hickory) spp. and/or *Liriodendron tulipifera* (tuliptree). ..... **Appalachian White Pine - Mesic Oak Forest (CEGL007517)**
[*Pinus strobus - Quercus alba - (Carya alba) / Gaylussacia ursina* Forest]
17b. Successional forest, even-aged or mixed-age and possibly including a mixture of other successional species. Arising from disturbance, but not evidently planted. Some examples may contain *Quercus* (oak) spp., but these are even-aged and similar in age to the dominant *Pinus strobus* (eastern white pine). ..... **Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

18a. Dry-mesic forests with a mixed canopy including *Quercus alba* (white oak), *Quercus rubra* (northern red oak), and *Quercus prinus* (chestnut oak), with acidic species such as *Kalmia latifolia* (mountain laurel) and *Vaccinium pallidum* (Blue Ridge blueberry). **[Three Choices]** **19**
18b. More mesic forest with deeper soils and a rich and lush herb layer approaching that of a cove with species such as *Collinsonia canadensis* (richweed), *Podophyllum peltatum* (mayapple), and *Actaea racemosa* (black baneberry). **21**

19a. *Kalmia latifolia* (mountain laurel) characteristic in shrub layer; *Quercus coccinea* (scarlet oak), *Quercus velutina* (black oak), and sometimes *Quercus prinus* (chestnut oak) present at low cover in canopy; various *Carya* (hickory) spp., as well as *Pinus echinata* (shortleaf pine) and *Pinus virginiana* (Virginia pine) may be present to common in canopy. This forest is restricted to low elevations and sandy soils and is very uncommon on the AT corridor. In some stands *Quercus falcata* (southern red oak) may be an indicator, while in others not present or detectible; in some examples *Carya* (hickory) spp. may have greater cover than *Quercus* (oak) spp. ..... **Appalachian Montane Oak - Hickory Forest (Low-Elevation Xeric Type) (CEGL007691)**
[*Quercus alba - Quercus coccinea - Quercus falcata / Kalmia latifolia - Vaccinium pallidum* Forest]
19b. Dry-mesic forests lacking *Quercus falcata* (southern red oak) as a canopy species. Stands have a mixed canopy including *Quercus alba* (white oak), *Quercus rubra* (northern red oak), and *Quercus prinus* (chestnut oak), and with acidic species such as *Kalmia latifolia* (mountain laurel), *Vaccinium pallidum* (Blue Ridge blueberry), and *Rhododendron* (rhododendron) present and lacking rich herb layer; few herbs present or herb layer dominated by acid-loving herbs and ferns. Elevation ranges from 610 to 1,370 m (2,000-4,500 feet) on sheltered lower slopes and in coves over deep soils. In the Southern Blue Ridge, this essentially replaces CEGL007691 above about 670 m (2,200 feet) elevation..... **Appalachian Montane Oak - Hickory Forest (Typic Acidic Type) (CEGL007230)**
[*Quercus alba - Quercus (rubra, prinus) / Rhododendron calendulaceum - (Gaylussacia ursina)* Forest]

19c. Forest at low elevations (below about 670 m [2,200 feet]) containing *Quercus falcata* (southern red oak) and *Quercus alba* (white oak) in the canopy. **20**

20a. Canopy dominated by *Quercus alba* (white oak), *Quercus velutina* (black oak), *Quercus rubra* (northern red oak), or *Carya glabra* (pignut hickory), *Carya alba* (mockernut hickory), or *Carya ovalis* (red hickory). ..... **Appalachian Montane Oak - Hickory Forest (Rich Type) (CEGL007692)**
[*Quercus alba - Quercus rubra - Quercus prinus / Collinsonia canadensis - Podophyllum peltatum* Forest]

20b. Canopy dominated by *Quercus alba* (white oak), *Carya ovata* (shagbark hickory), and *Carya alba* (mockernut hickory). *Quercus rubra* (northern red oak) may be a dominant component of the canopy as well. Other species that may be present in the canopy are *Acer saccharum* (sugar maple), *Liriodendron tulipifera* (tuliptree), *Quercus velutina* (black oak), *Carya glabra* (pignut hickory), *Fraxinus americana* (white ash), *Fagus grandifolia* (American beech), *Prunus serotina* (black cherry), *Ulmus rubra* (slippery elm), and *Juglans nigra* (black walnut). This is a low-elevation type (below 610 m [2,000 feet]) more characteristic of the Ridge and Valley, of uncertain occurrence on the AT corridor. .....**Rich Low-Elevation Appalachian Oak - Hickory Forest (CEGL007233)**
[*Quercus alba - Quercus rubra - Carya ovalis / Acer saccharum / Polystichum acrostichoides* Forest]

10. Acidic Mesic and Rich Forests[17]

1a. Canopy comprised of evergreen or mixed evergreen/deciduous trees; herbaceous stratum sparse to nearly absent; shrub stratum of *Rhododendron maximum* (great laurel) often with high coverage for many but not all types. **2**
1b. Canopy dominated (cover greater than 75%) by deciduous trees; *Tsuga canadensis* (eastern hemlock) occurrence may be patchy in some associations or even absent in some examples. **6**

2a. Canopy largely dominated (cover greater than 50%) by evergreen trees (*Tsuga canadensis* (eastern hemlock), *Pinus strobus* (eastern white pine)) often with a dense evergreen shrub stratum (but not for all associations). Indicator species include *Galax urceolata* (beetleweed), *Hexastylis* (heartleaf) spp., *Kalmia latifolia* (mountain laurel). Other common species include *Rhododendron maximum* (great laurel).[Note: over time, many *Tsuga* (hemlock) will be dying or dead, leading to greater dominance of *Pinus strobus* (eastern white pine) with emergent/transgressive subcanopy hardwoods.] **[Appalachian Hemlock - Hardwood Forests]** **3**
2b. Canopy comprised of evergreen and/or deciduous trees including *Tsuga canadensis* (eastern hemlock), *Liriodendron* (tuliptree), *Halesia* (silverbell), but usually less than 75% *Tsuga canadensis* (eastern hemlock) and usually lacking a dense evergreen shrub stratum. Indicator species include *Eurybia divaricata* (white wood aster), *Arisaema triphyllum* (Jack in the pulpit), *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Laportea canadensis* (Canadian woodnettle), *Polygonatum biflorum* (smooth Solomon's-seal), *Polystichum acrostichoides* (Christmas fern), *Solidago curtisii* (mountain decumbent goldenrod), *Tiarella cordifolia* (heartleaf foamflower), *Viola rotundifolia* (roundleaf yellow violet), *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), and *Tilia americana* var. *heterophylla* (Appalachian basswood). Other common species include *Acer rubrum* (red maple), *Rhododendron maximum* (great laurel), and *Betula lenta* (sweet birch). **5**

3a. Forest mostly *Tsuga canadensis* (eastern hemlock), but occasionally with hardwood trees up to 25% of canopy often with a strong presence of *Betula alleghaniensis* (yellow birch). This type also appears in the key as a more deciduous forest, stands may lack *Tsuga* (hemlock). .... **Blue Ridge Hemlock - Northern Hardwood Forest (CEGL007861)**
[*Betula alleghaniensis - (Tsuga canadensis) / Rhododendron maximum / (Leucothoe fontanesiana)* Forest]
3b. Forest with a substantial amount of *Pinus strobus* (eastern white pine) in canopy (usually >20%). **4**

4a. Canopy includes a mixture of *Pinus strobus* (eastern white pine) and *Quercus* (oak) species, usually *Quercus alba* (white oak), *Quercus prinus* (chestnut oak), and/or *Quercus velutina* (black oak), possibly with *Carya* (hickory) spp. and/or *Liriodendron tulipifera* (tuliptree). .... **Appalachian White Pine - Mesic Oak Forest (CEGL007517)**
[*Pinus strobus - Quercus alba - (Carya alba) / Gaylussacia ursina* Forest]
4b. Canopy dominated almost exclusively by evergreen conifers. Ericaceous understory usually close to 100% *Rhododendron maximum* (great laurel). Canopy mixed *Tsuga canadensis* (eastern hemlock) and *Pinus strobus* (eastern white pine). Largely restricted to lower slopes, gorges and stream and river margins. .... **Southern Appalachian Eastern Hemlock Forest (White Pine Type) (CEGL007102)**
[*Pinus strobus - Tsuga canadensis / Rhododendron maximum - (Leucothoe fontanesiana)* Forest]

[17]Standing dead hemlock should be treated as though it was alive for mapping and keying purposes.

5a. Lower elevation (400-1,160 m [1,300-3,800 feet]) with a variable canopy that usually does not include much *Halesia* (silverbell). Canopy is usually dominated by *Liriodendron tulipifera* (tuliptree) or *Betula lenta* (sweet birch) mixed with *Tsuga canadensis* (eastern hemlock); relative proportion of *Tsuga canadensis* (eastern hemlock) may vary greatly, with some sites having little or no *Tsuga* (hemlock) in the canopy. Other deciduous species more typical of "rich" coves may occur as scattered individuals, including *Tilia americana* var. *heterophylla* (Appalachian basswood), *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), and *Fagus grandifolia* (American beech). ..... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera - Betula lenta - Tsuga canadensis / Rhododendron maximum* Forest]

5b. Higher elevation (850-1,400 m [2,800-4,600 feet]) usually with greater than 25% *Halesia* (silverbell) in the canopy. The most important canopy trees are *Tsuga canadensis* (eastern hemlock) and *Halesia tetraptera* var. *monticola* (mountain silverbell), although *Magnolia fraseri* (mountain magnolia) or *Fagus grandifolia* (American beech) can have high canopy coverage in some examples. Some occurrences have the tall-shrub stratum dominated by *Rhododendron maximum* (great laurel), while others are more open and often dominated by *Dryopteris intermedia* (intermediate woodfern). [A type of limited distribution, found in the Smokies near (but maybe not on) the AT corridor.]..... ..... **Southern Appalachian Acidic Cove Forest (Silverbell Type) (CEGL007693)**
[*Tsuga canadensis - Halesia tetraptera - Magnolia fraseri / Rhododendron maximum / Dryopteris intermedia* Forest]

6a. Forests usually on slopes, often monotypic or dominated by a mixture of *Acer rubrum* (red maple), *Betula lenta* (sweet birch), and/or *Betula alleghaniensis* (yellow birch) usually over a dense ericaceous layer, primarily *Rhododendron maximum* (great laurel). Herb layer very poorly developed or dominated by acid-loving species, especially ferns..... **7**

6b. Forests occurring in sheltered coves, usually with a very diverse canopy, often (not always) with a well-developed and diverse herb layer; shrub stratum typically sparse to absent (except for in acidic coves). **[Southern Appalachian Cove Forests]**..... **8**

7a. Forests occurring primarily on midslopes of various aspects at lower elevations (760-1,400 m [2,500-4,600 feet]) and dominated largely by a mix of species such as *Acer rubrum* (red maple), *Betula lenta* (sweet birch), and occasionally with some *Betula alleghaniensis* (yellow birch), but not strongly dominated by yellow birch. .... **Southern Appalachian Ruderal Acidic Mixed Hardwood Forest (CEGL008558)**
[*Acer rubrum* var. *rubrum - Betula lenta - Magnolia fraseri / (Rhododendron maximum, Kalmia latifolia)* Ruderal Forest]

7b. Forests usually on sheltered north aspect slopes, occurring generally at higher elevations (1,035-1,460 m [3,400-4,800 feet]) and strongly dominated by *Betula alleghaniensis* (yellow birch); *Tsuga canadensis* (eastern hemlock) can be a codominant or a minor component. If stands lack *Tsuga* (hemlock) and have heavy dominance by *Betula* (birch), they may be hard to distinguish from CEGL008558 (above). ..... **Blue Ridge Hemlock - Northern Hardwood Forest (CEGL007861)**
[*Betula alleghaniensis - (Tsuga canadensis) / Rhododendron maximum / (Leucothoe fontanesiana)* Forest]

8a. Seeps found within cove matrix..... **9**

8b. Mesic coves, but not true seeps. **10**

9a. Seeps above 1,100 m (3,600 feet) elevation; primarily open seep, small patch in matrix of rich coves and rich northern hardwood forests from 1,100 to 1,525 m (3,600-5,000 feet) elevation. Herbaceous layer dominated by forbs including *Impatiens pallida* (pale touch-me-not), *Monarda didyma* (scarlet beebalm), and *Rudbeckia laciniata* (cutleaf coneflower). ..... **Rich Montane Seep (High-Elevation Type) (CEGL004293)**
[*Impatiens (capensis, pallida) - Monarda didyma - Rudbeckia laciniata* var. *humilis* Herbaceous Seep]

9b. Seeps found below 1,100 m (3,600 feet) elevation. Seepage on mid and lower slopes in matrix of cove forests. Usually canopy either partially or fully covered by cove forest trees from adjacent communities. Characteristic species include *Diphylleia cymosa* (American umbrellaleaf), *Saxifraga micranthidifolia* (lettuceleaf saxifrage), and *Laportea canadensis* (Canadian woodnettle). [Note: *Diphylleia cymosa* (American umbrellaleaf) may occur up to 1,585 m (5,200 feet), so elevation may not be an effective discriminator between these two seep types.] ..... **Rich Montane Seep (Cove Type) (CEGL004296)**
[*Diphylleia cymosa - Saxifraga micranthidifolia - Laportea canadensis* Forested Herbaceous Seep]

10a. Canopy dominated by species associated with acidic geology, such as *Liriodendron tulipifera* (tuliptree), *Betula lenta* (sweet birch), and *Tsuga canadensis* (eastern hemlock), and lacking those of nutrient-rich sites such as *Tilia americana* (American basswood), *Fraxinus americana* (white ash), or *Aesculus flava* (yellow buckeye); herbaceous layer usually dominated by ferns, with low to moderately high diversity and lacking species indicative of nutrient-rich soils. ..... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera - Betula lenta - Tsuga canadensis / Rhododendron maximum* Forest]

10b. Canopy including species indicative of nutrient-rich soils such as *Tilia americana* (American basswood), *Acer saccharum* (sugar maple), *Aesculus flava* (yellow buckeye), or *Fraxinus* (ash); herbaceous layer well-developed and diverse, including species indicative of nutrient-rich soils such as *Actaea* (baneberry), *Laportea* (woodnettle), *Hydrophyllum* (waterleaf), *Hepatica* (hepatica), etc. **11**

11a. Cove forest, canopy generally including *Liriodendron tulipifera* (tuliptree), its coverage highly variable, often 40%, but sometimes close to 100%. Also with *Fraxinus americana* (white ash), *Tilia americana* var. *heterophylla* (American basswood), *Aesculus flava* (yellow buckeye), and *Magnolia acuminata* (cucumber-tree). Indicator species can include *Carya cordiformis* (bitternut hickory), *Trillium vaseyi* (sweet wakerobin), *Galearis spectabilis* (showy orchid), *Sanicula canadensis* (Canadian black-snakeroot), and *Phegopteris hexagonoptera* (broad beechfern). Mean elevation ca. 750 m. ..... **Southern Appalachian Rich Cove Forest (Typic Type) (CEGL007710)**
[*Liriodendron tulipifera - Fraxinus americana - (Aesculus flava) / Actaea racemosa - Laportea canadensis* Forest]

11b. Canopy diverse, often with *Acer saccharum* (sugar maple), *Tilia americana* (American basswood), particularly var. *heterophylla* (Appalachian basswood), *Aesculus flava* (yellow buckeye), *Prunus serotina* (black cherry), and *Fraxinus americana* (white ash) all as part of canopy. Extremely diverse and rich herbaceous layer. Indicator species (including calciphiles) can include *Hydrophyllum canadense* (bluntleaf waterleaf), *Asplenium rhizophyllum* (walking fern), *Asarum canadense* (Canadian wildginger), *Cystopteris* (bladderfern) sp., and *Hepatica nobilis* var. *acuta* (sharp-lobe hepatica). Mean elevation ca. 1,000 m. This type does not list tuliptree as a component, but it is found within the elevational range of tuliptree. ..... **Southern Appalachian Rich Cove Forest (Montane Calcareous Type) (CEGL007695)**
[*Aesculus flava - Acer saccharum - (Tilia americana* var. *heterophylla) / Hydrophyllum canadense - Solidago flexicaulis* Forest]

Field Key to Vegetation Associations of the Central Appalachian Project Area

This field key provides classification to USNVC associations that were identified during the APPA vegetation mapping project for the CAP project area (see Figure D–2 in the "Key to Field Keys by Project Area"). The CAP project area includes APPA lands between Dickey Gap in Virginia (Corners Creek Road near State Highway 16) and the Delaware River (Pennsylvania-New Jersey State line along Interstate 80).

Notes about Scale for the Central Appalachian Project Area

All forest associations were mapped to a 0.5-ha MMU (a circle with a 40-m radius) and all nonforest associations were mapped to a 0.25-ha MMU (a circle with a 28-m radius). Some of the smaller-scale associations mapped to a MMU of 0.25 ha include: CEGL003683, CEGL003882, CEGL003896, CEGL003939, CEGL004044, CEGL004103, CEGL004142, CEGL004143, CEGL004286, CEGL004996, CEGL006037, CEGL006044, CEGL006107, CEGL006153, CEGL006431, CEGL006451, CEGL006480, CEGL006481, CEGL006483, CEGL006565, CEGL006571, CEGL006576, CEGL006622, CEGL006670, CEGL007119, CEGL008508, CEGL008525, CEGL008526, CEGL008529, CEGL008536, and CEGL008540.

Key to Keys for the Central Appalachian Project Area

1a. Vegetation strongly altered by recent human disturbance such as clearing, pasturing, logging, and/or fires; dominated by trees, shrubs, forbs, grasses, and/or vines, including disturbance-oriented (ruderal) native species (e.g., *Pinus virginiana* (Virginia pine), *Pinus strobus* (eastern white pine), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Robinia pseudoacacia* (black locust), *Fraxinus americana* (white ash), *Juglans nigra* (black walnut), *Crataegus punctata* (dotted hawthorn) and/or non-native species [e.g., *Ailanthus altissima* (tree of heaven) or *Pueraria montana* var. *lobata* (kudzu)] often in monotypic, even-aged stands; also includes evergreen plantations, pine successional forests, even-aged *Liriodendron tulipifera* (tuliptree) dominated forests, successional shrublands (including power line shrublands and non-native dominated shrublands), and old fields as well as disturbed wetland vegetation including successional wet meadows, shrub swamps and marshes invaded by *Phragmites* (reed) and *Phalaris* (canarygrass). ..... **Successional and Ruderal Vegetation (Key #11, p. D-92)**
1b. Vegetation structure and/or composition determined by a spontaneously growing set of native plant species shaped by ecological processes (i.e., NOT ruderal or early successional vegetation). **2**

2a. Wetland vegetation, regularly influenced, and compositionally driven, by stream flooding, seasonal flooding, or groundwater seepage. **3**
2b. Upland vegetation, never or very rarely influenced, and compositionally not driven, by stream flooding, seasonal flooding, or groundwater seepage. **5**

3a. Alluvial forests, woodlands, shrublands and herbaceous communities occurring along banks or channels of rivers and streams and adjacent levees and bottomlands, at least occasionally inundated by temporary overland flooding; also beaver pond areas that are part of larger alluvial systems. .... **Alluvial Forest, Woodland, Shrubland, and Herbaceous Vegetation (Key #1; p. D-51)**

3b. Non-alluvial wetland vegetation - substrate is saturated to the surface by groundwater for extended periods during the growing season or seepage-fed; rarely, if ever, flooded by alluvial waters, includes seepage-fed beaver pond impoundments, seepage-fed boulderfields and coves, poorly drained depressions and basin swamps, vernal pools, shrub swamps, aquatic pond vegetation, herbaceous wetlands and wet meadows. **4**

4a. Forested sites and sites generally with overhanging canopy of trees. Canopy cover varies widely depending upon elevation, fertility, and rockiness, but all examples with the exception of the vernal pools have diverse herbaceous layers. ..... **Forested Swamps, Seeps, Vernal Pools, and Aquatic Vegetation (Key #2; p. D-56)**
4b. Non-forested sites, shrub swamps and bogs or herb- and forb-dominated wetlands, with deep saturated soils and aquatic vegetation of ponds. ..... **Shrub Swamps, Bogs, Non-Alluvial Herbaceous Wetlands, and Aquatic Vegetation (Key #3; p. D-58)**

5a. Non-forested vegetation (canopy trees over 6 m sparse or absent, covering less than 25% of the area); shrublands, grasslands, nonvascular vegetation, or bare rock; associated with very shallow soils or rock outcrops; includes savanna-like areas and glades with widely spaced, open-grown trees (or small clumps of trees) over otherwise herbaceous vegetation. ..... **Non Forested Barrens, Glades, Rocky Outcrops, Boulderfields, and Talus Slopes (Key #4; p. D-60)**
5b. Forest and Woodland vegetation with canopy trees over 6m tall covering at least 25% of the area; understory varies. **6**

6a. Woodlands (25-60% tree cover). **7**
6b. Forests (>60% tree cover)[18]. **8**

7a. Deciduous dominated woodland canopies. ..... **Upland Deciduous Woodlands (Key #5, p. D-64)**
7b. Evergreen or mixed evergreen-deciduous woodland canopies (deciduous trees less than 75% cover); Pine- (*Pinus* sp.) or mixed pine-dominated canopies. Includes *Pinus strobus* (eastern white pine), *Pinus rigida* (pitch pine), *Pinus virginiana* (Virginia pine), *Pinus echinata* (shortleaf pine), *Pinus pungens* (Table Mountain pine); canopies codominated by pine and *Tsuga canadensis* (eastern hemlock); and canopies codominated by pines, oaks, and mesophytic hardwoods..... **Pine and Mixed Pine-Deciduous Forests and Woodlands (Key #6; p. D-68)**

8a. Evergreen and mixed evergreen-deciduous forests; pines and hemlock generally common to abundant in canopy. **9**
8b. Deciduous dominated canopies; pines and hemlock generally absent to minor in canopy cover. **10**

9a. Evergreen or mixed evergreen-deciduous forest canopies (deciduous trees less than 75% cover); Pine- (*Pinus* sp.) or mixed pine-dominated canopies. Includes *Pinus strobus* (eastern white pine), *Pinus rigida* (pitch pine), *Pinus virginiana* (Virginia pine), *Pinus echinata* (shortleaf pine), *Pinus pungens* (Table Mountain pine); canopies codominated by pine and *Tsuga canadensis* (eastern hemlock); and canopies codominated by pines, oaks, and mesophytic hardwoods..... **Pine and Mixed Pine-Deciduous Forests and Woodlands (Key #6; p. D-68)**

[18]Typically >60% tree cover, except in obvious cases of severe disturbance from gypsy moth, hemlock woolly adelgid, windstorms, etc. Such disturbed stands are quite common. Key users should try to key to the pre-disturbance association if possible or identify the new, postdisturbance association if the pre-disturbance association diagnostic species are absent.

9b. Forest canopy codominated by some combination mesophytic hardwoods, typically *Betula alleghaniensis* (yellow birch), *Betula lenta* (sweet birch), *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Liriodendron tulipifera* (tuliptree) and variable amounts of *Tsuga canadensis* (eastern hemlock) and/or *Pinus strobus* (eastern white pine); lacking nutrient-rich indicators. *Quercus rubra* (northern red oak) and occasionally *Quercus prinus* (chestnut oak) may be common in some mixed canopies; includes acidic coves. ..... **Hemlock - White Pine, Hemlock - Hardwood, Hemlock - Oak, Mesophytic Hardwood, and Acidic Cove Forests (Key #7; p. D-72)**

10a. Oak and oak-hickory-dominated canopies. **11**
10b. Deciduous hardwoods such as *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Acer saccharum* (sugar maple), and/or mesophytic tree species such as *Aesculus flava* (yellow buckeye), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), and/or *Liriodendron tulipifera* (tuliptree) codominant in canopy. *Quercus* (oak) species and *Carya* (hickory) species occasionally present to common, but never diagnostic. **12**

11a. Oak-dominated forests with ericaceous (heath) shrubs strongly dominant in lower woody layers; if sparse, then clearly more numerous than non-ericaceous species; hickories absent or unimportant; true herbaceous plants usually sparse to absent. ..... **Oak / Heath Forests (Key #8; p. D-79)**[19]
11b. Oak, oak-hickory, and mixed oak-hardwood forests lacking a strongly dominant ericaceous component; ericaceous shrubs absent, or of low to moderate cover and admixed with non-ericaceous species; herb layer patchy to well developed, with a moderate to high diversity of true herbaceous plants; in rare cases where ericads are dominant, then hickories abundant and/or herb layer well developed. ..... **Mixed Oak and Oak - Hickory Forests (Key #9; p. D-82)**

12a. Forest canopy codominated by some combination of mesophytic or northern hardwoods, typically *Betula alleghaniensis* (yellow birch), *Betula lenta* (sweet birch), *Fagus grandifolia* (American beech), *Liriodendron tulipifera* (tuliptree) and variable amounts of *Tsuga canadensis* (eastern hemlock) and/or *Pinus strobus* (eastern white pine); lacking nutrient-rich indicators. *Quercus rubra* (northern red oak) and occasionally *Quercus prinus* (chestnut oak) may be common in some mixed hemlock - oak forest canopies; includes acidic coves. ..... **Hemlock - White Pine, Hemlock - Hardwood, Hemlock - Oak, Mesophytic Hardwood, and Acidic Cove Forests (Key #7; p. D-72)**
12b. Forest canopy codominated by a combination of tree species indicative of nutrient-rich substrates such as *Tilia americana* (American basswood), *Fraxinus americana* (white ash), *Aesculus flava* (yellow buckeye), *Acer saccharum* (sugar maple), and/or mesophytic generalists such as *Liriodendron tulipifera* (tuliptree) typically occurring in ravines, lower slopes, coves, deep-soiled upper slopes and flats; includes rich boulderfield and cove forests. ..... **Rich Cove and Rich Boulderfield Forests (Key #10; p. D-86)**

[19]Severe disturbance from gypsy moth, hemlock woolly adelgid, windstorms, etc. are quite common. Key users should try to key to the pre-disturbance association if possible or identify the new, postdisturbance association if the pre-disturbance association diagnostic species are absent.

1. Alluvial Forest, Woodland, Shrubland, and Herbaceous Vegetation

1a. Forested communities, with greater than 40% tree canopy coverage. **2**
1b. Woodlands, shrublands, and herbaceous communities along river margins. **10**

2a. Widespread, variable, anthropogenically-disturbed forest of the Northeast with variable mixtures of young, even-aged trees can include *Acer negundo* (box-elder), *Robinia pseudoacacia* (black locust), *Juglans nigra* (black walnut), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Celtis occidentalis* (common hackberry), *Pinus strobus* (eastern white pine), and/or *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by exotics such as *Rosa multiflora* (multiflora rose), *Celastrus orbiculata* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); typically an upland forest, but may also occur in floodplains and wet settings. ..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana - (Robinia pseudoacacia)* Ruderal Forest]
2b. Naturally occurring and less anthropogenically-disturbed floodplain forests. **3**

3a. *Acer saccharinum* (silver maple) dominant, codominant or common in canopy. **4**
3b. *Acer saccharinum* (silver maple) minor to absent. **7**

4a. Early-successional community with scattered stunted and often battered and flood-trained *Platanus occidentalis* (American sycamore) and *Betula nigra* (river birch); trees (varying from less than 5 m tall to >10 m tall); dense shrub layer with *Salix* (willow) spp. and *Cephalanthus occidentalis* (common buttonbush). *Acer saccharinum* (silver maple) and *Fraxinus pennsylvanica* (green ash) may occur as minor associates. *Hibiscus laevis* (halberdleaf rosemallow) and/or *Justicia americana* (American water-willow) characteristic in the herb layer along with *Chamaesyce humistrata* (spreading sandmat), *Eupatorium serotinum* (lateflowering thoroughwort), and *Acalypha rhomboidea* (common threeseed mercury); occurs on coarse-textured (cobbly / bouldery) to fine-textured (silty or muddy) depositional bars and islands along rivers and large streams in the High Allegheny Plateau, Central Appalachians, and Lower New England.....
..... **Piedmont-Central Appalachian Sycamore - River Birch Floodplain Forest (CEGL003896)**
[*Platanus occidentalis - Betula nigra - Salix (caroliniana, nigra)* Floodplain Forest]
4b. Mature floodplain forest; *Betula nigra* (river birch) sparse to absent. **5**

5a. Widespread rich floodplain forest occupying the higher elevations of well-drained floodplain terraces of major Mid-Atlantic rivers in PA, MD, VA, WV; less actively flooded and scoured than the silver maple floodplain forests immediately adjacent to the river; canopy dominated by a mixture of *Platanus occidentalis* (American sycamore), *Juglans nigra* (black walnut), *Carya cordiformis* (bitternut hickory), *Celtis occidentalis* (common hackberry), and *Ulmus americana* (American elm); *Acer saccharinum* (silver maple) is codominant in a minority of stands but absent or unimportant in many others: it is never monodominant in the canopy; *Acer negundo* (box-elder) is strongly dominant in the subcanopy; *Asimina triloba* (pawpaw) and/or *Lindera benzoin* (northern spicebush) dominate a moderately dense shrub layer; rich in spring ephemerals and nutrient-demanding species such as *Mertensia virginica* (Virginia bluebells), *Asarum canadense* (Canadian wildginger), *Chaerophyllum procumbens* (spreading chervil), *Hydrophyllum canadense* (bluntleaf waterleaf), *Viola striata* (striped cream violet), *Phlox divaricata* (wild blue phlox), *Podophyllum peltatum* (mayapple), and others; invasive exotics typically abundant. .....
..... **Piedmont-Central Appalachian Rich Floodplain Forest (CEGL004073)**
[*Platanus occidentalis - Acer negundo - Juglans nigra / Asimina triloba / Mertensia virginica* Floodplain Forest]

5b. Actively flooded *Acer saccharinum* (silver maple) dominated floodplain forests adjacent to a river. **6**

6a. *Acer saccharinum* (silver maple) floodplain forest ranging from New England south to PA and possibly MD occurring on the deep, alluvial, silty to somewhat coarse soils of point bars, levees, and adjacent terraces of medium to large, high-energy and moderate-gradient rivers; *Acer saccharinum*- (silver maple) dominated canopy with or without *Populus deltoides* (eastern cottonwood), *Acer negundo* (box-elder), *Ulmus rubra* (slippery elm), and *Fraxinus pennsylvanica* (green ash); shrub layer sparse; *Toxicodendron radicans* (eastern poison-ivy) dominant vine; lush herb layer with *Impatiens* (touch-me-not) spp., *Laportea canadensis* (Canadian woodnettle), *Matteuccia struthiopteris* (ostrich fern), and *Leersia oryzoides* (rice cutgrass) along with invasives such as *Alliaria petiolata* (garlic mustard), *Lysimachia nummularia* (creeping jenny), and *Microstegium vimineum* (Nepalese browntop). ..... **Silver Maple Floodplain Levee Forest (CEGL006147)**
[*Acer saccharinum - (Populus deltoides) / Matteuccia struthiopteris - Laportea canadensis* Floodplain Forest]

6b. *Acer saccharinum* (silver maple) floodplain forest on river banks and low floodplain terraces bordering the main river channel; restricted to large river floodplains of major Mid-Atlantic rivers in PA, MD, WV, and VA; canopy dominated by *Acer saccharinum* (silver maple); *Platanus occidentalis* (American sycamore) may codominate the canopy layer, with *Acer negundo* (box-elder) dominating a subcanopy layer; other minor associates include *Populus deltoides* (eastern cottonwood), *Celtis occidentalis* (common hackberry), *Fraxinus pennsylvanica* (green ash), *Ulmus americana* (American elm), and *Juglans nigra* (black walnut); shrub layer usually open or sparse; characteristic herbs include *Ageratina altissima* (white snakeroot), *Laportea canadensis* (Canadian woodnettle), *Impatiens pallida* (pale touch-me-not), *Viola sororia* (common blue violet), *Leersia virginica* (whitegrass), and *Verbesina alternifolia* (wingstem). .... **Piedmont-Central Appalachian Silver Maple Floodplain Forest (CEGL006217)**
[*Acer saccharinum - Acer negundo / Ageratina altissima - Laportea canadensis - (Elymus virginicus)* Floodplain Forest]

7a. Early-successional community with scattered stunted and often battered and flood-trained *Platanus occidentalis* (American sycamore) and *Betula nigra* (river birch); trees (varying from less than 5 m tall to >10 m tall); dense shrub layer with *Salix* (willow) spp. and *Cephalanthus occidentalis* (common buttonbush); *Hibiscus laevis* (halberdleaf rosemallow) and/or *Justicia americana* (American water-willow) characteristic in the herb layer along with *Chamaesyce humistrata* (spreading sandmat), *Eupatorium serotinum* (lateflowering thoroughwort), and *Acalypha rhomboidea* (common threeseed mercury); occurs on coarse-textured (cobbly / bouldery) to fine-textured (silty or muddy) depositional bars and islands along rivers and large streams in the High Allegheny Plateau, Central Appalachians, and Lower New England..... ..... **Piedmont-Central Appalachian Sycamore - River Birch Floodplain Forest (CEGL003896)**
[*Platanus occidentalis - Betula nigra - Salix (caroliniana, nigra)* Floodplain Forest]

7b. Stand not dominated by *Platanus occidentalis* (American sycamore), *Betula nigra* (river birch), and/or *Salix caroliniana* (coastal plain willow) or *Salix nigra* (black willow)..... **8**

8a. Rich floodplain forest occupying the higher elevations of floodplains, floodplain berms, and low terraces of major Mid-Atlantic rivers in PA, MD, VA, and WV; less actively flooded and scoured than the silver maple floodplain forests immediately adjacent to the river; canopy dominated by a mixture of *Platanus occidentalis* (American sycamore), *Juglans nigra* (black walnut), *Carya cordiformis* (bitternut hickory), *Celtis occidentalis* (common hackberry), and *Ulmus americana* (American elm); *Acer saccharinum* (silver maple) is codominant in a minority of stands but absent or unimportant in many others: it is never monodominant in the canopy; *Acer negundo* (box-elder) is strongly dominant in the subcanopy; *Asimina triloba* (pawpaw) and/or *Lindera benzoin* (northern spicebush) dominate a moderately dense to dense shrub layer; rich in spring ephemerals and nutrient-demanding species such as *Mertensia virginica* (Virginia bluebells), *Asarum canadense* (Canadian wildginger), *Chaerophyllum procumbens* (spreading chervil), *Hydrophyllum canadense* (bluntleaf waterleaf), *Viola striata* (striped cream violet), *Phlox divaricata* (wild blue phlox), *Podophyllum peltatum* (mayapple), and others; invasive exotics typically abundant..... **Piedmont-Central Appalachian Rich Floodplain Forest (CEGL004073)**
[*Platanus occidentalis - Acer negundo - Juglans nigra / Asimina triloba / Mertensia virginica* Floodplain Forest]

8b. Small-stream floodplain forests of Virginia's Ridge and Valley and parts of the Northern Blue Ridge. **9**

9a. Floodplain forest characteristic of streams on less base-rich substrates such as shale, acidic granites, and quartzite in shale lowlands of the VA Ridge and Valley and parts of the Northern Blue Ridge includes various mixtures of *Tsuga canadensis* (eastern hemlock), *Pinus strobus* (eastern white pine), *Liriodendron tulipifera* (tuliptree), *Quercus alba* (white oak), and *Acer rubrum* (red maple); *Cornus florida* (flowering dogwood) and *Carpinus caroliniana* (American hornbeam) common; diverse herbaceous layer with a mixture of wetland and upland species such as *Amphicarpaea bracteata* (American hogpeanut), *Eurybia divaricata* (white wood aster), and *Mitchella repens* (partridgeberry). ..... **Central Appalachian Montane Small-Stream Floodplain Forest (CEGL008405)**
[*Liriodendron tulipifera - Pinus strobus - (Tsuga canadensis) / Carpinus caroliniana / Amphicarpaea bracteata* Forest]

9b. Richer and more diverse small stream floodplain forest in the Northern Blue Ridge near Roanoke, VA (and extending north to Catoctin Mountain, MD), confined to floodplains with relatively fertile base-rich alluvial deposits derived from metabasalt (greenstone), pyroxene-rich granites, or metasiltstone/phyllite; canopy dominated or codominated by *Liriodendron tulipifera* (tuliptree) but with a mixture of other trees, including *Platanus occidentalis* (American sycamore), *Betula lenta* (sweet birch), *Acer saccharum* var. *saccharum* (sugar maple), *Acer rubrum* (red maple), *Carya cordiformis* (bitternut hickory), *Aesculus flava* (yellow buckeye), *Quercus* (oak) spp., *Fagus grandifolia* (American beech), and others; *Lindera benzoin* (northern spicebush) dominates the shrub layer, but it can also include *Asimina triloba* (pawpaw), *Carpinus caroliniana* (American hornbeam), *Viburnum prunifolium*(blackhaw), and others; vines may be common; the herb layer is very diverse and dominated by numerous upland mesophytic species; *Circaea lutetiana* ssp. *canadensis* (broadleaf enchanter's nightshade) is characteristic; *Polygonatum biflorum* var. *commutatum* (smooth Solomon's seal), *Mertensia virginica* (Virginia bluebells), and *Eurybia divaricata* (white wood aster) may be common. .....**Northern Blue Ridge Montane Alluvial Forest (CEGL006255)**
[*Liriodendron tulipifera - Platanus occidentalis - Betula lenta / Lindera benzoin / Circaea lutetiana* ssp. *canadensis* Floodplain Forest]

10a. Early-successional woodland community with scattered stunted, battered and flood-trained *Platanus occidentalis* (American sycamore) and *Betula nigra* (river birch) occurring on coarse-textured (cobbly / bouldery) to fine-textured (silty or muddy) depositional bars and islands along rivers and large streams in the High Allegheny Plateau and Central Appalachians; trees (varying from less than 5 m tall to >10 m tall); dense shrub layer with *Salix* (willow) spp. and *Cephalanthus occidentalis* (common buttonbush); *Hibiscus laevis* (halberdleaf rosemallow) and/or *Justicia americana* (American water-willow) characteristic in the herb layer along with *Chamaesyce humistrata* (spreading sandmat), *Eupatorium serotinum* (lateflowering thoroughwort) and *Acalypha rhomboidea* (common threeseed mercury). ..... **Piedmont-Central Appalachian Sycamore - River Birch Floodplain Forest (CEGL003896)**
[*Platanus occidentalis - Betula nigra - Salix (caroliniana, nigra)* Floodplain Forest]
10b. Herbaceous communities. **11**

11a. Vegetation primarily dominated by one species. **12**
11b. Vegetation dominated by a combination of multiple species. **15**

12a. *Carex torta* (twisted sedge), *Justicia americana* (American water-willow) or *Saururus cernuus* (lizard's-tail) dominant or codominant. **13**
12b. *Phragmites australis* (common reed) or *Phalaris arundinacea* (reed canarygrass) dominant.... **14**

13a. *Carex torta* (twisted sedge) dominated rock, gravel and sand bars, and active channel shelves of high-gradient streams and small rivers, often forming small, discontinuous, linear patches along waterways in the Southern and Central Appalachians; *Boehmeria cylindrica* (small-spike false nettle) and *Lycopus virginicus* (Virginia water horehound) characteristic; *Carex torta* (twisted sedge) obviously dominant but many other species can co-occur and stands can be relatively diverse floristically; tolerant of frequent inundation and flood-scouring. ..... **Rocky Bar and Shore (Twisted Sedge Type) (CEGL004103)**
[*Carex torta* Riverbed Vegetation]
13b. *Justicia americana* (American water-willow) typically monospecific occurring on shoals or bars of rocky streams and riverbeds; entirely submerged by most flood events; ranges from the Piedmont and Central Appalachians to the Southern Appalachians; *Saururus cernuus* (lizard's-tail) is often present and may be codominant. ..... **Water-willow Rocky Bar and Shore (CEGL004286)**
[*Justicia americana* Riverbed Vegetation]

14a. *Phragmites australis* (common reed) dominant. ..... **Eastern Ruderal Common Reed Marsh (CEGL004141)**
[*Phragmites australis* ssp. *australis* Eastern Ruderal Marsh]
14b. Monocultural stands of the invasive grass *Phalaris arundinacea* (reed canarygrass) found in both basin wetlands and along rivershores. ..... **Eastern Ruderal Reed Canarygrass Marsh (CEGL006044)**
[*Phalaris arundinacea* Eastern Ruderal Marsh]

15a. Tall riverbank herbaceous community typically occurring along stable riverbanks and depositional bars with low sediment turnover during floods and prevalence of perennial herbs; in the Piedmont and mountain regions of MD, VA, and WV; diverse herbs can include *Eupatorium fistulosum* (trumpetweed), *Tripsacum dactyloides* (eastern gamagrass), *Solidago* (goldenrod) spp.; *Verbesina alternifolia* (wingstem), *Elymus riparius* (riverbank wildrye), *Apios americana* (groundnut), and *Asclepias syriaca* (common milkweed); shrubs and vines can include *Fraxinus pennsylvanica* (green ash), *Platanus occidentalis* (American sycamore), *Salix nigra* (black willow), and *Vitis riparia* (riverbank grape). ..... **Piedmont-Central Appalachian Riverbar Tall Wet Meadow (CEGL006480)**
[*Verbesina alternifolia - Elymus riparius - Solidago gigantea - (Teucrium canadense)* Riverbar Wet Meadow]

15b. Herbaceous communities experiencing high rates of sediment erosion and turnover during floods; sediment deposition is frequent; occurs on depositional bars and/or lowest parts of riverbanks. **16**

16a. Scour bar herbaceous vegetation occurring on depositional bars and in sand deposits on bedrock floodplains and boulder bars; patch dominants typically include *Eupatorium serotinum* (lateflowering thoroughwort) and one or more *Polygonum* (knotweed) spp.; other herbs possible such as *Chamaesyce humistrata* (spreading sandmat), *Artemisia annua* (sweet sagewort), *Cyperus squarrosus* (bearded flatsedge), *Datura stramonium* (jimsonweed), and *Eragrostis* (lovegrass) spp.; *Salix nigra* (black willow) may be present; occurs in the Piedmont and mountain provinces of MD, VA, and WV. ..... **Piedmont-Central Appalachian Scour Bar Wet Meadow (CEGL006481)**
[*Eupatorium serotinum - Polygonum (lapathifolium, punctatum, pensylvanicum)* Riverbar Wet Meadow]

16b. Narrow (<2 m wide) river bar drawdown shore, seasonally exposed shoreline flats and toes of riverbanks, wet beaches, and/or very low rivershore depositional bars dominated by *Eragrostis hypnoides* (teal lovegrass), *Ludwigia palustris* (marsh seedbox), *Rotala ramosior* (lowland rotala), *Cyperus strigosus* (strawcolored flatsedge), and *Cyperus squarrosus* (bearded flatsedge); may also occur in back channels and sloughs; occurs along major rivers in the Piedmont and mountains of MD, VA, WV, and DC. ..... **Appalachian-Atlantic Riverbar Drawdown Shore (CEGL006483)**
[*Eragrostis hypnoides - Ludwigia palustris - Lindernia dubia - Cyperus squarrosus* Riverbar Wet Meadow]

2. Forested Swamps, Seeps, Vernal Pools, and Aquatic Vegetation

1a. Forested swamp communities. **2**
1b. Herbaceous seeps, sparsely vegetated vernal pools, and aquatic vegetation. **6**

2a. *Acer rubrum* (red maple) present but not dominant in the canopy; hemlock/laurel swamp of the Central Appalachians; dominated by *Tsuga canadensis* (eastern hemlock) with *Pinus strobus* (eastern white pine), *Acer rubrum* (red maple), *Nyssa sylvatica* (blackgum), and/or *Betula alleghaniensis* (yellow birch) common; *Rhododendron maximum* (great laurel) common in the shrub layer; *Sphagnum* (sphagnum moss) spp. common; occurs on saturated acidic muck to imperfectly drained mineral soils in upland valleys, bedrock depressions, low slopes, and adjacent to streams and lakes. ..... **Eastern Hemlock / Great Laurel Swamp Forest (CEGL006279)**
[*Tsuga canadensis / Rhododendron maximum / Sphagnum* spp. Swamp Forest]
2b. *Acer rubrum* (red maple) dominant or codominant in the canopy. **3**

3a. *Nyssa sylvatica* (blackgum) and/or *Betula alleghaniensis* (yellow birch) common in the canopy; *Fraxinus* (ash) spp. Absent. **4**
3b. One or more *Fraxinus* (ash) spp., including *Fraxinus americana* (white ash), *Fraxinus nigra* (black ash), and/or *Fraxinus pennsylvanica* (green ash), usually codominant or common in the canopy with *Acer rubrum* (red maple). **5**

4a. Basin swamp occupying saturated or seasonally wet basins in upland forest settings; not a streamside wetland; *Nyssa sylvatica* (blackgum) and/or *Betula alleghaniensis* (yellow birch) common in canopy; *Ilex verticillata* (common winterberry), *Vaccinium corymbosum* (highbush blueberry), *Rhododendron viscosum* (swamp azalea), and/or *Lindera benzoin* (northern spicebush) common; *Sphagnum* (sphagnum moss) spp., *Osmunda cinnamomea* (cinnamon fern), and occasionally *Symplocarpus foetidus* (skunk-cabbage) carpet the ground; *Maianthemum canadense* (Canada mayflower) and *Medeola virginiana* (Indian cucumber) are also common; found from the Central Appalachians north to central New England. ..... **Red Maple - Blackgum Basin Swamp Forest (CEGL006014)**
[*Acer rubrum - Nyssa sylvatica - Betula alleghaniensis / Sphagnum* spp. Swamp Forest]
4b. Narrow, elongated seepage swamp occurring on groundwater-saturated flats and low slopes along streams (may be ephemeral) at elevations of 200-900 m (700-2,900 feet); *Acer rubrum* (red maple) and/or *Nyssa sylvatica* (blackgum) codominant in canopy; *Liriodendron tulipifera* (tuliptree) may be present; *Hamamelis virginiana* (American witch-hazel), *Ilex verticillata* (common winterberry), and *Lindera benzoin* (northern spicebush) are common shrubs; *Osmunda cinnamomea* var. *cinnamomea* (cinnamon fern) dominates the ground story; ranges from the Central Appalachians of MD and VA into the Cumberland Mountains in WV. ..... **Central Appalachian Acidic Seepage Swamp Forest (CEGL007853)**
[*Acer rubrum - Nyssa sylvatica / Ilex verticillata - Vaccinium fuscatum / Osmunda cinnamomea* Seep Forest]

5a. *Fraxinus nigra* (black ash) >5% in canopy; *Fraxinus americana* (white ash), *Betula alleghaniensis* (yellow birch) and/or *Liriodendron tulipifera* (tuliptree) also common with *Acer rubrum* (red maple); basic seepage swamp occurring at groundwater-saturated stream headwaters, as large spring seeps and runs, and as lateral areas in ravine and stream bottoms where groundwater emerges at the base of slopes; *Lindera benzoin* (northern spicebush) constant in shrub layer; *Asimina triloba* (pawpaw) may be common north of MD; *Chrysosplenium americanum* (American golden

saxifrage), *Veratrum viride* (green false hellebore), and *Symplocarpus foetidus* (skunk-cabbage) common in diverse herb layer. ..... **Central Appalachian Basic Seepage Swamp Forest (CEGL008416)**
[*Acer rubrum - Fraxinus nigra - Betula alleghaniensis / Veratrum viride - Carex bromoides* Seep Forest]

5b. *Fraxinus nigra* (black ash) minor to absent (≤5%); *Acer rubrum* (red maple) seepage swamp ranging from southern New England south to the Piedmont of VA; *Fraxinus americana* (white ash) and/or *Fraxinus pennsylvanica* (green ash) usually present; *Betula alleghaniensis* (yellow birch) may be common along with *Quercus palustris* (pin oak), *Quercus bicolor* (swamp white oak), and scattered *Ulmus americana* (American elm), *Pinus strobus* (eastern white pine), and/or *Tsuga canadensis* (eastern hemlock); *Carpinus caroliniana* (American hornbeam) typical; *Lindera benzoin* (northern spicebush), *Vaccinium corymbosum* (highbush blueberry), and *Ilex verticillata* (common winterberry) common; *Symplocarpus foetidus* (skunk-cabbage) and *Osmunda cinnamomea* (cinnamon fern) are nearly always present; *Sphagnum* (sphagnum moss) spp. may be common; occurs in saturated settings on slightly sloping hillsides, along small streams or in basins that receive overland flooding and groundwater influence. ..... **Southern New England-Northern Piedmont Red Maple Seepage Swamp Forest (CEGL006406)**
[*Acer rubrum - Fraxinus (pennsylvanica, americana) / Lindera benzoin / Symplocarpus foetidus* Swamp Forest]

6a. *Dulichium arundinaceum* (threeway sedge), *Sparganium americanum* (American bur-reed), and *Scirpus cyperinus* (woolgrass) are dominant in variable combinations; occurs in shallow basins, swales, moats of bog mats, and pondshores in peat, muck or sandy soils; known from NY, PA, and WV. ..... **Threeway Sedge Basin Marsh (CEGL006552)**
[*Dulichium arundinaceum - Carex folliculata - Juncus* spp. Seepage Meadow]
6b. Vernal pools and aquatic vegetation of ponds. **7**

7a. Vernal pool characterized by seasonally fluctuating water levels; species composition is variable among sites; many smaller, shaded vernal ponds are unvegetated, their bottoms consisting of dead leaves and algae; primarily in glaciated or periglacial areas, from Quebec and New Brunswick south through NY to northern PA and northern NJ. ..... **Eastern Woodland Vernal Pool (CEGL006453)**
[Eastern Woodland Vernal Pool]
7b. Aquatic vegetation of ponds. **8**

8a. *Lemna* (duckweed) spp. dominant. .... **Eastern North America Duckweed Pond (CEGL005451)**
[*Lemna* spp. Eastern North American Aquatic Vegetation]
8b. Aquatic vegetation of ponds; dominants are usually submerged macrophytes or floating-leaved pondweeds including *Elodea canadensis* (Canadian waterweed), *Potamogeton robbinsii* (Robbins' pondweed), *Potamogeton vaseyi* (Vasey's pondweed), *Stuckenia filiformis* (fineleaf pondweed), *Potamogeton crispus* (curly pondweed), *Potamogeton friesii* (Fries' pondweed), and *Potamogeton strictifolius* (narrowleaf pondweed). *Vallisneria americana* (American eel-grass), *Nymphaea odorata* (American white waterlily), and *Nuphar* (pond-lily) spp. are often present but not abundant. ..... **Eastern Waterweed - Pondweed Aquatic Vegetation (CEGL006431)**
[*Elodea canadensis - Potamogeton* spp. Eastern Aquatic Vegetation]

3. Shrub Swamps, Bogs, Non-Alluvial Herbaceous Wetlands, and Aquatic Vegetation

1a. Herbaceous wetlands, wet meadows, and aquatic vegetation of ponds. **2**
1b. Shrub swamps, shrubby wet meadows and shrub bogs. **8**

2a. Aquatic vegetation of ponds. **3**
2b. Herbaceous marshes, seeps, and wet meadows. **4**

3a. *Lemna* (duckweed) spp. dominant. .... **Eastern North America Duckweed Pond (CEGL005451)**
[*Lemna* spp. Eastern North American Aquatic Vegetation]
3b. Dominants are usually submerged macrophytes or floating-leaved pondweeds including *Elodea canadensis* (Canadian waterweed), *Potamogeton robbinsii* (Robbins' pondweed), *Potamogeton vaseyi* (Vasey's pondweed), *Stuckenia filiformis* (fineleaf pondweed), *Potamogeton crispus* (curly pondweed), *Potamogeton friesii* (Fries' pondweed), and *Potamogeton strictifolius* (narrowleaf pondweed). *Vallisneria americana* (American eel-grass), *Nymphaea odorata* (American white waterlily), and *Nuphar* (pond-lily) spp. are often present but not abundant. ..... **Eastern Waterweed - Pondweed Aquatic Vegetation (CEGL006431)**
[*Elodea canadensis* - *Potamogeton* spp. Eastern Aquatic Vegetation]

4a. Marshes dominated by native species, including *Typha* (cattail) spp., *Dulichium arundinaceum* (threeway sedge), *Sparganium americanum* (American bur-reed), and *Scirpus cyperinus* (woolgrass). **5**
4b. Disturbed marshes, invaded by exotics or native increasers, managed marshes, and wet meadows. **6**

5a. Cattail marsh dominated by *Typha* (cattail) spp. ..... **Eastern Cattail Marsh (CEGL006153)**
[*Typha (angustifolia, latifolia)* - (*Schoenoplectus* spp.) Eastern Marsh]
5b. *Dulichium arundinaceum* (threeway sedge), *Sparganium americanum* (American bur-reed), and *Scirpus cyperinus* (woolgrass); occurs in shallow basins, swales, moats of bog mats, and pondshores in peat, muck or sandy soils; known from PA and WV. ..... **Threeway Sedge Basin Marsh (CEGL006552)**
[*Dulichium arundinaceum* - *Carex folliculata* - *Juncus* spp. Seepage Meadow]

6a. Successional wet meadow dominated by an admixture of primarily herbaceous upland and wetland old-field species; may be mowed annually, "wet old fields"; may have successional shrubs (<50%). ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
6b. Monocultural stands of exotic forbs and grasses. **7**

7a. *Phragmites australis* (common reed) marsh. ..... **Eastern Ruderal Common Reed Marsh (CEGL004141)**
[*Phragmites australis* ssp. *australis* Eastern Ruderal Marsh]
7b. Monocultural stands of *Phalaris arundinacea* (reed canarygrass) found in both basin wetlands and along rivershores. ..... **Eastern Ruderal Reed Canarygrass Marsh (CEGL006044)**
[*Phalaris arundinacea* Eastern Ruderal Marsh]

8a. Successional shrub swamps and wet meadows with successional shrubs. **9**
8b. *Vaccinium corymbosum* (highbush blueberry) bog thicket; common shrubs include *Rhododendron viscosum* (swamp azalea), *Clethra alnifolia* (coastal sweet-pepperbush), *Gaylussacia baccata* (black huckleberry), *Kalmia angustifolia* (sheep laurel), and *Ilex verticillata* (common winterberry); sparse herb layer; thick *Sphagnum* (sphagnum moss) spp. layer; near the Delaware Water Gap (DEWA) and north. ..... **Highbush Blueberry Bog Thicket (CEGL006190)**
[*Vaccinium corymbosum / Sphagnum* spp. Acidic Peatland]

9a. Successional wet meadow dominated by an admixture of upland and wetland old-field species; may be annually mowed "wet old fields"; may have successional shrubs usually only about 1 m tall, *Rubus* (blackberry) spp. and *Spiraea* (spirea) spp. common; *Cornus* (dogwood) spp. may be present but are not dominant. ... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
9b. Tall successional shrub swamp (2-4 m) occurring in low-lying areas of old fields or pastures, or the edges of beaver-impacted wetlands or impoundments; vegetation is highly variable with *Cornus amomum* (silky dogwood), *Cornus sericea* (red-osier dogwood), *Viburnum dentatum* (southern arrow-wood), *Spiraea alba* var. *latifolia* (white meadowsweet), *Rosa multiflora* (multiflora rose), *Rubus allegheniensis* (Allegheny blackberry), and *Rubus hispidus* (bristly dewberry) typically present and abundant any one of which can exhibit patch dominance; *Salix* (willow) spp. may also be present but less common. ..... **Ruderal Dogwood - Arrow-wood Shrub Swamp (CEGL006576)**
[*Cornus (amomum, sericea) - Viburnum dentatum - Rosa multiflora* Ruderal Shrub Swamp]

4. Non Forested Barrens, Glades, Rocky Outcrops, Boulderfields, and Talus Slopes

1a. Shrublands and wooded herbaceous vegetation (tree coverage typically less than 25%). **2**
1b. Communities dominated by herbaceous or nonvascular species on rock outcrops. **11**

2a. Successional shrublands of old fields, rights-of-way and modified lands and high-elevation "hawthorn orchards." **3**
2b. Shrubland barrens, glades, boulderfields, and wooded herbaceous vegetation (<25% tree cover over herbaceous layer) originating from natural processes and generally lacking successional and exotic species. **5**

3a. *Crataegus punctata*- (dotted hawthorn) dominated successional woodland/forest/"orchard" of high elevations in the Southern and Central Appalachians; large patch along the AT corridor in the saddle between Beech Mountain and Whitetop in VA. ..... **Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata - Crataegus flabellata* Ruderal Forest]
3b. Dominated by an admixture of species. **4**

4a. Tall, typically closed-canopy shrubland thicket occurring on old fields, pastures, or modified lands dominated by an admixture of non-native and native shrubs such as *Elaeagnus umbellata* (Autumn olive), *Rubus allegheniensis* (Allegheny blackberry), *Rosa multiflora* (multiflora rose), *Lonicera morrowii* (Morrow's honeysuckle), *Celastrus orbiculata* (Oriental bittersweet), *Lonicera japonica* (Japanese honeysuckle), *Ligustrum vulgare* (European privet), *Juniperus virginiana* (eastern red-cedar), and other small trees such as *Liriodendron tulipifera* (tuliptree) (<25% in cover); old-field grasses and forbs are common in more open-canopied variants where tall and short shrubs cover at least 25% of the field. ..... **Northeastern Ruderal Shrubland (CEGL006451)**
[*Elaeagnus umbellata - Cornus racemosa - Rosa multiflora - Juniperus virginiana* Ruderal Shrubland]
4b. Native successional shrubland dominated by heath shrubs including *Gaylussacia* (huckleberry) spp., *Vaccinium* (blueberry) spp., and *Kalmia latifolia* (mountain laurel); *Dennstaedtia punctilobula* (eastern hayscented fern); frequent along rights-of-way. ..... **Successional Heath Shrubland (CEGL006622)**
[*Gaylussacia baccata - Vaccinium pallidum - Vaccinium corymbosum* Shrubland]

5a. Shrub-dominated barrens and wooded-herbaceous vegetation occurring on exposed rocky outcrops and rocky summits. Shrub cover may be quite patchy and limited due to extensive exposed rock surfaces. **6**
5b. Vegetation of boulderfields and/or talus slopes. **9**

6a. Heath barrens; vegetation characterized by ericaceous shrubs. **7**
6b. Wooded herbaceous vegetation characterized by patchy herbaceous and scrub vegetation **8**

7a. Central Appalachian heath barrens dominated by *Kalmia latifolia* (mountain laurel) occurring on upper-slope and ridgetop outcrops, pavements, and clifftops of acidic bedrock (quartzite and granitic) at elevations from about 950 to 1,460 m (3,100-4,800 feet); limited to Shenandoah National Park in VA on the AT corridor; *Sorbus americana* (American mountain-ash) and *Vaccinium* (blueberry) spp. common; *Menziesia pilosa* (minniebush) and *Prunus pensylvanica* (pin cherry) may be present; herbaceous patches absent or sparse. ..... **Central Appalachian Heath Barrens (CEGL003939)**
[*Kalmia latifolia - Gaylussacia baccata - Vaccinium (angustifolium, pallidum) - Menziesia pilosa* Shrubland]

7b. *Kalmia latifolia* (mountain laurel) may be present but not dominant; medium- to high-elevation igneous outcrop barrens and rocky summits dominated by *Photinia melanocarpa* (black chokeberry) and *Gaylussacia baccata* (black huckleberry) occurring from about 880 to 1,400 m (2,900-4,600 feet) from Shenandoah National Park, VA, south to central VA; *Vaccinium pallidum* (Blue Ridge blueberry) and *Sorbus americana* (American mountain-ash) may be common; herbaceous patches usually sparse or limited; *Carex pensylvanica* (Pennsylvania sedge), *Hylotelephium telephioides* (Allegheny stonecrop), *Deschampsia flexuosa* (wavy hairgrass) and *Maianthemum canadense* (Canada mayflower) are most characteristic; scattered *Quercus rubra* (northern red oak) and/or *Betula alleghaniensis* (yellow birch) possible. ..... **High-Elevation Outcrop Barrens (Black Chokeberry Igneous / Metamorphic Type) (CEGL008508)**

[*Photinia melanocarpa - Gaylussacia baccata / Carex pensylvanica* Shrubland]

8a. Low elevation 170 to 580 m (550-1,900 feet) wooded herbaceous vegetation occurring on a variety of substrates (including calcareous shales), and has a large component of elevation-limited lithophytes; *Fraxinus americana* (white ash) sometimes codominant with *Juniperus virginiana* (eastern red-cedar); *Rhus aromatica* (fragrant sumac) and/or *Cheilanthes lanosa* (hairy lipfern) characteristic; *Carex pensylvanica* (Pennsylvania sedge) is constant and dominant; *Danthonia spicata* (poverty oatgrass) is frequent but sparse; other herbs can include *Symphyotrichum oblongifolium* (aromatic aster), *Dichanthelium linearifolium* (slimleaf panicgrass), and/or *Euphorbia corollata* (flowering spurge); known along the AT corridor in Shenandoah National Park in VA on steep, southeast - to southwest-facing slopes. ..... **Central Appalachian Circumneutral Barrens (CEGL006037)**

[*Juniperus virginiana - Fraxinus americana / Carex pensylvanica - Cheilanthes lanosa* Open Woodland]

8b. Middle-elevation (550-1,050 m [1,800-3,450 feet]) mafic barren vegetation occurring on metabasalt and calcium-bearing granitic outcrops; *Juniperus virginiana* (eastern red-cedar) less constant and lacks many other low-elevation species; stunted *Fraxinus americana* (white ash) common with *Physocarpus opulifolius* (common ninebark), *Chionanthus virginicus* (white fringetree), *Rosa carolina* var. *carolina* (Carolina rose), and/or *Rhus typhina* (staghorn sumac) often abundant; *Symphyotrichum laeve* var. *concinnum* (smooth blue aster) and *Hylotelephium telephioides* (Allegheny stonecrop) usually present and characteristic; *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), *Deschampsia flexuosa* (wavy hairgrass), and/or *Schizachyrium scoparium* (little bluestem) common; *Phacelia dubia* (smallflower phacelia) common in the spring. ..... **Central Appalachian Mafic Barrens (Ninebark / Pennsylvania Sedge Type) (CEGL008529)**

[*Fraxinus americana / Physocarpus opulifolius / Carex pensylvanica - Allium cernuum - (Phacelia dubia)* Wooded Grassland]

9a. Boulderfield or talus slope vegetation characterized by gnarled and usually stunted *Betula lenta* (sweet birch), *Quercus prinus* (chestnut oak), and/or *Quercus rubra* (northern red oak); physiognomy varies from nearly closed forest to very sparse woodland; other common trees may include *Prunus serotina* (black cherry), *Pinus strobus* (eastern white pine), *Acer rubrum* (red maple),and/or *Nyssa sylvatica* (blackgum); *Hamamelis virginiana* (American witch-hazel) and *Vaccinium pallidum* (Blue Ridge blueberry) common; *Parthenocissus quinquefolia* (Virginia creeper) characteristic vine; *Aralia nudicaulis* (wild sarsaparilla) characteristic herb; high lichen cover; occurring on fractured rock from 100 to 1,025 m (300-3,360 feet) elevation throughout the Blue Ridge and Ridge and Valley sections of PA, VA, WV, and MD. ..... **Sweet Birch - Chestnut Oak Talus Woodland (CEGL006565)**

[*Betula lenta - Quercus prinus / Parthenocissus quinquefolia* Woodland]

9b. Boulderfields dominated by non vascular vegetation. **10**

10a. Quartzite and sandstone boulderfields covered with *Lasallia papulosa* (blistered naval lichen) and/or *Lasallia pensylvanica* (Pennsylvania blistered naval lichen) either singly or together along with *Dimelaena oreina* (mountain lichen); *Melanelia culbersonii* (Culberson's black-parmelia) is diagnostic; stunted *Betula lenta* (sweet birch) sometimes present in very low numbers; occurs at elevations from about 300 to 1,000 m (1,000-3,300 feet) and within the AT corridor in MD and Shenandoah National Park (SHEN) in VA; expected along the AT corridor in boulderfields that are characteristic of Central Appalachian siliciclastic ridges. ..... **Central Appalachian Acidic Boulderfield (CEGL004142)**
[*Lasallia (papulosa, pensylvanica) - Dimelaena oreina - (Melanelia culbersonii)* Nonvascular Vegetation]

10b. Metabasalt boulderfields in the northern VA Blue Ridge, covered with *Lasallia papulosa* (blistered naval lichen) and *Stereocaulon glaucescens* (snow lichen) in variable combinations; *Chrysothrix chlorina* (dust lichen) is scattered on sheltered boulder faces and is diagnostic; occurs from about 670 to 1,160 m (2,200-3,800 feet); this rare mafic nonvascular type occurs in SHEN in VA. ..... **Central Appalachian Mafic Boulderfield (CEGL004143)**
[*Lasallia papulosa - Stereocaulon glaucescens - Chrysothrix chlorina* Nonvascular Vegetation

11a. Herbaceous vegetation, sometimes with sparse shrub patches. **12**
11b. Nonvascular vegetation of boulderfields. Vascular plants absent or very sparse. **13**

12a. High-elevation barrens occurring on exposed rocky summits and upper-slope outcrops of Catoctin Formation metabasalt (greenstone) at elevations from 870 to 1,230 m (2,860-4,040 feet); all known sites on the AT corridor are located in Shenandoah National Park; *Deschampsia flexuosa* var. *flexuosa* (wavy hairgrass), *Sibbaldiopsis tridentata* (shrubby fivefingers), *Solidago simplex* var. *randii* (Rand's goldenrod), *Hylotelephium telephioides* (Allegheny stonecrop), and *Polypodium appalachianum* (Appalachian polypody) abundant; shrubs can include *Physocarpus opulifolius* var. *opulifolius* (common ninebark), *Diervilla lonicera* (northern bush honeysuckle), *Kalmia latifolia* (mountain laurel), and *Photinia melanocarpa* (black chokeberry); stunted trees may include *Betula alleghaniensis* (yellow birch), *Sorbus americana* (American mountain-ash), and *Prunus* (plum) spp.; patchwork of shrub thickets (typically <25% cover), herbaceous mats (typically <40% cover), and crustose lichen colonies. ..... **High-Elevation Greenstone Barrens (CEGL008536)**
[*Diervilla lonicera - Solidago simplex* var. *randii - Deschampsia flexuosa - Hylotelephium telephioides - Saxifraga michauxii* Grassland]

12b. Grassy openings found on rock outcrops and summits at 365-1,220 m (1,200-4,000 feet) elevation in the Central Appalachians; *Schizachyrium scoparium* (little bluestem), *Danthonia spicata* (poverty oatgrass), *Deschampsia flexuosa* (wavy hairgrass), and *Carex pensylvanica* (Pennsylvania sedge) characteristic with high *Cladonia* (cup lichen) spp. cover on exposed rocks; reported in PA, NJ, NY, CT. ..... **Low- to Mid-Elevation Little Bluestem - Poverty Oatgrass Outcrop Opening (CEGL006544)**
[*Schizachyrium scoparium - Danthonia spicata - Carex pensylvanica / Cladonia* spp. Grassland]

13a. Quartzite and sandstone boulderfields covered with *Lasallia papulosa* (blistered naval lichen) and/or *Lasallia pensylvanica* (Pennsylvania blistered naval lichen) either singly or together along with *Dimelaena oreina* (mountain lichen); *Melanelia culbersonii* (Culberson's black-parmelia) is diagnostic; stunted *Betula lenta* (sweet birch) sometimes present in very low numbers; occurs at elevations from about 300 to 1,000 m (1,000-3,300 feet) and within the AT corridor in MD and Shenandoah National Park (SHEN) in VA; expected along the AT corridor in boulderfields that are characteristic of Central Appalachian siliciclastic ridges. ..... **Central Appalachian Acidic Boulderfield (CEGL004142)**

[*Lasallia (papulosa, pensylvanica) - Dimelaena oreina - (Melanelia culbersonii)* Nonvascular Vegetation]

13b. Metabasalt boulderfields in the northern VA Blue Ridge, covered with *Lasallia papulosa* (blistered naval lichen) and *Stereocaulon glaucescens* (snow lichen) in variable combinations; *Chrysothrix chlorina* (dust lichen) is scattered on sheltered boulder faces and is diagnostic; occurs from about 670 to 1,160 m (2,200-3,800 feet); this rare mafic nonvascular type occurs in SHEN in VA. ..... **Central Appalachian Mafic Boulderfield (CEGL004143)**

[*Lasallia papulosa - Stereocaulon glaucescens - Chrysothrix chlorina* Nonvascular Vegetation]

5. Upland Deciduous Woodlands

1a. *Quercus* (oak) spp. and/or *Betula* (birch) spp. dominant. **2**
1b. *Quercus* (oak) spp. and/or *Betula* (birch) spp. **not** dominant. **10**

2a. *Betula* (birch) spp. more abundant than *Quercus* (oak) spp. **3**
2b. *Quercus* (oak) spp. more abundant than *Betula* (birch) spp. **7**

3a. *Betula lenta* (sweet birch) dominant. **4**
3b. *Betula alleghaniensis* (yellow birch) dominant. **5**

4a. Boulderfield or talus slope vegetation occurring on fractured rock from 100 to 1,025 m (300-3,360 feet) elevation throughout the Blue Ridge and Ridge and Valley sections of PA, VA, WV, and MD; gnarled *Betula lenta* (sweet birch), *Quercus prinus* (chestnut oak), and/or *Quercus rubra* (northern red oak) characteristic; other common trees may include *Prunus serotina* (black cherry), *Pinus strobus* (eastern white pine), *Acer rubrum* (red maple), and/or *Nyssa sylvatica* (blackgum); *Hamamelis virginiana* (American witch-hazel), *Vaccinium pallidum* (Blue Ridge blueberry) common shrubs; *Parthenocissus quinquefolia* (Virginia creeper) characteristic vine; *Aralia nudicaulis* (wild sarsaparilla) characteristic herb; high lichen cover. ..... **Sweet Birch - Chestnut Oak Talus Woodland (CEGL006565)**
[*Betula lenta - Quercus prinus / Parthenocissus quinquefolia* Woodland]

4b. *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) codominant in canopy with dense *Lycopodium* (clubmoss) spp. or *Dennstaedtia punctilobula* (eastern hayscented fern) ground cover; *Nyssa sylvatica* (blackgum) may be common; distribution is centered in the High Allegheny Mountains and Allegheny Plateau but extends north to NY, NJ and PA; common in WV, less common in VA. Often originating after severe disturbance such as fire, clear-cutting, or gypsy moth outbreaks. ..... **Central Appalachian Ruderal Sweet Birch - Red Maple Forest (CEGL008503)**
[*Betula lenta - Acer rubrum* / *Lycopodium annotinum - Dennstaedtia punctilobula* Ruderal Forest]

5a. Northern hardwood - oak talus slope woodland occurring on thin soils at low to mid elevations, from near sea level to about 520 m (0-1,700 feet) in the High Allegheny Plateau and Lower New England south to the northern Piedmont (1 occurrence along AT in northern PA); *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) codominant in canopy; scattered *Kalmia latifolia* (mountain laurel) may be present over an herb layer dominated by *Polypodium virginianum* (rock polypody) and *Dryopteris marginalis* (marginal woodfern); ground cover is exposed talus, moss- and lichen-covered boulders, and deciduous litter. ..... **Oak - Birch Talus Slope Woodland (CEGL006585)**
[*Quercus rubra - Betula lenta* / *Polypodium virginianum* Woodland]

5b. High-elevation boulderfield woodland or open forest of the Northern Blue Ridge, Ridge and Valley, and Allegheny Mountains in VA and WV. **6**

6a. *Quercus rubra* (northern red oak) absent or rare; very open canopy dominated by stunted and gnarled *Betula alleghaniensis* (yellow birch); *Sorbus americana* (American mountain-ash), *Prunus pensylvanica* (pin cherry), and *Acer spicatum* (mountain maple) often have high cover; *Menziesia pilosa* (minniebush), *Sambucus racemosa* (red elderberry), and/or *Ribes cynosbati* (eastern prickly gooseberry) are frequent shrubs; *Polypodium appalachianum* (Appalachian polypody) may abundantly cover mossy rock surfaces; high lichen cover. ..... **Central Appalachian High-Elevation Boulderfield Forest (CEGL008504)**
[*Betula alleghaniensis* / *Sorbus americana - Acer spicatum* / *Polypodium appalachianum* Forest]

6b. *Quercus rubra* (northern red oak) present; open to somewhat closed canopy dominated by gnarled *Betula alleghaniensis* (yellow birch); *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) characteristic understory trees, although *Ilex montana* (mountain holly) may be locally abundant; *Hamamelis virginiana* (American witch-hazel), *Sambucus racemosa* var. *racemosa* (red elderberry), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs can include *Oclemena acuminata* (whorled wood aster) and ferns such as *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Dennstaedtia punctilobula* (eastern hayscented fern), and *Dryopteris intermedia* (intermediate woodfern); generally on weathered talus. ..... **Central Appalachian Northern Hardwood Forest (Yellow Birch - Northern Red Oak Type) (CEGL008502)**
[*Betula alleghaniensis - Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia - Oclemena acuminata* Forest]

7a. *Quercus rubra* (northern red oak) dominant or codominant in canopy. **8**
7b. *Quercus prinus* (chestnut oak) dominant or codominant in canopy. **9**

8a. Northern hardwood - oak talus slope woodland occurring on thin soils at low to mid elevations, from near sea level to about 520 m (0-1,700 feet) in the High Allegheny Plateau and Lower New England south to the northern Piedmont (1 occurrence along AT in northern PA); *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) codominant in canopy; scattered *Kalmia latifolia* (mountain laurel) may be present over an herb layer dominated by *Polypodium virginianum* (rock polypody) and *Dryopteris marginalis* (marginal woodfern); ground cover is exposed talus, moss- and lichen-covered boulders, and deciduous litter. ..... **Oak - Birch Talus Slope Woodland (CEGL006585)**
[*Quercus rubra - Betula lenta* / *Polypodium virginianum* Woodland]

8b. Central Appalachian northern hardwood forest characterized by *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) occurring on rocky, northwest- to northeast-facing slopes at elevations from about 975 m to more than 1,300 m (3,000-4,300 feet); occurs in high-elevation areas of the Central Appalachians in VA, WV, MD, and PA; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) characteristic understory trees, although *Ilex montana* (mountain holly) may be locally abundant; *Hamamelis virginiana* (American witch-hazel), *Sambucus racemosa* var. *racemosa* (red elderberry), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs can include *Oclemena acuminata* (whorled wood aster) and ferns such as *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Dennstaedtia punctilobula* (eastern hayscented fern), and *Dryopteris intermedia* (intermediate woodfern). ..... **Central Appalachian Northern Hardwood Forest (Yellow Birch - Northern Red Oak Type) (CEGL008502)**
[*Betula alleghaniensis - Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia - Oclemena acuminata* Forest]

9a. Boulderfield or talus slope vegetation occurring on fractured rock from 100 to 1,025 m (300-3,360 feet) elevation throughout the Blue Ridge and Ridge and Valley sections of PA, VA, WV, and MD; physiognomy varies from nearly closed forest to very sparse woodland; gnarled and usually stunted *Betula lenta* (sweet birch), *Quercus prinus* (chestnut oak), and/or *Quercus rubra* (northern red oak) characteristic; other common trees may include *Prunus serotina* (black cherry), *Pinus strobus* (eastern white pine), *Acer rubrum* (red maple), *Betula* (birch) spp., and/or *Nyssa sylvatica* (blackgum); *Hamamelis virginiana* (American witch-hazel) and *Vaccinium pallidum* (Blue Ridge blueberry) common shrubs; *Parthenocissus quinquefolia* (Virginia creeper) characteristic vine; *Aralia nudicaulis* (wild sarsaparilla) characteristic herb; high lichen cover..... **Sweet Birch - Chestnut Oak Talus Woodland (CEGL006565)**
[*Betula lenta* - *Quercus prinus* / *Parthenocissus quinquefolia* Woodland]

9b. Central Appalachian xeric shale woodland occurring in the Ridge and Valley and also on metashale of the northern Blue Ridge, and is found in Bedford and Rockbridge counties north of Roanoke VA; codominated by *Quercus prinus* (chestnut oak) and *Pinus virginiana* (Virginia pine) at low elevations, up to about 840 m (2,760 feet) in the shale barrens of the Central Appalachians a patchy to moderately dense herb layer is present with *Danthonia spicata* (poverty oatgrass), *Carex pensylvanica* (Pennsylvania sedge), *Coreopsis verticillata* (whorled tickseed), *Solidago bicolor* (white goldenrod), and *Schizachyrium scoparium* (little bluestem); *Quercus ilicifolia* (bear oak) characteristic in the shrub layer; occurring on steep south- to west-facing, mid to upper slopes with abundant outcrops. ..... **Central Appalachian Xeric Shale Woodland (Chestnut Oak / Mixed Herbs Type) (CEGL008526)**
[*Quercus prinus* / *Quercus ilicifolia* / *Danthonia spicata* Woodland]

10a. *Crataegus punctata*- (dotted hawthorn) dominated successional woodland, forest, or "orchard" of high elevations in the Southern and Central Appalachians; large patch along the AT corridor in the saddle between Beech Mountain and Whitetop in VA. ..... **Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata* - *Crataegus flabellata* Ruderal Forest]

10b. *Carya* (hickory) spp., *Fraxinus americana* (white ash), *Tilia americana* (American basswood), and/or *Acer saccharum* (sugar maple) codominant in canopy. **11**

11a. Central Appalachian basic woodland of steep rocky metabasalt outcrops and slopes in the Blue Ridge and upper Piedmont of VA, MD, and WV from 60 to 1,000 m (240-3,300 feet) elevation; *Carya glabra* (pignut hickory) and *Fraxinus americana* (white ash) are the typical dominants; *Quercus prinus* (chestnut oak), and *Quercus rubra* (northern red oak) may also be common in canopy; *Celtis occidentalis* (common hackberry) common in subcanopy; herbs include *Asplenium platyneuron* (ebony spleenwort), *Bidens bipinnata* (Spanish needles), *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), *Carex muehlenbergii* (Muhlenberg's sedge), *Muhlenbergia sobolifera* (rock muhly), *Paronychia canadensis* (smooth forked nailwort), *Phytolacca americana* (American pokeweed), *Pycnanthemum incanum* (hoary mountainmint), *Verbascum thapsus* (common mullein), and *Solidago ulmifolia* (elmleaf goldenrod). ..... **Central Appalachian Basic Woodland (CEGL003683)**
[*Fraxinus americana* - *Carya glabra* / *Muhlenbergia sobolifera* - *Helianthus divaricatus* - *Solidago ulmifolia* Woodland]

11b. Boulderfield forests with substrates varying from stable, large-block boulderfields to fine talus and unstable, loose scree; occurring on steep, boulder and stone deposits below cliffs; stream- or river-fronting boulder- and talus-strewn slopes. **12**

12a. Central Appalachian basic boulderfield forest dominated by *Tilia americana* (American basswood) and *Fraxinus americana* (white ash) occurring on steep, boulder and stone slides below cliffs, boulder-filled slope concavities, and other very rocky, submesic to mesic habitats between 760 and 1,030 m (2,500-3,400 feet) elevation in the Northern Blue Ridge in VA, MD, and WV, and more locally in the western VA Ridge and Valley region; *Quercus rubra* (northern red oak), *Carya ovata* (shagbark hickory), and *Betula lenta* (sweet birch) also common; *Ostrya virginiana* (hophornbeam) and *Acer pensylvanicum* (striped maple) common in the subcanopy; shrubs can include *Sambucus racemosa* var. *racemosa* (red elderberry), *Prunus virginiana* (chokecherry), and/or *Hamamelis virginiana* (American witch-hazel); herb layer is diverse with *Laportea canadensis* (Canadian woodnettle), *Impatiens pallida* (pale touch-me-not), *Hydrophyllum virginianum* (eastern waterleaf), *Dryopteris marginalis* (marginal woodfern), *Arisaema triphyllum* (Jack in the pulpit), and others. .... **Central Appalachian Basic Boulderfield Forest (Montane Basswood - White Ash Type) (CEGL008528)**

[*Tilia americana* - *Fraxinus americana* / *Acer pensylvanicum* / *Parthenocissus quinquefolia* - *Impatiens pallida* Woodland]

12b. *Acer saccharum* (sugar maple) codominant in canopy; rich boulderfield forest occurring on stream- or river-fronting boulder- and talus-strewn slopes in the Central Appalachians of PA, MD, northern VA, and probably northeastern WV; characterized by a mixed canopy with *Tilia americana* (American basswood), *Fraxinus americana* (white ash), and *Acer saccharum* (sugar maple); *Staphylea trifolia* (American bladdernut) abundant in the shrub layer; *Acer nigrum* (black maple) may also be codominant; *Cardamine concatenata* (cutleaf toothwort), *Dicentra canadensis* (squirrel corn), *Impatiens pallida* (pale touch-me-not), *Dryopteris marginalis* (marginal woodfern), *Eurybia divaricata* (white wood aster), *Arisaema triphyllum* (Jack in the pulpit), *Asarum canadense* (Canadian wildginger), and *Polystichum acrostichoides* (Christmas fern) common herbs. .... **Central Appalachian-Piedmont Rich Boulderfield Forest (CEGL006471)**

[*Acer saccharum* - *Tilia americana* / *Staphylea trifolia* / *Dryopteris marginalis* - (*Impatiens pallida*) Forest]

6. Pine and Mixed Pine-Deciduous Forests and Woodlands

1a. Uneven-aged pine or mixed pine forests lacking indicators of recent (0-60 years) stand-initiating anthropogenic disturbance. **2**
1b. Successional, semi-natural pine and mixed pine forests and plantations occurring on altered, plowed, farmed, or planted lands. **14**

2a. *Pinus strobus* (eastern white pine) codominant in canopy (>25%). **3**
2b. Other pine species dominant or codominant in canopy. **9**

3a. *Tsuga canadensis* (eastern hemlock) codominant in the canopy. **4**
3b. Deciduous trees are codominant. **6**

4a. Matrix *Pinus strobus* (eastern white pine) - *Tsuga canadensis* (eastern hemlock) forest of the northern part of the Central Appalachians in PA; canopy associates include *Liriodendron tulipifera* (tuliptree), *Prunus serotina* (black cherry), *Nyssa sylvatica* (blackgum), and *Quercus prinus* (chestnut oak); sparse shrub and herb layers; occurs on dry-mesic sites with infertile, sandy soils. ..... **Central Appalachian White Pine - Eastern Hemlock Forest (CEGL006019)**
[*Pinus strobus* - *Tsuga canadensis* / *Acer pensylvanicum* / *Polystichum acrostichoides* Forest]
4b. Acidic cove forests occurring on the lower slopes and bottoms of ravines and coves at lower elevations, generally below 1,160 m (3,800 feet). **5**

5a. Ranging from the southern part of the Central Appalachians in Roanoke, VA, north to MD; *Liriodendron tulipifera* (tuliptree) characteristic; canopy associates can include *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and/or *Quercus alba* (white oak); *Acer rubrum* (red maple), *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Cercis canadensis* (eastern redbud), and/or *Cornus florida* (flowering dogwood) common; *Rhododendron maximum* (great laurel) absent. ..... **Central Appalachian Acidic Cove Forest (White Pine - Hemlock - Mixed Hardwoods Type) (CEGL006304)**
[*Liriodendron tulipifera* - *Pinus strobus* - *Tsuga canadensis* - *Quercus rubra* / *Polystichum acrostichoides* Forest]
5b. Lower-elevation (400-1,160 m [1,300-3,800 feet]) acidic cove forest ranging from Roanoke, VA, south to GA; *Rhododendron maximum* (great laurel) dominant shrub; with a variable canopy with *Liriodendron tulipifera* (tuliptree) and *Betula lenta* (sweet birch) mixed with *Tsuga canadensis* (eastern hemlock), *Acer rubrum* (red maple), *Quercus rubra* (northern red oak), and/or *Quercus alba* (white oak) that usually does not include much *Halesia* (silverbell) spp.; relative proportion of *Tsuga canadensis* (eastern hemlock) may vary greatly, with some sites having little or none in the canopy; *Aesculus flava* (yellow buckeye), *Acer pensylvanicum* (striped maple), and *Hamamelis virginiana* (American witch-hazel) are common shrubs; characteristic herbs include *Anemone quinquefolia* var. *quinquefolia* (nightcaps), *Carex laxiculmis* var. *laxiculmis* (spreading sedge), and *Viola blanda* var. *blanda* (sweet white violet). ..... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera* - *Betula lenta* - *Tsuga canadensis* / *Rhododendron maximum* Forest]

6a. Wide-ranging pine-oak forests occurring on a variety of slopes, exposures, and settings; *Quercus coccinea* (scarlet oak), *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus velutina* (black oak), and/or *Quercus rubra* (northern red oak) in the canopy; *Liriodendron tulipifera* (tuliptree) minor to absent. **7**

6b. Acidic cove forests occurring on the lower slopes and bottoms of ravines and coves at lower elevations, generally below 915 m (3,000 feet). **8**

7a. *Quercus velutina* (black oak), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and *Quercus prinus* (chestnut oak) share canopy with *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple), *Nyssa sylvatica* (blackgum), and *Betula lenta* (sweet birch) common in subcanopy; heaths are dominant shrubs; New England south and west to PA and WV. .... **Northeastern White Pine - Oak Forest (CEGL006293)**
[*Pinus strobus* - *Quercus* (*rubra, velutina*) - *Fagus grandifolia* Forest]

7b. *Pinus strobus* (eastern white pine) - subxeric oak forest widespread on low shale mountains and hills in west-central VA and adjacent WV; sites are mid and upper slopes, ridge crests, dry ravines, and bluffs underlain primarily by shale and similar sedimentary rocks (siltstone) mostly below 760 m (2,500 feet) elevation in the Central Appalachians of VA, MD, and WV, and the northern and central Piedmont of VA; *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus rubra* (northern red oak), and/or *Quercus coccinea* (scarlet oak) codominant with *Pinus strobus* (eastern white pine) in the canopy; *Acer rubrum* (red maple), *Amelanchier arborea* (common serviceberry) and *Cornus florida* (flowering dogwood) are common in subcanopy; *Kalmia latifolia* (mountain laurel), *Viburnum acerifolium* (mapleleaf viburnum), *Vaccinium pallidum* (Blue Ridge blueberry) and *Vaccinium stamineum* (deerberry) typical shrubs; scattered herbs including *Chimaphila maculata* (striped prince's pine), *Galax urceolata* (beetleweed), and *Polygonatum biflorum* (smooth Solomon's seal). ..... **Central Appalachian-Piedmont White Pine - Subxeric Oak Forest (CEGL008539)**
[*Pinus strobus* - *Quercus alba* - *Quercus prinus* / *Vaccinium stamineum* Forest]

8a. Cove forest of lower slopes and ravines below 915 m (3,000 feet) in the Central Appalachians from Roanoke, VA, north to MD; canopy associates can include *Liriodendron tulipifera* (tuliptree), *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and/or *Quercus alba* (white oak); *Acer rubrum* (red maple), *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Cercis canadensis* (eastern redbud), and/or *Cornus florida* (flowering dogwood) common; *Rhododendron maximum* (great laurel) absent. .... **Central Appalachian Acidic Cove Forest (White Pine - Hemlock - Mixed Hardwoods Type) (CEGL006304)**
[*Liriodendron tulipifera* - *Pinus strobus* - *Tsuga canadensis* - *Quercus rubra* / *Polystichum acrostichoides* Forest]

8b. Lower-elevation (400-1,160 m [1,300-3,800 feet]) acidic cove forest ranging from Roanoke, VA, south to GA; *Rhododendron maximum* (great laurel) dominant shrub; with a variable canopy with *Liriodendron tulipifera* (tuliptree) and *Betula lenta* (sweet birch) mixed with *Tsuga canadensis* (eastern hemlock), *Acer rubrum* (red maple), *Quercus rubra* (northern red oak), and/or *Quercus alba* (white oak) that usually does not include much *Halesia* (silverbell) spp.; relative proportion of *Tsuga canadensis* (eastern hemlock) may vary greatly, with some sites having little or none in the canopy; *Aesculus flava* (yellow buckeye), *Acer pensylvanicum* (striped maple), and *Hamamelis virginiana* (American witch-hazel) are common shrubs; characteristic herbs include *Anemone quinquefolia* var. *quinquefolia* (nightcaps), *Carex laxiculmis* var. *laxiculmis* (spreading sedge), and *Viola blanda* var. *blanda* (sweet white violet). .... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera* - *Betula lenta* - *Tsuga canadensis* / *Rhododendron maximum* Forest]

9a. *Pinus virginiana* (Virginia pine) and/or *Pinus rigida* (pitch pine) dominant or codominant in canopy. **10**
9b. Other pine species and/or conifers dominant. **15**

10a. *Pinus virginiana* (Virginia pine) dominant or codominant in canopy (≥20%) **11**
10b. *Pinus rigida* (pitch pine) and/or *Pinus pungens* (Table Mountain pine) share canopy dominance with *Quercus prinus* (chestnut oak) and/or *Quercus coccinea* (scarlet oak); *Pinus virginiana* (Virginia pine) absent to minor unless in in disturbed (and unburned) stands; *Quercus ilicifolia* (bear oak) is diagnostic but not always present; herbaceous species sparse to absent *Kalmia latifolia* (mountain laurel), *Amelanchier arborea* (common serviceberry), *Gaylussacia baccata* (black huckleberry), and *Vaccinium pallidum* (Blue Ridge blueberry) dominant; occurs on xeric, convex, often rocky south- and west-facing slopes, ridge spurs, crests, and clifftops at elevations from 275 to 1,200 m (900-4,000 feet); canopies of many stands have become quite closed due to fire exclusion, occurs throughout the Central Appalachians and peripherally in the Piedmont and Southern Blue Ridge. ..... **Central Appalachian Pine - Oak / Heath Woodland (CEGL004996)**
[*Pinus* (*pungens, rigida)* - *Quercus prinus* / (*Quercus ilicifolia*) / *Gaylussacia baccata* Woodland]

11a. Mixed pine-oak woodlands of the shale barrens in the Central Appalachians. **12**
11b. *Pinus virginiana* (Virginia pine) forests and woodlands not occurring on shale **13**

12a. Central Appalachian xeric shale woodland endemic to the Central Appalachian province of the Ridge and Valley, south (west) of Roanoke, VA dominated by *Pinus virginiana* (Virginia pine); *Pinus pungens* (Table Mountain pine) and *Quercus prinus* (chestnut oak) mixed in the canopy over a sparse *Quercus ilicifolia* (bear oak) and *Vaccinium pallidum* (Blue Ridge blueberry); occurs on moderate to steep slopes from 300-730 m (1,000-2,400 feet) elevation. ..... **Central Appalachian Xeric Shale Woodland (Virginia Pine / Sparse Herbs Type) (CEGL008525)**
[*Pinus virginiana* - *Quercus prinus* / *Quercus ilicifolia* / (*Hieracium greenii, Viola pedata*) Woodland]

12b. Central Appalachian xeric shale woodland occurring in the VA Ridge and Valley and also on metashale of the northern Blue Ridge, found in Bedford and Rockbridge counties north of Roanoke; codominated by *Quercus prinus* (chestnut oak) and *Pinus virginiana* (Virginia pine) at low elevations, up to about 840 m (2,760 feet) in the shale barrens of the Central Appalachians a patchy to moderately dense herb layer is present with *Danthonia spicata* (poverty oatgrass), *Carex pensylvanica* (Pennsylvania sedge), *Coreopsis verticillata* (whorled tickseed), *Solidago bicolor* (white goldenrod), and *Schizachyrium scoparium* (little bluestem); *Quercus ilicifolia* (bear oak) characteristic in the shrub layer; occurring on steep south- to west-facing, mid to upper slopes with abundant outcrops. ..... **Central Appalachian Xeric Shale Woodland (Chestnut Oak / Mixed Herbs Type) (CEGL008526)**
[*Quercus prinus* / *Quercus ilicifolia* / *Danthonia spicata* Woodland]

13a. Closed canopy *Pinus virginiana* (Virginia pine) forests..... **14**
13b. Xeric woodland with open canopy confined to lower elevations (<770 m [2,500 feet]) with southeast to southwest aspects on steep convex slopes, ridge spurs, and clifftops; abundant outcrops; limited to the Northern Blue Ridge, Ridge and Valley, and western Piedmont in VA, WV, and MD; *Pinus virginiana* (Virginia pine) and *Quercus prinus* (chestnut oak) codominant in canopy; *Schizachyrium scoparium* (little bluestem), *Carex pensylvanica* (Pennsylvania sedge), and/or *Danthonia spicata* (poverty oatgrass) common; *Amelanchier arborea* (common serviceberry) and *Vaccinium stamineum* (deerberry) are common shrubs; *Quercus ilicifolia* (bear oak) absent. ....**Central Appalachian Chestnut Oak - Virginia Pine Woodland (CEGL008540)**
[*Quercus prinus* - *Pinus virginiana* - (*Pinus pungens*) / *Schizachyrium scoparium* - *Dichanthelium depauperatum* Woodland]

14a. Dry *Pinus virginiana* (Virginia pine) forest with closed canopy, mostly *Vaccinium pallidum* (Blue Ridge blueberry) in low-shrub layer and very little herbaceous cover. ....**Appalachian Low-Elevation Mixed Pine / Blue Ridge Blueberry Forest (CEGL007119)**
[*Pinus virginiana* - *Pinus (rigida, echinata)* - *(Quercus prinus) / Vaccinium pallidum* Forest]
14b. Successional *Pinus virginiana* (Virginia pine) forest (over 50% of canopy); occupies flat to moderately sloping land that was heavily plowed or grazed and eroded in the recent past (10-60 years ago). ..... **Ruderal Virginia Pine Forest (CEGL002591)**
[*Pinus virginiana* Ruderal Forest]

15a. Mixed conifer plantation; pines (*Pinus* spp.) or conifers other than *Pinus strobus* (eastern white pine) codominant. ..... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
15b. *Pinus strobus* (eastern white pine) a dominant component (greater than 50% of canopy). **17**

16a. Planted even-aged stand of *Pinus strobus* (eastern white pine) with obvious indications of silviculture and few other species. .....**Eastern White Pine Plantation (CST007178)**
[*Pinus strobus* Forest Plantation]
16b. Successional forest, usually mixed-age and including a mixture of other successional species. ....**Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

7. Hemlock - White Pine, Hemlock - Hardwood, Hemlock - Oak, Mesophytic Hardwood, and Acidic Cove Forests[20]

1a. Evergreen trees dominant or codominant in canopy (>25% canopy coverage)..... **2**
1b. Deciduous trees dominant in canopy; *Tsuga canadensis* (eastern hemlock) and *Pinus strobus* (eastern white pine) minor to absent (<25% coverage). **11**

2a. *Pinus strobus* (eastern white pine) and *Tsuga canadensis* (eastern hemlock) both present, one or both of them dominant in the canopy..... **3**
2b. *Tsuga canadensis* (eastern hemlock) dominant or codominant in canopy; *Pinus strobus* (eastern white pine) minor associate to absent. **5**

3a. *Pinus strobus* (eastern white pine) - *Tsuga canadensis* (eastern hemlock) forest which occurs on dry-mesic sites restricted to the northern part of the Central Appalachians in PA, and possibly the High Allegheny Plateau in PA; canopy associates include *Liriodendron tulipifera* (tuliptree) *Prunus serotina* (black cherry), *Nyssa sylvatica* (blackgum), and *Quercus prinus* (chestnut oak); sparse shrub and herb layers; occurs on mid slopes with infertile, sandy soils. .... **Central Appalachian White Pine - Eastern Hemlock Forest (CEGL006019)**
[*Pinus strobus* - *Tsuga canadensis* / *Acer pensylvanicum* / *Polystichum acrostichoides* Forest]
3b. Cove forests of lower slopes and ravines below 1,160 m (3,800 feet) elevation, from MD south, containing *Pinus strobus* (eastern white pine) and *Tsuga canadensis* (eastern hemlock). **4**

4a. Acidic cove forests found in VA (from Roanoke north), MD, and WV; *Rhododendron maximum* (great laurel) typically absent; canopy associates can include *Liriodendron tulipifera* (tuliptree), *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and/or *Quercus alba* (white oak); *Acer rubrum* (red maple), *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Cercis canadensis* (eastern redbud), and/or *Cornus florida* (flowering dogwood) common; occurs on the lower slopes and bottoms of ravines and coves at lower elevations, generally below 915 m (3,000 feet). .... **Central Appalachian Acidic Cove Forest (White Pine - Hemlock - Mixed Hardwoods Type) (CEGL006304)**
[*Liriodendron tulipifera* - *Pinus strobus* - *Tsuga canadensis* - *Quercus rubra* / *Polystichum acrostichoides* Forest]
4b. Lower-elevation (400-1,160 m [1,300-3,800 feet]) acidic cove forest ranging from Roanoke, VA, south to GA; *Rhododendron maximum* (great laurel) dominant shrub; canopy variable with *Liriodendron tulipifera* (tuliptree) and *Betula lenta* (sweet birch) mixed with *Tsuga canadensis* (eastern hemlock), *Acer rubrum* (red maple), *Quercus rubra* (northern red oak), and/or *Quercus alba* (white oak) that usually does not include much *Halesia* (silverbell) spp.; relative proportion of *Tsuga canadensis* (eastern hemlock) may vary greatly, with some sites having little or none in the canopy; *Aesculus flava* (yellow buckeye), *Acer pensylvanicum* (striped maple), and *Hamamelis virginiana* (American witch-hazel) are common shrubs; characteristic herbs include *Anemone quinquefolia* var.

[20]For all *Tsuga canadensis* associations that have been impacted by the hemlock woolly adelgid, treat standing and fallen dead trees as part of *Tsuga canadensis* canopy cover. Due to the loss of hemlock from adelgids, *Pinus strobus* is now the sole evergreen codominant or dominant in many stands. Even in stands unaffected by adelgid, the proportions of hemlock and white pine were highly variable.

quinquefolia (nightcaps), *Carex laxiculmis* var. *laxiculmis* (spreading sedge), and *Viola blanda* var. *blanda* (sweet white violet). ..... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera* - *Betula lenta* - *Tsuga canadensis* / *Rhododendron maximum* Forest]

5a. *Betula alleghaniensis* (yellow birch) codominant or common in stand..... **6**
5b. *Betula alleghaniensis* (yellow birch) minor to absent; *Betula lenta* (sweet birch) may be common..... **8**

6a. *Rhododendron maximum* (great laurel) absent in the shrub layer; *Tsuga canadensis* (eastern hemlock) - northern hardwood forest occurring on rocky acidic soils on north-facing slopes; distributed in large patches from NH south through PA; restricted to local patches at higher elevations of the Central Appalachians in MD, WV, and VA; at the southern end of the range (in VA and MD), *Liriodendron tulipifera* (tuliptree) may be an important overstory associate while to the north *Fagus grandifolia* (American beech) and *Acer saccharum* (sugar maple) are more common; *Quercus* (oak) spp., such as *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), and *Quercus rubra* (northern red oak) and *Pinus strobus* (eastern white pine) tend to be absent or, if present, only occur with low abundance; subcanopy includes *Tsuga canadensis* (eastern hemlock), *Acer rubrum* (red maple), and *Betula lenta* (sweet birch); *Hamamelis virginiana* (American witch-hazel) is a characteristic shrub; sparse herb layer but *Mitchella repens* (partridgeberry), *Thelypteris noveboracensis* (New York fern), *Medeola virginiana* (Indian cucumber) and *Eurybia divaricata* (white wood aster) are characteristic. ..... **Hemlock - Transitional Northern Hardwood Forest (CEGL006639)**
[*Tsuga canadensis* - *Acer saccharum* - *Fagus grandifolia* / *Dryopteris intermedia* Forest]
6b. *Rhododendron maximum* (great laurel) characteristic in the shrub layer. **7**

7a. *Tsuga canadensis* (eastern hemlock) - northern hardwood forest occurring on sandy loams and sands of glacial till or sandstone, in rocky ravines, or moderately steep slopes of any aspect, on stream terraces, or occasionally on flats; ranges from PA and southern NY south to WV; *Betula lenta* (sweet birch), *Prunus serotina* (black cherry), *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Quercus alba* (white oak), and/or *Liriodendron tulipifera* (tuliptree) also common in canopy; *Hamamelis virginiana* (American witch-hazel) is a common shrub..... **Central Appalachian Hemlock - Northern Hardwood Forest (CEGL006206)**
[*Tsuga canadensis* - *Betula alleghaniensis* - *Prunus serotina* / *Rhododendron maximum* Forest]
7b. Mixed northern hardwood forest of the Blue Ridge Mountains at elevations of 320 to 1,040 m (1,000-5,000 feet); strong *Betula alleghaniensis* (yellow birch) component with variable amounts of *Tsuga canadensis* (eastern hemlock) and *Acer rubrum* (red maple); *Liriodendron tulipifera* (tuliptree), *Prunus serotina* (black cherry), and/or *Acer pensylvanicum* (striped maple) may be present in some stands; dense *Rhododendron maximum* (great laurel) cover and few herbs, including *Dennstaedtia punctilobula* (eastern hayscented fern) and *Dryopteris intermedia* (intermediate woodfern); steep, mostly north-facing mesic slopes, and on toeslopes and flats along streams; locally distributed throughout higher elevations of the Southern and Central Appalachians (NC, TN, VA, WV)..... **Blue Ridge Hemlock - Northern Hardwood Forest (CEGL007861)**
[*Betula alleghaniensis* - (*Tsuga canadensis*) / *Rhododendron maximum* / (*Leucothoe fontanesiana*) Forest]

8a. Acidic cove forest found at lower-elevations (400-1,160 m [1,300-3,800 feet]), ranging from Roanoke, VA, south to GA; *Rhododendron maximum* (great laurel) dominant shrub; with a variable canopy with *Liriodendron tulipifera* (tuliptree) and *Betula lenta* (sweet birch) mixed with *Tsuga canadensis* (eastern hemlock), *Acer rubrum* (red maple), *Quercus rubra* (northern red oak) and/or *Quercus alba* (white oak) that usually does not include much *Halesia* (silverbell) spp.; relative proportion of *Tsuga canadensis* (eastern hemlock) may vary greatly, with some sites having little or none in the canopy; *Aesculus flava* (yellow buckeye), *Acer pensylvanicum* (striped maple), and *Hamamelis virginiana* (American witch-hazel) are common shrubs; characteristic herbs include *Anemone quinquefolia* var. *quinquefolia* (nightcaps), *Carex laxiculmis* var. *laxiculmis* (spreading sedge), and *Viola blanda* var. *blanda* (sweet white violet). ..... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera - Betula lenta - Tsuga canadensis* / *Rhododendron maximum* Forest]

8b. Various forests occurring from New England south to central VA (near Roanoke). **9**

9a. Central Appalachian *Tsuga canadensis* (eastern hemlock) - mixed oak forest occurring on moderately steep sheltered slopes and low flats with northeastern to northwestern exposures at lower elevations from 150 m to about 750 m (500-2,500 feet); ranges from the NJ Highlands south to the Blue Ridge, Ridge and Valley, and Piedmont provinces of PA and MD, and the Cumberlands in WV; *Quercus prinus* (chestnut oak) codominant with *Tsuga canadensis* (eastern hemlock); *Quercus rubra* (northern red oak) and *Quercus alba* (white oak) are overstory associates; *Pinus strobus* (eastern white pine) minor associate; *Betula lenta* (sweet birch), *Acer rubrum* (red maple), and *Tsuga canadensis* (eastern hemlock) common in subcanopy; *Hamamelis virginiana* (American witch-hazel) most consistently providing moderate cover; less frequently, *Kalmia latifolia* (mountain laurel), *Rhododendron maximum* (great laurel), *Vaccinium pallidum* (Blue Ridge blueberry), *Amelanchier arborea* (common serviceberry), and *Viburnum acerifolium* (mapleleaf viburnum) are shrub components. ..... **Central Appalachian Hemlock - Chestnut Oak Forest (CEGL006923)**
[*Tsuga canadensis - Quercus prinus - Betula lenta* Forest]

9b. Mixed hemlock-hardwood or white pine - hemlock - hardwood acidic cove forests occurring on the lower slopes and bottoms of ravines. **10**

10a. Mixed hardwood - white pine - hemlock acidic cove forest distributed in the Central Appalachians from Roanoke, VA, north to MD generally below 915 m (3,000 feet); variable canopy can include *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and/or *Quercus alba* (white oak), along with *Tsuga canadensis* (eastern hemlock), *Liriodendron tulipifera* (tuliptree), and/or *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple), *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Cercis canadensis* (eastern redbud), and/or *Cornus florida* (flowering dogwood) common; *Rhododendron maximum* (great laurel) absent. ..... **Central Appalachian Acidic Cove Forest (White Pine - Hemlock - Mixed Hardwoods Type) (CEGL006304)**
[*Liriodendron tulipifera - Pinus strobus - Tsuga canadensis - Quercus rubra* / *Polystichum acrostichoides* Forest]

10b. Mixed hemlock-hardwood acidic cove forest found along the AT corridor only at Shenandoah National Park; sites are located between 275 and 760 m (900-2,500 feet) elevation; stands often occupy elongated, linear patches in mesic ravines with incising first-, second-, and third-order stream; *Tsuga canadensis* (eastern hemlock), *Quercus prinus* (chestnut oak), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Quercus rubra* (northern red oak), and *Nyssa sylvatica* (blackgum) are the most characteristic and abundant trees; *Fagus grandifolia* (American beech), *Magnolia acuminata* (cucumber-tree), *Pinus strobus* (eastern white pine), and *Quercus alba* (white oak) are minor and localized overstory associates; understory tree layers are

mostly composed of younger trees of the canopy species; *Kalmia latifolia* (mountain laurel), *Hamamelis virginiana* (American witch-hazel), and *Acer pensylvanicum* (striped maple) are abundant species shrubs; less frequently *Menziesia pilosa* (minniebush), *Rhododendron catawbiense* (Catawba rosebay), and rarely *Rhododendron maximum* (great laurel) may form large colonies; typically sparse herb layer, but some stands have substantial cover by the clonal ferns *Dennstaedtia punctilobula* (eastern hayscented fern) and/or *Thelypteris noveboracensis* (New York fern). .... **Central Appalachian Acidic Cove Forest (CEGL008512)**[21]

[*Tsuga canadensis - Quercus prinus - Liriodendron tulipifera / Kalmia latifolia - (Rhododendron catawbiense)* Forest]

11a. *Betula alleghaniensis* (yellow birch) present to codominant in canopy. **12**
11b. *Betula alleghaniensis* (yellow birch) absent from canopy. **15**

12a. Forests of the Central Appalachians (north of Roanoke, VA). **13**
12b. Forests more typical of the Southern Appalachians (Roanoke, VA and south). **14**

13a. Central Appalachian northern hardwood forest characterized by *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) occurring on rocky, northwest- to northeast-facing slopes at elevations from about 975 m to more than 1,300 m (3,000-4,300 feet); occurs in high-elevation areas of the Central Appalachians in VA, WV, MD, and PA; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) characteristic understory trees, although *Ilex montana* (mountain holly) may be locally abundant; *Hamamelis virginiana* (American witch-hazel), *Sambucus racemosa* var. *racemosa* (red elderberry), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs can include *Oclemena acuminata* (whorled wood aster) and ferns such as *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Dennstaedtia punctilobula* (eastern hayscented fern), and *Dryopteris intermedia* (intermediate woodfern). .... **Central Appalachian Northern Hardwood Forest (Yellow Birch - Northern Red Oak Type) (CEGL008502)**

[*Betula alleghaniensis - Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia - Oclemena acuminata* Forest]

13b. High-elevation boulderfield woodland or open forest of the Northern Blue Ridge, Ridge and Valley, and Allegheny Mountains in VA and WV; *Quercus rubra* (northern red oak) usually absent; very open canopy dominated by stunted and gnarled *Betula alleghaniensis* (yellow birch); *Sorbus americana* (American mountain-ash), *Prunus pensylvanica* (pin cherry), and *Acer spicatum* (mountain maple) often have high cover; *Menziesia pilosa* (minniebush), *Sambucus racemosa* (red elderberry), and/or *Ribes cynosbati* (eastern prickly gooseberry) are frequent shrubs; *Polypodium appalachianum* (Appalachian polypody) may abundantly cover mossy rock surfaces; high lichen cover. ..... **Central Appalachian High-Elevation Boulderfield Forest (CEGL008504)**

[*Betula alleghaniensis* / *Sorbus americana - Acer spicatum* / *Polypodium appalachianum* Forest]

[21]In Virginia, hemlock has been almost entirely extirpated from the canopy of this type by adelgids, although significant hemlock cover remains in the understory of many stands.

14a. Typic Southern Appalachian northern hardwood forest occurring on exposed landforms such as open, north-facing slopes at high elevations typically over 1,220 m (4,000 feet); common in high elevations of the Southern Blue Ridge in eastern TN, western NC, and southwestern VA; variable canopy includes *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Aesculus flava* (yellow buckeye), and *Acer saccharum* (sugar maple); indicator species include *Viburnum lantanoides* (hobblebush), *Ageratina altissima* var. *roanensis* (white snakeroot), *Eurybia chlorolepis* (mountain aster), *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Carex lucorum* var. *austrolucorum* (Blue Ridge sedge) and *Viola blanda* var. *blanda* (sweet white violet)..... ..... **Southern Appalachian Northern Hardwood Forest (Typic Type) (CEGL007285)**
[*Betula alleghaniensis - Fagus grandifolia* / *Viburnum lantanoides* / *Eurybia chlorolepis - Dryopteris intermedia* Forest]

14b. Mixed hemlock - northern hardwood forest of the Blue Ridge Mountains at elevations of 320 to 1,040 m (1,000-5,000 feet); strong *Betula alleghaniensis* (yellow birch) component with variable amounts of *Tsuga canadensis* (eastern hemlock); *Liriodendron tulipifera* (tuliptree) may be present in some stands; *Oxydendrum arboreum* (sourwood) common; dense *Rhododendron maximum* (great laurel) cover and few herbs, including *Mitchella repens* (partridgeberry) and *Carex laevivaginata* (smoothsheath sedge); steep, mostly north-facing mesic slopes, and on toeslopes and flats along streams; locally distributed throughout higher elevations of the Southern and Central Appalachians (NC, TN, VA, WV).....**Blue Ridge Hemlock - Northern Hardwood Forest (CEGL007861)**
[*Betula alleghaniensis* - (*Tsuga canadensis*) / *Rhododendron maximum* / (*Leucothoe fontanesiana*) Forest]

15a. *Quercus* (oak) spp. absent from canopy..... **16**
15b. *Quercus* (oak) spp. present in canopy..... **19**

16a. Mesophytic hardwood and cove forests ranging from Roanoke, VA, south through the Southern Blue Ridge. **17**
16b. Successional hardwood and cove forests ranging from Roanoke, VA, north through PA..... **18**

17a. Typic Southern Appalachian high-elevation [over 1,220 m (4,000 feet)] northern hardwood forest occurring on exposed open, north-facing slopes; endemic to high elevations of the Southern Blue Ridge in eastern TN, western NC, and southwestern VA; variable canopy includes *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Aesculus flava* (yellow buckeye), and *Acer saccharum* (sugar maple) dominant in canopy; indicator species include *Viburnum lantanoides* (hobblebush), *Ageratina altissima* var. *roanensis* (white snakeroot), *Eurybia chlorolepis* (mountain aster), *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Carex lucorum* var. *austrolucorum* (Blue Ridge sedge), and *Viola blanda* var. *blanda* (sweet white violet)..... ..... **Southern Appalachian Northern Hardwood Forest (Typic Type) (CEGL007285)**
[*Betula alleghaniensis - Fagus grandifolia* / *Viburnum lantanoides* / *Eurybia chlorolepis - Dryopteris intermedia* Forest]

17b. Lower-elevation (400-1,160 m [1,300-3,800 feet]) acidic cove forest ranging from Roanoke, VA, south to GA; *Rhododendron maximum* (great laurel) dominant shrub; with a variable canopy with *Liriodendron tulipifera* (tuliptree) and *Betula lenta* (sweet birch) mixed with *Tsuga canadensis* (eastern hemlock), *Acer rubrum* (red maple), *Quercus rubra* (northern red oak), and/or *Quercus alba* (white oak) that usually does not include much *Halesia* (silverbell) spp.; relative proportion of *Tsuga canadensis* (eastern hemlock) may vary greatly, with some sites having little or none in the canopy; *Aesculus flava* (yellow buckeye), *Acer pensylvanicum* (striped maple), and *Hamamelis virginiana* (American witch-hazel) are common shrubs; characteristic herbs include *Anemone quinquefolia* var.

quinquefolia (nightcaps), *Carex laxiculmis* var. *laxiculmis* (spreading sedge), and *Viola blanda* var. *blanda* (sweet white violet). ..... **Southern Appalachian Acidic Cove Forest (Typic Type) (CEGL007543)**
[*Liriodendron tulipifera* - *Betula lenta* - *Tsuga canadensis* / *Rhododendron maximum* Forest]

18a. *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) in canopy with dense *Lycopodium* (clubmoss) spp. or *Dennstaedtia punctilobula* (eastern hayscented fern) ground cover; *Nyssa sylvatica* (blackgum) may be common; distribution is centered in the High Allegheny Mountains and Allegheny Plateau but extends north to NY, NJ and PA; common in WV, less common in VA; often originating after severe disturbance such as fire, clear-cutting, or gypsy moth outbreaks. ..... **Central Appalachian Ruderal Sweet Birch - Red Maple Forest (CEGL008503)**
[*Betula lenta* - *Acer rubrum* / *Lycopodium annotinum* - *Dennstaedtia punctilobula* Ruderal Forest]
18b. Tuliptree dominated forests and acidic cove forests..... **19**

19a. *Liriodendron tulipifera* (tuliptree) dominated forests (>30% cover). **20**
19b. *Liriodendron tulipifera* (tuliptree) not dominant in canopy (<30% cover); Acidic cove forests of the Central Appalachians, more diverse, containing some combination of *Tsuga canadensis* (eastern hemlock), *Liriodendron tulipifera* (tuliptree), *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and/or *Quercus alba* (white oak); *Quercus rubra* (northern red oak), as well as possibly *Betula lenta* (sweet birch), *Acer rubrum* (red maple) and *Nyssa sylvatica* (blackgum). **21**

20a. Widespread *Liriodendron tulipifera* (tuliptree) forest of relatively fertile substrates in all provinces of the Mid-Atlantic states and in parts of the Southeast; *Quercus* (oak) spp. generally absent, with a large presence of understory species indicative of high-calcium or base-rich soils such as *Cercis canadensis* (eastern redbud), *Symphoricarpos orbiculatus* (coralberry), or *Lindera benzoin* (northern spicebush); exotic shrubs, including *Rosa multiflora* (multiflora rose), *Rubus phoenicolasius* (wine raspberry), and/or *Lonicera japonica* (Japanese honeysuckle), may be common; ground layer lush and diverse. ..... **Ruderal Tuliptree Forest (Rich Type) (CEGL007220)**
[*Liriodendron tulipifera* / (*Cercis canadensis*) / (*Lindera benzoin*) Ruderal Forest]
20b. Widespread typic acidic *Liriodendron tulipifera* (tuliptree) and *Quercus* (oak) spp. forest in areas that had stand-initiating disturbance such as logging in the past; oaks present in canopy and/or subcanopy (>10% cover); understory lacking calcium-rich indicators; additional associates may include *Acer rubrum* (red maple), *Carya* (hickory) spp., *Fagus grandifolia* (American beech), *Nyssa sylvatica* (blackgum), *Cornus florida* (flowering dogwood), *Betula lenta* (sweet birch), and/or *Robinia pseudoacacia* (black locust); shrub layers may include *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Hamamelis virginiana* (American witch-hazel), *Lindera benzoin* (northern spicebush) (in small amounts), and *Vaccinium pallidum* (Blue Ridge blueberry); ground layer less diverse, not lush. ..... **Ruderal Tuliptree Forest (Typic Type) (CEGL007221)**
[*Liriodendron tulipifera* - *Quercus* spp. Ruderal Forest]

21a. Mixed hemlock-hardwood acidic cove forest found only at Shenandoah National Park along the AT corridor; sites are located between 275 and 760 m (900-2,500 feet); stands often occupy elongated, linear patches in mesic ravines with incising first-, second-, and third-order streams; *Tsuga canadensis* (eastern hemlock), *Quercus prinus* (chestnut oak), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Quercus rubra* (northern red oak), and *Nyssa sylvatica* (blackgum) are the most characteristic and abundant trees; *Fagus grandifolia* (American beech), *Magnolia acuminata* (cucumber-tree), *Pinus strobus* (eastern white pine), and *Quercus alba* (white oak) are minor and localized overstory associates; *Kalmia latifolia* (mountain laurel), *Hamamelis virginiana* (American witch-hazel), and *Acer pensylvanicum* (striped maple) are abundant shrubs; less frequently *Menziesia pilosa* (minniebush), *Rhododendron catawbiense* (Catawba rosebay), and rarely *Rhododendron maximum* (great laurel) may form large colonies; sparse herb layer, but some stands have substantial cover by the clonal ferns *Dennstaedtia punctilobula* (eastern hayscented fern) and/or *Thelypteris noveboracensis* (New York fern). ....**Central Appalachian Acidic Cove Forest (CEGL008512)**

[*Tsuga canadensis - Quercus prinus - Liriodendron tulipifera / Kalmia latifolia - (Rhododendron catawbiense)* Forest]

21b. White pine-hemlock-mixed hardwoods acidic cove forest of the Central Appalachians from Roanoke, VA, north to MD; *Liriodendron tulipifera* (tuliptree) characteristic; acidic cove forest occurring on the lower slopes and bottoms of ravines and coves at lower elevations, generally below 915 m (3,000 feet); canopy associates can include, *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and/or *Quercus alba* (white oak); *Acer rubrum* (red maple), *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Cercis canadensis* (eastern redbud), and/or *Cornus florida* (flowering dogwood) common; *Rhododendron maximum* (great laurel) absent. .....**Central Appalachian Acidic Cove Forest (White Pine - Hemlock - Mixed Hardwoods Type) (CEGL006304)**

[*Liriodendron tulipifera - Pinus strobus - Tsuga canadensis - Quercus rubra* / *Polystichum acrostichoides* Forest]

8. Oak / Heath Forests

1a. Evergreen trees codominant with dry-site oaks. **2**
1b. Evergreen trees sparse or absent. **3**

2a. *Tsuga canadensis* (eastern hemlock) codominant with *Quercus prinus* (chestnut oak), or dominant in the understory; occurring on moderately steep sheltered slopes with northeastern to northwestern exposures at lower elevations from 150 m to about 750 m (500-2,500 feet); ranges from the NJ Highlands south to the Blue Ridge, Ridge and Valley, and Piedmont provinces of PA and MD, and the Cumberlands in WV. ..... **Central Appalachian Hemlock - Chestnut Oak Forest (CEGL006923)**
[*Tsuga canadensis* - *Quercus prinus* - *Betula lenta* Forest]
2b. *Pinus strobus* (eastern white pine) codominant in canopy with mixed oaks, or dominant in the understory; widespread on low shale mountains and hills in west-central VA and adjacent WV; sites are mid and upper slopes, ridge crests, dry ravines, and bluffs underlain primarily by shale and similar sedimentary rocks (siltstone) mostly below 760 m (2,500 feet) elevation; *Amelanchier arborea* (common serviceberry), and *Cornus florida* (flowering dogwood) are common in subcanopy; *Kalmia latifolia* (mountain laurel) and *Viburnum acerifolium* (mapleleaf viburnum) common in the tall-shrub layer; *Vaccinium pallidum* (Blue Ridge blueberry) and *Vaccinium stamineum* (deerberry) characteristic; scattered herbs including *Chimaphila maculata* (striped prince's pine), *Galax urceolata* (beetleweed), and *Polygonatum biflorum* (smooth Solomon's seal). ..... **Central Appalachian-Piedmont White Pine - Subxeric Oak Forest (CEGL008539)**
[*Pinus strobus* - *Quercus alba* - *Quercus prinus* / *Vaccinium stamineum* Forest]

3a. Stand strongly dominated by *Quercus prinus* (chestnut oak), or some combination of *Quercus prinus* (chestnut oak) with other dry-site oaks [e.g., *Quercus coccinea* (scarlet oak), *Quercus velutina* (black oak), *Quercus alba* (white oak), *Quercus rubra* (northern red oak)]..... **4**
3b. Stand codominated by *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak), or strongly dominated by *Quercus rubra* (northern red oak). **8**

4a. *Rhododendron catawbiense* (Catawba rosebay) dominant in shrub layer; occurs on north- or northwest-facing convex, upper slopes, clifftops, and spur crests from 305 to 1,097 m (1,000 to 3,600 feet) elevation from the northern part of the Southern Blue Ridge north through central VA (documented in Augusta Nelson, Amherst, and Rockbridge counties); scattered *Pinus pungens* (Table Mountain pine) possible; *Kalmia latifolia* (mountain laurel), *Amelanchier arborea* (common serviceberry), and *Hamamelis virginiana* (American witch-hazel) mixed in shrub layer; *Vaccinium pallidum* (Blue Ridge blueberry) and *Gaylussacia baccata* (black huckleberry) prominent; herbs are sparse but include *Galax urceolata* (beetleweed). ..... **Central Appalachian Chestnut Oak / Catawba Rosebay Forest (CEGL008524)**
[*Quercus prinus* / *Rhododendron catawbiense* - *Kalmia latifolia* Forest]
4b. *Rhododendron catawbiense* (Catawba rosebay) sparse or absent. **5**

5a. *Quercus alba* (white oak) important (often codominant) in stand; deciduous heaths dominant in shrub layer; restricted to low elevations, usually <457 m (1,500 feet), rarely to 762 m (2,500 feet), and relatively gentle slopes matrix forest of dry, nutrient-poor uplands of the Mid-Atlantic Piedmont Plateau; various *Pinus* (pine) spp., including *Pinus virginiana* (Virginia pine), *Pinus echinata* (shortleaf pine), *Pinus strobus* (eastern white pine), and/or *Pinus rigida* (pitch pine), can be overstory associates (but <30% in canopy - this is an oak forest, not a mixed oak-pine forest); subcanopy can include *Acer rubrum* (red maple); shrub layer can include *Rhododendron periclymenoides* (pink azalea), *Photinia melanocarpa* (black chokeberry), *Gaylussacia baccata* (black huckleberry), and *Vaccinium corymbosum* (highbush blueberry). ..... **Low-Elevation Mixed Oak / Heath Forest (CEGL008521)**
[*Quercus alba* - *Quercus* (*coccinea, velutina, prinus*) / *Gaylussacia baccata* Forest]

5b. *Quercus alba* (white oak) sparse or absent; occurring over a greater range of elevations and topographic settings; *Kalmia latifolia* (mountain laurel) usually dominant or codominant in shrub layer in VA and MD stands, PA stands have more variable ericaceous shrub species composition sometimes with *Kalmia* and sometimes without..... **6**

6a. Oak-heath forest occurring in a variety of topographic positions south of Roanoke, VA; characteristic Southern Appalachian species such as *Oxydendrum arboreum* (sourwood), *Leucothoe recurva* (redtwig doghobble), and *Galax urceolata* (beetleweed) prominent in stand; *Quercus coccinea* (scarlet oak), *Nyssa sylvatica* (blackgum), and *Acer rubrum* (red maple) common canopy associates; *Kalmia latifolia* (mountain laurel) and *Castanea dentata* (American chestnut) in shrub layer; *Gaultheria procumbens* (eastern teaberry), *Epigaea repens* (trailing arbutus), and *Uvularia puberula* (mountain bellwort) are common herbs..... **Chestnut Oak Forest (Subxeric Ridge Type) (CEGL006271)**
[*Quercus* (*prinus, coccinea*) / *Kalmia latifolia* / (*Galax urceolata, Gaultheria procumbens*) Forest]

6b. Oak-heath forest occurring north of Roanoke, VA; characteristic Southern Appalachian species absent. **7**

7a. Oak-heath forest occurring from Roanoke, VA, to Cumberland Co., PA; *Quercus prinus* (chestnut oak) over *Kalmia latifolia* (mountain laurel) with well-developed ericaceous shrub layer which includes *Vaccinium pallidum* (Blue Ridge blueberry), *Vaccinium stamineum* (deerberry), and *Gaylussacia baccata* (black huckleberry), any one of which can exhibit patch-dominance; (heath) shrubs strongly dominant in lower woody layers; if sparse, then clearly more numerous than non-ericaceous species. ..... **Central Appalachian-Northern Piedmont Chestnut Oak Forest (CEGL006299)**
[*Quercus prinus* - (*Quercus coccinea, Quercus rubra*) / *Kalmia latifolia* / *Vaccinium pallidum* Forest]

7b. Oak-heath forest occurring from Cumberland Co., PA, to southern New England; *Betula lenta* (sweet birch) common in subcanopy; understory with dense *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and/or *Gaylussacia baccata* (black huckleberry); *Kalmia latifolia* (mountain laurel) and/or *Hamamelis virginiana* (American witch-hazel) may be present with other tall shrubs; herbaceous layer poorly developed and depauperate..... **Lower New England High Slope Chestnut Oak Forest (CEGL006282)**
[*Quercus prinus* - *Quercus* (*rubra, velutina*) / *Vaccinium* (*angustifolium, pallidum*) Forest]

8a. Stand codominated by *Quercus prinus* (chestnut oak) and *Quercus rubra* (northern red oak); forests of low to middle elevations. **9**

8b. Stand strongly dominated by *Quercus rubra* (northern red oak); forests of high elevations **11**

9a. *Rhododendron maximum* (great laurel) dominant in shrub layer; usually on north aspect slopes; occurs rarely in the Central Appalachians; ranges from south of the New River in VA to the Southern Blue Ridge. ..... **Chestnut Oak Forest (Mesic Slope Heath Type) (CEGL006286)**
[*Quercus prinus* - *Quercus rubra* / *Rhododendron maximum* / *Galax urceolata* Forest]
9b. *Rhododendron maximum* (great laurel) sparse or absent. **10**

10a. Deciduous heaths *Vaccinium pallidum* (Blue Ridge blueberry), *Vaccinium stamineum* (deerberry) and *Viburnum acerifolium* (mapleleaf viburnum), patchy *Rhododendron periclymenoides* (pink azalea) and/or *Kalmia latifolia* (mountain laurel); occurring on exposed, convex higher-elevation (610-914 m [2,000-3,000 feet]), moderately steep, middle to upper slopes, ridge crests, and boulderfields from the Northern Blue Ridge to just north of Roanoke to Harpers Ferry to the Catoctin Mountains of northern MD, and extending into northeastern WV; *Acer rubrum* (red maple) cover may equal or exceed that of the diagnostic oak species in stands with recent harvesting; patchy to dense shrub layer dominated by heaths herbs are usually sparse but can be moderately diverse on rocky soils include *Aralia nudicaulis* (wild sarsaparilla), *Houstonia longifolia* (longleaf summer bluet), and *Campanula divaricata* (small bonny bellflower); *Dennstaedtia punctilobula* (eastern hayscented fern) more common on deeper soils. ..... **Central Appalachian Dry Chestnut Oak - Northern Red Oak / Heath Forest (CEGL008523)**
[*Quercus prinus* - *Quercus rubra* / *Vaccinium pallidum* - (*Rhododendron periclymenoides*) Forest]
10b. *Kalmia latifolia* (mountain laurel) dominant in shrub layer; oak-heath forest occurring from Roanoke, VA to Cumberland Co., PA; *Quercus prinus* (chestnut oak) over *Kalmia latifolia* (mountain laurel) with well-developed ericaceous shrub layer which includes *Vaccinium pallidum* (Blue Ridge blueberry), *Vaccinium stamineum* (deerberry), and *Gaylussacia baccata* (black huckleberry), any one of which can exhibit patch-dominance; occasionally stands in PA have an entirely deciduous ericaceous shrub layer with sparse *Kalmia*..... **Central Appalachian-Northern Piedmont Chestnut Oak Forest (CEGL006299)**
[*Quercus prinus* - (*Quercus coccinea, Quercus rubra*) / *Kalmia latifolia* / *Vaccinium pallidum* Forest]

11a. Combinations of evergreen *Rhododendron catawbiense* (Catawba rosebay), *Rhododendron maximum* (great laurel), and *Kalmia latifolia* (mountain laurel) forming >50% of shrub layer; occurring primarily south of the New River, with scattered outliers north to Bedford and Botetourt counties, VA. ..... **Southern Appalachian High-Elevation Red Oak Forest (Evergreen Shrub Type) (CEGL007299)**
[*Quercus rubra* / (*Kalmia latifolia, Rhododendron catawbiense, Rhododendron maximum*) / *Galax urceolata* Forest]
11b. *Kalmia latifolia* (mountain laurel), sometimes with *Menziesia pilosa* (minniebush) and/or *Rhododendron prinophyllum* (early azalea), dominating the shrub layer; *Rhododendron catawbiense* (Catawba rosebay) and *Rhododendron maximum* (great laurel) absent; occurring from Roanoke, VA, north through Shenandoah National Park. ..... **Central Appalachian Northern Red Oak Forest (CEGL008506)**
[*Quercus rubra* - (*Quercus alba*) / *Ilex montana* / *Dennstaedtia punctilobula* - *Lysimachia quadrifolia* Forest]

9. Mixed Oak and Oak - Hickory Forests

1a. High-elevation forests [above 915 m (3,000 feet)] strongly dominated by *Quercus rubra* (northern red oak) (*Quercus alba* (white oak) or *Quercus velutina* (black oak) occasionally codominant); *Quercus prinus* (chestnut oak) and *Carya* (hickory) spp. generally rare to absent (even in understory)[22]. **2**
1b. Lower- to middle-elevation forests [below 1,130 m (3,600 feet)] containing mixtures of various oaks [usually including *Quercus prinus* (chestnut oak)], often with hickories and/or other hardwoods. **4**

2a. Northern red oak forests of the Southern Appalachians, ranging north to Craig Co., VA; Southern Appalachian species such as *Rhododendron calendulaceum* (flame azalea), *Vaccinium erythrocarpum* (southern mountain cranberry), and *Galax urceolata* (beetleweed) prominent in stand. .....**Southern Appalachian High-Elevation Red Oak Forest (Deciduous Shrub Type) (CEGL007300)**
[*Quercus rubra* / (*Vaccinium simulatum, Rhododendron calendulaceum*) / (*Dennstaedtia punctilobula, Thelypteris noveboracensis*) Forest]
2b. Northern red oak forests of the Central Appalachians, ranging from Roanoke, VA north through PA; lacking species characteristic of the Southern Appalachians. **3**

3a. Central Appalachian northern red oak forest with *Acer pensylvanicum* (striped maple), *Ilex montana* (mountain holly), *Hamamelis virginiana* (American witch-hazel); variable understory and herbaceous but *Dennstaedtia punctilobula* (eastern hayscented fern), *Lysimachia quadrifolia* (whorled yellow loosestrife), *Carex pensylvanica* (Pennsylvania sedge), and *Solidago curtisii* (mountain decumbent goldenrod) are characteristic species. .... **Central Appalachian Northern Red Oak Forest (CEGL008506)**
[*Quercus rubra* - (*Quercus alba*) / *Ilex montana* / *Dennstaedtia punctilobula* - *Lysimachia quadrifolia* Forest]
3b. Central Appalachian northern hardwood - red oak forest characterized by *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) occurring on rocky, northwest- to northeast-facing slopes at elevations from about 975 m to more than 1,300 m (3,000-4,300 feet); occurs in high-elevation areas of the Central Appalachians in VA, WV, MD, and PA; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) characteristic understory trees, although *Ilex montana* (mountain holly) may be locally abundant; *Hamamelis virginiana* (American witch-hazel), *Sambucus racemosa* var. *racemosa* (red elderberry), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs can include *Oclemena acuminata* (whorled wood aster) and ferns such as *Athyrium filix-femina* ssp. *asplenioides* (asplenium ladyfern), *Dennstaedtia punctilobula* (eastern hayscented fern), and *Dryopteris intermedia* (intermediate woodfern). .... **Central Appalachian Northern Hardwood Forest (Yellow Birch - Northern Red Oak Type) (CEGL008502)**
[*Betula alleghaniensis* - *Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia* - *Oclemena acuminata* Forest]

[22]In the Virginia Northern Blue Ridge section (Roanoke through SHEN), northern red oak forests and montane oak-hickory forests co-occur extensively, and there are transition zones in which hickories are common in otherwise typical northern red oak stands.

4a. *Acer saccharum* (sugar maple) [and/or *Acer nigrum* (black maple)] among the canopy dominants. **5**
4b. Various oaks and often hickories codominant in the canopy; *Acer saccharum* (sugar maple) sometimes important in the understory but not in the canopy. **7**

5a. *Quercus muehlenbergii* (chinquapin oak) characteristic, often codominant; on dry, usually rocky limestone or dolomite slopes and ridges; *Cercis canadensis* (eastern redbud) is characteristic in the subcanopy; the herb layer is low and fairly dense, featuring patch-dominance by *Packera obovata* (roundleaf ragwort), *Erigeron pulchellus* (robin's plantain), *Hepatica nobilis* var. *acuta* (sharplobe hepatica), and *Thalictrum dioicum* (early meadowrue); uncommon along AT because of its being restricted to limestone; limited to valleys of the Ridge and Valley divergence area between I-81 and Roanoke in VA. ..... **Appalachian Sugar Maple - Chinquapin Oak Limestone Forest (CEGL006017)**
[*Acer saccharum* - *Quercus muehlenbergii* / *Cercis canadensis* Forest]
5b. *Quercus muehlenbergii* (chinquapin oak) sparse to absent; *Quercus rubra* (northern red oak) usually codominant; on dry-mesic to mesic slopes and in coves with various geological substrates ... **6**

6a. Red oak - sugar maple forest, often with abundant hickory, occurring only in the Ridge and Valley portion of the Central Appalachians in VA and MD; uncommon above 1,000 m (3,000 feet); *Fraxinus americana* (white ash) may be important, and *Liriodendron tulipifera* (tuliptree) may be common in disturbed stands; understory layers contain substantial reproduction of *Acer saccharum* (sugar maple); *Ostrya virginiana* (hophornbeam) is the most constant and abundant small tree/shrub, with *Cornus florida* (flowering dogwood), *Cercis canadensis* (eastern redbud); herbs are patchy with *Cardamine concatenata* (cutleaf toothwort) and *Ageratina altissima* (white snakeroot) characteristic.. ..... **Central Appalachian Rich Red Oak - Sugar Maple Forest (CEGL008517)**
[*Quercus rubra* - *Acer saccharum* / *Ostrya virginiana* / *Cardamine concatenata* Forest]
6b. Red oak - sugar maple - tuliptree forest occurring from Catoctin Mountain, MD north to NY and NJ; *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) common in the subcanopy; sparse shrub layer..... **High Allegheny Rich Red Oak - Sugar Maple Forest (CEGL006125)**
[*Quercus rubra* - *Acer saccharum* - *Liriodendron tulipifera* Forest]

7a. Montane basic oak-hickory forest occurring from 760 m to 1,220 m (2,500 feet to >4,000 feet) in VA, WV and MD with variable mixtures of *Quercus rubra* (northern red oak) and other hardwoods, most typically *Quercus alba* (white oak), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), *Carya ovalis* (red hickory), and *Carya ovata* (shagbark hickory), in the canopy, the latter three also common in the subcanopy; *Acer saccharum* common in the subcanopy of some stands; *Quercus prinus* (chestnut oak) rare to absent; lush herb layer with many nutrient-demanding forbs, i.e., *Actaea racemosa* (black baneberry), *Hydrophyllum virginianum* (eastern waterleaf), *Collinsonia canadensis* (richweed), *Thalictrum coriaceum* (maid-of-the-mist); occupies deep-soiled gentle crests, saddles, and upper slopes over base-rich igneous, metamorphic, and sedimentary rocks. ..... **Central Appalachian Montane Oak - Hickory Forest (Basic Type) (CEGL008518)**
[*Quercus rubra* - *Carya ovata* - *Fraxinus americana* / *Actaea racemosa* - *Hydrophyllum virginianum* Forest]
7b. *Quercus prinus* (chestnut oak) characteristic in mixtures with other trees; composition and environmental setting not as above. **8**

8a. Middle-elevation [760 m to 1,220 m (2,000 to 4,000 feet)] forests occurring from the vicinity of the New River south; Southern Appalachian species such as *Oxydendrum arboreum* (sourwood), *Magnolia fraseri* (mountain magnolia), *Rhododendron maximum* (great laurel), *Rhododendron calendulaceum* (flame azalea), *Galax urceolata* (beetleweed), and *Convallaria majuscula* (American lily-of-the-valley) prominent in stand. **9**
8b. Forests of various topographic settings, occurring from the vicinity of the New River north; Southern Appalachian species rare or absent in stand. **10**

9a. *Quercus rubra* (northern red oak) and *Quercus prinus* (chestnut oak) usually strongly codominant in stand; *Quercus alba* (white oak) absent to occasionally important; *Magnolia acuminata* (cucumber-tree) and/or *Magnolia fraseri* (mountain magnolia) usually important in canopy or understory; *Acer pensylvanicum* (striped maple) common to dominant in shrub layer; habitat variable, but most typically on somewhat sheltered, submesic, lower to middle slopes. ....**Southern Appalachian Montane Northern Red Oak - Chestnut Oak Forest (CEGL004817)**
[*Quercus rubra - Quercus prinus - Magnolia* (*acuminata, fraseri*) / *Acer pensylvanicum* Forest]
9b. *Quercus alba* (white oak) important (often codominant) in mixtures with *Quercus prinus* (chestnut oak), *Quercus rubra* (northern red oak), *Quercus velutina* (black oak), *Quercus coccinea* (scarlet oak), and *Carya* (hickory) spp.; high diversity of understory/shrub species (partly ericaceous) with no clear dominants; a diverse herb layer includes *Desmodium nudiflorum* (nakedflower ticktrefoil), *Prenanthes altissima* (tall rattlesnakeroot), *Polygonatum biflorum* (smooth Solomon's seal), *Potentilla canadensis* (dwarf cinquefoil), *Uvularia perfoliata* (perfoliate bellwort), *Uvularia puberula* (mountain bellwort), and *Zizia trifoliata* (meadow alexanders); usually on drier, more exposed convex upper slopes, crests, and saddles. ....**Appalachian Montane Oak - Hickory Forest (Typic Acidic Type) (CEGL007230)**
[*Quercus alba - Quercus* (*rubra, prinus*) / *Rhododendron calendulaceum* - (*Gaylussacia ursina*) Forest]

10a. *Quercus rubra* (northern red oak) and *Quercus prinus* (chestnut oak) usually strongly codominant; *Quercus alba* (white oak) rare to absent; *Carya* (hickory) spp. absent to sometimes important; *Hamamelis virginiana* (American witch-hazel) and/or *Acer pensylvanicum* (striped maple) characteristic; on sheltered, rocky slopes from 304 to 1,097 m (1,000 to 3,600 feet) elevation throughout the Central Appalachians; often on weathered boulderfields or talus; *Liriodendron tulipifera* (tuliptree) and *Acer rubrum* (red maple) and/or *Betula lenta* (sweet birch) possible in canopy or subcanopy; lower shrub layer is patchy and contains a mixture of scrambling vines, ericads, and non-ericaceous species; sparse but diverse dry-mesophytic herbs including *Carex* (sedge) spp., *Asplenium platyneuron* (ebony spleenwort), *Dioscorea quaternata* (fourleaf yam), *Dryopteris marginalis* (marginal woodfern), *Eurybia divaricata* (white wood aster), *Maianthemum racemosum* ssp. *racemosum* (feathery false lily of the valley), and *Solidago caesia* (wreath goldenrod). ....**Central Appalachian Dry-Mesic Chestnut Oak - Northern Red Oak Forest (CEGL006057)**
[*Quercus prinus - Quercus rubra* / *Hamamelis virginiana* Forest]
10b. True oak - hickory forests with *Carya* (hickory) spp. common (usually codominant or dominant) in canopy and/or understory; *Quercus alba* (white oak) often important in the mixtures of oaks; understory variable; typically on more exposed slope positions, rarely on weathered boulderfields or talus..... **11**

11a. Dry oak-hickory forest occurring in the northern part of the Central Appalachians, along the AT corridor from PA northward; *Nyssa sylvatica* (blackgum) may be common; *Cornus florida* (flowering dogwood) is a characteristic understory tree; shrub layer is characterized by *Viburnum*

acerifolium (mapleleaf viburnum); patchy low-shrub layer of *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and/or *Gaylussacia baccata* (black huckleberry); patchy herb layer with *Aralia nudicaulis* (wild sarsaparilla) and *Dryopteris marginalis* (marginal woodfern). ..... **Northeastern Dry Oak - Hickory Forest (CEGL006336)**
[*Quercus* (*alba, rubra, velutina*) - *Carya* spp. / *Viburnum acerifolium* Forest]

11b. Oak-hickory forests occurring in the southern part of the Central Appalachians, along the AT corridor from MD south. **12**

12a. Dry-mesic oak-hickory forest restricted to base-rich soils weathered from metabasalt and granitic rocks of the Northern Blue Ridge in VA, MD, and WV; elevation ranges from 140 to 950 m (450-3,100 feet); *Fraxinus americana* (white ash), *Liriodendron tulipifera* (tuliptree) and *Acer saccharum* (sugar maple) canopy associates; *Cercis canadensis* (eastern redbud) (at lower elevations), *Cornus florida* (flowering dogwood), *Asimina triloba* (pawpaw), *Ostrya virginiana* (hophornbeam), and/or *Acer rubrum* (red maple) dominate the lowest tree and shrub layers; pines (*Pinus* spp.) and ericaceous shrubs absent; diverse herb layer includes *Galium circaezans* (licorice bedstraw), *Festuca subverticillata* (nodding fescue), *Maianthemum racemosum* ssp. *racemosum* (feathery false lily of the valley), *Dioscorea quaternata* (fourleaf yam), *Solidago caesia* (wreath goldenrod), *Actaea racemosa* (black baneberry), *Circaea lutetiana* ssp. *canadensis* (broadleaf enchanter's nightshade), *Desmodium nudiflorum* (nakedflower ticktrefoil), *Podophyllum peltatum* (mayapple), and/or *Sanguinaria canadensis* (bloodroot). .....
Central Appalachian Basic Oak - Hickory Forest (Western Piedmont / Lower Blue Ridge Type) (CEGL008514)
[*Quercus rubra* - *Quercus prinus* - *Carya ovalis* / (*Cercis canadensis*) / *Solidago caesia* Forest]

12b. Dry oak-hickory forests restricted to more acidic soils of sedimentary and metasedimentary substrates of both the Northern Blue Ridge and Ridge and Valley regions..... **13**

13a. Low elevation (generally <610 m, rarely to 760 m (2,000 feet, rarely to 2,500 feet) acidic oak-hickory forest occurring primarily on shale and sandstone; *Carya glabra* (pignut hickory) is the most characteristic hickory; pines (*Pinus strobus* (eastern white pine) and *Pinus virginiana* (Virginia pine) are frequent to common associates, particularly in disturbed or fire-suppressed stands; *Cornus florida* (flowering dogwood) common in understory; common shrubs include *Amelanchier arborea* (common serviceberry), *Rosa carolina* var. *carolina* (Carolina rose), *Vaccinium stamineum* (deerberry), and *Vaccinium pallidum* (Blue Ridge blueberry); common herbs include *Carex pensylvanica* (Pennsylvania sedge), *Chimaphila maculata* (striped prince's pine), *Dichanthelium boscii* (Bosc's panicgrass), *Danthonia spicata* (poverty oatgrass), *Houstonia longifolia* (longleaf summer bluet), *Polygonatum biflorum* (smooth Solomon's seal), *Potentilla canadensis* (dwarf cinquefoil), and *Symphyotrichum undulatum* (wavyleaf aster). .....
..... **Central Appalachian Acidic Oak - Hickory Forest (CEGL008515)**
[*Quercus alba* - *Quercus prinus* - *Carya glabra* / *Cornus florida* / *Vaccinium pallidum* Forest]

13b. Montane acidic oak-hickory forest occurring at higher elevations 550-1270 m (2,000 to >4,000 feet) primarily on sandstone, quartzite, metasiltstone, and phyllite; pines rare to absent; *Carya ovalis* (red hickory) is the most characteristic hickory; *Cornus florida* (flowering dogwood) not common, usually absent; occurs in the southern part of the Central Appalachians, on the northern VA Blue Ridge and higher ridges of the Ridge and Valley in western VA and adjacent WV (from the New River north); *Acer pensylvanicum* (striped maple) and *Vaccinium* (blueberry) spp. dominate the patchy shrub layer; patchy herb layer. .....
..... **Central Appalachian Montane Oak - Hickory Forest (Acidic Type) (CEGL008516)**
[*Quercus prinus* - *Quercus rubra* - *Carya ovalis* / *Carex pensylvanica* - (*Calamagrostis porteri*) Forest]

10. Rich Cove and Rich Boulderfield Forests

1a. Uneven-aged forests lacking an abundance of non-native or early-successional species. **2**
1b. Successional or even-aged forests occurring on altered, plowed, farmed, or planted lands; typically dominated solely or a mixture of *Liriodendron tulipifera* (tuliptree), *Prunus serotina* (black cherry), *Robinia pseudoacacia* (black locust), *Acer rubrum* (red maple) and/or *Betula lenta* (sweet birch) and often with many invasive species. **13**

2a. Rich forests occurring from Shenandoah National Park (SHEN) in VA, north to PA in the Central Appalachians; lacking species characteristic of the Southern Appalachians such as *Aesculus flava* (yellow buckeye). **3**
2b. Rich forests occurring south of SHEN in VA, typically in southwestern VA and some extending south into the Southern Blue Ridge. **8**

3a. Boulderfield forests occurring on steep, boulder and stone deposits below cliffs; stream- or river-fronting boulder- and talus-strewn slopes; boulder-filled slope concavities and hollow-heads; and other very rocky, submesic to mesic habitats; rock cover nearly continuous; surface soils, if any, sparse and interstitial. **4**
3b. Cove and lower slope forests; surface rocks sparse to common but usually not forming a continuous substrate; well developed soils usually present, at least locally. **6**

4a. Central Appalachian northern hardwood forest characterized by *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) occurring on weathered, north- or northwest-facing, high-elevation boulderfields from about 935 m to more than 1,300 m (3,000-4,300 feet); on base-rich substrates of the Central Appalachians (e.g., metabasalt, pyroxene-bearing granitic gneisses), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), and *Acer saccharum* (sugar maple) may be common associates; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) characteristic understory trees, although *Ilex montana* (mountain holly) may be locally abundant; *Hamamelis virginiana* (American witch-hazel) and *Sambucus racemosa* var. *racemosa* (red elderberry) are common shrubs; the herb layer may be lush with species such as *Oclemena acuminata* (whorled wood aster), *Dryopteris intermedia* (intermediate woodfern), *Impatiens pallida* (pale touch-me-not), *Aconitum reclinatum* (trailing white monkshood), and others.. ..... **Central Appalachian Northern Hardwood Forest (Yellow Birch - Northern Red Oak Type) (CEGL008502)**
[*Betula alleghaniensis* - *Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia* - *Oclemena acuminata* Forest]
4b. Stand not on high-elevation boulderfield and not dominated by *Betula alleghaniensis* (yellow birch). **5**

5a. Middle-slope boulderfield forest occurring between 760 and 1,030 m (2,500-3,400 feet) elevation in the Northern Blue Ridge in VA, MD, and WV, and more locally in the western VA Ridge and Valley region usually above where *Liriodendron tulipifera* (tuliptree) grows; *Tilia americana* (American basswood) and *Fraxinus americana* (white ash) codominant in the canopy; *Quercus rubra* (northern red oak), *Carya ovata* (shagbark hickory), and *Betula lenta* (sweet birch) also common and sometimes codominant; *Ostrya virginiana* (hophornbeam) and *Acer pensylvanicum* (striped maple) common in the subcanopy; shrubs can include *Sambucus racemosa* var. *racemosa* (red elderberry), *Prunus virginiana* (chokecherry), and/or *Hamamelis virginiana* (American witch-hazel); herb layer is diverse with *Laportea canadensis* (Canadian woodnettle), *Impatiens pallida* (pale touch-me-not), *Hydrophyllum virginianum* (eastern waterleaf), *Dryopteris marginalis* (marginal woodfern), *Arisaema triphyllum* (Jack in the pulpit), and others. ..... **Central Appalachian Basic Boulderfield Forest (Montane Basswood - White Ash Type) (CEGL008528)**

[*Tilia americana* - *Fraxinus americana* / *Acer pensylvanicum* / *Parthenocissus quinquefolia* - *Impatiens pallida* Woodland]

5b. *Acer saccharum* (sugar maple) is dominant or codominant in canopy; boulderfield forest occurring on stream- or river-fronting boulder- and talus-strewn slopes characterized by a mixed canopy with *Tilia americana* (American basswood), *Fraxinus americana* (white ash), and *Acer saccharum* (sugar maple); *Acer saccharum* (sugar maple) is dominant in PA stands; *Staphylea trifolia* (American bladdernut) abundant in the shrub layer; minor overstory associates include *Quercus rubra* (northern red oak), *Liriodendron tulipifera* (tuliptree), and *Quercus prinus* (chestnut oak); *Sambucus nigra* ssp. *canadensis* (American black elderberry) and/or *Lindera benzoin* (northern spicebush) common shrubs; *Toxicodendron radicans* (eastern poison-ivy) is a common vine; *Impatiens pallida* (pale touch-me-not), *Collinsonia canadensis* (richweed), *Dryopteris marginalis* (marginal woodfern), *Dryopteris intermedia* (intermediate woodfern), *Polygonatum biflorum* (smooth Solomon's seal), *Maianthemum racemosum* (feathery false lily of the valley), *Eurybia divaricata* (white wood aster), and *Polystichum acrostichoides* (Christmas fern) common; occurs in the Central Appalachians of PA, MD, northern VA, and probably northeastern WV. ..... **Central Appalachian-Piedmont Rich Boulderfield Forest (CEGL006471)**

[*Acer saccharum* - *Tilia americana* / *Staphylea trifolia* / *Dryopteris marginalis* - (*Impatiens pallida*) Forest]

6a. *Liriodendron tulipifera* (tuliptree) sparse to absent; rich cove forest occurring along slope bases, on lower concave slopes, and in middle to upper-slope coves at elevations from 425 to 1,050 m (1,400-3,600 feet); canopy is mixed with *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Betula alleghaniensis* (yellow birch), *Quercus rubra* (northern red oak), *Tilia americana* (American basswood), and others; *Acer pensylvanicum* (striped maple) and *Hamamelis virginiana* (American witch-hazel) common in shrub layer; common herbs include *Impatiens pallida* (pale touch-me-not), *Laportea canadensis* (Canadian woodnettle), *Deparia acrostichoides* (silver false spleenwort), *Aconitum reclinatum* (trailing white monkshood), *Viola canadensis* var. *canadensis* (Canadian white violet), *Asarum canadense* (Canadian wildginger), and *Angelica triquinata* (filmy angelica); ranges from the High Alleghenies, Western Allegheny Plateau, Central Appalachians, and Cumberlands from NY and NJ south to WV and VA. ..... **Central Appalachian Rich Cove Forest (CEGL006237)**

[*Acer saccharum* - *Fraxinus americana* - *Tilia americana* - *Liriodendron tulipifera* / *Actaea racemosa* Forest]

6b. *Liriodendron tulipifera* (tuliptree) generally codominant or dominant, with 30 to 100% canopy cover; *Lindera benzoin* (northern spicebush) common or dominant in shrub layer. **7**

7a. Lower slope and cove forest ranging from northern VA to GA with *Tilia americana* (both vars.) (American basswood), *Fraxinus americana* (white ash), and/or *Aesculus flava* (yellow buckeye) (south of the James River in VA), typical canopy associates of *Liriodendron tulipifera* (tuliptree); low-elevation shrubs absent from most stands; montane rich-site herbs such as *Laportea canadensis* (Canadian woodnettle), *Osmorhiza claytonii* (Clayton's sweetroot), and *Caulophyllum thalictroides* (blue cohosh) usually among the patch-dominants of a lush and diverse herb layer. ..... **Southern Appalachian Rich Cove Forest (Typic Type) (CEGL007710)**[23]

[*Liriodendron tulipifera* - *Fraxinus americana* - (*Aesculus flava*) / *Actaea racemosa* - *Laportea canadensis* Forest]

7b. Lower slope and ravine forest at the lowest elevations of the Appalachians of VA and MD (more extensive in the Piedmont foothills) with *Fraxinus americana* (white ash), *Quercus rubra* (northern red oak), and *Carya* (hickory) spp. the most typical canopy associates of *Liriodendron* (tuliptree); *Tilia americana* (American basswood) and *Aesculus flava* (yellow buckeye) rare to absent; low-elevation shrubs such as *Asimina triloba* (pawpaw) and *Cercis canadensis* (eastern redbud) characteristic; herb layer patchy to lush, patch-dominated by widespread species such as *Actaea racemosa* (black baneberry) and *Uvularia perfoliata* (perfoliate bellwort); usually lacking montane rich-site herbs; occurring on mid to lower slopes and/or ravines on deep, fertile soils. ..... **Upper Piedmont-Northern Blue Ridge Basic Mesic Hardwood Forest (CEGL006186)**

[*Liriodendron tulipifera* - *Quercus rubra* - *Fraxinus americana* / *Asimina triloba* / *Actaea racemosa* Forest]

8a. Low-elevation (<700 m [2,200 feet]) rich forest occurring on limestone or dolomite talus and boulders in montane valleys, coves, gorges, or steep fertile slopes with many obligate calciphiles; canopy dominated by *Tilia americana* var. *heterophylla* (Appalachian basswood), *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), and/or *Aesculus flava* (yellow buckeye); patches of *Staphylea trifolia* (American bladdernut) and *Lindera benzoin* (northern spicebush) are frequent along with climbing lianas of *Aristolochia macrophylla* (pipevine); *Cystopteris bulbifera* (bulblet bladderfern) is consistently abundant; other common herbs include *Caulophyllum thalictroides* (blue cohosh), *Collinsia verna* (spring blue-eyed Mary), and *Trillium sessile* (toadshade); one plot from carbonate rock districts in the west-central and southwestern VA portions of the Ridge and Valley province..... **Southern Appalachian Limestone Rich Cove Forest (CEGL006472)**

[*Tilia americana* var. *heterophylla* - *Aesculus flava* - *Acer saccharum* / *Cystopteris bulbifera* - *Asarum canadense* Forest]

8b. Montane protected mid- to low-slope (rarely upper-slope) cove and boulderfield forests occurring at middle elevations (425-1,400 m [1,400-4,600 feet]) in the Southern Blue Ridge and at low to high elevations (200-915 m [650-4,300 feet]) in the Northern Blue Ridge and adjacent Ridge and Valley. **9**

9a. Cove forest characterized by 30 to 100% canopy cover of *Liriodendron tulipifera* (tuliptree) ranging from northern VA to GA; other trees, including *Tilia americana* (American basswood) and *Tilia americana* var. *heterophylla* (Appalachian basswood), *Fraxinus americana* (white ash), *Carya cordiformis* (bitternut hickory), *Acer saccharum* (sugar maple), *Quercus rubra* (northern red oak), *Magnolia acuminata* (cucumber-tree), and *Aesculus flava* (yellow buckeye) [south of the James River in VA] may be canopy associates and often codominant with *Liriodendron tulipifera* (tuliptree); common herbs include *Laportea canadensis* (Canadian woodnettle), *Actaea racemosa* var. *racemosa* (black bugbane), *Arisaema triphyllum* (Jack in the pulpit), *Cardamine angustata*

[23] See Section **1b** for additional *Liriodendron tulipifera*- (tuliptree) dominated forests that do not fit these choices.

(slender toothwort), *Corydalis flavula* (yellow fumewort), *Circaea lutetiana* ssp. *canadensis* (broadleaf enchanter's nightshade), *Galearis spectabilis* (showy orchid), *Osmorhiza claytonii* (Clayton's sweetroot), *Polystichum acrostichoides* (Christmas fern), *Sanguinaria canadensis* (bloodroot), and *Stellaria pubera* (star chickweed). ..... **Southern Appalachian Rich Cove Forest (Typic Type) (CEGL007710)**

[*Liriodendron tulipifera - Fraxinus americana - (Aesculus flava)* / *Actaea racemosa - Laportea canadensis* Forest]

9b. *Liriodendron tulipifera* (tuliptree) minor to absent in canopy. **10**

10a. Mid- to high-elevation boulderfield forests. **11**
10b. Cove forests. **12**

11a. Central Appalachian northern hardwood forest characterized by *Betula alleghaniensis* (yellow birch) and *Quercus rubra* (northern red oak) occurring on weathered, north- or northwest-facing, high-elevation boulderfields from about 975 m to more than 1,300 m (3,000-4,300 feet); on base-rich substrates of the Central Appalachians (e.g., metabasalt, pyroxene-bearing granitic gneisses), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), and *Acer saccharum* (sugar maple) may be common associates; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) characteristic understory trees, although *Ilex montana* (mountain holly) may be locally abundant; *Hamamelis virginiana* (American witch-hazel) and *Sambucus racemosa* var. *racemosa* (red elderberry) are common shrubs; the herb layer may be lush with species such as *Oclemena acuminata* (whorled wood aster), *Dryopteris intermedia* (intermediate woodfern), *Impatiens pallida* (pale touch-me-not), *Aconitum reclinatum* (trailing white monkshood), and others.. ..... **Central Appalachian Northern Hardwood Forest (Yellow Birch - Northern Red Oak Type) (CEGL008502)**

[*Betula alleghaniensis - Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia - Oclemena acuminata* Forest]

11b. Middle-slope boulderfield forest occurring between 760 and 1,030 m (2,500-3,400 feet) elevation in the Northern Blue Ridge in VA, MD, and WV, and more locally in the western VA Ridge and Valley region to the New River in VA; usually above where *Liriodendron tulipifera* (tuliptree) grows; *Tilia americana* (American basswood) and *Fraxinus americana* (white ash) codominant in the canopy; *Quercus rubra* (northern red oak), *Carya ovata* (shagbark hickory), and *Betula lenta* (sweet birch) also common and sometimes codominant; *Ostrya virginiana* (hophornbeam) and *Acer pensylvanicum* (striped maple) common in the subcanopy; shrubs can include *Sambucus racemosa* var. *racemosa* (red elderberry), *Prunus virginiana* (chokecherry), and/or *Hamamelis virginiana* (American witch-hazel); herb layer is diverse with *Laportea canadensis* (Canadian woodnettle), *Impatiens pallida* (pale touch-me-not), *Hydrophyllum virginianum* (eastern waterleaf), *Dryopteris marginalis* (marginal woodfern), *Arisaema triphyllum* (Jack in the pulpit), and others. ..... **Central Appalachian Basic Boulderfield Forest (Montane Basswood - White Ash Type) (CEGL008528)**

[*Tilia americana - Fraxinus americana* / *Acer pensylvanicum* / *Parthenocissus quinquefolia - Impatiens pallida* Woodland]

12a. Extremely diverse and rich montane Southern Appalachian cove forest ranging from eastern TN to western NC, and into southwestern VA characterized by canopy mixtures of *Acer saccharum* (sugar maple), *Tilia americana* var. *heterophylla* (American basswood), and *Aesculus flava* (yellow buckeye); *Carya cordiformis* (bitternut hickory) and *Fraxinus americana* (white ash) are constant but minor canopy associates; indicator herbaceous species include *Hydrophyllum canadense* (bluntleaf waterleaf), *Caulophyllum thalictroides* (blue cohosh), *Asplenium rhizophyllum* (walking fern), *Solidago flexicaulis* (zigzag goldenrod), and *Hepatica nobilis* var. *acuta* (sharplobe hepatica). ..... **Southern Appalachian Rich Cove Forest (Montane Calcareous Type) (CEGL007695)**
[*Aesculus flava* - *Acer saccharum* - (*Tilia americana* var. *heterophylla*) / *Hydrophyllum canadense* - *Solidago flexicaulis* Forest]

12b. Rich cove forest lacking *Aesculus flava* (yellow buckeye) and distinctly Southern Appalachian herbs; ranging south to WV and VA in the Central Appalachians; canopy is mixed with a combination of *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Betula alleghaniensis* (yellow birch), *Quercus rubra* (northern red oak), *Tilia americana* (American basswood), and others; *Acer pensylvanicum* (striped maple) and *Hamamelis virginiana* (American witch-hazel) common in shrub layer; common herbs include *Impatiens pallida* (pale touch-me-not), *Laportea canadensis* (Canadian woodnettle), *Deparia acrostichoides* (silver false spleenwort), *Aconitum reclinatum* (trailing white monkshood), *Viola canadensis* var. *canadensis* (Canadian white violet), *Asarum canadense* (Canadian wildginger), and *Angelica triquinata* (filmy angelica); occurs along slope bases, lower concave slopes, and moderate slopes at elevations from 425 to 1,050 m (1,400-3,600 feet)..... **Central Appalachian Rich Cove Forest (CEGL006237)**
[*Acer saccharum* - *Fraxinus americana* - *Tilia americana* - *Liriodendron tulipifera* / *Actaea racemosa* Forest]

13a. *Liriodendron tulipifera* (tuliptree) dominated forests (>30% cover). **14**
13b. *Liriodendron tulipifera* (tuliptree) not dominant in canopy (<30% cover). **15**

14a. Widespread *Liriodendron tulipifera* (tuliptree) forest of relatively fertile substrates in all provinces of the Mid-Atlantic states and in parts of the Southeast; *Quercus* (oak) spp. generally absent, with a large presence of understory species indicative of high-calcium or base-rich soils such as *Cercis canadensis* (eastern redbud), *Symphoricarpos orbiculatus* (coralberry), or *Lindera benzoin* (northern spicebush); exotic shrubs, including *Rosa multiflora* (multiflora rose), *Rubus phoenicolasius* (wine raspberry), and/or *Lonicera japonica* (Japanese honeysuckle), may be common; ground layer lush and diverse. ..... **Ruderal Tuliptree Forest (Rich Type) (CEGL007220)**
[*Liriodendron tulipifera* / (*Cercis canadensis*) / (*Lindera benzoin*) Ruderal Forest]

14b. Widespread typic acidic *Liriodendron tulipifera* (tuliptree) and *Quercus* (oak) spp. forest in areas that had stand-initiating disturbance such as logging in the past; oaks present in canopy and/or subcanopy (>10% cover); understory lacking calcium-rich indicators; additional associates may include *Acer rubrum* (red maple), *Carya* (hickory) spp., *Fagus grandifolia* (American beech), *Nyssa sylvatica* (blackgum), *Cornus florida* (flowering dogwood), *Betula lenta* (sweet birch), and/or *Robinia pseudoacacia* (black locust); shrub layers may include *Acer pensylvanicum* (striped maple), *Amelanchier arborea* (common serviceberry), *Hamamelis virginiana* (American witch-hazel), *Lindera benzoin* (northern spicebush) (in small amounts), and *Vaccinium pallidum* (Blue Ridge blueberry); ground layer less diverse, not lush. ..... **Ruderal Tuliptree Forest (Typic Type) (CEGL007221)**
[*Liriodendron tulipifera* - *Quercus* spp. Ruderal Forest]

15a. *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) dominant in canopy with dense *Lycopodium* (clubmoss) spp. or *Dennstaedtia punctilobula* (eastern hayscented fern) ground cover; *Nyssa sylvatica* (blackgum) may be common; distribution is centered in the High Allegheny Mountains and Allegheny Plateau but extends north to NY, NJ and PA; common in WV, less common in VA; often originating after severe disturbance such as fire, clear-cutting, or gypsy moth outbreaks. ..... **Central Appalachian Ruderal Sweet Birch - Red Maple Forest (CEGL008503)**
[*Betula lenta* - *Acer rubrum* / *Lycopodium annotinum* - *Dennstaedtia punctilobula* Ruderal Forest]

15b. Stand with variable mixtures of young, even-aged hardwoods and/or pines, especially *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Celtis occidentalis* (common hackberry), *Juglans nigra* (black walnut), *Pinus strobus* (eastern white pine) and/or *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by *Rosa multiflora* (multiflora rose), *Celastrus orbiculata* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); variable, widespread, disturbed forest of the Northeast; typically an upland forest, but may occur in floodplains or wet settings. .... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina* - *Liriodendron tulipifera* - *Acer rubrum* - *Fraxinus americana* - (*Robinia pseudoacacia*) Ruderal Forest]

11. Successional and Ruderal Vegetation

1a. Successional fields/meadows/marshes/shrublands/shrub swamps/woodlands (tree cover [height >6 m] less than 60% cover of canopy and subcanopy combined); occurring on altered, plowed, farmed, or planted lands. **2**
1b. Successional or planted forests (tree cover [height >6 m] greater than 60% cover of canopy and subcanopy combined). **13**

2a. Shrub- or vine-dominated (woody cover of shrub stratum greater than 25%; trees may be present at from 25-60% cover). **3**
2b. Herbaceous-dominated (greater than 60% herbaceous cover; shrubs less than 25% cover; trees less than 25% cover) vegetation that has been anthropogenically-altered and/or maintained, especially on old fields and pastures; shorter disturbance interval than 2a above, more frequently disturbed/managed, created and maintained by yearly mowing or grazing; scattered early-successional trees (<25% cover) possible. **9**

3a. *Pueraria montana* var. *lobata* (kudzu) dominant. ..... **Ruderal Kudzu Vineland (CEGL003882)**
.....[*Pueraria montana* var. *lobata* Ruderal Vine-Shrubland]
3b. *Pueraria montana* var. *lobata* (kudzu) sparse to absent **4**

4a. Shrubland dominated by a mix of species. **5**
4b. Shrubland or woodland dominated by one species. **8**

5a. Dominated by upland species. **6**
5b. Dominated by wetland species intermixed with upland species; successional wet meadows or shrub swamps dominated by an admixture of upland and wetland old-field species. **7**

6a. Tall, typically closed-canopy shrubland thicket occurring on old fields, pastures, or modified lands dominated by an admixture of non-native and native shrubs such as *Elaeagnus umbellata* (Autumn olive), *Rubus allegheniensis* (Allegheny blackberry), *Smilax rotundifolia* (roundleaf greenbrier), *Rosa multiflora* (multiflora rose), *Lonicera morrowii* (Morrow's honeysuckle), *Celastrus orbiculata* (Oriental bittersweet), *Lonicera japonica* (Japanese honeysuckle), *Ligustrum vulgare* (European privet), *Juniperus virginiana* (eastern red-cedar), and other early-successional trees such as *Liriodendron tulipifera* (tuliptree) (<25% in cover); old-field grasses and forbs are common in more open-canopied variants where shrubs cover at least 25% of the field. .....
..... **Northeastern Ruderal Shrubland (CEGL006451)**
[*Elaeagnus umbellata* - *Cornus racemosa* - *Rosa multiflora* - *Juniperus virginiana* Ruderal Shrubland]
6b. Native successional shrubland dominated by heath shrubs, including *Gaylussacia* (huckleberry) spp., *Vaccinium* (blueberry) spp., and *Kalmia latifolia* (mountain laurel); *Dennstaedtia punctilobula* (eastern hayscented fern); frequent along rights-of-way. .....
..... **Successional Heath Shrubland (CEGL006622)**
[*Gaylussacia baccata* - *Vaccinium pallidum* - *Vaccinium corymbosum* Shrubland]

7a. Successional wet meadow dominated by an admixture of upland and wetland old-field species; may be mowed annually, "wet old fields"; may have successional shrubs usually only about 1 m tall, *Rubus* (blackberry) and *Spiraea* (spirea) common; *Cornus* (dogwood) spp. may be present, but are not dominant. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]

7b. Tall successional shrub swamp (2-4 m) occurring in low-lying areas of old fields or pastures, or the edges of beaver-impacted wetlands or impoundments; vegetation is highly variable with *Cornus amomum* (silky dogwood), *Cornus sericea* (red-osier dogwood), *Viburnum dentatum* (southern arrow-wood), *Spiraea alba* var. *latifolia* (white meadowsweet), *Rosa multiflora* (multiflora rose), *Rubus allegheniensis* (Allegheny blackberry), and *Rubus hispidus* (bristly dewberry) typically present and abundant; *Salix* (willow) spp. may also be present but are less common..... ..... **Ruderal Dogwood - Arrow-wood Shrub Swamp (CEGL006576)**
[*Cornus* (*amomum, sericea*) - *Viburnum dentatum* - *Rosa multiflora* Ruderal Shrub Swamp]

8a. *Crataegus punctata*- (dotted hawthorn) dominated successional woodland/forest/"orchard" of high elevations in the Southern and Central Appalachians; large patch along the AT corridor in the saddle between Beech Mountain and Whitetop in VA. .... **Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata* - *Crataegus flabellata* Ruderal Forest]

8b. *Juniperus virginiana* (eastern red-cedar) dominant. .... **Northeastern Ruderal Red-cedar Forest[24] (CEGL006024)**
[*Juniperus virginiana* Ruderal Forest]

9a. High-elevation pasture dominated by *Andropogon virginicus* var. *virginicus* (broomsedge bluestem); *Lolium pratense* (meadow ryegrass) can dominate fields early in the season. .... **Broomsedge Old-field Grassland (CEGL004044)**
[*Andropogon virginicus* var. *virginicus* Ruderal Grassland]

9b. Low-elevation old fields and/or pastures; wet meadows and marshes. **10**

10a. Herbaceous layer dominated by mixtures of introduced *Dactylis glomerata* (orchardgrass), *Bromus* spp. *Phleum pratense* (timothy), *Festuca* (fescue) spp., *Solidago* (goldenrod) spp., *Trifolium* (clover) spp., *Medicago* (alfalfa) spp., *Setaria* (bristlegrass) spp., and other grass and/or forb species. ..... **Northeastern Old-field Meadow (CEGL006107)**
[*Dactylis glomerata* - *Phleum pratense* - *Festuca* spp. - *Solidago* spp. Ruderal Meadow]

10b. Wet meadows and marshes. **11**

11a. Successional wet meadow dominated by an admixture of upland and wetland old-field species; may be mowed annually, "wet old fields"; may have successional shrubs (<50%). .... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]

11b. Marshes dominated by one species. **12**

12a. *Phragmites australis* (common reed) dominant. .... **Eastern Ruderal Common Reed Marsh (CEGL004141)**
[*Phragmites australis* ssp. *australis* Eastern Ruderal Marsh]

[24]This association can also be a woodland or shrubland despite the common name.

12b. Monocultural stands of the invasive grass *Phalaris arundinacea* (reed canarygrass) found in both basin wetlands and along rivershores. ..... **Eastern Ruderal Reed Canarygrass Marsh (CEGL006044)**
[*Phalaris arundinacea* Eastern Ruderal Marsh]

13a. Canopy dominated by evergreen trees (at least 50% evergreen trees in canopy). **14**
13b. Canopy dominated by deciduous hardwood trees (at least 50% deciduous canopy). **20**

14a. Canopy dominated by *Pinus* (pine) sp. **15**
14b. Canopy not dominated by *Pinus* (pine) spp. **18**

15a. *Pinus virginiana* (Virginia pine) a dominant component of stand (greater than 50% of canopy)... ..... **Ruderal Virginia Pine Forest (CEGL002591)**
[*Pinus virginiana* Ruderal Forest]
15b. *Pinus virginiana* (Virginia pine) not a dominant component. **16**

16a. *Pinus strobus* (eastern white pine) a dominant component of association (greater than 50% of canopy). **17**
16b. A mixture of pines and/or other planted native or non-native conifers) in canopy; not always mixed in the case of *Picea abies* (Norway spruce) and others. ..... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]

17a. Stands contain plantations of *Pinus strobus* (eastern white pine) that are maintained for the extraction of forest products. ..... **Eastern White Pine Plantation (CST007178)**[25]
[*Pinus strobus* Forest Plantation]
17b. Successional forest, trees usually of mixed -ages, and including a mixture of other successional species; *Pinus strobus* (eastern white pine) cover ranges from 50-90%. ..... **Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

18a. *Juniperus virginiana* (eastern red-cedar) dominant. ..... **Northeastern Ruderal Red-cedar Forest (CEGL006024)**[26]
[*Juniperus virginiana* Ruderal Forest]
18b. Other conifers are dominant. **19**

19a. *Picea* (spruce) sp. plantations dominated by *Picea abies* (Norway spruce) and/or any combination of spruce species; successional understory may be present with *Prunus serotina* (black cherry), *Acer rubrum* (red maple), *Rubus* (blackberry) spp., *Dennstaedtia punctilobula* (eastern hayscented fern), and others..... **Norway Spruce Plantation (CST007167)**
Picea abies Forest Plantation]

[25]Stands that maintain the physical appearance of a plantation (i.e., rows or patterns) should be treated as plantations even after the cessation of management and should be classified as plantations until succession alters the stand structure and appearance from plantation to forest.

[26]This community may also occur as an open-canopy woodland with as little as 10% (and as much as 60%) red cedar canopy cover.

19b. A mixture of pines (and/or other planted native or non-native conifers) in canopy not always mixed in the case of *Picea abies* (Norway spruce) and others. ..... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]

20a. Canopy dominated or codominated by *Liriodendron tulipifera* (tuliptree) (greater than 30% of canopy) [Note: open disturbed forests with tuliptree and other early-successional species are not CEGL007220 nor CEGL007221, but follow the opposing lead to CEGL006599)]. **21**
20b. Canopy with less than 30% *Liriodendron tulipifera* (tuliptree) or tuliptree absent..... **22**

21a. Widespread *Liriodendron tulipifera* (tuliptree) forest of relatively fertile substrates in all provinces of the Mid-Atlantic states and in parts of the Southeast; oaks generally absent, with a large presence of understory species indicative of high-calcium or base-rich soils such as *Cercis canadensis* (eastern redbud), *Symphoricarpos orbiculatus* (coralberry), or *Lindera benzoin* (northern spicebush); exotic shrubs, including *Rosa multiflora* (multiflora rose), *Rubus phoenicolasius* (wine raspberry), and/or *Lonicera japonica* (Japanese honeysuckle), may be common. ..... **Ruderal Tuliptree Forest (Rich Type) (CEGL007220)**
[*Liriodendron tulipifera* / (*Cercis canadensis*) / (*Lindera benzoin*) Ruderal Forest]
21b. Widespread typic acidic *Liriodendron tulipifera* (tuliptree) and *Quercus* (oak) spp. forest in areas that had stand-initiating disturbance such as logging in the past; oaks present in canopy and/or subcanopy (>10% cover); understory lacking calcium-rich indicators; additional associates may include *Acer rubrum* (red maple), *Carya* (hickory) spp., *Nyssa sylvatica* (blackgum), *Cornus florida* (flowering dogwood), and *Betula lenta* (sweet birch); shrub layers may include *Rubus allegheniensis* (Allegheny blackberry), *Lindera benzoin* (northern spicebush) (in small amounts), and *Vaccinium pallidum* (Blue Ridge blueberry). Vines including *Toxicodendron radicans* (eastern poison-ivy), *Smilax rotundifolia* (roundleaf greenbrier), and *Vitis* (grape) sp. common; *Dennstaedtia punctilobula* (eastern hayscented fern) is a common fern..... **Ruderal Tuliptree Forest (Typic Type) (CEGL007221)**
[*Liriodendron tulipifera* - *Quercus* spp. Ruderal Forest]

22a. Stand with variable mixtures of young, even-aged hardwoods and pines; oaks may be present but are not dominant. **23**
22b. Stand dominated by one species. **24**

23a. Forest dominated by a combination of *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Celtis occidentalis* (common hackberry), *Juglans nigra* (black walnut), *Pinus strobus* (eastern white pine), and/or *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by exotics such as *Rosa multiflora* (multiflora rose), *Celastrus orbiculata* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); widespread, variable, disturbed forest of the Northeast; typically an upland forest but can occur in floodplains or wet settings. ..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina* - *Liriodendron tulipifera* - *Acer rubrum* - *Fraxinus americana* - (*Robinia pseudoacacia*) Ruderal Forest]
23b. Successional Central Appalachian mesophytic hardwood forest codominated by *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) in the canopy and shrub layers. *Nyssa sylvatica* (blackgum) may also be common. Shrub associates include fire and disturbance tolerant heaths *Kalmia latifolia* (mountain laurel), *Gaylussacia frondosa* (blue huckleberry), and *Vaccinium*

pallidum (Blue Ridge blueberry) as well as *Rhus glabra* (smooth sumac); *Lycopodium* (clubmoss) spp., *Dennstaedtia punctilobula* (eastern hayscented fern), and *Polypodium virginianum* (rock polypody) may be found in the herb layer; distribution is centered in the High Allegheny Mountains and Allegheny Plateau but extends north to NY, NJ and PA; it is common in WV, less common in MD, and uncommon in VA; often originating after severe disturbance such as fire, clear-cutting, or gypsy moth outbreaks. ..... **Central Appalachian Ruderal Sweet Birch - Red Maple Forest (CEGL008503)**
[*Betula lenta - Acer rubrum* / *Lycopodium annotinum - Dennstaedtia punctilobula* Ruderal Forest]

24a. Dominated by *Ailanthus altissima* (tree of heaven) or *Juglans nigra* (black walnut). **25**
24b. Stand dominated by other species; *Robinia pseudoacacia* (black locust) and/or *Ailanthus altissima* (tree of heaven) may be present but <50% in cover. **26**

25a. Forest dominated by *Ailanthus altissima* (tree of heaven); ≥50% of canopy. ..... **Ruderal Tree-of-Heaven Forest (CEGL007191)**
[*Ailanthus altissima* Ruderal Forest]
25b. Forest dominated by *Juglans nigra* (black walnut); >50% of canopy; with an understory of *Verbesina* (crownbeard) spp. and/or *Symphoricarpos orbiculatus* (coralberry); frequently found on postcultivation soil or former orchard sites around old homesites. ..... **Ruderal Black Walnut Forest (CEGL007879)**
[*Juglans nigra* / *Verbesina alternifolia* Ruderal Forest]

26a. *Crataegus punctata*- (dotted hawthorn) dominated successional woodland/forest/"orchard" of high elevations in the Southern and Central Appalachians; large patch along the AT corridor in the saddle between Beech Mountain and Whitetop in VA. ..... **Southern & Central Appalachian Ruderal Hawthorn Forest (CEGL004184)**
[*Crataegus punctata - Crataegus flabellata* Ruderal Forest]
26b. *Crataegus punctata* (dotted hawthorn) not dominant. **27**

27a. *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) dominate canopy with dense *Lycopodium* (clubmoss) spp. or *Dennstaedtia punctilobula* (eastern hayscented fern) ground cover; *Nyssa sylvatica* (blackgum) may be common; distribution is centered in the High Allegheny Mountains and Allegheny Plateau but extends north to NY, NJ and PA; common in WV, uncommon in VA; often originating after severe disturbance such as fire, clear-cutting, or gypsy moth outbreaks. ..... **Central Appalachian Ruderal Sweet Birch - Red Maple Forest (CEGL008503)**
[*Betula lenta - Acer rubrum* / *Lycopodium annotinum - Dennstaedtia punctilobula* Ruderal Forest]
27b. Successional forest dominated by an admixture of *Acer rubrum* (red maple), *Prunus serotina* (black cherry), *Celtis occidentalis* (common hackberry), and/or *Fraxinus americana* (white ash); *Juglans nigra* (black walnut), *Robinia pseudoacacia* (black locust), *Pinus strobus* (eastern white pine), and/or *Ailanthus altissima* (tree of heaven) may also be present; understory typically heavily invaded by *Rosa multiflora* (multiflora rose), *Celastrus orbiculata* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); common disturbed forest of the Northeast; typically an upland forest, but can occur in floodplains or wet settings. ..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana* - (*Robinia pseudoacacia*) Ruderal Forest]

Field Key to Vegetation Associations of the Lower New England Project Area

This field key provides classification to USNVC associations that were identified during the APPA vegetation mapping project for the LNE project area (see Figure D–3 in the "Key to Field Keys by Project Area"). The LNE project area includes APPA lands between the Delaware River (Pennsylvania-New Jersey State line along Interstate 80) and the Connecticut River (Vermont-New Hampshire State line between Norwich, Vermont, and Hanover, New Hampshire).

Notes about Scale for the Lower New England Project Area

All forest associations were mapped to a 0.5-ha MMU (a circle with a 40-m radius) and all nonforest associations were mapped to a 0.25-ha MMU (a circle with a 28-m radius).

Key to Keys for the Lower New England Project Area[27][28]

1a. Wetland vegetation. **2**
1b. Upland vegetation. **5**

2a. Alluvial forests, woodlands, shrublands and herbaceous communities occurring along banks or channels of rivers and streams and adjacent levees and bottomlands, at least occasionally flooded; includes beaver pond areas that are part of larger alluvial system. ..... **Alluvial Forest, Woodland, Shrubland, and Herbaceous Vegetation (Key #1, p. D-100)**
2b. Non-alluvial palustrine vegetation - substrate is saturated to the surface by groundwater for extended periods during the growing season; seepage-fed; or fed by ground and rainwater; rarely, if ever, flooded by alluvial waters, includes seepage-fed beaver pond impoundments, bottomlands, wet meadows, seeps, vernal pools, poorly-drained depressions, bogs, fens, and basin swamps..... **3**

3a. Forested sites and sites generally with overhanging canopy of trees (canopy cover >10%). ..... **Forested Basin Swamps, Forested Seeps, and Vernal Pools (Key #2, p. D-105)**
3b. Non-forested wetland communities (tree canopy cover ≤10%), including wooded marshes, shrub swamps, bogs, fens, and herbaceous-dominated wetlands, with deep saturated soils or seasonally flooded soils **4**

4a. Wetland vegetation dominated by shrubs (≥50% shrub cover) or with scattered tree cover (≤10%). ..... **Shrub Swamps, Fens, and Bogs (Key #3, p. D-113)**
4b. Wetland vegetation dominated by herbaceous species (>50% cover). ..... **Herbaceous Wetlands and Aquatic Vegetation (Key #4, p. D-117)**

[27]All of the vegetation associations have the potential to include non-native invasive species or other plant species that are indicators of disturbance which may or may not be in the USNVC description and key. Forests may have incomplete canopies interrupted by gypsy moth outbreaks, but these should be regarded as forests rather than woodlands. The key provides descriptions for relatively undisturbed associations as described in the USNVC.

[28]*Tsuga canadensis* (eastern hemlock) may be codominant in canopy usually >25% of canopy. For all *Tsuga canadensis* associations that have been impacted by the hemlock woolly adelgid, treat standing and fallen dead trees as part of *Tsuga canadensis* canopy cover.

5a. Vegetation dominated by trees, strongly altered by recent human disturbance, dominated by non-native tree species (e.g., *Acer platanoides* (Norway maple)) or certain disturbance-oriented (ruderal) native species; often in monotypic stands (e.g., *Acer rubrum* (red maple), *Liriodendron tulipifera* (Tuliptree), *Acer saccharum* (sugar maple), *Robinia pseudoacacia* (black locust), *Juglans nigra* (black walnut). Includes also evergreen plantations and pine successional forests. ..... **Successional and Ruderal Vegetation (Key #11, p. D-158)**
5b. Natural vegetation, dominated by trees, shrubs, forbs, grasses, and/or vines. **6**

6a. Non-forested (tree canopy cover ≤40%) or stunted forest vegetation. **7**
6b. Forested vegetation (tree canopy cover ≥40%)[29]. **8**

7a. Woodlands, stunted forests (trees may be 2m tall); shrublands, grasslands, nonvascular vegetation, or bare rock; associated with shallow soils or rock outcrops. ..... **Woodlands, Stunted Forests, Barrens, Rocky Outcrops, and Cliffs (Key #5, p. D-124)**
7b. Shrublands (<5m tall) or grasslands without substantial areas of exposed rock. Successional or altered (ruderal) vegetation resulting from human disturbance. ..... **Successional and Ruderal Vegetation (Key #11, p. D-158)**

8a. Evergreen or mixed evergreen-deciduous forest canopies (deciduous trees less than 70% cover). **9**
8b. Deciduous canopies; *Acer rubrum* (red maple) may be common in canopy; pines and hemlock generally absent to minor. **11**

9a. Spruce- and fir-dominated forests and woodlands. ..... **Spruce-Fir Forests (Key #6, p. D-131)**
9b. Pine- or hemlock-dominated canopies. **10**

10a. Hemlock-dominated canopies and mixed hemlock forests with *Tsuga canadensis* (eastern hemlock), *Pinus strobus* (eastern white pine), and/or northern hardwoods or oaks as codominant canopy species. ..... **Hemlock and Mixed Hemlock Forests (Key #7, p. D-133)**
10b. Pine-dominated or mixed pine-dominated canopies; includes *Pinus strobus* (eastern white pine) and *Pinus rigida* (pitch pine); canopies codominated by pine and *Tsuga canadensis* (eastern hemlock); and canopies codominated by pine, oaks, and northern hardwoods. ..... **Pine and Mixed Pine Shrublands, Woodlands, and Forests (Key #9, p. D-145)**

11a. Oak- and oak-hickory-dominated canopies. ..... **Mixed Oak - Conifer, Mixed Oak, and Oak - Hickory Forests (Key #10, p. D-148)**
11b. Hardwood deciduous trees such as northern hardwoods or early-successional hardwoods dominate canopy. **12**

[29]Typically >40% tree cover, except in obvious cases of severe disturbance from gypsy moth, hemlock woolly adelgid, windstorms, etc. Such disturbed stands are quite common. Key users should try to key to the pre-disturbance association if possible or identify the new, postdisturbance association if the pre-disturbance association diagnostic species are absent.

12a. Northern hardwoods such as *Betula alleghaniensis* (yellow birch), *Betula papyrifera* (paper birch), *Fagus grandifolia* (American beech), and *Acer saccharum* (sugar maple) and/or mesophytic tree species (e.g., *Tilia americana* (American basswood), *Fraxinus americana* (white ash), *Acer rubrum* (red maple), and/or *Liriodendron tulipifera* (tuliptree)) may be codominant in canopy. .... **Northern Hardwood Forests (Key #8, p. D-136)**

12b. Early-successional species such as *Acer rubrum* (red maple), *Betula lenta* (sweet birch), or *Prunus serotina* (black cherry), or in the northern portion of the range, *Acer saccharum* (sugar maple), or by non-native deciduous and/or conifer species; includes heavily invaded forests, altered (ruderal) forests and plantations resulting from human disturbance..... .....**Successional and Ruderal Vegetation (Key #11, p. D-158)**

1. Alluvial Forest, Woodland, Shrubland and Herbaceous Vegetation

1a. Forested communities, with greater than 40% tree canopy coverage. **2**
1b. Woodlands (<40% cover), shrublands, herbaceous, and sparse vegetation communities along narrow river margins; scattered trees (up to 25%) possible. **13**

2a. Floodplain forest canopy dominated by *Acer* (maple) spp. **3**
2b. Canopy dominants otherwise **10**

3a. Floodplain forest with abundant *Acer rubrum* (red maple) **4**
3b. Floodplain forest canopy not dominated by *Acer rubrum* (red maple) **5**

4a. Floodplain forest with abundant *Acer rubrum* (red maple) and significant component of *Quercus palustris* (pin oak), (either species may be dominant), on smaller rivers that have many canopy associates, including *Fraxinus pennsylvanica* (green ash), *Ulmus americana* (American elm), *Salix nigra* (black willow), and occasionally *Quercus bicolor* (swamp white oak), the latter only with low abundance; shrubs include *Lindera benzoin* (northern spicebush), *Rosa multiflora* (multiflora rose), and other exotics; herb layer diverse with abundant *Carex grayi* (Gray's sedge), *Geum canadense* (white avens), *Impatiens capensis* (jewelweed), *Lysimachia nummularia* (creeping jenny), and *Boehmeria cylindrica* (small-spike false nettle); occurs in the southern portion of the project area at Delaware Water Gap National Recreation Area (DEWA) and in NJ. ..... **Pin Oak Small River Floodplain Forest (CEGL006185)**
[*Quercus palustris - Acer rubrum / Carex grayi - Geum canadense* Wet Forest]
4b. Obviously disturbed and widely variable woody vegetation with mixtures of young, even-aged native and non-native hardwoods, especially *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Acer saccharum* (sugar maple) on calcareous soils, and *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by *Rosa multiflora* (multiflora rose), *Celastrus orbiculatus* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); can also occur in wet settings such as floodplains and seasonally or temporarily flooded lowlands; common throughout all of the states in the project area, especially PA, NJ, and CT. ..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana - (Robinia pseudoacacia)* Ruderal Forest]

5a. Floodplain forest canopy dominated or codominated by *Acer saccharinum* (silver maple) **6**
5b. Floodplain forest canopy with an abundance of *Acer saccharum* (sugar maple) in the canopy; *Acer saccharinum* (silver maple) minor or absent **9**
6a. *Acer saccharinum* (silver maple) strongly dominant with *Acer negundo* (box-elder) present to abundant **7**
6b. *Acer saccharinum* (silver maple) strongly dominant without *Acer negundo* (box-elder) **8**

7a. *Acer negundo* (box-elder) codominant in subcanopy and/or canopy; restricted to large river floodplains, where it occurs on first bottoms and banks immediately adjacent to the river from MD north to MA; early-successional stands are usually strongly dominated by even-aged *Acer saccharinum* (silver maple); characteristic herbs are *Ageratina altissima* (white snakeroot), *Boehmeria cylindrica* (small-spike false nettle), *Laportea canadensis* (Canadian woodnettle), *Leersia virginica* (whitegrass), *Impatiens pallida* (pale touch-me-not), and *Elymus virginicus* (Virginia wildrye); *Microstegium vimineum* (Nepalese browntop) can be abundant..... ..... **Piedmont-Central Appalachian Silver Maple Floodplain Forest (CEGL006217)**
[*Acer saccharinum - Acer negundo / Ageratina altissima - Laportea canadensis - (Elymus virginicus)* Floodplain Forest]

7b. *Acer negundo* (box-elder) maybe a canopy associate but not dominant; *Acer saccharinum* (silver maple) forest restricted to DEWA in the project area; *Platanus occidentalis* (American sycamore) and *Betula nigra* (river birch) codominant in canopy; additional canopy associates include *Ulmus americana* (American elm), *Ulmus rubra* (slippery elm), *Salix nigra* (black willow), *Celtis occidentalis* (common hackberry), *Carya cordiformis* (bitternut hickory), *Juglans nigra* (black walnut), *Fraxinus pennsylvanica* (green ash), and occasionally *Halesia tetraptera* (mountain silverbell). The shrub and sapling layer is often open (<25% cover). Woody and herbaceous vines can be prominent. Grasses, forbs, and ferns dominate the ground layer. .... **Midwestern Silver Maple - Elm Floodplain Forest (CEGL002586)**
[*Acer saccharinum - Fraxinus pennsylvanica - Ulmus americana* Floodplain Forest]

8a. *Acer saccharinum* (silver maple) floodplain forest occurring on low terraces adjacent to medium to large, high-energy and moderate-gradient rivers with *Matteuccia struthiopteris* (ostrich fern) or *Laportea canadensis* (Canadian woodnettle) occupying coarse soils with a relatively short flood duration; ranges from VT south to PA in the project area. .... **Silver Maple Floodplain Levee Forest (CEGL006147)**
[*Acer saccharinum - (Populus deltoides) / Matteuccia struthiopteris - Laportea canadensis* Floodplain Forest]

8b. *Acer saccharinum* (silver maple) floodplain forest occupying finer soils higher up in the floodplain and not immediately adjacent to river channel; *Matteuccia struthiopteris* (ostrich fern) or *Laportea canadensis* (Canadian woodnettle) if present are not dominant;; relatively long flood duration; well developed shrub layer present dominated by *Lindera benzoin* (northern spicebush) with other shrubs often prominent; lush herb layer dominated by *Onoclea sensibilis* (sensitive fern) also includes *Cinna arundinacea* (sweet woodreed), *Geum canadense* (white avens), *Chelone glabra* (white turtlehead), *Impatiens capensis* (jewelweed), *Carex lupulina* (hop sedge), *Carex crinita* (fringed sedge), *Carex grayi* (Gray's sedge), and others; occurring in MA and along the Housatonic River in CT and the Wallkill River in NJ. .... **Northeastern Silver Maple - Elm Floodplain Forest (CEGL006001)**
[*Acer saccharinum - Ulmus americana / Onoclea sensibilis* Floodplain Forest]

9a. Hardwood terrace floodplain forests in the mid-Atlantic states of NJ and PA, occurring on slightly elevated alluvial terraces and active floodplains of larger rivers; *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), and sometimes *Carya cordiformis* (bitternut hickory) are canopy dominants; canopy associates include *Quercus rubra* (northern red oak), *Juglans nigra* (black walnut), *Prunus serotina* (black cherry), *Fraxinus nigra* (black ash), *Liriodendron tulipifera* (tuliptree), *Ulmus americana* (American elm), *Tilia americana* (American basswood), *Acer negundo* (box-elder), and *Fagus grandifolia* (American beech); *Carpinus caroliniana* (American hornbeam) is often present; *Lindera benzoin* (northern spicebush) is the most common shrub; *Asimina triloba* (pawpaw) is characteristic in the southern portion of this type's range; characteristic herbs include *Arisaema triphyllum* (Jack in the pulpit) and *Podophyllum peltatum* (mayapple); similar vegetation/setting north of NJ should go to CEGL006114. ..... **Mid-Atlantic Hardwood High Terrace Floodplain Forest (CEGL006459)**
[*Acer saccharum - Fraxinus americana / Carpinus caroliniana / Podophyllum peltatum* Forest]

9b. Hardwood terrace floodplain forest of the glaciated Northeast from CT north to ME occurring on slightly elevated alluvial terraces and active floodplains of medium and larger rivers; *Acer saccharum* (sugar maple) dominates the canopy with associates *Tilia americana* (American basswood), *Quercus rubra* (northern red oak), *Ulmus americana* (American elm), *Fraxinus americana* (white ash), *Fraxinus pennsylvanica* (green ash), *Juglans cinerea* (butternut), and *Prunus serotina* (black cherry); shrubs include *Corylus americana* (American hazelnut), *Viburnum lentago* (nannyberry), and *Prunus virginiana* (chokecherry); characteristic herbs include *Matteuccia struthiopteris* (ostrich fern) and *Ageratina altissima* (white snakeroot). ..... **Terrace Hardwood Floodplain Forest (CEGL006114)**
[*Acer saccharum - Fraxinus* spp. *- Tilia americana / Matteuccia struthiopteris - Ageratina altissima* Floodplain Forest]

10a. Floodplain forest dominated by *Juglans nigra* (black walnut) with an understory of *Lindera benzoin* (northern spicebush) and an herbaceous layer dominated by *Verbesina* (crownbeard) spp. or *Sanicula canadensis* (Canadian blacksnakeroot); *Celtis occidentalis* (common hackberry) may be abundant; ranges from DEWA in PA north to CT. ..... **Ruderal Black Walnut Forest (CEGL007879)**
[*Juglans nigra / Verbesina alternifolia* Ruderal Forest]

10b. Floodplain forest not dominated by *Juglans nigra* (black walnut). **11**

11a. Obviously disturbed and widely variable woody vegetation with mixtures of young, even-aged native and non-native hardwoods, especially *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Acer saccharum* (sugar maple) on calcareous soils, and *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by *Rosa multiflora* (multiflora rose), *Celastrus orbiculatus* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); can also occur in wet settings such as floodplains and seasonally or temporarily flooded lowlands; common throughout all northeastern states especially PA, NJ, and CT. ..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana - (Robinia pseudoacacia)* Ruderal Forest]

11b. Less disturbed floodplain forests. **12**

12a. *Fraxinus pennsylvanica* (green ash) and/or *Platanus occidentalis* (American sycamore) dominant with other mixed hardwoods; enrichment indicators such as *Juglans nigra* (black walnut) often present; occurring in the project area from DEWA north through NY and CT. .... **Green Ash - Mixed Hardwood Floodplain Forest (CEGL006575)**
[*Fraxinus pennsylvanica - (Juglans nigra, Platanus occidentalis)* Floodplain Forest]
12b. *Salix nigra* (black willow) dominant or mixed with *Populus deltoides* (eastern cottonwood); floodplain forests of low-gradient rivers; observed in the project area in CT. .... **Eastern Black Willow Floodplain Forest (CEGL006629)**
[*Salix nigra - (Populus deltoides)* Floodplain Forest]

13a. Woodlands and shrublands. **14**
13b. Herbaceous communities and sparse vegetation. **15**

14a. Riparian shrublands dominated by *Alnus* (alder) spp. occurring on river-margin alluvial deposits of moderate- to high-energy river reaches, where the flooding regime prevents forests from developing, and *Cornus* (dogwood) spp. and *Salix* (willow) spp. also often present and occasionally dominant; if alder-dominated swamp, occurring in saturated basins settings, in associations with beaver-impacted wetlands, and/or alongside small, low-velocity streams consider CEGL002381 in Shrub Swamp Key; observed in the project area in VT..... **Alluvial Alder Thicket (CEGL006062)**
[*Alnus incana - Cornus (amomum, sericea) / Clematis virginiana* Shrub Swamp]
14b. *Salix* (willow) spp. strongly dominant on cobble or gravel bars experiencing flood scour; lacking *Betula nigra* (river birch); wooded riparian vegetation characterized by widely variable physiognomy, ranging from woodland (can include small forest patches), or shrubland (1m - 5m in height); observed in the project area in DEWA, NY, MA and VT..... ..... **Black Willow Riverbar Shrubland (CEGL006065)**
[*Salix nigra / Phalaris arundinacea - Apocynum cannabinum* Wet Shrubland]

15a. Open flood-scoured bedrock exposures of major rivers, along river narrows; patchy sparse vegetation includes *Andropogon gerardii* (big bluestem), *Carex stricta* (upright sedge), *Poa palustris* (fowl bluegrass), and *Poa compressa* (Canada bluegrass); lacks *Vaccinium* (blueberry) spp.; observed in the project area at DEWA and in VT along the White River. .... **Northern Riverscour Rock Outcrop (CEGL006284)**
[*Andropogon gerardii - Campanula rotundifolia - Solidago simplex* Riverscour Sparse Vegetation]
15b. Herbaceous vegetation..... **16**

16a. Vegetation dominated by a single species **17**
16b. Vegetation dominated by a combination of multiple species **18**

17a. *Carex torta* (twisted sedge) dominant; occurs on cobble scour river shores along medium- to high-energy river channels and, less frequently, exposed lakeshores with heavy wave action; seasonal flooding and ice-scour maintain the open nature of these communities; characteristic perennial species that tolerate inundation and flood scouring include *Carex torta* (twisted sedge) and low *Salix* (willow) spp.; associated species tend to vary widely from site to site, can be diverse, and may be sparse; observed in VT in the project area. .... **Northeastern Temperate Cobble Scour Rivershore (CEGL006536)**
[*Carex torta - Apocynum cannabinum - Cyperus* spp. Riverbed Vegetation]

17b. *Calamagrostis canadensis* (bluejoint) dominant. ..... **Laurentian & Northeast Bluejoint Wet Meadow (CEGL005448)**
[*Calamagrostis canadensis* - *Carex* spp. Laurentian & Northeast Wet Meadow]

18a. Riverside grasslands dominated by tall prairie grasses such as *Andropogon gerardii* (big bluestem), *Sorghastrum nutans* (Indiangrass), and *Schizachyrium scoparium* (little bluestem); occurs along major rivers in flood-scoured areas; observed in VT. ..... **Riverside Prairie Grassland (CEGL006518)**
[*Prunus pumila / Andropogon gerardii* - *Sorghastrum nutans* Riverscour Wet Meadow]

18b. Herb-dominated seepage community that develops on discharge areas of the shores of larger rivers; circumneutral groundwater discharge supports a fen-like aspect, but on mineral rather than peat soils; semi-open conditions are maintained by ice-scouring and floodwaters; herbaceous species include *Juncus dudleyi* (Dudley's rush), *Eleocharis tenuis* (slender spikerush), *Andropogon gerardii* (big bluestem), *Agrostis stolonifera* (creeping bentgrass), *Carex garberi* (elk sedge), *Carex granularis* (limestone meadow sedge), *Carex pellita* (woolly sedge), and others; observed in VT where White River crosses AT. ..... **Boreal Circumneutral Riverside Seep (CEGL006142)**
[*Triantha glutinosa* - *Carex garberi* Riverscour Wet Meadow]

2. Forested Basin Swamps, Forested Seeps, and Vernal Pools

1a. Forested wetlands..... **2**
1b. Small-patch herbaceous seeps (1-6 acres) may be under forest cover, sparse wetland vegetation of vernal pools, and nonvascular wetland vegetation under tree canopy..... **26**

2a. Forested wetlands dominated by conifers; hardwoods may be present, but generally <40% total cover..... **3**
2b. Forested swamps characterized by hardwoods; conifers may be present, but <25% cover. **12**

3a. *Chamaecyparis thyoides*- (Atlantic white-cedar) or *Thuja occidentalis*- (arborvitae) dominated swamps..... **4**
3b. Canopy dominated by *Larix* (larch) spp., *Picea* (spruce) spp., or *Tsuga* (hemlock) spp. **5**

4a. *Chamaecyparis thyoides* (Atlantic white-cedar) swamp occurring on inland ridgetops; rare association; observed once in the project area in NY. ..... **Inland Atlantic White-cedar Swamp Forest (CEGL006189)**
[*Chamaecyparis thyoides - (Tsuga canadensis, Betula alleghaniensis) / Clethra alnifolia* Swamp Forest]
4b. *Thuja occidentalis* (arborvitae) prominent in the canopy, either clearly dominant or mixed with *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), and/or *Acer rubrum* (red maple); *Alnus incana* (gray alder) and *Spiraea alba* (white meadowsweet) dominant shrubs; characteristic herbs include *Tiarella cordifolia* (heartleaf foamflower), *Ranunculus hispidus* var. *caricetorum* (bristly buttercup), *Solidago rugosa* (wrinkleleaf goldenrod), *Doellingeria umbellata* (parasol whitetop), *Chrysosplenium americanum* (American golden-saxifrage), and *Symphyotrichum puniceum* (purplestem aster); forests on gentle to moderate slopes with groundwater seepage maintaining moist to saturated conditions; mineral soils with little peat accumulation; most often where the substrate is not strongly acidic; more common in the NAP project area, observed once in VT. ..... **Northern White-cedar - Spruce Seepage Forest (CEGL006175)**
[*Thuja occidentalis - (Picea rubens) / Tiarella cordifolia* Swamp Forest]

5a. Forested wetlands dominated by *Larix* (larch) spp. or *Picea* (spruce) spp..... **6**
5b. Forested wetlands characterized by *Tsuga canadensis* (eastern hemlock)..... **9**

6a. Enriched *Larix laricina* (tamarack), *Acer rubrum - Fraxinus nigra* (red maple-black ash) seepage swamp north of extent of glaciation (approximate line runs roughly east-west through southern PA and northern NJ); *Pinus strobus* (eastern white pine) associate in canopy; *Alnus incana* (gray alder) and *Rhamnus alnifolia* (alderleaf buckthorn) in the shrub layer; with enriched seepage indicators frequent and often abundant, especially calciphiles such as *Saxifraga pensylvanica* (eastern swamp saxifrage), *Carex leptalea* (bristly-stalked sedge), *Carex flava* (yellow sedge), *Solidago patula* (roundleaf goldenrod), and *Ranunculus hispidus* var. *caricetorum* (bristly buttercup); ranges from PA north to VT..... **Red Maple - Black Ash Rich Seepage Swamp Forest (CEGL006009)**
[*Acer rubrum - Fraxinus nigra - (Larix laricina) / Rhamnus alnifolia* Swamp Forest]
6b. Forested wetlands dominated by *Picea* (spruce) spp..... **7**

7a. Forested bog dominated by *Picea mariana* (black spruce) over heath shrubs and sphagnum mosses; occurs in kettlehole basins and other well-defined topographic depressions; characterized by relatively deep peat accumulation, indicating acidic, nutrient-poor conditions; ranges from southern NH to just south of the glacial border in PA and NJ..... **Black Spruce Swamp Woodland (CEGL006098)**
[*Picea mariana* / (*Vaccinium corymbosum, Gaylussacia baccata*) / *Sphagnum* sp. Swamp Woodland]
7b. Forested swamps..... **8**

8a. *Picea rubens* (red spruce) basin swamp with a mixed canopy that includes *Acer rubrum* (red maple) and *Nyssa sylvatica* (blackgum); *Abies balsamea* (balsam fir) may be present, but not dominant; shrubs include *Vaccinium corymbosum* (highbush blueberry) and *Rhododendron maximum* (great laurel) (more common in southern examples) and *Nemopanthus mucronatus* (catberry), *Ilex verticillata* (common winterberry), and *Thuja occidentalis* (arborvitae) more common in northern examples; herbs include *Carex trisperma* (three-seeded sedge), *Osmunda cinnamomea* (cinnamon fern), *Gaultheria hispidula* (creeping snowberry), and *Carex folliculata* (northern long sedge); *Sphagnum* (sphagnum moss) common; observed in NY, MA and VT. ..... **Red Spruce - Red Maple Acidic Swamp Forest (CEGL006198)**
[*Picea rubens - Acer rubrum / Nemopanthus mucronatus* Swamp Forest]
8b. Northern *Picea rubens - Abies balsamea* (red spruce-balsam fir) swamps with a continuous layer of *Sphagnum* (sphagnum moss); fir prevalent with tall shrubs such as *Viburnum lantanoides* (hobblebush), *Nemopanthus mucronatus* (catberry), *Sorbus americana* (American mountain-ash), *Alnus viridis* ssp. *crispa* (mountain alder), and *Viburnum nudum* var. *cassinoides* (withe-rod); characteristic herbs include *Carex disperma* (softleaf sedge), *Coptis trifolia* (threeleaf goldthread), *Cornus canadensis* (bunchberry dogwood), and *Gaultheria hispidula* (creeping snowberry). [Northern Appalachians endemic, peripheral to but present in Lower New England in MA and VT.] .. .. **Northern Appalachian Spruce - Fir Swamp Forest (CEGL006312)**
[*Picea rubens - Abies balsamea / Gaultheria hispidula / Osmunda cinnamomea / Sphagnum* spp. Swamp Forest]

9a. *Tsuga canadensis* (eastern hemlock) sole canopy dominant with *Rhododendron maximum* (great laurel) dominant in shrub layer; hardwoods such as *Acer rubrum* (red maple) and *Betula alleghaniensis* (yellow birch) may be present in canopy, but low in cover (<25%); saturated acidic muck to imperfectly-drained mineral soils; swamp more common in the Central Appalachians, observed in DEWA and NY in the project area..... **Eastern Hemlock / Great Laurel Swamp Forest (CEGL006279)**
[*Tsuga canadensis / Rhododendron maximum / Sphagnum* spp. Swamp Forest]
9b. Mixed hemlock - hardwood canopy. **10**

10a. Mixed hemlock - hardwood basin swamps [*Tsuga* (hemlock) spp. ≥25% of the canopy] with acidic, organic soils; canopy includes *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Pinus strobus* (eastern white pine), *Nyssa sylvatica* (blackgum), and *Fraxinus* (ash) spp.; shrubs sparse; herbs often dense, especially *Osmunda cinnamomea* (cinnamon fern) and several sedges (*Carex folliculata* (northern long sedge), *Carex trisperma* (three-seeded sedge), *Carex disperma* (softleaf sedge)); *Sphagnum* (sphagnum moss) tend to carpet the surface; saturated acidic, peaty, organic soils occupy poorly-drained basins over bedrock or compacted till; observed in MA..... **Hemlock - Hardwood Swamp Forest (CEGL006226)**
[*Tsuga canadensis - Betula alleghaniensis / Ilex verticillata / Sphagnum* spp. Swamp Forest]
10b. Mixed hardwood and *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, on slopes rather than in basins. **11**

11a. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)], *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy) and occasionally *Abies balsamea* (balsam fir); plot elevations range from 295-611 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in NY, MA, and VT. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

11b. *Acer rubrum - Fraxinus nigra* (red maple-black ash) - *Tsuga canadensis* (eastern hemlock) seepage swamp; northern conifers such as *Thuja occidentalis* (arborvitae) and *Abies balsamea* (balsam fir) may be present; enrichment indicators such as *Rhamnus alnifolia* (alderleaf buckthorn), *Tiarella cordifolia* (heartleaf foamflower), *Chrysosplenium americanum* (American golden-saxifrage) present but not necessarily abundant; calciphiles lacking; observed in VT. ..... **Northern Hardwood - Hemlock Seepage Swamp Forest (CEGL006502)**
[*Acer rubrum - Fraxinus nigra - (Tsuga canadensis) / Tiarella cordifolia* Swamp Forest]

12a. Hardwood forested swamps strongly dominated by *Acer rubrum* (red maple); canopy associates may be present but at relatively low cover. **13**
12b. Hardwood forested swamps codominated by other species [but may be codominated by *Acer rubrum* (red maple)]. **16**

13a. *Acer rubrum* (red maple) swamps receiving considerable groundwater seepage (although not very enriched) as evidenced by significant cover of *Lindera benzoin* (northern spicebush), *Onoclea sensibilis* (sensitive fern), *Symplocarpus foetidus* (skunk-cabbage), *Impatiens capensis* (jewelweed), and mosses such as *Mnium* (mnium calcareous moss) spp. or *Calliergon* (calliergon moss) spp.; canopy associates can include *Fraxinus* (ash) spp. and/or *Betula alleghaniensis* (yellow birch); dense shrub layer includes *Ilex verticillata* (common winterberry), *Vaccinium corymbosum* (highbush blueberry), *Viburnum lentago* (nannyberry), and others; occurs in saturated settings, along small streams, or in basins that receive overland flooding in addition to groundwater influence; ranges from southern New England south to the Piedmont of VA; observed in NJ, MA, and NY. ..... **Southern New England-Northern Piedmont Red Maple Seepage Swamp Forest (CEGL006406)**
[*Acer rubrum - Fraxinus (pennsylvanica, americana) / Lindera benzoin / Symplocarpus foetidus* Swamp Forest]
13b. *Acer rubrum* (red maple) swamps lacking significant seepage indicators mentioned above. **14**

14a. *Acer rubrum* (red maple) wooded marsh characterized by an herbaceous layer strongly dominated by *Carex stricta* (upright sedge); *Vaccinium corymbosum* (highbush blueberry) often present; occurs on muck soils or mineral soils with a surface organic layer, in poorly-drained depressions influenced by groundwater; partly wooded wetland of central and northern New England; observed in NJ and NY. ..... **Red Maple / Upright Sedge Wet Woodland (CEGL006119)**
[*Acer rubrum / Carex stricta - Onoclea sensibilis* Wet Woodland]
14b. Forest canopy closed. **15**

15a. *Acer rubrum* (red maple) codominant with many possible associates most typically *Fraxinus nigra* (black ash) and/or *Ulmus americana* (American elm); diverse shrubs include but not limited to *Vaccinium corymbosum* (highbush blueberry), *Alnus* (alder) spp., *Lindera benzoin* (northern spicebush), and/or *Nemopanthus mucronatus* (catberry); the herb layer includes *Thelypteris palustris* (eastern marsh fern), *Osmunda regalis* (royal fern), *Osmunda claytoniana* (interrupted fern), *Carex stricta* (upright sedge), *Triadenum virginicum* (Virginia marsh St. Johnswort), and *Sphagnum* (sphagnum moss) frequent but necessarily abundant; observed in NY and NJ. ..... **Northern Red Maple Swamp Forest (CEGL006220)**
[*Acer rubrum / Nemopanthus mucronatus - Vaccinium corymbosum* Swamp Forest]

15b. Hardwood forested swamps codominated by *Acer rubrum* (red maple) and *Nyssa sylvatica* (blackgum) with *Betula alleghaniensis* (yellow birch) common; *Tsuga canadensis* (eastern hemlock) and/or *Pinus strobus* (eastern white pine) can be minor canopy associates; generally occurring in small, isolated basins high in watersheds; shrub layer usually well-developed with, *Vaccinium corymbosum* (highbush blueberry), *Rhododendron maximum* (great laurel), *Kalmia* (laurel) spp., *Lyonia ligustrina* and other heaths; a diversity of ferns, *Carex* (sedge) spp. and a dense *Sphagnum* (sphagnum moss) carpet are characteristic in the herb layer; hummock-and-hollow microtopography is typical and found from the Central Appalachians north to central New England; observed in PA, NJ, and NY..... **Red Maple - Blackgum Basin Swamp Forest (CEGL006014)**
[*Acer rubrum - Nyssa sylvatica - Betula alleghaniensis / Sphagnum* spp. Swamp Forest]

16a. *Acer rubrum* (red maple) swamps codominated by abundant conifers..... **17**
16b. Hardwood swamps dominated by other deciduous species in addition to *Acer rubrum* (red maple). **20**

17a. *Acer rubrum* (red maple) swamps with *Picea rubens* (red spruce) or *Tsuga canadensis* (eastern hemlock). **18**
17b. *Acer rubrum* (red maple) swamp with *Chamaecyparis thyoides* (Atlantic white-cedar) or *Larix laricina* (tamarack)..... **19**

18a. Mixed canopy codominated by *Acer rubrum* (red maple) and *Picea rubens* (red spruce); *Nyssa sylvatica* (blackgum) common; *Abies balsamea* (balsam fir) may be present; shrubs include *Vaccinium corymbosum* (highbush blueberry) and *Rhododendron maximum* (great laurel) (more common in southern examples) and *Nemopanthus mucronatus* (catberry), *Ilex verticillata* (common winterberry), and *Thuja occidentalis* (arborvitae) (more common in northern examples); herbs include *Carex trisperma* (three-seeded sedge), *Osmunda cinnamomea* (cinnamon fern), *Gaultheria hispidula* (creeping snowberry), and *Carex folliculata* (northern long sedge); *Sphagnum* (sphagnum moss) common; observed in NY, MA, and VT. ..... **Red Spruce - Red Maple Acidic Swamp Forest (CEGL006198)**
[*Picea rubens - Acer rubrum / Nemopanthus mucronatus* Swamp Forest]

18b. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)], *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy), and occasionally *Abies balsamea* (balsam fir) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, usually on slopes rather than in basins; plot elevations range from 295-611 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in NY, MA and VT. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

19a. Inland *Acer rubrum* (red maple) swamp with *Chamaecyparis thyoides* (Atlantic white-cedar) occurring on ridgetops; rare association; observed in NY at 370 m (1,213 feet). .... **Inland Atlantic White-cedar Swamp Forest (CEGL006189)**
[*Chamaecyparis thyoides - (Tsuga canadensis, Betula alleghaniensis) / Clethra alnifolia* Swamp Forest]

19b. Enriched *Acer rubrum - Fraxinus nigra* (red maple-black ash) seepage swamps north of extent of glaciation (approximate line runs roughly east-west through southern PA and northern NJ) often with *Larix laricina* (tamarack) and *Pinus strobus* (eastern white pine) in canopy and *Alnus incana* (gray alder) and *Rhamnus alnifolia* (alderleaf buckthorn) in the shrub layer; with enriched seepage indicators frequent and often abundant, especially calciphiles such as *Saxifraga pensylvanica* (eastern swamp saxifrage), *Carex leptalea* (bristly-stalked sedge), *Carex flava* (yellow sedge), *Solidago patula* (roundleaf goldenrod), and *Ranunculus hispidus* var. *caricetorum* (bristly buttercup); ranges from PA north to VT; observed in MA and VT..... ..... **Red Maple - Black Ash Rich Seepage Swamp Forest (CEGL006009)**
[*Acer rubrum - Fraxinus nigra - (Larix laricina) / Rhamnus alnifolia* Swamp Forest]

20a. Hardwood forested swamps codominated by *Acer rubrum* (red maple) and *Nyssa sylvatica* (blackgum), or *Acer rubrum* (red maple) and *Betula alleghaniensis* (yellow birch)..... **21**
20b. Hardwood forested swamps and wet forests codominated by *Acer rubrum* (red maple) and *Fraxinus* (ash) spp. **and/or** *Quercus* (oak) spp..... **22**
21a. Hardwood forested swamps codominated by *Acer rubrum* (red maple) and *Nyssa sylvatica* (blackgum) with *Betula alleghaniensis* (yellow birch) common; generally occurring in small, isolated basins high in watersheds; shrub layer usually well-developed with *Ilex verticillata* (common winterberry), *Vaccinium corymbosum* (highbush blueberry), *Rhododendron viscosum* (swamp azalea), *Rhododendron maximum* (great laurel), and/or *Lindera benzoin* (northern spicebush); hummock-and-hollow microtopography and dense *Sphagnum* (sphagnum moss) carpet characteristic; found from the Central Appalachians north to central New England; observed in PA, NJ and NY. .... **Red Maple - Blackgum Basin Swamp Forest (CEGL006014)**
[*Acer rubrum - Nyssa sylvatica - Betula alleghaniensis / Sphagnum* spp. Swamp Forest]

21b. Mixed hardwood (*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)) and *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy) and occasionally *Abies balsamea* (balsam fir) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones usually on slopes rather than in basins; plot elevations range from 295-611 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in NY, MA and VT. .... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

22a. Hardwood forests, wet at least seasonally, codominated by *Quercus* (oak) spp.; transitional upland / wetland forest occurring in a basin setting with a variable canopy typically including *Fraxinus* (ash) spp., *Quercus rubra* (northern red oak), *Acer rubrum* (red maple) and/or *Betula alleghaniensis* (yellow birch); *Lindera benzoin* (northern spicebush) dominates shrub layer; *Osmunda cinnamomea* (cinnamon fern), *Osmunda regalis* (royal fern), *Osmunda claytoniana* (interrupted fern), *Thelypteris palustris* (eastern marsh fern), *Impatiens capensis* (jewelweed), *Aralia nudicaulis* (wild sarsaparilla), and *Symplocarpus foetidus* (skunk-cabbage) common in the herb layer; ranges from Southern New England north to ME (1 plot and 1 obs point in CT). ..... **Upland/Wetland Transitional Forest (CEGL006000)**
[*Quercus rubra - Betula alleghaniensis / Osmunda cinnamomea* Forest]

22b. Hardwood forested swamps codominated by *Acer rubrum* (red maple) and *Fraxinus* (ash) spp. **23**

23a. Hardwood swamps with *Acer rubrum* (red maple) and *Fraxinus pennsylvanica* (green ash) and/or *Fraxinus americana* (white ash); *Betula alleghaniensis* (yellow birch) may be dominant in some areas. **24**

23b. Hardwood swamps with *Acer rubrum* (red maple) and *Fraxinus nigra* (black ash) **25**

24a. *Acer rubrum - Fraxinus* spp. (red maple-ash) swamps occurring in saturated settings, along small streams, or in basins that receive overland flooding in addition to considerable groundwater seepage indicated by abundant *Lindera benzoin* (northern spicebush), *Onoclea sensibilis* (sensitive fern), *Symplocarpus foetidus* (skunk-cabbage), and mosses such as *Mnium* (mnium calcareous moss) spp. or *Calliergon* (calliergon moss) spp. characteristic; canopy associates can include *Betula alleghaniensis* (yellow birch) (in some cases may be strongly dominant), and *Fraxinus* (ash) spp.; dense shrub layer includes *Ilex verticillata* (common winterberry), *Vaccinium corymbosum* (highbush blueberry), *Viburnum lentago* (nannyberry), and others; ranges from southern New England south to the Piedmont of VA; observed in in MA, NY, and NJ. ..... **Southern New England-Northern Piedmont Red Maple Seepage Swamp Forest (CEGL006406)**
[*Acer rubrum - Fraxinus (pennsylvanica, americana) / Lindera benzoin / Symplocarpus foetidus* Swamp Forest]

24b. *Acer rubrum - Fraxinus* spp. (red maple-ash) swamps occurring in basins; *Acer rubrum* (red maple) codominant with many possible associates; *Clethra alnifolia* (coastal sweet-pepperbush), *Vaccinium corymbosum* (highbush blueberry), *Ilex verticillata* (common winterberry), *Rhododendron viscosum* (swamp azalea), and *Nemopanthus mucronatus* (catberry) characteristic shrubs; herb layer includes *Thelypteris palustris* (eastern marsh fern), *Osmunda cinnamomea* (cinnamon fern), *Carex stricta* (upright sedge), *Triadenum virginicum* (Virginia marsh St. Johnswort), and *Sphagnum* (sphagnum moss); observed in NJ and NY. ..... **Northern Red Maple Swamp Forest (CEGL006220)**
[*Acer rubrum / Nemopanthus mucronatus - Vaccinium corymbosum* Swamp Forest]

25a. *Acer rubrum - Fraxinus nigra* (red maple-black ash) seepage swamp with less enrichment; canopy often mixed with *Tsuga canadensis* (eastern hemlock); includes northern conifers such as *Thuja occidentalis* (arborvitae) and *Abies balsamea* (balsam fir); enrichment indicators such as *Rhamnus alnifolia* (alderleaf buckthorn), *Tiarella cordifolia* (heartleaf foamflower), *Chrysosplenium americanum* (American golden-saxifrage) present but not necessarily abundant; calciphiles lacking; observed in VT. ..... **Northern Hardwood - Hemlock Seepage Swamp Forest (CEGL006502)**
[*Acer rubrum - Fraxinus nigra - (Tsuga canadensis) / Tiarella cordifolia* Swamp Forest]

25b. Enriched *Acer rubrum - Fraxinus nigra* (red maple-black ash) seepage swamps north of extent of glaciation (approximate line runs roughly east-west through southern PA and northern NJ) often with *Larix laricina* (tamarack) and *Pinus strobus* (eastern white pine) in canopy and *Alnus incana* (gray alder) and *Rhamnus alnifolia* (alderleaf buckthorn) in the shrub layer; with enriched seepage indicators frequent and often abundant, especially calciphiles such as *Saxifraga pensylvanica* (eastern swamp saxifrage), *Carex leptalea* (bristly-stalked sedge), *Carex flava* (yellow sedge), *Solidago patula* (roundleaf goldenrod), and *Ranunculus hispidus* var. *caricetorum* (bristly buttercup); ranges from PA north to VT; observed in MA and VT..... **Red Maple - Black Ash Rich Seepage Swamp Forest (CEGL006009)**
[*Acer rubrum - Fraxinus nigra - (Larix laricina) / Rhamnus alnifolia* Swamp Forest]

26a. Vernal pools characterized by seasonally fluctuating water levels; species composition is variable among sites; many smaller, shaded vernal ponds are unvegetated, their bottoms consisting of dead leaves and algae; primarily in glaciated or periglacial areas, from Quebec and New Brunswick south through NY to northern PA and northern NJ..... **Eastern Woodland Vernal Pool (CEGL006453)**
[Eastern Woodland Vernal Pool]
26b. Small herbaceous seepage areas. **27**

27a. Small herbaceous seepage areas under forest canopy. **28**
27b. Vegetation of high elevations or adjacent to shores of large rivers in northern New England. .. **30**

28a. Uncommon, globally rare, rich seep occurring known only from off the trail at DEWA where calcareous groundwater discharge is present; highly variable species composition; typical species include *Vernonia noveboracensis* (New York ironweed), *Thelypteris palustris* (eastern marsh fern), *Viola* (violet) spp., *Packera aurea* (golden ragwort), *Symplocarpus foetidus* (skunk-cabbage), *Arisaema triphyllum* (Jack in the pulpit), *Hydrocotyle americana* (American marshpennywort), *Eupatorium* (thoroughwort) spp., *Impatiens* (touch-me-not) spp., *Pycnanthemum verticillatum* (whorled mountainmint), *Amphicarpaea bracteata* (American hogpeanut), *Mitella diphylla* (twoleaf miterwort), *Chelone glabra* (white turtlehead), *Carex debilis* (white edge sedge), *Microstegium vimineum* (Nepalese browntop), and *Leersia oryzoides* (rice cutgrass)..... **Mid-Atlantic Rich Seep (CEGL006448)**
[*Vernonia noveboracensis - Thelypteris palustris - Symplocarpus foetidus* Seepage Meadow]
28b. Common, wide ranging seeps found throughout the northeast; *Chrysosplenium americanum* (American golden-saxifrage), *Symplocarpus foetidus* (skunk-cabbage) and/ or *Impatiens capensis* (jewelweed) dominant. **29**

29a. *Chrysosplenium americanum* (American golden-saxifrage) characteristic; *Impatiens capensis* (jewelweed) and *Glyceria melicaria* (melic mannagrass) common in addition to *Scutellaria lateriflora* (blue skullcap), *Dryopteris intermedia* (intermediate woodfern), *Thuidium delicatulum* (delicate thuidium moss), *Cinna latifolia* (drooping woodreed), *Osmunda cinnamomea* (cinnamon fern), *Cardamine bulbosa* (bulbous bittercress), *Circaea alpina* (small enchanter's nightshade), *Viola cucullata* (marsh blue violet), and *Chelone glabra* (white turtlehead); can be fully shaded by overhanging *Betula alleghaniensis* (yellow birch) or other matrix forest canopy trees; occurs throughout the eastern United States; observed in VT. ..... **Golden-saxifrage Forested Seep (CEGL006193)**
[*Chrysosplenium americanum* Seepage Meadow]
29b. *Symplocarpus foetidus* (skunk-cabbage) and/or *Impatiens capensis* (jewelweed) dominant; occurs under canopy of matrix forest..... **Skunk-cabbage - Jewelweed Seep (CEGL006567)**
[*Symplocarpus foetidus - Impatiens capensis* Seepage Meadow]

30a. Shrubby to herbaceous seepage swamps or glades with an overhanging canopy within a forest or free of tree cover known from high elevations (>776 m [2,545 feet]) in the Coolidge Range of the Green Mountains in central VT, occurring on moderate to somewhat steep slopes; mineral soil, with little to no peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is a constant short shrub; herb layer includes some combination of *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort), *Tiarella cordifolia* (heartleaf foamflower),*Veratrum viride* (green false hellebore), *Laportea canadensis* (Canadian woodnettle), *Solidago macrophylla* (largeleaf goldenrod), *Symphyotrichum puniceum* (purplestem aster), *Dryopteris campyloptera* (mountain woodfern), *Milium effusum* (American milletgrass), *Rubus pubescens* (dwarf red blackberry), *Trillium erectum* (red trillium), *Actaea pachypoda* (white baneberry), *Carex leptonervia* (nerveless woodland sedge), *Dicentra cucullaria* (Dutchman's breeches), *Erythronium americanum* (dogtooth violet), and *Phegopteris connectilis* (long beechfern). ..... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**

[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]

30b. Graminoid-dominated seepage community in discharge areas of the shores of larger rivers; circumneutral groundwater discharge supports a fen-like aspect, but on mineral rather than peat soils; semi-open conditions are maintained by ice-scouring and floodwaters; herbaceous species include *Juncus dudleyi* (Dudley's rush), *Eleocharis tenuis* (slender spikerush), *Andropogon gerardii* (big bluestem), *Agrostis stolonifera* (creeping bentgrass), *Carex garberi* (elk sedge), *Carex granularis* (limestone meadow sedge), *Carex pellita* (woolly sedge), and others; observed where the White River crosses AT in VT. ..... **Boreal Circumneutral Riverside Seep (CEGL006142)**

[*Triantha glutinosa - Carex garberi* Riverscour Wet Meadow]

3. Shrub Swamps, Fens, and Bogs

1a. Successional, ruderal, or altered wet meadow or shrub swamp vegetation; wetlands impacted by beaver or anthropogenic activity; low-lying areas of old fields, impoundments. **2**
1b. Natural vegetation not highly impacted by beavers or anthropogenic activity. **3**

2a. Wet meadow of variable physiognomy and species composition; characterized by *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. and scattered non-native shrubs with variable combinations of wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern), *Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); ranges from shrub thicket to herbaceous meadow with scattered shrubs; occurs in low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; known throughout the Northeast and broadly classified. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
2b. Tall successional shrub swamp (2-4 m) occurring in low-lying areas of old fields or pastures, or the edges of beaver-impacted wetlands or impoundments; vegetation is highly variable with *Cornus amomum* (silky dogwood), *Cornus sericea* (red-osier dogwood), *Viburnum dentatum* (southern arrow-wood), *Spiraea alba* var. *latifolia* (white meadowsweet), *Rosa multiflora* (multiflora rose), *Rubus allegheniensis* (Allegheny blackberry), and *Rubus hispidus* (bristly dewberry) typically present and abundant; *Salix* (willow) spp. may also be present but are less common. ..... **Ruderal Dogwood - Arrow-wood Shrub Swamp (CEGL006576)**
[*Cornus (amomum, sericea) - Viburnum dentatum - Rosa multiflora* Ruderal Shrub Swamp]

3a. Fen or bog vegetation of peat or mineral soils. **4**
3b. Non-peat-forming shrub swamps; *Sphagnum* (sphagnum moss) may be present (<20% cover), but seldom forming continuous carpet or mat; often on deep muck. **10**

4a. Calcareous indicators[30] present in quantity. **5**
4b. Calcareous indicators absent or uncommon. **6**

CALCAREOUS FENS

5a. Physiognomy generally shrub-dominated, clearly overtopping herbaceous layer; characteristic shrubs include *Juniperus virginiana* (eastern red-cedar), *Cornus amomum* (silky dogwood) and *Toxicodendron vernix* (poison-sumac); invasive *Rosa multiflora* (multiflora rose) and *Elaeagnus umbellata* (autumn olive) often present in quantity along with invasive herbaceous species; grazing an important factor, either currently or in recent past; observed in NY and NJ. ..... **Pasture Fen (CEGL006357)**
[*Juniperus virginiana / Dasiphora fruticosa* ssp. *floribunda / Carex flava - Carex tetanica* Fen]

[30] *Carex flava* (yellow sedge), *Dasiphora fruticosa* ssp. *floribunda* (shrubby-cinquefoil), *Carex hystericina* (bottlebrush sedge), *Carex leptalea* (bristly-stalked sedge), *Eriophorum viridicarinatum* (thinleaf cottonsedge), *Solidago patula* (roundleaf goldenrod), *Parnassia glauca* (fen grass of Parnassus), *Solidago uliginosa* (bog goldenrod), *Betula pumila* (bog birch), *Geum rivale* (purple avens), *Lobelia kalmii* (Ontario lobelia), *Castilleja coccinea* (scarlet Indian paintbrush), *Cypripedium reginae* (showy lady's slipper)

5b. Not as above; fens with shallow organic layer or mineral soil, tall shrubs and trees generally lacking; exotic species absent or rare; short cespitose sedges common; shrubs other than *Dasiphora fruticosa* ssp. *floribunda* (shrubby-cinquefoil) not abundant; fen forbs such as *Parnassia glauca* (fen grass of Parnassus), *Packera aurea* (golden ragwort), *Solidago uliginosa* (bog goldenrod), *Solidago patula* (roundleaf goldenrod), *Geum rivale* (purple avens), *Lobelia kalmii* (Ontario lobelia) present in quantity; observed in MA and VT. .....**Lower New England Sloping Fen (CEGL006326)**
[*Dasiphora fruticosa* ssp. *floribunda / Carex (sterilis, hystericina, flava)* Fen]

POOR (NON-CALCAREOUS) FENS AND BOGS

6a. *Sphagnum*-dominated peatlands with well-developed shrub layer, with or without scattered trees. **7**
6b. Shrub-herbaceous vegetation of nutrient-poor fens occurring on shallow to deep peat; vegetation in contact with groundwater..... **9**

7a. Wooded bog dominated by *Picea mariana* (black spruce) over heath shrubs and sphagnum mosses; occurs in kettlehole basins and other well-defined topographic depressions; characterized by relatively deep peat accumulation, indicating acidic, nutrient-poor conditions; ranges from central New England to just south of the glacial border in PA and NJ; possible for MA. ....**Black Spruce Swamp Woodland (CEGL006098)**
[*Picea mariana / (Vaccinium corymbosum, Gaylussacia baccata) / Sphagnum* sp. Swamp Woodland]
7b. Shrub-dominated vegetation; *Picea mariana* (black spruce) minor to absent (<10%). **8**

8a. *Vaccinium corymbosum* (highbush blueberry) dominant; common shrubs include *Nemopanthus mucronatus* (catberry), *Ilex verticillata* (common winterberry), *Photinia melanocarpa* (black chokeberry), *Kalmia latifolia* (mountain laurel), *Rhododendron viscosum* (swamp azalea), *Clethra alnifolia* (coastal sweet-pepperbush), *Gaylussacia baccata* (black huckleberry), *Kalmia angustifolia* (sheep laurel), and/or *Lyonia ligustrina* (maleberry); scattered trees include *Tsuga canadensis* (eastern hemlock), *Nyssa sylvatica* (blackgum), and/or *Acer rubrum* (red maple); sparse herb layer with *Carex trisperma* (three-seeded sedge), *Carex canescens* (silvery sedge), *Osmunda regalis* (royal fern), *Osmunda cinnamomea* (cinnamon fern), *Drosera rotundifolia* (roundleaf sundew), and thick *Sphagnum* (sphagnum moss) layer; occurs as a peat bog and/or border thicket around more open dwarf heath shrub peatlands or within small, isolated basins; observed in CT, NJ, NY and PA. .... **Highbush Blueberry Bog Thicket (CEGL006190)**
[*Vaccinium corymbosum / Sphagnum* spp. Acidic Peatland]
8b. *Chamaedaphne calyculata* (leatherleaf) and *Sphagnum* (sphagnum moss) strongly dominant; *Myrica gale* (sweetgale), *Kalmia angustifolia* (sheep laurel), or *Gaylussacia baccata* (black huckleberry), may be present and locally common, including *Decodon verticillatus* (swamp-loosestrife) along fringes of the peat mat; herbs generally very sparse and comprised of oligotrophic indicator species such as *Carex trisperma* (three-seeded sedge), *Eriophorum* (cottongrass) spp., *Drosera* (sundew) spp., and *Sarracenia purpurea* (purple pitcherplant); dwarf-shrub quaking or floating sphagnum bog occurs in the southern portion of the glaciated Northeast; observed in NY and NJ. .....**Southern New England Bog (CEGL006008)**
[*Chamaedaphne calyculata - (Gaylussacia dumosa) - Decodon verticillatus / Woodwardia virginica* Acidic Peatland]

9a. Mixed, relatively tall-shrub (often >1 m) fen codominated by *Myrica gale* (sweetgale), *Spiraea tomentosa* (steeplebush), *Chamaedaphne calyculata* (leatherleaf) and/or *Spiraea alba* (white meadowsweet); occurs in standing shallow water without a continuous *Sphagnum* (sphagnum moss) carpet; documented globally in NY, NH, ME and VT; observed in the project area in MA..... ..... **Sweetgale Mixed Shrub Fen (CEGL006512)**
[*Myrica gale - Spiraea alba - Chamaedaphne calyculata* Fen]

9b. *Chamaedaphne calyculata* (leatherleaf) dominates the dwarf-shrub layer (>25%); *Andromeda polifolia* (bog rosemary) usually present; *Myrica gale* (sweetgale), *Kalmia angustifolia* (sheep laurel), and *Ledum groenlandicum* (bog Labrador-tea) are frequent; *Carex* (sedge) spp., *Equisetum arvense* (field horsetail), *Lysimachia terrestris* (earth loosestrife), and *Triadenum virginicum* (Virginia marsh St. Johnswort) are characteristic herbs; *Sphagnum* (sphagnum moss) mat typical; occurs throughout the glaciated Northeast; observed in VT. .... **Leatherleaf Boggy Fen (CEGL006513)**
[*Chamaedaphne calyculata / Eriophorum virginicum / Sphagnum rubellum* Acidic Peatland]

SHRUB SWAMPS

10a. Shrubby to herbaceous seepage swamps or glades with an overhanging canopy within a forest or free of tree cover known from high elevations (>776 m [2,545 feet]) in the Coolidge Range of the Green Mountains in central VT, occurring on moderate to somewhat steep slopes; mineral soil, with little to no peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is a constant short shrub; herb layer includes some combination of *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort), *Veratrum viride* (green false hellebore), *Laportea canadensis* (Canadian woodnettle), *Solidago macrophylla* (largeleaf goldenrod), *Symphyotrichum puniceum* (purplestem aster), *Dryopteris campyloptera* (mountain woodfern), *Milium effusum* (American milletgrass), *Rubus pubescens* (dwarf red blackberry), *Trillium erectum* (red trillium), *Actaea pachypoda* (white baneberry), *Carex leptonervia* (nerveless woodland sedge), *Dicentra cucullaria* (Dutchman's breeches), *Erythronium americanum* (dogtooth violet), and *Phegopteris connectilis* (long beechfern); observed in VT. .... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**
[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]

10b. Shrub vegetation characterized by *Cephalanthus occidentalis* (common buttonbush), *Decodon verticillatus* (swamp-loosestrife), *Vaccinium corymbosum* (highbush blueberry), or *Alnus incana* (gray alder); habitat variable - low basins, pondshores, streamsides, riversides (but not bog mats[31]).**11**

[31]Swamp-loosestrife-dominated fringe of bog mats adjacent to water are considered part of the bog association, Southern New England Bog [*Chamaedaphne calyculata - (Gaylussacia dumosa) - Decodon verticillatus / Woodwardia virginica* Acidic Peatland (CEGL006008)].

11a. Wetlands dominated by shrubs of more or less low stature, usually 2m or less in height; *Cephalanthus occidentalis* (common buttonbush) **or** *Decodon verticillatus* (swamp-loosestrife) abundant **12**
11b. Wetlands dominated by tall shrubs (generally 1.5m–2m or higher); *Alnus incana* (gray alder) or *Vaccinium corymbosum* (highbush blueberry) dominant or abundant **13**

12a. Shrub swamp dominated by *Cephalanthus occidentalis* (common buttonbush); occurs in a variety of environmental settings, including backwater sloughs or oxbow ponds, wet swales in floodplains, pond and lake borders, and small, isolated depressions observed in the project area in PA; ranges throughout the Northeast. ..... **Northeastern Buttonbush Shrub Swamp (CEGL006069)**
[*Cephalanthus occidentalis - Decodon verticillatus* Shrub Swamp]
12b. Shrub border that occurs as a fringe along aquatic edges of lakes, and streams in Lower New England and elsewhere; *Decodon verticillatus* (swamp-loosestrife) forms a dense, often monotypic tangle; *Cephalanthus occidentalis* (common buttonbush) can occur, but with less abundance than *Decodon verticillatus* (swamp-loosestrife); observed in NY. ..... **Swamp-loosestrife Shrub Swamp (CEGL005089)**
[*Decodon verticillatus* Shrub Swamp]

13a. Alder swamps of saturated basins, beaver-impacted wetlands and small, low-velocity streams dominated by *Alnus incana* (gray alder); northern species such as *Nemopanthus mucronatus* (catberry) and *Myrica gale* (sweetgale) differentiate this type; other shrubs, such as *Cornus sericea* (red-osier dogwood), *Rubus idaeus* (American red raspberry), *Salix* (willow) spp., *Spiraea alba* (white meadowsweet), *Spiraea tomentosa* (steeplebush), and *Viburnum* (viburnum) spp., are common; if occurring adjacent to a high-velocity stream or river or an active floodplain consider CEGL006062 in the Alluvial Vegetation Key; observed in the project area in MA and VT. ..... **Gray Alder Shrub Swamp (CEGL002381)**
[*Alnus incana* Shrub Swamp]
13b. *Vaccinium corymbosum* (highbush blueberry) dominant or abundant **14**

14a. Blueberry wetland thicket of seasonally flooded basins with tall shrub associates including *Rhododendron viscosum* (swamp azalea), *Clethra alnifolia* (coastal sweet-pepperbush), *Ilex verticillata* (common winterberry) and others; ferns and forbs common; observed in south-central NY just to the east of the Hudson on the trail. ..... **Blueberry Wetland Thicket (CEGL006371)**
[*Vaccinium corymbosum - Rhododendron viscosum - Clethra alnifolia* Acidic Peatland]
14b. *Vaccinium corymbosum* (highbush blueberry) dominant over a thick *Sphagnum* (sphagnum moss) layer; occurs within peat bogs and/or as a border shrubland around more open dwarf heath shrub peatlands or within small, isolated saturated basins; scattered trees include *Tsuga canadensis* (eastern hemlock), *Nyssa sylvatica* (blackgum), and/or *Acer rubrum* (red maple); sparse herb layer with *Carex trisperma* (three-seeded sedge), *Carex canescens* (silvery sedge), *Drosera rotundifolia* (roundleaf sundew), and thick *Sphagnum* (sphagnum moss) layer; observed in CT, NJ, NY and PA. ..... **Highbush Blueberry Bog Thicket (CEGL006190)**
[*Vaccinium corymbosum / Sphagnum* spp. Acidic Peatland]

4. Herbaceous Wetlands and Aquatic Vegetation

1a. Tree cover present (>25%)..... **2**
1b. Tree cover absent or sparse; shrub cover <50%; herbaceous marshes and wetlands; herb cover >50% and aquatic vegetation. **7**

2a. *Acer rubrum* (red maple) wooded marshes characterized by an herbaceous layer strongly dominated by *Carex stricta* (upright sedge); *Vaccinium corymbosum* (highbush blueberry) often present; occurs on muck soils or mineral soils with a surface organic layer, in poorly-drained depressions influenced by groundwater; partly wooded wetland of central and northern New England; observed in NJ and NY..... **Red Maple / Upright Sedge Wet Woodland (CEGL006119)**
[*Acer rubrum / Carex stricta - Onoclea sensibilis* Wet Woodland]
2b. Forested seeps. **3**

3a. Small herbaceous seepage areas with scattered cover of forbs; characteristic species include *Chrysosplenium americanum* (American golden-saxifrage), *Impatiens capensis* (jewelweed), and *Glyceria melicaria* (melic mannagrass); other common species include *Scutellaria lateriflora* (blue skullcap), *Dryopteris intermedia* (intermediate woodfern), *Thuidium delicatulum* (delicate thuidium moss), *Cinna latifolia* (drooping woodreed), *Osmunda cinnamomea* (cinnamon fern), *Cardamine bulbosa* (bulbous bittercress), *Circaea alpina* (small enchanter's nightshade), *Viola cucullata* (marsh blue violet), and *Chelone glabra* (white turtlehead); can by fully shaded by overhanging matrix forest trees; observed in VT. ..... **Golden-saxifrage Forested Seep (CEGL006193)**
[*Chrysosplenium americanum* Seepage Meadow]
3b. *Chrysosplenium americanum* (American golden-saxifrage) sparse to absent. **4**

4a. Shrubby to herbaceous seepage swamps or glades with an overhanging canopy within a forest or free of tree cover known from high elevations (>776 m [2,545 feet]) in the Coolidge Range of the Green Mountains in central VT, occurring on moderate to somewhat steep slopes; mineral soil, with little to no peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is a constant short shrub; herb layer includes some combination of *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort), *Veratrum viride* (green false hellebore), *Laportea canadensis* (Canadian woodnettle), *Solidago macrophylla* (largeleaf goldenrod), *Symphyotrichum puniceum* (purplestem aster), *Dryopteris campyloptera* (mountain woodfern), *Milium effusum* (American milletgrass), *Rubus pubescens* (dwarf red blackberry), *Trillium erectum* (red trillium), *Actaea pachypoda* (white baneberry), *Carex leptonervia* (nerveless woodland sedge), *Dicentra cucullaria* (Dutchman's breeches), *Erythronium americanum* (dogtooth violet), and *Phegopteris connectilis* (long beechfern); observed in VT. ..... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**
[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]
4b. Seeps occurring under matrix forest cover. **5**

5a. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)] and *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, on slopes rather than in basins; plot elevations range from 295-611 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in NY, MA and VT. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

5b. Herbaceous dominated seeps. **6**

6a. *Symplocarpus foetidus* (skunk-cabbage) and *Impatiens capensis* (jewelweed) dominant; occurs under canopy of matrix forest. ..... **Skunk-cabbage - Jewelweed Seep (CEGL006567)**
[*Symplocarpus foetidus - Impatiens capensis* Seepage Meadow]

6b. Uncommon, globally rare, rich seep occurring where calcareous groundwater discharge is present; highly variable species composition known only from off the trail at DEWA; typical species include *Vernonia noveboracensis* (New York ironweed), *Thelypteris palustris* (eastern marsh fern), *Viola* (violet) spp., *Packera aurea* (golden ragwort), *Symplocarpus foetidus* (skunk-cabbage), *Arisaema triphyllum* (Jack in the pulpit), *Hydrocotyle americana* (American marshpennywort), *Eupatorium* (thoroughwort) spp., *Impatiens* (touch-me-not) spp., *Pycnanthemum verticillatum* (whorled mountainmint), *Amphicarpaea bracteata* (American hogpeanut), *Mitella diphylla* (twoleaf miterwort), *Chelone glabra* (white turtlehead), *Carex debilis* (white edge sedge), *Microstegium vimineum* (Nepalese browntop), and *Leersia oryzoides* (rice cutgrass). ..... **Mid-Atlantic Rich Seep (CEGL006448)**
[*Vernonia noveboracensis - Thelypteris palustris - Symplocarpus foetidus* Seepage Meadow]

7a. Aquatic vegetation of ponds or slow-moving rivers; dominants are usually submerged macrophytes or floating-leaved forbs **8**
7b. Herb-dominated fens, marshes, and wetlands; herb cover >50% **9**

8a. Floating-leaved water-lilies dominant; common throughout the Northeast; observed in NJ. ..... **Water-lily Aquatic Wetland (CEGL002386)**
[*Nuphar advena - Nymphaea odorata* Aquatic Vegetation]

8b. Submerged macrophytes, including *Elodea canadensis* (Canadian waterweed) and/or *Potamogeton* (pondweed) spp. abundant; observed in NY ..... **Eastern Waterweed - Pondweed Aquatic Vegetation (CEGL006431)**
[*Elodea canadensis - Potamogeton* spp. Eastern Aquatic Vegetation]

9a. Naturally occurring wetlands dominated by native species. **10**
9b. Successional wet meadows and invaded marshes. **32**

10a. Fens, and alluvial and sparse riverine vegetation. **11**
10b. Herbaceous vegetation not as above. **18**

11a. Fen vegetation. **12**
11b. Alluvial and sparse riverine vegetation. **14**

12a. Physiognomy generally shrub-dominated, clearly overtopping herbaceous layer; characteristic shrubs include *Juniperus virginiana* (eastern red-cedar), *Cornus amomum* (silky dogwood) and *Toxicodendron vernix* (poison-sumac); invasive *Rosa multiflora* (multiflora rose) and *Elaeagnus umbellata* (autumn olive) often present in quantity along with invasive herbaceous species; grazing an important factor, either currently or in recent past; observed in NY and NJ. ..... **Pasture Fen (CEGL006357)**
[*Juniperus virginiana / Dasiphora fruticosa* ssp. *floribunda / Carex flava - Carex tetanica* Fen]
12b. Not as above; fens with shallow organic layer or mineral soil, tall shrubs and trees generally lacking; exotic species absent or rare..... **13**

13a. Short cespitose sedges common; shrubs other than *Dasiphora fruticosa* ssp. *floribunda* (shrubby-cinquefoil) not abundant; fen forbs such as *Parnassia glauca* (fen grass of Parnassus), *Packera aurea* (golden ragwort), *Solidago uliginosa* (bog goldenrod), *Solidago patula* (roundleaf goldenrod), *Geum rivale* (purple avens), *Lobelia kalmii* (Ontario lobelia) present in quantity; observed in MA and VT. ..... **Lower New England Sloping Fen (CEGL006326)**
[*Dasiphora fruticosa* ssp. *floribunda / Carex (sterilis, hystericina, flava)* Fen]
13b. *Dulichium arundinaceum* (threeway sedge), *Juncus pelocarpus* (brownfruit rush) [and other *Juncus* (rush) spp.), *Carex stricta* (upright sedge), *Carex lasiocarpa* (woollyfruit sedge), *Carex utriculata* (Northwest Territory sedge), *Carex canescens* (silvery sedge), and *Bidens* (beggarticks) spp. *Sphagnum* mosses, such as *Sphagnum cuspidatum* (toothed sphagnum), *Sphagnum papillosum* (papillose sphagnum), or *Sphagnum torreyanum* (Torrey's sphagnum), generally form a continuous, often monotypic carpet; occurs as a narrow zone in semipermanently flooded or saturated conditions along pond borders, bog moats, and other areas where minerotrophic conditions exist; observed in MA and VT. ..... **Southern New England Threeway Sedge Fen (CEGL006131)**
[*Dulichium arundinaceum / Sphagnum* spp. Fen]

14a. Sparse riverine vegetation of open flood-scoured bedrock exposures of major rivers, along river narrows; patchy vegetation includes *Andropogon gerardii* (big bluestem), *Carex stricta* (upright sedge), *Poa palustris* (fowl bluegrass), and *Poa compressa* (Canada bluegrass); lacks *Vaccinium* (blueberry) spp.; documented globally in VT, NH, ME, CT, NJ, PA and NY; observed at DEWA and in VT along the White River..... **Northern Riverscour Rock Outcrop (CEGL006284)**
[*Andropogon gerardii - Campanula rotundifolia - Solidago simplex* Riverscour Sparse Vegetation]
14b. Alluvial herbaceous vegetation..... **15**

15a. Vegetation dominated by one species..... **16**
15b. *Carex torta* (twisted sedge) not dominant; vegetation dominated by a combination of multiple species..... **17**

16a. *Calamagrostis canadensis* (bluejoint) dominant. ..... **Laurentian & Northeast Bluejoint Wet Meadow (CEGL005448)**
[*Calamagrostis canadensis - Carex* spp. Laurentian & Northeast Wet Meadow]
16b. *Carex torta* (twisted sedge) dominant; occurs on large coarse substrates deposited along medium- to high-energy river channels and, less frequently, exposed lakeshores with heavy wave action; seasonal flooding and ice-scour maintain the open nature of these communities; characteristic perennial species that tolerate inundation and flood scouring include *Carex torta* (twisted sedge) and low *Salix* (willow) spp.; associated species tend to vary widely from site to site, can be diverse, and may be sparse; globally occurs in NH, ME, VT; observed in VT. ..... **Northeastern Temperate Cobble Scour Rivershore (CEGL006536)**
[*Carex torta - Apocynum cannabinum - Cyperus* spp. Riverbed Vegetation]

17a. Riverside grasslands dominated by tall prairie grasses such as *Andropogon gerardii* (big bluestem), *Sorghastrum nutans* (Indiangrass), and *Schizachyrium scoparium* (little bluestem); generally occurs along major rivers in flood-scoured areas; observed in VT..... ..... **Riverside Prairie Grassland (CEGL006518)**
[*Prunus pumila / Andropogon gerardii - Sorghastrum nutans* Riverscour Wet Meadow]

17b. Herb-dominated seepage community that develops on discharge areas of the shores of larger rivers in the glaciated northeastern United States; circumneutral groundwater discharge supports a fen-like aspect, but on mineral rather than peat soils; semi-open conditions are maintained by ice-scouring and floodwaters; herbaceous species include *Juncus dudleyi* (Dudley's rush), *Eleocharis tenuis* (slender spikerush), *Andropogon gerardii* (big bluestem), *Agrostis stolonifera* (creeping bentgrass), *Carex garberi* (elk sedge), *Carex granularis* (limestone meadow sedge), *Carex pellita* (woolly sedge), and others; observed in VT where White River crosses AT; documented globally in ME, NH, VT, CT, and NY..... **Boreal Circumneutral Riverside Seep (CEGL006142)**
[*Triantha glutinosa - Carex garberi* Riverscour Wet Meadow]

18a. Freshwater wetlands dominated primarily by graminoids..... **19**
18b. Freshwater wetlands dominated by broad-leaved emergent herbs..... **29**

19a. Wet meadows dominated by a diversity of herbaceous species..... **20**
19b. Marshes dominated by one or two species..... **23**

20a. *Carex* (sedge) spp. or *Dulichium arundinaceum* (threeway sedge) characteristic..... **21**
20b. Not as above..... **22**

21a. *Carex utriculata* (Northwest Territory sedge) dominant or codominant with *Carex aquatilis* (water sedge), *Carex lacustris* (hairy sedge), *Carex lasiocarpa* (woollyfruit sedge), *Carex rostrata* (beaked sedge), *Carex vesicaria* (blister sedge), and locally *Carex stricta* (upright sedge); Shrubs can cover up to 25% of the area; *Sphagnum* (sphagnum moss) form a carpet under Carices; one obs point in VT..... **Northern Sedge Wet Meadow (CEGL002257)**
[*Carex utriculata - Carex lacustris - (Carex vesicaria, Carex stricta)* Wet Meadow]

21b. *Dulichium arundinaceum* (threeway sedge), *Juncus pelocarpus* (brownfruit rush) [and other *Juncus* (rush) spp.), *Carex stricta* (upright sedge), *Carex lasiocarpa* (woollyfruit sedge), *Carex utriculata* (Northwest Territory sedge), *Carex canescens* (silvery sedge), and *Bidens* (beggarticks) spp. *Sphagnum* mosses, such as *Sphagnum cuspidatum* (toothed sphagnum), *Sphagnum papillosum* (papillose sphagnum), or *Sphagnum torreyanum* (Torrey's sphagnum), generally form a continuous, often monotypic carpet; occurs as a narrow zone in semipermanently flooded or saturated conditions along pond borders, bog moats, and other areas where minerotrophic conditions exist; observed in MA and VT..... **Southern New England Threeway Sedge Fen (CEGL006131)**
[*Dulichium arundinaceum / Sphagnum* spp. Fen]

22a. Successional wet meadow vegetation of the low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; variable composition can include wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern), *Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. are characteristic shrubs; herbaceous meadow with scattered shrubs; known throughout the Northeast; observed in NJ. .... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]

22b. Seasonally flooded wet meadow with some combination of *Calamagrostis canadensis* (bluejoint), *Scirpus cyperinus* (woolgrass), and/or *Schoenoplectus* (bulrush) spp., as well as *Leersia oryzoides* (rice cutgrass), *Carex stricta* (upright sedge), *Juncus* (rush) spp., *Lysimachia terrestris* (earth loosestrife), *Dulichium arundinaceum* (threeway sedge), *Lycopus uniflorus* (northern bugleweed), *Glyceria canadensis* (rattlesnake mannagrass), *Carex echinata* (star sedge); observed in MA and VT. ..... **Mixed Graminoid Wet Meadow (CEGL006519)**
[*Calamagrostis canadensis - Scirpus* spp. - *Dulichium arundinaceum* Wet Meadow]

23a. Marshes dominated by tussock-forming species such as *Carex stricta* (upright sedge) or *Carex utriculata* (Northwest Territory sedge) or *Juncus effusus* (common rush); microtopography characterized by hummocks and hollows. **24**
23b. Marshes dominated by medium-tall and tall, non-hummock-forming graminoids such as *Typha* (cattail) spp., *Schoenoplectus* (bulrush) spp., *Phragmites australis* ssp. *australis* (European common reed), *Phalaris arundinacea* (reed canarygrass). **27**

24a. *Juncus effusus* (common rush) dominant, often admixed with other graminoids and forbs..... ..... **Common Rush Marsh (CEGL004112)**
[*Juncus effusus* Marsh]
24b. *Carex* (sedge) spp. or dominant or codominant. **25**

25a. *Carex stricta* (upright sedge) abundant (>15% coverage); other common herbaceous species include *Scirpus cyperinus* (woolgrass), *Carex canescens* (silvery sedge), *Triadenum virginicum* (Virginia marsh St. Johnswort), and *Sparganium americanum* (American bur-reed); scattered *Vaccinium corymbosum* (highbush blueberry), *Lyonia ligustrina* (maleberry), and other wetland shrubs possible; occurs in seasonally flooded basins or on stream or lake margins; substrate is muck or peat of variable depth overlying mineral soil; common throughout the Northeast; observed in NY and NJ. ..... **Eastern Upright Sedge Wet Meadow (CEGL006412)**
[*Carex stricta - Carex vesicaria* Wet Meadow]
25b. *Carex stricta* (upright sedge) not abundant. **26**

26a. *Dulichium arundinaceum* (threeway sedge), *Juncus pelocarpus* (brownfruit rush) [and other *Juncus* (rush) spp.), *Carex stricta* (upright sedge), *Carex lasiocarpa* (woollyfruit sedge), *Carex utriculata* (Northwest Territory sedge), *Carex canescens* (silvery sedge), and *Bidens* (beggarticks) spp. *Sphagnum* mosses, such as *Sphagnum cuspidatum* (toothed sphagnum), *Sphagnum papillosum* (papillose sphagnum), or *Sphagnum torreyanum* (Torrey's sphagnum), generally form a continuous, often monotypic carpet; occurs as a narrow zone in semipermanently flooded or saturated conditions along pond borders, bog moats, and other areas where minerotrophic conditions exist; observed in MA and VT. ..... **Southern New England Threeway Sedge Fen (CEGL006131)**
[*Dulichium arundinaceum / Sphagnum* spp. Fen]
26b. *Carex utriculata* (Northwest Territory sedge) dominant or codominant with *Carex aquatilis* (water sedge), *Carex lacustris* (hairy sedge), *Carex lasiocarpa* (woollyfruit sedge), *Carex rostrata* (beaked sedge), *Carex vesicaria* (blister sedge), and locally *Carex stricta* (upright sedge); Shrubs can cover up to 25% of the area; *Sphagnum* (sphagnum moss) form a carpet under Carices; observed in VT. ..... **Northern Sedge Wet Meadow (CEGL002257)**
[*Carex utriculata - Carex lacustris - (Carex vesicaria, Carex stricta)* Wet Meadow]

27a. Tall emergent marsh dominated by *Typha* (cattail) spp.; occurs in permanently flooded basins, often part of a larger wetland mosaic and associated with lakes, ponds, or slow-moving streams; very common throughout the Northeast; observed in NJ, MA and VT. ..... **Eastern Cattail Marsh (CEGL006153)**
[*Typha (angustifolia, latifolia) - (Schoenoplectus* spp.) Eastern Marsh]

27b. Marshes dominated by non-native exotic graminoids such as *Phragmites australis* ssp. *australis* (European common reed) or *Phalaris arundinacea* (reed canarygrass). **28**

28a. *Phragmites australis* ssp. *australis* (European common reed) dominant; occurs throughout the Northeast; observed in NY..... **Eastern Ruderal Common Reed Marsh (CEGL004141)**
[*Phragmites australis* ssp. *australis* Eastern Ruderal Marsh]

28b. *Phalaris arundinacea* (reed canarygrass) marsh found in both basin wetlands and along rivershores; other species present may include *Solidago canadensis* (Canada goldenrod), *Impatiens capensis* (jewelweed), *Onoclea sensibilis* (sensitive fern), *Euthamia graminifolia* (flat-top goldentop), and *Eupatorium maculatum* (spotted joe-pye-weed); occurs throughout the northeastern United States; observed in NJ, MA, and NY. ..... **Eastern Ruderal Reed Canarygrass Marsh (CEGL006044)**
[*Phalaris arundinacea* Eastern Ruderal Marsh]

29a. Shrubby to herbaceous seepage swamps or glades with an overhanging canopy within a forest or free of tree cover known from high elevations (>776 m [2,545 feet]) in the Coolidge Range of the Green Mountains in central VT, occurring on moderate to somewhat steep slopes; mineral soil, with little to no peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is a constant short shrub; herb layer includes some combination of *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort),*Veratrum viride* (green false hellebore), *Laportea canadensis* (Canadian woodnettle), *Solidago macrophylla* (largeleaf goldenrod), *Symphyotrichum puniceum* (purplestem aster), *Dryopteris campyloptera* (mountain woodfern), *Milium effusum* (American milletgrass), *Rubus pubescens* (dwarf red blackberry), *Trillium erectum* (red trillium), *Actaea pachypoda* (white baneberry), *Carex leptonervia* (nerveless woodland sedge), *Dicentra cucullaria* (Dutchman's breeches), *Erythronium americanum* (dogtooth violet), and *Phegopteris connectilis* (long beechfern); observed in VT. ..... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**
[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]

29b. Wetlands dominated by broad-leaved emergent vegetation of lower elevations. **30**

30a. Tall emergent marsh dominated by *Typha* (cattail) spp.; occurs in permanently flooded basins, often part of a larger wetland mosaic and associated with lakes, ponds, or slow-moving streams; very common throughout the Northeast; observed in NJ, MA, and VT. ..... **Eastern Cattail Marsh (CEGL006153)**
[*Typha (angustifolia, latifolia) - (Schoenoplectus* spp.) Eastern Marsh]

30b. Emergent wetlands not dominated by *Typha* (cattail) spp. **31**

31a. *Pontederia cordata* (pickerelweed), *Sagittaria* (arrowhead) spp., and/or *Peltandra virginica* (green arrow-arum); occurs along pondshores, lakeshores, impoundments; common throughout the Northeast from PA north to ME; seen along the NY/NJ line. ..... **Northeastern Leafy Forb Marsh (CEGL006191)**
[*Pontederia cordata - Peltandra virginica - Sagittaria latifolia* Marsh]

31b. Variable wetland occurring in depressions, drainages, and basins that contain ponded water throughout the year; common dominants include *Eleocharis acicularis* (needle spikerush), *Verbena hastata* (swamp verbena), *Bidens cernua* (nodding beggarticks), *Leersia oryzoides* (rice cutgrass), and *Polygonum* (knotweed) spp.; invasive species *Lythrum salicaria* (purple loosestrife) and *Microstegium vimineum* (Nepalese browntop) common; documented in PA, NY and NJ; likely in NH; seen along NY/CT line..... **Mixed Forb Marsh (CEGL006446)**
[*Bidens cernua - Verbena hastata - Polygonum* spp. Marsh]

32a. Successional wet meadow vegetation dominated by *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. with variable combinations of wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern),*Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); ranges from shrub thicket to herbaceous meadow with scattered shrubs; occurs in low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; known throughout the Northeast; observed in NJ. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]

32b. Invaded marshes dominated by one species. **33**

33a. *Phragmites australis* ssp. *australis* (European common reed) dominant; occurs throughout the Northeast; observed in NY..... **Eastern Ruderal Common Reed Marsh (CEGL004141)**
[*Phragmites australis* ssp. *australis* Eastern Ruderal Marsh]

33b. *Phalaris arundinacea* (reed canarygrass) marsh found in both basin wetlands and along rivershores; other species present may include *Solidago canadensis* (Canada goldenrod), *Impatiens capensis* (jewelweed), *Onoclea sensibilis* (sensitive fern), *Euthamia graminifolia* (flat-top goldentop), and *Eupatorium maculatum* (spotted joe-pye-weed); occurs throughout the northeastern United States; observed in MA, NJ and NY. ..... **Eastern Ruderal Reed Canarygrass Marsh (CEGL006044)**
[*Phalaris arundinacea* Eastern Ruderal Marsh]

5. Woodlands, Stunted Forests, Barrens, Rocky Outcrops, and Cliffs

1a. Shrublands and woodlands. **2**
1b. Herbaceous vegetation communities or sparse vegetation of cliffs. **21**

2a. Shrublands (trees <5m may be common). **3**
2b. Woodlands (open stands of trees generally forming 20–60% cover) and stunted forests (trees generally >3 m tall). **7**

3a. Successional shrublands; shrubland thicket occurring on old fields, pastures, or modified lands dominated by an admixture of non-native and native shrubs such as *Elaeagnus umbellata* (Autumn olive), *Rubus allegheniensis* (Allegheny blackberry), *Rosa multiflora* (multiflora rose), *Lonicera morrowii* (Morrow's honeysuckle), *Celastrus orbiculatus* (Oriental bittersweet), *Lonicera japonica* (Japanese honeysuckle), *Ligustrum vulgare* (European privet), *Juniperus virginiana* (eastern red-cedar), *Prunus pensylvanica, Prunus serotina, Rhus typhina*, and other small trees (<25% in cover); old-field grasses, forbs, and ferns are common in more open-canopied variants where tall and short shrubs cover at least 25% of the field; wide-ranging in northeastern states; observed in CT and VT. ... . **Northeastern Ruderal Shrubland (CEGL006451)**
[*Elaeagnus umbellata - Cornus racemosa - Rosa multiflora - Juniperus virginiana* Ruderal Shrubland]
3b. Shrubland barrens, glades, and wooded vegetation. **4**

4a. *Pinus rigida* (pitch pine) rocky summits occurring at low to moderate elevations; plot elevations range from 387–792 m (1,270–2,598 feet); *Pinus rigida* (pitch pine) dominant (tree or shrub-sized) with highly variable canopy coverage and a variable mixture of canopy associates, such as *Quercus prinus* (chestnut oak), *Betula populifolia* (gray birch), *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and/or *Carya glabra* (pignut hickory); *Quercus ilicifolia* (bear oak) and *Photinia melanocarpa* (black chokeberry) characteristic in the tall-shrub layer; *Kalmia latifolia* (mountain laurel) often present; *Gaylussacia baccata* (black huckleberry) and *Vaccinium angustifolium* (lowbush blueberry) dominant short shrubs; *Deschampsia flexuosa* (wavy hairgrass) and *Maianthemum canadense* (Canada mayflower) common in the herb layer; high lichen cover characteristic; shallow acidic, well-drained sandy to gravelly soils; observed in CT, MA, NJ and NY. ..... **Pitch Pine Rocky Summit (CEGL006116)**
[*Pinus rigida / (Quercus ilicifolia) / Photinia melanocarpa / Deschampsia flexuosa* Woodland]
4b. *Quercus ilicifolia* (bear oak), *Carya glabra* (pignut hickory) and/or *Vaccinium* (blueberry) spp. and/or *Gaylussacia baccata* (black huckleberry) dominant. **5**

5a. Heath balds; northern or high-elevation acidic rock outcrops or summits characterized by abundant short *Vaccinium* (blueberry) spp., *Quercus ilicifolia* (bear oak), *Vaccinium pallidum* (Blue Ridge blueberry) and *Kalmia angustifolia* (sheep laurel); widely scattered trees possible with very dense heath shrubs observed in NY at 351 m (1,152 feet)..... ..... **Central Appalachian Blueberry Dwarf-shrubland (CEGL003958)**
[*Vaccinium (angustifolium, myrtilloides, pallidum*) Central Appalachian Dwarf-shrubland]
5b. Vegetation characterized by tall shrubs or woodland trees. **6**

6a. *Quercus ilicifolia* (bear oak) dominant; associated shrubs include *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), *Gaylussacia baccata* (black huckleberry), *Photinia melanocarpa* (black chokeberry), *Quercus prinoides* (dwarf chinquapin oak), and/or *Amelanchier arborea* (common serviceberry); typical herbs include *Deschampsia flexuosa* (wavy hairgrass), *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), *Schizachyrium scoparium* (little bluestem), and/or *Pteridium aquilinum* (western brackenfern); *Carya glabra* (pignut hickory) may be common in some NJ sites; occurs along ridgelines from southern New England south to interior NJ and PA; elevations range from 347-448 m (1,138-1,470 feet); observed in NJ and NY. ..... **Ridgetop Bear Oak Barrens (CEGL006121)**
[*Quercus ilicifolia - Prunus pumila* Shrubland]

6b. *Carya glabra* (pignut hickory) sole dominant in canopy; open woodland along ridgetops often with exposed bedrock; dominant shrubs include *Quercus ilicifolia* (bear oak), *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and *Gaylussacia baccata* (black huckleberry); *Carex pensylvanica* (Pennsylvania sedge) and *Deschampsia flexuosa* (wavy hair grass) also characteristic. ..... **Ridgetop Pignut Hickory Woodland (CEGL006640)**
[*Carya glabra* Woodland]

7a. Evergreen or mixed evergreen and deciduous trees dominant or codominant in canopy..... **8**
7b. Deciduous trees dominant in canopy. **14**

8a. *Juniperus virginiana* (eastern red-cedar) constant in the canopy. **9**
8b. *Juniperus virginiana* (eastern red-cedar) absent to sparse in canopy. **12**

9a. *Juniperus virginiana* (eastern red-cedar) dominated old fields; early-successional, can be an open woodland; common community throughout the Northeast.....
.....**Northeastern Ruderal Red-cedar Forest (CEGL006024)**
[*Juniperus virginiana* Ruderal Forest]
9b. *Juniperus virginiana* (eastern red-cedar) with associates in canopy. **10**

10a. *Pinus strobus* (eastern white pine) and *Juniperus virginiana* (eastern red-cedar) in canopy with *Quercus prinus* (chestnut oak), *Carya glabra* (pignut hickory), *Quercus rubra* (northern red oak), and *Quercus alba* (white oak); woodland occurring on unstable shale talus with shallow, very well-drained soils; characteristic shrubs and herbs include *Rhus glabra* (smooth sumac), *Quercus prinoides* (dwarf chinquapin oak), *Toxicodendron radicans* (eastern poison-ivy), *Penstemon hirsutus* (hairy beardtongue), *Antennaria plantaginifolia* (woman's tobacco), and *Carex pensylvanica* (Pennsylvania sedge); observed in in NY at 183 m (600 feet). .....
..... **Shale Talus Slope Woodland (CEGL006074)**
[*Quercus prinus / Rhus* spp. / *Deschampsia flexuosa* Woodland]
10b. *Juniperus virginiana* (eastern red-cedar) and deciduous trees codominant..... **11**

11a. *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Fraxinus americana* (white ash), and/or *Prunus serotina* (black cherry) in canopy with *Juniperus virginiana* (eastern red-cedar) over *Quercus ilicifolia* (bear oak) and *Vaccinium pallidum* (Blue Ridge blueberry); *Schizachyrium scoparium* (little bluestem), *Deschampsia flexuosa* (wavy hairgrass), and/or *Danthonia spicata* (poverty oatgrass) common grasses; occurs primarily on exposed outcrops known from mountainous sites in New England, NJ, and PA; observed in PA, NJ, and NY; elevations range from 281-396 m (922-1,299 feet)..... **Traprock Ridge (CEGL006002)**
[*Juniperus virginiana - Fraxinus americana / Danthonia spicata - Poa compressa* Woodland]

11b. Cliffs with dry vertical exposures of resistant acidic bedrock; overall vegetation coverage <20%; *Fraxinus americana* (white ash) and *Quercus prinus* (chestnut oak) present; herbaceous layer includes *Schizachyrium scoparium* (little bluestem), *Deschampsia flexuosa* (wavy hairgrass), and *Solidago ulmifolia* (elmleaf goldenrod); documented globally in MA, NY, NH, PA, and VT; observed off trail at DEWA; observed in NY.....**Eastern Temperate Acidic Cliff (CEGL006422)**
[*Juniperus virginiana / Corydalis sempervirens* Cliff Sparse Vegetation]

12a. Pines dominant or codominant in canopy. **13**
12b. Deciduous trees dominant in canopy. **14**

13a. *Pinus rigida* (pitch pine) dominant (tree or shrub-sized) with highly variable canopy coverage occurring on dry rocky ridges and summits of low to moderate elevations; plot elevations range from 387-792 m (1,270-2,598 feet); variable mixture of canopy associates including *Quercus prinus* (chestnut oak), *Betula populifolia* (gray birch), *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and/or *Carya glabra* (pignut hickory); *Quercus ilicifolia* (bear oak) and *Photinia melanocarpa* (black chokeberry) characteristic tall shrubs; *Kalmia latifolia* (mountain laurel) often present; *Gaylussacia baccata* (black huckleberry) and *Vaccinium angustifolium* (lowbush blueberry) dominant dwarf-shrubs; *Deschampsia flexuosa* (wavy hairgrass) and *Maianthemum canadense* (Canada mayflower) common herbs; high lichen cover characteristic; shallow acidic, well-drained sandy to gravelly soils; observed in NJ, NY, CT, and MA. .... **Pitch Pine Rocky Summit (CEGL006116)**
[*Pinus rigida / (Quercus ilicifolia) / Photinia melanocarpa / Deschampsia flexuosa* Woodland]
13b. *Pinus strobus* (eastern white pine) in canopy with *Quercus prinus* (chestnut oak), *Carya glabra* (pignut hickory), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and *Juniperus virginiana* (eastern red-cedar); woodland occurring on unstable shale talus with shallow, very well-drained soils; known range restricted to NY; characteristic shrubs and herbs include *Rhus glabra* (smooth sumac), *Quercus prinoides* (dwarf chinquapin oak), *Toxicodendron radicans* (eastern poison-ivy), *Penstemon hirsutus* (hairy beardtongue), *Antennaria plantaginifolia* (woman's tobacco), and *Carex pensylvanica* (Pennsylvania sedge); observed in NY at 183 m (600 feet). .... **Shale Talus Slope Woodland (CEGL006074)**
[*Quercus prinus / Rhus* spp. / *Deschampsia flexuosa* Woodland]

14a. *Quercus* (oak) spp., *Carya glabra* (pignut hickory) **and/or** *Betula* (birch) spp. canopy dominants. **15**
14b. Enriched, dry-mesic to mesic woodlands on talus; *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), **and/or** *Tilia americana* (American basswood) in canopy. **20**

15a. *Carya glabra* (pignut hickory) sole dominant in canopy; open woodland often with exposed bedrock along ridgetops; dominant shrubs include *Quercus ilicifolia* (bear oak), *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), *Gaylussacia baccata* (black huckleberry). ..... **Ridgetop Pignut Hickory Woodland (CEGL006640)**
[*Carya glabra* Woodland]
15b. *Quercus* (oak) spp. **and/or** *Betula* (birch) spp. Dominant. **16**

16a. *Quercus* (oak) spp. dominant or codominant in canopy, *Betula* (birch) spp. Absent. **17**
16b. *Quercus* (oak) spp. and/or *Betula* (birch) spp. in canopy (>10%). **19**

17a. *Quercus rubra* (northern red oak) dominant or codominant with or without *Quercus prinus* (chestnut oak), *Quercus velutina* (black oak), and/or *Acer rubrum* (red maple); *Quercus coccinea* (scarlet oak) may be common to dominant in some stands in NY; *Pinus* (pine) spp. and *Betula* (birch) spp. may be present; *Sassafras albidum* (sassafras), *Castanea dentata* (American chestnut), and *Amelanchier laevis* (Allegheny serviceberry) are characteristic. Canopies are often composed of stunted individuals; *Quercus ilicifolia* (bear oak), *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and/or *Gaylussacia baccata* (black huckleberry) dominate the shrub layer; *Deschampsia flexuosa* (wavy hairgrass), *Danthonia spicata* (poverty oatgrass), *Cypripedium acaule* (moccasin flower), *Aralia nudicaulis* (wild sarsaparilla), and *Pteridium aquilinum* (western brackenfern) characteristic in the herb layer; woodland or stunted forest occurring on upper slopes and low- to mid-elevation summits; ranges from the Central Appalachians north through the Northern Appalachians; plot elevations range from 375-567 m (1,235-1,860 feet) in New England; observed in NY, MA and VT..... **Red Oak / Heath Woodland Rocky Summit (CEGL006134)**
[*Quercus rubra - (Quercus prinus) / Vaccinium* spp. / *Deschampsia flexuosa* Woodland]

17b. Canopy is composed of a combination of the any of the follow species: *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus rubra* (northern red oak), *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Ostrya virginiana* (hophornbeam), *Pinus strobus* (eastern white pine), and *Juniperus virginiana* (eastern red-cedar)..... **18**

18a. Rich oak-hickory forest occurring on low-elevation [285-478 m (935-1,561 feet)] ridgetops, upper slopes, south- or west-facing sideslopes from ME and VT to PA and northern NJ; dominated by a mixture of *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Carya alba* (mockernut hickory), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and/or *Quercus prinus* (chestnut oak) often with *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) over an *Ostrya virginiana* (hophornbeam) subcanopy and grassy herbaceous layer dominated by *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), and/or *Carex lucorum* (Blue Ridge sedge) (sedge lawn may or may not be present) with *Solidago caesia* (wreath goldenrod), *Solidago bicolor* (white goldenrod), and *Deschampsia flexuosa* (wavy hairgrass); tall shrubs include *Viburnum acerifolium* (mapleleaf viburnum) and *Amelanchier arborea* (common serviceberry); *Vaccinium pallidum* (Blue Ridge blueberry) is a common short shrub; observed on the trail in NJ, NY, PA, and CT.....**Oak - Hickory / Hophornbeam / Sedge Forest (CEGL006301)**
[*Quercus rubra - Carya (glabra, ovata) / Ostrya virginiana / Carex lucorum* Forest]

18b. *Quercus prinus* (chestnut oak) woodland occurring on unstable shale talus with shallow, very well-drained soils; known range restricted to NY; *Carya glabra* (pignut hickory), *Quercus rubra* (northern red oak), and *Quercus alba* (white oak) in canopy with *Pinus strobus* (eastern white pine) and *Juniperus virginiana* (eastern red-cedar); characteristic shrubs and herbs include *Rhus glabra* (smooth sumac), *Quercus prinoides* (dwarf chinquapin oak), *Toxicodendron radicans* (eastern poison-ivy), *Penstemon hirsutus* (hairy beardtongue), *Antennaria plantaginifolia* (woman's tobacco), and *Carex pensylvanica* (Pennsylvania sedge); observed in NY at 183 m (600 feet. ..... **Shale Talus Slope Woodland (CEGL006074)**
[*Quercus prinus / Rhus* spp. / *Deschampsia flexuosa* Woodland]

19a. Acidic large-boulder talus slope woodland with *Quercus rubra* (northern red oak) and *Betula lenta* (sweet birch) codominant in canopy (**Note:** in the northern portion of this community's range, *Quercus rubra* (northern red oak) may drop out entirely, with *Betula* (birch) spp. and *Acer* (maple) spp. dominant); *Acer spicatum* (mountain maple) dominant tall shrub; occurs in Lower New England and south to the northern Piedmont; low to mid elevations, from near sea level to about 520 m (0-1,700 feet); observed in PA and NY. ..... **Oak - Birch Talus Slope Woodland (CEGL006585)**
[*Quercus rubra - Betula lenta / Polypodium virginianum* Woodland]

19b. *Betula alleghaniensis* (yellow birch) absent from canopy; *Betula lenta* (sweet birch) **and/or** *Betula populifolia* (gray birch) and *Betula papyrifera* (paper birch) common with *Quercus* (oak) spp. **20**

20a. Stunted *Quercus rubra* (northern red oak) [sometimes with *Quercus prinus* (chestnut oak), *Quercus coccinea* (scarlet oak) may be common to dominant in some stands in NY] woodland or forest occurring on rocky upper slopes and low- to mid-elevation summits from the Central Appalachians north through the Northern Appalachians; Lower New England elevations range from 375-567 m (1,235-1,860 feet); *Quercus velutina* (black oak), *Betula populifolia* (gray birch), *Betula papyrifera* (paper birch), *Betula lenta* (sweet birch), and/or *Acer rubrum* (red maple) associates; *Pinus* (pine) spp. may be present; *Castanea dentata* (American chestnut), *Amelanchier laevis* (Allegheny serviceberry), and *Sassafras albidum* (sassafras) characteristic; *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), *Quercus ilicifolia* (bear oak), and/or *Gaylussacia baccata* (black huckleberry) dominate the shrub layer; *Deschampsia flexuosa* (wavy hairgrass), *Danthonia spicata* (poverty oatgrass), *Cypripedium acaule* (moccasin flower), *Aralia nudicaulis* (wild sarsaparilla) and *Pteridium aquilinum* (western brackenfern) are characteristic herbs; observed on trail in NY, MA and VT. ..... **Red Oak / Heath Woodland Rocky Summit (CEGL006134)**
[*Quercus rubra - (Quercus prinus) / Vaccinium* spp. / *Deschampsia flexuosa* Woodland]

20b. Boulderfield or talus slope woodland communities. **21**

21a. Sweet birch - chestnut oak talus woodland occurring on fractured rock from 336-462 m (1,104-1,515 feet) elevation along the PA-NJ border; gnarled specimens of *Betula lenta* (sweet birch), *Quercus prinus* (chestnut oak), and/or *Quercus rubra* (northern red oak) characteristic; *Hamamelis virginiana* (American witch-hazel), *Sorbus americana* (American mountain-ash), and/or *Kalmia latifolia* (mountain laurel) common tall shrubs, and *Vaccinium pallidum* (Blue Ridge blueberry) common short-shrub; *Parthenocissus quinquefolia* (Virginia creeper) characteristic vine; *Polypodium virginianum* (rock polypody) characteristic fern; high lichen cover ;can have low vegetation cover and high rock cover; observed off trail at DEWA and in NJ and NY. ..... **Sweet Birch - Chestnut Oak Talus Woodland (CEGL006565)**
[*Betula lenta - Quercus prinus / Parthenocissus quinquefolia* Woodland]

21b. Oak - birch acidic large-boulder talus slope woodland with *Quercus rubra* (northern red oak) and *Betula lenta* (sweet birch) codominant in canopy (**Note:** in the northern portion of this community's range, *Quercus rubra* (northern red oak) may drop out entirely, with *Betula* (birch) spp. and *Acer* (maple) spp. dominant); *Acer spicatum* (mountain maple) dominant tall shrub; occurs in Lower New England and south to the northern Piedmont; low to mid elevations, from near sea level to about 520 m (0-1,700 feet); observed in PA and NY. ..... **Oak - Birch Talus Slope Woodland (CEGL006585)**
[*Quercus rubra - Betula lenta / Polypodium virginianum* Woodland]

22a. Enriched, dry-mesic to mesic forest on talus or shallow, very rocky soils dominated by *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) and with many canopy associates including *Tilia americana* (American basswood); some stands are dominated by *Betula lenta* (sweet birch) and have these enrichment indicators present at lower cover; shrub layer is characterized by *Staphylea trifolia* (American bladdernut); herb layer is characterized by *Cystopteris* (bladderfern) spp., *Woodsia* (cliff fern) spp., *Asarum canadense* (Canadian wildginger), and others; tends to have more southern species that drop out at the northern edge of the range; ranges from VA northward with limited occurrences in New England; observed off trail at DEWA; NY/NJ State line. .... **Northern Calcareous Talus Slope Forest (CEGL006577)**
[*Acer saccharum - Fraxinus americana - Juglans cinerea / Staphylea trifolia / Adlumia fungosa* Forest]

22b. Northern, enriched, dry-mesic forest/woodland occurring from 150 to 610 m (500-2,000 feet); dominated by *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) with *Ostrya virginiana* (hophornbeam) in the subcanopy, and species of non-enriched bedrock such as *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple); shrub and herb layers with circumneutral-calcareous indicators such as *Sambucus racemosa* (red elderberry), *Impatiens pallida* (pale touch-me-not), *Caulophyllum thalictroides* (blue cohosh), *Geranium robertianum* (Robert's geranium), *Arabis drummondii* (Drummond's rockcress), *Asarum canadense* (Canadian wildginger), or the sedges *Carex rosea* (rosy sedge), *Carex sprengelii* (Sprengel's sedge), or *Carex platyphylla* (broadleaf sedge); ranges from VT south to NJ; observed in MA and VT. .... **Rich Northern Hardwood Talus Woodland (CEGL005058)**
[*Acer saccharum - Tilia americana - Fraxinus americana / Ostrya virginiana / Geranium robertianum* Woodland]

23a. Herbaceous vegetation communities not on cliffs. **24**
23b. Sparse vegetation. **27**

24a. Naturally occurring patchy grassy openings, on rock; expanses of bare rock common. **25**
24b. Successional grasslands, not on rock outcrops. **26**

25a. Open flood-scoured bedrock exposures of major rivers, along river narrows; patchy vegetation includes *Andropogon gerardii* (big bluestem), *Carex stricta* (upright sedge), *Poa palustris* (fowl bluegrass), *Poa compressa* (Canada bluegrass); documented in throughout the Northeast; observed at DEWA and in VT where White River crosses AT. .... **Northern Riverscour Rock Outcrop (CEGL006284)**
[*Andropogon gerardii - Campanula rotundifolia - Solidago simplex* Riverscour Sparse Vegetation]

25b. Rock outcrops not associated with rivers; Grassy openings found on rock outcrops and summits at 202 to 417 m (663-1,368 feet) in elevation; *Schizachyrium scoparium* (little bluestem), *Danthonia spicata* (poverty oatgrass), and *Carex pensylvanica* (Pennsylvania sedge) are diagnostic; *Deschampsia flexuosa* (wavy hair grass), *Dichanthelium boscii* (Bosc's panicgrass), and *Potentilla simplex* (common cinquefoil) characteristic with high *Cladonia* (cup lichen) spp. cover on exposed rocks; *Vaccinium pallidum* (Blue Ridge blueberry) and *Gaylussacia baccata* (black huckleberry) common; tall shrubs may include *Amelanchier* (serviceberry) spp. and *Quercus ilicifolia* (bear oak); observed in NJ, NY and MA. .... **Low- to Mid-Elevation Little Bluestem - Poverty Oatgrass Outcrop Opening (CEGL006544)**
[*Schizachyrium scoparium - Danthonia spicata - Carex pensylvanica / Cladonia* spp. Grassland]

26a. Herbaceous layer varies widely in composition and can include or be dominated by one or more of the following: *Solidago* (goldenrod) spp., *Dactylis glomerata* (orchardgrass), *Phleum pratense* (timothy), *Anthoxanthum odoratum* (sweet vernalgrass), *Festuca* (fescue) spp., *Dichanthelium clandestinum* (deertongue), *Poa pratensis* (Kentucky bluegrass), *Euthamia graminifolia* (flat-top goldentop), *Dennstaedtia punctilobula* (eastern hayscented fern), and other grass, forb, and/or fern species; scattered trees and shrubs possible; wide-ranging in northeastern states; observed in DEWA, NJ and VT. ..... **Northeastern Old-field Meadow (CEGL006107)**
[*Dactylis glomerata - Phleum pratense - Festuca* spp. - *Solidago* spp. Ruderal Meadow]

26b. *Schizachyrium scoparium* (little bluestem) dominant; wide-ranging in northeastern states; observed at DEWA. ..... **Little Bluestem Old-field Meadow (CEGL006333)**
[*Schizachyrium scoparium - (Andropogon virginicus) - Solidago* spp. Ruderal Meadow]

27a. Sparse vegetation of cliffs; dry vertical exposures of resistant acidic bedrock; overall vegetation coverage <20%; *Fraxinus americana* (white ash) and *Quercus prinus* (chestnut oak) generally present; herbaceous layer includes *Schizachyrium scoparium* (little bluestem), *Deschampsia flexuosa* (wavy hairgrass), and *Solidago ulmifolia* (elmleaf goldenrod); documented in throughout the northeast, observed at DEWA and in VT. ..... **Eastern Temperate Acidic Cliff (CEGL006422)**
[*Juniperus virginiana / Corydalis sempervirens* Cliff Sparse Vegetation]

27b. Quartzite and sandstone boulderfields covered with *Lasallia papulosa* (blistered naval lichen) and/or *Lasallia pensylvanica* (Pennsylvania blistered naval lichen) either singly or together along with *Dimelaena oreina* (mountain lichen); *Melanelia culbersonii* (Culberson's black-parmelia) is diagnostic; stunted *Betula lenta* (sweet birch) sometimes present in very low numbers; occurs at elevations from about 300 to 1,000 m (1,000-3,300 feet); restricted to Delaware Water Gap National Recreation Site within the LNE project area. ..... **Central Appalachian Acidic Boulderfield (CEGL004142)**
[*Lasallia (papulosa, pensylvanica) - Dimelaena oreina - (Melanelia culbersonii)* Nonvascular Vegetation]

6. Spruce-Fir Forests

1a. *Picea* (spruce) sp. plantations dominated by *Picea abies* (Norway spruce) **or** *Picea glauca* (white spruce), and/or any combination of spruce species; successional understory may be present with *Prunus serotina* (black cherry), *Acer rubrum* (red maple), *Rubus* (blackberry) spp., *Dennstaedtia punctilobula* (eastern hayscented fern), and others..... **Norway Spruce Plantation (CST007167)**
[*Picea abies* Forest Plantation]
1b. Spruce-fir, fir, and mixed spruce and/or fir - deciduous forests; sometimes deciduous [*Betula papyrifera* var. *cordifolia* (heart-leaved paper birch)] at high elevations..... **2**

2a. Subalpine forests dominated by *Abies balsamea* (balsam fir) (or rarely by *Betula papyrifera* var. *cordifolia (*heart-leaved paper birch)) near treeline on upper mountain slopes and ridgetops above 914 m (3,000 feet); *Picea rubens* (red spruce) may be present but <20% cover; shrub layer is predominantly *Abies* (fir) seedlings with occasional patches of *Sorbus americana* (American mountain-ash) and *Betula alleghaniensis* (yellow birch); characteristic herbs include *Dryopteris campyloptera* (mountain woodfern) and *Oxalis montana* (mountain woodsorrel); peripheral in the LNE project area, common in the NAP project area; observed in MA and VT. .... **Montane Balsam Fir - Birch Forest (CEGL006112)**
[*Abies balsamea - (Betula papyrifera* var. *cordifolia*) Forest]
2b. *Picea rubens* (red spruce) dominant or codominant in the canopy. **3**

3a. Dry-mesic pine - hemlock forest codominated by *Tsuga canadensis* (eastern hemlock) and *Pinus strobus* (eastern white pine); *Picea rubens* (red spruce) and northern hardwoods typical in understory; occurs on lower-elevation slopes and flats from MA to ME on sheltered slopes with sandy or stony, acidic, moderately well-drained soils; observed in VT. .... **White Pine - Hemlock - Red Spruce Forest (CEGL006324)**
[*Pinus strobus - Tsuga canadensis - Picea rubens* Forest]
3b. *Tsuga canadensis* (eastern hemlock) and *Pinus strobus* (eastern white pine) sparse to absent **4**

4a. Mixed deciduous - spruce forests; *Picea rubens* (red spruce) [and in logged stands, *Abies balsamea* (balsam fir)], comprises at least 25-50% total cover, deciduous hardwood species abundant (>50%). **5**
4b. Evergreen spruce-fir-dominated canopy; deciduous hardwoods <25%. **6**

5a. Transitional northern hardwoods - red spruce forest with *Betula alleghaniensis* (yellow birch) and *Acer rubrum* (red maple) characteristic; lacks *Betula papyrifera* var. *cordifolia* (mountain paper birch), and *Sorbus americana* (American mountain-ash) is sparse to absent; other northern hardwoods *Acer saccharum* (sugar maple) and *Fagus grandifolia* (American beech) may be common; *Acer pensylvanicum* (striped maple), *Viburnum lantanoides* (hobblebush), and *Acer spicatum* (mountain maple) common; herbs include *Clintonia borealis* (bluebead), *Dennstaedtia punctilobula* (eastern hayscented fern), *Coptis trifolia* (threeleaf goldthread), *Oxalis montana* (mountain woodsorrel), *Oclemena acuminata* (whorled wood aster), *Maianthemum canadense* (Canada mayflower), and *Dryopteris intermedia* (intermediate woodfern); most extensive at middle elevations, plot/obs point elevations range from 460-929 m (1,509-3,047 feet) on rocky slopes; observed in MA and VT. .... **Transitional Northern Hardwood - Red Spruce Forest (CEGL006267)**
[*Betula alleghaniensis - Picea rubens / Dryopteris campyloptera* Forest]

5b. Successional mixed spruce-fir-hardwoods forest made up of *Picea rubens* (red spruce) and/or *Abies balsamea* (balsam fir) (>50% total cover) and early-successional trees including *Acer rubrum* (red maple), *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), and *Betula papyrifera* (paper birch), or, less commonly, *Betula populifolia* (gray birch) or *Betula papyrifera* var. *cordifolia* (mountain paper birch); usually lacks any appreciable amount of *Betula alleghaniensis* (yellow birch) and *Fagus grandifolia* (American beech); *Acer pensylvanicum* (striped maple) characteristic shrub; common herbs include *Uvularia sessilifolia* (sessileleaf bellwort), *Maianthemum canadense* (Canada mayflower), and *Trientalis borealis* (starflower) in northern New England and NY. This also includes post disturbance stands where the hardwood species form the main canopy and spruce and/or fir form a "dog hair" subcanopy of samplings; observed in MA and VT; elevation ranges from 601-798 m (1,972-2,618 feet)..... **Successional Mixed Spruce - Fir - Hardwood Forest (CEGL006505)**
[*Picea rubens - Abies balsamea - Betula* spp. - *Acer rubrum* Forest]

6a. Widespread on lower-elevation slopes between 244 and 687 m (800-2,254 feet); canopy dominated by *Picea rubens* (red spruce) with variable amounts of *Abies balsamea* (balsam fir) and *Betula papyrifera* (paper birch); lower-elevation species such as *Aralia nudicaulis* (wild sarsaparilla), *Tiarella cordifolia* (heartleaf foamflower), and *Trillium erectum* (red trillium) may be abundant; high-elevation species such as *Dryopteris campyloptera* (mountain woodfern) and *Sorbus americana* (American mountain-ash) are less abundant; occurs across boreal regions of the northeastern United States and adjacent Canada; observed in MA and VT..... **Low-Elevation Spruce - Fir Forest (CEGL006273)**
[*Picea rubens - Abies balsamea - Betula papyrifera* Forest]

6b. Spruce-fir forests of high elevations, generally a matrix forest between 609 and 1,067 m (2,000-3,500 feet); *Picea rubens* (red spruce) and *Abies balsamea* (balsam fir) dominant (usually 70-80% of the canopy); canopy associates include *Sorbus americana* (American mountain-ash) and *Betula papyrifera* var. *cordifolia* (mountain paper birch); herb layer patchy with *Oxalis montana* (mountain woodsorrel), *Clintonia borealis* (bluebead), *Streptopus lanceolatus* var. *roseus* (twisted-stalk), and/or *Dryopteris campyloptera* (mountain woodfern); lush carpet of mosses and liverworts characteristic; ranges from NY north to ME; peripheral in the LNE project area; common in the NAP project area; observed in VT..... **Montane Spruce - Fir Forest (CEGL006128)**
[*Picea rubens - Abies balsamea / Sorbus americana* Forest]

7. Hemlock and Mixed Hemlock Forests[32]

1a. *Tsuga canadensis* (eastern hemlock) - mixed evergreen canopy; conifer trees >75% of canopy cover. **2**
1b. Mixed canopy hemlock-hardwood forests. **3**

2a. Dry-mesic hemlock-pine forest codominated by *Tsuga canadensis* (eastern hemlock), *Pinus strobus* (eastern white pine), and *Picea rubens* (red spruce) at least present, even if in understory; northern hardwoods typical in the understory; occurs on lower-elevation slopes and flats from MA to ME on sheltered slopes with sandy or stony, acidic, moderately well-drained soils. .... **White Pine - Hemlock - Red Spruce Forest (CEGL006324)**
[*Pinus strobus - Tsuga canadensis - Picea rubens* Forest]
2b. *Picea rubens* (red spruce) absent to minor; *Tsuga canadensis* (eastern hemlock) forests with abundant or codominant *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple) and *Quercus rubra* (northern red oak) common associates; *Acer pensylvanicum* (striped maple) is a common, though rarely abundant small tree; *Kalmia latifolia* (mountain laurel) common shrub; occurs on sloping sites and in sheltered ravines; from PA and NJ north to ME. .... **Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest (CEGL006328)**
[*Pinus strobus - Tsuga canadensis* Lower New England-Northern Piedmont Forest]

3a. Forest with a strong component of *Picea rubens* (red spruce) **and/or** northern hardwood species, especially *Acer saccharum* (sugar maple) **and/or** *Betula alleghaniensis* (yellow birch). **4**
3b. Mixed *Tsuga canadensis* (eastern hemlock) - hardwood forest with a strong component of *Fagus grandifolia* (American beech), *Quercus* (oak) spp., or *Betula lenta* (sweet birch); *Acer saccharum* (sugar maple) and/or *Betula alleghaniensis* (yellow birch) absent or rare. **8**

4a. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)] and *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy) and occasionally *Abies balsamea* (balsam fir) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, on slopes rather than in basins; plot elevations range from 295-611 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in MA and VT. .... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]
4b. Upland forests lacking seepage indicators. **5**

5a. Plantations and ruderal forests. **6**
5b. Hemlock forests that are not plantations or ruderal. **7**

[32]*Tsuga canadensis* (eastern hemlock) may be codominant in canopy usually >25% of canopy. For all *Tsuga canadensis* associations that have been impacted by the hemlock woolly adelgid, treat standing and fallen dead trees as part of *Tsuga canadensis* canopy cover.

6a. Hemlock plantations. ..... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
6b. Successional stands of *Pinus strobus* (eastern white pine), or as in VT, *Tsuga canadensis* (eastern hemlock) replaces eastern white pine in the canopy; *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Fraxinus americana* (white ash), and/or *Prunus serotina* (black cherry) may be common in canopy and/or subcanopy; observed in CT and VT. ..... **Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

7a. Transitional *Tsuga canadensis* (eastern hemlock) - northern hardwood forest that lacks a significant presence of *Quercus* (oak) spp. and *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple), *Acer saccharum* (sugar maple), *Betula papyrifera* (paper birch), *Betula lenta* (sweet birch), *Fagus grandifolia* (American beech), and *Fraxinus americana* (white ash) common; *Acer pensylvanicum* (striped maple) characteristic tall shrub; sparse herb layer but *Dryopteris intermedia* (intermediate woodfern), *Mitchella repens* (partridgeberry), *Clintonia borealis* (bluebead), *Trientalis borealis* (starflower), and *Lycopodium obscurum* (rare clubmoss) are common; occurs on acidic soils, often on rocky, north-facing slopes; distributed in large patches from VT south through DEWA. ..... **Hemlock - Transitional Northern Hardwood Forest (CEGL006639)**
[*Tsuga canadensis - Acer saccharum - Fagus grandifolia / Dryopteris intermedia* Forest]
7b. *Tsuga canadensis* (eastern hemlock) - northern hardwood forest with *Picea rubens* (red spruce) present (<45% cover); herb layer may contain more boreal species such as *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), *Oxalis montana* (mountain woodsorrel), and *Trillium undulatum* (painted trillium); from northern and central New England and NY; occurs globally on sheltered slopes at moderate elevations of 30-610 m (100-2,000 feet); observed in VT and MA. ..... **Hemlock - Spruce - Hardwood Forest (CEGL006129)**
[*Tsuga canadensis - (Betula alleghaniensis) - Picea rubens / Cornus canadensis* Forest]

8a. *Liriodendron tulipifera* (tuliptree) in canopy along with *Quercus rubra* (northern red oak), *Tsuga canadensis* (eastern hemlock), *Betula lenta* (sweet birch), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and/or *Pinus strobus* (eastern white pine); *Hamamelis virginiana* (American witch-hazel) is the dominant shrub; *Polystichum acrostichoides* (Christmas fern) is the dominant herb; occurs on northern and eastern midslopes and in coves; plot/obs point elevation ranges from 384-797 m (1,261-2,614 feet). ..... **Red Oak - Hemlock - Mixed Hardwood Forest (CEGL006566)**
[*Quercus rubra - Tsuga canadensis - Liriodendron tulipifera / Hamamelis virginiana* Forest]
8b. *Liriodendron tulipifera* (tuliptree) absent from canopy. **9**

9a. Mixture of *Tsuga canadensis* (eastern hemlock) with *Fagus grandifolia* (American beech) and/or *Quercus rubra* (northern red oak) in canopy; canopy associates and subcanopy include *Betula lenta* (sweet birch), *Pinus strobus* (eastern white pine), *Prunus serotina* (black cherry), and/or *Acer rubrum* (red maple); *Hamamelis virginiana* (American witch-hazel), *Acer pensylvanicum* (striped maple), *Viburnum acerifolium* (mapleleaf viburnum), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs sparse; nutrient-poor, well-drained, often stony sandy loams or loamy sands; widespread in southern New England; observed in NY, NJ, MA, CT, and VT; elevation of plots/obs points ranges from 360-544 m (1,181-1,785 feet); successional monocultures of *Tsuga canadensis* (eastern hemlock) altered by hemlock woolly adelgid are mapped as this association. ..... **Hemlock - Beech - Red Oak Forest (CEGL006088)**
[*Tsuga canadensis - Fagus grandifolia - Quercus rubra* Forest]

9b. *Quercus prinus* (chestnut oak) codominant with *Tsuga canadensis* (eastern hemlock); *Quercus rubra* (northern red oak) is an overstory associate; *Betula lenta* (sweet birch), *Acer rubrum* (red maple), and *Tsuga canadensis* (eastern hemlock) common in subcanopy; *Rhododendron maximum* (great laurel) and/or *Kalmia latifolia* (mountain laurel) common; occurs on moderately steep sheltered slopes with northern exposures at lower elevations globally from 170-880 m (550-2,900 feet); ranges from the NJ Highlands south to the Central Appalachians; observed in NJ and NY. .....**Central Appalachian Hemlock - Chestnut Oak Forest (CEGL006923)**
[*Tsuga canadensis - Quercus prinus - Betula lenta* Forest]

8. Northern Hardwood Forests[33]

1a. Forests with enrichment indicators[34]. **2**
1b. Forests not as above; northern hardwoods dominant; enrichment indicators lacking. **10**

2a. Enriched northern hardwood forests with a 25-50% *Quercus* (oak) spp. Component. **3**
2b. Enriched northern hardwood forests without abundant *Quercus* (oak) spp.; oaks may be present but in low quantities (<25% cover). **6**

3a. Rich red oak - sugar maple forest dominated by *Quercus rubra* (northern red oak) and *Acer saccharum* (sugar maple) with *Fagus grandifolia* (American beech), *Liriodendron tulipifera* (tuliptree), and/or *Fraxinus americana* (white ash) common and abundant (usually >20% relative cover); *Hamamelis virginiana* (American witch-hazel) and *Lindera benzoin* (northern spicebush) common shrubs; ranges from MA to PA and the Central Appalachians; plot/obs point elevations range from 230-309 m (755-1,014 feet). ..... **High Allegheny Rich Red Oak - Sugar Maple Forest (CEGL006125)**
[*Quercus rubra - Acer saccharum - Liriodendron tulipifera* Forest]
3b. Deciduous forest lacking *Liriodendron tulipifera* (tuliptree). **4**

4a. Rich oak-hickory forest dominated by a mixture of *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Carya alba* (mockernut hickory), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and/or *Quercus prinus* (chestnut oak) often with *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) over an *Ostrya virginiana* (hophornbeam) subcanopy and grassy herbaceous layer dominated by *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), and/or *Carex lucorum* (Blue Ridge sedge) (sedge lawn may or may not be present) with *Solidago caesia* (wreath goldenrod), *Solidago bicolor* (white goldenrod), and *Deschampsia flexuosa* (wavy hairgrass); tall shrubs include *Viburnum acerifolium* (mapleleaf viburnum) and *Amelanchier arborea* (common serviceberry); *Vaccinium pallidum* (Blue Ridge blueberry) is common dwarf-shrub; occurs on low-elevation ridgetops, upper slopes, south- or west-facing sideslopes; extends from ME and VT to PA and northern NJ; plot/obs point elevation ranges from 285-478 m (935-1,561 feet). ..... **Oak - Hickory / Hophornbeam / Sedge Forest (CEGL006301)**
[*Quercus rubra - Carya (glabra, ovata) / Ostrya virginiana / Carex lucorum* Forest]
4b. *Acer saccharum* (sugar maple) - *Quercus* (oak) spp. Forest. **5**

[33]Deciduous northern hardwood forests; *Tsuga canadensis* (eastern hemlock) low in cover to absent (<25%).

[34]*Acer saccharum* (sugar maple), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), *Ostrya virginiana* (hophornbeam), *Carya* (hickory) spp., *Cornus alternifolia* (alternateleaf dogwood), *Caulophyllum thalictroides* (blue cohosh), *Panax quinquefolius* (American ginseng), *Dryopteris goldiana* (Goldie's woodfern), *Adiantum pedatum* (northern maidenhair), *Viola rotundifolia* (roundleaf yellow violet), *Hepatica nobilis* (hepatica), wide-leaved sedges (*Carex* Section Laxiflorae), *Geranium robertianum* (Robert's geranium), *Woodsia* (cliff fern) spp., *Arabis canadensis* (sicklepod)

5a. Semi-rich, dry to dry-mesic forest of calcareous environments, with *Quercus muehlenbergii* (chinquapin oak) and *Acer saccharum* (sugar maple) in the canopy; *Fraxinus americana* (white ash) may also be in canopy, with *Ostrya virginiana* (hophornbeam) common; herb layer diverse with forbs, ferns, and graminoids; occurs on upper slopes and wooded summits on limestone, dolomite or marble bedrock from NJ north to VT; plot/obs point elevations range from 120-290 m (394-951 feet). ..... **Sugar Maple - Chinquapin Oak / Sedge Forest (CEGL006162)**
[*Acer saccharum - Quercus muehlenbergii / Carex platyphylla* Forest]

5b. *Quercus muehlenbergii* (chinquapin oak) absent; semi-rich, dry-mesic forest with some combination of *Quercus rubra* (northern red oak), *Acer saccharum* (sugar maple), and *Fraxinus americana* (white ash) in canopy, with *Carya glabra* (pignut hickory) and *Betula lenta* (sweet birch) as canopy and subcanopy associates; *Tsuga canadensis* (eastern hemlock) can be occasional; *Ostrya virginiana* (hophornbeam) and *Viburnum acerifolium* (mapleleaf viburnum) characteristic; *Arisaema triphyllum* (Jack in the pulpit), *Polystichum acrostichoides* (Christmas fern), *Eurybia divaricata* (white wood aster), and *Polygonatum biflorum* (smooth Solomon's seal) common in diverse herb layer; occurs on rocky slopes; observed in NJ, NY and CT. ..... **Sugar Maple - Ash - Oak - Hickory Mesic Forest (CEGL006046)**
[*Acer saccharum - Quercus rubra / Hepatica nobilis* var. *obtusa* Forest]

6a. Enriched forest occurring on talus or sloping rocky soils; enrichment indicators present in addition to vines. **7**
6b. Enriched northern hardwood forests of seepage areas or deeper upland soils. **8**

7a. Enriched, dry-mesic to mesic forest on talus or shallow, very rocky soils dominated by *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) and with many canopy associates including *Tilia americana* (American basswood); some stands are dominated by *Betula lenta* (sweet birch) and have these enrichment indicators present at lower cover shrub layer is characterized by *Staphylea trifolia* (American bladdernut); herb layer is characterized by *Cystopteris* (bladderfern) spp., *Woodsia* (cliff fern) spp., *Asarum canadense* (Canadian wildginger), and others; tends to have more southern species that drop out at the northern edge of the range; ranges from VA northward with limited occurrences in New England; observed off trail at DEWA and at NY/NJ line. ..... **Northern Calcareous Talus Slope Forest (CEGL006577)**
[*Acer saccharum - Fraxinus americana - Juglans cinerea / Staphylea trifolia / Adlumia fungosa* Forest]

7b. Northern, enriched, dry-mesic forest/woodland dominated by *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) with *Ostrya virginiana* (hophornbeam) in the subcanopy; and species of non-enriched bedrock such as *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple); shrub and herb layers with circumneutral-calcareous indicators such as *Sambucus racemosa* (red elderberry), *Impatiens pallida* (pale touch-me-not), *Caulophyllum thalictroides* (blue cohosh), *Geranium robertianum* (Robert's geranium), *Arabis drummondii* (Drummond's rockcress), *Asarum canadense* (Canadian wildginger), or the sedges *Carex rosea* (rosy sedge), *Carex sprengelii* (Sprengel's sedge), or *Carex platyphylla* (broadleaf sedge); ranges from New Brunswick and VT south to NJ; global elevation ranges from 150-610 m (500-2,000 feet); observed in MA and VT. ..... **Rich Northern Hardwood Talus Woodland (CEGL005058)**
[*Acer saccharum - Tilia americana - Fraxinus americana / Ostrya virginiana / Geranium robertianum* Woodland]

8a. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)] and *Tsuga* (hemlock) spp. (hemlock ≤25% of canopy) and occasionally *Abies balsamea* (balsam fir) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, on slopes rather than in basins; plot elevations range from 295-611 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in NY, MA and VT. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]
8b. Seepage indicators absent; enriched upland northern hardwood forests. **9**

9a. Enriched transitional deciduous forests dominated by *Acer saccharum* (sugar maple) and *Tilia americana* (American basswood); *Ostrya virginiana* (hophornbeam) is very common as a small tree; *Acer pensylvanicum* (striped maple) is a characteristic shrub; strong-enrichment indicator herbs such as *Caulophyllum thalictroides* (blue cohosh), *Adiantum pedatum* (northern maidenhair), *Asarum canadense* (Canadian wildginger), and *Panax quinquefolius* (American ginseng), often with abundant spring ephemerals; from New England west to Michigan and south to NJ and NY; observed in CT, MA, and VT. ..... **Transitional Northern Sugar Maple - Ash Rich Mesic Forest (CEGL006637)**
[*Acer saccharum - Tilia americana / Acer pensylvanicum / Caulophyllum thalictroides* Forest]
9b. Canopy is dominated by a combination of *Acer saccharum* (sugar maple), *Betula alleghaniensis* (yellow birch), *Fraxinus americana* (white ash), and/or less commonly *Fagus grandifolia* (American beech); lacks the strong-enrichment indicator species mentioned above; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) common in understory; herbs are semi-rich, including *Viola rotundifolia* (roundleaf yellow violet), *Athyrium filix-femina* (common ladyfern), *Arisaema triphyllum* (Jack in the pulpit), *Maianthemum racemosum* (feathery false lily of the valley), *Tiarella cordifolia* (heartleaf foamflower), *Actaea pachypoda* (white baneberry), *Medeola virginiana* (Indian cucumber), wide-leaved sedges such as *Carex laxiculmis* (spreading sedge) and *Carex platyphylla* (broadleaf sedge), *Botrychium* (grapefern) spp., *Solidago flexicaulis* (zigzag goldenrod), *Osmunda claytoniana* (interrupted fern), and *Osmunda cinnamomea* (cinnamon fern); occurs globally at moderate elevations of 245-610 m (800-2,000 feet) on slightly enriched soils often in cove and toeslope settings, from PA north to ME; observed in NJ, NY, MA, and VT. ..... **Semi-rich Northern Hardwood Forest (CEGL006211)**
[*Acer saccharum - (Fraxinus americana) / Arisaema triphyllum* Forest]

10a. Northern hardwood forests with 25-50% conifer cover in the canopy. **11**
10b. Northern hardwood forests with deciduous associates in the canopy; conifers <25% of canopy. **20**

11a. Northern hardwood forest codominated by *Acer saccharum* (sugar maple) and *Pinus strobus* (eastern white pine); *Tsuga canadensis* (eastern hemlock) minor component; occurring on well-drained, acidic, sandy or gravelly soil over glacial till, in general a less mesic setting than northern hardwoods lacking white pine; observed in MA and VT. ..... **Northern Hardwood - White Pine Forest (CEGL005005)**
[*Acer saccharum - Pinus strobus / Acer pensylvanicum* Forest]
11b. Not as above. **12**

12a. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)] and *Tsuga* (hemlock) spp., and occasionally *Abies balsamea* (balsam fir) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, on slopes rather than in basins; plot/obs point elevations range from 295-610 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; observed in MA, NY and VT. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]
12b. Seepage indicators lacking; upland forests. **13**

13a. Early- to mid-successional native forest that may or may not appear disturbed with variable canopy composition depending on site history; *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), *Fagus grandifolia* (American beech), and *Quercus rubra* (northern red oak) (at <25% relative cover) occur in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) occasional minor associates in northern examples; trees 40-100 years old; ground cover may be represented by a diverse range of species based on sites history and disturbance pattern; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]
13b. Later-successional and mature forests. **14**

14a. *Liriodendron tulipifera* (tuliptree) in canopy along with *Quercus rubra* (northern red oak), *Tsuga canadensis* (eastern hemlock), *Betula lenta* (sweet birch), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and/or *Pinus strobus* (eastern white pine); *Hamamelis virginiana* (American witch-hazel) is the dominant shrub; *Polystichum acrostichoides* (Christmas fern) is the dominant herb; occurs on northern and eastern midslopes and in coves; plot/obs point elevation ranges from 384-797 m (1,261-2,614 feet); observed in NJ and NY. ..... **Red Oak - Hemlock - Mixed Hardwood Forest (CEGL006566)**
[*Quercus rubra - Tsuga canadensis - Liriodendron tulipifera / Hamamelis virginiana* Forest]
14b. *Liriodendron tulipifera* (tuliptree) absent. **15**

15a. *Picea rubens* (red spruce) common. **16**
15b. *Picea rubens* (red spruce) sparse to absent; *Tsuga canadensis* (eastern hemlock) most abundant conifer. **17**

16a. Mixed deciduous hardwoods - spruce forest most extensive at middle elevations, plot/obs point elevations range from 460-929 m (1,509-3,047 feet) on rocky slopes; *Picea rubens* (red spruce) [and in logged stands, *Abies balsamea* (balsam fir)], comprises at least 25-50% total cover, *Betula alleghaniensis* (yellow birch) and *Acer rubrum* (red maple) characteristic; other northern hardwoods *Acer saccharum* (sugar maple) and *Fagus grandifolia* (American beech) may be common; *Acer pensylvanicum* (striped maple), *Viburnum lantanoides* (hobblebush), and *Acer spicatum* (mountain maple) common; herbs include *Clintonia borealis* (bluebead), *Dennstaedtia punctilobula* (eastern hayscented fern), *Coptis trifolia* (threeleaf goldthread), *Oxalis montana* (mountain woodsorrel), *Oclemena acuminata* (whorled wood aster), *Maianthemum canadense* (Canada mayflower), and *Dryopteris intermedia* (intermediate woodfern); lacks *Betula papyrifera* var. *cordifolia* (mountain paper birch) and *Sorbus americana* (American mountain-ash) is sparse to absent; observed in MA and VT. ..... **Transitional Northern Hardwood - Red Spruce Forest (CEGL006267)**
[*Betula alleghaniensis - Picea rubens / Dryopteris campyloptera* Forest]

16b. *Tsuga canadensis* (eastern hemlock) - northern hardwood forest with *Picea rubens* (red spruce) present (<45% cover); herb layer may contain more boreal species such as *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), *Oxalis montana* (mountain woodsorrel), and *Trillium undulatum* (painted trillium); from northern and central New England and NY; occurs globally on sheltered slopes at moderate elevations 30-610 m (100-2,000 feet); observed in MA and VT. ..... **Hemlock - Spruce - Hardwood Forest (CEGL006129)**
[*Tsuga canadensis - (Betula alleghaniensis) - Picea rubens / Cornus canadensis* Forest]

17a. *Tsuga canadensis* (eastern hemlock) - northern hardwood forests lacking abundant *Betula lenta* (sweet birch), *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), and *Pinus strobus* (eastern white pine) in canopy. **18**

17b. Mixed *Tsuga canadensis* (eastern hemlock) with *Betula lenta* (sweet birch), *Quercus rubra* (northern red oak), and/or *Quercus prinus* (chestnut oak) in canopy. **19**

18a. *Tsuga canadensis* (eastern hemlock) - northern hardwood forest with *Picea rubens* (red spruce) present (<45% cover); herb layer may contain more boreal species such as *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), *Oxalis montana* (mountain woodsorrel), and *Trillium undulatum* (painted trillium); from northern and central New England and NY; occurs globally on sheltered slopes at moderate elevations 30-610 m (100-2,000 feet); observed in MA and VT. ..... **Hemlock - Spruce - Hardwood Forest (CEGL006129)**
[*Tsuga canadensis - (Betula alleghaniensis) - Picea rubens / Cornus canadensis* Forest]

18b. Transitional *Tsuga canadensis* (eastern hemlock) - northern hardwood forest; *Acer rubrum* (red maple), *Acer saccharum* (sugar maple), *Betula papyrifera* (paper birch), *Fagus grandifolia* (American beech), and *Fraxinus americana* (white ash) common; *Acer pensylvanicum* (striped maple) characteristic tall shrub; sparse herb layer but *Dryopteris intermedia* (intermediate woodfern), *Mitchella repens* (partridgeberry), *Clintonia borealis* (bluebead), *Trientalis borealis* (starflower), and *Lycopodium obscurum* (rare clubmoss) are common; occurs on acidic soils, often on rocky, north-facing slopes; distributed in large patches from NH south through PA (DEWA); elevation of plots/obs points ranges from 350-543 m (1,148-1,782 feet). ..... **Hemlock - Transitional Northern Hardwood Forest (CEGL006639)**
[*Tsuga canadensis - Acer saccharum - Fagus grandifolia / Dryopteris intermedia* Forest]

19a. Canopy associates and subcanopy include *Fagus grandifolia* (American beech), *Betula lenta* (sweet birch), *Pinus strobus* (eastern white pine), *Prunus serotina* (black cherry), and/or *Acer rubrum* (red maple); *Hamamelis virginiana* (American witch-hazel), *Acer pensylvanicum* (striped maple), *Viburnum acerifolium* (mapleleaf viburnum), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs sparse; nutrient-poor, well-drained, often stony sandy loams or loamy sands; widespread in southern New England; observed in NY, MA, CT, and VT; elevation of plots/obs points ranges from 360-544 m (1,181-1,785 feet); successional monocultures of *Tsuga canadensis* (eastern hemlock) altered by hemlock woolly adelgid are mapped as this association. ..... **Hemlock - Beech - Red Oak Forest (CEGL006088)**
[*Tsuga canadensis - Fagus grandifolia - Quercus rubra* Forest]

19b. *Quercus prinus* (chestnut oak) codominant with *Tsuga canadensis* (eastern hemlock); *Quercus rubra* (northern red oak) is an overstory associate; *Betula lenta* (sweet birch), *Acer rubrum* (red maple), and *Tsuga canadensis* (eastern hemlock) common in subcanopy; *Rhododendron maximum* (great laurel) and/or *Kalmia latifolia* (mountain laurel) common; occurs globally on moderately steep sheltered slopes with northern exposures at lower elevations from 170-880 m (550-2,900 feet); ranges from the NJ Highlands south to the Central Appalachians; observed in NJ and NY. ..... **Central Appalachian Hemlock - Chestnut Oak Forest (CEGL006923)**
[*Tsuga canadensis - Quercus prinus - Betula lenta* Forest]

20a. Mixed hardwood [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple)] and *Tsuga* (hemlock) spp. and occasionally *Abies balsamea* (balsam fir) mineral-soil wetlands occurring in seepage-influenced areas, at wetland-upland ecotones, on slopes rather than in basins; plot/obs point elevations range from 295-610 m (968-2,000 feet); herbaceous layer more indicative of nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

20b. Upland forests; seepage indicators lacking. **21**

21a. Oak - birch woodland occurring on talus slopes; *Quercus rubra* (northern red oak) and *Betula lenta* (sweet birch) codominant in canopy; acidic large-boulder talus slope woodland occurs in Lower New England, and south to the northern Piedmont; low to mid elevations, from near sea level to about 520 m (0-1,700 feet); observed in NY and PA. ..... **Oak - Birch Talus Slope Woodland (CEGL006585)**
[*Quercus rubra - Betula lenta / Polypodium virginianum* Woodland]

21b. Northern hardwood forest not on talus. **22**

22a. Early-successional northern hardwood forests and woodlands (young / even-aged stands of *Acer saccharum* (sugar maple) with depauperate shrub and herb layers or abundance of early-successional trees such as *Populus* (cottonwood) spp., *Betula populifolia* (gray birch), or *Prunus serotina* (black cherry). **23**

22b. Later-successional or mature northern hardwood forests. **24**

23a. Successional northern hardwoods dominated by some combination of *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Populus alba* (white poplar), *Betula papyrifera* (paper birch), and/or *Betula populifolia* (gray birch); *Populus balsamifera* (balsam poplar), *Acer rubrum* (red maple), *Prunus serotina* (black cherry), and/or *Prunus pensylvanica* (pin cherry) may also be common; shrub layer can be sparse or include *Lonicera morrowii* (Morrow's honeysuckle), *Frangula alnus* (glossy buckthorn), *Rubus* (blackberry) spp., and/or *Viburnum dentatum* (southern arrow-wood); old-field grasses and herbs and/or herbs typical of northern hardwood forests common in herb layer; ranges from closed-canopy forests to open woodlands; observed in MA and VT. .....**Ruderal Aspen - Birch Woodland (CEGL006303)**
[*Populus (tremuloides, grandidentata) - Betula (populifolia, papyrifera)* Ruderal Woodland]

23b. Early-successional variant of widespread typic northern hardwood forest occurring on acidic soils in central New England and at lower elevations in northern New England and upstate NY dominated by a monotypic canopy of *Acer saccharum* (sugar maple) or some combination of young, small-diameter *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech) and/or *Betula papyrifera* (paper birch); arises from cutting, farming, or extended grazing; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns, clubmosses (Lycopodiaceae), and other herbs. ....**Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]

24a. Northern hardwood forest lacking a significant component of *Quercus rubra* (northern red oak), *Liriodendron tulipifera* (tuliptree), **or** *Prunus serotina* (black cherry)..... **25**
24b. Northern hardwood forest with significant component of *Quercus rubra* (northern red oak), *Liriodendron tulipifera* (tuliptree), **or** *Prunus serotina* (black cherry)..... **28**

25a. Northern Hardwood Forest characterized by mix of *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), and/or *Betula alleghaniensis* (yellow birch); herb and shrub layers well developed, occurs as matrix or large patch forest. **26**
25b. Northern hardwood forest strongly dominated by *Acer saccharum* (sugar maple) or *Fagus grandifolia* (American beech); depauperate forest with poorly developed shrub and herb layers. **27**

26a. Northern hardwood forest with *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Fraxinus americana* (white ash), and occasionally *Prunus serotina* (black cherry); conifers including *Pinus strobus* (eastern white pine), *Tsuga canadensis* (eastern hemlock), and in the northern portion of the range, *Picea rubens* (red spruce) and/or *Abies balsamea* (balsam fir) may be present but not abundant (<25%); tall shrubs include *Acer pensylvanicum* (striped maple), *Acer spicatum* (mountain maple), and *Viburnum lantanoides* (hobblebush); herb layer patchy and most often a mix of *Dryopteris intermedia* (intermediate woodfern) and other ferns, clubmosses (Lycopodiaceae), *Trillium erectum* (red trillium), *Maianthemum racemosum* (feathery false lily of the valley), *Trientalis borealis* (starflower), *Arisaema triphyllum* (Jack in the pulpit), and other herbs; occurring on acidic soils; widespread matrix forest in central New England and at lower elevations in northern New England and upstate NY; very common observed in MA and VT. ....**Transitional Northern Hardwood Forest (CEGL006632)**
[*Acer saccharum - Fagus grandifolia - Fraxinus americana / Arisaema triphyllum* Forest]

26b. Canopy dominated by a combination of *Acer saccharum* (sugar maple), *Betula alleghaniensis* (yellow birch), *Fraxinus americana* (white ash), and/or less commonly *Fagus grandifolia* (American beech); *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) common in understory; herb layer similar to above but also characterized by a small number of rich indicators, including *Viola rotundifolia* (roundleaf yellow violet), *Tiarella cordifolia* (heartleaf foamflower), *Actaea pachypoda* (white baneberry), wide-leaved sedges such as *Carex laxiculmis* (spreading sedge) and *Carex platyphylla* (broadleaf sedge), *Botrychium* (grapefern) spp., and *Solidago flexicaulis* (zigzag goldenrod), occurs globally at moderate elevations of 245-610 m (800-2,000 feet) on slightly enriched soils often in cove and toeslope settings, from PA north to ME; common, observed in NJ, NY, MA, and VT. ..... **Semi-rich Northern Hardwood Forest (CEGL006211)**
[*Acer saccharum - (Fraxinus americana) / Arisaema triphyllum* Forest]

27a. Northern hardwood forest dominated by *Fagus grandifolia* (American beech) (>30% cover); *Acer saccharum* (sugar maple), *Prunus serotina* (black cherry), *Fraxinus americana* (white ash), and/or *Betula alleghaniensis* (yellow birch) also in canopy; *Dennstaedtia punctilobula* (eastern hayscented fern) and *Dryopteris intermedia* (intermediate woodfern) common ferns; occurs on low-nutrient sites; includes high elevation (968 m) "elfin" stunted, multi-trunked montane northern hardwood forests in MA and VT. ..... **Transitional Northern Hardwood Forest (CEGL006632)**
[*Acer saccharum - Fagus grandifolia - Fraxinus americana / Arisaema triphyllum* Forest]

27b. Early-successional variant of widespread typic northern hardwood forest occurring on acidic soils in central New England and at lower elevations in northern New England and upstate NY. dominated by some combination of young, small-diameter *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech) and/or *Betula papyrifera* (paper birch) or monotypic *Acer saccharum* (sugar maple); arises from cutting; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns, clubmosses (Lycopodiaceae), and other herbs. ....**Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]

28a. *Liriodendron tulipifera* (tuliptree) common. **29**
28b. *Liriodendron tulipifera* (tuliptree) sparse or absent..... **31**

29a. *Tsuga canadensis* (eastern hemlock) and/or *Pinus strobus* (eastern white pine) significant canopy components; *Tsuga canadensis* (eastern hemlock) up to 25% of canopy; *Liriodendron tulipifera* (tuliptree) in canopy along with *Quercus rubra* (northern red oak), *Tsuga canadensis* (eastern hemlock), *Betula lenta* (sweet birch), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and/or *Pinus strobus* (eastern white pine); *Hamamelis virginiana* (American witch-hazel) is the dominant shrub; *Polystichum acrostichoides* (Christmas fern) is the dominant herb; occurs on northern and eastern midslopes and in coves; plot/obs point elevation ranges from 384-797 m (1,261-2,614 feet); observed in NY and NJ. ....**Red Oak - Hemlock - Mixed Hardwood Forest (CEGL006566)**
[*Quercus rubra - Tsuga canadensis - Liriodendron tulipifera / Hamamelis virginiana* Forest]
29b. Conifers sparse or lacking. **30**

30a. *Quercus rubra* (northern red oak) absent from canopy; canopy characterized by a mixture of *Liriodendron tulipifera* (tuliptree), *Fagus grandifolia* (American beech), *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), and *Betula lenta* (sweet birch); occurs on deep soils that are not strongly acidic; mid- to lower-slope forest of the mid-Atlantic region; documented in PA and NJ; common off trail at DEWA..... **Beech - Tuliptree - Sugar Maple Forest (CEGL006296)**
[*Fagus grandifolia - Betula lenta - Liriodendron tulipifera - Acer saccharum* Forest]

30b. Deciduous forest dominated by *Quercus rubra* (northern red oak) and *Acer saccharum* (sugar maple) with *Fagus grandifolia* (American beech), *Liriodendron tulipifera* (tuliptree), and/or *Fraxinus americana* (white ash) common and abundant (usually >20% relative cover); *Hamamelis virginiana* (American witch-hazel) and *Lindera benzoin* (northern spicebush) common shrubs; ranges from MA to PA and the Central Appalachians; plot/obs point elevations range from 230-309 m (755-1,014 feet). ..... **High Allegheny Rich Red Oak - Sugar Maple Forest (CEGL006125)**
[*Quercus rubra - Acer saccharum - Liriodendron tulipifera* Forest]

31a. Northern hardwood forest with significant component of *Prunus serotina* (black cherry); Early-successional variant of widespread typic northern hardwood forest occurring on acidic soils in central New England and at lower elevations in northern New England and upstate NY; either monotypic *Acer saccharum* (sugar maple), or dominated by some combination of young, small-diameter *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech) and/or *Betula papyrifera* (paper birch); arises from cutting; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns, clubmosses (Lycopodiaceae), and other herbs. .....**Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]
31b. *Quercus rubra* (northern red oak) abundant in mixed canopy. **32**

32a. Canopy composition is a **variable** mixture of *Quercus rubra* (northern red oak) (usually at least 30% of the canopy), *Acer saccharum* (sugar maple), *Acer rubrum* (red maple), and in some stands *Pinus strobus* (eastern white pine) or *Tsuga canadensis* (eastern hemlock) (conifers generally make up less than 20% of the canopy cover); *Picea rubens* (red spruce) may occur sporadically at the northern extent, and *Nyssa sylvatica* (blackgum) may occur to the south; *Fraxinus americana* (white ash) and/or *Betula alleghaniensis* (yellow birch) are canopy associates; *Acer pensylvanicum* (striped maple), *Viburnum acerifolium* (mapleleaf viburnum), and *Lindera benzoin* (northern spicebush) are common shrubs; *Aralia nudicaulis* (wild sarsaparilla), *Dennstaedtia punctilobula* (eastern hayscented fern), *Athyrium filix-femina* (common ladyfern), and *Polystichum acrostichoides* (Christmas fern) are common herbs; occurs on sideslopes at low to mid elevations, usually under 550 m (1,800 feet) but can range up to 655 m (2,148 feet); observed in NJ, NY, CT MA, VT..... ..... **Red Oak - Transitional Northern Hardwood Forest (CEGL006635)**
[*Quercus rubra - Acer saccharum / Viburnum acerifolium - Lindera benzoin* Forest]
32b. Early- to mid-successional native forest (trees 40-100 years old) with canopy composition variable depending on site history; *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), *Fagus grandifolia* (American beech), and *Quercus rubra* (northern red oak) (<25%) occur in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are minor associates in northern examples; ground cover may be represented by a diverse range of species based on sites history and disturbance pattern; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT. .... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]

9. Pine and Mixed Pine Shrublands, Woodlands, and Forests

1a. *Pinus rigida* (pitch pine) dominant with highly variable canopy coverage; *Pinus rigida - Quercus ilicifolia* (pitch pine-bear oak) woodland barrens and shrublands occurring on shallow soils over bedrock and on dry rocky ridges and summits of low to moderate elevations; plot elevations range from 387-792 m (1,270-2,598 feet); *Pinus rigida* (pitch pine) dominant (tree or shrub-sized) with a variable mixture of canopy associates, such as *Quercus prinus* (chestnut oak), *Betula populifolia* (gray birch), *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and/or *Carya glabra* (pignut hickory); *Quercus ilicifolia* (bear oak) and *Photinia melanocarpa* (black chokeberry) characteristic in the tall-shrub layer; *Kalmia latifolia* (mountain laurel) often present; *Gaylussacia baccata* (black huckleberry) and *Vaccinium angustifolium* (lowbush blueberry) dominant dwarf-shrubs; *Deschampsia flexuosa* (wavy hairgrass) and *Maianthemum canadense* (Canada mayflower) common in the herb layer; high lichen cover characteristic; shallow acidic, well-drained sandy to gravelly soils; observed in NJ, NY, CT and MA. ..... **Pitch Pine Rocky Summit (CEGL006116)**
[*Pinus rigida / (Quercus ilicifolia) / Photinia melanocarpa / Deschampsia flexuosa* Woodland]
1b. *Pinus strobus* (eastern white pine) dominant or codominant. **2**

2a. Shale talus woodland with *Pinus strobus* (eastern white pine) and *Juniperus virginiana* (eastern red-cedar) in canopy with *Quercus prinus* (chestnut oak), *Carya glabra* (pignut hickory), *Quercus rubra* (northern red oak), and *Quercus alba* (white oak); characteristic shrubs and herbs include *Rhus glabra* (smooth sumac), *Quercus prinoides* (dwarf chinquapin oak), *Toxicodendron radicans* (eastern poison-ivy), *Penstemon hirsutus* (hairy beardtongue), *Antennaria plantaginifolia* (woman's tobacco), and *Carex pensylvanica* (Pennsylvania sedge); occurs on unstable shale talus with shallow, very well-drained soils; known range restricted to NY at 183 m (600 feet); rare association. .... **Shale Talus Slope Woodland (CEGL006074)**
[*Quercus prinus / Rhus* spp. / *Deschampsia flexuosa* Woodland]
2b. Other *Pinus strobus* (eastern white pine) forests. **3**

3a. Early- and mid-successional, ruderal or planted *Pinus strobus* (eastern white pine) and mixed pine forests. **4**
3b. Later-successional and mixed canopy *Pinus strobus* (eastern white pine) forests **8**

4a. Evergreen-dominated canopy. **5**
4b. Mixed evergreen-deciduous canopy with *Pinus strobus* (eastern white pine) and *Quercus* (oak) spp. **and/or** early-successional hardwoods. **7**

5a. Multiple *Pinus* (pine) species in canopy; other conifers sometimes present in smaller amounts; planted in postagricultural fields and pastures; plantations of mixed pines or pine mixed with other non-native planted conifers; common throughout the Northeast; along entire length of trail. .... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
5b. Planted and successional, even-aged stands of *Pinus strobus* (eastern white pine), and sometimes with *Tsuga canadensis* (eastern hemlock) replacing eastern white pine in the canopy; widespread throughout the Northeast. **6**

6a. *Pinus strobus* (eastern white pine) plantations; observed in CT..... .....**Eastern White Pine Plantation (CST007178)**
[*Pinus strobus* Forest Plantation]
6b. Successional stands of *Pinus strobus* (eastern white pine), [or as in VT, *Tsuga canadensis* (eastern hemlock) replaces eastern white pine in the canopy]; *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Fraxinus americana* (white ash), and/or *Prunus serotina* (black cherry) may be common in canopy and/or subcanopy; observed in CT and VT..... .....**Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

7a. Composition is variable depending on site history; canopy is a mixture of *Quercus rubra* (northern red oak) [<25% cover], *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech) occurring in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); trees 40-100 years old; ground cover may be represented by a diverse range of species based on sites history and disturbance pattern; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]
7b. Mid-successional forests developing after heavy cutting or other disturbance in southern New England and NY south through Delaware Water Gap; *Pinus strobus* (eastern white pine) emergent (may or may not be present) over a layer of young, small-diameter hardwoods, such as *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Prunus serotina* (black cherry), and mesic oaks, including *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and *Quercus velutina* (black oak); heath shrubs <25%; plots off trail at DEWA. ....**Mid-Atlantic Mid-Successional Oak - Pine Forest (CEGL006454)**
[*Quercus (rubra, velutina, alba) - Betula lenta - (Pinus strobus)* Forest]

8a. *Pinus strobus* (eastern white pine) forests with *Quercus* (oak) spp. and/or northern hardwoods codominant in canopy. **9**
8b. *Pinus strobus* (eastern white pine) - mixed evergreen canopy; conifer trees >75% of canopy cover..... **11**

9a. *Liriodendron tulipifera* (tuliptree) in canopy along with *Quercus rubra* (northern red oak), *Tsuga canadensis* (eastern hemlock), *Betula lenta* (sweet birch), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), and/or *Pinus strobus* (eastern white pine); *Hamamelis virginiana* (American witch-hazel) is the dominant shrub; *Polystichum acrostichoides* (Christmas fern) is the dominant herb; occurs on northern and eastern midslopes and in coves; plot/obs point elevation ranges from 384-797 m (1,261-2,614 feet); observed in NY and NJ..... .....**Red Oak - Hemlock - Mixed Hardwood Forest (CEGL006566)**
[*Quercus rubra - Tsuga canadensis - Liriodendron tulipifera / Hamamelis virginiana* Forest]
9b. *Liriodendron tulipifera* (tuliptree) absent from canopy..... **10**

10a. *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus velutina* (black oak), and/or *Quercus coccinea* (scarlet oak) share canopy dominance with *Pinus strobus* (eastern white pine); *Fagus grandifolia* (American beech) and *Tsuga canadensis* (eastern hemlock) can be common and abundant; *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) are characteristic; *Kalmia latifolia* (mountain laurel) is a tall shrub; a heath layer may be extensive and includes *Vaccinium angustifolium* (lowbush blueberry) and *Gaylussacia baccata* (black huckleberry); common herbs include *Aralia nudicaulis* (wild sarsaparilla), *Pteridium aquilinum* (western brackenfern), and *Gaultheria procumbens* (eastern teaberry); ranges throughout the Northeast from WV north to ME at elevations below 915 m (3,000 feet); observed in NJ, NY, CT, and MA. ..... **Northeastern White Pine - Oak Forest (CEGL006293)**
[*Pinus strobus - Quercus (rubra, velutina) - Fagus grandifolia* Forest]

10b. Northern hardwood forests with 25-50% conifer cover in the canopy codominated by *Acer saccharum* (sugar maple) and *Pinus strobus* (eastern white pine); *Tsuga canadensis* (eastern hemlock) minor component; occurring on well-drained, acidic, sandy or gravelly soil over glacial till, in general a less mesic setting than northern hardwoods lacking white pine; observed in MA and VT. ..... **Northern Hardwood - White Pine Forest (CEGL005005)**
[*Acer saccharum - Pinus strobus / Acer pensylvanicum* Forest]

11a. Dry-mesic pine - hemlock forest codominated by *Tsuga canadensis* (eastern hemlock) and *Pinus strobus* (eastern white pine); *Picea rubens* (red spruce) and northern hardwoods typical in understory; occurs on lower-elevation slopes and flats from MA to ME on sheltered slopes with sandy or stony, acidic, moderately well-drained soils. .... **White Pine - Hemlock - Red Spruce Forest (CEGL006324)**
[*Pinus strobus - Tsuga canadensis - Picea rubens* Forest]

11b. *Picea rubens* (red spruce) absent to minor; *Pinus strobus* (eastern white pine) forests with abundant or codominant *Tsuga canadensis* (eastern hemlock); *Acer rubrum* (red maple) and *Quercus rubra* (northern red oak) common associates; *Acer pensylvanicum* (striped maple) is a common, though rarely abundant small tree; *Kalmia latifolia* (mountain laurel) common shrub; occurs on sloping sites and in sheltered ravines; from PA and NJ north to ME. ....**Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest (CEGL006328)**
[*Pinus strobus - Tsuga canadensis* Lower New England-Northern Piedmont Forest]

10. Mixed Oak - Conifer, Mixed Oak, and Oak - Hickory Forests

1a. Later-successional forests dominated by *Quercus* (oak) spp. and/or *Quercus* (oak) spp. and *Carya* (hickory) spp. **2**
1b. Successional forests; young, even-aged native and non-native hardwoods and/or light-requiring, wind-dispersed trees such as *Populus* (cottonwood) spp., *Betula* (birch) spp., and/or *Acer rubrum* (red maple) characteristic. **31**

2a. Mixed conifer-deciduous forests, *Quercus* (oak) spp. codominant with conifers (>30% cover) **3**
2b. Oak and oak-hickory forests and woodlands with conifers much less frequent (≤30% cover to absent), may be codominated by other deciduous trees. **6**

3a. Oak - pine forests. **4**
3b. Mixed *Quercus* (oak) spp. - *Tsuga canadensis* (eastern hemlock) forests; *Tsuga canadensis* (eastern hemlock) codominant (>25% cover). **5**

4a. Mixed *Quercus* (oak) spp. - *Pinus strobus* (eastern white pine) forest; *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus velutina* (black oak), and/or *Quercus coccinea* (scarlet oak) share canopy dominance with *Pinus strobus* (eastern white pine); *Fagus grandifolia* (American beech) and *Tsuga canadensis* (eastern hemlock) can be common and abundant; *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) are characteristic; *Kalmia latifolia* (mountain laurel) is a tall shrub; a heath layer may be extensive and includes *Vaccinium angustifolium* (lowbush blueberry) and *Gaylussacia baccata* (black huckleberry); common herbs include *Aralia nudicaulis* (wild sarsaparilla), *Pteridium aquilinum* (western brackenfern), and *Gaultheria procumbens* (eastern teaberry); ranges throughout the Northeast from WV north to ME at elevations below 915 m (3,000 feet); observed NJ, NY, CT, and MA. ..... **Northeastern White Pine - Oak Forest (CEGL006293)**
[*Pinus strobus - Quercus (rubra, velutina) - Fagus grandifolia* Forest]
4b. *Pinus rigida - Quercus ilicifolia* (pitch pine-bear oak) woodlands with up to 60% canopy cover occurring on shallow soils over bedrock and on dry rocky ridges and summits of low to moderate elevations; plot elevations range from 387-792 m (1,270-2,598 feet); *Pinus rigida* (pitch pine) dominant (tree or shrub-sized) with a variable mixture of canopy associates, such as *Quercus prinus* (chestnut oak), *Betula populifolia* (gray birch), *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and/or *Carya glabra* (pignut hickory); *Quercus ilicifolia* (bear oak) and *Photinia melanocarpa* (black chokeberry) characteristic in the tall-shrub layer; *Kalmia latifolia* (mountain laurel) often present; *Gaylussacia baccata* (black huckleberry) and *Vaccinium angustifolium* (lowbush blueberry) dominant dwarf-shrubs; *Deschampsia flexuosa* (wavy hairgrass) and *Maianthemum canadense* (Canada mayflower) common in the herb layer; high lichen cover characteristic; shallow acidic, well-drained sandy to gravelly soils; observed in NJ, NY, CT and MA. ..... **Pitch Pine Rocky Summit (CEGL006116)**
[*Pinus rigida / (Quercus ilicifolia) / Photinia melanocarpa / Deschampsia flexuosa* Woodland]

5a. *Fagus grandifolia* (American beech) present in canopy; mixture of *Tsuga canadensis* (eastern hemlock) with *Fagus grandifolia* (American beech) and/or *Quercus rubra* (northern red oak) in canopy; canopy associates and subcanopy include *Betula lenta* (sweet birch), *Pinus strobus* (eastern white pine), *Prunus serotina* (black cherry), and/or *Acer rubrum* (red maple); *Hamamelis virginiana* (American witch-hazel), *Acer pensylvanicum* (striped maple), *Viburnum acerifolium* (mapleleaf viburnum), and *Kalmia latifolia* (mountain laurel) are common shrubs; herbs sparse; nutrient-poor, well-drained, often stony sandy loams or loamy sands; widespread in southern New England; observed in NY, MA, CT and VT; elevation of plots/obs points ranges from 360-544 m (1,181-1,785 feet); successional monocultures of *Tsuga canadensis* (eastern hemlock) altered by hemlock woolly adelgid are mapped as this association. ..... **Hemlock - Beech - Red Oak Forest (CEGL006088)**
[*Tsuga canadensis - Fagus grandifolia - Quercus rubra* Forest]
5b. *Fagus grandifolia* (American beech) absent to sparse. **6**

6a. *Liriodendron tulipifera* (tuliptree) in canopy along with *Quercus rubra* (northern red oak), *Tsuga canadensis* (eastern hemlock), *Betula lenta* (sweet birch), *Betula alleghaniensis* (yellow birch), and/or *Pinus strobus* (eastern white pine); *Hamamelis virginiana* (American witch-hazel) is the dominant shrub; *Polystichum acrostichoides* (Christmas fern) is the dominant herb; occurs on northern and eastern midslopes and in coves; plot/obs point elevation ranges from 384-797 m (1,261-2,614 feet); occurs in NJ and NY..... **Red Oak - Hemlock - Mixed Hardwood Forest (CEGL006566)**
[*Quercus rubra - Tsuga canadensis - Liriodendron tulipifera / Hamamelis virginiana* Forest]
6b. *Quercus prinus* (chestnut oak) codominant with *Tsuga canadensis* (eastern hemlock); *Quercus rubra* (northern red oak) is an overstory associate; *Betula lenta* (sweet birch), *Acer rubrum* (red maple), and *Tsuga canadensis* (eastern hemlock) common in subcanopy; *Kalmia latifolia* (mountain laurel) common, and *Rhododendron maximum* (great laurel) possible in more southern examples; *Liriodendron tulipifera* (tuliptree) lacking. Occurs globally on moderately steep sheltered slopes with northern exposures at lower elevations from 170-880 m (550-2,900 feet); ranges from the NJ Highlands south to the Central Appalachians; observed in NJ and NY. ..... **Central Appalachian Hemlock - Chestnut Oak Forest (CEGL006923)**
[*Tsuga canadensis - Quercus prinus - Betula lenta* Forest]

7a. Hardwood forests, wet at least seasonally, codominated by *Quercus* (oak) spp.; transitional upland / wetland forest occurring in a basin setting with a variable canopy typically including *Fraxinus* (ash) spp., *Quercus rubra* (northern red oak), *Acer rubrum* (red maple) and/or *Betula alleghaniensis* (yellow birch); *Lindera benzoin* (northern spicebush) dominates shrub layer; *Osmunda cinnamomea* (cinnamon fern), *Osmunda regalis* (royal fern), *Osmunda claytoniana* (interrupted fern), *Thelypteris palustris* (eastern marsh fern), *Impatiens capensis* (jewelweed), *Aralia nudicaulis* (wild sarsaparilla), and *Symplocarpus foetidus* (skunk-cabbage) common in the herb layer; ranges from Southern New England north to ME; observed in CT..... **Upland/Wetland Transitional Forest (CEGL006000)**
[*Quercus rubra - Betula alleghaniensis / Osmunda cinnamomea* Forest]
7b. Upland forests..... **8**

8a. Enriched forests and woodlands with frequent and sometimes abundant enrichment indicators in canopy, such as *Carya ovalis* (red hickory), *Carya ovata* (shagbark hickory), *Acer saccharum* (sugar maple), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), *Ostrya virginiana* (hophornbeam), and/or herbs such as *Viola rotundifolia* (roundleaf yellow violet), *Hepatica nobilis* (hepatica), wide-leaved *Carex* (sedge) spp., *Geranium robertianum* (Robert's geranium), and/or *Woodsia* (cliff fern) spp., among others..... **9**
8b. Acidic oak and oak-hickory forests and woodlands lacking significant cover of enrichment indicators..... **13**

9a. Rich oak-hickory forest dominated by a mixture of *Carya glabra* (pignut hickory), *Carya alba* (mockernut hickory), *Carya ovata* (shagbark hickory), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and/or *Quercus prinus* (chestnut oak) often with *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) over an *Ostrya virginiana* (hophornbeam) subcanopy and grassy herbaceous layer dominated by *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), and/or *Carex lucorum* (Blue Ridge sedge) (sedge lawn may or may not be present) with *Solidago caesia* (wreath goldenrod), *Solidago bicolor* (white goldenrod), and *Deschampsia flexuosa* (wavy hairgrass); tall shrubs include *Viburnum acerifolium* (mapleleaf viburnum) and *Amelanchier arborea* (common serviceberry); *Vaccinium pallidum* (Blue Ridge blueberry) is common dwarf-shrub; occurs on low-elevation ridgetops, upper slopes, south- or west-facing sideslopes at elevations ranging from 285-478 m (935-1,561 feet); extends from ME and VT to PA and northern NJ; observed in NJ, NY, PA, and CT..... **Oak - Hickory / Hophornbeam / Sedge Forest (CEGL006301)**
[*Quercus rubra - Carya (glabra, ovata) / Ostrya virginiana / Carex lucorum* Forest]
9b. Enriched *Quercus* (oak) spp. forests with *Acer saccharum* (sugar maple) and/or *Liriodendron tulipifera* (tuliptree) codominant or common; lacks abundant *Carya* (hickory) spp. **10**

10a. *Quercus* (oak) spp. forests with *Liriodendron tulipifera* (tuliptree) common and abundant (greater than 20% cover); dominated by *Quercus rubra* (northern red oak) and *Acer saccharum* (sugar maple) with *Fagus grandifolia* (American beech) and *Liriodendron tulipifera* (tuliptree) common and abundant (usually >20% relative cover); *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) common in the subcanopy; sparse shrub layer; *Hamamelis virginiana* (American witch-hazel) and *Lindera benzoin* (northern spicebush) common shrubs; *Vaccinium pallidum* (Blue Ridge blueberry) common dwarf-shrub; *Dryopteris intermedia* (intermediate woodfern) common herb; found in coves, on moist north- and east-facing slopes and on well-drained flats at elevations ranging from 230-309 m (755-1,014 feet), often covered by bouldery colluvia; ranges from MA to PA and the Central Appalachians; observed in NY, MA. ..... **High Allegheny Rich Red Oak - Sugar Maple Forest (CEGL006125)**
[*Quercus rubra - Acer saccharum - Liriodendron tulipifera* Forest]
10b. *Quercus* (oak) spp. - *Acer saccharum* (sugar maple) forest lacking *Liriodendron tulipifera* (tuliptree)..... **11**

11a. Semi-rich, dry to dry-mesic forest of calcareous settings, with *Quercus muehlenbergii* (chinquapin oak) and *Acer saccharum* (sugar maple) in canopy; *Fraxinus americana* (white ash) may also be in canopy; with *Ostrya virginiana* (hophornbeam) common; herb layer diverse with forbs, ferns, and graminoids; occurs on upper slopes and wooded summits on limestone, dolomite or marble bedrock at elevations ranging from 120-290 m (394-951 feet); observed in NJ, CT and MA..... **Sugar Maple - Chinquapin Oak / Sedge Forest (CEGL006162)**
[*Acer saccharum - Quercus muehlenbergii / Carex platyphylla* Forest]
11b. *Quercus muehlenbergii* (chinquapin oak) absent. **12**

12a. Semi-rich, dry-mesic with some combination of *Quercus rubra* (northern red oak), *Acer saccharum* (sugar maple), and *Fraxinus americana* (white ash) common in canopy, with *Carya glabra* (pignut hickory) and *Betula lenta* (sweet birch) as canopy and subcanopy associates; *Ostrya virginiana* (hophornbeam) and *Viburnum acerifolium* (mapleleaf viburnum) characteristic; *Arisaema triphyllum* (Jack in the pulpit), *Polystichum acrostichoides* (Christmas fern), *Eurybia divaricata* (white wood aster), and *Polygonatum biflorum* (smooth Solomon's seal) common in diverse herb layer; occurs on rocky slopes; CT obs points have *Pinus strobus* (eastern white pine) above canopy; observed in NY, NJ, and CT..... **Sugar Maple - Ash - Oak - Hickory Mesic Forest (CEGL006046)**
[*Acer saccharum - Quercus rubra / Hepatica nobilis* var. *obtusa* Forest]
12b. Canopy composition is a variable mixture of *Quercus rubra* (northern red oak) (usually at least 30% of the canopy), *Acer saccharum* (sugar maple), *Acer rubrum* (red maple), and in some stands *Pinus strobus* (eastern white pine) or *Tsuga canadensis* (eastern hemlock) (conifers generally make up less than 20% of the canopy cover); *Picea rubens* (red spruce) may occur sporadically at the northern extent of this community, and *Nyssa sylvatica* (blackgum) may occur to the south; *Fraxinus americana* (white ash) and/or *Betula alleghaniensis* (yellow birch) are canopy associates; *Acer pensylvanicum* (striped maple),*Viburnum acerifolium* (mapleleaf viburnum), and *Lindera benzoin* (northern spicebush) are common shrubs; *Aralia nudicaulis* (wild sarsaparilla), *Dennstaedtia punctilobula* (eastern hayscented fern), *Athyrium filix-femina* (common ladyfern), and *Polystichum acrostichoides* (Christmas fern) are common herbs; occurs on sideslopes at low to mid elevations, usually under 550 m (1,800 feet) but can range up to 655 m (2,148 feet); observed in NJ, NY, CT, MA, and VT..... **Red Oak - Transitional Northern Hardwood Forest (CEGL006635)**
[*Quercus rubra - Acer saccharum / Viburnum acerifolium - Lindera benzoin* Forest]

13a. *Quercus* (oak) spp. forests and woodlands; several oak species can be dominant in the canopy; with ericaceous species cover ≥10%..... **14**
13b. Oak, oak-hickory, oak-northern hardwood forests and woodlands (several oaks can be dominant in the canopy) with low ericaceous species cover (<10% cover). **22**

14a. Mixed *Quercus* (oak) spp. - *Pinus strobus* (eastern white pine) forest; *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus velutina* (black oak), and/or *Quercus coccinea* (scarlet oak) share canopy dominance with *Pinus strobus* (eastern white pine); *Fagus grandifolia* (American beech) and *Tsuga canadensis* (eastern hemlock) can be common and abundant; *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) are characteristic; *Kalmia latifolia* (mountain laurel) is a tall shrub; a heath layer may be extensive and includes *Vaccinium angustifolium* (lowbush blueberry) and *Gaylussacia baccata* (black huckleberry); common herbs include *Aralia nudicaulis* (wild sarsaparilla), *Pteridium aquilinum* (western brackenfern), and *Gaultheria procumbens* (eastern teaberry); ranges throughout the Northeast from WV north to ME at elevations below 915 m (3,000 feet); observed in NJ, NY, CT, and MA..... **Northeastern White Pine - Oak Forest (CEGL006293)**
[*Pinus strobus - Quercus (rubra, velutina) - Fagus grandifolia* Forest]
14b. *Pinus strobus* (eastern white pine) sparse to absent **15**

15a. *Quercus* (oak) spp. forests and woodlands dominated or codominated (≥20% cover) by *Quercus prinus* (chestnut oak) [or by *Quercus rubra* (northern red oak) from southwestern VT and north, beyond range of *Quercus prinus* (chestnut oak)]..... **16**
15b. Oak forests or woodlands and oak-hickory forests (from southwestern VT and south) not dominated by *Quercus prinus* (chestnut oak); other oaks such as *Quercus velutina* (black oak), *Quercus coccinea* (scarlet oak), and/or *Quercus rubra* (northern red oak) more abundant. **18**

16a. *Quercus prinus* (chestnut oak) dominant with *Quercus rubra* (northern red oak) an overstory associate; scattered *Tsuga canadensis* (eastern hemlock) in canopy; *Betula lenta* (sweet birch), *Acer rubrum* (red maple), and *Tsuga canadensis* (eastern hemlock) common in subcanopy; *Rhododendron maximum* (great laurel) or *Kalmia latifolia* (mountain laurel) common; occurs globally on moderately steep sheltered slopes with northern exposures at lower elevations from 170-880 m (550-2,900 feet); ranges from the NJ Highlands south to the Central Appalachians; observed in NJ and NY. ..... **Central Appalachian Hemlock - Chestnut Oak Forest (CEGL006923)**
[*Tsuga canadensis - Quercus prinus - Betula lenta* Forest]
16b. *Tsuga canadensis* (eastern hemlock) absent or sparse..... **17**

17a. Gnarled specimens of *Betula lenta* (sweet birch), *Quercus prinus* (chestnut oak), and/or *Quercus rubra* (northern red oak) characteristic; *Hamamelis virginiana* (American witch-hazel), *Sorbus americana* (American mountain-ash), and/or *Kalmia latifolia* (mountain laurel) common tall shrubs, and *Vaccinium pallidum* (Blue Ridge blueberry) common dwarf-shrub; *Parthenocissus quinquefolia* (Virginia creeper) characteristic vine; *Polypodium virginianum* (rock polypody) characteristic fern; high lichen cover typical; boulderfield or talus slope association occurring on fractured rock from 336-462 m (1,104-1,515 feet) along the PA-NJ border; can have low vegetation cover and high rock cover; observed off trail at DEWA and on trail in NJ and NY. ..... **Sweet Birch - Chestnut Oak Talus Woodland (CEGL006565)**
[*Betula lenta - Quercus prinus / Parthenocissus quinquefolia* Woodland]
17b. Widespread *Quercus prinus* (chestnut oak) forest of Lower New England (New England and NY); *Quercus rubra* (northern red oak), *Quercus coccinea* (scarlet oak), and/or *Quercus velutina* (black oak) may be common in the canopy in the northern portion of the range; understory with dense *Vaccinium pallidum* (Blue Ridge blueberry), *Vaccinium angustifolium* (lowbush blueberry), and/or *Gaylussacia baccata* (black huckleberry); herbaceous layer poorly-developed and depauperate but includes *Danthonia spicata* (poverty oatgrass), *Carex pensylvanica* (Pennsylvania sedge), and *Aralia nudicaulis* (wild sarsaparilla); occurs on xeric upper slopes and ridgetops and steep sideslopes with shallow, acidic, infertile soils; ranges from ME to VA; observed in NJ, NY, CT and MA on the trail. ..... **Lower New England High Slope Chestnut Oak Forest (CEGL006282)**
[*Quercus prinus - Quercus (rubra, velutina) / Vaccinium (angustifolium, pallidum)* Forest]

18a. *Pinus strobus* (eastern white pine) in canopy. **19**
18b. Oak-hickory or oak / heath forests; *Pinus strobus* (eastern white pine) sparse to absent..... **20**

19a. Mixed *Quercus* (oak) spp. - *Pinus strobus* (eastern white pine) forest; *Quercus rubra* (northern red oak), *Quercus prinus* (chestnut oak), *Quercus alba* (white oak), *Quercus velutina* (black oak), and/or *Quercus coccinea* (scarlet oak) share canopy dominance with *Pinus strobus* (eastern white pine); *Fagus grandifolia* (American beech) and *Tsuga canadensis* (eastern hemlock) can be common and abundant; *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) are characteristic; *Kalmia latifolia* (mountain laurel) is a tall shrub; a heath layer may be extensive and includes *Vaccinium angustifolium* (lowbush blueberry) and *Gaylussacia baccata* (black huckleberry); common herbs include *Aralia nudicaulis* (wild sarsaparilla), *Pteridium aquilinum* (western brackenfern), and *Gaultheria procumbens* (eastern teaberry); ranges throughout the Northeast from WV north to ME at elevations below 915 m (3,000 feet); observed in NJ, NY, CT, and MA. ..... **Northeastern White Pine - Oak Forest (CEGL006293)**
[*Pinus strobus - Quercus (rubra, velutina) - Fagus grandifolia* Forest]

19b. Rocky summit woodland; *Quercus rubra* (northern red oak) dominant or codominant with *Quercus prinus* (chestnut oak), *Quercus velutina* (black oak), *Quercus coccinea* (scarlet oak), and/or *Acer rubrum* (red maple); *Quercus coccinea* (scarlet oak) may be common to dominant in some stands in NY; *Pinus* (pine) spp. and *Betula* (birch) spp. may be present; *Sassafras albidum* (sassafras), *Castanea dentata* (American chestnut), and *Amelanchier laevis* (Allegheny serviceberry) are characteristic. Canopies are often composed of stunted individuals; *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and/or *Gaylussacia baccata* (black huckleberry) dominate the shrub layer; *Deschampsia flexuosa* (wavy hairgrass), *Danthonia spicata* (poverty oatgrass), *Cypripedium acaule* (moccasin flower), *Aralia nudicaulis* (wild sarsaparilla), and *Pteridium aquilinum* (western brackenfern) are characteristic herbs; woodland or stunted forest occurring on rocky upper slopes and low- to mid-elevation summits; ranges from the Central Appalachians north through the Northern Appalachians; elevations range from 375-567 m (1,235-1,860 feet) in New England; observed in NY, MA and VT. ..... **Red Oak / Heath Woodland Rocky Summit (CEGL006134)**
[*Quercus rubra - (Quercus prinus) / Vaccinium* spp. / *Deschampsia flexuosa* Woodland]

20a. Oaks predominant; understory characterized by heaths and/or graminoids. **21**
20b. Oaks present but mixed with other tree genera..... **26**

21a. *Quercus prinus* (chestnut oak) strongly dominant in forest stand or mixed with other species in open, often gnarled, canopy on steep slopes. **22**
21b. *Quercus prinus* (chestnut oak) sparse to absent; canopy dominated by *Quercus velutina* (black oak), *Quercus alba* (white oak), or *Quercus rubra* (northern red oak); scattered pines may be present. **24**

22a. *Quercus rubra* (northern red oak), *Quercus coccinea* (scarlet oak), and/or *Quercus velutina* (black oak) often codominant canopy with *Quercus prinus* (chestnut oak), understory with dense *Vaccinium pallidum* (Blue Ridge blueberry), *Vaccinium angustifolium* (lowbush blueberry), and/or *Gaylussacia baccata* (black huckleberry); herbaceous layer poorly-developed and depauperate but includes *Danthonia spicata* (poverty oatgrass), *Carex pensylvanica* (Pennsylvania sedge), and *Aralia nudicaulis* (wild sarsaparilla); occurs on xeric upper slopes and ridgetops and steep sideslopes with shallow, acidic, infertile soils; ranges from ME to VA; observed in NJ, NY, CT and MA on trail. .....**Lower New England High Slope Chestnut Oak Forest (CEGL006282)**
[*Quercus prinus - Quercus (rubra, velutina) / Vaccinium (angustifolium, pallidum)* Forest]
22b. Canopy open, often gnarled; substrate shale or boulder talus on slopes. **23**

23a. Shale talus woodland with known range restricted to NY with *Pinus strobus* (eastern white pine) and *Juniperus virginiana* (eastern red-cedar) in canopy with *Quercus prinus* (chestnut oak), *Carya glabra* (pignut hickory), *Quercus rubra* (northern red oak), and *Quercus alba* (white oak); characteristic shrubs and herbs include *Rhus glabra* (smooth sumac), *Quercus prinoides* (dwarf chinquapin oak), *Toxicodendron radicans* (eastern poison-ivy), *Penstemon hirsutus* (hairy beardtongue), *Antennaria plantaginifolia* (woman's tobacco), and *Carex pensylvanica* (Pennsylvania sedge); occurring on unstable shale talus with shallow, very well-drained soils; rare association; observed in NY at 183 m (600 feet)..... **Shale Talus Slope Woodland (CEGL006074)**
[*Quercus prinus / Rhus* spp. / *Deschampsia flexuosa* Woodland]

23b. Gnarled specimens of *Betula lenta* (sweet birch), *Quercus prinus* (chestnut oak), and/or *Quercus rubra* (northern red oak) characteristic; *Hamamelis virginiana* (American witch-hazel), *Sorbus americana* (American mountain-ash), and/or *Kalmia latifolia* (mountain laurel) common tall shrubs, and *Vaccinium pallidum* (Blue Ridge blueberry) common dwarf-shrub; *Parthenocissus quinquefolia* (Virginia creeper) characteristic vine; *Polypodium virginianum* (rock polypody) characteristic fern; high lichen cover typical; boulderfield or talus slope association occurring on fractured rock from 336-462 m (1,104-1,515 feet) along the PA-NJ border; can have low vegetation cover and high rock cover; observed off trail at DEWA and in NJ and NY..... **Sweet Birch - Chestnut Oak Talus Woodland (CEGL006565)**
[*Betula lenta - Quercus prinus / Parthenocissus quinquefolia* Woodland]

24a. Dominant species in canopy are monotypic or mixtures of *Quercus velutina* (black oak), *Quercus alba* (white oak), and *Quercus rubra* (northern red oak); low-shrub layer dominated by *Vaccinium* (blueberry) spp. and *Gaylussacia* (huckleberry) spp. and tall-shrub layer includes *Kalmia latifolia* (mountain laurel); herbaceous layer may include *Pteridium aquilinum* (western brackenfern), *Cypripedium acaule* (moccasin flower); observed in PA, NJ, NY, and MA..... **Allegheny Plateau Oak Forest (CEGL006018)**
[*Quercus (velutina, alba) / Vaccinium pallidum / Pteridium aquilinum* High Allegheny Plateau, Western Allegheny Plateau Forest]

24b. Composition is variable depending on site history, canopy is a mixture of *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech)..... **25**

25a. Light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry) occur in subcanopy or canopy; *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are occasional minor associates in northern examples; trees 40-100 years old; ground cover may be represented by a diverse range of species based on sites history and disturbance pattern; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]

25b. Canopy composition is a variable mixture of *Quercus rubra* (northern red oak) (usually at least 30% of the canopy), *Acer saccharum* (sugar maple), *Acer rubrum* (red maple), and in some stands *Pinus strobus* (eastern white pine) or *Tsuga canadensis* (eastern hemlock) (conifers generally make up less than 20% of the canopy cover); *Picea rubens* (red spruce) may occur sporadically at the northern extent of this community, and *Nyssa sylvatica* (blackgum) may occur to the south; *Fraxinus americana* (white ash) and/or *Betula alleghaniensis* (yellow birch) are canopy associates; *Acer pensylvanicum* (striped maple) and *Viburnum acerifolium* (mapleleaf viburnum), and *Lindera benzoin* (northern spicebush) are common shrubs; *Aralia nudicaulis* (wild sarsaparilla), *Dennstaedtia punctilobula* (eastern hayscented fern), *Athyrium filix-femina* (common ladyfern), and *Polystichum acrostichoides* (Christmas fern) are common herbs; occurs on sideslopes at low to mid elevations, usually under 550 m (1,800 feet) but can range up to 655 m (2,148 feet); observed in NJ, NY, CT, MA, and VT. ..... **Red Oak - Transitional Northern Hardwood Forest (CEGL006635)**
[*Quercus rubra - Acer saccharum / Viburnum acerifolium - Lindera benzoin* Forest]

26a. Oaks and hickories prevalent in canopy; northern hardwoods generally absent. **27**
26b. Oaks other than *Quercus rubra* (northern red oak) generally sparse to absent; northern hardwoods and/or early-successional trees, such as *Acer rubrum* (red maple), *Prunus serotina* (black cherry), present in abundance. **28**

27a. Acidic, dry oak-hickory forest of the Northeast (from ME to MD) occurring on well-drained loamy sand of midslopes with heath dominated understory where cover of herbs rarely exceeds shrubs; *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and *Quercus velutina* (black oak) prominent in the canopy; *Quercus prinus* (chestnut oak) and *Quercus coccinea* (scarlet oak) are canopy associates in the southern portion of the range; hickories include *Carya glabra* (pignut hickory), *Carya ovata* (shagbark hickory), *Carya alba* (mockernut hickory), and *Carya ovalis* (red hickory); *Acer saccharum* (sugar maple), *Betula lenta* (sweet birch), and *Nyssa sylvatica* (blackgum) may be common; *Carpinus caroliniana* (American hornbeam), *Ostrya virginiana* (hophornbeam), and *Cornus florida* (flowering dogwood) common understory trees; shrub layer is characterized by *Viburnum acerifolium* (mapleleaf viburnum); *Kalmia latifolia* (mountain laurel) common in some stands; patchy low-shrub layer of *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium pallidum* (Blue Ridge blueberry), and/or *Gaylussacia baccata* (black huckleberry); patchy herb layer with *Solidago caesia* (wreath goldenrod), *Eurybia divaricata* (white wood aster), *Aralia nudicaulis* (wild sarsaparilla), and *Dryopteris marginalis* (marginal woodfern); elevations range from 190-463 m (623-1,519 feet); observed in PA, NJ, CT, and NY and off trail at DEWA; (some CT examples have *Tsuga canadensis* (eastern hemlock) in subcanopy). ..... **Northeastern Dry Oak - Hickory Forest (CEGL006336)**
[*Quercus (alba, rubra, velutina) - Carya* spp. / *Viburnum acerifolium* Forest]
27b. Rich oak-hickory forest dominated by a mixture of *Carya glabra* (pignut hickory), *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and/or *Quercus prinus* (chestnut oak) often with *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash) over an *Ostrya virginiana* (hophornbeam) subcanopy and grassy herbaceous layer dominated by *Carex pensylvanica* (Pennsylvania sedge), *Danthonia spicata* (poverty oatgrass), and/or *Carex lucorum* (Blue Ridge sedge) with *Solidago caesia* (wreath goldenrod), *Solidago bicolor* (white goldenrod), and/or *Deschampsia flexuosa* (wavy hairgrass); tall shrubs include *Viburnum acerifolium* (mapleleaf viburnum) and *Amelanchier arborea* (common serviceberry); *Vaccinium pallidum* (Blue Ridge blueberry) is common short shrub; occurs on low-elevation ridgetops, upper slopes, south- or west-facing sideslopes from 285-478 m (935-1,561 feet); observed in PA, NJ, NY, and CT. ..... **Oak - Hickory / Hophornbeam / Sedge Forest (CEGL006301)**
[*Quercus rubra - Carya (glabra, ovata) / Ostrya virginiana / Carex lucorum* Forest]

28a. Northern hardwoods and *Quercus rubra* (northern red oak) prevalent; either mature forests or woodlands of talus slopes. **29**
28b. Early-successional species present in quantity. **31**

29a. *Quercus rubra* (northern red oak) and *Betula lenta* (sweet birch) codominant in canopy; acidic large-boulder talus slope woodland occurs in Lower New England and south to the northern Piedmont; low to mid elevations, from near sea level to about 520 m (1,700 feet); observed in PA and NY. ..... **Oak - Birch Talus Slope Woodland (CEGL006585)**
[*Quercus rubra - Betula lenta / Polypodium virginianum* Woodland]
29b. Closed forest, not on talus. **30**

30a. Transitional upland / wetland forest occurring at the base of slopes on the border of wetlands; including *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Fraxinus* (ash) spp., and/or *Quercus rubra* (northern red oak) in the canopy; *Lindera benzoin* (northern spicebush) dominates shrub layer; *Osmunda cinnamomea* (cinnamon fern), *Osmunda regalis* (royal fern), *Osmunda claytoniana* (interrupted fern), *Thelypteris palustris* (eastern marsh fern), *Impatiens capensis* (jewelweed), *Aralia nudicaulis* (wild sarsaparilla), and *Symplocarpus foetidus* (skunk-cabbage) common in the herb layer; ranges from Southern New England north to ME; observed in CT. ..... **Upland/Wetland Transitional Forest (CEGL006000)**
[*Quercus rubra - Betula alleghaniensis / Osmunda cinnamomea* Forest]

30b. Setting not transitional to wetlands; strong component of transitional northern hardwood species accompanies *Quercus rubra* (northern red oak) in the canopy; *Acer saccharum* (sugar maple) and *Quercus rubra* (northern red oak) codominant; *Fraxinus americana* (white ash) and/or *Betula alleghaniensis* (yellow birch) are canopy associates; *Acer pensylvanicum* (striped maple), *Viburnum acerifolium* (mapleleaf viburnum), and *Lindera benzoin* (northern spicebush) common shrubs; *Aralia nudicaulis* (wild sarsaparilla), *Dennstaedtia punctilobula* (eastern hayscented fern), *Athyrium filix-femina* (common ladyfern), and *Polystichum acrostichoides* (Christmas fern) common herbs; occurs on sideslopes at low to mid elevations, usually under 550 m (1,800 feet) but can range up to 655 m (2,148 feet); observed in NJ, NY CT, MA, and VT. ..... **Red Oak - Transitional Northern Hardwood Forest (CEGL006635)**
[*Quercus rubra - Acer saccharum / Viburnum acerifolium - Lindera benzoin* Forest]

31a. *Pinus strobus* (eastern white pine) usually present in quantity; mid-successional forests developing after heavy cutting or other disturbance from Delaware Water Gap north to southern New England; emergent *Pinus strobus* (eastern white pine) may be present over a layer of young, small-diameter hardwoods, such as *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Prunus serotina* (black cherry), and oaks, including *Quercus rubra* (northern red oak), *Quercus alba* (white oak), and *Quercus velutina* (black oak); heath shrubs <25% cover; plots off trail at DEWA..... **Mid-Atlantic Mid-Successional Oak - Pine Forest (CEGL006454)**
[*Quercus (rubra, velutina, alba) - Betula lenta - (Pinus strobus*) Forest]

31b. Not as above. **32**

32a. Obviously disturbed and widely variable woody vegetation with mixtures of young, even-aged native and non-native hardwoods, especially *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Acer saccharum* (sugar maple) on calcareous soils, and *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by *Rosa multiflora* (multiflora rose), *Celastrus orbiculatus* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle); can also occur in wet settings such as floodplains and seasonally or temporarily flooded lowlands; many plots off trail throughout Northeast especially at DEWA; observed in NJ, NY, and CT..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana - (Robinia pseudoacacia)* Ruderal Forest]

32b. Successional native forest, not obviously disturbed; composition variable depending on site history; canopy includes *Quercus rubra* (northern red oak) [<25%], *Acer rubrum* (red maple), and *Fagus grandifolia* (American beech) in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) minor associates in northern examples; *Pinus strobus* (eastern white pine) may be common to absent; trees 40-100 years old; ground cover may be diverse range of species based on sites history and disturbance; develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra* - *Acer rubrum* - *Betula* spp. - *Pinus strobus* Ruderal Forest]

11. Successional and Ruderal Vegetation (including plantations)

1a. Successional, ruderal, or non-native upland vegetation. **2**
1b. Successional, ruderal or non-native wetland vegetation. **19**

2a. Successional fields/meadows/shrublands/woodlands (<60% trees). **3**
2b. Successional or planted forests (>60% cover of canopy/overstory combined). **5**

3a. Shrubland thicket occurring on old fields, pastures, power lines, or otherwise modified lands dominated by native shrubs or an admixture of non-native and native shrubs; small trees (<25% in cover) may be present; old-field grasses, forbs and ferns are common in more open-canopied variants where tall and short shrubs cover at least 25% of the field; wide-ranging in northeastern states; observed off trail at DEWA and on trail in CT and VT. ..... **Northeastern Ruderal Shrubland (CEGL006451)**
[*Elaeagnus umbellata* - *Cornus racemosa* - *Rosa multiflora* - *Juniperus virginiana* Ruderal Shrubland]
3b. Herbaceous-dominated (greater than 50% herbaceous cover) vegetation that has been anthropogenically altered and/or maintained, especially on old fields and pastures frequently disturbed or managed, created and maintained by yearly mowing or grazing. **4**

4a. Old field with variable composition that can include or be dominated by one or more of the following: *Solidago* (goldenrod) spp., *Dactylis glomerata* (orchardgrass), *Phleum pratense* (timothy), *Anthoxanthum odoratum* (sweet vernalgrass), *Festuca* (fescue) spp., *Dichanthelium clandestinum* (deertongue), *Poa pratensis* (Kentucky bluegrass), *Euthamia graminifolia* (flat-top goldentop), *Dennstaedtia punctilobula* (eastern hayscented fern), and other grass, forb, and/or fern species; scattered trees and shrubs possible; wide-ranging in northeastern states; off trail at DEWA; observed in NJ and VT. ..... **Northeastern Old-field Meadow (CEGL006107)**
[*Dactylis glomerata* - *Phleum pratense* - *Festuca* spp. - *Solidago* spp. Ruderal Meadow Vegetation]
4b. *Schizachyrium scoparium* (little bluestem) dominated field; wide-ranging in northeastern states; observed off trail at DEWA. ..... **Little Bluestem Old-field Meadow (CEGL006333)**
[*Schizachyrium scoparium* - *(Andropogon virginicus)* - *Solidago* spp. Ruderal Meadow]

5a. Canopy dominated by evergreen trees (at least 50% evergreen trees in canopy; generally >75%). **6**
5b. Canopy dominated by hardwood deciduous trees (at least 50% deciduous canopy; conifers generally <25%). **14**

6a. Evergreen portion of canopy dominated by *Pinus* (pine) species or *Tsuga canadensis* (eastern hemlock). **7**
6b. Conifer portion of canopy not dominated by *Pinus* (pine) species. **12**

7a. Multiple *Pinus* (pine) species in the canopy; in uncommon instances, *Tsuga canadensis* (eastern hemlock) may be sole dominant; other conifers sometimes present in smaller amounts; planted in postagricultural fields and pastures; plantations of mixed pines or pine mixed with other non-native planted conifers; common throughout the Northeast; observed off trail at DEWA. ..... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
7b. Canopy dominated by *Pinus strobus* (eastern white pine) or *Pinus resinosa* (red pine); greater than 50% of canopy. **8**

8a. Plantations of *Pinus resinosa* (red pine) occurring in various settings and soil types; in older stands, or in canopy gaps, native regeneration includes hardwoods such as *Acer rubrum* (red maple), *Acer saccharum* (sugar maple), and *Fagus grandifolia* (American beech), as well as the conifers *Pinus strobus* (eastern white pine), *Picea rubens* (red spruce), and/or *Tsuga canadensis* (eastern hemlock); observed in VT. ..... **Red Pine Plantation (CST007177)**
[*Pinus resinosa* Forest Plantation]
8b. Planted and successional stands of *Pinus strobus* (eastern white pine)..... **9**

9a. Multiple *Pinus* (pine) species in the canopy; in uncommon instances, *Tsuga canadensis* (eastern hemlock) may be sole dominant; other conifers sometimes present in smaller amounts; planted in postagricultural fields and pastures; plantations of mixed pines or pine mixed with other non-native planted conifers; common throughout the Northeast; observed off trail at DEWA. .... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
9b. Canopy dominated by *Pinus strobus* (eastern white pine); greater than 50% of canopy. **10**

10a. Composition is variable depending on site history; canopy is a mixture of *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech); *Quercus rubra* (northern red oak) is often present, but occurring at <25% relative cover; occurs in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are occasional minor associates in northern examples; trees 40-100 years old; ground cover may be represented by a diverse range of species based on sites history and disturbance pattern; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT..... ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]
10b. Planted and successional stands of *Pinus strobus* (eastern white pine) or as in some VT stands, successional *Tsuga canadensis* (eastern hemlock) is replacing eastern white pine in the canopy. **11**

11a. *Pinus strobus* (eastern white pine) plantations; observed in CT..... ..... **Eastern White Pine Plantation (CST007178)**
[*Pinus strobus* Forest Plantation]
11b. Successional stands of *Pinus strobus* (eastern white pine) [or as in some VT sites, successional *Tsuga canadensis* (eastern hemlock) is replacing eastern white pine in the canopy]; *Acer rubrum* (red maple), *Betula lenta* (sweet birch), *Fraxinus americana* (white ash), and/or *Prunus serotina* (black cherry) may be common in canopy and/or subcanopy; observed in CT and VT..... ..... **Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

12a. *Juniperus virginiana* (eastern red-cedar) dominant; can also be a woodland..... ..... **Northeastern Ruderal Red-cedar Forest (CEGL006024)**
[*Juniperus virginiana* Ruderal Forest]
12b. *Picea* (spruce) sp. and/or *Abies balsamea* (balsam fir) dominant. **13**

13a. *Picea* (spruce) sp. plantations dominated by *Picea abies* (Norway spruce) or *Picea glauca* (white spruce), and/or a combination of spruce species. .... **Norway Spruce Plantation (CST007167)**
[*Picea abies* Forest Plantation]

13b. Successional mixed spruce-fir-hardwoods forest made up of *Picea rubens* (red spruce) and *Abies balsamea* (balsam fir) and early-successional trees including *Acer rubrum* (red maple), *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), and *Betula papyrifera* (paper birch), or, less commonly, *Betula populifolia* (gray birch) or *Betula papyrifera* var. *cordifolia* (mountain paper birch) as well as *Fagus grandifolia* (American beech); *Acer pensylvanicum* (striped maple) characteristic shrub; common herbs include *Uvularia sessilifolia* (sessileleaf bellwort), *Maianthemum canadense* (Canada mayflower), and *Trientalis borealis* (starflower) in northern New England and NY; observed in MA and VT..... **Successional Mixed Spruce - Fir - Hardwood Forest (CEGL006505)**
[*Picea rubens - Abies balsamea - Betula* spp. - *Acer rubrum* Forest]

14a. Composition is variable depending on site history; canopy is a mixture of *Quercus rubra* (northern red oak) [<25%], *Acer rubrum* (red maple), *Fagus grandifolia* (American beech), and occasionally *Pinus strobus* (eastern white pine) occurring in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are occasional minor associates in northern examples; trees 40-100 years old; ground cover may be represented by a diverse range of species based on sites history and disturbance pattern; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in MA and VT. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]

14b. Oak uncommon in canopy; stand with variable mixtures of young even-aged native and/or non-native hardwoods. **15**

15a. Obviously disturbed forests comprised of non-native (*Ailanthus altissima* (tree of heaven), *Robinia pseudoacacia* (black locust)) and/or early-successional native trees (*Acer rubrum* (red maple), *Prunus serotina* (black cherry), *Juglans nigra* (black walnut), *Fraxinus americana* (white ash), *Liriodendron tulipifera* (tuliptree)); vines often rampant..... **16**

15b. Early-successional forests comprised mainly of native trees; occurring as monotypic stands or mixtures..... **17**

16a. Canopy strongly dominated by either *Ailanthus altissima* (tree of heaven), *Liriodendron tulipifera* (tuliptree), or *Juglans nigra* (black walnut). ..... **Ruderal Tree-of-Heaven Forest (CEGL007191)**
[*Ailanthus altissima* Ruderal Forest]
OR
Ruderal Tuliptree Forest (Rich Type) (CEGL007220)
[*Liriodendron tulipifera / (Cercis canadensis) / (Lindera benzoin)* Ruderal Forest]
OR
Ruderal Black Walnut Forest (CEGL007879)
[*Juglans nigra / Verbesina alternifolia* Ruderal Forest]

16b. *Ailanthus altissima* (tree of heaven), *Liriodendron tulipifera* (tuliptree), or *Juglans nigra* (black walnut) absent or mixed with other tree species; *Robinia pseudoacacia* (black locust), *Sassafras albidum* (sassafras), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Liriodendron tulipifera* (tuliptree), *Acer rubrum* (red maple), *Acer saccharum* (sugar maple) on calcareous soils, *Populus deltoides* (eastern cottonwood), and *Ailanthus altissima* (tree of heaven), any one of which can dominate over small areas; understory heavily invaded by *Rosa multiflora* (multiflora rose), *Celastrus orbiculatus* (Oriental bittersweet), and *Lonicera japonica* (Japanese honeysuckle), *Berberis thunbergii* (Japanese barberry); generally an upland forest, but can occur in wet settings such as floodplains and seasonally or temporarily flooded lowlands; common throughout all northeastern states; many plots off trail throughout the Northeast especially at DEWA; observed on trail in NJ, NY and CT. ..... **Northeastern Ruderal Hardwood Forest (CEGL006599)**
[*Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana - (Robinia pseudoacacia)* Ruderal Forest]

17a. *Betula lenta* (sweet birch) and/or *Acer rubrum* (red maple) abundant; *Betula alleghaniensis* (yellow birch) and *Acer saccharum* (sugar maple) absent or minor; successional even-aged, nearly pure *Betula lenta* (sweet birch) and *Acer rubrum* (red maple) in canopy with dense *Lycopodium* (clubmoss) sp. or *Dennstaedtia punctilobula* (eastern hayscented fern) ground cover; distribution is centered in the Central Appalachians but extends north to NY, NJ and PA; observed off trail at DEWA and observed in NY..... **Central Appalachian Ruderal Sweet Birch - Red Maple Forest (CEGL008503)**
[*Betula lenta - Acer rubrum / Lycopodium annotinum - Dennstaedtia punctilobula* Ruderal Forest]
17b. Northern hardwood (*Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Betula alleghaniensis* (yellow birch)) or northern early-successional [*Populus grandidentata* (bigtooth aspen), *Populus tremuloides* (quaking aspen), *Populus balsamifera* (balsam poplar), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch)] trees abundant..... **18**

18a. Early-successional variant of widespread typic northern hardwood forest occurring on acidic soils in central New England and at lower elevations in northern New England and upstate NY; either monotypic *Acer saccharum* (sugar maple), or dominated by some combination of young, small-diameter *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech) and/or *Betula papyrifera* (paper birch); arises from cutting; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns, clubmosses (Lycopodiaceae), and other herbs. ..... **Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]
18b. Successional northern hardwoods dominated by some combination of *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Populus alba* (white poplar), *Betula papyrifera* (paper birch), and/or *Betula populifolia* (gray birch); *Populus balsamifera* (balsam poplar), *Acer rubrum* (red maple), *Prunus serotina* (black cherry), and/or *Prunus pensylvanica* (pin cherry) may also be common; shrub layer can be sparse or include *Lonicera morrowii* (Morrow's honeysuckle), *Frangula alnus* (glossy buckthorn), *Rubus* (blackberry) spp., and/or *Viburnum dentatum* (southern arrow-wood); old-field grasses and forbs and/or herbs typical of northern hardwood forests common in herb layer; ranges from closed-canopy forests or open woodlands; observed in MA and VT. ..... **Ruderal Aspen - Birch Woodland (CEGL006303)**
[*Populus (tremuloides, grandidentata) - Betula (populifolia, papyrifera)* Ruderal Woodland]

19a. Wetland shrub-dominated vegetation. **20**
19b. Wetland herbaceous and aquatic vegetation. **22**

20a. Successional wet meadow vegetation dominated by *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. with variable combinations of wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern),*Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); ranges from shrub thicket to herbaceous meadow with scattered shrubs; occurs in low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; known throughout the Northeast; observed off trail at DEWA; observed from NJ north; applied to manmade and beaver meadows. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
20b. Tall successional shrub swamps (2-4 m). **21**

21a. Highly variable successional wet shrubland occurring in low-lying areas of old fields or pastures, or the edges of beaver-impacted wetlands or impoundments; vegetation can include *Cornus amomum* (silky dogwood), *Cornus sericea* (red-osier dogwood), *Viburnum dentatum* (southern arrow-wood), *Spiraea alba* var. *latifolia* (white meadowsweet), *Rosa multiflora* (multiflora rose), *Rubus allegheniensis* (Allegheny blackberry), and *Rubus hispidus* (bristly dewberry) typically present and abundant; *Salix* (willow) spp. may also be present but are less common..... **Ruderal Dogwood - Arrow-wood Shrub Swamp (CEGL006576)**
[*Cornus (amomum, sericea) - Viburnum dentatum - Rosa multiflora* Ruderal Shrub Swamp]
21b. Alder swamps of saturated basins, beaver-impacted wetlands and small, low-velocity streams dominated by *Alnus incana* (gray alder); northern species such as *Nemopanthus mucronatus* (catberry) and *Myrica gale* (sweetgale) differentiate this type; other shrubs, such as *Cornus sericea* (red-osier dogwood), *Rubus idaeus* (American red raspberry), *Salix* (willow) spp., *Spiraea alba* (white meadowsweet), *Spiraea tomentosa* (steeplebush), and *Viburnum* (viburnum) spp., are common; if occurring adjacent to a high-velocity stream or river or an active floodplain consider CEGL006062 in the Alluvial Vegetation Key; throughout the northeastern United States; observed in MA and VT on trail..... **Gray Alder Shrub Swamp (CEGL002381)**
[*Alnus incana* Shrub Swamp]

22a. Aquatic vegetation of ponds and lakes; dominants are usually submerged macrophytes or floating-leaved pondweeds; observed in NJ. ..... **Water-lily Aquatic Wetland (CEGL002386)**
[*Nuphar advena - Nymphaea odorata* Aquatic Vegetation]
22b. Herbaceous vegetation. **23**

23a. Vegetation of wet meadows; with variable combinations of wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern),*Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. common; ranges from herbaceous meadow with scattered shrubs to shrub thicket; occurs in low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; known throughout the Northeast; observed off trail at DEWA and from NJ north; applied to manmade and beaver meadows. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
23b. Marshes. **24**

24a. *Phalaris arundinacea* (reed canarygrass) marsh found in basin wetlands and along rivershores; other species present may include *Solidago canadensis* (Canada goldenrod), *Impatiens capensis* (jewelweed), *Onoclea sensibilis* (sensitive fern), *Euthamia graminifolia* (flat-top goldentop), and *Eupatorium maculatum* (spotted joe-pye-weed) occurs throughout the northeastern United States; observed in NJ, NY, and MA and at DEWA off trail. ..... **Eastern Ruderal Reed Canarygrass Marsh (CEGL006044)**
[*Phalaris arundinacea* Eastern Ruderal Marsh]

24b. *Phragmites australis* ssp. *australis* (European common reed) marsh. ..... **Eastern Ruderal Common Reed Marsh (CEGL004141)**
[*Phragmites australis* ssp. *australis* Eastern Ruderal Marsh]

Field Key to Vegetation Associations of the Northern Appalachian Project Area

This field key provides classification to USNVC associations that were identified during the APPA vegetation mapping project for the NAP project area (see Figure D–4 in the "Key to Field Keys by Project Area"). The NAP project area includes APPA lands between the Connecticut River (Vermont-New Hampshire State line between Norwich, Vermont, and Hanover, New Hampshire) and the northern terminus of the AT corridor on Baxter Peak of Mount Katahdin in Maine.

Notes about Scale for the Northern Appalachian Project Area

All forest associations were mapped to a 0.5-ha MMU (a circle with a 40-m radius) and all nonforest associations were mapped to a 0.25-ha MMU (a circle with a 28-m radius) with the exception of alpine vegetation. Vegetation associations in the alpine zones (Mount Moosilauke, Mount Lafayette area, Mount Guyot, the Presidential Range, South Peak, East Peak, Saddleback Mountain, the Bigelow Range, and Mount Katahdin) were mapped to a 0.125-ha MMU (a circle with a 20-meter radius).

Key to Keys for the Northern Appalachian Project Area

1a. Wetland vegetation including alluvial vegetation and sparse vegetation alongside rivers **2**
1b. Upland vegetation. **6**

2a. Wetland vegetation dominated by trees, shrubs, forbs, grasses, and/or vines strongly altered by recent human disturbance, dominated by disturbance-oriented (ruderal) native species and/or non-native species, often in monotypic stands. ..... **Successional and Ruderal Vegetation (Key #10, p. D-208)**
2b. Wetland vegetation, dominated by trees, shrubs, forbs, grasses, and/or vines *not* altered by recent human disturbance. **3**

3a. Alluvial forests, woodlands, shrublands and herbaceous communities occurring along banks or channels of rivers and streams and adjacent levees and bottomlands, at least occasionally flooded; also beaver pond areas that are part of larger alluvial systems. ..... **Alluvial Vegetation (Key #1, p. D-167)**
3b. Non-alluvial palustrine vegetation. **4**

4a. Forested and wooded wetlands (canopy cover ≥10%) including seepage-fed beaver pond impoundments, bottomlands, poorly-drained depressions, wooded and forested bogs, fens, and basin swamps; and small-patch herbaceous seeps, sparse vegetation of vernal pools, and nonvascular wetland vegetation dominated by *Sphagnum* (sphagnum moss) occurring under forest canopy; substrate is saturated to the surface by groundwater for extended periods during the growing season or seepage-fed; rarely, if ever, flooded by alluvial waters. ..... **Forested and Wooded Wetlands (Key #2, p. D-170)**
4b. Non-forested wetland communities (tree canopy cover ≤10%), including wooded marshes, shrub swamps, bogs, fens, herbaceous-dominated wetlands, with deep saturated soils or seasonally flooded soils, and aquatic vegetation. **5**

5a. Wetland vegetation dominated by shrubs (≥50% shrub cover) or with scattered tree cover (≤10%). ..... **Shrub Swamps, Bogs, and Fens (Key #3, p. D-175)**
5b. Wetland vegetation dominated by herbaceous species (>50% cover)..... **Herbaceous Wetlands and Aquatic Vegetation (Key #4, p. D-179)**
6a. One or more layers of the vegetation's structure and/or composition determined by regular human activity such as planting, tilling, cropping, mowing, and/or irrigating; vegetation dominated by even-aged trees, shrubs, forbs, grasses, and/or vines strongly altered by recent (often anthropogenic) disturbance; trees typically less than 80 years old; community develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; dominated by disturbance-oriented (ruderal) native and/or non-native species, often in monotypic stands; includes also evergreen plantations, pine successional forests, light-requiring, wind-dispersed trees common; successional shrublands, and old fields. ..... **Successional and Ruderal Vegetation (Key #10, p. D-208)**
6b. Vegetation structure and/or composition determined by a spontaneously growing set of plant species shaped by ecological processes. **7**

7a. Non-forested or non-wooded vegetation and sparse vegetation (tree canopy cover ≤10%)..... **8**
7b. Forested and woodland vegetation (tree canopy cover ≥10%)..... **9**

8a. Shrublands, grasslands, nonvascular vegetation (such as lichens), or bare rock in alpine and subalpine settings, mid-elevation talus slopes, lower elevation barrens, cliffs, and sparse vegetation. Only alpine vegetation is restricted to the peaks listed in the Notes and Comments section. ..... **Open Alpine and Subalpine Vegetation, Lower Elevation Balds, Barrens, Cliffs, and Sparse Vegetation (Key #5, p. D-183)**
8b. Shrublands or grasslands of lower elevations without substantial areas of exposed rock; successional or altered (ruderal) vegetation resulting from human disturbance..... **Successional and Ruderal Vegetation (Key #10, p. D-208)**

9a. Woodlands (10-60% tree canopy cover)..... **Upland Woodlands (Key #6, p. D-190)**
9b. Forests (>60% tree canopy cover)[35]. **10**

10a. Evergreen or mixed evergreen-deciduous forest canopies (deciduous trees less than 75% cover). **11**
10b. Deciduous and mixed canopies; deciduous trees such as northern hardwoods or early-successional hardwoods dominate canopy; spruces, pines and hemlock generally absent to minor..... **12**

11a. Spruce- and fir-dominated forests and woodlands or mixed stands of softwood and hardwood forests..... **Spruce and/or Fir Upland Woodlands and Forests (Key #7, p. D-193)**
11b. Pine- and/or hemlock-dominated and mixed canopies. ..... **Hemlock, Mixed Hemlock, Pine, and Mixed Pine Upland Forests (Key #8, p. D-197)**

[35]Typically >60% tree cover, except in obvious cases of severe disturbance from gypsy moth, hemlock woolly adelgid, windstorms, etc. Such disturbed stands are quite common. Key users should try to key to the pre-disturbance association if possible or identify the new, postdisturbance association if the pre-disturbance association diagnostic species are absent.

12a. Northern hardwoods such as *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), and/or mesophytic tree species [e.g., *Tilia americana* (American basswood)], *Fraxinus americana* (white ash), may be codominant in canopy; forests with *Quercus rubra* (northern red oak) may also be present. ..... **Northern Hardwood Upland Forests (Key #9, p. D-201)**

12b. Early-successional species such as *Acer rubrum* (red maple), *Betula papyrifera* (paper birch), *Populus* (cottonwood) spp. and/or *Prunus serotina* (black cherry) dominate canopy; canopy dominated by native or non-native deciduous and/or conifer species; includes heavily invaded forests; altered (ruderal) forests and plantations resulting from human disturbance. ..... **Successional and Ruderal Vegetation (Key #10, p. D-208)**

1. Alluvial Vegetation

1a. Forested communities, with greater than 40% tree canopy coverage. **2**
1b. Woodlands, shrublands, and herbaceous communities along narrow river margins; scattered trees (up to 10% cover) possible..... **5**

2a. *Acer saccharinum* (silver maple) strongly dominant, forming a high, arching canopy; shrubs sparse; typically along medium to large rivers. **3**
2b. Floodplain forest canopy within an abundance of *Acer saccharum* (sugar maple) and/or *Fraxinus* (ash) spp. in the canopy; *Acer saccharinum* (silver maple) minor or absent. **4**

3a. *Matteuccia struthiopteris* (ostrich fern) or *Laportea canadensis* (Canadian woodnettle) prominent in the herb layer; *Populus deltoides* (eastern cottonwood) may be present; associated with coarse soils and a relatively short flood duration; along trail in VT near White River; possible in ME. .... **Silver Maple Floodplain Levee Forest (CEGL006147)**
[*Acer saccharinum - (Populus deltoides) / Matteuccia struthiopteris - Laportea canadensis* Floodplain Forest]
3b. *Onoclea sensibilis* (sensitive fern) and/or *Boehmeria cylindrica* (small-spike false nettle) dominant in lush ground layer; low-positioned *Acer saccharinum* (silver maple) floodplain forest with large, widely-spaced canopy trees; few to no shrubs; typical of riverbottoms, lakeplains, and the inner floodplain of medium to large rivers (third- or fourth-order), mostly at less than 245 m (800 feet) elevation; at Katahdin Iron Works and along the Penobscot River in ME..... ..... **Silver Maple Floodplain Bottom Forest (Sensitive Fern Type) (CEGL006176)**
[*Acer saccharinum / Onoclea sensibilis - Boehmeria cylindrica* Floodplain Forest]

4a. Forests on terraces or plains of lower-gradient portions of rivers, often in areas of circumneutral to calcareous bedrock, soils usually silt loams; canopy dominants include *Acer saccharum* (sugar maple) and/or *Fraxinus americana* (white ash) with associates *Acer rubrum* (red maple), *Tilia americana* (American basswood), *Quercus rubra* (northern red oak), *Ulmus americana* (American elm), *Juglans cinerea* (butternut), and *Prunus serotina* (black cherry); *Acer negundo* (box-elder) and *Juglans cinerea* (butternut) often present in younger stands; diverse herb layer with *Matteuccia struthiopteris* (ostrich fern) prominent and usually with richness indicators such as *Ageratina altissima* (white snakeroot), *Solidago flexicaulis* (zigzag goldenrod), *Allium tricoccum* (ramp), *Elymus hystrix* (eastern bottlebrush grass), or *Elymus wiegandii* (Wiegand's wildrye); CT north to ME; observed in ME at 180 m (600 feet). .... **Terrace Hardwood Floodplain Forest (CEGL006114)**
[*Acer saccharum - Fraxinus* spp. - *Tilia americana / Matteuccia struthiopteris - Ageratina altissima* Floodplain Forest]
4b. Floodplains forests of higher-gradient, somewhat flashy reaches; soils are alluvial sands or sandy loams over coarser substrates; *Acer saccharum* (sugar maple) and *Ostrya virginiana* (hophornbeam) characteristic; other northern hardwoods such as *Fagus grandifolia* (American beech) or *Betula alleghaniensis* (yellow birch) may be present; rich-site species are absent or minor; common herbs include *Thelypteris noveboracensis* (New York fern), *Osmunda claytoniana* (interrupted fern), and *Uvularia sessilifolia* (sessileleaf bellwort). *Brachyelytrum erectum* (bearded shorthusk) is a frequently present grass. Observed in ME; plot elevations range from 177 to 483 m (580-1,586 feet).. ..... **High-gradient Hardwood Floodplain Forest (CEGL006504)**
[*Acer saccharum / Ostrya virginiana / Brachyelytrum erectum* Floodplain Forest]

5a. Woodlands and shrublands. **6**
5b. Herbaceous communities. **7**

6a. Riparian shrublands occurring on river-margin alluvial deposits of moderate -to high-energy river reaches, where the flooding regime prevents forests from developing; on mineral soils that are flooded in spring but may be fairly dry by midsummer; *Alnus* (alder) spp. occurring in the greatest abundance; *Clematis virginiana* (devil's darning needles), *Boehmeria cylindrica* (small-spike false nettle), *Matteuccia struthiopteris* (ostrich fern), *Elymus virginicus* (Virginia wildrye), and *Osmunda claytoniana* (interrupted fern) are characteristic; floodplain trees such as *Ulmus americana* (American elm) may be occasional; observed in NH and ME; plot/obs point elevations ranges from 396 to 478 m (1,300-1,568 feet). ..... **Alluvial Alder Thicket (CEGL006062)**
[*Alnus incana - Cornus (amomum, sericea) / Clematis virginiana* Shrub Swamp]
6b. Alder-dominated swamp occurring in saturated basins settings, in association with beaver-impacted wetlands, and/or alongside small, low-velocity streams dominated by *Alnus incana* (gray alder); *Rubus pubescens* (dwarf red blackberry) common; *Carex stricta* (upright sedge) and other wetland *Carex* (sedge) spp. along with a diversity of *Symphyotrichium* (asters), *Osmunda cinnamomea* (cinnamon fern), *Thelypteris palustris* (marsh fern), and *Impatiens capensis* (orange jewelweed); mosses include *Climacium dendroides* (tree climacium moss) and *Sphagnum* (sphagnum moss) spp.; widespread in the northeastern United States; elevations range from 177 to 354 m (580-1,160 feet). ..... **Gray Alder Shrub Swamp (CEGL002381)**
[*Alnus incana* Shrub Swamp]

7a. Sites with medium to high flow gradient, coarse substrate (rocky or gravelly). **8**
7b. Low gradient shores with silt, sand, or muck substrate. **10**

8a. *Carex torta* (twisted sedge) diagnostic, and prairie grasses such as *Sorghastrum nutans* (Indiangrass) and *Andropogon gerardii* (big bluestem) often present; occurring on large coarse substrates deposited along medium- to high-energy river channels and, less frequently, exposed lakeshores with heavy wave action; seasonal flooding and ice-scour maintain the open nature; observed in ME. ..... **Northeastern Temperate Cobble Scour Rivershore (CEGL006536)**
[*Carex torta - Apocynum cannabinum - Cyperus* spp. Riverbed Vegetation]
8b. Vegetation dominated by a combination of species. **9**

9a. Riverside grasslands dominated by tall prairie grasses such as *Andropogon gerardii* (big bluestem), *Sorghastrum nutans* (Indiangrass), and *Schizachyrium scoparium* (little bluestem); generally occurs along major rivers in flood-scoured areas; along the Pemigewassett and Connecticut rivers in NH but not within the AT corridor in NH. ..... **Riverside Prairie Grassland (CEGL006518)**
[*Prunus pumila / Andropogon gerardii - Sorghastrum nutans* Wet Meadow]
9b. Herb-dominated, constantly saturated, rivershore seeps that develop on discharge areas of the shores of larger rivers in the glaciated Northeast; **circumneutral groundwater** discharge a fen supports -like aspect, but on mineral rather than peat soils; semi-open conditions maintained by ice-scouring and floodwaters; herbaceous species include *Lobelia kalmii* (Ontario lobelia), *Parnassia glauca* (fen grass of Parnassus), *Platanthera dilatata* (scentbottle), *Packera paupercula* (balsam groundsel), *Triantha glutinosa* (sticky tofieldia), *Equisetum variegatum* (variegated scouringrush), *Spiranthes lucida* (shining ladies'-tresses), *Spiranthes romanzoffiana* (hooded ladies'-tresses), *Carex garberi* (elk sedge), *Carex viridula* (little green sedge), *Carex flava* (yellow sedge), *Rhynchospora capillacea* (needle beaksedge), *Rhynchospora capitellata* (brownish beaksedge), *Mentha arvensis* (wild mint), and others; *Dasiphora fruticosa* ssp. *floribunda* (shrubby-cinquefoil), variegated *Alnus*

(alder) spp., *Cornus sericea* (red-osier dogwood), and *Calamagrostis canadensis* (bluejoint); occurs where White River crosses AT in VT; documented globally in ME, NH, VT, and NY; but does not occur in the AT corridor in NH..... **Boreal Circumneutral Riverside Seep (CEGL006142)**
[*Triantha glutinosa* - *Carex garberi* Riverscour Wet Meadow]

10a. Successional mixed wet meadow - shrubby vegetation of the low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. are characteristic shrubs; variable composition can include wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern), *Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); known throughout the Northeast. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
10b. Graminoids dominant. **11**

11a. Seasonally flooded **grass-**dominated marshes with *Calamagrostis canadensis* (bluejoint) predominant graminoid; *Carex utriculata* (Northwest Territory sedge), *Carex stricta* (upright sedge), and *Glyceria canadensis* (rattlesnake mannagrass) may be codominant to dominant at some sites; total herbaceous cover ranges from 40-80%; shrubs such as *Alnus incana* (gray alder), *Spiraea tomentosa* (steeplebush), and *Chamaedaphne calyculata* (leatherleaf) are common at low cover; 3 plots in the NAP project area. ..... **Mixed Graminoid Wet Meadow (CEGL006519)**
[*Calamagrostis canadensis* - *Scirpus* spp. - *Dulichium arundinaceum* Wet Meadow]
11b. Seasonally flooded **sedge** dominated marshes; *Carex stricta* (upright sedge) (>15% coverage) dominant; other common herbaceous species include *Carex vesicaria* (blister sedge), *Scirpus* (bulrush) spp., *Carex canescens* (silvery sedge), *Triadenum virginicum* (Virginia marsh St. Johnswort), and *Sparganium americanum* (American bur-reed); scattered, and other wetland shrubs possible; occurs in seasonally flooded basins or on stream or lake margins; substrate is muck or peat of variable depth overlying mineral soil; common throughout the Northeast. ..... **Eastern Upright Sedge Wet Meadow (CEGL006412)**
[*Carex stricta* - *Carex vesicaria* Wet Meadow]

2. Forested and Wooded Wetlands[36]

1a. Forested wetlands dominated by conifers; hardwoods may be present, but generally <50% total cover. **2**
1b. Forested wetlands characterized by hardwoods; conifers may be present, but <50% total cover... **9**

2a. *Thuja occidentalis* (arborvitae) is abundant in wetland forest canopy. **3**
2b. *Picea* (spruce) spp., *Abies* (fir), and/or *Tsuga canadensis* (eastern hemlock) dominant or codominant in canopy. **5**

3a. Canopy more open (usually <50%), partially wooded fens dominated by *Thuja occidentalis* (arborvitae), that are part of a larger peatland vegetation complex; heath shrubs or other dwarf-shrubs usually >15% cover; *Picea mariana* (black spruce), *Larix laricina* (tamarack), *Abies balsamea* (balsam fir), and *Acer rubrum* (red maple) canopy and subcanopy associates; tall-shrub layer characterized by *Alnus incana* (gray alder), *Ilex verticillata* (common winterberry), and *Viburnum nudum* (possumhaw); dwarf-shrubs typically include *Vaccinium angustifolium* (lowbush blueberry), *Kalmia angustifolia* (sheep laurel), and *Gaylussacia baccata* (black huckleberry); herbaceous layer includes *Maianthemum trifolium* (threeleaf false lily of the valley), *Carex trisperma* (three-seeded sedge), *Carex stricta* (upright sedge), *Calamagrostis canadensis* (bluejoint), *Osmunda cinnomomea* (cinnamon fern), *Coptis trifolia* (threeleaf goldthread), *Onoclea sensibilis* (sensitive fern), and *Osmunda regalis* (royal fern); observed in ME; plot elevations are 344 m and 415 m (1,130-1,360 feet). ..... **Northern White-cedar Wooded Fen (CEGL006507)**
[*Thuja occidentalis - Abies balsamea / Ledum groenlandicum / Carex trisperma* Swamp Woodland]
3b. Closed or nearly closed-canopy forests (almost always >60% canopy). **4**

4a. Basin peatland dominated by *Thuja occidentalis* (arborvitae) with canopy associates including *Picea mariana* (black spruce), *Abies balsamea* (balsam fir), and *Larix laricina* (tamarack); shrubs include *Lonicera canadensis* (American fly honeysuckle), *Ilex verticillata* (common winterberry), and *Nemopanthus mucronatus* (catberry) with heaths <15%; herb layer is often diverse with *Gaultheria hispidula* (creeping snowberry), *Carex trisperma* (three-seeded sedge), *Carex disperma* (softleaf sedge), *Linnaea borealis* (twinflower), *Mitella nuda* (naked miterwort), *Mitella diphylla* (twoleaf miterwort), and others; *Sphagnum* (sphagnum moss) abundant; usually in poorly-drained basins where they may occupy most of the basin, rather than occurring as part of a larger peatland vegetation complex; observed in ME..... **Northern White-cedar Peatland Swamp Forest (CEGL006007)**
[*Thuja occidentalis / Sphagnum (girgensohnii, warnstorfii)* Swamp Forest]
4b. *Thuja occidentalis* (arborvitae) seepage forest; *Thuja occidentalis* (arborvitae) either clearly dominant or mixed with *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), and/or *Betula alleghaniensis* (yellow birch) or *Fraxinus* (ash) spp.; *Alnus incana* (gray alder) dominant shrub on wetter sites; characteristic herbs include *Tiarella cordifolia* (heartleaf foamflower), *Ranunculus hispidus* var. *nitidus* (bristly buttercup), *Solidago rugosa* (wrinkleleaf goldenrod), *Doellingeria umbellata* (parasol whitetop), *Chrysosplenium americanum* (American golden saxifrage), and *Symphyotrichum puniceum* (purplestem aster); non-*Sphagnum* (sphagnum moss) mosses abundant;

[36]Includes wooded swamps; wooded fens; forested bogs; vernal pools and Sphagnum-dominated vegetation with tree cover >10%. Herbaceous seeps under forest canopy are covered in Section 4: Non-Alluvial Herbaceous Wetlands and Aquatic Vegetation.

forests on gentle to moderate slopes with groundwater seepage maintaining moist to saturated conditions; mineral soils with little peat accumulation, or rocky/bouldery substrates near lakes and rivers; most often where the substrate is not strongly acidic; observed in ME..... .....**Northern White-cedar - Spruce Seepage Forest (CEGL006175)**
[*Thuja occidentalis - (Picea rubens) / Tiarella cordifolia* Swamp Forest]

5a. Forested wetlands characterized by *Tsuga canadensis* (eastern hemlock); mixed hardwood - hemlock (≤25% of canopy) [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock) - *Abies balsamea* (balsam fir)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with hydric minerals soils and/or shallow muck soils; herbaceous layer indicative of semi-nutrient-enriched conditions seepage, including such species such as *Glyceria* (mannagrass) spp. (*Glyceria melicaria* (melic mannagrass) and *Glyceria striata* (fowl mannagrass), *Rubus pubescens* (dwarf red blackberry), *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians. Balsam fir replaces hemlock as the dominant conifer in these sites moving northward.. .....**Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]
5b. *Picea* (spruce) spp. and/or *Abies balsamea* (balsam fir) dominant or codominant. **6**

6a. *Picea mariana* (black spruce) bog of sub-boreal peatland systems with both wooded and open portions from central NH north through ME; *Picea mariana* (black spruce) is often the sole species in the canopy and may be stunted; *Larix laricina* (tamarack) may be a canopy associate; dwarf-shrub layer includes a mixture of *Myrica gale* (sweetgale), *Ledum groenlandicum* (bog Labrador-tea), *Chamaedaphne calyculata* (leatherleaf), *Vaccinium myrtilloides* (velvetleaf huckleberry), *Vaccinium oxycoccos* (small cranberry), *Kalmia polifolia* (bog laurel), *Kalmia angustifolia* (sheep laurel), *Gaultheria hispidula* (creeping snowberry), and *Andromeda polifolia* (bog rosemary); ground cover includes *Carex trisperma* (three-seeded sedge), *Eriophorum vaginatum* (tussock cottongrass), *Maianthemum trifolium* (threeleaf false lily of the valley), and a *Sphagnum* (sphagnum moss) carpet; observed in NH. .....**Black Spruce Open Bog Woodland (CEGL002485)**
[*Picea mariana / Ledum groenlandicum / Carex trisperma / Sphagnum* spp. Open Bog Woodland]
6b. *Picea rubens* (red spruce) dominant or codominant with or without *Abies balsamea* (balsam fir) **7**

7a. Open to closed mostly evergreen dominated near-boreal acidic basin swamp; *Picea rubens* (red spruce) dominates the canopy with minor amounts of *Acer rubrum* (red maple) (though hardwoods can exceed 25% cover) and *Tsuga canadensis* (eastern hemlock); *Nemopanthus mucronatus* (catberry) dominant shrub; other shrubs present at low cover may include *Alnus incana* ssp. *rugosa* (speckled alder), *Amelanchier canadensis* (Canadian serviceberry), *Ilex verticillata* (common winterberry), and *Viburnum nudum* var. *cassinoides* (withe-rod); herbaceous layer dominated by *Osmunda cinnamomea* (cinnamon fern) in association with other forbs and graminoids; *Sphagnum* (sphagnum moss) are prominent in the ground layer and may exceed 80% cover; observed in NH and ME; plot/obs point elevations range from 511 to 740 m (1,678-2,427 feet). ....**Red Spruce - Red Maple Acidic Swamp Forest (CEGL006198)**
[*Picea rubens - Acer rubrum / Nemopanthus mucronatus* Swamp Forest]
7b. Coniferous dominated spruce-fir swamps and flats with <25% hardwood. **8**

8a. Typic, Northern Appalachians endemic red spruce swamp; usually closed-canopy evergreen forests dominated by *Picea rubens* (red spruce) and/or *Abies balsamea* (balsam fir) with both species always at least present; *Sphagnum* (sphagnum moss) often strongly dominate the ground layer with as much as >90% cover; canopy associates include *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), and *Betula papyrifera* (paper birch); shrubs are not prominent; herbs are highly variable and can include *Carex brunnescens* (brownish sedge), *Carex disperma* (softleaf sedge), *Carex gynandra* (nodding sedge), *Carex trisperma* (three-seeded sedge), *Clintonia borealis* (bluebead), *Coptis trifolia* (threeleaf goldthread), *Cornus canadensis* (bunchberry dogwood), *Dennstaedtia punctilobula* (eastern hayscented fern), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris marginalis* (marginal woodfern), *Gaultheria hispidula* (creeping snowberry), *Maianthemum canadense* (Canada mayflower), *Oclemena acuminata* (whorled wood aster), and *Osmunda cinnamomea* (cinnamon fern); observed in NH and ME. ..... **Northern Appalachian Spruce-Fir Swamp Forest (CEGL006312)**
[*Picea rubens - Abies balsamea / Gaultheria hispidula / Osmunda cinnamomea / Sphagnum* spp. Swamp Forest]

8b. *Picea rubens - Abies balsamea* (red spruce-balsam fir) and/or *Picea mariana - Picea rubens* (black spruce-red spruce) flats with a well-developed bryophyte layer that includes *Pleurozium schreberi* (Schreber's big red stem moss), *Hylocomium splendens* (splendid feathermoss), *Ptilium crista-castrensis* (knights plume moss), *Bazzania trilobata* (three-lobed bazzania), and *Sphagnum* (sphagnum moss); upland and wetland plants in the understory including heath shrubs *Kalmia angustifolia* (sheep laurel), *Vaccinium angustifolium* (lowbush blueberry), and *Vaccinium myrtilloides* (velvetleaf huckleberry) as well as herbs *Osmunda cinnamomea* (cinnamon fern), *Osmunda claytoniana* (interrupted fern), *Gaultheria hispidula* (creeping snowberry), *Maianthemum canadense* (Canada mayflower), and *Cornus canadensis* (bunchberry dogwood); occurs on imperfectly drained flats or stream drainages, where cold air accumulates; may intergrade with Low Elevation Spruce Fir Forest, depending on subtle changes in drainage; observed on trail in NH and ME..... **Northern Spruce - Fir Flats (CEGL006361)**
[*Picea mariana - Picea rubens / Pleurozium schreberi* Swamp Forest]

9a. Hardwood forested wetlands strongly dominated by *Acer rubrum* (red maple); canopy associates may be present but at relatively low cover. **10**
9b. Hardwood forested wetlands codominated by other species [but may be codominated by *Acer rubrum* (red maple)]..... **14**

10a. Lower New England, open-canopied (20-60%) *Acer rubrum* (red maple) wooded marsh characterized by an herbaceous layer strongly dominated by *Carex stricta* (upright sedge); *Carex lacustris* (hairy sedge) and *Calamagrostis canadensis* (bluejoint) may be common; *Vaccinium corymbosum* (highbush blueberry) often present; occurs on muck soils or mineral soils with a surface organic layer, in poorly-drained depressions influenced by groundwater; peripheral in the Northern Appalachian / Acadian ecoregion, observed in southern NH. ..... **Red Maple / Upright Sedge Wet Woodland (CEGL006119)**
[*Acer rubrum / Carex stricta - Onoclea sensibilis* Wet Woodland]
10b. *Acer rubrum* (red maple) open peatlands, seepage swamps, and forested wetlands. **11**

11a. Open *Acer rubrum* (red maple) wooded fen generally lacking *Picea* (spruce) spp.; *Larix laricina* (tamarack) possible to codominant; tall shrubs can include *Viburnum nudum* var. *cassinoides* (withe-rod), *Spiraea alba* (white meadowsweet), *Ilex verticillata* (common winterberry), and *Nemopanthus mucronatus* (catberry); *Osmunda cinnamomea* (cinnamon fern) and *Carex trisperma* (three-seeded sedge) are common, continuous saturated *Sphagnum* (sphagnum moss) layer; occurs in basin

peatlands at elevations below 305 m (1,000 feet), often in a peripheral area of a larger peatland; in central and northern New England; observed in ME. ..... **Red Maple Wooded Fen (CEGL006395)**
[*Acer rubrum / Alnus incana - Ilex verticillata / Osmunda regalis* Woodland]
11b. Seepage swamps and forested wetlands. **12**

12a. *Acer rubrum* (red maple) swamp of stream drainages and wetland borders; many possible canopy associates; shrub layer dominated by *Ilex verticillata* (common winterberry); herb layer dominated by *Osmunda cinnamomea* (cinnamon fern), *Carex stricta* (upright sedge), and *Onoclea sensibilis* (sensitive fern); *Sphagnum* (sphagnum moss) frequent but not necessarily abundant; observed in ME. ..... **Northern Red Maple Swamp Forest (CEGL006220)**
[*Acer rubrum / Nemopanthus mucronatus - Vaccinium corymbosum* Swamp Forest]
12b. Forested seepage swamps with nutrient enrichment indicators. **13**

13a. Enriched *Acer rubrum - Fraxinus nigra* (red maple-black ash) circumneutral seepage swamp often with *Larix laricina* (tamarack) and *Pinus strobus* (eastern white pine) in canopy and *Alnus incana* (gray alder); *Rhamnus alnifolia* (alderleaf buckthorn) and *Toxicodendron vernix* (poison-sumac) in the shrub layer; calciphiles such as *Saxifraga pensylvanica* (eastern swamp saxifrage), *Carex leptalea* (bristly-stalked sedge), *Carex flava* (yellow sedge), *Solidago patula* (roundleaf goldenrod), and *Ranunculus hispidus* var. *caricetorum* (bristly buttercup) common; typically occurs south of the NAP project area, seen during mapping reconnaissance in southern NH and northern ME..... **Red Maple - Black Ash Rich Seepage Swamp Forest (CEGL006009)**
[*Acer rubrum - Fraxinus nigra - (Larix laricina) / Rhamnus alnifolia* Swamp Forest]
13b. Mixed hardwood - hemlock (≤25% of canopy) [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock), - *Abies balsamea* (balsam fir)]] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians. Balsam fir replaces hemlock as the dominant conifer in these sites moving northward; observed in ME. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

14a. Conifers such as *Picea rubens* (red spruce) or *Tsuga canadensis* (eastern hemlock) in canopy. **15**
14b. Hardwood swamps dominated by other deciduous species in addition to *Acer rubrum* (red maple). **16**

15a. Mixed coniferous -deciduous [*Picea rubens* (red spruce) - *Acer rubrum* (red maple)] near-boreal acidic basin swamp with a mixed canopy (>25% hardwoods) that includes shrubs include *Nemopanthus mucronatus* (catberry), *Ilex verticillata* (common winterberry), and/or *Viburnum* (viburnum) spp.; herbs include *Carex trisperma* (three-seeded sedge) and *Osmunda cinnamomea* (cinnamon fern); *Sphagnum* (sphagnum moss) common; observed in NH and ME; plot/obs point elevations range from 511 to 740 m (1,678-2,427 feet)..... **Red Spruce - Red Maple Acidic Swamp Forest (CEGL006198)**
[*Picea rubens - Acer rubrum / Nemopanthus mucronatus* Swamp Forest]

15b. Mixed hardwood - hemlock (≤25% of canopy)] [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock) - *Abies balsamea* (balsam fir)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern) and *Arisaema triphyllum* (Jack in the pulpit); occurs in New England and the Northern Appalachians; balsam fir replaces hemlock as the dominant conifer in these sites moving northward. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

16a. Mixed hardwood - hemlock (≤25% of canopy) [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock) - *Abies balsamea* (balsam fir)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in New England and the Northern Appalachians; balsam fir replaces hemlock as the dominant conifer in these sites moving northward; observed in ME..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]
16b. Hardwood forested swamps and wet forests codominated by *Acer rubrum* (red maple) and *Fraxinus* (ash) spp..... **17**

17a. *Acer rubrum - Fraxinus* spp. (red maple-ash) basin swamps where *Acer rubrum* (red maple) is codominant with many possible associates; shrub layer dominated by *Ilex verticillata* (common winterberry); herb layer dominated by *Osmunda cinnamomea* (cinnamon fern), *Carex stricta* (upright sedge), and *Onoclea sensibilis* (sensitive fern); *Sphagnum* (sphagnum moss) frequent but not necessarily abundant. ..... **Northern Red Maple Swamp Forest (CEGL006220)**
[*Acer rubrum / Nemopanthus mucronatus - Vaccinium corymbosum* Swamp Forest]
17b. Seepage swamps with *Acer rubrum* (red maple) and *Fraxinus nigra* (black ash)..... **18**

18a. Low elevation *Acer rubrum - Fraxinus nigra* (red maple-black ash) seepage swamp with less enrichment than CEGL006009 below; canopy often mixed with *Tsuga canadensis* (eastern hemlock); includes northern conifers such as *Thuja occidentalis* (arborvitae) and *Abies balsamea* (balsam fir); enrichment indicators such as *Rhamnus alnifolia* (alderleaf buckthorn), *Tiarella cordifolia* (heartleaf foamflower), and *Chrysosplenium americanum* (American golden saxifrage) present but not abundant; calciphiles lacking; observed in southern NH and then again in northern ME. ..... **Northern Hardwood - Hemlock Seepage Swamp Forest (CEGL006502)**
[*Acer rubrum - Fraxinus nigra - (Tsuga canadensis) / Tiarella cordifolia* Swamp Forest]
18b. Enriched *Acer rubrum - Fraxinus nigra* (red maple-black ash) circumneutral seepage swamp often with *Larix laricina* (tamarack) and *Pinus strobus* (eastern white pine) in canopy and *Alnus incana* (gray alder), *Rhamnus alnifolia* (alderleaf buckthorn), and *Toxicodendron vernix* (poison-sumac) in the shrub layer; calciphiles *Saxifraga pensylvanica* (eastern swamp saxifrage), *Carex leptalea* (bristly-stalked sedge), *Carex flava* (yellow sedge), *Solidago patula* (roundleaf goldenrod) and *Ranunculus hispidus* var. *caricetorum* (bristly buttercup) common. ..... **Red Maple - Black Ash Rich Seepage Swamp Forest (CEGL006009)**
[*Acer rubrum - Fraxinus nigra - (Larix laricina) / Rhamnus alnifolia* Swamp Forest]

3. Shrub Swamps, Bogs, and Fens[37]

1a. Peatlands and shrub swamps of high elevations. **2**
1b. Peatlands **and** shrub swamps of lower elevations. **6**

2a. Shrubby to herbaceous seepage swamps or glades known from high elevations (>776 m [2,545 feet]) in the Northern Appalachians; occupying small openings on moderate to somewhat steep slopes within a matrix of *Abies balsamea*- (balsam fir) dominated forest (CEGL006112); soils primarily fertile mineral with deep organic/A horizon and little to no muck/peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is often present as a short shrub; lush herb layer includes some combination of *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort), *Laportea canadensis* (Canadian woodnettle), and others; observed in southernmost NH and ME. ..... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**
[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]

2b. Bog-like vegetation in subalpine and alpine settings above 610 m (2,000 feet) elevation, on moderate to steep slopes over bedrock or talus; includes alpine and subalpine bogs over sloping rock. **3**

3a. Subalpine peatland near or above treeline [elevations range from 1,036 to 1,599 m (3,400-5,246 feet)], forming in shallow bedrock basins where the peat usually remains saturated through the summer; vegetation dominated by bryoids with a mixture of dwarf-shrubs and graminoids, usually including *Vaccinium* (blueberry) spp., *Rubus chamaemorus* (cloudberry), *Ledum groenlandicum* (bog Labrador-tea), *Empetrum nigrum* (black crowberry), *Kalmia angustifolia* (sheep laurel), *Kalmia polifolia* (bog laurel), *Chamaedaphne calyculata* (leatherleaf), *Trichophorum caespitosum* (tufted bulrush), and *Eriophorum* (cottongrass) spp.; observed in NH. ..... **Black Crowberry Wet Alpine Bog (CEGL006140)**
[*Empetrum nigrum - Vaccinium uliginosum - Vaccinium oxycoccos / Rubus chamaemorus* Dwarf-shrubland]

3b. Dwarf-shrub- (or, rarely graminoid-) dominated vegetation on *Sphagnum* (sphagnum moss) or *Cladina* (reindeer lichen) spp. forming a thin layer over sloping bedrock (sometimes talus); not in basin settings, peat may not remain saturated through the summer..... **4**

[37]Shrub cover (including dwarf-shrubs) exceeds tree and graminoid cover (shrubs ≥50%); shrub swamps, bogs, fens, and shrub-herbaceous vegetation (50/50). For bog-like vegetation in subalpine setting, on moderate to steep slopes over bedrock or talus of mountain slopes go to Open Upland Alpine and Subalpine communities.

4a. Uncommon graminoid-dominated montane sloping fen occurring at or above approximately 800 m (2,625 feet) with abundant *Trichophorum caespitosum* (tufted bulrush) and *Calamagrostis pickeringii* (Pickering's reedgrass) restricted to the brow of certain alpine cliffs; dwarf ericaceous shrubs including *Vaccinium uliginosum* (bog blueberry), *Chamaedaphne calyculata* (leatherleaf), *Kalmia polifolia* (bog laurel), and *Ledum groenlandicum* (bog Labrador-tea) common; may occur as a mosaic of herb-dominated patches, shrub clusters, bryophyte carpets, and exposed bedrock; observed in NH. .....**Northern Appalachian Alpine Bulrush Cliff (CEGL006423)**
[*Trichophorum caespitosum - Calamagrostis pickeringii* Alpine Snowbed]
4b. Dwarf-shrub-dominated vegetation. **5**

5a. Subalpine slope bog occurring on moderate to very steep subalpine slopes among fir-birch forest or krummholz near or above treeline with elevations ranging from 1,085 to 1,420 m (3,560-4,659 feet); peat accumulation is deeper than in other alpine or subalpine heath settings, with depths of 25-80+ cm; dense layer of dwarf ericaceous shrubs dominated by a mixture of *Kalmia angustifolia* (sheep laurel), *Chamaedaphne calyculata* (leatherleaf), *Ledum groenlandicum* (bog Labrador-tea), and *Sphagnum* (sphagnum moss); fruticose lichens including *Cladina rangiferina* (greygreen reindeer lichen) and *Cetraria islandica* (island cetraria lichen) abundant; in ME and NH. ....**Subalpine Slope Bog (CEGL006425)**
[*Kalmia angustifolia - Chamaedaphne calyculata / Rubus chamaemorus / Cladina* spp. Dwarf-shrubland]
5b. Talus heathland usually at lower elevations [plot elevations ~776 m (2,296 feet)] in cool microsites with very patchy vegetation, occurring at the base of much exposed talus slopes; bryoid layer has *Cladina* (reindeer lichen) spp. and *Cladonia* (cup lichen) spp. more extensive than *Sphagnum* (sphagnum moss) cover; may be open or partially wooded, primarily with *Picea mariana* (black spruce); observed in the Presidential Range. .....**Cold Air Talus Heathland (CEGL006268)**
[*Picea mariana / Ledum groenlandicum - Empetrum nigrum / Cladina* spp. Dwarf-shrubland]

6a. Bogs and fens; *Sphagnum* (sphagnum moss) or other mosses (≥20%) dominant in ground layer sometimes floating over water and often forming a mat; substrate is accumulated peat (undecayed to partially decayed), constantly saturated. **7**
6b. Non-peat-forming shrub swamps; *Sphagnum* (sphagnum moss) may be present (<20% cover), but seldom forming continuous carpet or mat; shrub swamps of saturated basins, beaver-impacted wetlands and small, low-velocity streams **and** altered shrubby wet meadow vegetation. **14**

7a. Shrub bogs with a deep peat layer; shrub cover (including dwarf-shrubs) exceeds graminoid cover; acidic vegetation. **8**
7b. Shrub-herbaceous vegetation of nutrient-poor and enriched fens occurring on shallow peat; vegetation in contact with groundwater. **12**

8a. Vegetation dominated by taller shrub species, including *Viburnum nudum* (possumhaw), *Nemopanthus mucronatus* (catberry), *Alnus incana* (gray alder), or *Myrica gale* (sweetgale). **9**
8b. Shrubs mostly shorter species, including abundant ericads such as *Chamaedaphne calyculata* (leatherleaf), *Ledum groenlandicum* (bog Labrador-tea), or *Kalmia angustifolia* (sheep laurel); bogs and fens on well-developed *Sphagnum* (sphagnum moss) carpets. **10**

9a. Northern peatland shrub swamp occurring at the landward edge of acidic peat mats at 717 m (2,352 feet); *Viburnum nudum* var. *cassinoides* (withe-rod), *Nemopanthus mucronatus* (catberry), *Alnus incana* (gray alder), *Eriophorum virginicum* (tawny cottongrass), *Carex trisperma* (three-seeded sedge), *Osmunda cinnamomea* (cinnamon fern), and *Calla palustris* (water arum) characteristic; scattered *Picea mariana* (black spruce), *Larix laricina* (tamarack), and/or *Acer rubrum* (red maple) possible; standing water usually present among hummocks of *Sphagnum* (sphagnum moss); observed in NH..... **Northern Peatland Shrub Swamp (CEGL006158)**
[*Alnus incana* ssp. *rugosa* - *Nemopanthus mucronatus* / *Sphagnum* spp. Acidic Peatland]

9b. Mixed shrub fen with *Myrica gale* (sweetgale), *Spiraea tomentosa* (steeplebush), and/or *Spiraea alba* (white meadowsweet) prominent; *Chamaedaphne calyculata* (leatherleaf) often present but other ericads not abundant; diverse herb layer with *Calamagrostis canadensis* (bluejoint), *Carex stricta* (upright sedge), *Carex utriculata* (Northwest Territory sedge), and others; occurs in shallow standing water without a continuous *Sphagnum* (sphagnum moss) carpet; observed in NH and ME; plot elevations range from 280 to 837 m (920-2,746 feet). ..... **Sweetgale Mixed Shrub Fen (CEGL006512)**
[*Myrica gale* - *Spiraea alba* - *Chamaedaphne calyculata* Fen]

10a. Leatherleaf boggy fen with weakly minerotrophic fen conditions (vegetation in contact with the water table; water supply comes mainly from streams or springs), *Chamaedaphne calyculata* (leatherleaf) dominates the dwarf-shrub layer (>25%); *Andromeda polifolia* (bog rosemary) usually present; *Myrica gale* (sweetgale), *Kalmia angustifolia* (sheep laurel), and *Ledum groenlandicum* (bog Labrador-tea) are frequent; *Eriophorum virginicum* (tawny cottongrass) and *Rhynchospora alba* (white beaksedge) are characteristic herbs; *Sphagnum* (sphagnum moss) mat typical; occurs throughout the glaciated northeast; observed in ME. ..... **Leatherleaf Boggy Fen (CEGL006513)**
[*Chamaedaphne calyculata* / *Eriophorum virginicum* / *Sphagnum rubellum* Acidic Peatland]

10b. Ombrotrophic conditions (vegetation raised above the water table - receives water from precipitation; poor fen conditions where ground is permanently wet with nutrient-poor water which is somewhat acidic), or sometimes weakly minerotrophic conditions grading to ombrotrophic conditions; *Kalmia angustifolia* (sheep laurel), *Rhododendron canadense* (rhodora), *Gaylussacia* (huckleberry) spp., and *Ledum groenlandicum* (bog Labrador-tea) together equal or exceed the cover of *Chamaedaphne calyculata* (leatherleaf); graminoid cover rarely exceeds 15%. **11**

11a. Vegetation occurring on the raised and relatively well-drained portions of raised peatlands bogs *Kalmia angustifolia* (sheep laurel), *Gaylussacia* (huckleberry) spp., and *Ledum groenlandicum* (bog Labrador-tea) together more abundant than *Rhododendron canadense* (rhodora); *Eriophorum vaginatum* var. *spissum* (tussock cottongrass), *Sarracenia purpurea* (purple pitcherplant), *Drosera rotundifolia* (roundleaf sundew), and *Carex trisperma* (three-seeded sedge) are common; observed in ME..... **Raised Dwarf-shrub Bog (CEGL006225)**
[*Kalmia angustifolia* - *Chamaedaphne calyculata* - *(Picea mariana)* / *Cladina* spp. Acidic Peatland]

11b. Vegetation usually slightly downslope of the highest portions of a raised bog; very weakly minerotrophic conditions; *Rhododendron canadense* (rhodora) characteristic and more abundant than *Kalmia angustifolia* (sheep laurel), *Ledum groenlandicum* (bog Labrador-tea), and *Gaylussacia* (huckleberry) spp.; *Eriophorum virginicum* (tawny cottongrass) the most typical cottongrass; possible on trail in ME..... **Near-Boreal Dwarf-shrub Poor Fen (CEGL006514)**
[*Rhododendron canadense* - *Chamaedaphne calyculata* Acidic Peatland]

12a. *Chamaedaphne calyculata* (leatherleaf) dominates the dwarf-shrub layer (>25%); *Andromeda polifolia* (bog rosemary) usually present; *Myrica gale* (sweetgale), *Kalmia angustifolia* (sheep laurel), and *Ledum groenlandicum* (bog Labrador-tea) are frequent; *Eriophorum virginicum* (tawny cottongrass) and *Rhynchospora alba* (white beaksedge) are characteristic herbs; *Sphagnum* (sphagnum moss) mat typical; occurs throughout the glaciated Northeast; observed in ME. ..... **Leatherleaf Boggy Fen (CEGL006513)**
[*Chamaedaphne calyculata / Eriophorum virginicum / Sphagnum rubellum* Acidic Peatland]
12b. *Chamaedaphne calyculata* (leatherleaf) <25% in the dwarf-shrub layer. **13**

13a. Mixed, relatively tall-shrub (often >1 m) fen codominated by *Myrica gale* (sweetgale), *Spiraea tomentosa* (steeplebush), and/or *Spiraea alba* (white meadowsweet); *Chamaedaphne calyculata* (leatherleaf) present but not sole dominant; diverse herb layer with *Calamagrostis canadensis* (bluejoint), *Carex stricta* (upright sedge), *Carex utriculata* (Northwest Territory sedge), and others; occurs in standing shallow water without a continuous *Sphagnum* (sphagnum moss) carpet; observed in NH and ME; plot elevations range from 280 to 837 m (920-2,746 feet). ..... **Sweetgale Mixed Shrub Fen (CEGL006512)**
[*Myrica gale - Spiraea alba - Chamaedaphne calyculata* Fen]
13b. Vegetation codominated by tall sedges: dominant species are *Carex lasiocarpa* (woollyfruit sedge), *Carex utriculata* (Northwest Territory sedge), *Carex lacustris* (hairy sedge), and/or *Carex vesicaria* (blister sedge); sometimes with *Carex stricta* (upright sedge) and *Rhynchospora alba* (white beaksedge); scattered shrubs often shorter than the graminoids include *Spiraea alba* var. *latifolia* (white meadowsweet), *Myrica gale* (sweetgale), and/or *Chamaedaphne calyculata* (leatherleaf); observed in ME; plot elevations range from 400 to 749 m (1,310-2,457 feet). ..... **Medium Fen (CEGL006302)**
[*Myrica gale - Chamaedaphne calyculata / Carex (lasiocarpa, utriculata) - Utricularia* spp. Fen]

14a. Altered, successional mixed wet meadow shrubby vegetation dominated by *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. with variable combinations of wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern),*Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); ranges from shrub thicket to herbaceous meadow with scattered shrubs; occurs in low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; known throughout the Northeast; observed in the NAP project area. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
14b. Alder-dominated swamp occurring in saturated basins settings, in association with beaver-impacted wetlands, and/or alongside small, low-velocity streams dominated by *Alnus incana* (gray alder); *Rubus pubescens* (dwarf red blackberry) common; *Carex stricta* (upright sedge) and other wetland *Carex* (sedge) spp. along with a diversity of *Symphyotrichium* (asters), *Osmunda cinnamomea* (cinnamon fern), *Thelypteris palustris* (marsh fern), and *Impatiens capensis* (orange jewelweed); mosses include *Climacium dendroides* (tree climacium moss) and *Sphagnum* (sphagnum moss) spp.; widespread in the northeastern United States; elevations range from 177 to 354 m (580-1,160 feet). ..... **Gray Alder Shrub Swamp (CEGL002381)**
[*Alnus incana* Shrub Swamp]

4. Herbaceous Wetlands and Aquatic Vegetation

1a. Herbaceous seeps and nonvascular wetland vegetation. **2**
1b. Herbaceous wetlands that aren't seeps; herb cover >50% **and** aquatic vegetation **5**

2a. Boreal circumneutral riverside seep that develops on discharge areas of the shores of larger rivers in the northeast; circumneutral groundwater discharge supports a fen-like aspect, but on mineral rather than peat soils; semi-open conditions maintained by ice-scouring and floodwaters; characteristic species include *Lobelia kalmii* (Ontario lobelia), *Parnassia glauca* (fen grass of Parnassus), *Platanthera dilatata* (scentbottle), *Packera paupercula* (balsam groundsel), *Triantha glutinosa* (sticky tofieldia), *Spiranthes lucida* (shining ladies'-tresses), *Spiranthes romanzoffiana* (hooded ladies'-tresses), *Carex garberi* (elk sedge), *Carex viridula* (little green sedge), *Carex flava* (yellow sedge), *Rhynchospora capillacea* (needle beaksedge), *Rhynchospora capitellata* (brownish beaksedge), *Mentha arvensis* (wild mint), and others; probable where White River crosses AT in VT; documented globally in ME, NH, VT, and NY; but not in the NH portion of the AT corridor. .... **Boreal Circumneutral Riverside Seep (CEGL006142)**
[*Triantha glutinosa - Carex garberi* Riverscour Wet Meadow]
2b. Herb-dominated seepage communities not associated with riversides. **3**

3a. Shrubby to herbaceous seepage swamps or glades known from high elevations (>776 m [2,545 feet]) in the Northern Appalachians; occupying small openings on moderate to somewhat steep slopes within a matrix of *Abies balsamea*- (balsam fir) dominated forest (CEGL006112); soils primarily fertile mineral with deep organic/A horizon and little to no muck/peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is often present as a short shrub; lush herb layer includes some combination of *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort), *Calamagrostis canadensis* (bluejoint), *Veratrum viride* (green false hellebore), and others; observed in NH and ME. May occur in areas with natural disturbance (e.g., blowdown patches) or harvest history. .... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**
[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]
3b. Seeps dominated by forbs and graminoids typically at lower elevations. **4**

4a. Seepy wet cliff community of lower elevations dominated by moisture-loving plants such as *Chrysosplenium americanum* (American golden saxifrage), *Epilobium ciliatum* ssp. *glandulosum* (fringed willowherb), *Cinna latifolia* (drooping woodreed), *Drosera rotundifolia* (roundleaf sundew), and *Trichophorum caespitosum* (tufted bulrush), often with abundant bryophytes; *Oclemena acuminata* (whorled wood aster) and *Viola* (violet) spp. are characteristic; observed in NH. ....**Northern Appalachian Cliff Seep (CEGL006429)**
[*Drosera rotundifolia - Viola* spp. Cliff Sparse Vegetation]

4b. Common seeps not occurring on cliffs; *Carex scabrata* (eastern rough sedge) and/or *Chrysosplenium americanum* (American golden saxifrage) characteristic; small herbaceous seepage areas with shallow muck soils and usually lush cover of forbs, grasses, and sedges under matrix forest canopy; *Circaea alpina* (small enchanter's nightshade), *Viola cucullata* (marsh blue violet), *Chelone glabra* (white turtlehead), and *Glyceria* (mannagrass) spp. common; observed in NH. ..... **Golden-saxifrage Forested Seep (CEGL006193)**
[*Chrysosplenium americanum* Seepage Meadow]

5a. Aquatic vegetation of ponds and slow-moving rivers. **6**
5b. Herbaceous vegetation. **7**

6a. Dominants are usually submerged macrophytes such as *Nuphar advena* (yellow pond-lily), and/or *Nymphaea odorata* (American white waterlily) or floating-leaved pondweeds or bur-reeds; common throughout the Northeast; observed in ME. ... **Water-lily Aquatic Wetland (CEGL002386)**
[*Nuphar advena - Nymphaea odorata* Aquatic Vegetation]
6b. Aquatic vegetation of circumneutral water; *Nymphaea odorata* (American white waterlily) and *Nuphar* (pond-lily) spp. are often present but not abundant; submerged macrophytes or floating-leaved pondweeds dominant, including *Elodea canadensis* (Canadian waterweed), *Potamogeton robbinsii* (Robbins' pondweed), *Potamogeton vaseyi* (Vasey's pondweed), *Stuckenia filiformis* (fineleaf pondweed), *Potamogeton friesii* (Fries' pondweed), and *Potamogeton strictifolius* (narrowleaf pondweed); *Vallisneria americana* (American eel-grass)is often present. ..... **Eastern Waterweed - Pondweed Aquatic Vegetation (CEGL006431)**
[*Elodea canadensis - Potamogeton* spp. Eastern Aquatic Vegetation]

7a. Herbaceous vegetation occurring in riverine settings. **8**
7b. Non-alluvial herbaceous vegetation of bogs, fens, marshes and wet meadows. **11**

8a. Low-gradient shores with silt, sand, or muck substrate; *Calamagrostis canadensis* (bluejoint) predominant graminoid. **9**
8b. Sites with medium to high flow gradient, coarse substrate (rocky or gravelly). **10**

9a. *Calamagrostis canadensis* (bluejoint) monodominant in alluvial setting..... **Laurentian & Northeast Bluejoint Wet Meadow (CEGL005448)**
[*Calamagrostis canadensis - Carex* spp. Laurentian & Northeast Wet Meadow]
9b. Seasonally flooded mixed graminoid meadow with *Carex utriculata* (Northwest Territory sedge), *Carex stricta* (upright sedge), and *Glyceria canadensis* (rattlesnake mannagrass) may be codominant to dominant with *Calamagrostis canadensis* (bluejoint); total herbaceous cover ranges from 40-80%; shrubs such as *Alnus incana* (gray alder), *Spiraea tomentosa* (steeplebush), and *Chamaedaphne calyculata* (leatherleaf) common at low cover..... **Mixed Graminoid Wet Meadow (CEGL006519)**
[*Calamagrostis canadensis - Scirpus* spp. - *Dulichium arundinaceum* Wet Meadow]

10a. *Carex torta* (twisted sedge) diagnostic, and prairie grasses such as *Sorghastrum nutans* (Indiangrass) and *Andropogon gerardii* (big bluestem) often present; occurring on large coarse substrates deposited along medium- to high-energy river channels and, less frequently, exposed lakeshores with heavy wave action; seasonal flooding and ice-scour maintain the open nature; observed in ME. ..... **Northeastern Temperate Cobble Scour Rivershore (CEGL006536)**
[*Carex torta - Apocynum cannabinum - Cyperus* spp. Riverbed Vegetation]
10b. Vegetation dominated by a combination of species. **11**

11a. Riverside grasslands dominated by tall prairie grasses such as *Andropogon gerardii* (big bluestem), *Sorghastrum nutans* (Indiangrass), and *Schizachyrium scoparium* (little bluestem); generally occurs along major rivers in flood-scoured areas; along the Pemigewassett and Connecticut rivers in NH but not within the AT corridor in NH. ..... **Riverside Prairie Grassland (CEGL006518)**
[*Prunus pumila / Andropogon gerardii - Sorghastrum nutans* Wet Meadow]

11b. Herb-dominated, constantly saturated, rivershore seeps that develop on discharge areas of the shores of larger rivers in the glaciated Northeast; **circumneutral groundwater** discharge supports a fen-like aspect, but on mineral rather than peat soils; semi-open conditions maintained by ice-scouring and floodwaters; herbaceous species include *Lobelia kalmii* (Ontario lobelia), *Parnassia glauca* (fen grass of Parnassus), *Platanthera dilatata* (scentbottle), *Packera paupercula* (balsam groundsel), *Triantha glutinosa* (sticky tofieldia), *Equisetum variegatum* (variegated scouringrush), *Spiranthes lucida* (shining ladies'-tresses), *Spiranthes romanzoffiana* (hooded ladies'-tresses), *Carex garberi* (elk sedge), *Carex viridula* (little green sedge), *Carex flava* (yellow sedge), *Rhynchospora capillacea* (needle beaksedge), *Rhynchospora capitellata* (brownish beaksedge), *Mentha arvensis* (wild mint), and others; *Dasiphora fruticosa* ssp. *floribunda* (shrubby-cinquefoil), variegated *Alnus* (alder) spp., *Cornus sericea* (red-osier dogwood), and *Calamagrostis canadensis* (bluejoint); occurs where White River crosses AT in VT; not within the AT corridor in NH but documented globally in ME, NH, VT, and NY. ..... **Boreal Circumneutral Riverside Seep (CEGL006142)**
[*Triantha glutinosa - Carex garberi* Riverscour Wet Meadow]

12a. Bog and fen, peatland vegetation including low elevation and alpine settings. **13**
12b. Herbaceous marshes and wet meadows of lower elevations. **15**

13a. Fen community codominated by tall sedges: dominant species are *Carex lasiocarpa* (woollyfruit sedge), *Carex utriculata* (Northwest Territory sedge), *Carex lacustris* (hairy sedge), and/or *Carex vesicaria* (blister sedge); sometimes with *Carex stricta* (upright sedge) and *Rhynchospora alba* (white beaksedge); scattered shrubs often shorter than the graminoids include *Spiraea alba* var. *latifolia* (white meadowsweet), *Myrica gale* (sweetgale), and/or *Chamaedaphne calyculata* (leatherleaf); observed in ME; plot elevations range from 400 to 749 m (1,310-2,457 feet). ..... **Medium Fen (CEGL006302)**
[*Myrica gale - Chamaedaphne calyculata / Carex (lasiocarpa, utriculata) - Utricularia* spp. Fen]

13b. Bog-like vegetation in subalpine setting, on moderate to steep slopes over bedrock or talus of mountain slopes. **14**

14a. Rare graminoid-dominated sloping fen, with abundant *Trichophorum caespitosum* (tufted bulrush) and *Calamagrostis pickeringii* (Pickering's reedgrass) restricted to the brow of certain alpine cliffs; dwarf ericaceous shrubs including *Vaccinium uliginosum* (bog blueberry), *Chamaedaphne calyculata* (leatherleaf), *Kalmia polifolia* (bog laurel), and *Ledum groenlandicum* (bog Labrador-tea) common; may occur as a mosaic of herb-dominated patches, shrub clusters, bryophyte carpets, and exposed bedrock; observed in NH; average plot elevation is 800 m (2,625 feet). ..... **Northern Appalachian Alpine Bulrush Cliff (CEGL006423)**
[*Trichophorum caespitosum - Calamagrostis pickeringii* Alpine Snowbed]

14b. Alpine herbaceous - heath wet meadow dominated by *Trichophorum caespitosum* (tufted bulrush) occurring in moist and somewhat protected spots, or at groundwater seeps above 1,430 m (4,700 feet) elevation; not on cliffs; slopes more gentle with constant moisture provided by nearby streams or late-melting snowbanks; *Carex bigelowii* (Bigelow's sedge), and *Veratrum viride* (green false hellebore) common; lower-elevation species such as *Solidago macrophylla* (largeleaf

goldenrod) and *Deschampsia flexuosa* (wavy hairgrass) often present along with *Vaccinium caespitosum* (dwarf bilberry) and *Vaccinium uliginosum* (bog blueberry); observed in NH. ....**Alpine Herbaceous Wet Meadow (CEGL006424)**
[*Trichophorum caespitosum - Carex scirpoidea - Carex bigelowii* Alpine Snowbed]

15a. Freshwater wetlands dominated by broad-leaved emergent herbs; *Pontederia cordata* (pickerelweed), *Sagittaria* (arrowhead) spp., and/or *Sparganium* (bur-reed) sp. occurs along pondshores, lakeshores, and impoundments; common throughout the Northeast from PA north to ME; observed in ME. .....**Northeastern Leafy Forb Marsh (CEGL006191)**
[*Pontederia cordata - Peltandra virginica - Sagittaria latifolia* Marsh]
15b. Graminoids primarily dominant..... **16**

16a. Seasonally flooded wet meadows characterized by *Phalaris arundinacea* (reed canarygrass), *Spiraea* (spirea) spp., *Rubus* (blackberry) spp., or *Calamagrostis canadensis* (bluejoint) and/or *Dulichium arundinaceum* (threeway sedge). **17**
16b. Seasonally flooded or saturated marshes characterized by *Carex stricta* (upright sedge), *Carex vesicaria* (blister sedge), or *Typha* (cattail) spp. **18**

17a. Successional, mixed wet meadow - shrubby vegetation of the low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. are characteristic shrubs; variable composition can include wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern), *Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); known throughout the Northeast; observed in the NAP project area. ....**Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa - Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
17b. Naturally occurring, seasonally flooded wet meadow with some combination of *Calamagrostis canadensis* (bluejoint), *Scirpus cyperinus* (woolgrass), and/or *Schoenoplectus* (bulrush) spp., as well as *Leersia oryzoides* (rice cutgrass), *Carex stricta* (upright sedge), *Juncus* (rush) spp., *Lysimachia terrestris* (earth loosestrife), *Dulichium arundinaceum* (threeway sedge), *Lycopus uniflorus* (northern bugleweed), *Glyceria canadensis* (rattlesnake mannagrass), and *Carex echinata* (star sedge); shrubs absent to sparse; observed in NAP project area. ....**Mixed Graminoid Wet Meadow (CEGL006519)**
[*Calamagrostis canadensis - Scirpus* spp. - *Dulichium arundinaceum* Wet Meadow]

18a. Seasonally flooded sedge marshes dominated by *Carex stricta* (upright sedge) (>15% coverage); other common herbaceous species include *Carex vesicaria* (blister sedge), *Scirpus* (bulrush) spp., *Carex canescens* (silvery sedge), *Triadenum virginicum* (Virginia marsh St. Johnswort), and *Sparganium americanum* (American bur-reed); scattered, and other wetland shrubs possible; occurs in seasonally flooded basins or on stream or lake margins; substrate is muck or peat of variable depth overlying mineral soil; common throughout the Northeast; 4 plots in the NAP project area..... ..... **Eastern Upright Sedge Wet Meadow (CEGL006412)**
[*Carex stricta - Carex vesicaria* Wet Meadow]
18b. Tall emergent marsh dominated by *Typha* (cattail) spp.; occurs in permanently flooded basins and other disturbed wetlands, often part of a larger wetland mosaic and associated with lakes, ponds, or slow-moving streams; very common throughout the Northeast; observed in NH. ....**Eastern Cattail Marsh (CEGL006153)**
[*Typha (angustifolia, latifolia) - (Schoenoplectus* spp.) Eastern Marsh]

5. Open Alpine and Subalpine Vegetation, Lower Elevation Balds, Barrens, Cliffs, and Sparse Vegetation[38]

1a. Alpine areas: rocky summits and slopes near or above treeline, usually >1,000 m (3,300 feet) elevation; if tree species are present, then less than 2 m tall; vegetation patchy to continuous; may be small-patch in nature though key consistently. **2**
1b. Open areas with patchy to sparse vegetation on hills, low mountains, steep slopes, or cliffs; elevation usually below treeline though occasionally above tree line, scattered trees may be present. **19**

2a. Spruce and fir frequent. **3**
2b. Vegetation dominated by shrubs, dwarf-shrubs and/or herbs, or sparse; ericaceous species prominent among the shrubs. **4**

3a. Stunted tree species form the dominant cover; dense masses or patches of krummholz (stunted conifers) ≤2 m tall including *Picea mariana* (black spruce) and *Abies balsamea* (balsam fir) [and on occasion *Larix* (larch)] forming a band between treeline and more open summit areas; *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium myrtilloides* (velvetleaf huckleberry), *Nemopanthus mucronatus* (catberry), and *Ledum groenlandicum* (bog Labrador-tea) are common shrubs; elevation of plots range from 1,018 to 1,109 m (3,340-3,669 feet). .... **Black Spruce Krummholz (CEGL006038)**
[*Picea mariana - Abies balsamea / Sibbaldiopsis tridentata* Shrubland]
3b. Shrub species form the dominant cover; vegetation a mixture of dwarf heath shrubs and scattered stunted *Picea mariana* (black spruce), *Picea rubens* (red spruce), and/or *Abies balsamea* (balsam fir) with *Kalmia angustifolia* (sheep laurel) or *Ledum groenlandicum* (bog Labrador-tea) as the most abundant dwarf-shrub; taller shrubs, or tall-shrub-sized spruce often interspersed as islands; subalpine, sometimes extending above treeline; elevation of plots ranges from 950 to 1,460 m (3,117-4,790 feet); global elevations range from 550-1,435 m (1,800-4,700 feet); observed in NH and ME. ... . **Subalpine Summit Heath (CEGL006031)**
[(*Picea mariana, Abies balsamea*) / *Kalmia angustifolia - Ledum groenlandicum* Dwarf-shrubland]

4a. Arctic-alpine vegetation on high summits, with one or more strictly alpine species present (not necessarily dominant): *Diapensia lapponica* (pincushion plant), *Agrostis mertensii* (northern bentgrass), *Carex bigelowii* (Bigelow's sedge), *Arctostaphylos alpina* (alpine bearberry), *Rhododendron lapponicum* (Lapland rosebay), *Salix uva-ursi* (bearberry willow), *Betula glandulosa* (resin birch), *Harrimanella hypnoides* (mossplant), *Phyllodoce caerulea* (blue mountain-heath), *Saxifraga foliolosa* (leafystem saxifrage), or *Polygonum viviparum* (alpine bistort). **5**
4b. Strictly alpine species (see list above) absent; patches of vegetation over bare rock, usually subalpine, below or near treeline, but may extend higher. **12**

[38]Includes alpine herbaceous meadows, heath barrens, krummholz, cliffs, rocky outcrop, boulderfields, talus slopes, cliff and sparse vegetation with <10% tree cover. See Upland Woodlands for vegetation with more tree cover occurring in alpine and subalpine settings.

5a. Expanses of lichen-covered boulders occurring on gentle to steep slopes or tablelands (fell-field); very sparse vascular vegetation confined to pockets among the rocks; Mt. Abram in ME; occurs globally in NH. ..... **Eastern Lichen Fell-field (CEGL006420)**
[*Arctoparmelia centrifuga - Rhizocarpon geographicum* Nonvascular Vegetation]
5b. Vegetation more extensive, although very low, forming patchy carpets over the rock substrate. .. **6**

6a. Herbs, mostly graminoids, more prominent than dwarf-shrubs. **7**
6b. Vegetation primarily dwarf shrubs. **10**

7a. *Carex bigelowii* (Bigelow's sedge) dominates the vegetation; high elevation alpine meadows usually over 1,463 m (4,800 feet), on north and west slopes, where there is both high moisture intercept (from precipitation or fog) and lower snow cover than other alpine habitats; soils are typically thin, acidic and have a low moisture-holding capacity, consisting of organic turf over stone, gravel or coarse sediment; extensive in Presidential Range and very small patch on Katahdin, patches may be too small in ME and could be included in Alpine Heath Meadow (CEGL006298) see below... ..... **Bigelow's Sedge Alpine Meadow (CEGL006081)**
[*Carex bigelowii* Alpine Meadow]
7b. *Carex bigelowii* (Bigelow's sedge) not sole dominant **8**

8a. Matrix, above treeline, alpine meadow of matted shrubs, sedges, and rushes on the highest peaks [above 1,370 m (4,500 feet) (occasionally lower)] of the northern Appalachian Mountains; a variable mixture of dwarf evergreen shrubs primarily *Vaccinium uliginosum* (bog blueberry), with *Vaccinium* (blueberry) spp., *Empetrum* (crowberry) spp., *Rhododendron lapponicum* (Lapland rosebay), *Diapensia lapponica* (pincushion plant), *Salix uva-ursi* (bearberry willow), and *Arctostaphylos uva-ursi* (kinnikinnick) and herbs with locally extensive patches of graminoid cover, dominated by *Juncus trifidus* (highland rush) and/or *Carex bigelowii* (Bigelow's sedge); observed in ME and NH. ... . **Alpine Heath Meadow (CEGL006298)**
[*Vaccinium uliginosum - Rhododendron lapponicum / Juncus trifidus* Dwarf-shrubland]
8b. Less common, small-patch alpine vegetation with moist to wet soils. **9**

9a. Small-patch alpine herbaceous - heath wet meadow dominated by *Trichophorum caespitosum* (tufted bulrush) occurring in moist and somewhat protected spots, or at groundwater seeps above 1,430 m (4,700 feet) elevation; not on cliffs; slopes more gentle with constant moisture provided by nearby streams or late-melting snowbanks; *Carex bigelowii* (Bigelow's sedge), and *Veratrum viride* (green false hellebore) common; lower-elevation species such as *Solidago macrophylla* (largeleaf goldenrod) and *Deschampsia flexuosa* (wavy hairgrass) often present along with *Vaccinium caespitosum* (dwarf bilberry) and *Vaccinium uliginosum* (bog blueberry); observed in NH. .... **Alpine Herbaceous Wet Meadow (CEGL006424)**
[*Trichophorum caespitosum - Carex scirpoidea - Carex bigelowii* Alpine Snowbed]
9b. Rare graminoid-dominated sloping fen, with abundant *Trichophorum caespitosum* (tufted bulrush) and *Calamagrostis pickeringii* (Pickering's reedgrass) restricted to the brow of certain alpine cliffs; dwarf ericaceous shrubs including *Vaccinium uliginosum* (bog blueberry), *Chamaedaphne calyculata* (leatherleaf), *Kalmia polifolia* (bog laurel), and *Ledum groenlandicum* (bog Labrador-tea) common; may occur as a mosaic of herb-dominated patches, shrub clusters, bryophyte carpets, and exposed bedrock; observed in NH; average plot elevation is 800 m (2,625 feet). .... **Northern Appalachian Alpine Bulrush Cliff (CEGL006423)**
[*Trichophorum caespitosum - Calamagrostis pickeringii* Alpine Snowbed]

10a. Matrix, above treeline, alpine meadow of matted shrubs, sedges, and rushes on the highest peaks [above 1,370 m (4,500 feet) (occasionally lower)] of the northern Appalachian Mountains; a variable mixture of dwarf evergreen shrubs (primarily *Vaccinium uliginosum* (bog blueberry)) and herbs with locally extensive patches of graminoid cover, dominated by *Juncus trifidus* (highland rush) and/or *Carex bigelowii* (Bigelow's sedge); observed in NH and ME. ..... **Alpine Heath Meadow (CEGL006298)**
[*Vaccinium uliginosum - Rhododendron lapponicum / Juncus trifidus* Dwarf-shrubland]
10b. Less common, small patch dwarf-shrub dominated vegetation. **11**

11a. Protected areas where snow lingers - at summit edges, upper slopes, or bases of cliffs; *Vaccinium uliginosum* (bog blueberry) typically dominant and *Phyllodoce caerulea* (blue mountain-heath), *Betula glandulosa* (resin birch), or *Harrimanella hypnoides* (mossplant) characteristic; observed in NH. ..... **Alpine Heath Snowbank (CEGL006155)**
[*Vaccinium uliginosum - Harrimanella hypnoides - Loiseleuria procumbens* Dwarf-shrubland]
11b. Exposed areas; cushions of *Diapensia lapponica* (pincushion plant) dominate the vegetation (>30% cover), with *Vaccinium uliginosum* (bog blueberry); *Betula glandulosa* (resin birch), or *Harrimanella hypnoides* (mossplant) absent; herbs <10% cover; observed in NH. ..... **Windswept Alpine Ridge (CEGL006322)**
[*Diapensia lapponica* Dwarf-shrubland]

12a. Bog-like vegetation with peaty soils in subalpine setting above 610 m (2,000 feet) elevation, on moderate to steep slopes over bedrock or talus; bedrock substrate (or sometimes talus). **13**
12b. Upland vegetation in an open or woodland setting. **16**

13a. Subalpine peatlands near or above treeline forming in shallow bedrock basins where the peat usually remains saturated through the summer; vegetation dominated by bryoids with a mixture of dwarf-shrubs and graminoids, usually including *Vaccinium* (blueberry) spp., *Rubus chamaemorus* (cloudberry), *Ledum groenlandicum* (bog Labrador-tea), *Empetrum nigrum* (black crowberry), *Kalmia angustifolia* (sheep laurel), *Kalmia polifolia* (bog laurel), *Chamaedaphne calyculata* (leatherleaf), *Trichophorum caespitosum* (tufted bulrush), and *Eriophorum* (cottongrass) spp.; observed in NH, plot elevations range from 1,036 to 1,599 m (3,400-5,246 feet). ..... **Black Crowberry Wet Alpine Bog (CEGL006140)**
[*Empetrum nigrum - Vaccinium uliginosum - Vaccinium oxycoccos / Rubus chamaemorus* Dwarf-shrubland]
13b. Dwarf-shrub- (or, rarely graminoid-) dominated vegetation on *Sphagnum* (sphagnum moss) or *Cladina* (reindeer lichen) spp., forming a thin layer over sloping bedrock (sometimes talus), not a basin; peat may not remain saturated through the summer. **14**

14a. Rare graminoid-dominated sloping fen, with abundant *Trichophorum caespitosum* (tufted bulrush) and *Calamagrostis pickeringii* (Pickering's reedgrass) restricted to the brow of certain alpine cliffs; dwarf ericaceous shrubs including *Vaccinium uliginosum* (bog blueberry), *Chamaedaphne calyculata* (leatherleaf), *Kalmia polifolia* (bog laurel), and *Ledum groenlandicum* (bog Labrador-tea) common; may occur as a mosaic of herb-dominated patches, shrub clusters, bryophyte carpets, and exposed bedrock; observed in NH; average plot elevation is 800 m (2,625 feet). ..... **Northern Appalachian Alpine Bulrush Cliff (CEGL006423)**
[*Trichophorum caespitosum - Calamagrostis pickeringii* Alpine Snowbed]
14b. Dwarf-shrub-dominated vegetation. **15**

15a. Subalpine slope bog occurring on moderate to very steep subalpine slopes near or above treeline with plot elevations ranging from 1,085 to 1,420 m (3560-4,659 feet); peat accumulation is deeper than in other alpine or subalpine heath settings, with depths of 25-80+ cm; dense layer of dwarf ericaceous shrubs dominated by a mixture of *Kalmia angustifolia* (sheep laurel), *Chamaedaphne calyculata* (leatherleaf), *Ledum groenlandicum* (bog Labrador-tea), and *Sphagnum* (sphagnum moss); fruticose lichens including *Cladina rangiferina* (greygreen reindeer lichen) and *Cetraria islandica* (island cetraria lichen) abundant; observed in NH and ME..... **Subalpine Slope Bog (CEGL006425)**
[*Kalmia angustifolia - Chamaedaphne calyculata / Rubus chamaemorus / Cladina* spp. Dwarf-shrubland]

15b. Talus heathland usually at lower elevations [plot elevations ~700 m (2,296 feet)] in cool microsites with very patchy vegetation, occurring at the base of much exposed talus slopes; bryoid layer has *Cladina* (reindeer lichen) spp. and *Cladonia* (cup lichen) spp. more extensive than *Sphagnum* (sphagnum moss) cover; may be open or partially wooded, primarily with *Picea mariana* (black spruce); observed in the Presidential Range. ..... **Cold Air Talus Heathland (CEGL006268)**
[*Picea mariana / Ledum groenlandicum - Empetrum nigrum / Cladina* spp. Dwarf-shrubland]

16a. 1-2 m tall *Alnus viridis* ssp. *crispa* (mountain alder) and *Betula papyrifera* (paper birch) (possibly including the subalpine var. *cordifolia*) alder-birch shrublands found in subalpine to lower alpine zones in unstable settings such as avalanche paths, old landslides, or cirque walls; herb cover is patchy and best developed in openings among the shrubs; bryophytes are sparse; *Diervilla lonicera* (northern bush honeysuckle) and/or *Corylus cornuta* (beaked hazelnut) may be locally abundant, especially in somewhat drier microsites; stunted *Picea mariana* (black spruce) and *Abies balsamea* (balsam fir) possible; *Viburnum edule* (squashberry) often present with low cover; herbs include *Solidago macrophylla* (largeleaf goldenrod), *Prenanthes trifoliolata* (gall of the earth), *Eurybia radula* (low rough aster), *Sibbaldiopsis tridentata* (shrubby fivefingers) (in drier openings), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Athyrium filix-femina* (common ladyfern) and *Calamagrostis canadensis* (bluejoint). .... **Alpine Slope Shrub Thicket (CEGL006064)**
[*Alnus viridis* ssp. *crispa - Spiraea alba / Solidago macrophylla* Shrubland]

16b. *Alnus viridis* ssp. *crispa* (mountain alder) and *Betula papyrifera* (paper birch) not abundant.... **17**

17a. Spruce and/or fir krummholz and tall shrubs absent or very limited; sparse vascular vegetation forming a patchwork of matted shrubs amid expanses of rock; *Vaccinium uliginosum* (bog blueberry), *Vaccinium vitis-idaea* (lingonberry), and/or *Empetrum* (crowberry) spp. the most abundant dwarf-shrubs; sometimes extending above treeline; observed in ME and NH. .... **Subalpine Rock Bald (CEGL006533)**
[*Vaccinium uliginosum / Sibbaldiopsis tridentata* Sparse Vegetation]

17b. Spruce and/or fir abundant..... **18**

18a. Shrub species form the dominant cover; vegetation a mixture of dwarf heath shrubs and scattered stunted *Picea* spp. (black spruce and/or red spruce), and/or *Abies balsamea* (balsam fir) with *Kalmia angustifolia* (sheep laurel) or *Ledum groenlandicum* (bog Labrador-tea) as the most abundant dwarf-shrub; taller shrubs, or tall-shrub-sized spruce often interspersed as islands; subalpine, sometimes extending above treeline; elevation of plots ranges from 950 to 1,460 m (3,117-4,790 feet); global elevations range from 550-1,435 m (1,800-4,700 feet); observed in ME and NH.... ..... **Subalpine Summit Heath (CEGL006031)**
[(*Picea mariana, Abies balsamea*) / *Kalmia angustifolia - Ledum groenlandicum* Dwarf-shrubland]

18b. Talus heathland usually at lower elevations [plot elevations ~700 m (2,296 feet)] in cool microsites with very patchy vegetation, occurring at the base of much exposed talus slopes; bryoid layer has *Cladina* (reindeer lichen) spp. and *Cladonia* (cup lichen) spp. more extensive than *Sphagnum* (sphagnum moss) cover; may be open or partially wooded, primarily with *Picea mariana* (black spruce); observed in the Presidential Range. .....**Cold Air Talus Heathland (CEGL006268)**
[*Picea mariana / Ledum groenlandicum - Empetrum nigrum / Cladina* spp. Dwarf-shrubland]

19a. Vegetation of low- to mid-elevation open summits, with patchy vegetation including dwarf-shrubs, herbs, and, in more protected spots, taller shrubs or stunted trees; vegetation is not sparse (≥10% cover). **20**
19b. Sparse vegetation of mid-elevation steep talus slopes, boulderfields, and cliffs (including the cliff brow) with sparse and patchy vegetation (<10% cover). **24**

20a. Trees and/or tall shrubs (1-2 m) present. **21**
20b. Dwarf ericads (1 m) form the dominant cover. **23**

21a. 1-2 m tall *Alnus viridis* ssp. *crispa* (mountain alder) and *Betula papyrifera* (paper birch) (possibly including the subalpine var. *cordifolia*) alder-birch shrublands found in subalpine to lower alpine zones in unstable settings such as avalanche paths, old landslides, or cirque walls; herb cover is patchy and best developed in openings among the shrubs; bryophytes are sparse; *Diervilla lonicera* (northern bush honeysuckle) and/or *Corylus cornuta* (beaked hazelnut) may be locally abundant, especially in somewhat drier microsites; stunted *Picea mariana* (black spruce) and *Abies balsamea* (balsam fir) may be present; *Viburnum edule* (squashberry) is often present, although in very low numbers; herbs include Solidago macrophylla (largeleaf goldenrod), *Prenanthes trifoliolata* (gall of the earth), *Eurybia radula* (low rough aster), *Sibbaldiopsis tridentata* (shrubby fivefingers) (in drier openings), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Athyrium filix-femina* (common ladyfern), and *Calamagrostis canadensis* (bluejoint). .....**Alpine Slope Shrub Thicket (CEGL006064)**
[*Alnus viridis* ssp. *crispa - Spiraea alba / Solidago macrophylla* Shrubland]
21b. *Picea rubens* (red spruce) -dominated woodlands. **22**

22a. Patchy and open *Picea rubens* (red spruce) woodland with *Abies balsamea* (balsam fir) or *Pinus strobus* (eastern white pine) occasionally codominant, occurring on exposed acidic bedrock outcrops, rocky ridges or summits often with high lichen cover; talus substrate sparse to absent; *Betula papyrifera* var. *cordifolia* (mountain paper birch) may be common over a heath-forb understory with *Vaccinium angustifolium* (lowbush blueberry) and *Kalmia angustifolia* (sheep laurel); elevations range from 305-880 m (1,000-2,887 feet)..... .....**Northern Appalachian Red Spruce Rocky Ridge (CEGL006053)**
[*Picea rubens / Vaccinium angustifolium / Sibbaldiopsis tridentata* Woodland]
22b. *Picea rubens* (red spruce) woodland of acidic talus steep slopes typically occurring within the spruce-fir forest zone at moderate to high elevations with variable canopy closure and coverage; *Abies balsamea* (balsam fir), *Betula papyrifera* var. *papyrifera* (paper birch), *Betula papyrifera* var. *cordifolia* (mountain paper birch), and *Betula alleghaniensis* (yellow birch) are canopy associates; tall-shrub cover is comprised of *Acer spicatum* (mountain maple), *Acer pensylvanicum* (striped maple), *Sorbus americana* (American mountain-ash), and *Sorbus decora* (northern mountain-ash); *Ribes glandulosum* (skunk currant) is a typical and diagnostic smaller shrub; heaths may be present, but not abundant.....**Red Spruce Talus Slope Woodland (CEGL006250)**
[*Picea rubens / Ribes glandulosum* Woodland]

23a. Acidic rock heath barren occurring on rocky ridges, outcrops and summits dominated by *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium myrtilloides* (velvetleaf huckleberry), and/or *Vaccinium pallidum* (Blue Ridge blueberry); more temperate species such as *Quercus rubra* (northern red oak), *Arctostaphylos uva-ursi* (kinnikinnick), *Solidago simplex* var. *randii* (Rand's goldenrod), and/or *Minuartia glabra* (Appalachian stitchwort) often present; more boreal species such as *Ledum groenlandicum* (bog Labrador-tea) and *Empetrum* (crowberry) spp. absent; observed in NH; below 825 m (2,700 feet). ..... **Blueberry Granite Barrens (CEGL005094)**
[*Vaccinium angustifolium - Sorbus americana / Sibbaldiopsis tridentata* Dwarf-shrubland]

23b. Vegetation a mixture of dwarf heath shrubs and scattered stunted *Picea mariana* (black spruce), *Picea rubens* (red spruce), and/or *Abies balsamea* (balsam fir) with *Kalmia angustifolia* (sheep laurel) or *Ledum groenlandicum* (bog Labrador-tea) as the most abundant dwarf-shrub; taller shrubs, or tall-shrub-sized spruce often interspersed as islands; subalpine, sometimes extending above treeline; elevation of APPA plots ranges from 950 to 1,460 m (3,117-4,790 feet); global elevations range from 550-1,435 m (1,800-4,700 feet)..... **Subalpine Summit Heath (CEGL006031)**
[(*Picea mariana, Abies balsamea*) / *Kalmia angustifolia - Ledum groenlandicum* Dwarf-shrubland]

24a**.** Very steep, lichen-covered talus slopes and boulderfields occurring at mid elevations from 300-900 m (984-2,953 feet) with little-to-no soil accumulation; *Cladina* (reindeer lichen) spp. and *Cladonia* (cup lichen) spp. characteristic; scattered and isolated patches of stunted vegetation including but not limited to *Picea rubens* (red spruce), *Betula papyrifera* var. *cordifolia* (mountain paper birch), dwarf ericads such as *Vaccinium* spp. (blueberries), and *Polypodium* (polypody) spp. possible at low cover (≤10% cover)..... **Northern Lichen Talus Barrens (CEGL006534)**
Polypodium (*virginianum, appalachianum*) / Lichens Nonvascular Vegetation

24b. Sparse and patchy vegetation of cliffs, including the cliff brow above. **25**

25a. Seepy wet cliff community dominated by moisture-loving plants such as *Chrysosplenium americanum* (American golden saxifrage), *Epilobium ciliatum* ssp. *glandulosum* (fringed willowherb), *Cinna latifolia* (drooping woodreed), *Drosera rotundifolia* (roundleaf sundew), and *Trichophorum caespitosum* (tufted bulrush), often with abundant bryophytes; *Oclemena acuminata* (whorled wood aster) and *Viola* (violet) spp. are characteristic; observed in NH. .... **Northern Appalachian Cliff Seep (CEGL006429)**
[*Drosera rotundifolia - Viola* spp. Cliff Sparse Vegetation]

25b. Cliff-face dry, at most with small linear seepage areas included. **26**

26a. Sub-boreal cliffs or outcrops of circumneutral to calcareous rocks where woody plants such as *Thuja occidentalis* (arborvitae), *Sorbus decora* (northern mountain-ash) and/or *Sorbus americana* (American mountain-ash) are common; enriched conditions present, as evidenced by calciphilic vascular plants or bryophytes, including *Dryopteris fragrans* (fragrant woodfern), *Dasiphora fruticosa* ssp. *floribunda* (shrubby-cinquefoil), *Carex scirpoidea* (northern singlespike sedge), *Pinguicula vulgaris* (common butterwort), *Asplenium trichomanes-ramosum* (bright-green spleenwort), *Asplenium trichomanes* (maidenhair spleenwort), and/or *Carex eburnea* (bristleleaf sedge); possible on trail in NH and observed in ME at 847 m (2,278 feet). .... **Near-Boreal Alkaline Cliff (CEGL006526)**
[*Carex scirpoidea* Alkaline Cliff Sparse Vegetation]

26b. Cliffs or outcrops of acidic rock; vegetation patchy and in many places sparse; herbaceous flora varies, but lacks calciphiles, with typical species including *Polypodium* (polypody) spp., *Sibbaldiopsis tridentata* (shrubby fivefingers), *Deschampsia flexuosa* (wavy hairgrass), *Streptopus lanceolatus* (twisted-stalk), and *Solidago simplex* var. *randii* (Rand's goldenrod); woody plants typically include *Picea rubens* (red spruce), *Betula papyrifera* (paper birch), or *Acer spicatum* (mountain maple); observed in NH and possible on trail ME; plot elevations range from 678 to 1,155 m (2,224-3,789 feet). .....**Northern Appalachian Acidic Cliff (CEGL006528)**
[*Polypodium (virginianum, appalachianum)* Cliff Sparse Vegetation]

6. Upland Woodlands[39]

1a. Open woodlands on exposed talus or cliffs with trees very patchy and open areas interspersed; trees generally short; talus may be covered by a thin layer of leaf litter. **2**
1b. Woodlands not occurring on exposed talus. **4**

2a. Northern hardwood - (oak) talus slope woodland of low to mid elevations up to about 518 m (1,700 feet) with some combination of *Betula alleghaniensis* (yellow birch) and/or *Betula papyrifera* (paper birch); oak may drop out entirely in the northern portion of range; enriched-site herbs absent; *Acer spicatum* (mountain maple), *Acer pensylvanicum* (striped maple), *Rubus* (blackberry) spp., *Viburnum acerifolium* (mapleleaf viburnum), and *Ribes* (currant) spp. also common; vines are characteristic including *Parthenocissus quinquefolia* (Virginia creeper), *Parthenocissus vitacea* (woodbine), *Toxicodendron radicans* (eastern poison-ivy), and others; *Dryopteris marginalis* (marginal woodfern), *Dryopteris campyloptera* (mountain woodfern), *Polypodium virginianum* (rock polypody), and *Maianthemum canadense* (Canada mayflower) are common herbs; observed in NH; global range extends into ME. ..... **Northern Hardwood - Oak Talus Slope Woodland (CEGL006584)**
[*Betula alleghaniensis - Quercus rubra / Polypodium virginianum* Woodland]
2b. *Picea rubens* (red spruce) and/or *Picea mariana* (black spruce) present. **3**

3a. *Picea rubens* (red spruce) woodland of acidic talus steep slopes typically occurring within the spruce-fir forest zone at moderate to high elevations with variable canopy coverage; *Abies balsamea* (balsam fir), *Betula papyrifera* var. *papyrifera* (paper birch), *Betula papyrifera* var. *cordifolia* (mountain paper birch), and *Betula alleghaniensis* (yellow birch) are canopy associates; tall-shrub cover is comprised of *Acer spicatum* (mountain maple), *Acer pensylvanicum* (striped maple), *Sorbus americana* (American mountain-ash) and *Sorbus decora* (northern mountain-ash); *Ribes glandulosum* (skunk currant) is a diagnostic smaller shrub; heaths may be present, but not abundant; vegetation may be sparse in areas with massive talus blocks. ..... **Red Spruce Talus Slope Woodland (CEGL006250)**
[*Picea rubens / Ribes glandulosum* Woodland]
3b. Partially wooded to open talus heathland occurring at the base of much exposed talus slopes; bryoid layer has *Cladina* (reindeer lichen) spp. and *Cladonia* (cup lichen) spp.; may be open or partially wooded, primarily with *Picea mariana* (black spruce); observed in the Presidential Range at 776 m (2,296 feet) in cool microsites. ..... **Cold Air Talus Heathland (CEGL006268)**
[*Picea mariana / Ledum groenlandicum - Empetrum nigrum / Cladina* spp. Dwarf-shrubland]

4a. Evergreen or mixed evergreen and deciduous trees codominant in canopy. **5**
4b. Deciduous trees dominant in canopy. **8**

[39]Open stands of trees generally forming 10-60% cover. See Open Alpine and Subapline Vegetation for alpine herbaceous meadows, heath barrens, krummholz, cliffs, rocky outcrop, steep lichen covered talus slopes and sparse vegetation with <10% tree cover.

5a. *Quercus rubra* (northern red oak) and occasionally *Pinus strobus* (eastern white pine) codominate the patchy rocky summit and upper slope woodland, occurring low- to mid-elevation summits from 375 to 567 m (1,235-1,860 feet); *Betula populifolia* (gray birch), *Betula papyrifera* (paper birch), and/or *Acer rubrum* (red maple) are canopy associates; *Castanea dentata* (American chestnut) and *Amelanchier laevis* (Allegheny serviceberry), characteristic; *Vaccinium angustifolium* (lowbush blueberry) and/or *Gaylussacia baccata* (black huckleberry) dominate the shrub layer; *Deschampsia flexuosa* (wavy hairgrass), *Danthonia spicata* (poverty oatgrass), *Cypripedium acaule* (moccasin flower), *Aralia nudicaulis* (wild sarsaparilla), and *Pteridium aquilinum* (western brackenfern) characteristic herbs; observed in Hanover and Shelburne NH and in ME. ..... **Red Oak / Heath Woodland Rocky Summit (CEGL006134)**
[*Quercus rubra - (Quercus prinus) / Vaccinium* spp. / *Deschampsia flexuosa* Woodland]
5b. Evergreen trees dominant or codominant in canopy. **6**

6a. *Pinus banksiana* (Jack pine) dominant on mid to high elevation 550 to 1,190 m (1,800-3,900 feet) mountain ridges in the White Mountains in NH; observed at Crawford Notch, NH. ..... **Jack Pine Heath Barrens (CEGL006041)**
[*Pinus banksiana / Kalmia angustifolia - Vaccinium* spp. Woodland]
6b. Other conifers dominant. **7**

7a. Patchy and open *Picea rubens* (red spruce) woodland with *Abies balsamea* (balsam fir) or *Pinus strobus* (eastern white pine) occasionally codominant, occurring on acidic bedrock outcrops and exposed bedrock often with high lichen cover also on rocky ridges or summits; talus substrate sparse to absent; *Betula papyrifera* var. *cordifolia* (mountain paper birch) may be common; over a heath-forb understory with *Vaccinium angustifolium* (lowbush blueberry) and *Kalmia angustifolia* (sheep laurel) common; elevations range from 305-880 m (1,000-2,887 feet). ..... **Northern Appalachian Red Spruce Rocky Ridge (CEGL006053)**
[*Picea rubens / Vaccinium angustifolium / Sibbaldiopsis tridentata* Woodland]
7b. Stunted tree species form the dominant cover; dense masses or patches of krummholz (stunted conifers) ≤2 m tall including *Picea mariana* (black spruce) and *Abies balsamea* (balsam fir) [and on occasion *Larix* (larch)] forming a band between treeline and more open summit areas; *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium myrtilloides* (velvetleaf huckleberry), *Nemopanthus mucronatus* (catberry), and *Ledum groenlandicum* (bog Labrador-tea) are common shrubs; elevation of plots range from 1,018 to 1,109 m (3,340-3,669 feet). ..... **Black Spruce Krummholz (CEGL006038)**
[*Picea mariana - Abies balsamea / Sibbaldiopsis tridentata* Shrubland]

8a. *Quercus rubra* (northern red oak) and occasionally *Pinus strobus* (eastern white pine) codominate the patchy woodland, occurring on rocky upper slopes and low- to mid-elevation summits from 375 to 567 m (1,235-1,860 feet); *Betula populifolia* (gray birch), *Betula papyrifera* (paper birch), and/or *Acer rubrum* (red maple) are canopy associates; *Amelanchier laevis* (Allegheny serviceberry), characteristic; *Vaccinium angustifolium* (lowbush blueberry) and/or *Gaylussacia baccata* (black huckleberry) dominate the shrub layer; *Deschampsia flexuosa* (wavy hairgrass), *Danthonia spicata* (poverty oatgrass), *Cypripedium acaule* (moccasin flower), *Aralia nudicaulis* (wild sarsaparilla), and *Pteridium aquilinum* (western brackenfern) characteristic herbs; observed in Hanover and Shelburne, NH and in ME. ..... **Red Oak / Heath Woodland Rocky Summit (CEGL006134)**
[*Quercus rubra - (Quercus prinus) / Vaccinium* spp. / *Deschampsia flexuosa* Woodland]

8b. Early-successional northern hardwoods dominated by a combination of *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), and/or *Betula populifolia* (gray birch); *Betula papyrifera* (paper birch), old-field grasses and herbs in herb layer; understory may contain *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Abies balsamea* (balsam fir), or *Picea rubens* (red spruce), *Pinus strobus* (eastern white pine), and/or *Tsuga canadensis* (eastern hemlock) in canopy and understory; ranges from closed-canopy forests to open woodlands; observed in NH and common in ME.....**Ruderal Aspen - Birch Woodland (CEGL006303)**

[*Populus (tremuloides, grandidentata) - Betula (populifolia, papyrifera)* Ruderal Woodland]

7. Spruce and/or Fir Upland Woodlands and Forests

1a. Open woodlands and spruce-fir krummholz. **2**
1b. Closed-canopy forests and plantations; canopy coverage >70%. **4**

2a. Stunted tree species form the dominant cover; dense masses or patches of krummholz (stunted conifers) ≤2 m tall including *Picea mariana* (black spruce) and *Abies balsamea* (balsam fir) [and on occasion *Larix* (larch)] forming a band between treeline and more open summit areas; *Vaccinium angustifolium* (lowbush blueberry), *Vaccinium myrtilloides* (velvetleaf huckleberry), *Nemopanthus mucronatus* (catberry), and *Ledum groenlandicum* (bog Labrador-tea) are common shrubs; elevation of plots range from 1,018 to 1,109 m (3,340-3,669 feet). ..... **Black Spruce Krummholz (CEGL006038)**
[*Picea mariana - Abies balsamea / Sibbaldiopsis tridentata* Shrubland]
2b. Woodlands. **3**

3a. *Picea rubens* (red spruce) woodland of acidic talus steep slopes typically occurring within the spruce-fir forest zone at moderate to high elevations [plot elevations are 664 and 890 m (2,178-2,920 feet)]; *Abies balsamea* (balsam fir), *Betula papyrifera* var. *papyrifera* (paper birch), *Betula papyrifera* var. *cordifolia* (mountain paper birch), and *Betula alleghaniensis* (yellow birch) are canopy associates; tall-shrub cover is comprised of *Acer spicatum* (mountain maple), *Acer pensylvanicum* (striped maple), *Sorbus americana* (American mountain-ash), and *Sorbus decora* (northern mountain-ash); *Ribes glandulosum* (skunk currant) is a typical and diagnostic smaller shrub; heaths may be present, but not abundant; vegetation may be sparse at some sites with massive talus boulders; observed in NH and ME. ..... **Red Spruce Talus Slope Woodland (CEGL006250)**
[*Picea rubens / Ribes glandulosum* Woodland]
3b. Patchy and open to ocassionally closed (70% cover) *Picea rubens* (red spruce) woodland with *Abies balsamea* (balsam fir) and/or *Pinus strobus* (eastern white pine) occasionally codominant, occurring on acidic bedrock outcrops, rocky ridges or summits; talus substrate sparse to absent; *Betula papyrifera* var. *cordifolia* (mountain paper birch) may be common; over a heath-forb understory with *Vaccinium angustifolium* (lowbush blueberry) and *Kalmia angustifolia* (sheep laurel) common; high lichen and moss cover and exposed bedrock; elevations range from 305-880 m (1,000-2,887 feet). ..... **Northern Appalachian Red Spruce Rocky Ridge (CEGL006053)**
[*Picea rubens / Vaccinium angustifolium / Sibbaldiopsis tridentata* Woodland]

4a. *Picea* (spruce) spp. plantations dominated by *Picea abies* (Norway spruce) **or** *Picea glauca* (white spruce), and/or any combination of spruce species; successional understory may be present with *Prunus serotina* (black cherry), *Acer rubrum* (red maple), *Rubus* (blackberry) spp., *Dennstaedtia punctilobula* (eastern hayscented fern), and others; observed in NH. ..... **Norway Spruce Plantation (CST007167)**
[*Picea abies* Forest Plantation]
4b. Naturally regenerated forests. **5**

5a. *Thuja occidentalis* (arborvitae) seepage forest; *Thuja occidentalis* (arborvitae) either clearly dominant or mixed with *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), and/or *Betula alleghaniensis* (yellow birch) or *Fraxinus* (ash) spp.; *Alnus incana* (gray alder) dominant shrub on wetter sites; characteristic herbs include *Tiarella cordifolia* (heartleaf foamflower), *Ranunculus hispidus* var. *nitidus* (bristly buttercup), *Solidago rugosa* (wrinkleleaf goldenrod), *Doellingeria umbellata* (parasol whitetop), *Chrysosplenium americanum* (American golden saxifrage), and *Symphyotrichum puniceum* (purplestem aster); non-*Sphagnum* (sphagnum moss) mosses abundant; forests on gentle to moderate slopes with groundwater seepage maintaining moist to saturated conditions; mineral soils with little peat accumulation, or rocky/bouldery substrates near lakes and rivers; most often where the substrate is not strongly acidic; observed in ME..... **Northern White-cedar - Spruce Seepage Forest (CEGL006175)**
[*Thuja occidentalis - (Picea rubens) / Tiarella cordifolia* Swamp Forest]
5b. Upland forests lacking seepage indicators..... **6**

6a. Subalpine coniferous forest dominated by *Abies balsamea* (balsam fir) near treeline on upper mountain slopes and ridgetops above 732 m (2,400 feet) elevation and approaching a matrix forest above 1,219 m (4,000 feet); open to closed subalpine evergreen or mixed evergreen - deciduous canopies ranging from 40-90% total cover; *Abies balsamea* (balsam fir) is always present and is the sole dominant or may be codominated by *Betula papyrifera* var. *cordifolia* (mountain paper birch); *Picea rubens* (red spruce) is frequently present at low cover (<10% in canopy); a dense subcanopy may be present and composed of the canopy species in addition to *Acer pensylvanicum* (striped maple), *Sorbus americana* (American mountain-ash), and *Sorbus decora* (northern mountain-ash); consistent herbs include *Clintonia borealis* (bluebead), *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), and *Oxalis montana* (mountain woodsorrel); fir waves are repeating patterns of growth, senescence, and regeneration that are controlled by the prevailing wind and are a physiognomically unusual expression of this community; common in the NAP project area..... **Montane Balsam Fir - Birch Forest (CEGL006112)**
[*Abies balsamea - (Betula papyrifera* var. *cordifolia*) Forest]
6b. Strong presence (>25%) of *Picea rubens* (red spruce) in the canopy or in the understory; *Betula papyrifera* var. *cordifolia* (mountain paper birch) absent to minor or non-diagnostic (i.e., growing outside of its appropriate range)..... **7**

7a. Mixed deciduous - spruce forests, *Picea rubens* (red spruce) comprises at least 25% total canopy cover, with *Abies balsamea* (balsam fir) more common in logged stands; *Tsuga canadensis* (eastern hemlock) minor to absent; deciduous hardwood species form at least 25% canopy cover..... **8**
7b. Evergreen canopy, with deciduous trees typically forming <25% of the canopy cover..... **9**

8a. Closed-canopy mixed deciduous - evergreen forests occurring at middle elevations, between 305 and 762 m (1,000-2,500 feet) on moderate to steep low to high slopes with cooler north, northwest, east and northeast aspects; *Betula alleghaniensis* (yellow birch) and *Picea rubens* (red spruce) are codominant or present; canopy associates present at low cover may include *Acer rubrum* (red maple), *Acer spicatum* (mountain maple), *Abies balsamea* (balsam fir), *Fagus grandifolia* (American beech), *Acer saccharum* (sugar maple), and *Betula papyrifera* (paper birch); *Viburnum lantanoides* (hobblebush) most frequent shrub; dense herbaceous layer dominated by the ferns *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), and *Dennstaedtia punctilobula* (eastern hayscented fern); nonvascular moss and lichen species may have as much as 60% cover; observed in NH and ME..... **Transitional Northern Hardwood - Red Spruce Forest (CEGL006267)**
[*Betula alleghaniensis - Picea rubens / Dryopteris campyloptera* Forest]

8b. Highly variable mixed evergreen-deciduous successional forest occurring on sites that have burned or been heavily harvested and are characterized by canopies dominated by combinations of *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), and *Betula papyrifera* (paper birch); *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Fraxinus americana* (white ash), *Pinus strobus* (eastern white pine), and *Tsuga canadensis* (eastern hemlock) often occur at low cover; shrub layer mainly consists of species from the canopy and may be very dense on some sites; *Viburnum lantanoides* (hobblebush) and *Acer pensylvanicum* (striped maple) may be common; locally dominant herbs can include *Aralia nudicaulis* (wild sarsaparilla), *Carex gynandra* (nodding sedge), *Clintonia borealis* (bluebead), *Coptis trifolia* (threeleaf goldthread), *Cornus canadensis* (bunchberry dogwood), *Dennstaedtia punctilobula* (eastern hayscented fern), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Huperzia lucidula* (shining clubmoss), *Maianthemum canadense* (Canada mayflower), *Oxalis montana* (mountain woodsorrel), *Pteridium aquilinum* (western brackenfern), *Thelypteris noveboracensis* (New York fern), and *Uvularia sessilifolia* (sessileleaf bellwort); includes young stands dominated by softwoods; observed in NH and ME. ..... **Successional Mixed Spruce - Fir - Hardwood Forest (CEGL006505)**
[*Picea rubens - Abies balsamea - Betula* spp. - *Acer rubrum* Forest]

9a. Mixed evergreen - deciduous forest characterized by a canopy cover of variable mixtures of *Tsuga canadensis* (eastern hemlock), *Picea rubens* (red spruce) (10-45% cover) and *Betula alleghaniensis* (yellow birch); canopy associates may include *Acer rubrum* (red maple), *Betula papyrifera* (paper birch) and *Pinus strobus* (eastern white pine); canopy species dominate the shrub layer with *Acer pensylvanicum* (striped maple); low herb cover with most abundant species *Aralia nudicaulis* (wild sarsaparilla) and *Dryopteris intermedia* (intermediate woodfern); boreal species such as *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), *Oxalis montana* (mountain woodsorrel), and *Trillium undulatum* (painted trillium) possible; plots occur on sheltered slopes at moderate elevations from 200 to 480 m (670-1,580 feet); observed in NH and ME. ..... **Hemlock - Spruce - Hardwood Forest (CEGL006129)**
[*Tsuga canadensis - (Betula alleghaniensis) - Picea rubens / Cornus canadensis* Forest]
9b. Spruce-fir and/or spruce-dominated canopy; deciduous hardwoods <25%; *Tsuga canadensis* (eastern hemlock) sparse to absent **10**

10a. *Picea rubens - Abies balsamea* (red spruce-balsam fir) and/or *Picea mariana - Picea rubens* (black spruce-red spruce) flats with a well-developed bryophyte layer that includes *Pleurozium schreberi* (Schreber's big red stem moss), *Hylocomium splendens* (splendid feathermoss), *Ptilium crista-castrensis* (knights plume moss), *Bazzania trilobata* (three-lobed bazzania), and *Sphagnum* (sphagnum moss); upland and wetland plants in the understory include heath shrubs *Kalmia angustifolia* (sheep laurel), *Vaccinium angustifolium* (lowbush blueberry), and *Vaccinium myrtilloides* (velvetleaf huckleberry) and herbs *Osmunda cinnamomea* (cinnamon fern), *Osmunda claytoniana* (interrupted fern), *Gaultheria hispidula* (creeping snowberry), *Maianthemum canadense* (Canada mayflower), and *Cornus canadensis* (bunchberry dogwood); occurs on imperfectly drained flats or stream drainages, where cold air accumulates; shrubs sparse; may intergrade with Low Elevation Spruce Fir Forest, depending on subtle changes in drainage; observed on trail in NH and ME. ..... **Northern Spruce - Fir Flats (CEGL006361)**
[*Picea mariana - Picea rubens / Pleurozium schreberi* Swamp Forest]
10b. Upland *Picea rubens* (red spruce) and *Abies balsamea* (balsam fir) forests **11**

11a. Widespread on lower-elevation slopes between 244 and 640 m (800-2,100 feet); canopy dominated by variable amounts of *Picea rubens* (red spruce) and *Abies balsamea* (balsam fir); on occasion just spruce; *Acer rubrum* (red maple) is the most common hardwood; high-elevation species such as *Dryopteris campyloptera* (mountain woodfern) and *Sorbus americana* (American mountain-ash) are less abundant or absent here, while other lower-elevation species such as *Aralia nudicaulis* (wild sarsaparilla) *Trientalis borealis* (starflower), and *Trillium undulatum* (painted trillium) may be more abundant; observed in NH and ME..... **Low-Elevation Spruce-Fir Forest (CEGL006273)**
[*Picea rubens - Abies balsamea - Betula papyrifera* Forest]

11b. Spruce-fir forests of high elevations, generally a matrix forest between 634 and 1,067 m (2,000-3,500 feet); *Picea rubens* (red spruce) and *Abies balsamea* (balsam fir) dominant (usually 70-80% of the canopy); *Betula alleghaniensis* (yellow birch) is the most common hardwood; other canopy associates include *Sorbus americana* (American mountain-ash) and *Betula papyrifera* var. *cordifolia* (mountain paper birch); herb layer patchy with *Oxalis montana* (mountain woodsorrel), *Clintonia borealis* (bluebead), *Streptopus lanceolatus* (twisted-stalk), and/or *Dryopteris campyloptera* (mountain woodfern); lush carpet of mosses and liverworts characteristic; common in the NAP project area..... **Montane Spruce-Fir Forest (CEGL006128)**
[*Picea rubens - Abies balsamea / Sorbus americana* Forest]

8. Hemlock, Mixed Hemlock, Pine, and Mixed Pine Upland Forests[40]

1a. *Tsuga canadensis* (eastern hemlock) forming at least 25% of the total canopy. **2**
1b. *Pinus* (pine) spp. dominant in canopy; *Tsuga canadensis* (eastern hemlock) sparse to absent. **9**

2a. *Tsuga canadensis* (eastern hemlock) - mixed evergreen canopy; conifer trees >75% of canopy cover. **3**
2b. Mixed canopy hemlock-hardwood forest; northern hardwoods ≥25% canopy cover. **5**

3a. Mixed evergreen - deciduous forest characterized by a canopy cover of variable mixtures of *Tsuga canadensis* (eastern hemlock), *Picea rubens* (red spruce) (10-45% cover) and *Betula alleghaniensis* (yellow birch); canopy associates may include *Acer rubrum* (red maple), *Betula papyrifera* (paper birch) and *Pinus strobus* (eastern white pine); canopy species dominate the shrub layer with *Acer pensylvanicum* (striped maple); low herb cover with most abundant species *Aralia nudicaulis* (wild sarsaparilla) and *Dryopteris intermedia* (intermediate woodfern); boreal species such as *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), *Oxalis montana* (mountain woodsorrel), and *Trillium undulatum* (painted trillium) possible; plots occur on sheltered slopes at moderate elevations from 200 to 480 m (670-1,580 feet);observed in NH and ME. ..... **Hemlock - Spruce - Hardwood Forest (CEGL006129)**
[*Tsuga canadensis - (Betula alleghaniensis) - Picea rubens / Cornus canadensis* Forest]
3b. *Pinus strobus* (eastern white pine) important in canopy. **4**

4a. Closed-canopy evergreen forests dominated by variable mixtures of *Pinus strobus* (eastern white pine), *Picea rubens* (red spruce) and *Tsuga canadensis* (eastern hemlock), any of which can be dominant, codominant or a canopy associate; heavily shaded forests with understories with low cover and low diversity; northern hardwoods be present but at low cover; occurs on lower-elevation slopes and flats from MA to ME on sheltered slopes with sandy or stony, acidic, moderately well-drained loamy soils; observed in ME; in north, often hemlock-red spruce with little white pine. ..... **White Pine - Hemlock - Red Spruce Forest (CEGL006324)**
[*Pinus strobus - Tsuga canadensis - Picea rubens* Forest]
4b. *Picea rubens* (red spruce) absent to minor; *Tsuga canadensis* (eastern hemlock) forests with abundant or codominated by *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple) and *Quercus rubra* (northern red oak) common associates; *Acer pensylvanicum* (striped maple) is a common; occurs on sloping sites and in sheltered ravines; from PA and NJ north to ME; observed in NH. ..... **Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest (CEGL006328)**
[*Pinus strobus - Tsuga canadensis* Lower New England / Northern Piedmont Forest]

[40] *Tsuga canadensis* (eastern hemlock) may be codominant in canopy (usually >25% of canopy). For all *Tsuga canadensis* associations that have been impacted by the hemlock woolly adelgid, treat standing and fallen dead trees as part of *Tsuga canadensis* canopy cover.

5a. Mixed *Tsuga canadensis* (eastern hemlock) - hardwood forest with a strong component of *Fagus grandifolia* (American beech), *Quercus rubra* (northern red oak); *Acer saccharum* (sugar maple) and/or *Betula alleghaniensis* (yellow birch) sparse to absent; subcanopy includes, *Pinus strobus* (eastern white pine), *Prunus serotina* (black cherry), and/or *Acer rubrum* (red maple); *Hamamelis virginiana* (American witch-hazel), *Acer pensylvanicum* (striped maple), and *Viburnum acerifolium* (mapleleaf viburnum) are common shrubs; herbs sparse; soils nutrient-poor, well-drained, often stony sandy loams or loamy sands; widespread in southern New England; observed in NH. .... **Hemlock - Beech - Red Oak Forest (CEGL006088)**
[*Tsuga canadensis - Fagus grandifolia - Quercus rubra* Forest]

5b. Forest with a strong component of *Picea rubens* (red spruce) **and/or** northern hardwood species, especially *Acer saccharum* (sugar maple) **and/or** *Betula* (birch) spp. **6**

6a. Seepage forests..... **7**
6b. Upland forests lacking seepage indicators..... **8**

7a. Mixed hardwood - hemlock (≤25% of canopy) [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock) - *Abies balsamea* (balsam fir)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; balsam fir replaces hemlock as the dominant conifer in these sites moving northward. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

7b. Low elevation *Acer rubrum - Fraxinus nigra* (red maple-black ash) seepage swamp; canopy often mixed with *Tsuga canadensis* (eastern hemlock); includes northern conifers such as *Thuja occidentalis* (arborvitae) and *Abies balsamea* (balsam fir); enrichment indicators such as *Rhamnus alnifolia* (alderleaf buckthorn), *Tiarella cordifolia* (heartleaf foamflower), and *Chrysosplenium americanum* (American golden saxifrage) present but not necessarily abundant; calciphiles lacking; observed in southern NH and northern ME. .... **Northern Hardwood - Hemlock Seepage Swamp Forest (CEGL006502)**
[*Acer rubrum - Fraxinus nigra - (Tsuga canadensis) / Tiarella cordifolia* Swamp Forest]

8a. *Tsuga canadensis* (eastern hemlock) - northern hardwood forest that lacks a significant presence of *Quercus* (oak) spp., *Pinus strobus* (eastern white pine) and *Picea rubens* (red spruce); hemlock 25-75% canopy cover; *Acer rubrum* (red maple), *Betula papyrifera* (paper birch), *Fagus grandifolia* (American beech), and *Fraxinus americana* (white ash) common; *Acer pensylvanicum* (striped maple) characteristic tall shrub; sparse herb layer but *Dryopteris intermedia* (intermediate woodfern), *Mitchella repens* (partridgeberry), *Clintonia borealis* (bluebead) and *Trientalis borealis* (starflower) are common; occurs on acidic soils, often on rocky, lower elevation slopes (below 300 m in ME and NH; higher up farther south); distributed in large patches from ME south through PA; observed on the West branch of the Pleasant River at about 250 m elevation in ME..... ..... **Hemlock - Northern Hardwood Forest (CEGL006638)**
[*Tsuga canadensis - Betula alleghaniensis - Acer saccharum / Dryopteris intermedia* Forest]

8b. Mixed evergreen - deciduous forest characterized by a canopy cover of variable mixtures of *Tsuga canadensis* (eastern hemlock), *Picea rubens* (red spruce) (10-45% cover) and *Betula alleghaniensis* (yellow birch); canopy associates may include *Acer rubrum* (red maple), *Betula papyrifera* (paper birch) and *Pinus strobus* (eastern white pine); canopy species dominate the shrub layer with *Acer pensylvanicum* (striped maple); low herb cover with most abundant species *Aralia nudicaulis* (wild sarsaparilla) and *Dryopteris intermedia* (intermediate woodfern); boreal species such as *Dryopteris campyloptera* (mountain woodfern), *Huperzia lucidula* (shining clubmoss), *Oxalis montana* (mountain woodsorrel), and *Trillium undulatum* (painted trillium) possible; plots occur on sheltered slopes at moderate elevations from 200 to 480 m (670-1,580 feet); observed in NH and ME. ..... **Hemlock - Spruce - Hardwood Forest (CEGL006129)**
[*Tsuga canadensis - (Betula alleghaniensis) - Picea rubens / Cornus canadensis* Forest]

9a. *Pinus resinosa* (red pine) dominant; *Picea rubens* (red spruce) and/or *Pinus strobus* (eastern white pine) may be nearly codominant; herb layer sparse; observed in southern NH and northern ME. ..... **White Pine - Red Pine Forest (CEGL006253)**
[*Pinus strobus - Pinus resinosa / Cornus canadensis* Forest]
9b. *Pinus strobus* (eastern white pine) or *Pinus banksiana* (Jack pine) dominant. **10**

10a. *Pinus banksiana* (Jack pine) dominant on mid to high elevation 550 to 1,190 m (1,800-3,900 feet) mountain ridges in the White Mountains in NH; observed only at Crawford Notch, NH. .... **Jack Pine Heath Barrens (CEGL006041)**
[*Pinus banksiana / Kalmia angustifolia - Vaccinium* spp. Woodland]
10b. *Pinus strobus* (eastern white pine) dominant. **11**

11a. Early- and mid-successional, ruderal or planted *Pinus strobus* (eastern white pine) and mixed pine forests. **12**
11b. Later-successional *Pinus strobus* (eastern white pine) and mixed canopy *Pinus strobus* (eastern white pine) forests. **15**

12a. Mixed evergreen-deciduous canopy with *Pinus strobus* (eastern white pine) and *Quercus* (oak) spp.; composition is variable depending on site history; canopy is a mixture of *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech) occurring in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); trees 40-100 years old; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England. .... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]
12b. Evergreen-dominated canopy. **13**

13a. Multiple *Pinus* (pine) species in canopy; other conifers sometimes present in smaller amounts; planted in postagricultural fields and pastures; plantations of mixed pines or pine mixed with other non-native planted conifers; common throughout the Northeast. .... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
13b. Planted and successional stands of even-aged *Pinus strobus* (eastern white pine). **14**

14a. *Pinus strobus* (eastern white pine) plantations. ....**Eastern White Pine Plantation (CST007178)**
[*Pinus strobus* Forest Plantation]

14b. Successional stands of *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Fraxinus americana* (white ash), and/or *Prunus serotina* (black cherry) may be common in canopy and/or subcanopy. ....**Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

15a. Closed-canopy evergreen forests dominated by variable mixtures of *Pinus strobus* (eastern white pine), *Picea rubens* (red spruce) and *Tsuga canadensis* (eastern hemlock), any of which can be dominant, codominant or a canopy associate; heavily shaded forests have understories with low cover and diversity; northern hardwoods present but at low cover; occurs on lower-elevation slopes and flats and on sheltered slopes with sandy or stony, acidic, moderately well-drained loamy soils from MA to ME; in north, often hemlock-red spruce with little white pine..... ..... **White Pine - Hemlock - Red Spruce Forest (CEGL006324)**
[*Pinus strobus* - *Tsuga canadensis* - *Picea rubens* Forest]

15b. *Picea rubens* (red spruce) absent to minor; *Tsuga canadensis* (eastern hemlock) forests codominated by *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple) and *Quercus rubra* (northern red oak) common associates; *Acer pensylvanicum* (striped maple) is common, though rarely abundant; occurs on sloping sites and in sheltered ravines; from PA and NJ north to ME..... .....**Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest (CEGL006328)**
[*Pinus strobus* - *Tsuga canadensis* Lower New England / Northern Piedmont Forest]

9. Northern Hardwood Upland Forests[41]

1a. Forests with enrichment indicators in the canopy [i.e., *Acer saccharum* (sugar maple) (often abundant), *Tilia americana* (American basswood), *Fraxinus americana* (white ash), and *Ostrya virginiana* (hophornbeam) spp.]; shrubs include *Cornus alternifolia* (alternateleaf dogwood) and herbs may be *Actaea* (baneberry) spp., *Adiantum pedatum* (northern maidenhair), *Polystichum acrostichoides* (Christmas fern), *Polystichum braunii* (Braun's hollyfern), *Caulophyllum thalictroides* (blue cohosh), *Viola rotundifolia* (roundleaf yellow violet), *Hepatica nobilis* (hepatica), wide-leaved sedges (*Carex* spp.), *Geranium robertianum* (Robert's geranium), among many others. **2**
1b. Forests not as above; northern hardwoods dominant; enrichment indicators lacking. **5**

2a. Enriched northern hardwood forests of seepage areas. **3**
2b. Enriched and semi-enriched upland northern hardwood forests; seepage indicators absent. **4**

3a. Mixed hardwood-hemlock (≤25% of canopy) [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock) - *Abies balsamea* (balsam fir)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of moist conditions includes *Onoclea sensibilis* (sensitive fern), *Carex scabrata* (eastern rough sedge), and *Tiarella cordifolia* (heartleaf foamflower), or semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; balsam fir replaces hemlock as the dominant conifer in these sites moving northward..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

3b. Shrubby to herbaceous seepage swamps or glades known from high elevations (>776 m [2,545 feet]) in the Northern Appalachians; occupying small openings on moderate to somewhat steep slopes within a matrix of *Abies balsamea*- (balsam fir) dominated forest (CEGL006112); soils primarily fertile mineral with deep organic/A horizon and little to no muck/peat accumulation; open to dense shrub layer up to 5 m in height dominated by *Prunus virginiana* (chokecherry), *Acer spicatum* (mountain maple), and *Sambucus racemosa* (red elderberry); *Ribes triste* (red currant) is often present as a short shrub; lush herb layer includes some combination *Angelica atropurpurea* (purplestem angelica), *Heracleum maximum* (common cowparsnip), *Hydrophyllum virginianum* (eastern waterleaf), *Impatiens capensis* (jewelweed), *Thalictrum pubescens* (king-of-the-meadow), *Tiarella cordifolia* (heartleaf foamflower), *Ageratina altissima* (white snakeroot), *Glyceria striata* (fowl mannagrass), *Solidago rugosa* (wrinkleleaf goldenrod), *Athyrium filix-femina* (common ladyfern), *Chelone glabra* (white turtlehead), *Dryopteris campyloptera* (mountain woodfern), *Ranunculus recurvatus* (blisterwort), and others; observed in NH and ME. ..... **Northern Appalachian High-Elevation Seepage Shrubland (CEGL006583)**
[*Prunus virginiana - Acer spicatum - Ribes triste / Angelica atropurpurea - Heracleum maximum* Seepage Shrubland]

[41]Deciduous northern hardwood forests; *Tsuga canadensis* (eastern hemlock) low in cover to absent (<25%).

4a. Enriched northern hardwood forest dominated by *Acer saccharum* (sugar maple) and *Fraxinus americana* (white ash); *Ostrya virginiana* (hophornbeam) can be common as a small tree; *Acer spicatum* (mountain maple) is a characteristic shrub; strong enrichment-indicator herbs include *Caulophyllum thalictroides* (blue cohosh), *Adiantum pedatum* (northern maidenhair), *Asarum canadense* (Canadian wildginger), *Claytonia caroliniana* (Carolina springbeauty), *Deparia acrostichoides* (silver false spleenwort), and *Panax quinquefolius* (American ginseng), often with abundant spring ephemerals; from northern New England; observed in NH. ..... **Northern Sugar Maple - Ash Rich Mesic Forest (CEGL006636)**
[*Acer saccharum - Fraxinus americana / Acer spicatum / Caulophyllum thalictroides* Forest]

4b. Semi-rich northern hardwood forest dominated by a combination of *Acer saccharum* (sugar maple), *Betula alleghaniensis* (yellow birch), *Fraxinus americana* (white ash), and/or less commonly *Fagus grandifolia* (American beech); lacks the strong-enrichment indicator species mentioned above; *Acer pensylvanicum* (striped maple) common in understory; herbs are semi-rich including *Viola rotundifolia* (roundleaf yellow violet), *Athyrium filix-femina* (common ladyfern), *Arisaema triphyllum* (Jack in the pulpit), *Maianthemum racemosum* (feathery false lily of the valley), *Tiarella cordifolia* (heartleaf foamflower), *Actaea pachypoda* (white baneberry), *Polystichum acrostichoides* (Christmas fern), *Medeola virginiana* (Indian cucumber), wide-leaved sedges such as *Carex leptonervia* (nerveless woodland sedge) and *Carex laxiflora* (broad looseflower sedge) in addition to *Botrychium* (grapefern) spp., *Solidago flexicaulis* (zigzag goldenrod), *Osmunda claytoniana* (interrupted fern), and *Osmunda cinnamomea* (cinnamon fern); plots occur at moderate elevations from 204 to 610 m (670-1,830 feet) on slightly enriched soils often in cove and toeslope settings; observed in NH and ME. ..... **Semi-rich Northern Hardwood Forest (CEGL006211)**
[*Acer saccharum - (Fraxinus americana) / Arisaema triphyllum* Forest]

5a. Northern hardwood forests with 25-50% conifer cover in the canopy. **6**
5b. Northern hardwood forests with deciduous associates in the canopy; conifers ≤25% of canopy . **11**

6a. Mixed hardwood - hemlock (≤25% of canopy)] [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of moist conditions includes *Onoclea sensibilis* (sensitive fern), *Carex scabrata* (eastern rough sedge), and *Impatiens capensis* (jewelweed), or semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens) and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

6b. Seepage indicators lacking; upland forests. **7**

7a. Early- to- mid-successional forests. **8**
7b. Later-successional forests. **9**

8a. *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech) occur in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) an occasional minor associate in northern examples; trees 40-100 years old; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in NH. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]

8b. Highly variable mixed evergreen-deciduous successional forest occurring on sites that have burned or been heavily harvested and are characterized by canopies dominated by combinations of *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), and *Betula papyrifera* (paper birch); *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Fraxinus americana* (white ash), *Pinus strobus* (eastern white pine), and *Tsuga canadensis* (eastern hemlock) often occur at low cover; shrub layer mainly consists of species from the canopy and may be very dense on some sites; *Viburnum lantanoides* (hobblebush) and *Acer pensylvanicum* (striped maple) may be common; locally dominant herbs can include *Aralia nudicaulis* (wild sarsaparilla), *Carex gynandra* (nodding sedge), *Clintonia borealis* (bluebead), *Coptis trifolia* (threeleaf goldthread), *Cornus canadensis* (bunchberry dogwood), *Dennstaedtia punctilobula* (eastern hayscented fern), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Huperzia lucidula* (shining clubmoss), *Maianthemum canadense* (Canada mayflower), *Oxalis montana* (mountain woodsorrel), *Pteridium aquilinum* (western brackenfern), *Thelypteris noveboracensis* (New York fern), and *Uvularia sessilifolia* (sessileleaf bellwort); includes young stands dominated by softwoods; observed in NH and ME..... **Successional Mixed Spruce - Fir - Hardwood Forest (CEGL006505)**
[*Picea rubens - Abies balsamea - Betula* spp. - *Acer rubrum* Forest]

9a. Transitional northern hardwoods - spruce forest with a closed canopy occurring at middle elevations, between 305 and 762 m (1,000-2,500 feet) on moderate to steep low to high slopes with cooler north, northwest, east and northeast aspects; *Betula alleghaniensis* (yellow birch) and *Picea rubens* (red spruce) are codominant or present; *Abies balsamea* (balsam fir) more common in logged stands; canopy associates present at low cover may include *Acer rubrum* (red maple), *Acer spicatum* (mountain maple), *Abies balsamea* (balsam fir), *Fagus grandifolia* (American beech), *Acer saccharum* (sugar maple), and *Betula papyrifera* (paper birch); *Viburnum lantanoides* (hobblebush) most frequent shrub; dense herbaceous layer dominated by the ferns *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), and *Dennstaedtia punctilobula* (eastern hayscented fern); nonvascular moss and lichen species may have as much as 60% cover; observed in NH and ME. ..... **Transitional Northern Hardwood - Red Spruce Forest (CEGL006267)**
[*Betula alleghaniensis - Picea rubens / Dryopteris campyloptera* Forest]

9b. *Tsuga canadensis* (eastern hemlock) most abundant conifer. **10**

10a. *Tsuga canadensis* (eastern hemlock) - northern hardwood forest that lacks a significant presence of *Quercus* (oak) spp., *Pinus strobus* (eastern white pine), and *Picea rubens* (red spruce); hemlock 25-75% canopy cover; *Acer rubrum* (red maple), *Betula papyrifera* (paper birch), *Fagus grandifolia* (American beech), and *Fraxinus americana* (white ash) common; *Acer pensylvanicum* (striped maple) characteristic tall shrub; sparse herb layer but *Dryopteris intermedia* (intermediate woodfern), *Mitchella repens* (partridgeberry), *Clintonia borealis* (bluebead) and *Trientalis borealis* (starflower) are common; occurs on acidic soils, often on rocky, lower elevation slopes (below 300 m in ME and NH; higher up farther south); distributed in large patches in the NAP project area; observed on the West branch of the Pleasant River at about 250 m elevation in ME..... **Hemlock - Northern Hardwood Forest (CEGL006638)**
[*Tsuga canadensis - Betula alleghaniensis - Acer saccharum / Dryopteris intermedia* Forest]

10b. Hemlock - Beech - Oak forest; canopy associates and subcanopy include *Quercus rubra* (northern red oak), *Fagus grandifolia* (American beech), *Pinus strobus* (eastern white pine), *Prunus serotina* (black cherry), and/or *Acer rubrum* (red maple); *Hamamelis virginiana* (American witch-hazel), *Acer pensylvanicum* (striped maple), *Viburnum acerifolium* (mapleleaf viburnum), are common shrubs; herbs sparse; soils nutrient-poor, well-drained, often stony sandy loams or loamy sands; observed in NH. ..... **Hemlock - Beech - Red Oak Forest (CEGL006088)**
[*Tsuga canadensis - Fagus grandifolia - Quercus rubra* Forest]

11a. Mixed hardwood - hemlock (≤25% of canopy) [*Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Acer saccharum* (sugar maple) - *Tsuga canadensis* (eastern hemlock) - *Abies balsamea* (balsam fir)] wetland forest occurring in seepage-influenced areas, at wetland-upland ecotones, along streamsides, on gentle to moderate slopes with minerals soils; herbaceous layer indicative of semi-nutrient-enriched conditions with species such as *Geum rivale* (purple avens), *Impatiens capensis* (jewelweed), *Thelypteris palustris* (eastern marsh fern), and *Arisaema triphyllum* (Jack in the pulpit); occurs in moist ecotonal areas between uplands and wetlands in New England and the Northern Appalachians; balsam fir replaces hemlock as the dominant conifer in these sites moving northward. ..... **Hardwood - Conifer Seepage Forest (CEGL006380)**
[*Betula alleghaniensis - Acer rubrum - (Tsuga canadensis, Abies balsamea) / Osmunda cinnamomea* Swamp Forest]

11b. Upland forests; seepage indicators lacking. **12**

12a. Acidic, large-boulder talus slope northern hardwood woodland of low to mid elevations up to about 518 m (1,700 feet) with some combination of *Quercus rubra* (northern red oak), *Betula alleghaniensis* (yellow birch), and/or *Betula papyrifera* (paper birch); *Acer spicatum* (mountain maple), *Acer pensylvanicum* (striped maple), *Rubus* (blackberry) spp., *Viburnum acerifolium* (mapleleaf viburnum), and *Ribes* (currant) spp. also common; vines are characteristic including *Parthenocissus quinquefolia* (Virginia creeper), *Parthenocissus vitacea* (woodbine), *Toxicodendron radicans* (eastern poison-ivy), and others; *Dryopteris marginalis* (marginal woodfern), *Dryopteris campyloptera* (mountain woodfern), *Polypodium virginianum* (rock polypody), and *Maianthemum canadense* (Canada mayflower) common herbs; observed in NH..... **Northern Hardwood - Oak Talus Slope Woodland (CEGL006584)**
[*Betula alleghaniensis - Quercus rubra / Polypodium virginianum* Woodland]

12b. Northern hardwood forest not on talus. **13**

13a. Early-successional northern hardwood forests and woodlands, stands with variable mixtures of light-requiring, wind-dispersed trees such as *Populus* (cottonwood) or *Betula* (birch) spp. and even-aged native hardwoods; oaks uncommon in canopy. **14**
13b. Later-successional or older northern hardwood forests. **16**

14a. Highly variable mixed evergreen-deciduous successional forest occurring on sites that have burned or been heavily harvested and are characterized by canopies dominated by combinations of *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), and *Betula papyrifera* (paper birch); *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Fraxinus americana* (white ash), *Pinus strobus* (eastern white pine), and *Tsuga canadensis* (eastern hemlock) often occur at low cover; shrub layer mainly consists of species from the canopy and may be very dense on some sites; *Viburnum lantanoides* (hobblebush) and *Acer pensylvanicum* (striped maple) may be common; locally dominant herbs can include *Aralia nudicaulis* (wild sarsaparilla), *Carex gynandra* (nodding sedge), *Clintonia borealis* (bluebead), *Coptis trifolia* (threeleaf goldthread), *Cornus canadensis* (bunchberry dogwood), *Dennstaedtia punctilobula* (eastern hayscented fern), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Huperzia lucidula* (shining clubmoss), *Maianthemum canadense* (Canada mayflower), *Oxalis montana* (mountain woodsorrel), *Pteridium aquilinum* (western brackenfern), *Thelypteris noveboracensis* (New York fern), and *Uvularia sessilifolia* (sessileleaf bellwort); includes young stands dominated by softwoods; observed in NH and ME. ..... **Successional Mixed Spruce - Fir - Hardwood Forest (CEGL006505)**
[*Picea rubens - Abies balsamea - Betula* spp. - *Acer rubrum* Forest]
14b. Evergreen trees not dominant or codominant in canopy. **15**

15a. Canopy is dominated by some combination of *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Populus alba* (white poplar), and/or *Betula populifolia* (gray birch) and/or *Betula papyrifera* (paper birch); *Populus balsamifera* (balsam poplar), *Acer rubrum* (red maple), *Prunus serotina* (black cherry), and/or *Prunus pensylvanica* (pin cherry) may also be common; disturbance-adapted grasses and herbs common in herb layer; ranges from closed-canopy forests to open woodlands; can on occasion have conifers, white pine, red spruce, or hemlock in canopy and understory; observed in NH; common in ME. ..... **Ruderal Aspen - Birch Woodland (CEGL006303)**
[*Populus (tremuloides, grandidentata) - Betula (populifolia, papyrifera)* Ruderal Woodland]
15b. Successional variant, young or even-aged, widespread, typic northern hardwood forest; dominated by some combination of *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), and/or *Betula papyrifera* (paper birch); oaks, pines, and aspens sparse to absent; arises from cutting; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns such as *Dennstaedtia punctilobula* (eastern hayscented fern), clubmosses (Lycopodiaceae), and other herbs; occurring on acidic soils in NH and ME. ..... **Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]

16a. Northern hardwood forest lacking a significant component of *Quercus rubra* (northern red oak) **or** *Prunus serotina* (black cherry). **17**
16b. Northern hardwood forest with *Quercus rubra* (northern red oak) **or** *Prunus serotina* (black cherry). **19**

17a. Semi-rich northern hardwood forest dominated by a combination of *Acer saccharum* (sugar maple), *Betula alleghaniensis* (yellow birch), *Fraxinus americana* (white ash), and/or less commonly *Fagus grandifolia* (American beech); lacks strong-enrichment indicators; *Acer pensylvanicum* (striped maple) and *Acer spicatum* (mountain maple) common in understory; herbs are semi-rich including *Viola rotundifolia* (roundleaf yellow violet), *Athyrium filix-femina* (common ladyfern), *Arisaema triphyllum* (Jack in the pulpit), *Maianthemum racemosum* (feathery false lily of the valley), *Tiarella cordifolia* (heartleaf foamflower), *Actaea pachypoda* (white baneberry), *Medeola virginiana* (Indian cucumber), *Botrychium* (grapefern) spp., and *Solidago flexicaulis* (zigzag goldenrod); occurs at moderate elevations from 204 to 610 m (670-1,830 feet) on slightly enriched soils often in cove and toeslope settings, from PA north to ME; observed in NH and ME. ..... **Semi-rich Northern Hardwood Forest (CEGL006211)**
[*Acer saccharum - (Fraxinus americana) / Arisaema triphyllum* Forest]
17b. Typic/matrix and successional northern hardwood forests. **18**

18a. Matrix "Northern Hardwood Forest" characterized by mixed age native *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), and/or *Betula alleghaniensis* (yellow birch); *Pinus strobus* (eastern white pine) and *Tsuga canadensis* (eastern hemlock), and in the northern portion of the range, *Picea rubens* (red spruce) may be present but not abundant; *Fraxinus americana* (white ash) and *Tilia americana* (American basswood) absent or minor; *Viburnum lantanoides* (hobblebush) is the most consistent dominant shrub but many sites have a tall shrub layer heavily dominated by saplings of canopy species; herb layer rarely >30% cover except for tree seedlings; herb flora depauperate, without rich-site herbs; environmental settings various but occurring on acidic soils and may cover large areas; the most extensive northern hardwood forest type in the region; common in NH and ME. ..... **Northern Hardwood Forest (CEGL006631)**
[*Acer saccharum - Betula alleghaniensis - Fagus grandifolia / Viburnum lantanoides* Forest]
18b. Early-successional variant of widespread typic northern hardwood forest, either monotypic canopy of *Acer saccharum* (sugar maple), or canopy dominated by some combination of young, small-diameter, even-aged *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Populus* (cottonwood) spp., and/or *Betula papyrifera* (paper birch); arises from cutting; oaks, pines, and aspens sparse to absent; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns, clubmosses (Lycopodiaceae), and other herbs; occurring on acidic soils in central New England, NH and ME. ..... **Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]

19a. Northern hardwood forest with significant component of *Prunus serotina* (black cherry); successional variant of widespread typic northern hardwood forest; oaks, pines, and aspens sparse to absent; dominated by some combination of even-aged *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Populus* (cottonwood) spp., and *Betula papyrifera* (paper birch); arises from cutting; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns such as *Dennstaedtia punctilobula* (eastern hayscented fern), clubmosses (Lycopodiaceae), and other herbs; occurring on acidic soils in NH and ME. ..... **Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]
19b. Significant component (≥20%) of *Quercus rubra* (northern red oak) in mixed canopy **20**

20a. Variable mixture of *Quercus rubra* (northern red oak) (usually at least 20% of the canopy) and *Acer saccharum* (sugar maple) in association with *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Betula papyrifera* (paper birch), and *Ostrya virginiana* (hophornbeam) occurring at lower cover; shrub cover is low and variable and may include *Acer pensylvanicum* (striped maple), *Cornus alternifolia* (alternateleaf dogwood), *Corylus cornuta* (beaked hazelnut), and *Viburnum acerifolium* (mapleleaf viburnum); depauperate herbaceous layer with low cover from *Arisaema triphyllum* (Jack in the pulpit), *Athyrium filix-femina* (common ladyfern), *Dennstaedtia punctilobula* (eastern hayscented fern), *Dryopteris intermedia* (intermediate woodfern), and *Polystichum acrostichoides* (Christmas fern); known from two locations in the NAP project area at 320 to 360 m (1,050-1,180 feet) in elevation on moderate to steep low to mid slopes on south east and northwest aspects; observed in NH. ..... **Red Oak - Northern Hardwood Forest (CEGL006633)**
[*Quercus rubra - Acer saccharum - Fagus grandifolia / Viburnum acerifolium* Forest]

20b. Early- to- mid successional forest with variable canopy composition depending on site history; *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech) occur in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are occasional minor associates in northern examples; trees 40-100 years old; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in NH. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]

10. Successional and Ruderal Vegetation

1a. Successional, ruderal wetland vegetation with variable combinations of wetland old-field species such as *Phalaris arundinacea* (reed canarygrass), *Juncus effusus* (common rush), *Thelypteris palustris* (eastern marsh fern),*Onoclea sensibilis* (sensitive fern), *Solidago* (goldenrod) spp., *Impatiens capensis* (jewelweed), *Lycopus uniflorus* (northern bugleweed), and *Lythrum salicaria* (purple loosestrife); *Spiraea* (spirea) spp. and *Rubus* (blackberry) spp. common; ranges from herbaceous meadow with scattered shrubs to shrub thicket; occurs in low-lying areas of old fields or pastures, headwater basins, or beaver-impacted wetlands; known throughout the Northeast. ..... **Ruderal Steeplebush / Reed Canarygrass Wet Shrubland (CEGL006571)**
[*Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland]
1b. Upland vegetation. **2**

2a. Successional fields/meadows/shrublands/woodlands (<60% trees). **3**
2b. Successional or planted forests (>60% cover of canopy/overstory combined). **5**

3a. Herbaceous-dominated (greater than 50% herbaceous cover) vegetation that has been anthropogenically altered and/or maintained, especially on old fields and pastures frequently disturbed/managed, created and maintained by yearly mowing or grazing; mixtures of *Solidago* (goldenrod) spp., *Dactylis glomerata* (orchardgrass), *Phleum pratense* (timothy), *Anthoxanthum odoratum* (sweet vernalgrass), *Festuca* (fescue) spp., *Poa pratensis* (Kentucky bluegrass), *Euthamia graminifolia* (flat-top goldentop), *Dennstaedtia punctilobula* (eastern hayscented fern), and *Pteridium aquilinum* (western brackenfern), and other grass, forb, and/or fern species; scattered trees and shrubs possible; wide-ranging in northeastern states; observed at low elevation in NH and along the Kennebec River in ME. ..... **Northeastern Old-field Meadow (CEGL006107)**
[*Dactylis glomerata* - *Phleum pratense* - *Festuca* spp. - *Solidago* spp. Ruderal Meadow]
3b. Shrubland vegetation. **4**

4a. Shrubland thicket found in the NAP project area only in NH south of Hwy 25A/Orford Rd (connecting Wentworth and Fairlee); occurring on old fields, pastures, or modified lands dominated by an admixture of non-native and native shrubs such as *Elaeagnus umbellata* (Autumn olive), *Rubus allegheniensis* (Allegheny blackberry), *Rubus idaeus* (American red raspberry), *Rosa multiflora* (multiflora rose), *Lonicera morrowii* (Morrow's honeysuckle), *Celastrus orbiculatus* (Oriental bittersweet), *Lonicera japonica* (Japanese honeysuckle), *Ligustrum vulgare* (European privet), *Juniperus virginiana* (eastern red-cedar), *Prunus pensylvanica* (pin cherry), *Prunus serotina* (black cherry), *Rhus typhina* (staghorn sumac), and other small trees (<25% in cover); old-field grasses, forbs, and ferns such as *Pteridium aquilinum* (western brackenfern) and *Dennstaedtia punctilobula* (eastern hayscented fern) are common in more open-canopied variants where tall and short shrubs cover at least 25% of the field; wide-ranging in northeastern states. ..... **Northeastern Ruderal Shrubland (CEGL006451)**
[*Elaeagnus umbellata* - *Cornus racemosa* - *Rosa multiflora* - *Juniperus virginiana* Ruderal Shrubland]
4b. Native shrubland vegetation of power lines, landslides, and avalanche scrapes. **5**

5a. Native ericaceous shrubs (huckleberries and blueberries or viburnums) generally dominant, usually occurring on acidic soils that have been cleared or burned, such as forest openings or power lines; dominant shrubs typically include *Gaylussacia baccata* (black huckleberry), *Nemopanthus mucronatus* (catberry), and *Alnus incana* (gray alder); *Calamagrostis canadensis* (bluejoint) is a common herb. ..... **Successional Heath Shrubland (CEGL006622)**
[*Gaylussacia baccata - Vaccinium pallidum - Vaccinium corymbosum* Shrubland]
5b. 1-2 m tall *Alnus viridis* ssp. *crispa* (mountain alder) and *Betula papyrifera* (paper birch) (possibly including the subalpine var. *cordifolia*) alder-birch shrublands found in subalpine to lower alpine zones in unstable settings such as avalanche paths, old landslides, or cirque walls; herb cover is patchy and best developed in openings among the shrubs; bryophytes are sparse; *Diervilla lonicera* (northern bush honeysuckle) and/or *Corylus cornuta* (beaked hazelnut) may be locally abundant, especially in somewhat drier microsites; stunted *Picea mariana* (black spruce) and *Abies balsamea* (balsam fir) may be present; *Viburnum edule* (squashberry) is often present, although in very low numbers; herbs include Solidago macrophylla (largeleaf goldenrod), *Prenanthes trifoliolata* (gall of the earth), *Eurybia radula* (low rough aster), *Sibbaldiopsis tridentata* (shrubby fivefingers) (in drier openings), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Athyrium filix-femina* (common ladyfern), and *Calamagrostis canadensis* (bluejoint); 2 plots in the NAP project area. ..... **Alpine Slope Shrub Thicket (CEGL006064)**
[*Alnus viridis* ssp. *crispa - Spiraea alba / Solidago macrophylla* Shrubland]

6a. Canopy or regeneration dominated by evergreen trees (at least 50% evergreen trees in canopy or understory). **7**
6b. Canopy and regeneration dominated by hardwood deciduous trees (≥50% deciduous canopy)... **12**

7a. Evergreen portion of canopy dominated by pines. **8**
7b. Conifer portion of canopy or regeneration not dominated by *Pinus* (pine) species. **11**

8a. Multiple *Pinus* (pine) species in the canopy; other conifers sometimes present in smaller amounts; planted in postagricultural fields and pastures; plantations of mixed pines or pine mixed with other non-native planted conifers; common throughout the Northeast; observed in southern most NH only. ..... **Mixed Pine Conifer Plantation (CST006313)**
[*Pinus* spp. Forest Plantation]
8b. Evergreen portion of canopy dominated by *Pinus strobus* (eastern white pine). **9**

9a. Composition is variable depending on site history; canopy is a mixture of *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Pinus strobus* (eastern white pine), and *Fagus grandifolia* (American beech), occurring in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are occasional minor associates in northern examples; trees 40-100 years old; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in NH. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest]
9b. Planted and successional stands dominated by *Pinus strobus* (eastern white pine) **10**

10a. *Pinus strobus* (eastern white pine) plantations; observed in NH. ..... **Eastern White Pine Plantation (CST007178)**
[*Pinus strobus* Forest Plantation]

10b. Successional stands of *Pinus strobus* (eastern white pine); *Acer rubrum* (red maple), *Betula papyrifera* (paper birch), *Fraxinus americana* (white ash), and/or *Prunus serotina* (black cherry) may be common in canopy and/or subcanopy; observed at lower elevations throughout the NAP project area. ..... **Ruderal Eastern White Pine Forest (CEGL007944)**
[*Pinus strobus* Ruderal Forest]

11a. *Picea* (spruce) sp. plantations dominated by *Picea abies* (Norway spruce) or *Picea glauca* (white spruce), and/or a combination of spruce species; observed southernmost NH..... **Norway Spruce Plantation (CST007167)**
[*Picea abies* Forest Plantation]

11b. *Picea* (spruce) sp. and/or *Abies balsamea* (balsam fir) dominant (>50% cover) in either the canopy or regeneration strata; highly variable mixed evergreen-deciduous successional forest occurring on sites that have burned or been heavily harvested and are characterized by canopies dominated by combinations of *Picea rubens* (red spruce), *Abies balsamea* (balsam fir), *Acer rubrum* (red maple), *Betula alleghaniensis* (yellow birch), and *Betula papyrifera* (paper birch); *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Fraxinus americana* (white ash), *Pinus strobus* (eastern white pine), and *Tsuga canadensis* (eastern hemlock) often occur at low cover; shrub layer mainly consists of species from the canopy and may be very dense on some sites; *Viburnum lantanoides* (hobblebush) and *Acer pensylvanicum* (striped maple) may be common; locally dominant herbs can include *Aralia nudicaulis* (wild sarsaparilla), *Carex gynandra* (nodding sedge), *Clintonia borealis* (bluebead), *Coptis trifolia* (threeleaf goldthread), *Cornus canadensis* (bunchberry dogwood), *Dennstaedtia punctilobula* (eastern hayscented fern), *Dryopteris campyloptera* (mountain woodfern), *Dryopteris intermedia* (intermediate woodfern), *Huperzia lucidula* (shining clubmoss), *Maianthemum canadense* (Canada mayflower), *Oxalis montana* (mountain woodsorrel), *Pteridium aquilinum* (western brackenfern), *Thelypteris noveboracensis* (New York fern), and *Uvularia sessilifolia* (sessileleaf bellwort); includes young stands dominated by softwoods; common in the NAP project area. ..... **Successional Mixed Spruce - Fir - Hardwood Forest (CEGL006505)**
[*Picea rubens* - *Abies balsamea* - *Betula* spp. - *Acer rubrum* Forest]

12a. Composition is variable depending on site history but almost always has oaks; canopy a mixture of *Quercus rubra* (northern red oak), *Acer rubrum* (red maple), *Fagus grandifolia* (American beech), and occasionally *Pinus strobus* (eastern white pine), occurring in association with light-requiring, wind-dispersed trees such as *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Betula papyrifera* (paper birch), *Betula populifolia* (gray birch), *Fraxinus americana* (white ash), and *Prunus serotina* (black cherry); *Betula papyrifera* (paper birch) and *Picea rubens* (red spruce) are occasional minor associates in northern examples; trees 40-100 years old; forest develops after severe disturbance including clearing, pasturing, logging, fires, severe hurricanes, or simply heavily fragmented residential development; widespread throughout northern and central New England; observed in NH. ..... **Northeastern Ruderal Oak - Red Maple Forest (CEGL006506)**
[*Quercus rubra* - *Acer rubrum* - *Betula* spp. - *Pinus strobus* Ruderal Forest]

12b. Stand with variable mixtures of light-requiring, wind-dispersed trees and even-aged native hardwoods; oaks uncommon in canopy **13**

13a. Early-successional variant of widespread typic northern hardwood forest, either monotypic canopy of *Acer saccharum* (sugar maple), or canopy dominated by some combination of young, small-diameter, even-aged *Acer saccharum* (sugar maple), *Fraxinus americana* (white ash), *Prunus serotina* (black cherry), *Betula alleghaniensis* (yellow birch), *Fagus grandifolia* (American beech), *Pinus strobus* (eastern white pine) and/or *Betula papyrifera* (paper birch); arises from cutting; disturbed shrub layer with exotics or no shrub layer; herb layer patchy and most often a mix of ferns, clubmosses (Lycopodiaceae), and other herbs; occurring on acidic soils in central New England and at lower elevations in northern New England, NH, and ME. ....**Ruderal Sugar Maple - Northern Hardwood Forest (CEGL006628)**
[*Acer saccharum - Betula* spp. - *Fagus grandifolia* Ruderal Forest]

13b. Early-successional northern hardwoods dominated by some combination of *Populus tremuloides* (quaking aspen), *Populus grandidentata* (bigtooth aspen), *Populus alba* (white poplar), and/or *Betula populifolia* (gray birch); *Betula papyrifera* (paper birch), *Populus balsamifera* (balsam poplar), *Acer rubrum* (red maple), *Prunus serotina* (black cherry), and/or *Prunus pensylvanica* (pin cherry) may also be common; understory may contain *Acer saccharum* (sugar maple), *Fagus grandifolia* (American beech), *Abies balsamea* (balsam fir), *Picea rubens* (red spruce), *Pinus strobus* (eastern white pine), and/or *Tsuga canadensis* (eastern hemlock); ranges from closed-canopy forests to open woodlands; observed in NH and common in ME. ....**Ruderal Aspen - Birch Woodland (CEGL006303)**
[*Populus (tremuloides, grandidentata) - Betula (populifolia, papyrifera)* Ruderal Woodland]

Appendix E: List of Plant Species

Explanation of Species List

Plant taxa were identified and documented from vegetation plots in which the plots were used to characterize vegetation associations in the U.S. National Vegetation Classification of the Appalachian National Scenic Trail. Plant taxa also were identified and documented from validation and accuracy assessment sites in which the sites were used to assess the vegetation map layer produced for the Appalachian National Scenic Trail vegetation mapping project. Plant taxa from vegetation plots, along with other plot sample data, were entered into the National Park Service PLOTS Database Version 2.0 (NatureServe 2005) and later converted into the PLOTS version 4.0 (National Park Service 2015) database. Plant taxa from validation and accuracy assessment sites, along with other site and environmental data, were entered into the PLOTS version 4.0 (National Park Service 2015) database according to National Park Service specifications.

Table E–1 is an export of plant taxa generated from the PLOTS database for the APPA vegetation mapping project. This list includes taxa identified to the genus, species, and subspecies level. This list is not intended to be a comprehensive list of every taxon of the Appalachian National Scenic Trail. The plant taxa list is organized alphabetically by scientific name, and taxa names were standardized to the PLANTS Database (U.S. Department of Agriculture, Natural Resource Conservation Service 2016), which is in accordance with the NatureServe Ecology vascular plant taxonomic standard (Kartesz 1999).

Table E–1. Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Abies balsamea	balsam fir	Pinaceae
Abies fraseri	Fraser fir	Pinaceae
Abutilon theophrasti	velvetleaf	Malvaceae
Acalypha rhomboidea	common threeseed mercury	Euphorbiaceae
Acalypha virginica	Virginia threeseed mercury	Euphorbiaceae
Acer negundo	boxelder	Aceraceae
Acer nigrum	black maple	Aceraceae
Acer pensylvanicum	striped maple	Aceraceae
Acer platanoides	Norway maple	Aceraceae
Acer rubrum	red maple	Aceraceae
Acer rubrum var. *rubrum*	red maple	Aceraceae
Acer rubrum var. *trilobum*	red maple	Aceraceae
Acer saccharinum	silver maple	Aceraceae
Acer saccharum	sugar maple	Aceraceae
Acer saccharum var. *saccharum*	sugar maple	Aceraceae
Acer spicatum	mountain maple	Aceraceae
Acer ×freemanii	freeman maple	Aceraceae
Achillea millefolium	common yarrow	Asteraceae
Aconitum reclinatum	trailing white monkshood	Ranunculaceae
Aconitum uncinatum	southern blue monkshood	Ranunculaceae
Aconitum uncinatum ssp. *muticum*	southern blue monkshood	Ranunculaceae
Acorus	sweetflag	Acoraceae
Acorus americanus	sweetflag	Acoraceae
Acorus calamus	calamus	Acoraceae
Actaea	baneberry	Ranunculaceae
Actaea pachypoda	white baneberry	Ranunculaceae
Actaea podocarpa	mountain bugbane	Ranunculaceae
Actaea racemosa	black baneberry	Ranunculaceae
Actaea rubra	red baneberry	Ranunculaceae
Adiantum pedatum	northern maidenhair	Pteridaceae
Adlumia fungosa	allegheny vine	Fumariaceae
Aegopodium podagraria	bishop's goutweed	Apiaceae
Aesculus	buckeye	Hippocastanaceae
Aesculus flava	yellow buckeye	Hippocastanaceae
Aesculus sylvatica	painted buckeye	Hippocastanaceae
Agalinis tenuifolia	slenderleaf false foxglove	Scrophulariaceae
Agalinis tenuifolia var. *tenuifolia*	slenderleaf false foxglove	Scrophulariaceae
Agastache scrophulariifolia	purple giant hyssop	Lamiaceae
Ageratina altissima	white snakeroot	Asteraceae
Ageratina altissima var. *altissima*	white snakeroot	Asteraceae
Ageratina altissima var. *roanensis*	white snakeroot	Asteraceae
Ageratina aromatica	lesser snakeroot	Asteraceae
Agrimonia	agrimony	Rosaceae
Agrimonia gryposepala	tall hairy agrimony	Rosaceae
Agrimonia parviflora	harvestlice	Rosaceae
Agrimonia pubescens	soft agrimony	Rosaceae
Agrimonia rostellata	beaked agrimony	Rosaceae
Agrostis	bentgrass	Poaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Agrostis canina	velvet bentgrass	Poaceae
Agrostis gigantea	redtop	Poaceae
Agrostis hyemalis	winter bentgrass	Poaceae
Agrostis mertensii	northern bentgrass	Poaceae
Agrostis perennans	upland bentgrass	Poaceae
Agrostis scabra	rough bentgrass	Poaceae
Agrostis stolonifera	creeping bentgrass	Poaceae
Ailanthus altissima	tree of heaven	Simaroubaceae
Albizia julibrissin	silktree	Fabaceae
Aletris farinosa	white colicroot	Liliaceae
Alga, Freshwater	Alga, Freshwater	
Alisma	water plantain	Alismataceae
Alisma subcordatum	American water plantain	Alismataceae
Alliaria petiolata	garlic mustard	Brassicaceae
Allium	onion	Liliaceae
Allium burdickii	narrowleaf wild leek	Liliaceae
Allium canadense	meadow garlic	Liliaceae
Allium cernuum	nodding onion	Liliaceae
Allium tricoccum	ramp	Liliaceae
Allium vineale	wild garlic	Liliaceae
Alnus	alder	Betulaceae
Alnus incana	gray alder	Betulaceae
Alnus incana ssp. *rugosa*	speckled alder	Betulaceae
Alnus serrulata	hazel alder	Betulaceae
Alnus viridis	green alder	Betulaceae
Alnus viridis ssp. *crispa*	mountain alder	Betulaceae
Amaranthus spinosus	spiny amaranth	Amaranthaceae
Ambrosia artemisiifolia	annual ragweed	Asteraceae
Ambrosia trifida	great ragweed	Asteraceae
Ambrosia trifida var. *trifida*	great ragweed	Asteraceae
Amelanchier	serviceberry	Rosaceae
Amelanchier arborea	common serviceberry	Rosaceae
Amelanchier arborea var. *arborea*	common serviceberry	Rosaceae
Amelanchier bartramiana	oblongfruit serviceberry	Rosaceae
Amelanchier canadensis	Canadian serviceberry	Rosaceae
Amelanchier humilis	low serviceberry	Rosaceae
Amelanchier laevis	Allegheny serviceberry	Rosaceae
Amelanchier sanguinea var. *sanguinea*	roundleaf serviceberry	Rosaceae
Amelanchier stolonifera	running serviceberry	Rosaceae
Amianthium muscitoxicum	flypoison	Liliaceae
Amorpha	false indigo	Fabaceae
Amphicarpaea bracteata	American hogpeanut	Fabaceae
Anaphalis	pearly everlasting	Asteraceae
Anaphalis margaritacea	western pearly everlasting	Asteraceae
Andreaea rothii	Roth's andreaea moss	Andreaeaceae
Andromeda polifolia	bog rosemary	Ericaceae
Andropogon gerardii	big bluestem	Poaceae
Andropogon gyrans var. *gyrans*	Elliott's bluestem	Poaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Andropogon ternarius	splitbeard bluestem	Poaceae
Andropogon virginicus	broomsedge bluestem	Poaceae
Anemone canadensis	Canadian anemone	Ranunculaceae
Anemone lancifolia	mountain thimbleweed	Ranunculaceae
Anemone quinquefolia	wood anemone	Ranunculaceae
Anemone quinquefolia var. *quinquefolia*	nightcaps	Ranunculaceae
Anemone virginiana	tall thimbleweed	Ranunculaceae
Anemone virginiana var. *alba*	tall thimbleweed	Ranunculaceae
Anemone virginiana var. *virginiana*	tall thimbleweed	Ranunculaceae
Angelica	angelica	Apiaceae
Angelica atropurpurea	purplestem angelica	Apiaceae
Angelica triquinata	filmy angelica	Apiaceae
Angelica venenosa	hairy angelica	Apiaceae
Anomodon	anomodon moss	Anomodontaceae
Anomodon attenuatus	anomodon moss	Anomodontaceae
Antennaria	pussytoes	Asteraceae
Antennaria plantaginifolia	woman's tobacco	Asteraceae
Antennaria virginica	shale barren pussytoes	Asteraceae
Anthoxanthum	hornwort	Poaceae
Anthoxanthum monticola ssp. *alpinum*	alpine sweetgrass	Poaceae
Anthoxanthum odoratum	sweet vernalgrass	Poaceae
Apios americana	groundnut	Fabaceae
Apocynum	dogbane	Apocynaceae
Apocynum androsaemifolium	spreading dogbane	Apocynaceae
Apocynum cannabinum	Indianhemp	Apocynaceae
Aquatic species, unknown	unknown aquatic species	
Aquilegia canadensis	red columbine	Ranunculaceae
Arabis	rockcress	Brassicaceae
Arabis canadensis	sicklepod	Brassicaceae
Arabis glabra	tower rockcress	Brassicaceae
Arabis hirsuta	hairy rockcress	Brassicaceae
Arabis laevigata	smooth rockcress	Brassicaceae
Arabis laevigata var. *laevigata*	smooth rockcress	Brassicaceae
Arabis lyrata	lyrate rockcress	Brassicaceae
Aralia hispida	bristly sarsaparilla	Araliaceae
Aralia nudicaulis	wild sarsaparilla	Araliaceae
Aralia racemosa	American spikenard	Araliaceae
Aralia spinosa	devil's walkingstick	Araliaceae
Arctium minus	lesser burdock	Asteraceae
Arctostaphylos alpina	alpine bearberry	Ericaceae
Arisaema	Jack in the pulpit	Araceae
Arisaema dracontium	green dragon	Araceae
Arisaema triphyllum	Jack in the pulpit	Araceae
Arisaema triphyllum ssp. *triphyllum*	Jack in the pulpit	Araceae
Aristida dichotoma var. *dichotoma*	churchmouse threeawn	Poaceae
Aristolochia	dutchman's pipe	Aristolochiaceae
Aristolochia macrophylla	pipevine	Aristolochiaceae
Aristolochia serpentaria	Virginia snakeroot	Aristolochiaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Arnica lanceolata	lanceleaf arnica	Asteraceae
Arnoglossum atriplicifolium	pale Indian plantain	Asteraceae
Arnoglossum muehlenbergii	great Indian plantain	Asteraceae
Aronia arbutifolia	red chokeberry	Rosaceae
Aronia melanocarpa	black chokeberry	Rosaceae
Arrhenatherum elatius	tall oatgrass	Poaceae
Artemisia annua	sweet sagewort	Asteraceae
Artemisia vulgaris	common wormwood	Asteraceae
Arthraxon hispidus	small carpetgrass	Poaceae
Aruncus	aruncus	Rosaceae
Aruncus dioicus	bride's feathers	Rosaceae
Arundinaria appalachiana	hill cane	Poaceae
Arundinaria gigantea	giant cane	Poaceae
Asarum canadense	Canadian wildginger	Aristolochiaceae
Asclepias	milkweed	Asclepiadaceae
Asclepias exaltata	poke milkweed	Asclepiadaceae
Asclepias incarnata	swamp milkweed	Asclepiadaceae
Asclepias incarnata ssp. *incarnata*	swamp milkweed	Asclepiadaceae
Asclepias purpurascens	purple milkweed	Asclepiadaceae
Asclepias quadrifolia	fourleaf milkweed	Asclepiadaceae
Asclepias syriaca	common milkweed	Asclepiadaceae
Asclepias tuberosa	butterfly milkweed	Asclepiadaceae
Asclepias verticillata	whorled milkweed	Asclepiadaceae
Asimina	pawpaw	Annonaceae
Asimina triloba	pawpaw	Annonaceae
Asparagus officinalis	garden asparagus	Liliaceae
Asplenium	spleenwort	Aspleniaceae
Asplenium montanum	mountain spleenwort	Aspleniaceae
Asplenium pinnatifidum	lobed spleenwort	Aspleniaceae
Asplenium platyneuron	ebony spleenwort	Aspleniaceae
Asplenium platyneuron var. *platyneuron*	ebony spleenwort	Aspleniaceae
Asplenium rhizophyllum	walking fern	Aspleniaceae
Asplenium ruta-muraria	wallrue	Aspleniaceae
Asplenium trichomanes	maidenhair spleenwort	Aspleniaceae
Asplenium trichomanes ssp. *trichomanes*	maidenhair spleenwort	Aspleniaceae
Aster	aster	Asteraceae
Asteraceae	Aster family	Asteraceae
Astilbe biternata	Appalachian false goat's beard	Saxifragaceae
Athyrium	ladyfern	Dryopteridaceae
Athyrium filix-femina	common ladyfern	Dryopteridaceae
Athyrium filix-femina ssp. *angustum*	subarctic ladyfern	Dryopteridaceae
Athyrium filix-femina ssp. *asplenioides*	asplenium ladyfern	Dryopteridaceae
Atrichum	atrichum moss	Polytrichaceae
Atrichum angustatum	atrichum moss	Polytrichaceae
Aulacomnium	aulacomnium moss	Aulacomniaceae
Aulacomnium palustre	aulacomnium moss	Aulacomniaceae
Aureolaria	false foxglove	Scrophulariaceae
Aureolaria laevigata	entireleaf yellow false foxglove	Scrophulariaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Aureolaria pectinata	combleaf yellow false foxglove	Scrophulariaceae
Aureolaria virginica	downy yellow false foxglove	Scrophulariaceae
Baptisia tinctoria	horseflyweed	Fabaceae
Barbarea vulgaris	garden yellowrocket	Brassicaceae
Bartonia paniculata	twining screwstem	Gentianaceae
Bazzania		Lepidoziaceae
Bazzania trilobata		Lepidoziaceae
Berberis	bareberry	Berberidaceae
Berberis canadensis	American barberry	Berberidaceae
Berberis thunbergii	Japanese barberry	Berberidaceae
Berberis vulgaris	common barberry	Berberidaceae
Betula	birch	Betulaceae
Betula alleghaniensis	yellow birch	Betulaceae
Betula glandulosa	resin birch	Betulaceae
Betula lenta	sweet birch	Betulaceae
Betula minor	dwarf white birch	Betulaceae
Betula nana	dwarf birch	Betulaceae
Betula nigra	river birch	Betulaceae
Betula papyrifera	paper birch	Betulaceae
Betula papyrifera var. *cordifolia*	mountain paper birch	Betulaceae
Betula papyrifera var. *papyrifera*	paper birch	Betulaceae
Betula populifolia	gray birch	Betulaceae
Bidens	beggarticks	Asteraceae
Bidens bipinnata	Spanish needles	Asteraceae
Bidens cernua	nodding beggartick	Asteraceae
Bidens connata	purplestem beggarticks	Asteraceae
Bidens frondosa	devil's beggartick	Asteraceae
Bidens tripartita	threelobe beggarticks	Asteraceae
Blephilia hirsuta	hairy pagoda-plant	Lamiaceae
Boehmeria cylindrica	smallspike false nettle	Urticaceae
Botrychium	grapefern	Ophioglossaceae
Botrychium biternatum	sparselobe grapefern	Ophioglossaceae
Botrychium dissectum	cutleaf grapefern	Ophioglossaceae
Botrychium lanceolatum var. *angustisegmentum*	lanceleaf grapefern	Ophioglossaceae
Botrychium matricariifolium	matricary grapefern	Ophioglossaceae
Botrychium virginianum	rattlesnake fern	Ophioglossaceae
Brachyelytrum	shorthusk	Poaceae
Brachyelytrum aristosum	northern shorthusk	Poaceae
Brachyelytrum erectum	bearded shorthusk	Poaceae
Brachyelytrum septentrionale	northern shorthusk	Poaceae
Brachythecium frigidum	cold brachythecium moss	Brachytheciaceae
Brasenia schreberi	watershield	Cabombaceae
Bromus	brome	Poaceae
Bromus ciliatus	fringed brome	Poaceae
Bromus inermis	smooth brome	Poaceae
Bromus pubescens	hairy woodland brome	Poaceae
Bromus sterilis	poverty brome	Poaceae
Bryophyte	bryophyte	

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Bryum pseudotriquetrum	common green bryum moss	Bryaceae
Buckleya distichophylla	piratebush	Santalaceae
Bulbostylis capillaris	densetuft hairsedge	Cyperaceae
Calamagrostis canadensis	bluejoint	Poaceae
Calamagrostis canadensis var. *canadensis*	bluejoint	Poaceae
Calamagrostis coarctata	Nuttall's reedgrass	Poaceae
Calamagrostis pickeringii	Pickering's reedgrass	Poaceae
Calamagrostis porteri	Porter's reedgrass	Poaceae
Calamagrostis porteri ssp. *porteri*	Porter's reedgrass	Poaceae
Calla palustris	water arum	Araceae
Calliergon	calliergon moss	Amblystegiaceae
Callitriche	water-starwort	Callitrichaecea
Caltha palustris	yellow marsh marigold	Ranunculaceae
Calycanthus floridus	eastern sweetshrub	Calycanthaceae
Calystegia	false bindweed	Convolvulaceae
Calystegia sepium	hedge false bindweed	Convolvulaceae
Calystegia spithamaea ssp. *spithamaea*	low false bindweed	Convolvulaceae
Campanula aparinoides	marsh bellflower	Campanulaceae
Campanula divaricata	small bonny bellflower	Campanulaceae
Campanula rotundifolia	bluebell bellflower	Campanulaceae
Campanulastrum americanum	American bellflower	Campanulaceae
Capsella bursa-pastoris	shepherd's purse	Brassicaceae
Cardamine	bittercress	Brassicaceae
Cardamine clematitis	small mountain bittercress	Brassicaceae
Cardamine concatenata	cutleaf toothwort	Brassicaceae
Cardamine diphylla	crinkleroot	Brassicaceae
Cardamine flagellifera	Blue Ridge bittercress	Brassicaceae
Cardamine hirsuta	hairy bittercress	Brassicaceae
Cardamine parviflora var. *arenicola*	sand bittercress	Brassicaceae
Cardamine pensylvanica	Pennsylvania bittercress	Brassicaceae
Cardamine pratensis var. *pratensis*	cuckoo flower	Brassicaceae
Carex	sedge	Cyperaceae
Carex aestivalis	summer sedge	Cyperaceae
Carex albicans	whitetinge sedge	Cyperaceae
Carex albicans var. *albicans*	whitetinge sedge	Cyperaceae
Carex albicans var. *australis*	stellate sedge	Cyperaceae
Carex albicans var. *emmonsii*	Emmons' sedge	Cyperaceae
Carex albursina	white bear sedge	Cyperaceae
Carex amphibola	eastern narrowleaf sedge	Cyperaceae
Carex annectens	yellowfruit sedge	Cyperaceae
Carex appalachica	Appalachian sedge	Cyperaceae
Carex aquatilis	water sedge	Cyperaceae
Carex arctata	drooping woodland sedge	Cyperaceae
Carex argyrantha	hay sedge	Cyperaceae
Carex atlantica	prickly bog sedge	Cyperaceae
Carex atlantica ssp. *atlantica*	prickly bog sedge	Cyperaceae
Carex atlantica ssp. *capillacea*	prickly bog sedge	Cyperaceae
Carex backii	Back's sedge	Cyperaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Carex baileyi	Bailey's sedge	Cyperaceae
Carex bigelowii	Bigelow's sedge	Cyperaceae
Carex billingsii	Billings' Sedge	Cyperaceae
Carex blanda	eastern woodland sedge	Cyperaceae
Carex brevior	shortbeak sedge	Cyperaceae
Carex bromoides	brome-like sedge	Cyperaceae
Carex brunnescens	brownish sedge	Cyperaceae
Carex brunnescens ssp. *sphaerostachya*	brownish sedge	Cyperaceae
Carex bullata	button sedge	Cyperaceae
Carex canescens	silvery sedge	Cyperaceae
Carex castanea	chestnut sedge	Cyperaceae
Carex cephaloidea	thinleaf sedge	Cyperaceae
Carex cephalophora	oval-leaf sedge	Cyperaceae
Carex communis	fibrousroot sedge	Cyperaceae
Carex comosa	longhair sedge	Cyperaceae
Carex conoidea	openfield sedge	Cyperaceae
Carex crinita	fringed sedge	Cyperaceae
Carex crinita var. *crinita*	fringed sedge	Cyperaceae
Carex davisii	Davis' sedge	Cyperaceae
Carex debilis	white edge sedge	Cyperaceae
Carex debilis var. *pubera*	white edge sedge	Cyperaceae
Carex debilis var. *rudgei*	white edge sedge	Cyperaceae
Carex deflexa	northern sedge	Cyperaceae
Carex deweyana	Dewey sedge	Cyperaceae
Carex diandra	lesser panicled sedge	Cyperaceae
Carex digitalis	slender woodland sedge	Cyperaceae
Carex disperma	softleaf sedge	Cyperaceae
Carex ebenea	ebony sedge	Cyperaceae
Carex eburnea	bristleleaf sedge	Cyperaceae
Carex echinata	star sedge	Cyperaceae
Carex echinata ssp. *echinata*	star sedge	Cyperaceae
Carex flava	yellow sedge	Cyperaceae
Carex folliculata	northern long sedge	Cyperaceae
Carex frankii	Frank's sedge	Cyperaceae
Carex garberi	elk sedge	Cyperaceae
Carex glaucodea	blue sedge	Cyperaceae
Carex gracillima	graceful sedge	Cyperaceae
Carex granularis	limestone meadow sedge	Cyperaceae
Carex grayi	Gray's sedge	Cyperaceae
Carex gynandra	nodding sedge	Cyperaceae
Carex hirsutella	fuzzy wuzzy sedge	Cyperaceae
Carex hirtifolia	pubescent sedge	Cyperaceae
Carex hystericina	bottlebrush sedge	Cyperaceae
Carex interior	inland sedge	Cyperaceae
Carex intumescens	greater bladder sedge	Cyperaceae
Carex jamesii	James' sedge	Cyperaceae
Carex kraliana	Kral's sedge	Cyperaceae
Carex lacustris	hairy sedge	Cyperaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Carex laevivaginata	smoothsheath sedge	Cyperaceae
Carex lasiocarpa	woollyfruit sedge	Cyperaceae
Carex laxiculmis	spreading sedge	Cyperaceae
Carex laxiculmis var. *laxiculmis*	spreading sedge	Cyperaceae
Carex laxiflora	broad looseflower sedge	Cyperaceae
Carex laxiflora var. *laxiflora*	broad looseflower sedge	Cyperaceae
Carex leptalea	bristlystalked sedge	Cyperaceae
Carex leptalea ssp. *leptalea*	bristlystalked sedge	Cyperaceae
Carex leptonervia	nerveless woodland sedge	Cyperaceae
Carex lucorum	Blue Ridge sedge	Cyperaceae
Carex lucorum var. *austrolucorum*	Blue Ridge sedge	Cyperaceae
Carex lupuliformis	false hop sedge	Cyperaceae
Carex lupulina	hop sedge	Cyperaceae
Carex lurida	shallow sedge	Cyperaceae
Carex magellanica	boreal bog sedge	Cyperaceae
Carex manhartii	Manhart's sedge	Cyperaceae
Carex misera	wretched sedge	Cyperaceae
Carex muehlenbergii	Muhlenberg's sedge	Cyperaceae
Carex nigromarginata	black edge sedge	Cyperaceae
Carex normalis	greater straw sedge	Cyperaceae
Carex novae-angliae	New England sedge	Cyperaceae
Carex oligosperma	fewseed sedge	Cyperaceae
Carex pallescens	pale sedge	Cyperaceae
Carex pauciflora	fewflower sedge	Cyperaceae
Carex peckii	Peck's sedge	Cyperaceae
Carex pedunculata	longstalk sedge	Cyperaceae
Carex pellita	woolly sedge	Cyperaceae
Carex pensylvanica	Pennsylvania sedge	Cyperaceae
Carex plantaginea	plantainleaf sedge	Cyperaceae
Carex platyphylla	broadleaf sedge	Cyperaceae
Carex prasina	drooping sedge	Cyperaceae
Carex projecta	necklace sedge	Cyperaceae
Carex radiata	eastern star sedge	Cyperaceae
Carex retroflexa	reflexed sedge	Cyperaceae
Carex rosea	rosy sedge	Cyperaceae
Carex ruthii	Ruth's sedge	Cyperaceae
Carex scabrata	eastern rough sedge	Cyperaceae
Carex scoparia	broom sedge	Cyperaceae
Carex seorsa	weak stellate sedge	Cyperaceae
Carex shortiana	Short's sedge	Cyperaceae
Carex sparganioides	bur-reed sedge	Cyperaceae
Carex sprengelii	Sprengel's sedge	Cyperaceae
Carex squarrosa	squarrose sedge	Cyperaceae
Carex stipata	awlfruit sedge	Cyperaceae
Carex stipata var. *stipata*	owlfruit sedge	Cyperaceae
Carex striatula	lined sedge	Cyperaceae
Carex stricta	upright sedge	Cyperaceae
Carex styloflexa	bent sedge	Cyperaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Carex swanii	Swan's sedge	Cyperaceae
Carex tenera	quill sedge	Cyperaceae
Carex tincta	tinged sedge	Cyperaceae
Carex tonsa	shaved sedge	Cyperaceae
Carex tonsa var. *tonsa*	shaved sedge	Cyperaceae
Carex torta	twisted sedge	Cyperaceae
Carex tribuloides	blunt broom sedge	Cyperaceae
Carex tribuloides var. *tribuloides*	blunt broom sedge	Cyperaceae
Carex trisperma	threeseeded sedge	Cyperaceae
Carex trisperma var. *trisperma*	threeseeded sedge	Cyperaceae
Carex tuckermanii	Tuckerman's sedge	Cyperaceae
Carex typhina	cattail sedge	Cyperaceae
Carex umbellata	parasol sedge	Cyperaceae
Carex utriculata	Northwest Territory sedge	Cyperaceae
Carex vesicaria	blister sedge	Cyperaceae
Carex virescens	ribbed sedge	Cyperaceae
Carex vulpinoidea	fox sedge	Cyperaceae
Carex wiegandii	Wiegand's sedge	Cyperaceae
Carex willdenowii	Willdenow's sedge	Cyperaceae
Carex woodii	pretty sedge	Cyperaceae
Carpinus caroliniana	American hornbeam	Betulaceae
Carya	hybrid hickory	Juglandaceae
Carya alba	mockernut hickory	Juglandaceae
Carya cordiformis	bitternut hickory	Juglandaceae
Carya glabra	pignut hickory	Juglandaceae
Carya ovalis	red hickory	Juglandaceae
Carya ovata	shagbark hickory	Juglandaceae
Carya pallida	sand hickory	Juglandaceae
Carya tomentosa	mockernut hickory	Juglandaceae
Castanea	chestnut	Fagaceae
Castanea dentata	American chestnut	Fagaceae
Castanea pumila	chinquapin	Fagaceae
Castanea pumila var. *pumila*	chinquapin	Fagaceae
Castilleja septentrionalis	Labrador Indian paintbrush	Scrophulariaceae
Catalpa	catalpa	Bignoniaceae
Catalpa bignonioides	southern catalpa	Bignoniaceae
Catalpa speciosa	northern catalpa	Bignoniaceae
Caulophyllum thalictroides	blue cohosh	Berberidaceae
Ceanothus americanus	New Jersey tea	Rhamnaceae
Celastrus	bittersweet	Celastraceae
Celastrus orbiculatus	Oriental bittersweet	Celastraceae
Celastrus scandens	American bittersweet	Celastraceae
Celtis occidentalis	common hackberry	Ulmaceae
Celtis tenuifolia	dwarf hackberry	Ulmaceae
Centaurea	knapweed	Asteraceae
Centaurea biebersteinii	spotted knapweed	Asteraceae
Cephalanthus occidentalis	common buttonbush	Rubiaceae
Cercis canadensis	eastern redbud	Fabaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Cercis canadensis var. *canadensis*	eastern redbud	Fabaceae
Cetraria islandica	island cetraria lichen	Parmeliaceae
Chaerophyllum procumbens	spreading chervil	Apiaceae
Chaerophyllum procumbens var. *shortii*	Short's spreading chervil	Apiaceae
Chaiturus marrubiastrum	lion's tail	Lamiaceae
Chamaecrista fasciculata	partridge pea	Fabaceae
Chamaecyparis thyoides	Atlantic white cedar	Cupressaceae
Chamaedaphne calyculata	leatherleaf	Ericaceae
Chamaelirium luteum	fairywand	Liliaceae
Chamaesyce humistrata	spreading sandmat	Euphorbiaceae
Chamaesyce maculata	spotted sandmat	Euphorbiaceae
Chamaesyce nutans	eyebane	Euphorbiaceae
Chamerion angustifolium	fireweed	Onagraceae
Chamerion angustifolium ssp. *angustifolium*	fireweed	Onagraceae
Chasmanthium latifolium	Indian woodoats	Poaceae
Cheilanthes lanosa	hairy lipfern	Pteridaceae
Chelone	turtlehead	Scrophulariaceae
Chelone glabra	white turtlehead	Scrophulariaceae
Chelone lyonii	pink turtlehead	Scrophulariaceae
Chelone obliqua	red turtlehead	Scrophulariaceae
Chenopodium	goosefoot	Chenopodiaceae
Chenopodium album	lambsquarters	Chenopodiaceae
Chenopodium ambrosioides var. *ambrosioides*	Mexican tea	Chenopodiaceae
Chenopodium botrys	Jerusalem oak goosefoot	Chenopodiaceae
Chenopodium standleyanum	Standley's goosefoot	Chenopodiaceae
Chimaphila maculata	striped prince's pine	Pyrolaceae
Chimaphila umbellata	pipsissewa	Pyrolaceae
Chionanthus virginicus	white fringetree	Oleaceae
Chrysanthemum	daisy	Asteraceae
Chrysogonum virginianum var. *virginianum*	green and gold	Asteraceae
Chrysosplenium americanum	American golden saxifrage	Saxifragaceae
Cichorium intybus	chicory	Asteraceae
Cicuta bulbifera	bulblet-bearing water hemlock	Apiaceae
Cicuta maculata	spotted water hemlock	Apiaceae
Cicuta maculata var. *maculata*	spotted water hemlock	Apiaceae
Cimicifuga	tall bugbane	Ranunculaceae
Cinna	woodreed	Poaceae
Cinna arundinacea	sweet woodreed	Poaceae
Cinna latifolia	drooping woodreed	Poaceae
Circaea	enchanter's nightshade	Onagraceae
Circaea alpina	small enchanter's nightshade	Onagraceae
Circaea alpina ssp. *alpina*	small enchanter's nightshade	Onagraceae
Circaea lutetiana	broadleaf enchanter's nightshade	Onagraceae
Circaea lutetiana ssp. *canadensis*	broadleaf enchanter's nightshade	Onagraceae
Cirsium	thistle	Asteraceae
Cirsium arvense	Canada thistle	Asteraceae
Cirsium muticum	swamp thistle	Asteraceae
Cirsium pumilum	pasture thistle	Asteraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Cirsium vulgare	bull thistle	Asteraceae
Citrullus lanatus var. *lanatus*	watermelon	Cucurbitaceae
Cladina	reindeer lichen	Cladoniaceae
Cladina mitis	reindeer lichen	Cladoniaceae
Cladina rangiferina	greygreen reindeer lichen	Cladoniaceae
Cladina stellaris	star reindeer lichen	Cladoniaceae
Cladina subtenuis	reindeer lichen	Cladoniaceae
Cladium mariscoides	smooth sawgrass	Cyperaceae
Cladonia	cup lichen	Cladoniaceae
Cladonia amaurocraea	cup lichen	Cladoniaceae
Cladonia chlorophaea	cup lichen	Cladoniaceae
Cladonia coniocraea	cup lichen	Cladoniaceae
Cladonia cristatella	British soldier lichen	Cladoniaceae
Cladonia squamosa	cup lichen	Cladoniaceae
Cladonia uncialis	cup lichen	Cladoniaceae
Cladrastis kentukea	Kentucky yellowwood	Fabaceae
Claytonia	springbeauty	Portulacaceae
Claytonia caroliniana	Carolina springbeauty	Portulacaceae
Claytonia virginica	Virginia springbeauty	Portulacaceae
Cleistes bifaria	small spreading pogonia	Orchidaceae
Clematis	leather flower	Ranunculaceae
Clematis coactilis	Virginia whitehair leather flower	Ranunculaceae
Clematis viorna	vasevine	Ranunculaceae
Clematis virginiana	devil's darning needles	Ranunculaceae
Clethra acuminata	mountain sweetpepperbush	Clethraceae
Clethra alnifolia	coastal sweetpepperbush	Clethraceae
Climacium americanum	American climacium moss	Climaciaceae
Climacium dendroides	tree climacium moss	Climaciaceae
Clinopodium vulgare	wild basil	Lamiaceae
Clintonia	bluebead	Liliaceae
Clintonia borealis	bluebead	Liliaceae
Clintonia umbellulata	white clintonia	Liliaceae
Clitoria mariana	Atlantic pigeonwings	Fabaceae
Collinsia verna	spring blue eyed Mary	Scrophulariaceae
Collinsonia	horsebalm	Lamiaceae
Collinsonia canadensis	richweed	Lamiaceae
Comandra umbellata	bastard toadflax	Santalaceae
Comarum palustre	purple marshlocks	Rosaceae
Commelina communis	Asiatic dayflower	Commelinaceae
Commelina erecta	whitemouth dayflower	Commelinaceae
Commelina erecta var. *erecta*	whitemouth dayflower	Commelinaceae
Comptonia	sweet fern	Myricaceae
Comptonia peregrina	sweet fern	Myricaceae
Conium maculatum	poison hemlock	Apiaceae
Conoclinium coelestinum	blue mistflower	Asteraceae
Conopholis americana	American cancer-root	Orobanchaceae
Conostomum	conostomum moss	Bartramiaceae
Convallaria majalis	European lily of the valley	Liliaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Convallaria majuscula	American lily-of-the-valley	Liliaceae
Convolvulus	bindweed	Convolvulaceae
Convolvulus arvensis	field bindweed	Convolvulaceae
Conyza canadensis	Canadian horseweed	Asteraceae
Coptis trifolia	threeleaf goldthread	Ranunculaceae
Coreopsis auriculata	lobed tickseed	Asteraceae
Coreopsis latifolia	broadleaf tickseed	Asteraceae
Coreopsis major	greater tickseed	Asteraceae
Coreopsis pubescens	star tickseed	Asteraceae
Coreopsis pubescens var. *robusta*	star tickseed	Asteraceae
Coreopsis verticillata	whorled tickseed	Asteraceae
Cornus	dogwood	Cornaceae
Cornus alternifolia	alternateleaf dogwood	Cornaceae
Cornus amomum	silky dogwood	Cornaceae
Cornus canadensis	bunchberry dogwood	Cornaceae
Cornus florida	flowering dogwood	Cornaceae
Cornus racemosa	gray dogwood	Cornaceae
Cornus rugosa	roundleaf dogwood	Cornaceae
Cornus sericea	redosier dogwood	Cornaceae
Corydalis	fumewort	Fumariaceae
Corydalis flavula	yellow fumewort	Fumariaceae
Corydalis sempervirens	rock harlequin	Fumariaceae
Corylus	hazelnut	Betulaceae
Corylus americana	American hazelnut	Betulaceae
Corylus cornuta	beaked hazelnut	Betulaceae
Corylus cornuta var. *cornuta*	beaked hazelnut	Betulaceae
Crataegus	hawthorn	Rosaceae
Crataegus flabellata	fanleaf hawthorn	Rosaceae
Crataegus intricata	Copenhagen hawthorn	Rosaceae
Crataegus macrosperma	bigfruit hawthorn	Rosaceae
Crataegus pedicellata	scarlet hawthorn	Rosaceae
Crataegus pruinosa	waxyfruit hawthorn	Rosaceae
Crataegus punctata	dotted hawthorn	Rosaceae
Crataegus schuettei	Schuette's hawthorn	Rosaceae
Crataegus uniflora	dwarf hawthorn	Rosaceae
Croton elliottii	Elliott's croton	Euphorbiaceae
Crustose lichen	crustose lichen	
Cryptotaenia canadensis	Canadian honewort	Apiaceae
Cucurbita pepo var. *pepo*	field pumpkin	Cucurbitaceae
Cunila origanoides	common dittany	Lamiaceae
Cuphea viscosissima	blue waxweed	Lythraceae
Cuscuta	dodder	Cuscutaceae
Cuscuta gronovii	scaldweed	Cuscutaceae
Cuscuta gronovii var. *gronovii*	scaldweed	Cuscutaceae
Cuscuta rostrata	beaked dodder	Cuscutaceae
Cymophyllus fraserianus	Fraser's cymophyllus	Cyperaceae
Cynanchum louiseae	Louise's swallow-wort	Asclepiadaceae
Cynanchum louiseae	Louise's swallow-wort	Asclepiadaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Cynoglossum	hound's tongue	Boraginaceae
Cynoglossum officinale	gypsyflower	Boraginaceae
Cynoglossum virginianum	wild comfrey	Boraginaceae
Cynoglossum virginianum var. *virginianum*	wild comfrey	Boraginaceae
Cyperaceae	cyperaceae family	Cyperaceae
Cyperus	flatsedge	Cyperaceae
Cyperus bipartitus	slender flatsedge	Cyperaceae
Cyperus lupulinus	Great Plains flatsedge	Cyperaceae
Cyperus odoratus	fragrant flatsedge	Cyperaceae
Cyperus squarrosus	bearded flatsedge	Cyperaceae
Cyperus strigosus	strawcolored flatsedge	Cyperaceae
Cypripedium	lady's slipper	Orchidaceae
Cypripedium acaule	moccasin flower	Orchidaceae
Cypripedium parviflorum	lesser yellow lady's slipper	Orchidaceae
Cypripedium parviflorum var. *pubescens*	greater yellow lady's slipper	Orchidaceae
Cystopteris	bladderfern	Dryopteridaceae
Cystopteris bulbifera	bulblet bladderfern	Dryopteridaceae
Cystopteris fragilis	brittle bladderfern	Dryopteridaceae
Cystopteris protrusa	lowland bladderfern	Dryopteridaceae
Cystopteris tenuis	upland brittle bladderfern	Dryopteridaceae
Dactylis glomerata	orchardgrass	Poaceae
Dalibarda	dalibarda	Rosaceae
Dalibarda repens	robin runaway	Rosaceae
Danthonia	oatgrass	Poaceae
Danthonia compressa	flattened oatgrass	Poaceae
Danthonia sericea	downy danthonia	Poaceae
Danthonia spicata	poverty oatgrass	Poaceae
Dasiphora fruticosa ssp. *floribunda*	shrubby cinquefoil	Rosaceae
Datura stramonium	jimsonweed	Solanaceae
Daucus carota	Queen Anne's lace	Apiaceae
Decodon verticillatus	swamp loosestrife	Lythraceae
Delphinium tricorne	dwarf larkspur	Ranunculaceae
Dennstaedtia	hayscented fern	Dennstaedtiaceae
Dennstaedtia punctilobula	eastern hayscented fern	Dennstaedtiaceae
Deparia	false spleenwort	Dryopteridaceae
Deparia acrostichoides	silver false spleenwort	Dryopteridaceae
Deschampsia	hairgrass	Poaceae
Deschampsia cespitosa	tufted hairgrass	Poaceae
Deschampsia flexuosa	wavy hairgrass	Poaceae
Deschampsia flexuosa var. *flexuosa*	wavy hairgrass	Poaceae
Desmodium	ticktrefoil	Fabaceae
Desmodium canadense	showy ticktrefoil	Fabaceae
Desmodium canescens	hoary ticktrefoil	Fabaceae
Desmodium ciliare	hairy small-leaf ticktrefoil	Fabaceae
Desmodium glabellum	Dillenius' ticktrefoil	Fabaceae
Desmodium glutinosum	pointedleaf ticktrefoil	Fabaceae
Desmodium laevigatum	smooth ticktrefoil	Fabaceae
Desmodium marilandicum	smooth small-leaf ticktrefoil	Fabaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Desmodium nudiflorum	nakedflower ticktrefoil	Fabaceae
Desmodium paniculatum	panicledleaf ticktrefoil	Fabaceae
Desmodium paniculatum var. *paniculatum*	panicledleaf ticktrefoil	Fabaceae
Desmodium perplexum	perplexed ticktrefoil	Fabaceae
Desmodium rotundifolium	prostrate ticktrefoil	Fabaceae
Dianthus armeria	Deptford pink	Caryophyllaceae
Diapensia lapponica	pincushion plant	Diapensiaceae
Dicentra canadensis	squirrel corn	Fumariaceae
Dicentra cucullaria	dutchman's breeches	Fumariaceae
Dicentra eximia	turkey corn	Fumariaceae
Dichanthelium	rosette grass	Poaceae
Dichanthelium acuminatum	tapered rosette grass	Poaceae
Dichanthelium acuminatum var. *acuminatum*	tapered rosette grass	Poaceae
Dichanthelium acuminatum var. *fasciculatum*	western panicgrass	Poaceae
Dichanthelium acuminatum var. *lindheimeri*	Lindheimer panicgrass	Poaceae
Dichanthelium boreale	northern panicgrass	Poaceae
Dichanthelium boscii	Bosc's panicgrass	Poaceae
Dichanthelium clandestinum	deertongue	Poaceae
Dichanthelium commutatum	variable panicgrass	Poaceae
Dichanthelium depauperatum	starved panicgrass	Poaceae
Dichanthelium dichotomum	cypress panicgrass	Poaceae
Dichanthelium dichotomum var. *dichotomum*	cypress panicgrass	Poaceae
Dichanthelium latifolium	broadleaf rosette grass	Poaceae
Dichanthelium laxiflorum	openflower rosette grass	Poaceae
Dichanthelium linearifolium	slimleaf panicgrass	Poaceae
Dichanthelium oligosanthes var. *scribnerianum*	Scribner's rosette grass	Poaceae
Dichanthelium scoparium	velvet panicum	Poaceae
Dichanthelium sphaerocarpon var. *isophyllum*	roundseed panicgrass	Poaceae
Dichanthelium sphaerocarpon var. *sphaerocarpon*	roundseed panicgrass	Poaceae
Dichanthelium villosissimum	whitehair rosette grass	Poaceae
Dichanthelium villosissimum var. *villosissimum*	whitehair rosette grass	Poaceae
Dicranodontium asperulum	dicranodontium moss	Dicranaceae
Dicranum	dicranum moss	Dicranaceae
Dicranum fulvum	dicranum moss	Dicranaceae
Dicranum montanum	montane dicranum moss	Dicranaceae
Dicranum scoparium	dicranum moss	Dicranaceae
Diervilla	bush honeysuckle	Caprifoliaceae
Diervilla lonicera	northern bush honeysuckle	Caprifoliaceae
Diervilla sessilifolia	southern bush honeysuckle	Caprifoliaceae
Digitaria ischaemum	smooth crabgrass	Poaceae
Digitaria sanguinalis	hairy crabgrass	Poaceae
Dimelaena oreina	mountain lichen	Physciaceae
Diodia teres	poorjoe	Rubiaceae
Diodia virginiana	Virginia buttonweed	Rubiaceae
Dioscorea	yam	Dioscoreaceae
Dioscorea oppositifolia	Chinese yam	Dioscoreaceae
Dioscorea quaternata	fourleaf yam	Dioscoreaceae
Dioscorea villosa	wild yam	Dioscoreaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Diospyros virginiana	common persimmon	Ebenaceae
Diphylleia cymosa	American umbrellaleaf	Berberidaceae
Diplazium pycnocarpon	glade fern	Dryopteridaceae
Dipsacus fullonum	Fuller's teasel	Dipsacaceae
Dirca palustris	eastern leatherwood	Thymelaeaceae
Dodecatheon meadia ssp. *meadia*	pride of Ohio	Primulaceae
Doellingeria infirma	cornel-leaf whitetop	Asteraceae
Doellingeria umbellata	parasol whitetop	Asteraceae
Draba ramosissima	branched draba	Brassicaceae
Drosera intermedia	spoonleaf sundew	Droseraceae
Drosera rotundifolia	roundleaf sundew	Droseraceae
Dryopteris	woodfern	Dryopteridaceae
Dryopteris ×boottii	woodfern	Dryopteridaceae
Dryopteris campyloptera	mountain woodfern	Dryopteridaceae
Dryopteris carthusiana	spinulose woodfern	Dryopteridaceae
Dryopteris cristata	crested woodfern	Dryopteridaceae
Dryopteris fragrans	fragrant woodfern	Dryopteridaceae
Dryopteris goldiana	Goldie's woodfern	Dryopteridaceae
Dryopteris intermedia	intermediate woodfern	Dryopteridaceae
Dryopteris marginalis	marginal woodfern	Dryopteridaceae
Duchesnea indica	Indian strawberry	Rosaceae
Dulichium arundinaceum	three-way sedge	Cyperaceae
Echinochloa	cockspur grass	Poaceae
Echinochloa crus-galli	barnyardgrass	Poaceae
Echinocystis lobata	wild cucumber	Cucurbitaceae
Eclipta prostrata	false daisy	Asteraceae
Elaeagnus	oleaster	Elaeagnaceae
Elaeagnus umbellata	autumn olive	Elaeagnaceae
Elaeagnus umbellata var. *parvifolia*	autumn olive	Elaeagnaceae
Eleocharis	spikerush	Cyperaceae
Eleocharis obtusa	blunt spikerush	Cyperaceae
Eleocharis palustris	common spikerush	Cyperaceae
Eleocharis tenuis	slender spikerush	Cyperaceae
Eleusine indica	Indian goosegrass	Poaceae
Elodea	waterweed	Hydrocharitaceae
Elodea canadensis	Canadian waterweed	Hydrocharitaceae
Elymus	wildrye	Poaceae
Elymus canadensis	Canada wildrye	Poaceae
Elymus hystrix	eastern bottlebrush grass	Poaceae
Elymus hystrix var. *hystrix*	eastern bottlebrush grass	Poaceae
Elymus repens	quackgrass	Poaceae
Elymus riparius	riverbank wildrye	Poaceae
Elymus villosus	hairy wildrye	Poaceae
Elymus virginicus	Virginia wildrye	Poaceae
Elymus virginicus var. *virginicus*	Virginia wildrye	Poaceae
Empetrum eamesii ssp. *atropurpureum*	purple crowberry	Empetraceae
Empetrum nigrum	black crowberry	Empetraceae
Empetrum nigrum ssp. *hermaphroditum*	black crowberry	Empetraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Entodon cladorrhizans	entodon moss	Entodontaceae
Epifagus virginiana	beechdrops	Orobanchaceae
Epigaea repens	trailing arbutus	Ericaceae
Epilobium	willowherb	Onagraceae
Epilobium ciliatum	fringed willowherb	Onagraceae
Epilobium ciliatum ssp. *ciliatum*	fringed willowherb	Onagraceae
Epilobium coloratum	purpleleaf willowherb	Onagraceae
Epilobium hornemannii	Hornemann's willowherb	Onagraceae
Epilobium leptophyllum	bog willowherb	Onagraceae
Epipactis helleborine	broadleaf helleborine	Orchidaceae
Equisetum	horsetail	Equisetaceae
Equisetum arvense	field horsetail	Equisetaceae
Equisetum fluviatile	water horsetail	Equisetaceae
Equisetum hyemale	scouringrush horsetail	Equisetaceae
Equisetum hyemale var. *affine*	scouringrush horsetail	Equisetaceae
Equisetum palustre	marsh horsetail	Equisetaceae
Equisetum pratense	meadow horsetail	Equisetaceae
Equisetum scirpoides	dwarf scouringrush	Equisetaceae
Equisetum sylvaticum	woodland horsetail	Equisetaceae
Equisetum variegatum	variegated scouringrush	Equisetaceae
Eragrostis	lovegrass	Poaceae
Eragrostis capillaris	lace grass	Poaceae
Eragrostis frankii	sandbar lovegrass	Poaceae
Eragrostis hypnoides	teal lovegrass	Poaceae
Eragrostis pectinacea	tufted lovegrass	Poaceae
Erechtites hieraciifolia	American burnweed	Asteraceae
Erechtites hieraciifolia var. *hieraciifolia*	Americna burnweed	Asteraceae
Erigenia bulbosa	harbinger of spring	Apiaceae
Erigeron	fleabane	Asteraceae
Erigeron annuus	eastern daisy fleabane	Asteraceae
Erigeron philadelphicus	Philadelphia fleabane	Asteraceae
Erigeron philadelphicus var. *philadelphicus*	Philadelphia fleabane	Asteraceae
Erigeron pulchellus	robin's plantain	Asteraceae
Erigeron pulchellus var. *pulchellus*	robin's plantain	Asteraceae
Erigeron strigosus	prairie fleabane	Asteraceae
Eriocaulon aquaticum	sevenangle pipewort	Eriocaulaceae
Eriophorum angustifolium	tall cottongrass	Cyperaceae
Eriophorum tenellum	fewnerved cottongrass	Cyperaceae
Eriophorum vaginatum	tussock cottongrass	Cyperaceae
Eriophorum virginicum	tawny cottongrass	Cyperaceae
Eriophorum viridicarinatum	thinleaf cottonsedge	Cyperaceae
Erythronium americanum	dogtooth violet	Liliaceae
Erythronium umbilicatum	dimpled troutlily	Liliaceae
Euonymus	spindletree	Celastraceae
Euonymus alatus	burningbush	Celastraceae
Euonymus americanus	bursting-heart	Celastraceae
Euonymus obovatus	running strawberry bush	Celastraceae
Eupatorium	thoroughwort	Asteraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Eupatorium album	white thoroughwort	Asteraceae
Eupatorium altissimum	tall thoroughwort	Asteraceae
Eupatorium fistulosum	trumpetweed	Asteraceae
Eupatorium godfreyanum	Godfrey's thoroughwort	Asteraceae
Eupatorium maculatum	spotted joe pye weed	Asteraceae
Eupatorium maculatum var. *maculatum*	spotted joe pye weed	Asteraceae
Eupatorium perfoliatum	common boneset	Asteraceae
Eupatorium perfoliatum var. *perfoliatum*	common boneset	Asteraceae
Eupatorium pilosum	rough boneset	Asteraceae
Eupatorium purpureum	spotted joe pye weed	Asteraceae
Eupatorium purpureum var. *purpureum*	sweetscented joe pye weed	Asteraceae
Eupatorium rotundifolium	roundleaf thoroughwort	Asteraceae
Eupatorium rotundifolium var. *ovatum*	roundleaf thoroughwort	Asteraceae
Eupatorium serotinum	lateflowering thoroughwort	Asteraceae
Eupatorium sessilifolium	upland boneset	Asteraceae
Eupatorium sessilifolium var. *sessilifolium*	upland boneset	Asteraceae
Eupatorium steelei	Steele's eupatorium	Asteraceae
Euphorbia corollata	flowering spurge	Euphorbiaceae
Euphorbia pubentissima	false flowering spurge	Euphorbiaceae
Eurybia	aster	Asteraceae
Eurybia chlorolepis	mountain aster	Asteraceae
Eurybia divaricata	white wood aster	Asteraceae
Eurybia macrophylla	bigleaf aster	Asteraceae
Eurybia radula	low rough aster	Asteraceae
Eurybia schreberi	Schreber's aster	Asteraceae
Eurybia surculosa	creeping aster	Asteraceae
Euthamia caroliniana	slender goldentop	Asteraceae
Euthamia galetorum	slendor goldentop	Asteraceae
Euthamia graminifolia	flat-top goldentop	Asteraceae
Eutrochium	joe pye weed	Asteraceae
Eutrochium maculatum	spotted joe pyeweed	Asteraceae
Fagus grandifolia	American beech	Fagaceae
Fern, unknown	unknown fern	
Festuca	fescue	Poaceae
Festuca rubra	red fescue	Poaceae
Festuca subverticillata	nodding fescue	Poaceae
Fissidens	fissidens moss	Fissidentaceae
Flavocetraria cucullata		Parmeliaceae
Flavocetraria nivalis		Parmeliaceae
Flavoparmelia baltimorensis	Baltimore flavoparmelia lichen	Parmeliaceae
Foliose lichen	foliose lichen	
Fontinalis	fontinalis moss	Fontinalaceae
Forb, unknown	unknown forb species	
Fothergilla	witchalder	Hamamelidaceae
Fragaria	strawberry	Rosaceae
Fragaria vesca	woodland strawberry	Rosaceae
Fragaria virginiana	Virginia strawberry	Rosaceae
Fragaria virginiana ssp. *virginiana*	Virginia strawberry	Rosaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Frangula alnus	glossy buckthorn	Rhamnaceae
Fraxinus	ash	Oleaceae
Fraxinus americana	white ash	Oleaceae
Fraxinus nigra	black ash	Oleaceae
Fraxinus pennsylvanica	green ash	Oleaceae
Frullania asagrayana		Jubulaceae
Fruticose lichen	fruticose lichen	
Galax	galax	Diapensiaceae
Galax urceolata	beetleweed	Diapensiaceae
Galearis spectabilis	showy orchid	Orchidaceae
Galeopsis tetrahit	brittlestem hempnettle	Lamiaceae
Galinsoga quadriradiata	shaggy soldier	Asteraceae
Galium	bedstraw	Rubiaceae
Galium aparine	stickywilly	Rubiaceae
Galium asprellum	rough bedstraw	Rubiaceae
Galium boreale	northern bedstraw	Rubiaceae
Galium circaezans	licorice bedstraw	Rubiaceae
Galium circaezans var. *circaezans*	licorice bedstraw	Rubiaceae
Galium circaezans var. *hypomalacum*	licorice bedstraw	Rubiaceae
Galium kamtschaticum	boreal bedstraw	Rubiaceae
Galium lanceolatum	lanceleaf wild licorice	Rubiaceae
Galium latifolium	purple bedstraw	Rubiaceae
Galium mollugo	false baby's breath	Rubiaceae
Galium obtusum	bluntleaf bedstraw	Rubiaceae
Galium palustre	common marsh bedstraw	Rubiaceae
Galium pilosum	hairy bedstraw	Rubiaceae
Galium pilosum var. *pilosum*	hairy bedstraw	Rubiaceae
Galium tinctorium	stiff marsh bedstraw	Rubiaceae
Galium trifidum	threepetal bedstraw	Rubiaceae
Galium triflorum	fragrant bedstraw	Rubiaceae
Gamochaeta purpurea	spoonleaf purple everlasting	Asteraceae
Gaultheria	snowberry	Ericaceae
Gaultheria hispidula	creeping snowberry	Ericaceae
Gaultheria procumbens	eastern teaberry	Ericaceae
Gaylussacia	huckleberry	Ericaceae
Gaylussacia baccata	black huckleberry	Ericaceae
Gaylussacia frondosa	blue huckleberry	Ericaceae
Gaylussacia ursina	bear huckleberry	Ericaceae
Gentiana	gentian	Gentianaceae
Gentiana austromontana	Appalachian gentian	Gentianaceae
Gentiana decora	showy gentian	Gentianaceae
Gentiana linearis	narrowleaf gentian	Gentianaceae
Gentianella quinquefolia	agueweed	Gentianaceae
Gentianella quinquefolia ssp. *quinquefolia*	agueweed	Gentianaceae
Geranium	geranium	Geraniaceae
Geranium maculatum	spotted geranium	Geraniaceae
Geranium robertianum	Robert geranium	Geraniaceae
Geum	avens	Rosaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Geum canadense	white avens	Rosaceae
Geum laciniatum	rough avens	Rosaceae
Geum macrophyllum	largeleaf avens	Rosaceae
Geum peckii	mountain avens	Rosaceae
Geum rivale	purple avens	Rosaceae
Geum vernum	spring avens	Rosaceae
Geum virginianum	cream avens	Rosaceae
Glechoma hederacea	ground ivy	Lamiaceae
Gleditsia triacanthos	honeylocust	Fabaceae
Glyceria	mannagrass	Poaceae
Glyceria borealis	small floating mannagrass	Poaceae
Glyceria canadensis	rattlesnake mannagrass	Poaceae
Glyceria grandis	American mannagrass	Poaceae
Glyceria melicaria	melic mannagrass	Poaceae
Glyceria nubigena	Great Smoky Mountain mannagrass	Poaceae
Glyceria septentrionalis	floating mannagrass	Poaceae
Glyceria striata	fowl mannagrass	Poaceae
Goodyera pubescens	downy rattlesnake plantain	Orchidaceae
Goodyera repens	lesser rattlesnake plantain	Orchidaceae
Goodyera tesselata	checkered rattlesnake plantain	Orchidaceae
Grass, unknown	unknown grass species	
Gratiola neglecta	clammy hedgehyssop	Scrophulariaceae
Gymnocarpium appalachianum	Appalachian oakfern	Dryopteridaceae
Gymnocarpium dryopteris	western oakfern	Dryopteridaceae
Hackelia	stickseed	Boraginaceae
Hackelia virginiana	beggarslice	Boraginaceae
Halesia tetraptera	mountain silverbell	Styracaceae
Halesia tetraptera var. *monticola*	mountain silverbell	Styracaceae
Hamamelis virginiana	American witchhazel	Hamamelidaceae
Harrimanella hypnoides	mossplant	Ericaceae
Hedeoma pulegioides	American false pennyroyal	Lamiaceae
Hedera helix	English ivy	Araliaceae
Hedwigia ciliata	ciliate hedwigia moss	Hedwigiaceae
Helenium autumnale	common sneezeweed	Asteraceae
Helianthemum	frostweed	Cistaceae
Helianthemum bicknellii	hoary frostweed	Cistaceae
Helianthus	sunflower	Asteraceae
Helianthus decapetalus	thinleaf sunflower	Asteraceae
Helianthus divaricatus	woodland sunflower	Asteraceae
Helianthus laevigatus	smooth sunflower	Asteraceae
Helianthus microcephalus	small woodland sunflower	Asteraceae
Helianthus strumosus	paleleaf woodland sunflower	Asteraceae
Helianthus tuberosus	Jerusalem artichoke	Asteraceae
Heliopsis helianthoides	smooth oxeye	Asteraceae
Hemerocallis	daylily	Liliaceae
Hemerocallis fulva	orange daylily	Liliaceae
Hepatica	hepatica	Ranunculaceae
Hepatica nobilis	hepatica	Ranunculaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Hepatica nobilis var. *acuta*	sharplobe hepatica	Ranunculaceae
Hepatica nobilis var. *obtusa*	roundlobe hepatica	Ranunculaceae
Heracleum maximum	common cowparsnip	Apiaceae
Hesperis matronalis	dames rocket	Brassicaceae
Heteranthera dubia	grassleaf mudplantain	Pontederiaceae
Heteromeles arbutifolia	toyon	Rosaceae
Heuchera	alumroot	Saxifragaceae
Heuchera americana	American alumroot	Saxifragaceae
Heuchera americana var. *americana*	American alumroot	Saxifragaceae
Heuchera americana var. *hirsuticaulis*	American alumroot	Saxifragaceae
Heuchera caroliniana	Carolina alumroot	Saxifragaceae
Heuchera pubescens	downy alumroot	Saxifragaceae
Heuchera villosa	hairy alumroot	Saxifragaceae
Heuchera villosa var. *villosa*	hairy alumroot	Saxifragaceae
Hexastylis	heartleaf	Aristolochiaceae
Hexastylis arifolia	littlebrownjug	Aristolochiaceae
Hexastylis heterophylla	variableleaf heartleaf	Aristolochiaceae
Hexastylis shuttleworthii	largeflower heartleaf	Aristolochiaceae
Hexastylis virginica	Virginia heartleaf	Aristolochiaceae
Hibiscus laevis	halberdleaf rosemallow	Malvaceae
Hieracium	hawkweed	Asteraceae
Hieracium ×floribundum	hawkweed	Asteraceae
Hieracium caespitosum	meadow hawkweed	Asteraceae
Hieracium greenii	Maryland hawkweed	Asteraceae
Hieracium gronovii	queendevil	Asteraceae
Hieracium paniculatum	Allegheny hawkweed	Asteraceae
Hieracium scabrum	rough hawkweed	Asteraceae
Hieracium venosum	rattlesnakeweed	Asteraceae
Holcus lanatus	common velvetgrass	Poaceae
Houstonia caerulea	azure bluet	Rubiaceae
Houstonia longifolia	longleaf summer bluet	Rubiaceae
Houstonia purpurea	Venus' pride	Rubiaceae
Houstonia purpurea var. *purpurea*	Venus' pride	Rubiaceae
Houstonia serpyllifolia	thymeleaf bluet	Rubiaceae
Humulus japonicus	Japanese hop	Cannabaceae
Humulus lupulus	common hop	Cannabaceae
Huperzia appalachiana	Appalachian clubmoss	Lycopodiaceae
Huperzia lucidula	shining clubmoss	Lycopodiaceae
Huperzia selago	fir clubmoss	Lycopodiaceae
Hybanthus concolor	eastern greenviolet	Violaceae
Hydrangea	hydrangea	Hydrangeaceae
Hydrangea arborescens	wild hydrangea	Hydrangeaceae
Hydrangea radiata	silverleaf hydrangea	Hydrangeaceae
Hydrocotyle americana	American marshpennywort	Apiaceae
Hydrocotyle ranunculoides	floating marshpennywort	Apiaceae
Hydrophyllum canadense	bluntleaf waterleaf	Hydrophyllaceae
Hydrophyllum macrophyllum	largeleaf waterleaf	Hydrophyllaceae
Hydrophyllum virginianum	eastern waterleaf	Hydrophyllaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Hylocomium	hylocomium feather moss	Hylocomiaceae
Hylocomium splendens	splendid feather moss	Hylocomiaceae
Hylotelephium telephioides	Allegheny stonecrop	Crassulaceae
Hypericum	St. Johnswort	Clusiaceae
Hypericum ascyron	great St. Johnswort	Clusiaceae
Hypericum buckleii	Buckley's St. Johnswort	Clusiaceae
Hypericum canadense	lesser Canadian St. Johnswort	Clusiaceae
Hypericum ellipticum	pale St. Johnswort	Clusiaceae
Hypericum gentianoides	orangegrass	Clusiaceae
Hypericum hypericoides ssp. *multicaule*	St. Andrew's cross	Clusiaceae
Hypericum mitchellianum	Blue Ridge St. Johnswort	Clusiaceae
Hypericum mutilum	dwarf St. Johnswort	Clusiaceae
Hypericum perforatum	common St. Johnswort	Clusiaceae
Hypericum prolificum	shrubby St. Johnswort	Clusiaceae
Hypericum punctatum	spotted St. Johnswort	Clusiaceae
Hypericum uralum		Clusiaceae
Hypnum	hypnum moss	Hypnaceae
Hypnum curvifolium	curveleaf hypnum moss	Hypnaceae
Hypnum fertile	hypnum moss	Hypnaceae
Hypnum imponens	hypnum moss	Hypnaceae
Hypoxis hirsuta	common goldstar	Liliaceae
Ilex	holly	Aquifoliaceae
Ilex ambigua	Carolina holly	Aquifoliaceae
Ilex montana	mountain holly	Aquifoliaceae
Ilex mucronata	catberry	Aquifoliaceae
Ilex opaca	American holly	Aquifoliaceae
Ilex opaca var. *opaca*	American holly	Aquifoliaceae
Ilex verticillata	common winterberry	Aquifoliaceae
Impatiens	touch-me-not	Balsaminaceae
Impatiens capensis	jewelweed	Balsaminaceae
Impatiens pallida	pale touch-me-not	Balsaminaceae
Ionactis linariifolius	flaxleaf whitetop aster	Asteraceae
Ipomoea	morning-glory	Convolvulaceae
Ipomoea hederacea	ivyleaf morning-glory	Convolvulaceae
Ipomoea lacunosa	whitestar	Convolvulaceae
Ipomoea pandurata	man of the earth	Convolvulaceae
Iris	iris	Iridaceae
Iris cristata	dwarf crested iris	Iridaceae
Iris pseudacorus	paleyellow iris	Iridaceae
Iris verna	dwarf violet iris	Iridaceae
Iris versicolor	harlequin blueflag	Iridaceae
Isanthus brachiatus	fluxweed	Lamiaceae
Isoetes	quillwort	Isoetaceae
Isotria verticillata	large whorled pogonia	Orchidaceae
Jeffersonia diphylla	twinleaf	Berberidaceae
Juglans	walnut	Juglandaceae
Juglans cinerea	butternut	Juglandaceae
Juglans nigra	black walnut	Juglandaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Juncus	rush	Juncaceae
Juncus brevicaudatus	narrowpanicle rush	Juncaceae
Juncus canadensis	Canadian rush	Juncaceae
Juncus coriaceus	leathery rush	Juncaceae
Juncus dudleyi	Dudley's rush	Juncaceae
Juncus effusus	common rush	Juncaceae
Juncus effusus var. *pylaei*	common rush	Juncaceae
Juncus effusus var. *solutus*	lamp rush	Juncaceae
Juncus filiformis	thread rush	Juncaceae
Juncus gymnocarpus	Pennsylvania rush	Juncaceae
Juncus marginatus	grassleaf rush	Juncaceae
Juncus militaris	bayonet rush	Juncaceae
Juncus secundus	lopsided rush	Juncaceae
Juncus tenuis	poverty rush	Juncaceae
Juncus trifidus	highland rush	Juncaceae
Juniperus communis	common juniper	Cupressaceae
Juniperus virginiana	eastern redcedar	Cupressaceae
Juniperus virginiana var. *virginiana*	eastern redcedar	Cupressaceae
Justicia americana	American water-willow	Acanthaceae
Kalmia angustifolia	sheep laurel	Ericaceae
Kalmia latifolia	mountain laurel	Ericaceae
Kalmia polifolia	bog laurel	Ericaceae
Krigia biflora	twoflower dwarfdandelion	Asteraceae
Krigia montana	mountain dwarfdandelion	Asteraceae
Krigia virginica	Virginia dwarfdandelion	Asteraceae
Kummerowia striata	Japanese clover	Fabaceae
Lactuca	lettuce	Asteraceae
Lactuca biennis	tall blue lettuce	Asteraceae
Lactuca canadensis	Canada lettuce	Asteraceae
Lactuca floridana	woodland lettuce	Asteraceae
Lactuca floridana var. *villosa*	woodland lettuce	Asteraceae
Lamiaceae	Lamiaceae family	Lamiaceae
Laportea	laportea	Urticaceae
Laportea canadensis	Canadian woodnettle	Urticaceae
Lapsana communis	common nipplewort	Asteraceae
Larix decidua	European larch	Pinaceae
Larix laricina	tamarack	Pinaceae
Lasallia	blistered navel lichen	Umbilicariaceae
Lasallia papulosa	blistered naval lichen	Umbilicariaceae
Lasallia pensylvanica	Pensylvania blistered naval lichen	Umbilicariaceae
Lathyrus	pea	Fabaceae
Lathyrus venosus	veiny pea	Fabaceae
Lechea	pinweed	Cistaceae
Lechea racemulosa	Illinois pinweed	Cistaceae
Ledum groenlandicum	bog Labrador tea	Ericaceae
Leersia	cutgrass	Poaceae
Leersia oryzoides	rice cutgrass	Poaceae
Leersia virginica	whitegrass	Poaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Leiophyllum buxifolium	sandmyrtle	Ericaceae
Lemna	duckweed	Lemnaceae
Lemna minor	common duckweed	Lemnaceae
Leonurus cardiaca	common motherwort	Lamiaceae
Lepidium virginicum	Virginia pepperweed	Brassicaceae
Lepidium virginicum var. *virginicum*	Virginia pepperweed	Brassicaceae
Lepraria lobificans	dust lichen	Stereocaulaceae
Lespedeza	lespedeza	Fabaceae
Lespedeza cuneata	sericea lespedeza	Fabaceae
Lespedeza hirta	hairy lespedeza	Fabaceae
Lespedeza hirta ssp. *hirta*	hairy lespedeza	Fabaceae
Lespedeza procumbens	trailing lespedeza	Fabaceae
Lespedeza repens	creeping lespedeza	Fabaceae
Lespedeza violacea	violet lespedeza	Fabaceae
Lespedeza virginica	slender lespedeza	Fabaceae
Leucanthemum vulgare	oxeye daisy	Asteraceae
Leucobryum	leucobryum moss	Leucobryaceae
Leucobryum albidum	leucobryum moss	Leucobryaceae
Leucobryum glaucum	leucobryum moss	Leucobryaceae
Leucospora	leucospora	Scrophulariaceae
Leucospora multifida	narrowleaf paleseed	Scrophulariaceae
Leucothoe	doghobble	Ericaceae
Leucothoe axillaris	coastal doghobble	Ericaceae
Leucothoe fontanesiana	highland doghobble	Ericaceae
Leucothoe racemosa	swamp doghobble	Ericaceae
Leucothoe recurva	redtwig doghobble	Ericaceae
Liatris	blazing star	Asteraceae
Liatris pilosa	shaggy blazing star	Asteraceae
Liatris spicata	dense blazing star	Asteraceae
Liatris turgida	turgid blazing star	Asteraceae
Lichen, unknown	unknown lichen	
Ligusticum canadense	Canadian licorice-root	Apiaceae
Ligustrum	privet	Oleaceae
Ligustrum obtusifolium	border privet	Oleaceae
Ligustrum sinense	Chinese privet	Oleaceae
Ligustrum vulgare	European privet	Oleaceae
Lilium	lily	Liliaceae
Lilium canadense	Canada lily	Liliaceae
Lilium grayi	Gray's lily	Liliaceae
Lilium michauxii	Carolina lily	Liliaceae
Lilium superbum	turk's-cap lily	Liliaceae
Linaria vulgaris	butter and eggs	Scrophulariaceae
Lindera	spicebush	Lauraceae
Lindera benzoin	northern spicebush	Lauraceae
Lindera benzoin var. *benzoin*	northern spicebush	Lauraceae
Lindernia dubia	yellowseed false pimpernel	Scrophulariaceae
Linnaea borealis	twinflower	Caprifoliaceae
Linum striatum	ridged yellow flax	Linaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Liparis liliifolia	brown widelip orchid	Orchidaceae
Liquidambar styraciflua	sweetgum	Hamamelidaceae
Liriodendron tulipifera	tuliptree	Magnoliaceae
Listera smallii	kidneyleaf twayblade	Orchidaceae
Lithospermum	stoneseed	Boraginaceae
Lithospermum canescens	hoary puccoon	Boraginaceae
Lobelia	lobelia	Campanulaceae
Lobelia cardinalis	cardinalflower	Campanulaceae
Lobelia inflata	Indian-tobacco	Campanulaceae
Lobelia kalmii	Ontario lobelia	Campanulaceae
Lobelia puberula	downy lobelia	Campanulaceae
Lobelia siphilitica	great blue lobelia	Campanulaceae
Lobelia siphilitica var. *siphilitica*	great blue lobelia	Campanulaceae
Loiseleuria procumbens	alpine azalea	Ericaceae
Lolium arundinaceum	tall fescue	Poaceae
Lolium perenne	perennial ryegrass	Poaceae
Lolium pratense	meadow fescue	Poaceae
Lonicera canadensis	American fly honeysuckle	Caprifoliaceae
Lonicera dioica	limber honeysuckle	Caprifoliaceae
Lonicera japonica	Japanese honeysuckle	Caprifoliaceae
Lonicera maackii	Amur honeysuckle	Caprifoliaceae
Lonicera morrowii	Morrow's honeysuckle	Caprifoliaceae
Lonicera oblongifolia	swamp fly honeysuckle	Caprifoliaceae
Lonicera tatarica	Tatarian honeysuckle	Caprifoliaceae
Lonicera villosa	mountain fly honeysuckle	Caprifoliaceae
Lotus corniculatus	bird's-foot trefoil	Fabaceae
Ludwigia palustris	marsh seedbox	Onagraceae
Luzula	woodrush	Juncaceae
Luzula acuminata	hairy woodrush	Juncaceae
Luzula acuminata var. *acuminata*	hairy woodrush	Juncaceae
Luzula acuminata var. *carolinae*	Carolina woodrush	Juncaceae
Luzula bulbosa	bulbous woodrush	Juncaceae
Luzula echinata	hedgehog woodrush	Juncaceae
Luzula multiflora	common woodrush	Juncaceae
Luzula parviflora	smallflowered woodrush	Juncaceae
Luzula spicata	spiked woodrush	Juncaceae
Lycopodiella appressa	southern bog clubmoss	Lycopodiaceae
Lycopodiella inundata	inundated clubmoss	Lycopodiaceae
Lycopodiella subappressa	northern bog clubmoss	Lycopodiaceae
Lycopodium	clubmoss	Lycopodiaceae
Lycopodium annotinum	stiff clubmoss	Lycopodiaceae
Lycopodium clavatum	running clubmoss	Lycopodiaceae
Lycopodium complanatum	groundcedar	Lycopodiaceae
Lycopodium dendroideum	tree groundpine	Lycopodiaceae
Lycopodium digitatum	fan clubmoss	Lycopodiaceae
Lycopodium hickeyi	Pennsylvania clubmoss	Lycopodiaceae
Lycopodium lagopus	one-cone clubmoss	Lycopodiaceae
Lycopodium obscurum	rare clubmoss	Lycopodiaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Lycopodium sitchense	Sitka clubmoss	Lycopodiaceae
Lycopus	waterhorehound	Lamiaceae
Lycopus americanus	American water horehound	Lamiaceae
Lycopus uniflorus	northern bugleweed	Lamiaceae
Lycopus virginicus	Virginia water horehound	Lamiaceae
Lyonia ligustrina	maleberry	Ericaceae
Lyonia ligustrina var. *ligustrina*	maleberry	Ericaceae
Lysimachia	yellow loosestrife	Primulaceae
Lysimachia ciliata	fringed loosestrife	Primulaceae
Lysimachia nummularia	creeping jenny	Primulaceae
Lysimachia quadriflora	fourflower yellow loosestrife	Primulaceae
Lysimachia quadrifolia	whorled yellow loosestrife	Primulaceae
Lysimachia terrestris	earth loosestrife	Primulaceae
Lythrum salicaria	purple loosestrife	Lythraceae
Maclura pomifera	Osage-orange	Moraceae
Magnolia acuminata	cucumber tree	Magnoliaceae
Magnolia fraseri	mountain magnolia	Magnoliaceae
Magnolia tripetala	umbrella-tree	Magnoliaceae
Maianthemum	mayflower	Liliaceae
Maianthemum canadense	Canada mayflower	Liliaceae
Maianthemum racemosum	feathery false lily of the valley	Liliaceae
Maianthemum racemosum ssp. *racemosum*	feathery false lily of the valley	Liliaceae
Maianthemum trifolium	threeleaf false lily of the valley	Liliaceae
Malus	apple	Rosaceae
Malus angustifolia var. *angustifolia*	southern crab apple	Rosaceae
Malus baccata	Siberian crap apple	Rosaceae
Malus coronaria	sweet crab apple	Rosaceae
Malus pumila	paradise apple	Rosaceae
Matteuccia struthiopteris	ostrich fern	Dryopteridaceae
Medeola virginiana	Indian cucumber	Liliaceae
Medicago	alfalfa	Fabaceae
Medicago lupulina	black medick	Fabaceae
Medicago sativa	alfalfa	Fabaceae
Meehania cordata	Meehan's mint	Lamiaceae
Melampyrum lineare	narrowleaf cowwheat	Scrophulariaceae
Melampyrum lineare var. *latifolium*	narrowleaf cowwheat	Scrophulariaceae
Melampyrum lineare var. *lineare*	narrowleaf cowwheat	Scrophulariaceae
Melanthium latifolium	slender bunchflower	Liliaceae
Melanthium parviflorum	Appalachian bunchflower	Liliaceae
Melanthium virginicum	Virginia bunchflower	Liliaceae
Melilotus officinalis	sweetclover	Fabaceae
Menispermum canadense	common moonseed	Menispermaceae
Mentha	mint	Lamiaceae
Mentha arvensis	wild mint	Lamiaceae
Menyanthes trifoliata	buckbean	Menyanthaceae
Menziesia pilosa	minniebush	Ericaceae
Microstegium	browntop	Poaceae
Microstegium vimineum	Nepalese browntop	Poaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Milium effusum	American milletgrass	Poaceae
Mimulus alatus	sharpwing monkeyflower	Scrophulariaceae
Mimulus ringens	Allegheny monkeyflower	Scrophulariaceae
Minuartia glabra	Appalachian stitchwort	Caryophyllaceae
Minuartia groenlandica	Greenland stitchwort	Caryophyllaceae
Miscanthus sinensis	Chinese silvergrass	Poaceae
Mitchella repens	partridgeberry	Rubiaceae
Mitella diphylla	twoleaf miterwort	Saxifragaceae
Mitella nuda	naked miterwort	Saxifragaceae
Mnium	mnium calcareous moss	Mniaceae
Mnium hornum	horn calcareous moss	Mniaceae
Mollugo verticillata	green carpetweed	Molluginaceae
Monarda	beebalm	Lamiaceae
Monarda clinopodia	white bergamot	Lamiaceae
Monarda didyma	scarlet beebalm	Lamiaceae
Monarda fistulosa	wild bergamot	Lamiaceae
Moneses	single delight	Pyrolaceae
Moneses uniflora	single delight	Pyrolaceae
Monotropa hypopitys	pinesap	Monotropaceae
Monotropa uniflora	Indianpipe	Monotropaceae
Monotropsis odorata	pygmypipes	Monotropaceae
Morella pensylvanica	northern bayberry	Myricaceae
Morus alba	white mulberry	Moraceae
Morus rubra	red mulberry	Moraceae
Morus rubra var. *rubra*	red mulberry	Moraceae
Moss, unknown	unknown moss	
Muhlenbergia	muhly	Poaceae
Muhlenbergia frondosa	wirestem muhly	Poaceae
Muhlenbergia glomerata	spiked muhly	Poaceae
Muhlenbergia schreberi	nimblewill	Poaceae
Muhlenbergia sobolifera	rock muhly	Poaceae
Muhlenbergia sylvatica	woodland muhly	Poaceae
Muhlenbergia tenuiflora	slimflower muhly	Poaceae
Mycelis muralis	wall-lettuce	Asteraceae
Myosotis	forget-me-not	Boraginaceae
Myosotis scorpioides	true forget-me-not	Boraginaceae
Myosotis stricta	strict forget-me-not	Boraginaceae
Myrica gale	sweetgale	Myricaceae
Myriophyllum	watermilfoil	Haloragaceae
Narcissus	daffodil	Liliaceae
Nasturtium officinale	watercress	Brassicaceae
Nepeta cataria	catnip	Lamiaceae
Nonvascular plant, unknown	unknown nonvascular plant	
Nuphar	pond-lily	Nymphaeaceae
Nuphar lutea ssp. *advena*	yellow pond-lily	Nymphaeaceae
Nuphar lutea ssp. *rubrodisca*	yellow pond-lily	Nymphaeaceae
Nuphar lutea ssp. *variegata*	varigated yellow pond-lily	Nymphaeaceae
Nymphaea odorata	American white waterlily	Nymphaeaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Nymphoides cordata	little floatingheart	Menyanthaceae
Nyssa sylvatica	blackgum	Cornaceae
Oclemena acuminata	whorled wood aster	Asteraceae
Oclemena nemoralis	bog aster	Asteraceae
Oenothera	evening primrose	Onagraceae
Oenothera biennis	common evening primrose	Onagraceae
Oenothera fruticosa	narrowleaf evening primrose	Onagraceae
Oenothera parviflora	northern evening primrose	Onagraceae
Oligoneuron rigidum var. *rigidum*	stiff goldenrod	Asteraceae
Onoclea sensibilis	sensitive fern	Dryopteridaceae
Oplismenus hirtellus subsp. undulatifolius	basketgrass	Poaceae
Orchidaceae	Orchidaceae family	
Origanum	origanum	Lamiaceae
Orthilia secunda	sidebells wintergreen	Pyrolaceae
Oryzopsis asperifolia	roughleaf ricegrass	Poaceae
Osmorhiza	sweetroot	Apiaceae
Osmorhiza claytonii	Clayton's sweetroot	Apiaceae
Osmorhiza longistylis	longstyle sweetroot	Apiaceae
Osmunda cinnamomea	cinnamon fern	Osmundaceae
Osmunda cinnamomea var. *cinnamomea*	cinnamon fern	Osmundaceae
Osmunda claytoniana	interrupted fern	Osmundaceae
Osmunda regalis	royal fern	Osmundaceae
Osmunda regalis var. *spectabilis*	royal fern	Osmundaceae
Ostrya virginiana	hophornbeam	Betulaceae
Ostrya virginiana	hophornbeam	Betulaceae
Ostrya virginiana var. *virginiana*	hophornbeam	Betulaceae
Oxalis	woodsorrel	Oxalidaceae
Oxalis dillenii	slender yellow woodsorrel	Oxalidaceae
Oxalis grandis	great yellow woodsorrel	Oxalidaceae
Oxalis montana	mountain woodsorrel	Oxalidaceae
Oxalis stricta	common yellow oxalis	Oxalidaceae
Oxydendrum arboreum	sourwood	Ericaceae
Oxypolis rigidior	stiff cowbane	Apiaceae
Oxyria digyna	alpine mountainsorrel	Polygonaceae
Packera	ragwort	Asteraceae
Packera anonyma	Small's ragwort	Asteraceae
Packera antennariifolia	shale barren ragwort	Asteraceae
Packera aurea	golden ragwort	Asteraceae
Packera obovata	roundleaf ragwort	Asteraceae
Packera paupercula	balsam groundsel	Asteraceae
Packera schweinitziana	Schweinitz's ragwort	Asteraceae
Panax quinquefolius	American ginseng	Araliaceae
Panax trifolius	dwarf ginseng	Araliaceae
Panicum	panicgrass	Poaceae
Panicum anceps	beaked panicgrass	Poaceae
Panicum capillare	witchgrass	Poaceae
Panicum philadelphicum	Philadelphia panicgrass	Poaceae
Panicum virgatum	switchgrass	Poaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Paraleucobryum	paraleucobryum moss	Dicranaceae
Parietaria pensylvanica	Pennsylvania pellitory	Urticaceae
Parmelia	shield lichen	Parmeliaceae
Parnassia asarifolia	kidneyleaf grass of Parnassus	Saxifragaceae
Parnassia glauca	fen grass of Parnassus	Saxifragaceae
Paronychia	nailwort	Caryophyllaceae
Paronychia argyrocoma	silvery nailwort	Caryophyllaceae
Paronychia canadensis	smooth forked nailwort	Caryophyllaceae
Paronychia fastigiata	hairy forked nailwort	Caryophyllaceae
Paronychia montana	mountain nailwort	Caryophyllaceae
Parthenium integrifolium	wild quinine	Asteraceae
Parthenium integrifolium var. *integrifolium*	wild quinine	Asteraceae
Parthenocissus quinquefolia	Virginia creeper	Vitaceae
Parthenocissus vitacea	woodbine	Vitaceae
Paspalum setaceum	thin paspalum	Poaceae
Passiflora incarnata	purple passionflower	Passifloraceae
Passiflora lutea	yellow passionflower	Passifloraceae
Pastinaca sativa	wild parsnip	Apiaceae
Patis racemosa	blackseed ricegrass	Poaceae
Paulownia tomentosa	princesstree	Scrophulariaceae
Pedicularis	lousewort	Scrophulariaceae
Pedicularis canadensis	Canadian lousewort	Scrophulariaceae
Pellaea atropurpurea	purple cliffbrake	Pteridaceae
Peltandra virginica	green arrow arum	Araceae
Pennisetum glaucum	pearl millet	Poaceae
Penstemon	beardtongue	Scrophulariaceae
Penstemon canescens	eastern gray beardtongue	Scrophulariaceae
Penstemon digitalis	foxglove beardtongue	Scrophulariaceae
Penstemon laevigatus	eastern smooth beardtongue	Scrophulariaceae
Penthorum sedoides	ditch stonecrop	Crassulaceae
Petasites frigidus	arctic sweet coltsfoot	Asteraceae
Phacelia	phacelia	Hydrophyllaceae
Phacelia bipinnatifida	fernleaf phacelia	Hydrophyllaceae
Phacelia dubia var. *dubia*	smallflower phacelia	Hydrophyllaceae
Phacelia fimbriata	fringed phacelia	Hydrophyllaceae
Phalaris arundinacea	reed canarygrass	Poaceae
Phegopteris connectilis	long beechfern	Thelypteridaceae
Phegopteris hexagonoptera	broad beechfern	Thelypteridaceae
Phemeranthus teretifolius	quill fameflower	Portulacaceae
Philadelphus hirsutus	streambank mock orange	Hydrangeaceae
Phleum alpinum	alpine timothy	Poaceae
Phleum pratense	timothy	Poaceae
Phlox	phlox	Polemoniaceae
Phlox carolina	thickleaf phlox	Polemoniaceae
Phlox carolina ssp. *carolina*	thickleaf phlox	Polemoniaceae
Phlox divaricata	wild blue phlox	Polemoniaceae
Phlox maculata ssp. *pyramidalis*	wild sweetwilliam	Polemoniaceae
Phlox subulata	moss phlox	Polemoniaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Photinia	chokeberry	Rosaceae
Photinia floribunda	purple chokeberry	Rosaceae
Photinia melanocarpa	black chokeberry	Rosaceae
Photinia pyrifolia	red chokeberry	Rosaceae
Phragmites australis	common reed	Poaceae
Phryma leptostachya	American lopseed	Verbenaceae
Phyla lanceolata	lanceleaf fogfruit	Verbenaceae
Phyllodoce caerulea	blue mountainheath	Ericaceae
Physalis	groundcherry	Solanaceae
Physalis heterophylla	clammy groundcherry	Solanaceae
Physalis longifolia var. *subglabrata*	longleaf groundcherry	Solanaceae
Physalis virginiana var. *virginiana*	Virginia groundcherry	Solanaceae
Physcia millegrana	rosette lichen	Physciaceae
Physocarpus	ninebark	Rosaceae
Physocarpus opulifolius	common ninebark	Rosaceae
Physocarpus opulifolius var. *opulifolius*	common ninebark	Rosaceae
Phytolacca americana	American pokeweed	Phytolaccaceae
Phytolacca americana var. *americana*	American pokeweed	Phytolaccaceae
Picea abies	Norway spruce	Pinaceae
Picea glauca	white spruce	Pinaceae
Picea mariana	black spruce	Pinaceae
Picea rubens	red spruce	Pinaceae
Pieris floribunda	mountain fetterbush	Ericaceae
Pilea	clearweed	Urticaceae
Pilea pumila	Canadian clearweed	Urticaceae
Pilea pumila var. *pumila*	Canadian clearweed	Urticaceae
Pinus	pine	Pinaceae
Pinus banksiana	jack pine	Pinaceae
Pinus echinata	shortleaf pine	Pinaceae
Pinus pungens	Table Mountain pine	Pinaceae
Pinus resinosa	red pine	Pinaceae
Pinus rigida	pitch pine	Pinaceae
Pinus strobus	eastern white pine	Pinaceae
Pinus sylvestris	Scots pine	Pinaceae
Pinus virginiana	Virginia pine	Pinaceae
Piptatherum racemosum	blackseed ricegrass	Poaceae
Piptochaetium avenaceum	blackseed speargrass	Poaceae
Pityopsis graminifolia var. *latifolia*	narrowleaf silkgrass	Asteraceae
Plantago	plantain	Plantaginaceae
Plantago lanceolata	narrowleaf plantain	Plantaginaceae
Plantago major	common plantain	Plantaginaceae
Plantago rugelii	blackseed plantain	Plantaginaceae
Plantago virginica	Virginia plantain	Plantaginaceae
Platanthera	fringed orchid	Orchidaceae
Platanthera ciliaris	yellow fringed orchid	Orchidaceae
Platanthera clavellata	small green wood orchid	Orchidaceae
Platanthera dilatata	scentbottle	Orchidaceae
Platanthera flava	palegreen orchid	Orchidaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Platanthera grandiflora	greater purple fringed orchid	Orchidaceae
Platanthera hyperborea	northern green orchid	Orchidaceae
Platanthera lacera	green fringed orchid	Orchidaceae
Platanthera orbiculata	lesser roundleaved orchid	Orchidaceae
Platanthera psycodes	lesser purple fringed orchid	Orchidaceae
Platanus occidentalis	American sycamore	Platanaceae
Pleopeltis polypodioides	resurrection fern	Polypodiaceae
Pleopeltis polypodioides ssp. *michauxiana*	resurrection fern	Polypodiaceae
Pleurozium schreberi	Schreber's big red stem moss	Hylocomiaceae
Poa	Poa	Poaceae
Poa alsodes	grove bluegrass	Poaceae
Poa annua	annual bluegrass	Poaceae
Poa autumnalis	autumn bluegrass	Poaceae
Poa compressa	Canada bluegrass	Poaceae
Poa cuspidata	early bluegrass	Poaceae
Poa nemoralis	wood bluegrass	Poaceae
Poa palustris	fowl bluegrass	Poaceae
Poa pratensis	Kentucky bluegrass	Poaceae
Poa saltuensis	oldpasture bluegrass	Poaceae
Poa sylvestris	woodland bluegrass	Poaceae
Poa trivialis	rough bluegrass	Poaceae
Poaceae	poaceae family	Poaceae
Poaceae - long-fruited	unknown grass second species	Poaceae
Podophyllum peltatum	mayapple	Berberidaceae
Pogonia ophioglossoides	snakemouth orchid	Orchidaceae
Polygala curtissii	Curtiss' milkwort	Polygalaceae
Polygala paucifolia	gaywings	Polygalaceae
Polygala sanguinea	purple milkwort	Polygalaceae
Polygala senega	Seneca snakeroot	Polygalaceae
Polygonatum	Solomon's seal	Liliaceae
Polygonatum biflorum	smooth Solomon's seal	Liliaceae
Polygonatum biflorum var. *commutatum*	smooth Solomon's seal	Liliaceae
Polygonatum pubescens	hairy Solomon's seal	Liliaceae
Polygonum	knotweed	Polygonaceae
Polygonum amphibium	water knotweed	Polygonaceae
Polygonum arifolium	halberdleaf tearthumb	Polygonaceae
Polygonum careyi	Carey's smartweed	Polygonaceae
Polygonum cespitosum	Oriental lady's thumb	Polygonaceae
Polygonum cespitosum var. *longisetum*	Oriental lady's thumb	Polygonaceae
Polygonum cilinode	fringed black bindweed	Polygonaceae
Polygonum cuspidatum	Japanese knotweed	Polygonaceae
Polygonum hydropiper	marshpepper knotweed	Polygonaceae
Polygonum hydropiperoides	swamp smartweed	Polygonaceae
Polygonum lapathifolium	curlytop knotweed	Polygonaceae
Polygonum pensylvanicum	Pennsylvania smartweed	Polygonaceae
Polygonum perfoliatum	Asiatic tearthumb	Polygonaceae
Polygonum persicaria	spotted ladysthumb	Polygonaceae
Polygonum punctatum	dotted smartweed	Polygonaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Polygonum sagittatum	arrowleaf tearthumb	Polygonaceae
Polygonum scandens	climbing false buckwheat	Polygonaceae
Polygonum scandens var. *cristatum*	climbing false buckwheat	Polygonaceae
Polygonum scandens var. *scandens*	climbing false buckwheat	Polygonaceae
Polygonum tenue	pleatleaf knotweed	Polygonaceae
Polygonum virginianum	jumpseed	Polygonaceae
Polygonum viviparum	alpine bistort	Polygonaceae
Polymnia canadensis	whiteflower leafcup	Asteraceae
Polypodium	polypody	Polypodiaceae
Polypodium appalachianum	Appalachian polypody	Polypodiaceae
Polypodium virginianum	rock polypody	Polypodiaceae
Polystichum acrostichoides	Christmas fern	Dryopteridaceae
Polystichum acrostichoides var. *acrostichoides*	Christmas fern	Dryopteridaceae
Polystichum braunii	Braun's hollyfern	Dryopteridaceae
Polytrichum	polytrichum moss	Polytrichaceae
Polytrichum commune	polytrichum moss	Polytrichaceae
Polytrichum juniperinum	juniper polytrichum moss	Polytrichaceae
Polytrichum ohioense	Ohio polytrichum moss	Polytrichaceae
Polytrichum pallidisetum	polytrichum moss	Polytrichaceae
Polytrichum strictum	polytrichum moss	Polytrichaceae
Pontederia cordata	pickerelweed	Pontederiaceae
Populus alba	white poplar	Salicaceae
Populus balsamifera	balsam poplar	Salicaceae
Populus balsamifera ssp. *balsamifera*	balsam poplar	Salicaceae
Populus deltoides	eastern cottonwood	Salicaceae
Populus deltoides ssp. *deltoides*	eastern cottonwood	Salicaceae
Populus grandidentata	bigtooth aspen	Salicaceae
Populus heterophylla	swamp cottonwood	Salicaceae
Populus tremuloides	quaking aspen	Salicaceae
Porteranthus stipulatus	American ipecac	Rosaceae
Porteranthus trifoliatus	Bowman's root	Rosaceae
Portulaca grandiflora	rose moss	Portulacaceae
Portulaca oleracea	little hogweed	Portulacaceae
Potamogeton	pondweed	Potamogetonaceae
Potamogeton epihydrus	ribbonleaf pondweed	Potamogetonaceae
Potamogeton natans	floating pondweed	Potamogetonaceae
Potentilla	cinquefoil	Rosaceae
Potentilla canadensis	dwarf cinquefoil	Rosaceae
Potentilla canadensis var. *canadensis*	dwarf cinquefoil	Rosaceae
Potentilla norvegica	Norwegian cinquefoil	Rosaceae
Potentilla recta	sulphur cinquefoil	Rosaceae
Potentilla simplex	common cinquefoil	Rosaceae
Prenanthes	rattlesnakeroot	Asteraceae
Prenanthes alba	white rattlesnakeroot	Asteraceae
Prenanthes altissima	tall rattlesnakeroot	Asteraceae
Prenanthes boottii	alpine rattlesnakeroot	Asteraceae
Prenanthes nana	dwarf rattlesnakeroot	Asteraceae
Prenanthes roanensis	Roan Mountain rattlesnakeroot	Asteraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Prenanthes serpentaria	cankerweed	Asteraceae
Prenanthes trifoliolata	gall of the earth	Asteraceae
Prosartes lanuginosa	yellow fairybells	Liliaceae
Prunella vulgaris	common selfheal	Lamiaceae
Prunella vulgaris ssp. *lanceolata*	lance selfheal	Lamiaceae
Prunus	plum	Rosaceae
Prunus alleghaniensis	Allegheny plum	Rosaceae
Prunus angustifolia	Chickasaw plum	Rosaceae
Prunus avium	sweet cherry	Rosaceae
Prunus pensylvanica	pin cherry	Rosaceae
Prunus serotina	black cherry	Rosaceae
Prunus serotina var. *serotina*	black cherry	Rosaceae
Prunus susquehanae	Sesquehana sandcherry	Rosaceae
Prunus virginiana	chokecherry	Rosaceae
Prunus virginiana var. *virginiana*	chokecherry	Rosaceae
Pseudognaphalium	cudweed	Asteraceae
Pseudognaphalium obtusifolium ssp. *obtusifolium*	rabbit-tobacco	Asteraceae
Ptelea	hoptree	Rutaceae
Ptelea trifoliata	common hoptree	Rutaceae
Pteridium aquilinum	western brackenfern	Dennstaedtiaceae
Pteridium aquilinum var. *latiusculum*	western brackenfern	Dennstaedtiaceae
Pteridium aquilinum var. *pseudocaudatum*	western brackenfern	Dennstaedtiaceae
Ptilidium ciliare		Pteilidiaceae
Ptilidium pulcherrimum		Ptilidiaceae
Pueraria montana	kudz	Fabaceae
Pueraria montana var. *lobata*	kudzu	Fabaceae
Pycnanthemum	mountainmint	Lamiaceae
Pycnanthemum clinopodioides	basil mountainmint	Lamiaceae
Pycnanthemum incanum	hoary mountainmint	Lamiaceae
Pycnanthemum montanum	thinleaf mountainmint	Lamiaceae
Pycnanthemum muticum	clustered mountainmint	Lamiaceae
Pycnanthemum virginianum	Virginia mountainmint	Lamiaceae
Pyrola	wintergreen	Pyrolaceae
Pyrola americana	American wintergreen	Pyrolaceae
Pyrola elliptica	waxflower shinleaf	Pyrolaceae
Pyrularia pubera	buffalo nut	Santalaceae
Quercus	oak	Fagaceae
Quercus acutissima	sawtooth oak	Fagaceae
Quercus alba	white oak	Fagaceae
Quercus bicolor	swamp white oak	Fagaceae
Quercus coccinea	scarlet oak	Fagaceae
Quercus coccinea var. *coccinea*	scarlet oak	Fagaceae
Quercus falcata	southern red oak	Fagaceae
Quercus ilicifolia	bear oak	Fagaceae
Quercus marilandica	blackjack oak	Fagaceae
Quercus michauxii	swamp chestnut oak	Fagaceae
Quercus montana	chestnut oak	Fagaceae
Quercus muehlenbergii	chinquapin oak	Fagaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Quercus palustris	pin oak	Fagaceae
Quercus prinoides	dwarf chinquapin oak	Fagaceae
Quercus prinus	swamp chestnut oak	Fagaceae
Quercus rubra	northern red oak	Fagaceae
Quercus stellata	post oak	Fagaceae
Quercus velutina	black oak	Fagaceae
Racomitrium lanuginosum	racomitrium moss	Grimmiaceae
Ranunculus	buttercup	Ranunculaceae
Ranunculus abortivus	littleleaf buttercup	Ranunculaceae
Ranunculus acris	tall buttercup	Ranunculaceae
Ranunculus allegheniensis	Allegheny Mountain buttercup	Ranunculaceae
Ranunculus bulbosus	St. Anthony's turnip	Ranunculaceae
Ranunculus hispidus	bristly buttercup	Ranunculaceae
Ranunculus hispidus var. *caricetorum*	bristly buttercup	Ranunculaceae
Ranunculus hispidus var. *hispidus*	bristly buttercup	Ranunculaceae
Ranunculus hispidus var. *nitidus*	bristly buttercup	Ranunculaceae
Ranunculus pensylvanicus	Pennsylvania buttercup	Ranunculaceae
Ranunculus recurvatus	blisterwort	Ranunculaceae
Ranunculus sardous	hairy buttercup	Ranunculaceae
Rhamnus	buckthorn	Rhamnaceae
Rhamnus alnifolia	alderleaf buckthorn	Rhamnaceae
Rhamnus cathartica	common buckthorn	Rhamnaceae
Rhododendron	rhododendron	Ericaceae
Rhododendron arborescens	smooth azalea	Ericaceae
Rhododendron calendulaceum	flame azalea	Ericaceae
Rhododendron canadense	rhodora	Ericaceae
Rhododendron carolinianum	Carolina azalea	Ericaceae
Rhododendron catawbiense	Catawba rosebay	Ericaceae
Rhododendron cumberlandense	Cumberland rhododendron	Ericaceae
Rhododendron lapponicum	lapland rosebay	Ericaceae
Rhododendron maximum	great laurel	Ericaceae
Rhododendron minus	piedmont rhododendron	Ericaceae
Rhododendron periclymenoides	pink azalea	Ericaceae
Rhododendron prinophyllum	early azalea	Ericaceae
Rhododendron viscosum	swamp azalea	Ericaceae
Rhodotypos scandens	jetbead	Rosaceae
Rhus aromatica	fragrant sumac	Anacardiaceae
Rhus aromatica var. *aromatica*	fragrant sumac	Anacardiaceae
Rhus copallinum	winged sumac	Anacardiaceae
Rhus copallinum var. *latifolia*	winged sumac	Anacardiaceae
Rhus glabra	smooth sumac	Anacardiaceae
Rhus typhina	staghorn sumac	Anacardiaceae
Rhynchospora alba	white beaksedge	Cyperaceae
Rhynchospora capitellata	brownish beaksedge	Cyperaceae
Rhynchospora recognita	globe beaksedge	Cyperaceae
Rhytidiadelphus triquetrus	rough goose neck moss	Hylocomiaceae
Ribes	currant	Grossulariaceae
Ribes americanum	American black currant	Grossulariaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Ribes cynosbati	eastern prickly gooseberry	Grossulariaceae
Ribes glandulosum	skunk currant	Grossulariaceae
Ribes hirtellum	hairystem gooseberry	Grossulariaceae
Ribes lacustre	prickly currant	Grossulariaceae
Ribes rotundifolium	Appalachian gooseberry	Grossulariaceae
Ribes triste	red currant	Grossulariaceae
Riccia	riccia	Ricciaceae
Robinia	locust	Fabaceae
Robinia hispida	bristly locust	Fabaceae
Robinia pseudoacacia	black locust	Fabaceae
Rorippa	yellowcress	Brassicaceae
Rorippa palustris	bog yellowcress	Brassicaceae
Rorippa palustris ssp. *fernaldiana*	Fernald's yellowcress	Brassicaceae
Rorippa sylvestris	creeping yellowcress	Brassicaceae
Rosa	rose	Rosaceae
Rosa blanda	smooth rose	Rosaceae
Rosa carolina	Carolina rose	Rosaceae
Rosa carolina var. *carolina*	Carolina rose	Rosaceae
Rosa multiflora	multiflora rose	Rosaceae
Rosa nitida	shining rose	Rosaceae
Rosa palustris	swamp rose	Rosaceae
Rotala ramosior	lowland rotala	Lythraceae
Rubus	blackberry	Rosaceae
Rubus allegheniensis	Allegheny blackberry	Rosaceae
Rubus allegheniensis var. *allegheniensis*	Allegheny blackberry	Rosaceae
Rubus argutus	sawtooth blackberry	Rosaceae
Rubus canadensis	smooth blackberry	Rosaceae
Rubus chamaemorus	cloudberry	Rosaceae
Rubus flagellaris	northern dewberry	Rosaceae
Rubus hispidus	bristly dewberry	Rosaceae
Rubus idaeus	American red raspberry	Rosaceae
Rubus idaeus ssp. *strigosus*	grayleaf red raspberry	Rosaceae
Rubus occidentalis	black raspberry	Rosaceae
Rubus odoratus	purpleflowering raspberry	Rosaceae
Rubus odoratus var. *odoratus*	purpleflowering raspberry	Rosaceae
Rubus pensilvanicus	Pennsylvania blackberry	Rosaceae
Rubus pergratus	upland blackberry	Rosaceae
Rubus phoenicolasius	wine raspberry	Rosaceae
Rubus pubescens	dwarf red blackberry	Rosaceae
Rubus setosus	setose blackberry	Rosaceae
Rubus trivialis	southern dewberry	Rosaceae
Rudbeckia hirta	blackeyed Susan	Asteraceae
Rudbeckia laciniata	cutleaf coneflower	Asteraceae
Rudbeckia triloba	browneyed Susan	Asteraceae
Ruellia caroliniensis	Carolina wild petunia	Acanthaceae
Rugelia nudicaulis	Rugel's Indianplantain	Asteraceae
Rumex	dock	Polygonaceae
Rumex acetosella	common sheep sorrel	Polygonaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Rumex crispus	curly dock	Polygonaceae
Rumex hastatulus	heartwing sorrel	Polygonaceae
Rumex obtusifolius	bitter dock	Polygonaceae
Rumex orbiculatus	greater water dock	Polygonaceae
Sagittaria latifolia	broadleaf arrowhead	Alismataceae
Salix	willow	Salicaceae
Salix argyrocarpa	Labrador willow	Salicaceae
Salix bebbiana	Bebb willow	Salicaceae
Salix candida	sageleaf willow	Salicaceae
Salix caroliniana	coastal plain willow	Salicaceae
Salix discolor	pussy willow	Salicaceae
Salix eriocephala	Missouri River willow	Salicaceae
Salix fragilis	crack willow	Salicaceae
Salix herbacea	snowbed willow	Salicaceae
Salix humilis	prairie willow	Salicaceae
Salix lucida	shining willow	Salicaceae
Salix nigra	black willow	Salicaceae
Salix pedicellaris	bog willow	Salicaceae
Salix pellita	satiny willow	Salicaceae
Salix petiolaris	meadow willow	Salicaceae
Salix planifolia	diamondleaf willow	Salicaceae
Salix pyrifolia	balsam willow	Salicaceae
Salix sericea	silky willow	Salicaceae
Salix uva-ursi	bearberry willow	Salicaceae
Salix viminalis	basket willow	Salicaceae
Salvia lyrata	lyreleaf sage	Lamiaceae
Salvia urticifolia	nettleleaf sage	Lamiaceae
Sambucus nigra	black elderberry	Caprifoliaceae
Sambucus nigra ssp. *canadensis*	American black elderberry	Caprifoliaceae
Sambucus racemosa	red elderberry	Caprifoliaceae
Sambucus racemosa var. *racemosa*	red elderberry	Caprifoliaceae
Samolus valerandi ssp. *parviflorus*	seaside brookweed	Primulaceae
Sanguinaria canadensis	bloodroot	Papaveraceae
Sanicula	sanicle	Apiaceae
Sanicula canadensis	Canadian blacksnakeroot	Apiaceae
Sanicula canadensis var. *canadensis*	Canadian blacksnakeroot	Apiaceae
Sanicula marilandica	Maryland sanicle	Apiaceae
Sanicula odorata	clustered blacksnakeroot	Apiaceae
Sanicula trifoliata	largefruit blacksnakeroot	Apiaceae
Saponaria officinalis	bouncingbet	Caryophyllaceae
Sarracenia purpurea	purple pitcherplant	Sarraceniaceae
Sassafras albidum	sassafras	Lauraceae
Saururus cernuus	lizard's tail	Saururaceae
Saxifraga michauxii	Michaux's saxifrage	Saxifragaceae
Saxifraga micranthidifolia	lettuceleaf saxifrage	Saxifragaceae
Saxifraga occidentalis	Alberta saxifrage	Saxifragaceae
Saxifraga pensylvanica	eastern swamp saxifrage	Saxifragaceae
Saxifraga virginiensis	early saxifrage	Saxifragaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Schedonorus arundinaceus	tall fescue	Poaceae
Schedonorus pratensis	meadow fescue	Poaceae
Scheuchzeria palustris	rannoch-rush	Scheuchzeriaceae
Schistidium apocarpum	schistidium moss	Grimmiaceae
Schizachne purpurascens	false melic	Poaceae
Schizachyrium scoparium	little bluestem	Poaceae
Schoenoplectus americanus	chairmaker's bulrush	Cyperaceae
Schoenoplectus subterminalis	swaying bulrush	Cyperaceae
Schoenoplectus tabernaemontani	softstem bulrush	Cyperaceae
Scirpus	bulrush	Cyperaceae
Scirpus atrocinctus	blackgirdle bulrush	Cyperaceae
Scirpus atrovirens	green bulrush	Cyperaceae
Scirpus cyperinus	woolgrass	Cyperaceae
Scirpus expansus	woodland bulrush	Cyperaceae
Scirpus hattorianus	mosquito bulrush	Cyperaceae
Scirpus microcarpus	panicled bulrush	Cyperaceae
Scirpus pedicellatus	stalked bulrush	Cyperaceae
Scirpus polyphyllus	leafy bulrush	Cyperaceae
Scleria triglomerata	whip nutrush	Cyperaceae
Scrophularia lanceolata	lanceleaf figwort	Scrophulariaceae
Scrophularia marilandica	carpenter's square	Scrophulariaceae
Scutellaria	skullcap	Lamiaceae
Scutellaria elliptica	hairy skullcap	Lamiaceae
Scutellaria elliptica var. *elliptica*	hairy skullcap	Lamiaceae
Scutellaria elliptica var. *hirsuta*	hairy skullcap	Lamiaceae
Scutellaria galericulata	marsh skullcap	Lamiaceae
Scutellaria incana	hoary skullcap	Lamiaceae
Scutellaria integrifolia	helmet flower	Lamiaceae
Scutellaria lateriflora	blue skullcap	Lamiaceae
Scutellaria ovata	heartleaf skullcap	Lamiaceae
Scutellaria saxatilis	smooth rock skullcap	Lamiaceae
Scutellaria serrata	showy skullcap	Lamiaceae
Securigera varia	crownvetch	Fabaceae
Sedum glaucophyllum	cliff stonecrop	Crassulaceae
Sedum ternatum	woodland stonecrop	Crassulaceae
Selaginella apoda	meadow spikemoss	Selaginellaceae
Selaginella rupestris	northern selaginella	Selaginellaceae
Senecio	ragwort	Asteraceae
Senna hebecarpa	American senna	Fabaceae
Sericocarpus asteroides	toothed whitetop aster	Asteraceae
Sericocarpus linifolius	narrowleaf whitetop aster	Asteraceae
Setaria	bristlegrass	Poaceae
Setaria faberi	Japanese bristlegrass	Poaceae
Setaria parviflora	marsh bristlegrass	Poaceae
Setaria pumila	yellow foxtail	Poaceae
Setaria viridis	green bristlegrass	Poaceae
Sibbaldiopsis tridentata	shrubby fivefingers	Rosaceae
Sida spinosa	prickly fanpetals	Malvaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Silene antirrhina	sleepy silene	Caryophyllaceae
Silene caroliniana ssp. *pensylvanica*	Pennsylvania catchfly	Caryophyllaceae
Silene latifolia ssp. *alba*	bladder campion	Caryophyllaceae
Silene noctiflora	nightflowering silene	Caryophyllaceae
Silene stellata	widowsfrill	Caryophyllaceae
Silene virginica	fire pink	Caryophyllaceae
Silene virginica var. *virginica*	fire pink	Caryophyllaceae
Silene vulgaris	maidenstears	Caryophyllaceae
Silphium compositum	kidneyleaf rosinweed	Asteraceae
Silphium trifoliatum	whorled rosinweed	Asteraceae
Silphium trifoliatum var. *trifoliatum*	whorled rosinweed	Asteraceae
Sisyrinchium angustifolium	narrowleaf blue-eyed grass	Iridaceae
Sisyrinchium mucronatum	needletip blue-eyed grass	Iridaceae
Sium suave	hemlock waterparsnip	Apiaceae
Smallanthus uvedalius	hairy leafcup	Asteraceae
Smilax	greenbrier	Smilacaceae
Smilax biltmoreana	Biltmore's carrionflower	Smilacaceae
Smilax bona-nox	saw greenbrier	Smilacaceae
Smilax glauca	cat greenbrier	Smilacaceae
Smilax herbacea	smooth carrionflower	Smilacaceae
Smilax hugeri	Huger's carrionflower	Smilacaceae
Smilax pulverulenta	downy carrionflower	Smilacaceae
Smilax rotundifolia	roundleaf greenbrier	Smilacaceae
Smilax tamnoides	bristly greenbrier	Smilacaceae
Solanum americanum	American black nightshade	Solanaceae
Solanum carolinense	Carolina horsenettle	Solanaceae
Solanum dulcamara	climbing nightshade	Solanaceae
Solanum nigrum	black nightshade	Solanaceae
Solanum ptychanthum	West Indian nightshade	Solanaceae
Solidago	goldenrod	Asteraceae
Solidago altissima	Canada goldenrod	Asteraceae
Solidago arguta	Atlantic goldenrod	Asteraceae
Solidago arguta var. *arguta*	Atlantic goldenrod	Asteraceae
Solidago arguta var. *caroliniana*	Atlantic goldenrod	Asteraceae
Solidago bicolor	white goldenrod	Asteraceae
Solidago caesia	wreath goldenrod	Asteraceae
Solidago canadensis	Canada goldenrod	Asteraceae
Solidago canadensis var. *canadensis*	Canada goldenrod	Asteraceae
Solidago curtisii	mountain decumbent goldenrod	Asteraceae
Solidago cutleri	Cutler's alpine goldenrod	Asteraceae
Solidago erecta	showy goldenrod	Asteraceae
Solidago flexicaulis	zigzag goldenrod	Asteraceae
Solidago gigantea	giant goldenrod	Asteraceae
Solidago glomerata	clustered goldenrod	Asteraceae
Solidago hispida	hairy goldenrod	Asteraceae
Solidago juncea	early goldenrod	Asteraceae
Solidago macrophylla	largeleaf goldenrod	Asteraceae
Solidago nemoralis	gray goldenrod	Asteraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Solidago odora	anisescented goldenrod	Asteraceae
Solidago odora var. *odora*	anisescented goldenrod	Asteraceae
Solidago patula	roundleaf goldenrod	Asteraceae
Solidago pinetorum	Small's goldenrod	Asteraceae
Solidago puberula	downy goldenrod	Asteraceae
Solidago roanensis	Roan Mountain goldenrod	Asteraceae
Solidago rugosa	wrinkleleaf goldenrod	Asteraceae
Solidago rugosa ssp. *aspera*	wrinkleleaf goldenrod	Asteraceae
Solidago simplex	Mt. Albert goldenrod	Asteraceae
Solidago simplex ssp. *randii*	Rand's goldenrod	Asteraceae
Solidago simplex ssp. *randii* var. *randii*	Rand's goldenrod	Asteraceae
Solidago speciosa var. *speciosa*	showy goldenrod	Asteraceae
Solidago squarrosa	stout goldenrod	Asteraceae
Solidago uliginosa	bog goldenrod	Asteraceae
Solidago uliginosa var. *linoides*	bog goldenrod	Asteraceae
Solidago ulmifolia	elmleaf goldenrod	Asteraceae
Solidago ulmifolia var. *ulmifolia*	elmleaf goldenrod	Asteraceae
Sorbus	mountain ash	Rosaceae
Sorbus americana	American mountain ash	Rosaceae
Sorbus decora	northern mountain ash	Rosaceae
Sorghastrum nutans	Indiangrass	Poaceae
Sparganium	bur-reed	Sparganiaceace
Sparganium americanum	American bur-reed	Sparganiaceae
Sparganium androcladum	branched bur-reed	Sparganiaceae
Sparganium angustifolium	narrowleaf bur-reed	Sparganiaceae
Sparganium emersum	European bur-reed	Sparganiaceae
Sparganium eurycarpum	broadfruit bur-reed	Sparganiaceae
Sparganium fluctuans	floating bur-reed	Sparganiaceae
Sphagnum	sphagnum	Sphagnaceae
Sphagnum capillifolium	sphagnum	Sphagnaceae
Sphagnum centrale	sphagnum	Sphagnaceae
Sphagnum compactum	low sphagnum	Sphagnaceae
Sphagnum contortum	contorted sphagnum	Sphagnaceae
Sphagnum fuscum	sphagnum	Sphagnaceae
Sphagnum girgensohnii	Girgensohn's sphagnum	Sphagnaceae
Sphagnum magellanicum	Magellan's sphagnum	Sphagnaceae
Sphagnum palustre	prairie sphagnum	Sphagnaceae
Sphagnum russowii	Russow's sphagnum	Sphagnaceae
Sphagnum squarrosum	sphagnum	Sphagnaceae
Sphenopholis intermedia	slender wedgescale	Poaceae
Sphenopholis nitida	shiny wedgescale	Poaceae
Sphenopholis pensylvanica	swamp wedgescale	Poaceae
Spigelia marilandica	woodland pinkroot	Loganiaceae
Spiraea	spirea	Rosaceae
Spiraea alba	white meadowsweet	Rosaceae
Spiraea alba var. *latifolia*	white meadowsweet	Rosaceae
Spiraea betulifolia	white spirea	Rosaceae
Spiraea betulifolia var. *corymbosa*	shinyleaf meadowsweet	Rosaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Spiraea tomentosa	steeplebush	Rosaceae
Spiranthes	lady's tresses	Orchidaceae
Sporobolus	dropseed	Poaceae
Sporobolus vaginiflorus	poverty dropseed	Poaceae
Stachys	hedgenettle	Lamiaceae
Stachys clingmanii	Clingman's hedgenettle	Lamiaceae
Stachys latidens	broadtooth hedgenettle	Lamiaceae
Stachys nuttallii	heartleaf hedgenettle	Lamiaceae
Stachys tenuifolia	smooth hedgenettle	Lamiaceae
Staphylea trifolia	American bladdernut	Staphyleaceae
Stellaria alsine	bog chickweed	Caryophyllaceae
Stellaria borealis	boreal starwort	Caryophyllaceae
Stellaria corei	Tennessee starwort	Caryophyllaceae
Stellaria graminea	grass-like starwort	Caryophyllaceae
Stellaria longifolia	longleaf starwort	Caryophyllaceae
Stellaria media	common chickweed	Caryophyllaceae
Stellaria media ssp. *media*	common chickweed	Caryophyllaceae
Stellaria pubera	star chickweed	Caryophyllaceae
Stenanthium gramineum	eastern featherbells	Liliaceae
Stenanthium gramineum var. *micranthum*	eastern featherbells	Liliaceae
Stereocaulon saxatile	snow lichen	Stereocaulaceae
Streptopus amplexifolius	claspleaf twistedstalk	Liliaceae
Streptopus lanceolatus	twistedstalk	Liliaceae
Streptopus lanceolatus var. *lanceolatus*	twistedstalk	Liliaceae
Streptopus lanceolatus var. *roseus*	twistedstalk	Liliaceae
Stuckenia filiformis	fineleaf pondweed	Potamogetonaceae
Symphoricarpos	snowberry	Caprifoliaceae
Symphoricarpos albus	common snowberry	Caprifoliaceae
Symphoricarpos orbiculatus	coralberry	Caprifoliaceae
Symphyotrichum	aster	Asteraceae
Symphyotrichum cordifolium	common blue wood aster	Asteraceae
Symphyotrichum divaricatum	southern annual saltmarsh aster	Asteraceae
Symphyotrichum dumosum	rice button aster	Asteraceae
Symphyotrichum laeve var. *concinnum*	smooth blue aster	Asteraceae
Symphyotrichum laeve var. *laeve*	smooth blue aster	Asteraceae
Symphyotrichum lanceolatum	white panicle aster	Asteraceae
Symphyotrichum lanceolatum ssp. *lanceolatum*	white panicle aster	Asteraceae
Symphyotrichum lateriflorum	calico aster	Asteraceae
Symphyotrichum lateriflorum var. *lateriflorum*	calico aster	Asteraceae
Symphyotrichum lowrieanum	Lowrie's blue wood aster	Asteraceae
Symphyotrichum novae-angliae	New England aster	Asteraceae
Symphyotrichum novi-belgii	New York aster	Asteraceae
Symphyotrichum oblongifolium	aromatic aster	Asteraceae
Symphyotrichum patens var. *patens*	late purple aster	Asteraceae
Symphyotrichum phlogifolium	thinleaf late purple aster	Asteraceae
Symphyotrichum pilosum	hairy white oldfield aster	Asteraceae
Symphyotrichum prenanthoides	crookedstem aster	Asteraceae
Symphyotrichum puniceum	purplestem aster	Asteraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Symphyotrichum puniceum var. *puniceum*	purplestem aster	Asteraceae
Symphyotrichum racemosum	smooth white oldfield aster	Asteraceae
Symphyotrichum retroflexum	rigid whitetop aster	Asteraceae
Symphyotrichum undulatum	wavyleaf aster	Asteraceae
Symphyotrichum urophyllum	white arrowleaf aster	Asteraceae
Symphytum	comfrey	Boraginaceae
Symplocarpus foetidus	skunk cabbage	Araceae
Symplocos tinctoria	common sweetleaf	Symplocaceae
Taenidia integerrima	yellow pimpernel	Apiaceae
Taenidia montana	mountain pimpernel	Apiaceae
Talinum teretifolium	quil fameflower	Portulacaceae
Taraxacum officinale	common dandelion	Asteraceae
Taxus canadensis	Canada yew	Taxaceae
Tephrosia virginiana	Virginia tephrosia	Fabaceae
Teucrium canadense	Canada germander	Lamiaceae
Thalia	alligator-flag	Marantaceae
Thalictrum	meadow-rue	Ranunculaceae
Thalictrum clavatum	mountain meadow-rue	Ranunculaceae
Thalictrum coriaceum	maid of the mist	Ranunculaceae
Thalictrum dioicum	early meadow-rue	Ranunculaceae
Thalictrum pubescens	king of the meadow	Ranunculaceae
Thalictrum revolutum	waxyleaf meadow-rue	Ranunculaceae
Thalictrum thalictroides	rue anemone	Ranunculaceae
Thaspium	meadowparsnip	Apiaceae
Thaspium barbinode	hairyjoint meadowparsnip	Apiaceae
Thaspium trifoliatum	purple meadowparsnip	Apiaceae
Thaspium trifoliatum var. *aureum*	purple meadowparsnip	Apiaceae
Thelypteris noveboracensis	New York fern	Thelypteridaceae
Thelypteris palustris	eastern marsh fern	Thelypteridaceae
Thelypteris palustris var. *pubescens*	eastern marsh fern	Thelypteridaceae
Thelypteris simulata	bog fern	Thelypteridaceae
Thuidium	thuidium moss	Thuidaceae
Thuidium delicatulum	delicate thuidium moss	Thuidiaceae
Thuja occidentalis	arborvitae	Cupressaceae
Tiarella cordifolia	heartleaf foamflower	Saxifragaceae
Tiarella cordifolia var. *cordifolia*	heartleaf foamflower	Saxifragaceae
Tilia	basswood	Tiliaceae
Tilia americana	American basswood	Tiliaceae
Tilia americana var. *americana*	American basswood	Tiliaceae
Tilia americana var. *heterophylla*	American basswood	Tiliaceae
Tipularia discolor	crippled cranefly	Orchidaceae
Torilis japonica	erect hedgeparsley	Apiaceae
Torreyochloa pallida	palse false mannagrass	Poaceae
Torreyochloa pallida var. *fernaldii*	Fernald's false mannagrass	Poaceae
Toxicodendron pubescens	Atlantic poison oak	Anacardiaceae
Toxicodendron radicans	eastern poison ivy	Anacardiaceae
Toxicodendron rydbergii	western poison ivy	Anacardiaceae
Toxicodendron vernix	poison sumac	Anacardiaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Tradescantia	spiderwort	Commelinaceae
Tradescantia ohiensis	bluejacket	Commelinaceae
Tradescantia subaspera	zigzag spiderwort	Commelinaceae
Tradescantia subaspera var. *montana*	zigzag spiderwort	Commelinaceae
Tradescantia virginiana	Virginia spiderwort	Commelinaceae
Trapa natans	water chestnut	Trapaceae
Trautvetteria caroliniensis	Carolina bugbane	Ranunculaceae
Trautvetteria caroliniensis var. *caroliniensis*	Carolina bugbane	Ranunculaceae
Triadenum fraseri	Fraser's marsh St. Johnswort	Clusiaceae
Triadenum virginicum	Virginia marsh St. Johnswort	Clusiaceae
Trichophorum alpinum	alpine bulrush	Cyperaceae
Trichophorum cespitosum	tufted bulrush	Cyperaceae
Trichophorum planifolium	bashful bulrush	Cyperaceae
Tridens flavus	purpletop tridens	Poaceae
Trientalis borealis	starflower	Primulaceae
Trientalis borealis ssp. *borealis*	starflower	Primulaceae
Trifolium	clover	Fabaceae
Trifolium campestre	field clover	Fabaceae
Trifolium pratense	red clover	Fabaceae
Trifolium repens	white clover	Fabaceae
Trillium	trillium	Liliaceae
Trillium catesbaei	bashful wakerobin	Liliaceae
Trillium cernuum	whip-poor-will flower	Liliaceae
Trillium cuneatum	little sweet Betsy	Liliaceae
Trillium erectum	red trillium	Liliaceae
Trillium grandiflorum	white trillium	Liliaceae
Trillium luteum	yellow wakerobin	Liliaceae
Trillium sessile	toadshade	Liliaceae
Trillium simile	jeweled wakerobin	Liliaceae
Trillium sulcatum	furrowed wakerobin	Liliaceae
Trillium undulatum	painted trillium	Liliaceae
Trillium vaseyi	sweet wakerobin	Liliaceae
Triodanis perfoliata	clasping Venus' looking-glass	Campanulaceae
Triosteum	horse-gentian	Caprifoliaceae
Triosteum angustifolium	yellowfruit horse-gentian	Caprifoliaceae
Triosteum aurantiacum	orangefruit horse-gentian	Caprifoliaceae
Triosteum perfoliatum	feverwort	Caprifoliaceae
Tripsacum dactyloides	eastern gamagrass	Poaceae
Tsuga canadensis	eastern hemlock	Pinaceae
Tsuga caroliniana	Carolina hemlock	Pinaceae
Tsuga heterophylla	western hemlock	Pinaceae
Tussilago farfara	coltsfoot	Asteraceae
Typha	cattail	Typhaceae
Typha angustifolia	narrowleaf cattail	Typhaceae
Typha latifolia	broadleaf cattail	Typhaceae
Typha ×glauca	hybrid cattail	Typhaceae
Ulmus	elm	Ulmaceae
Ulmus alata	winged elm	Ulmaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Ulmus americana	American elm	Ulmaceae
Ulmus rubra	slippery elm	Ulmaceae
Umbilicaria	navel lichen	Umbilicariaceae
Umbilicaria mammulata	navel lichen	Umbilicariaceae
Urtica dioica	stinging nettle	Urticaceae
Usnea	beard lichen	Parmeliaceae
Utricularia	bladderwort	Lentibulariaceae
Utricularia cornuta	horned bladderwort	Lentibulariaceae
Utricularia geminiscapa	hiddenfruit bladderwort	Lentibulariaceae
Utricularia intermedia	flatleaf bladderwort	Lentibulariceae
Utricularia macrorhiza	common bladderwort	Lentibulariaceae
Uvularia	bellwort	Liliaceae
Uvularia grandiflora	largeflower bellwort	Liliaceae
Uvularia perfoliata	perfoliate bellwort	Liliaceae
Uvularia puberula	mountain bellwort	Liliaceae
Uvularia sessilifolia	sessileleaf bellwort	Liliaceae
Vaccinium	blueberry	Ericaceae
Vaccinium angustifolium	lowbush blueberry	Ericaceae
Vaccinium arboreum	farkleberry	Ericaceae
Vaccinium boreale	northern blueberry	Ericaceae
Vaccinium cespitosum	dwarf bilberry	Ericaceae
Vaccinium corymbosum	highbush blueberry	Ericaceae
Vaccinium erythrocarpum	southern mountain cranberry	Ericaceae
Vaccinium fuscatum	black highbush blueberry	Ericaceae
Vaccinium hirsutum	hairy blueberry	Ericaceae
Vaccinium macrocarpon	cranberry	Ericaceae
Vaccinium myrtilloides	velvetleaf huckleberry	Ericaceae
Vaccinium oxycoccos	small cranberry	Ericaceae
Vaccinium pallidum	Blue Ridge blueberry	Ericaceae
Vaccinium simulatum	upland highbush blueberry	Ericaceae
Vaccinium stamineum	deerberry	Ericaceae
Vaccinium uliginosum	bog blueberry	Ericaceae
Vaccinium vitis-idaea	lingonberry	Ericaceae
Vaccinium vitis-idaea ssp. *minus*	northern mountain cranberry	Ericaceae
Vallisneria	eelgrass	Hydrocharitaceae
Vallisneria americana	American eelgrass	Hydrocharitaceae
Veratrum parviflorum	Appalachian bunchflower	Liliaceae
Veratrum viride	green false hellebore	Liliaceae
Verbascum thapsus	common mullein	Scrophulariaceae
Verbena hastata	swamp verbena	Verbenaceae
Verbena simplex	narrowleaf vervain	Verbenaceae
Verbena urticifolia	white vervain	Verbenaceae
Verbesina	crownbeard	Asteraceae
Verbesina alternifolia	wingstem	Asteraceae
Verbesina occidentalis	yellow crownbeard	Asteraceae
Vernonia	ironweed	Asteraceae
Vernonia gigantea	giant ironweed	Asteraceae
Vernonia gigantea ssp. *gigantea*	giant ironweed	Asteraceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Vernonia glauca	broadleaf ironweed	Asteraceae
Vernonia noveboracensis	New York ironweed	Asteraceae
Veronica	speedwell	Scrophulariaceae
Veronica americana	American speedwell	Scrophulariaceae
Veronica arvensis	corn speedwell	Scrophulariaceae
Veronica hederifolia	ivyleaf speedwell	Scrophulariaceae
Veronica officinalis	common gypsyweed	Scrophulariaceae
Veronica serpyllifolia	thymeleaf speedwell	Scrophulariaceae
Veronica wormskjoldii	American alpine speedwell	Scrophulariaceae
Viburnum	viburnum	Caprifoliaceae
Viburnum acerifolium	mapleleaf viburnum	Caprifoliaceae
Viburnum dentatum	southern arrowwood	Caprifoliaceae
Viburnum edule	squashberry	Caprifoliaceae
Viburnum lantanoides	hobblebush	Caprifoliaceae
Viburnum lentago	nannyberry	Caprifoliaceae
Viburnum nudum	possumhaw	Caprifoliaceae
Viburnum nudum var. *cassinoides*	withe-rod	Caprifoliaceae
Viburnum nudum var. *nudum*	possumhaw	Caprifoliaceae
Viburnum opulus	European cranberrybush	Caprifoliaceae
Viburnum opulus var. *americanum*	American cranberrybush	Caprifoliaceae
Viburnum plicatum	Japanese snowball	Caprifoliaceae
Viburnum prunifolium	blackhaw	Caprifoliaceae
Viburnum rafinesqueanum	downy arrowwood	Caprifoliaceae
Viburnum recognitum	southern arrowwood	Caprifoliaceae
Viburnum rufidulum	rusty blackhaw	Caprifoliaceae
Vicia	vetch	Fabaceae
Vicia caroliniana	Carolina vetch	Fabaceae
Vicia cracca	bird vetch	Fabaceae
Vicia sativa ssp. *nigra*	garden vetch	Fabaceae
Vinca	periwinkle	Apocynaceae
Viola	violet	Violaceae
Viola ×palmata	early blue violet	Violaceae
Viola ×primulifolia		Violaceae
Viola affinis	sand violet	Violaceae
Viola bicolor	field pansy	Violaceae
Viola blanda	sweet white violet	Violaceae
Viola blanda var. *blanda*	sweet white violet	Violaceae
Viola canadensis	Canadian white violet	Violaceae
Viola canadensis var. *canadensis*	Canadian white violet	Violaceae
Viola cucullata	marsh blue violet	Violaceae
Viola hastata	halberdleaf yellow violet	Violaceae
Viola hirsutula	southern woodland violet	Violaceae
Viola labradorica	alpine violet	Violaceae
Viola macloskeyi	small white violet	Violaceae
Viola macloskeyi ssp. *pallens*	smooth white violet	Violaceae
Viola pedata	birdfoot violet	Violaceae
Viola pubescens	downy yellow violet	Violaceae
Viola pubescens var. *pubescens*	downy yellow violet	Violaceae

Table E–1 (continued). Plant species list from the Appalachian National Scenic Trail vegetation mapping project (sorted by scientific name of plant species).

Scientific Name	Common Name	Family
Viola pubescens var. *scabriuscula*	downy yellow violet	Violaceae
Viola renifolia	white violet	Violaceae
Viola rostrata	longspur violet	Violaceae
Viola rotundifolia	roundleaf yellow violet	Violaceae
Viola sagittata	arrowleaf violet	Violaceae
Viola sagittata var. *ovata*	arrowleaf violet	Violaceae
Viola selkirkii	Selkirk's violet	Violaceae
Viola sororia	common blue violet	Violaceae
Viola striata	striped cream violet	Violaceae
Viola triloba	three-lobe violet	Violaceae
Vitis	grape	Vitaceae
Vitis aestivalis	summer grape	Vitaceae
Vitis aestivalis var. *aestivalis*	summer grape	Vitaceae
Vitis aestivalis var. *bicolor*	summer grape	Vitaceae
Vitis cinerea	graybark grape	Vitaceae
Vitis cinerea var. *baileyana*	graybark grape	Vitaceae
Vitis labrusca	fox grape	Vitaceae
Vitis riparia	riverbank grape	Vitaceae
Vitis rotundifolia	muscadine	Vitaceae
Vitis vulpina	frost grape	Vitaceae
Waldsteinia fragarioides	Appalachian barren strawberry	Rosaceae
Warnstorfia fluitans var. *fluitans*	warnstorfia moss	Amblystegiaceae
Wisteria sinensis	Chinese wisteria	Fabaceae
Wolffia	watermeal	Lemnaceae
Woodsia ilvensis	rusty woodsia	Dryopteridaceae
Woodsia obtusa ssp. *obtusa*	bluntlobe cliff fern	Dryopteridaceae
Woodwardia virginica	Virginia chainfern	Blechnaceae
woody seedlings, not specified	woody seedlings	
Xanthium strumarium	rough cocklebur	Asteraceae
Xanthoparmelia	xanthoparmelia lichen	Parmeliaceae
Xanthoparmelia conspersa	xanthoparmelia lichen	Parmeliaceae
Xanthoparmelia plittii	Plitt's xanthoparmelia lichen	Parmeliaceae
Xanthorhiza simplicissima	yellowroot	Ranunculaceae
Xerophyllum asphodeloides	eastern turkeybeard	Liliaceae
Yucca filamentosa	Adam's needle	Agavaceae
Zanthoxylum americanum	common pricklyash	Rutaceae
Zea mays	corn	Poaceae
Zizia aptera	meadow zizia	Apiaceae
Zizia aurea	golden zizia	Apiaceae
Zizia trifoliata	meadow alexanders	Apiaceae

Appendix F: Descriptions of Map Classes

Explanation of Map-Class Descriptions

This appendix provides descriptions of the 169 map classes used to map the Appalachian National Scenic Trail (APPA) for the National Park Service (NPS) Vegetation Mapping Inventory (VMI) Program. Of these 169 map classes, 150 represent 261 of the 280 U.S. National Vegetation Classification (USNVC) associations identified with this vegetation mapping project; 19 associations were determined always less than minimum mapping unit (MMU). (Some map classes represent more than one association whereas others represent a single association.) Another 11 map classes represent cultural vegetation types (agricultural and developed) in the USNVC, 3 map classes represent nonvegetation open water (non-USNVC), and 5 map classes represent natural landscapes that have undergone catastrophic disturbance or some other form of modification to natural vegetation preventing accurate vegetation classification and placement in the USNVC.

For those map classes representing vegetation associations in the USNVC, "Appendix C: Descriptions of Vegetation Associations" and "Appendix D: Field Key to Vegetation Associations" should be used to complement the map-class descriptions in this appendix.

Each map-class description provides the formal map-class code and name used for mapping. For those map classes representing a single vegetation association in the USNVC, the association's common name was used as the map-class name (e.g., Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest). For those map classes representing more than one association in the USNVC, a comparable map-class name was derived (e.g., Chestnut Oak / Heath Forest for the collective associations of Central Appalachian-Northern Piedmont Chestnut Oak Forest and Low-Elevation Mixed Oak / Heath Forest). For those map classes representing cultural vegetation, either the common name at the lowest level mapped in the USNVC was used as the map-class name (e.g., Herbaceous Agricultural Vegetation, which is a Cultural Subclass), or a generic map-class name was derived (e.g., Developed Area). For vegetation map classes lacking a direct link to the USNVC, a descriptive map-class name was derived (e.g. Recently Burned Landscape). For those map classes representing nonvegetation features, a generic map-class name was derived (e.g., Open Water Lake).

For all map classes representing USNVC associations, the USNVC classification name(s) and code(s) that the map class represents are provided at the beginning of each map-class description. Each map class is described with a focus on how it presents in the APPA landscape, noting that this type of description may not reflect how the various USNVC types present across their range. Descriptions are from a mapping, rather than an ecological, perspective, but ecological concepts relevant to the mapping effort were integrated into the map-class description. Full ecological descriptions of each vegetation association are available in "Appendix C: Descriptions of Vegetation Associations."

Tree species such as northern red oak (*Quercus rubra*), eastern redcedar (*Juniperus virginiana*), and sweetgum (*Liquidambar styraciflua*) are assumed to be of heights greater than 5 meters (m), unless otherwise specified (e.g., shrub-height trees) in the description. The term "hardwood trees" refers to all deciduous tree species. The term "tree species" includes general references to trees as conifers and hardwoods. Furthermore, unless otherwise noted, the herbaceous types have greater than 10%

herbaceous cover and less than 25% total tree and shrub canopy closure, shrubland types have greater than 25% shrub canopy closure and less than 25% tree canopy closure, woodlands have greater than 25% tree canopy closure, and forests typically have greater than 60% tree canopy closure.

Adjectives are used in the map-class descriptions to provide a general idea of the commonness of each map class by area and percent cover of the APPA vegetation map layer. These adjectives are detailed in Table F–1.

Table F–1. Adjectives used to describe map-class commonness of occurance by area and percent cover of the Appalachian National Scenic Trail vegetation map layer.

Adjective	Area (ha)	Percent cover
Exceptionally rare	0–11.09	0–0.0099
Rare	11.1–110.92	0.01–0.099
Uncommon	110.93–543.50	0.1–0.49
Common	543.51–2,761.85	0.5–2.49
Very common	>2,761.86	>2.5

When map-class signatures or presentations are discussed, unless otherwise specified, they are in reference to the color-infrared component of the 4-band aerial imagery used during the mapping process, unless otherwise specified.

When accuracy assessment (AA) results are reported in the map-class description, two views are discussed—mapped too aggressively and mapped too conservatively. The view of "mapped too aggressively" refers to errors in the users' accuracy. The users' accuracy reports on the probability that an AA site in the tested map class does not have a vegetation type that is represented by the map class. This is an error of commission indicating where too much of APPA was mapped as the tested map class. The lower the users' accuracy for a map class, the higher the likelihood that the map class was overmapped (i.e., mapped too aggressively). The view of "mapped too conservatively" refers to errors in the producers' accuracy. The producers' accuracy reports on the probability that an AA site in a different map class has a vegetation type that is represented by the tested map class. This is an error of omission indicating where too little area of APPA was mapped as the tested map class. The lower the producers' accuracy for a map class, the higher the likelihood that the map class was undermapped (i.e., mapped too conservatively).

Straight accuracies are listed for users' and producers' in the reporting of AA results. When straight accuracies are below 80%, the 90% confidence intervals are provided to present where the interval range is in regards to the 80% accuracy standard set by the NPS VMI Program. The 90% confidence intervals to users' and producers' accuracies for all map classes that were included in the AA study are included with the suite of data products developed for the APPA vegetation mapping project.

Along with text descriptions of the map classes, images form field pictures are provided when possible to visually depict the vegetation types and nonvegetation features that the map classes represent. Worth noting is that the images are a partial representation; capturing all variations within a map class would not be possible.

Throughout this appendix, APPA also is referred to as the "AT corridor" for the Appalachian Trail corridor, or simply as the "corridor" after the AT corridor context is established. For brevity purpose, references to other national-park units use the following official NPS park-unit abbreviations:

- Delaware Water Gap National Recreation Area (DEWA),
- Great Smoky Mountains National Park (GRSM), and
- Shenandoah National Park (SHEN).

Map-Classification Lists

Within a particular map-class description, map classes (other than the map class being directly described) are referenced by their map-class codes. Map-class names to these map-class codes are listed in Table F–2 at the end of this appendix; this listing of map classes is sorted alphabetically by map-class code. Map-classification codes, names, and their crosswalk (cross-reference) to vegetation types in the USNVC (when applicable), are listed in Table G–1 in "Appendix G: Map Classification by Map-Class Category." Table H–1 in "Appendix H: Map Classification by U.S. National Vegetation Classification" lists the map-classification set within the hierarchy of the USNVC.

Minimum Mapping Units

The NPS VMI Program's standard MMU of 0.5 hectare (ha) was applied to mapping forest, cultural, and park-special vegetation map classes. For woodland, shrubland, herbaceous, sparse vegetation, and nonvegetated open-water map classes, a MMU of 0.25 ha was applied. The only exceptions were nine map classes representing alpine shrub, herbaceous, and sparse vegetation associations in the USNVC, which were mapped with a MMU of 0.125 ha. These nine map classes were used only in the alpine zone of New Hampshire and Maine. The 0.25 ha MMU was applied to woodland map classes because woodland map classes were generally rare along the AT corridor. The 0.25 ha MMU was applied to non-alpine shrubland, herbaceous, and sparse vegetation map classes because the map classes frequently interfaced with each other and because the map classes were generally rare within the AT corridor. The 0.125 ha MMU was specifically applied to the nine alpine map classes in New Hampshire and Maine because of the consistent occurrence of mappable small-patch variation within the very restricted alpine zone. Without this 0.125 ha MMU, most of the mappable variation within the alpine zone would not be mapped.

For polygons that represent vegetation crossing outside the boundary for the APPA vegetation mapping project, mappers allowed the polygons to be mapped less than the MMU if the vegetation continued over the project boundary, was contiguous, and covered at least the standard MMU for that map class. In these instances, map classes with a 0.5 ha MMU were mapped down to 0.1 ha and map classes with a 0.25 ha or 0.125 ha MMU were mapped down to 0.05 ha. For example, a 0.18 ha polygon of the Acidic Hardwood Swamp Forest (FAHS) map class would be mapped inside the project boundary if at least 0.32 ha of contiguous connected FAHS was outside the boundary.

No Map Class

There are 19 vegetation associations in the USNVC that were not defined by any 1 map class. These associations were observed always below the MMU. The 19 associations are as follows:

- *Vitis aestivalis* Vine-Scrub (CEGL003890),
- *Alnus serrulata - Lindera benzoin* / *Scutellaria lateriflora - Thelypteris noveboracensis* Seepage Shrubland (CEGL003909),
- *Impatiens* (*capensis*, *pallida*) - *Monarda didyma - Rudbeckia laciniata* var. *humilis* Herbaceous Seep (CEGL004293),
- *Diphylleia cymosa - Saxifraga micranthidifolia - Laportea canadensis* Forested Herbaceous Seep (CEGL004296),
- *Asplenium montanum - Heuchera villosa* Felsic Cliff Sparse Vegetation (CEGL004980),
- *Alnus incana* ssp. *rugosa - Nemopanthus mucronatus* / *Sphagnum* spp. Acidic Peatland (CEGL006158),
- *Tsuga caroliniana - Pinus* (*rigida*, *pungens*, *virginiana*) Forest (CEGL006178),
- *Chrysosplenium americanum* Seepage Meadow (CEGL006193),
- *Dasiphora fruticosa* ssp. *floribunda* / *Carex* (*sterilis*, *hystericina*, *flava*) Fen (CEGL006326),
- *Drosera rotundifolia - Viola* spp. Cliff Sparse Vegetation (CEGL006429),
- *Vernonia noveboracensis - Thelypteris palustris - Symplocarpus foetidus* Seepage Meadow (CEGL006448),
- *Dulichium arundinaceum - Carex folliculata - Juncus* spp. Seepage Meadow (CEGL006552),
- *Symplocarpus foetidus - Impatiens capensis* Seepage Meadow (CEGL006567),
- *Tsuga caroliniana* / *Kalmia latifolia - Rhododendron catawbiense* Forest (CEGL007139),
- *Acer rubrum* var. *trilobum - Nyssa sylvatica* / *Osmunda cinnamomea - Carex intumescens* / *Sphagnum lescurii* Seep Forest (CEGL007443),
- *Tsuga canadensis - Acer rubrum* - (*Nyssa sylvatica*) / *Rhododendron maximum* / *Sphagnum* spp. Seep Forest (CEGL007565),
- *Carex gynandra - Platanthera clavellata - Drosera rotundifolia - Carex ruthii* / *Sphagnum* spp. Herbaceous Seep (CEGL007697),
- *Quercus prinus - Juniperus virginiana* - (*Pinus virginiana*) / *Philadelphus hirsutus - Celtis occidentalis* Woodland (CEGL007720), and
- *Glyceria striata - Carex gynandra - Chelone glabra - Symphyotrichum puniceum* / *Sphagnum* spp. Herbaceous Seep (CEGL008438).

Small clumps (inclusions) of each of these 19 associations exist within appropriate habitats along the AT corridor. As with each association that is represented by the various map classes described in this appendix, the 19 associations also are described in "Appendix C: Descriptions of Vegetation Associations" and also are included in "Appendix D: Field Key to Vegetation Associations."

FABF – Southern Appalachian Boulderfield Forest (Currant and Rockcap Fern Type)

The Southern Appalachian Boulderfield Forest (Currant and Rockcap Fern Type) (FABF) map class represents the *Betula alleghaniensis* / *Ribes glandulosum* / *Polypodium appalachianum* Forest Association (CEGL006124) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor in the southernmost portion and occurs at high elevation over bouldery substrate. The FABF map class is exceptionally rare within the corridor covering 3.3 ha (0.003% of APPA).

Dominated by a short-statured and generally open monotypic canopy of northern hardwood trees over boulders, this map class only occurs above 1,460 m within the corridor. Often intermixed with the FSAH map class, the ability to see the boulders in the imagery was critical to mapping this map class. Because of the elevation, the FABF map class was completely senesced when the project imagery was collected and is otherwise identical in signature to the high-elevation presentation of the FSAH map class.

The AA results indicate that FABF was mapped with a users' accuracy of 50% (90% confidence interval of -4–104%) and a producers' accuracy of 67% (90% confidence interval of 5–128%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses a few instances where FABF was mapped either too aggressively (to the FSAH map class) or too conservatively (from the SBDH map class).

An example of the FABF map class showing the characteristically stunted canopy of northern hardwoods over boulders.

FBGP – Southern Appalachian Beech Gap

The Southern Appalachian Beech Gap (FBGP) map class represents the *Fagus grandifolia* / *Carex pensylvanica* - *Ageratina altissima* var. *roanensis* Forest Association (CEGL006130) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor in the southern portion and is limited to the highest elevations (above 1,400 m elevation). The FBGP map class is uncommon within the corridor covering 256.0 ha (0.2% of APPA).

Almost exclusively dominated by short-statured or stunted and open-canopied American beech (*Fagus grandifolia*), the FBGP map class generally presents as a monotypic stand of leaf-off hardwoods below the spruce-fir line. Occasionally, however, a beech clone would still have senesced leaves and present a very distinct and consistent signature of light-pink, tan, or off-white in the aerial imagery.

The AA results indicate that FBGP was mapped well with a users' accuracy of 90% and a producers' accuracy of 93%. The AA discloses three instances where FBGP was mapped either too aggressively (to two map classes) or too conservatively (from the FSAH map class). Most of both the users' and producers' errors come from confusion with FSAH where the percent cover of American beech was either over or under estimated.

An example of the FBGP map class showing the dominance of short-statured American beech with an open canopy allowing for a rich herb layer to develop.

FCAB – Central Appalachian High-Elevation Boulderfield Forest

The Central Appalachian High-Elevation Boulderfield Forest (FCAB) map class represents the *Betula alleghaniensis* / *Sorbus americana* - *Acer spicatum* / *Polypodium appalachianum* Forest Association (CEGL008504) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor in SHEN in north-central Virginia above 850 m elevation. The FCAB map class is rare within the corridor covering 19.7 ha (0.02% of APPA).

This northern hardwood dominated map class is an open canopied yellow birch (*Betula alleghaniensis*) forest over acidic bouldery substrate. Often intermixed with the FCRO and FCHW map classes, FCAB lacks the oak of FCRO and maintains a much more open canopy than FCHW, with FCHW lacking the bouldery substrate. Generally, this map class presents as a hardwood forest of white and yellow fuzzy-crowned trees on very steep slopes with the rocky substrate visible through the canopy gaps.

The AA results indicate that FCAB was mapped well with a users' accuracy of 82% and a producers' accuracy of 90%. The AA discloses two instances where FCAB was mapped either too aggressively (to the FCHW map class) or too conservatively (from the FCRO map class). These errors result from misinterpreting the ground layer either as a boulder field when it was not (in the case of FCHW) or as not a boulder field when it was (FCRO).

Two examples of the FCAB map class showing the open canopy dominated by northern hardwood tree species over a bouldery substrate from above the canopy (left) and below the canopy (right).

FCRO – Central Appalachian Northern Red Oak Forest

The Central Appalachian Northern Red Oak Forest (FCRO) map class represents the *Quercus rubra* - (*Quercus alba*) / *Ilex montana* / *Dennstaedtia punctilobula* - *Lysimachia quadrifolia* Forest Association (CEGL008506) in the USNVC. The forest association that makes up this map class in the AT corridor only occurs in central Virginia above 920 m elevation. The FCRO map class is common within the corridor covering 1,023.3 ha (0.9% of APPA).

This northern red oak (*Quercus rubra*) dominated (often greater than 75% of the canopy) map class is restricted to the highest elevations of central Virginia, is only in the AT corridor above 920 m elevation, and is generally common only above 1,100 m elevation. The signature and landscape position of FCRO proved reliable because this map class exists on ridge and mountain tops. The northern red oak in this forest generally present as a crisp, tan to gold to pink to red and broad-crowned canopy, but with canopy structure more open than comparable oak forests at lower elevation. The oak may be intermixed with lighter-pink and white-crowned hardwood tree species, but often the hardwoods were completely senesced and leafless in the project imagery.

Because FCRO presents a nearly identical topographic profile and signature to FROH, mappers consulted with ecologists for a geographic location to split these map classes and determined this location to be the general area of Roanoke, Virginia. Because no high-elevation northern red oak forests are known to exist within the AT corridor for several miles north and south of Roanoke, this generalized location worked effectively to split these similar map classes.

The AA results indicate that FCRO was mapped with a users' accuracy of 92% and a producers' accuracy of 71% (90% confidence interval of 56–86%). The AA discloses several instances where FCRO was mapped either too aggressively (to two map classes) or too conservatively (from four map classes). The users' error indicates no clear pattern, whereas the producers' error indicates an overly conservative approach to applying FCRO in the tension zone with lower elevation co-occurring oak forest map classes and a consistent underestimation of oak coverage in the FCHW map class.

An example of the FCRO map class showing the moderately open, short-statured canopy dominated by northern red oak over eastern hayscented fern.

FROH – High-Elevation Red Oak Forest

The High-Elevation Red Oak Forest (FROH) map class represents the following three associations in the USNVC:

- *Quercus rubra* / *Carex pensylvanica* - *Ageratina altissima* var. *roanensis* Forest (CEGL007298),
- *Quercus rubra* / (*Kalmia latifolia*, *Rhododendron catawbiense*, *Rhododendron maximum*) / *Galax urceolata* Forest (CEGL007299), and
- *Quercus rubra* / (*Vaccinium simulatum*, *Rhododendron calendulaceum*) / (*Dennstaedtia punctilobula*, *Thelypteris noveboracensis*) Forest (CEGL007300).

This map class primarily represents the highest elevation northern red oak (*Quercus rubra*) dominated forests in the AT corridor south of Roanoke, Virginia. The FROH map class is common within the corridor covering 2,195.1 ha (2.0% of APPA).

This northern red oak dominated (often greater than 75% of the canopy) map class is restricted to the highest elevations of the southern portion of the AT corridor from the Roanoke, Virginia, area south to Springer Mountain in Georgia. The FROH map class exists above 1,220 m elevation, common only above 1,340 m elevation. The signature and landscape position of FROH proved reliable because this map class exists on ridge and mountain tops. The northern red oak in this forest generally present as a crisp, tan to gold to pink to red and broad-crowned canopy, but with canopy structure more open and smaller crowned than comparable oak forests at lower elevation. The oak may be intermixed with lighter-pink and white-crowned hardwood tree species, but often the hardwoods were completely senesced and leafless in the project imagery.

Because FROH presents a nearly identical topographic profile and signature to FCRO, mappers consulted with ecologists for a geographic location to split these map classes and determined this location to be the general area of Roanoke, Virginia. Because no high-elevation northern red oak forests are known to exist within the AT corridor for several miles north and south of Roanoke, this generalized location worked effectively to split these similar map classes.

The AA results indicate that FROH was mapped with a users' accuracy of 78% (90% confidence interval of 65–90%) and a producers' accuracy of 61% (90% confidence interval of 49–73%). The AA discloses several instances where FROH was mapped either too aggressively (to six map classes) or too conservatively (from six map classes). The majority of the users' errors come from an overly aggressive application among co-occurring oak forest map classes, whereas the majority of the producers' errors come from an overly conservative application among both co-occurring oak and co-occurring hardwood forest map classes.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the FROH map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FROH map class showing association CEGL007299 with an evergreen shrub layer under a closed northern red oak canopy (left) and association CEGL007300 with a dense fern understory under a closed northern red oak canopy (right). Note the presence of bedrock in both images.

WROT – Red Oak Talus Woodland

The Red Oak Talus Woodland (WROT) map class represents the following four associations in the USNVC:

- *Quercus prinus* / *Rhus* spp. / *Deschampsia flexuosa* Woodland (CEGL006074),
- *Quercus rubra* - (*Quercus prinus*) / *Vaccinium* spp. / *Deschampsia flexuosa* Woodland (CEGL006134),
- *Betula lenta* - *Quercus prinus* / *Parthenocissus quinquefolia* Woodland (CEGL006565), and
- *Quercus rubra* - *Betula lenta* / *Polypodium virginianum* Woodland (CEGL006585).

This map class primarily represents oak dominated talus slopes within the AT corridor from the southern border of DEWA in Pennsylvania north to the terminus in Maine. The WROT map class is uncommon within the corridor covering 341.6 ha (0.3% of APPA).

Originally, the associations CEGL006074 and CEGL006134 defined the WROT map class, but the AA process determined consistent confusion with a former map class representing associations CEGL006565 and CEGL006585 mapped north of DEWA. The four associations, therefore, were combined to form the WROT map class. A potential source of confusion is that a different former map class represented CEGL006565 and CEGL006585 south of DEWA and this map class was confused with and collapsed into the FCHW map class. Thus, both WROT and FCHW contain CEGL006565 and CEGL006585 as rare components, but the remaining vegetation associations in WROT and FCHW are geographically and ecologically exclusive.

The WROT map class is defined by red and chestnut oak (*Quercus rubra* and *Q. prinus*) trees and scrub over talus, boulders, and, occasionally, bedrock. Confined to steep warm-topography slopes below 790 m elevation, this map class generally presents as an open canopy of crisp, tan, pink, and red crowned, short- to medium-statured trees with talus, boulders, or bedrock visible through the canopy gaps.

The AA results indicate that WROT was mapped with a users' accuracy of 78% (90% confidence interval of 69–88%) and a producers' accuracy of 96%. The AA discloses several instances where WROT was mapped either too aggressively (to five map classes) or too conservatively (from two map classes). The majority of the users' errors come from an overly aggressive application of WROT among co-occurring oak forest map classes, whereas the producers' errors suggest a misidentification of the dominant canopy species.

Two examples of the WROT map class showing association CEGL006074 with a chestnut oak canopy (left) compared to association CEGL006134 with a northern red oak canopy (right). Both examples show an open oak canopy over rock.

FBHH – Blue Ridge Hemlock - Northern Hardwood Forest

The Blue Ridge Hemlock - Northern Hardwood Forest (FBHH) map class represents the *Betula alleghaniensis* - (*Tsuga canadensis*) / *Rhododendron maximum* / (*Leucothoe fontanesiana*) Forest Association (CEGL007861) in the USNVC. The forest association that makes up this map class is confined to the higher elevations of the southern portion of the AT corridor. The FBHH map class is uncommon within the corridor covering 387.6 ha (0.4% of APPA).

Dominated by yellow birch (*Betula alleghaniensis*) and other northern hardwoods over a thick shrub layer of great laurel (*Rhododendron maximum*), the canopy of FBHH was historically mixed with eastern hemlock (*Tsuga canadensis*). When this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the range of this map class. As a consequence, this map class currently contains a fraction of the eastern hemlock that it once did. This map class now generally presents as a northern hardwood forest over a thick evergreen shrub layer above 1,160 m elevation on sheltered sites and then more commonly above 1,280 m elevation. The FBHH map class generally is intermixed with the FSAH and FROH map classes, but lacks the oaks of FROH and has the evergreen shrub layer that FSAH lacks.

The AA results indicate that FBHH was mapped with a users' accuracy of 66% (90% confidence interval of 49–82%) and a producers' accuracy of 73% (90% confidence interval of 57–89%). The AA discloses several instances where FBHH was mapped either too aggressively (to five map classes) or too conservatively (from five map classes). The majority of the users' errors come from an overly aggressive application in co-occurring oak and northern hardwood map classes, whereas the producers' error is lightly spread across the five map classes, likely resulting from an underestimation of eastern hemlock cover in a variety of map classes.

An example of the FBHH map class showing the characteristic northern hardwood canopy over great laurel. Note the dead eastern hemlock on the right side of the image.

FMFB – Montane Balsam Fir - Birch Forest

The Montane Balsam Fir - Birch Forest (FMFB) map class represents the *Abies balsamea* - (*Betula papyrifera* var. *cordifolia*) Forest Association (CEGL006112) in the USNVC. The forest association that makes up this map class occurs in the AT corridor on the highest peaks from northern Massachusetts north to Mount Katahdin in Maine. The FMFB map class is very common within APPA covering 5,675.2 ha (5.1% of APPA).

Appearing only above 980 m elevation on the slopes of Mount Greylock in Massachusetts, the minimum elevation for FMFB gradually decreases northerly along the AT corridor until Mount Katahdin in Maine, where FMFB begins at 640 m elevation. Generally, FMSF occurs below the elevation of FMFB. Otherwise, FMFB is up to the tree line, where it interfaces with the botanically similar SMCK. The FMFB is map class generally presents as a balsam fir (*Abies balsamea*) dominated (greater than 50%, often 90%) single-clade forest, with a red and rounded crown; some associated (less than 25%) red spruce (*Picea rubens*), with a rough, purple, star-shaped crown; and some associated mountain paper birch (*Betula papyrifera* var. *cordifolia*). On occasion, mountain paper birch would codominate or even dominate over balsam fir.

The AA results indicate that FMFB was mapped well with both a users' and producers' accuracy of 94%. The AA discloses a few instances where FMFB was mapped either too aggressively (to two map classes) or too conservatively (from two map class). This confusion relates to the under or overestimation of balsam fir canopy cover.

An example of the FMFB map class showing a mix of balsam fir and mountain paper birch.

FSHH – Red Spruce - Northern Hardwood Forest (Herb Type)

The Red Spruce - Northern Hardwood Forest (Herb Type) (FSHH) map class represents the *Picea rubens* - (*Betula alleghaniensis*, *Aesculus flava*) / *Viburnum lantanoides* / *Oxalis montana* - *Solidago glomerata* Forest Association (CEGL006256) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor in the southern most portions of the corridor in the higher reaches (above 1,350 m elevation). The FSHH map class is common within the corridor covering 636.9 ha (0.6% of APPA).

Dominated by a mix of red spruce (*Picea rubens*) and northern hardwoods, particularly yellow birch (*Betula alleghaniensis*), the FSHH map class occurs as the transitional forest between the lower-elevation hardwood-dominated forests and higher-elevation conifer-dominated forests. This map class is common along the backbone of the Smoky Mountains and on the surrounding higher ranges within the AT corridor. In the APPA imagery set, this map class presents as a mixed spruce-hardwood canopy forest with a closed, dense canopy. The assumption was that an evergreen shrub layer either would be visible through the canopy gaps or unable to persist under a closed canopy.

The AA results indicate that FSHH was mapped well with a users' accuracy of 88% and a producers' accuracy of 83%. The AA discloses three instances where FSHH was mapped either too aggressively (to FSFD map class) or too conservatively (from the FSFD or FSHS map classes). The error originating with FSFD comes from misestimation of the hardwood tree canopy cover while the producers' errors come from an overly conservative estimation of the deciduous shrub and herb cover in FSHS.

Two examples of the FSHH map class showing the mixed spruce-northern hardwood canopy over a dense shrub layer generally with a more open canopy (left) and sparse shrub layer, generally with a more closed canopy (right).

FSHS – Spruce - Hardwood / Shrub Forest

The Spruce - Hardwood / Shrub Forest (FSHS) map class represents two associations in the USNVC—the *Picea rubens* - (*Betula alleghaniensis*, *Aesculus flava*) / *Rhododendron* (*maximum*, *catawbiense*) Forest Association (CEGL004983) and the *Picea rubens* - (*Tsuga canadensis*) / *Rhododendron maximum* Forest Association (CEGL006152) in the USNVC. The forest associations that make up this map class only occur within the AT corridor in the southern most portions of the corridor in the higher reaches (above 1,400 m elevation). The FSHS map class is rare within the corridor covering 94.6 ha (0.09% of APPA).

Dominated by a mix of red spruce (*Picea rubens*) and northern hardwoods, particularly yellow birch (*Betula alleghaniensis*), the FSHS map class occurs as the transitional forest between the lower-elevation hardwood-dominated forests and the higher-elevation conifer-dominated forests. The FSHS map class is defined by the presence of an evergreen shrub layer and was uncommon along the backbone of the Smoky Mountains and on the surrounding higher ranges within the AT corridor. In the APPA imagery set, this map class presents as a mixed spruce-hardwood canopy forest with a broken to open canopy showing the red glow of an evergreen shrub layer. The assumption was that an evergreen shrub layer either would be visible through the canopy gaps or unable to persist under a closed canopy.

The AA results indicate that FSHS was mapped with a users' accuracy of 75% (90% confidence interval of 62–88%) and a producers' accuracy of 100%. The AA discloses four instances where FSHS was mapped too aggressively. These errors primarily result from an overly aggressive estimation of evergreen shrub cover, from confusion with FSHH, and from an overly aggressive estimation red spruce cover for the other instances.

An example of the FSHS map class showing the characteristically open canopy of mixed spruce and northern hardwoods over a dense evergreen shrub layer.

FTHS – Transitional Northern Hardwood - Red Spruce Forest

The Transitional Northern Hardwood - Red Spruce Forest (FTHS) map class represents the *Betula alleghaniensis* - *Picea rubens* / *Dryopteris campyloptera* Forest Association (CEGL006267) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from southcentral Massachusetts north to the terminus in Maine. The FTHS map class is very common within the corridor covering 4,004.1 ha (3.6% of APPA).

Codominated to dominated (25–75% canopy cover, each) by red spruce (*Picea rubens*) and northern hardwood tree species, especially yellow birch (*Betula alleghaniensis*), this map class is rare in Massachusetts, but becomes a ubiquitous part of the forested landscape in Maine. Balsam fir (*Abies balsamea*) was occasionally associated to codominant (10–25% canopy cover) in some examples, likely because of disturbance. Presenting an interesting elevational profile, FTHS is wedged between the lower FNAH and the higher FMSF; however, FTHS does intermix with FNAH, FMSF, and many other similar map classes.

The FTHS map class generally presents as a mixed conifer-hardwood forest of red spruce, with dark-purple conical crowns and of northern hardwoods, with fuzzy crowns of white, tan, yellow, orange, and pink. Occasionally, the northern hardwoods had completely senesced; therefore, only bare branches and red spruce were visible, which was most common in higher-elevation examples.

The AA results indicate that FTHS was mapped with a users' accuracy of 83% and a producers' accuracy of 74% (90% confidence interval of 60–87%). The AA discloses several instances where FTHS was mapped either too aggressively (to three map classes) or too conservatively (from seven map classes). The primary source of users' error comes from the overly aggressive estimation of recovery in a ruderal red spruce forest map class and from the overly conservation estimation of red spruce canopy cover in co-occurring northern hardwood forest map classes.

Two examples of the FTHS map class both showing association CEGL006267 being dominated by northern hardwood tree species (left) and by red spruce (right).

FFFS – Fraser Fir / Shrub Forest

The Fraser Fir / Shrub Forest (FFFS) map class represents two associations in the USNVC—the *Abies fraseri* / *Viburnum lantanoides* / *Dryopteris campyloptera* - *Oxalis montana* / *Hylocomium splendens* Forest (CEGL006049) and the *Abies fraseri* / (*Rhododendron catawbiense*, *Rhododendron carolinianum*) Forest (CEGL006308). The forest associations that make up this map class only occur in the southern most portion of the AT corridor in the highest reaches (above 1,830 m elevation) and are limited to the corridor as FFFS passes through GRSM. The FFFS map class is uncommon within the corridor covering 118.1 ha (0.1% of APPA).

Dominated by Fraser fir (*Abies fraseri*), the FFFS map class generally presented as a monotypic stand of fir or fir mixed with sparse red spruce (*Picea rubens*). Present above the spruce-dominated forest downslope, this map class tends to cover the peaks of the highest mountains in the Southern Blue Ridge ecoregion. The ability to split the two associations apart was explored, but the visibility of the shrub layer, either evergreen or deciduous, was unreliable. Generally, the Fraser fir in FFFS tend to present a redder, more robust signature than the spruce because of the flatter and more horizontal plane of Fraser fir leaves, with the overall effect being a dense red-conifer forest.

The AA results indicate that FFFS was mapped with a users' accuracy of 100% and a producers' accuracy of 78% (90% confidence interval of 65–92%). The AA discloses two instances where FFFS was mapped too conservatively (to two other co-occurring high-elevation conifer map classes). Most of this confusion was because of a consistent underestimation of Fraser fir cover in the FSFD map class.

Two examples of the FFFS map class both showing association CEGL006049, with a very sparse herb layer (left) and a very dense herb layer (right), depending on canopy closure.

FMSF – Montane Spruce - Fir Forest

The Montane Spruce - Fir Forest (FMSF) map class represents the *Picea rubens* - *Abies balsamea* / *Sorbus americana* Forest Association (CEGL006128) in the USNVC. The forest association that makes up this map class occurs in the AT corridor on the highest peaks from northern Massachusetts north to Mount Katahdin in Maine. The FMSF map class is common within the corridor covering 2,419.6 ha (2.2% of APPA).

Starting around an elevation of 700 m on the slopes of Mount Greylock in Massachusetts, the FMSF map class is confined to a range between 640 m elevation (above FLSF) and 1,070 m elevation (below FMFB). This window is widest in Vermont and New Hampshire and gradually narrows to a small patch right at 670 m elevation on the slopes of Mount Katahdin in Maine.

Dominated (greater than 50% canopy cover) by red spruce (*Picea rubens*), the FMSF map class often approaches 100% red spruce canopy. The map class, however, can have co-dominant (generally less than 40% canopy cover) balsam fir (*Abies balsamea*) and generally lacks (less than 25% canopy) northern hardwood tree species. This canopy composition is potentially identical to FLSF; therefore, an elevation cutoff of 670 m and above, but down to 550 m (based on landscape context), was utilized to split these two map classes. This map class generally presented as a sea of red spruce with dark-red to purple pointy cone-shaped crowns of similar size and height sparsely interspersed with the fuzzy white, yellow, and pink cone-shaped crowns of northern hardwoods and the rounded red crowns of balsam fir.

The AA results indicate that FMSF was mapped well with both a users' and producers' accuracy of 94%. The AA discloses three instances where FMSF was mapped either too aggressively (to two spruce map classes) or too conservatively (from the FXSF map class). This confusion results from the misestimation of red spruce canopy cover, for the overly aggressive application, and the degree of disturbance in a re spruce-dominated forest, for the overly conservative application.

Two examples of the FMSF map class showing a version with a completely closed red spruce canopy (left) and a version with a much more open canopy showing significant balsam fir regeneration (right).

FSFD – Red Spruce - Fraser Fir Forest (Deciduous Shrub Type)

The Red Spruce - Fraser Fir Forest (Deciduous Shrub Type) (FSFD) map class represents the *Picea rubens* - (*Abies fraseri*) / *Vaccinium erythrocarpum* / *Oxalis montana* - *Dryopteris campyloptera* / *Hylocomium splendens* Forest Association (CEGL007131) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor in the southern portion of the corridor in the higher reaches (above 1,450 m elevation). The FSFD map class is uncommon within the corridor covering 479.5 ha (0.4% of APPA).

Dominated by a mix of red spruce (*Picea rubens*) and Fraser fir (*Abies fraseri*), the FSFD map class can occur over any type of understory (including spruce and fir regeneration) with the exception of evergreen shrub. Present above the hardwood dominated lower slopes, this map class generally occurs along the backbone of the Smoky Mountains and on the surrounding higher ranges within the AT corridor. In the APPA imagery set, this map class presented as a mixed spruce-fir canopy forest either with a closed canopy or an open canopy that lacked an evergreen shrub layer. The assumption was that an evergreen shrub layer either would be visible through the canopy gaps or unable to persist under a closed canopy.

The AA results indicate that FSFD was mapped with both a users' and producers' accuracy of 71% (90% confidence interval of 56–85%). The AA discloses several instances where FSFD was mapped either too aggressively (to four map classes) or too conservatively (from two map classes). Almost all the error, both users' and producers', comes from confusion with co-occurring mixed red spruce – Fraser fir forest map classes where either the shrub and herb layers were misinterpreted or the northern hardwood tree canopy cover was misestimated.

Two examples of the FSFD map class showing a very sparse understory below a dense spruce-fir canopy (left) and a very dense understory dominated by deciduous shrubs and herbs (right).

FSFE – Red Spruce - Fraser Fir Forest (Evergreen Shrub Type)

The Red Spruce - Fraser Fir Forest (Evergreen Shrub Type) (FSFE) map class represents the *Picea rubens* - (*Abies fraseri*) / (*Rhododendron catawbiense*, *Rhododendron maximum*) Forest Association (CEGL007130) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor in the southern most portion of the corridor in the higher reaches (above 1,450 m elevation). The FSFE map class is rare within the corridor covering 108.4 ha (0.098% of APPA).

Dominated by a mix of red spruce (*Picea rubens*) and Fraser fir (*Abies fraseri*), the FSFE map class can only occur over an understory of evergreen shrub (this does not include spruce and fir regeneration). Present above the hardwood dominated lower slopes, this map class is occasionally along the backbone of the Smoky Mountains and on the surrounding higher ranges within the AT corridor. In the APPA imagery set, this map class presented as a mixed spruce-fir canopy forest with an open canopy showing a consistent red glow from a dense evergreen shrub layer. The assumption was that an evergreen shrub layer either would be visible through the canopy gaps or unable to persist under a closed canopy.

The AA results indicate that FSFE was mapped with a users' accuracy of 74% (90% confidence interval of 60–89%) and a producers' accuracy of 92%. The AA discloses three instances where FSFE was mapped either too aggressively (to two map classes) or too conservatively (from the FSFD map class). Almost all the error, both users' and producers', comes from confusion with the FSFD map class. The confusion was caused by misinterpretation of whether the shrub and herb layer was evergreen (for FSFE) or deciduous (for FSFD).

Two examples of the FSFE map class showing the potential for a sparse evergreen shrub layer over dense conifer regeneration, generally with a more closed canopy (left), and the potential for a dense evergreen shrub layer, generally with a more open canopy (right).

WPPS – Pitch Pine Rocky Summit

The Pitch Pine Rocky Summit (WPPS) map class represents the *Pinus rigida* / (*Quercus ilicifolia*) / *Photinia melanocarpa* / *Deschampsia flexuosa* Woodland Association (CEGL006116) in the USNVC. This map class represents dry pine woodlands and open forest within the AT corridor from the Delaware River in New Jersey north to northern Massachusetts. The WPPS map class is rare within the corridor covering 37.1 ha (0.03% of APPA).

The WPPS map class is defined by an open pitch pine (*Pinus rigida*) dominated canopy, with a dark-pink to purple small and wispy crown, on hot or dry and often steep topographic positions under 730 m elevation. Often, patches of bear oak (*Quercus ilicifolia*), with a tight and flat orange-tan canopy, were present as a dominant tall shrub.

The AA results indicate that WPPS was mapped well with a users' accuracy of 100% and a producers' accuracy of 96%. The AA discloses one instance where WPPS was mapped too conservatively from the co-occurring WROT map class because of the underestimation of pitch pine canopy cover.

An example of the WPPS map class showing a pitch pine dominated woodland over open grass and shrub.

WSFR – Northern Appalachian Red Spruce Rocky Ridge

The Northern Appalachian Red Spruce Rocky Ridge (WSFR) map class represents the *Picea rubens* / *Vaccinium angustifolium* / *Sibbaldiopsis tridentata* Woodland Association (CEGL006053) in the USNVC. The woodland association that makes up this map class occurs within the AT corridor from the Connecticut River in New Hampshire north to Mount Katahdin in Maine. The WSFR map class is uncommon within the corridor covering 287.3 ha (0.3% of APPA).

The WSFR map class is on upper slopes and ridge tops below 1,000 m elevation where bedrock is at the surface in the AT corridor. Often exclusively dominated by red spruce (*Picea rubens*), which present as dark-red to purple pointy cones of similar size and height, this map class is generally an open and patchy woodland with large areas of open shrub, herb, and bedrock visible in the canopy gaps.

The WSFR map class was mapped very consistently. The AA process discovered no new instances of the WSFR map class, and no instances of WSFR were confused with a different map class.

An example of the red spruce dominated woodland over bedrock that defines the WSFR map class.

FAMO – Appalachian Mixed Oak Forest

The Appalachian Mixed Oak Forest (FAMO) map class represents the following six associations in the USNVC:

- *Quercus rubra* - *Acer rubrum* / *Pyrularia pubera* / *Thelypteris noveboracensis* Forest (CEGL006192),
- *Quercus alba* - *Quercus* (*rubra*, *prinus*) / *Rhododendron calendulaceum* - (*Gaylussacia ursina*) Forest (CEGL007230),
- *Quercus alba* - *Quercus rubra* - *Carya ovalis* / *Acer saccharum* / *Polystichum acrostichoides* Forest (CEGL007233),
- *Quercus alba* - *Quercus coccinea* - *Quercus falcata* / *Kalmia latifolia* - *Vaccinium pallidum* Forest (CEGL007691),
- *Quercus alba* - *Quercus rubra* - *Quercus prinus* / *Collinsonia canadensis* - *Podophyllum peltatum* Forest (CEGL007692), and
- *Quercus rubra* - *Tilia americana* var. *heterophylla* - (*Halesia tetraptera* var. *monticola*) / *Collinsonia canadensis* - *Prosartes lanuginosa* Forest (CEGL007878).

This map class primarily represents a very diverse mix of red and white oak (*Quercus rubra*, *Q. alba*) dominated forest in the AT corridor from Springer Mountain in Georgia north to the New River in Virginia. The FAMO map class is very common within the corridor covering 6,047.5 ha (5.5% of APPA).

The FAMO map class is a complex mix of low-elevation mesic to dry-mesic northern red oak and white oak dominated forests resulting from map-class collapses that occurred post-mapping. The FAMO map class was initially conceived as two map classes that represented low-elevation mesic to dry-mesic forest dominated by either northern red oak or white oak. During the AA process, however, the two map classes were consistently confused because northern red oak and white oak were confused or because northern red oak and white oak intermixed.

The signature and landscape position of FAMO that proved reliable because this map class exists on lower and mid-slopes in mesic to dry-mesic positions below 1,220 m elevation, though occasionally up to 1,280 m elevation. These oak forests generally present a crisp, darker-pink to red and broad-crowned canopy representing the red and white oak. These forests are intermixed with lighter-pink and white-crowned oaks with smaller crowns representing other oak species, yellow-crowned hickory (*Carya* spp.), and various hardwood tree species.

The AA results indicate that FAMO was mapped with both a users' and producers' accuracy of 74% (90% confidence interval of 66–82%). The AA discloses several instances where FAMO was mapped either too aggressively (to four map classes) or too conservatively (from six map classes). The majority of the users' errors come from an overly aggressive application among co-occurring oak forest map classes, whereas the majority of the producers' errors come from an overly conservative application among co-occurring hardwood forest map classes.

Four examples of the FAMO map class showing associations CEGL006192 (upper left), CEGL007230 (upper right), CEGL007692 (lower left), and CEGL007878 (lower right). All examples show a closed northern red oak or white oak canopy over a variety of different shrub and herb layers.

FAOH – Central Appalachian Oak - Hickory Forest

The Central Appalachian Oak - Hickory Forest (FAOH) map class represents the following five associations in the USNVC:

- *Quercus rubra* - *Quercus prinus* - *Carya ovalis* / (*Cercis canadensis*) / *Solidago caesia* Forest (CEGL008514),
- *Quercus alba* - *Quercus prinus* - *Carya glabra* / *Cornus florida* / *Vaccinium pallidum* Forest (CEGL008515),
- *Quercus prinus* - *Quercus rubra* - *Carya ovalis* / *Carex pensylvanica* - (*Calamagrostis porteri*) Forest (CEGL008516),
- *Quercus rubra* - *Acer saccharum* / *Ostrya virginiana* / *Cardamine concatenata* Forest (CEGL008517), and
- *Quercus rubra* - *Carya ovata* - *Fraxinus americana* / Actaea racemosa - *Hydrophyllum virginianum* Forest (CEGL008518).

This map class primarily represents a very diverse mix of mixed oak (*Quercus* spp.) and hickory (*Carya* spp.) dominated forest in the AT corridor from the South Fork Holston River in Virginia north to the Maryland-Pennsylvania border. The FAOH map class is very common within the corridor covering 5,973.6 ha (5.4% of APPA).

The FAOH map class presents a complex mix of low-elevation to mid-elevation mesic to dry-mesic forests held together by the consistent mix of oak, hickory, and occasional hardwood tree species. The signature and landscape position of FAOH proved reliable because this map class exists on lower and mid-slopes in mesic to dry-mesic positions below 1,220 m elevation, though occasionally up to 1,280 m elevation. The oaks in this forest generally present as crisp, tan to pink to red-crowned narrow to broad-branching trees with a somewhat open to completely closed canopy. White to yellow-crowned hickory, which have a fuzzier appearance with smaller, more open crowns, and a wide mix of other hardwood tree species, consistently mix with the other hardwood tree species.

The AA results indicate that FAOH was mapped with a users' accuracy of 69% (90% confidence interval of 53–85%) and a producers' accuracy of 53% (90% confidence interval of 38–67%). The AA discloses several instances where FAOH was mapped either too aggressively (to 5 map classes) or too conservatively (from 10 map classes). The majority of these errors, both users' and producers', come from occasional confusion with four different co-occurring oak forest map classes.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the FAOH map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FAOH map class showing association CEGL008514 (left), which is a much more acidic mix of oak and hickory, compared to association CEGL008518 (right), which is a much more calcareous mix of oak and hickory.

FCAO – Central Appalachian Oak Forest

The Central Appalachian Oak Forest (FCAO) map class represents two associations in the USNVC—the *Quercus prinus* - *Quercus rubra* / *Hamamelis virginiana* Forest (CEGL006057) and the *Quercus prinus* - *Quercus rubra* / *Vaccinium pallidum* - (*Rhododendron periclymenoides*) Forest (CEGL008523). The forest associations that make up this map class occur within the AT corridor from Giles County in Virginia north to the Delaware River in Pennsylvania. The FCAO map class is common within the corridor covering 2,764.5 ha (2.49% of APPA).

Dominated by a mix of northern red oak (*Quercus rubra*) and chestnut oak (*Quercus prinus*) over deciduous shrub, this map class generally was most common on dry-mesic slopes below 1,070 m elevation. Because of an identical signature with some associations in the FCOM map class, mappers consulted with ecologists for a geographic location to split the two map classes and determined this location to be the Montgomery-Giles County line in Virginia. Following AA, however, a complicating factor arose when a secondary, rare map class that spanned this line collapsed into the FCOM map class. This factor has resulted in a small area of FCOM to be mapped north of the Montgomery-Giles County line; but the vegetation in this small group of polygons is singularly attributed to the *Quercus prinus* / *Rhododendron catawbiense* - *Kalmia latifolia* Forest Association (CEGL00008524) in FCOM, which has an evergreen understory not in FCAO.

The FCAO map class generally presents as large-crowned closed-canopy oaks with crisp, pink or red crowns with forests tending to be a good mix of pink and red crowns, though some examples are only of pink or, more commonly, red crowns. Notably absent are hardwood trees or hickory (*Carya* spp.) from the canopy, which helps distinguish this map class from the very common FAOH. Occasionally, in areas prone to ice storms or gypsy moth (*Lymantria dispar*) damage, this forest presents a very broken and degraded canopy, though the forest maintains the other aspects familiar to the map class.

The AA results indicate that FCAO was mapped with a users' accuracy of 70% (90% confidence interval of 55–85%) and a producers' accuracy of 47% (90% confidence interval of 33–60%). The AA discloses several instances where FCAO was mapped either too aggressively (to 5 map classes) or too conservatively (from 11 map classes). For the map classes with users' error, all but one class also had producers' error; and, these four classes were also oak forest map classes, showing a general confusion between these oak forest map classes. For the remaining map classes with producers' errors, the errors are generally in hardwood forest map classes and indicate a consistent underestimation of oak cover in these map classes.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the FCAO map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FCAO map class showing associations CEGL006057 (left) and CEGL008523 (right).

FCHO – Central Appalachian Hemlock - Chestnut Oak Forest

The Central Appalachian Hemlock - Chestnut Oak Forest (FCHO) map class represents the *Tsuga canadensis* - *Quercus prinus* - *Betula lenta* Forest Association (CEGL006923) in the USNVC. The forest association that makes up this map class within the AT corridor only occurs from central Pennsylvania to central Massachusetts. The FCHO map class is uncommon within the corridor covering 231.4 ha (0.2% of APPA).

Dominated by a mix of eastern hemlock (*Tsuga canadensis*) and chestnut oak (*Quercus prinus*), the FCHO map class is restricted to north-facing or other protected slopes below 550 m elevation. Generally, this map class presents as a chestnut oak forest with bright-pink, crisp, and broad crowns with the occasional tall eastern hemlock poking a dark-purple top through the oak crowns. When examined more closely, especially with ancillary leaf-off imagery, the amount of hemlock cover in these forests would become much more apparent. On occasion, especially in the northern portion of the range of this map class, northern red oak (*Quercus rubra*) would mix with, or even supplant the chestnut oak, providing for a red rather than pink oak canopy.

A confusing factor is that when this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the southern range of this map class, while leaving eastern hemlock untouched in the northern portions.

The AA results indicate that FCHO was mapped with a users' accuracy of 67% (90% confidence interval of 51–83%) and a producers' accuracy of 71% (90% confidence interval of 56–87%). The AA discloses several instances where FCHO was mapped either too aggressively (to three map classes) or too conservatively (from eight map classes). The errors come either from an overly aggressive estimation of hemlock cover for the users' error or from an overly conservative estimation of hemlock cover for the producers' error.

An example of the FCHO map class showing the characteristically mix of chestnut oak and eastern hemlock.

FCNO – Central & Northern Oak Forest

The Central & Northern Oak Forest (FCNO) map class represents the following six associations in the USNVC:

- *Quercus* (*velutina*, *alba*) / *Vaccinium pallidum* / *Pteridium aquilinum* High Allegheny Plateau, Western Allegheny Plateau Forest (CEGL006018),
- *Acer saccharum* - *Quercus rubra* / *Hepatica nobilis* var. *obtusa* Forest (CEGL006046),
- *Quercus prinus* - *Quercus* (*rubra*, *velutina*) / *Vaccinium* (*angustifolium*, *pallidum*) Forest (CEGL006282),
- *Quercus* (*alba*, *rubra*, *velutina*) - *Carya* spp. / *Viburnum acerifolium* Forest (CEGL006336),
- *Quercus rubra* - *Acer saccharum* - *Fagus grandifolia* / *Viburnum acerifolium* Forest (CEGL006633), and
- *Quercus rubra* - *Acer saccharum* / *Viburnum acerifolium* - *Lindera benzoin* Forest (CEGL006635).

This map class primarily represents a very diverse mix of oak (*Quercus* spp.) forests within the AT corridor from the Conodoguinet Creek in Pennsylvania north to the terminus in Maine. The FCNO map class is very common within the corridor covering 8,324.1 ha (7.5% of APPA), making FCNO the second-most common map class in the corridor.

The FCNO map class is an oak-dominated (generally greater than 40% canopy) forest with varying amounts of codominant hickory (*Carya* spp.) and northern hardwoods. Extensively covering mesic lowlands up to dry-mesic ridgetops, the northern and southern ends of this map class differ greatly, but the incremental changes between associations were insufficient to further split these associations into more map classes. The oak in the map class generally present as crisp, darker-pink to red, broad-crowned, closed-canopy trees. These oak may or may not be intermixed with lighter-pink, yellow, and white-crowned hickory and northern hardwoods with smaller crowns.

Occasionally, in areas prone to ice storms or gypsy moth (*Lymantria dispar*) damage, this forest presents a very broken and degraded canopy, though the forest maintains the other aspects familiar to the map class. When the canopy becomes too disturbed, the crowns too young and small, or the hardwood species more ruderal in nature, indicates that the forest would be more accurately represented by the FXOM map class.

A point of confusion for the FCNO map class is that association CEGL006282 also occurs in the FCNO map class north of DEWA, though not south of DEWA. Additionally, CEGL006282 occurs in the FSCO map class, and FSCO and FCNO overlap. This complication results from the unforeseen collapse of oak heath map classes north of DEWA, but not south of DEWA.

The AA results indicate that FCNO was mapped with a users' accuracy of 86% and a producers' accuracy of 75% (90% confidence interval of 67–83%). The AA discloses several instances where FCNO was mapped either too aggressively (to six map classes) or too conservatively (from nine map classes). The users' error is split into either an overly aggressive application of FCNO among other oak-dominated map classes or an over estimation of oak cover in hardwood forest map classes. The

producers' errors are more widely spread among an overly conservative estimation of oak canopy coverage in oak woodland map classes, an under estimation of oak coverage in hardwood forest map classes, and an under estimation of oak coverage in a mixed conifer-oak map class.

Four examples of the FCNO map class showing associations CEGL006046 (upper left), CEGL006282 (upper right), CEGL006336 (lower left), and CEGL006635 (lower right). All examples show a closed oak canopy with or without mixed hickory and northern hardwoods over a variety of different shrub and herb layers.

FCOH – Chestnut Oak / Heath Forest

The Chestnut Oak / Heath Forest (FCOH) map class represents two associations in the USNVC—the *Quercus prinus* - (*Quercus coccinea*, *Quercus rubra*) / *Kalmia latifolia* / *Vaccinium pallidum* Forest (CEGL006299) and the *Quercus alba* - *Quercus* (*coccinea*, *velutina*, *prinus*) / *Gaylussacia baccata* Forest (CEGL008521). The forest associations that make up this map class are in the AT corridor from central Virginia north to the Conodoguinet Creek in Pennsylvania. The FCOH map class is very common within the corridor covering 6,234.4 ha (5.6% of APPA).

The FCOH map class is an oak-dominated (generally greater than 40%, often greater than 75% canopy) forest with varying amounts of hickory (*Carya* spp.) and hardwoods and occasional (less than 25% canopy) pine (*Pinus* spp.) over a heath shrub layer. Extensively covering dry-mesic and hot, dry slopes and ridgetops, this map class will also creep around to cooler, more sheltered slopes where little soil is present to maintain moisture in the forest. The oak in the map class generally present as crisp, tan, pink, and red, small- to medium-crowned, open- to closed-canopy trees. These oak may or may not be intermixed with lighter-pink, orange, yellow, and white-crowned hickory and hardwoods with smaller crowns. Occasionally, in areas affected by ice storms or gypsy moth (*Lymantria dispar*) damage, this forest presents a very broken and degraded canopy, though the forest maintains the other aspects familiar to the map class.

Because of an identical signature with some associations in the FCOM and FSCO map classes, mappers consulted with ecologists for a geographic location to split these map classes. The FCOH-FCOM split was determined to be the Montgomery-Giles County line in Virginia. However, following AA, a complicating factor arose when a secondary, rare map class that spanned this line collapsed into the FCOM map class. This factor has resulted in a small area of FCOM to be mapped north of the Montgomery-Giles County line; but the vegetation in this small group of polygons is singularly attributed to the *Quercus prinus* / *Rhododendron catawbiense* - *Kalmia latifolia* Forest Association (CEGL00008524) in FCOM, which has a rhododendron understory not in FCOH. The FCOH-FSCO split was determined to be the Conodoguinet Creek in Pennsylvania, and these two map classes do not overlap.

The AA results indicate that FCOH was mapped with a users' accuracy of 77% (90% confidence interval of 62–91%) and a producers' accuracy of 82%. The AA discloses several instances where FCOH was mapped either too aggressively (to four map classes) or too conservatively (from three map classes). The majority of these errors are caused by a misinterpretation of the oak species causing confusing with other co-occurring oak forest map classes.

Two examples of the FCOH map class showing associations CEGL006299 (left) and CEGL008521 (right) with a closed oak canopy over a heath shrub layer.

FCOM – Chestnut Oak - Mixed Oak Forest

The Chestnut Oak - Mixed Oak Forest (FCOM) map class represents the following five associations in the USNVC:

- *Quercus rubra* - *Quercus prinus* - *Magnolia* (*acuminata*, *fraseri*) / *Acer pensylvanicum* Forest (CEGL004817),
- *Quercus* (*prinus*, *coccinea*) / *Kalmia latifolia* / (*Galax urceolata*, *Gaultheria procumbens*) Forest (CEGL006271),
- *Quercus prinus* - *Quercus rubra* / *Rhododendron maximum* / *Galax urceolata* Forest (CEGL006286),
- *Quercus prinus* - (*Quercus rubra*) - *Carya* spp. / *Oxydendrum arboreum* - *Cornus florida* Forest (CEGL007267), and
- *Quercus prinus* / *Rhododendron catawbiense* - *Kalmia latifolia* Forest (CEGL008524).

This map class primarily represents a very diverse mix of red and chestnut oak (*Quercus rubra*, *Q. prinus*) dominated forest in the AT corridor from Springer Mountain in Georgia north to central Virginia. The FCOM map class is very common within the corridor covering 4,973.5 ha (4.5% of APPA).

The FCOM map class is an oak-dominated (generally greater than 40%, often greater than 75% canopy) forest with varying amounts of hickory (*Carya* spp.) and hardwoods and occasional (less than 25% canopy) pine (*Pinus* spp.) over a heath shrub layer that can be deciduous, evergreen, or mixed. Extensively covering dry-mesic and hot, dry slopes and ridgetops, this map class will also creep around to cooler, more sheltered slopes where little soil is present to maintain moisture in the forest. The oak in the map class generally present as crisp, tan, pink, and red, small- to medium-crowned, open- to closed-canopy trees. These may or may not be intermixed with lighter-pink, orange, yellow, and white-crowned hickory and hardwoods with smaller crowns. Occasionally, in areas affected by ice storms, forest fires, or gypsy moth (*Lymantria dispar*) damage, this forest presents a very broken and degraded canopy, though the forest maintains the other aspects familiar to the map class.

Because of an identical signature with some associations in the FCOM and FCOH map classes, mappers consulted with ecologists for a geographic location to split these two map classes and determined this location to be the Montgomery-Giles County line in Virginia. However, following AA, a complicating factor arose when a secondary, rare map class that spanned this line collapsed into the FCOM map class. This factor has resulted in a small area of FCOM to be mapped north of the Montgomery-Giles County line; but the vegetation in this small group of polygons is singularly attributed to the *Quercus prinus* / *Rhododendron catawbiense* - *Kalmia latifolia* Forest Association (CEGL00008524) in FCOM, which has a rhododendron understory not in FCOM or FCOH.

The AA results indicate that FCOM was mapped with a users' accuracy of 86% and a producers' accuracy of 54% (90% confidence interval of 45–63%). The AA discloses several instances where FCOM was mapped either too aggressively (to 4 map classes) or too conservatively (from 14 map classes). Most of the users' errors relate to confusion with other co-occurring oak forest map classes.

The producers' errors indicate confusion with co-occurring oak forest map classes, an overly conservative estimation of oak cover in ruderal hardwood forest map classes, an overly conservative estimation of oak cover in mixed conifer-oak forest map classes, and an overly conservative estimation of oak canopy cover in oak woodland map classes.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a lower producers' accuracy for the FCOM map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Four examples of the FCOM map class showing associations CEGL004817 with a deciduous shrub layer (upper left), CEGL006271 with a deciduous shrub layer (upper right), CEGL006271 with an evergreen shrub layer (lower left), and CEGL006286 with an evergreen shrub layer (lower right). All examples show the associations under a chestnut oak canopy.

FMCO – Appalachian Sugar Maple - Chinquapin Oak Limestone Forest

The Appalachian Sugar Maple - Chinquapin Oak Limestone Forest (FMCO) map class represents the *Acer saccharum* - *Quercus muehlenbergii* / *Cercis canadensis* Forest Association (CEGL006017) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor at one site in central Virginia. The FMCO map class is exceptionally rare within the corridor covering 1.4 ha (0.001% of APPA).

Based on vegetation plot data and conversations with ecologists, the FMCO map class was a "map known locations" map class, which means that only confirmed locations were mapped. For FMCO, therefore, a single polygon was mapped in southwestern Virginia on a steeply sloping, sheltered, calcareous hillside. This location was supported by both a vegetation plot and a field reconnaissance visit prior to mapping. The site generally presents as mixed oak-mixed northern hardwood forest, with the oaks having crisp, pink and orange broadly branching crowns and the northern hardwoods having fluffy white, yellow, and pink crowns between and below the larger oaks. This signature is similar to potential signatures in the FAOH and FAMO map classes; therefore, the potential exists for other examples of the FMCO on the landscape, but no others are known.

The FMCO map class was mapped very consistently. The AA process discovered no new instances of the FMCO map class, and no instances of FMCO were confused with a different map class.

An example of the FMCO map class showing the light-green sugar maple canopy interspersed with chinquapin oak.

FOHG – Oak - Hickory Forest & Woodland

The Oak - Hickory Forest & Woodland (FOHG) map class represents two associations in the USNVC—the *Quercus rubra - Carya* (*glabra*, *ovata*) / *Ostrya virginiana* / *Carex lucorum* Forest (CEGL006301) and the *Carya glabra* Woodland (CEGL006640). The associations that make up this map class occur in the AT corridor from the southwestern side of DEWA in Pennsylvania north to the Connecticut-Massachusetts border. The FOHG map class is uncommon within the corridor covering 227.7 ha (0.2% of APPA).

Dominated by a mix of northern red oak (*Quercus rubra*) and hickory (*Carya* spp.) over herbaceous vegetation, the FOHG map class was on dry-mesic moderate to steep slopes with a warm aspect below 490 m elevation. Initially, only the association CEGL006301 defined this map class; however, during the AA process, several sites were discovered that did not fit well with CEGL006301 or with any other existing association. The classifiers, therefore, decided to create association CEGL006640 to define this association. The vegetation in CEGL006640 was only noted in the FOHG map class. Presenting as an open woodland (at least 25% canopy cover) to moderately-closed forest, the canopy of FOHG is generally a mix of codominant northern red oak, with crisp, red crowns and mixed hickory, with soft, white, yellow, and greenish-tan crowns.

The AA results indicate that FOHG was mapped with a users' accuracy of 90% and a producers' accuracy of 75% (90% confidence interval of 62–88%). The AA discloses several instances where FOHG was mapped either too aggressively (to two map classes) or too conservatively (from three map classes). The majority of these errors come from confusion with the WROT map class, which is a co-occurring oak-dominated woodland map class.

Two examples of the FOHG map class showing the closed-canopy association CEGL006301 over sedge with oak and hickory codominant (left) and open hickory-dominated woodland association CEGL006640 (right).

FSCO – Lower New England High Slope Chestnut Oak Forest

The Lower New England High Slope Chestnut Oak Forest (FSCO) map class represents the *Quercus prinus* - *Quercus* (*rubra*, *velutina*) / *Vaccinium* (*angustifolium*, *pallidum*) Forest Association (CEGL006282) in the USNVC. The forest association that makes up this map class is in the AT corridor from north of Conodoguinet Creek in Pennsylvania north to the southwestern boundary of DEWA in Pennsylvania. The FSCO map class is very common within the corridor covering 4,144.0 ha (3.7% of APPA).

The FSCO map class is an oak-dominated (generally greater than 40%, often greater than 90% canopy) forest with varying amounts of hickory (*Carya* spp.) and hardwoods, and the map class defines the dry ridgetops that the AT corridor runs along in Pennsylvania. Extensively covering these dry, hot, and acidic slopes and ridgetops, this map class will also creep around to cooler, more sheltered slopes where little soil is present to maintain moisture in the forest. The oak in the map class generally present as crisp, tan, pink, and red, small- to medium-crowned, open- to closed-canopy trees. These oak may or may not be intermixed with lighter-pink, orange, yellow, and white-crowned hickory and hardwoods with smaller crowns, especially in areas that experienced persistent disturbance. Occasionally, in areas affected by ice storms or gypsy moth (*Lymantria dispar*) damage, this forest presents a very broken and degraded canopy, though the forest maintains the other aspects familiar to the map class.

Because of an identical signature and structure with the FCOH map class, mappers consulted with ecologists for a geographic location to split the two map classes and determined this location to be the Conodoguinet Creek in Pennsylvania.

A point of confusion for the FSCO map class is that association CEGL006282 also occurs in the FCNO map class north of DEWA, but not south of DEWA and also because the map classes FSCO and FCNO overlap. This complication results from the unforeseen collapse of oak heath map classes north of DEWA, but not south of DEWA.

The AA results indicate that FSCO was mapped with a users' accuracy of 70% (90% confidence interval of 55–84%) and a producers' accuracy of 77% (90% confidence interval of 62–91%). The AA discloses several instances where FSCO was mapped either too aggressively (to five map classes) or too conservatively (from five map classes). The great majority of the users' errors come from an overly aggressive application among co-occurring oak forest map classes, while the producers' error is split between an overly conservative application from co-occurring ruderal hardwood forest map classes and from among co-occurring oak forest map classes.

An example of the FSCO map class showing the dry and acidic oak forest of association CEGL006282 in central Pennsylvania.

FSMC – Sugar Maple - Chinquapin Oak / Sedge Forest

The Sugar Maple - Chinquapin Oak / Sedge Forest (FSMC) map class represents the *Acer saccharum* - *Quercus muehlenbergii* / *Carex platyphylla* Forest Association (CEGL006162) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor at three disjunct locations in New Jersey, Connecticut, and Massachusetts. The FSMC map class is exceptionally rare within the corridor covering 7.6 ha (0.007% of APPA).

Based on vegetation plot data and conversations with ecologists, the FSMC map class was a "map known locations" map class, which means that only confirmed locations were mapped. For FSMC, that means only three groups on a sloping calcareous hillside were mapped. These locations were supported by both vegetation plots and field reconnaissance visits. The sites generally present as diverse oak-hardwood forest with the hardwoods having fluffy white or leaf-off crowns and the oak having crisp, broad, bright-red crowns. This signature is similar to potential signatures in the FCNO map class; therefore, the potential exists for other examples of the FSMC on the landscape, but no others are known.

The FSMC map class was mapped very consistently. The AA process discovered no new instances of the FSMC map class and determined only one site to be confused with a different map class. The AA, therefore, disagreed with the mapping field reconnaissance call and determined that the site was too disturbed and should have been mapped as FXCH.

An example of the FSMC map class showing the light-green sugar maple canopy interspersed with large American basswood (*Tilia americana* var. *heterophylla*) and yellow buckeye (*Aesculus flava*).

FARB – Southern Appalachian Hardwood Rich Boulderfield Forest

The Southern Appalachian Hardwood Rich Boulderfield Forest (FARB) map class represents the *Betula alleghaniensis* - *Tilia americana* var. *heterophylla* / *Acer spicatum* / *Ribes cynosbati* / *Dryopteris marginalis* Forest Association (CEGL004982) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor in the southern portion and is limited to the lower elevations (below 1,220 m elevation). The FARB map class is exceptionally rare within the corridor covering 7.4 ha (0.007% of APPA).

This map class, with an open canopy of mixed northern hardwood tree species, exists over boulders and only occurs below 1,220 m elevation within the AT corridor. Often intermixed with low-elevation oak forest, this hardwood tree-dominated map class was readily visible. Generally, FARB presents as a hardwood forest of white and yellow fuzzy-crowned trees on steep slopes, with the rocky substrate visible through the canopy gaps.

The AA results indicate that FARB was mapped with both a users' and producers' accuracy of 60% (90% confidence interval of 14–106%). Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals. The AA discloses three instances where FARB was mapped either too aggressively (to two map classes) or too conservatively (from the FSAH map class). The users' errors come from an overly aggressive application among co-occurring ruderal hardwood forest map classes, while the producers' errors come from an overly conservative application with FSAH.

An example of the FARB map class showing the open canopy dominated by northern hardwood tree species over a bouldery substrate.

FCHW – Central Appalachian Hardwood Forest & Woodland

The Central Appalachian Hardwood Forest & Woodland (FCHW) map class represents the following 14 associations in the USNVC:

- *Fraxinus americana - Carya glabra* / *Muhlenbergia sobolifera - Helianthus divaricatus - Solidago ulmifolia* Woodland (CEGL003683),
- *Liriodendron tulipifera - Quercus rubra - Fraxinus americana* / Asimina triloba / *Actaea racemosa* Forest (CEGL006186),
- *Acer saccharum - Fraxinus americana - Tilia americana - Liriodendron tulipifera* / *Actaea racemosa* Forest (CEGL006237),
- *Liriodendron tulipifera - Platanus occidentalis - Betula lenta* / *Lindera benzoin* / *Circaea lutetiana* ssp. *canadensis* Floodplain Forest (CEGL006255),
- *Acer saccharum - Tilia americana* / *Staphylea trifolia* / *Dryopteris marginalis* - (*Impatiens pallida*) Forest (CEGL006471),
- *Betula lenta - Quercus prinus* / *Parthenocissus quinquefolia* Woodland (CEGL006565),
- *Quercus rubra - Betula lenta* / *Polypodium virginianum* Woodland (CEGL006585),
- *Liriodendron tulipifera - Betula lenta - Tsuga canadensis* / *Rhododendron maximum* Forest (CEGL007543),
- *Aesculus flava - Acer saccharum* - (*Tilia americana* var. heterophylla) / *Hydrophyllum canadense - Solidago flexicaulis* Forest (CEGL007695),
- *Liriodendron tulipifera - Fraxinus americana* - (*Aesculus flava*) / *A*ctaea racemosa - *Laportea canadensis* Forest (CEGL007710),
- *Liriodendron tulipifera - Pinus strobus* - (*Tsuga canadensis*) / *Carpinus caroliniana* / *Amphicarpaea bracteata* Forest (CEGL008405),
- *Betula alleghaniensis - Quercus rubra* / *Acer spicatum* / *Dryopteris intermedia - Oclemena acuminata* Forest (CEGL008502),
- *Tsuga canadensis - Quercus prinus - Liriodendron tulipifera* / *Kalmia latifolia* - (*Rhododendron catawbiense*) Forest (CEGL008512), and
- *Tilia americana - Fraxinus americana* / *Acer pensylvanicum* / *Parthenocissus quinquefolia - Impatiens pallida* Woodland (CEGL008528).

This map class represents hardwood forests within the AT corridor from southern Virginia north to the Delaware River in Pennsylvania. The FCHW map class is very common within the corridor, covering 3,043.9 ha (2.7% of APPA).

Originally conceived as three separate map classes representing low-elevation mesic hardwood coves, high-elevation northern hardwood forests, and northern hardwood woodland, the AA indicated consistent and significant confusion among the three map classes. High-elevation northern hardwood and low-elevation cove forests were consistently confused, and northern hardwood woodlands were consistently confused with low-elevation cove and high-elevation northern hardwood forests. The result is a map class that represents most of the upland deciduous tree associations over the south-central portion of the AT corridor.

A further point of confusion is that FCHW shares three vegetation associations with FSAH. These three vegetation associations, CEGL007543, CEGL007695, and CEGL007710, are all mesic hardwood cove forests from Virginia and south within the AT corridor. No clear method existed for splitting the associations and grouping the entire hardwood forest system of the southern corridor seemed excessive, so this overlap was accepted to allow for some finer resolution of the vegetation.

A final point of confusion is that when this project initiated, eastern hemlock (*Tsuga canadensis*) was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the range of this map class. As a consequence, this map class now contains only a fraction of the eastern hemlock that it once did.

The cove forests of the southern Appalachian Mountains are some of the most biologically diverse ecosystems in the coterminous United States. When grouped together in a map class spanning the majority of mesophytic and northern hardwoods in the south-central portion of the AT corridor, the result is a map class with a wildly variable signature. Although generally dominated by hardwoods, the FCHW map class can also contain as much as 75% canopy cover of eastern white pine (*Pinus strobus*) and eastern hemlock (alive or standing dead). Crown morphology is similarly variable with many different shapes and textures and colors of red, orange, yellow, tan, pink, and white commonly intermixed; however, monotypic stands, especially of tuliptree (*Liriodendron tulipifera*), are possible. Oaks are generally absent from this map class, but may make as much as 25% of the canopy cover. Topographic position is somewhat more indicative of this map class with sheltered locations favoring mesophytic cove forests, but this map class can climb up to the crest of ridges and up the slopes of mountains to nearly 1,220 m elevation. Overall, this map class proves to have a highly variable signature and landscape position.

The AA results indicate that FCHW was mapped with a users' accuracy of 76% (90% confidence interval of 68–84%) and a producers' accuracy of 84%. The AA discloses several instances where FCHW was mapped either too aggressively (to eight map classes) or too conservatively (from eight map classes). The majority of these errors are because of either a misestimation of oak cover (both over and under) or of confusion with the ruderal mixed hardwoods map class FXCH.

Four examples of the FCHW map class showing associations CEGL006186 (upper left), CEGL006237 (upper right), CEGL006565 (lower left), and CEGL007543 (lower right). All examples show a diverse hardwood tree canopy over a variety of different shrub and herb layers.

FNAH – Northern Appalachian Hardwood Forest

The Northern Appalachian Hardwood Forest (FNAH) map class represents the following five associations in the USNVC:

- *Acer saccharum* - (*Fraxinus americana*) / *Arisaema triphyllum* Forest (CEGL006211),
- *Acer saccharum* - *Betula alleghaniensis* - *Fagus grandifolia* / *Viburnum lantanoides* Forest (CEGL006631),
- *Acer saccharum* - *Fagus grandifolia* - *Fraxinus americana* / *Arisaema triphyllum* Forest (CEGL006632),
- *Acer saccharum* - *Fraxinus americana* / *Acer spicatum* / *Caulophyllum thalictroides* Forest (CEGL006636), and
- *Acer saccharum* - *Tilia americana* / *Acer pensylvanicum* / *Caulophyllum thalictroides* Forest (CEGL006637).

This map class represents a very diverse mix of northern hardwood forests within the AT corridor dominated or codominated by sugar maple (*Acer saccharum*) and from the very northeastern corner of Pennsylvania to the terminus in Maine. The FNAH map class is very common within the corridor covering 10,088.7 ha (9.1% of APPA), making FNAH the most common map class in APPA.

The FNAH map class is a complex mix of both rich and typic northern hardwood forests with a highly-variable composition ranging from monotypic stands of single-clade sugar maple to mixed-species mixed-age stands. Initially, this map class contained only three vegetation associations; however, post mapping, two of the associations were split into four. Although a definite geographic split indicates that associations CEGL006632 and CEGL006637 are more southerly than associations CEGL006631 and CEGL006636, association CEGL006211 overlaps the range of the other four associations, and the five associations together provide no discernable signature difference.

Confined to the coolest and most protected topographies in Pennsylvania and New Jersey, the landscape positions occupied by FNAH gradually expand moving northward along the AT corridor until this map class is a ubiquitous forest across the terrain below the conifer forests.

Crown morphology is similarly variable with many different shapes and textures and colors based on stand age, composition, local conditions, and geographic location. Crowns of red, orange, yellow, tan, pink, and white commonly intermix, though monotypic stands, especially of pink and white-crowned sugar maple, are common. Not a mixed forest, this map class cannot have greater than 25% total conifer or greater than 40% northern red oak (*Quercus rubra*) cover in the canopy. Additionally, this map class lacks southern species such as tuliptree (*Liriodendron tulipifera*) and is distinctly upland lacking both swamp and floodplain tree species.

The AA results indicate that FAMA was mapped with a users' accuracy of 82% and a producers' accuracy of 58% (90% confidence interval of 46–71%). The AA discloses several instances where FCAS was mapped either too aggressively (to 5 map classes) or too conservatively (from 11 map classes). The errors fall into three general categories with the misinterpretation of the degree of disturbance in co-occurring ruderal forest map classes, an overly conservative application among

several mixed northern hardwood - conifer map classes, and an overly conservative application among several hardwood swamp forest map classes.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the FNAH map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Four examples of the FNAH map class showing associations CEGL006211 (upper left), CEGL006631 (upper right), CEGL006632 (lower left), and CEGL006636 (lower right). All examples show a closed northern hardwood canopy over a variety of different shrub and herb layers.

FOTM – Oak - Tuliptree - Maple Forest

The Oak - Tuliptree - Maple Forest (FOTM) map class represents two associations in the USNVC—the *Quercus rubra - Acer saccharum - Liriodendron tulipifera* Forest (CEGL006125) and the *Fagus grandifolia - Betula lenta - Liriodendron tulipifera - Acer saccharum* Forest (CEGL006296). The forest associations that make up this map class occur in the AT corridor from New Jersey north to the terminus in Maine. The FOTM map class is uncommon within the corridor covering 539.2 ha (0.49% of APPA).

The FOTM map class is always a mixed forest on the interface of southern mesic forest, northern hardwood forest, and northern red oak (*Quercus rubra*) forest. Initially, the two associations were mapped separately, but AA indicated consistent confusion between the two map class and the map classes were combined. Sites are codominated to dominated (25–75% canopy cover, each) in turn by northern red oak, sugar maple (*Acer saccharum*), tuliptree (*Liriodendron tulipifera*), and other northern hardwoods, but the exact proportion of any one canopy species varied from site to site. Similarly, this map class presents a very variable signature. Holding this map class together is the consistent presence of tuliptree, with large, soft, pink conical crowns. The tuliptree are then mixed with the crisp, broad, bright-red crowns of northern red oak; the fluffy white to pink crowns of sugar maple; and a variable mix of other northern hardwood tree species with fluffy white, pink, orange, yellow, and tan crowns.

The AA results indicate that FOTM was mapped with a users' accuracy of 52% (90% confidence interval of 35–68%) and a producers' accuracy of 89%. The AA discloses several instances where FOTM was mapped either too aggressively (to nine map classes) or too conservatively (from two map classes). The errors primarily focus on the misestimation of tuliptree canopy cover in other co-occurring forest map classes and secondarily focus on the misinterpretation of the degree of disturbance in ruderal forest map classes.

The 90% confidence interval for the users' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower users' accuracy for the FOTM map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FOTM map class showing association CEGL006125 with northern red oak and tuliptree codominant (left) and association CEGL006296 with tuliptree and northern hardwoods codominant (right).

FRVL – Southern Appalachian Limestone Rich Cove Forest

The Southern Appalachian Limestone Rich Cove Forest (FRVL) map class represents the *Tilia americana* var. *heterophylla* - *Aesculus flava* - *Acer saccharum* / *Cystopteris bulbifera* - *Asarum canadense* Forest Association (CEGL006472) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor at one site in central Virginia. The FRVL map class is exceptionally rare within the corridor covering only 7.6 ha (0.007% of APPA).

Based on vegetation plot data and conversations with ecologists, the FRVL map class was a "map known locations" map class, which means that only confirmed locations were mapped. For FRVL, that means only two polygons (separated by a road) were mapped in central Virginia on a steeply sloping, sheltered, calcareous hillside. This location was supported by both a vegetation plot and a field reconnaissance visit prior to mapping. The site generally presents as a steep, diverse hardwood forest with the hardwoods having fluffy white, yellow, pink, and red crowns. This signature is similar to possible signatures in the FCHW map class; therefore, the potential exists for other examples of the FRVL on the landscape, but no others are known.

The FRVL map class was mapped very consistently. The AA process discovered no new instances of the FRVL map class, and no instances of FRVL were confused with a different map class.

An example of the FRVL map class showing the light-green sugar maple canopy interspersed with large American basswood (*Tilia americana* var. *heterophylla*) and yellow buckeye (*Aesculus flava*).

FSAH – Southern Appalachian Hardwood Forest

The Southern Appalachian Hardwood Forest (FSAH) map class represents the following six associations in the USNVC:

- *Aesculus flava - Betula alleghaniensis - Acer saccharum* / *Caulophyllum thalictroides - Actaea podocarpa* Forest (CEGL004973),
- *Betula alleghaniensis - Fagus grandifolia* / *Viburnum lantanoides* / *Eurybia chlorolepis - Dryopteris intermedia* Forest (CEGL007285),
- *Liriodendron tulipifera - Betula lenta - Tsuga canadensis* / *Rhododendron maximum* Forest (CEGL007543),
- *Tsuga canadensis - Halesia tetraptera - Magnolia fraseri* / *Rhododendron maximum* / *Dryopteris intermedia* Forest (CEGL007693),
- *Aesculus flava - Acer saccharum* - (*Tilia americana* var. heterophylla) / *Hydrophyllum canadense - Solidago flexicaulis* Forest (CEGL007695), and
- *Liriodendron tulipifera - Fraxinus americana* - (*Aesculus flava*) / *Actaea racemosa - Laportea canadensis* Forest (CEGL007710).

This map class represents hardwood forest in the AT corridor from the Springer Mountain in Georgia north to the Virginia State Highway 16 crossing and also a small remnant area on Garden Mountain in Virginia above 1,160 m elevation. The FSAH map class is very common within the corridor covering 5,558.8 ha (5.0% of APPA).

Originally conceived as three separate map classes representing low-elevation mesic hardwood coves, high-elevation rich northern hardwood forests, and high-elevation typic northern hardwood forests, the AA indicated consistent and significant confusion among the three map classes. High-elevation typic and rich forests were consistently confused, and low-elevation cove and high-elevation rich forests were consistently confused. The result is a map class that represents most of the upland deciduous tree associations over the southern portion of the AT corridor.

A further point of confusion is that FSAH shares three vegetation associations with FCHW. These three vegetation associations, CEGL007543, CEGL007695, and CEGL007710, are all mesic hardwood cove forests from Virginia and south within the AT corridor. No clear method existed for splitting the associations and grouping the entire hardwood forest system of the southern corridor seemed excessive, so this overlap was accepted to provide opportunities for finer resolution of the vegetation.

A final point of confusion is that when this project initiated, eastern hemlock (*Tsuga canadensis*) was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the range of this map class. As a consequence, this map class now contains only a small fraction of the eastern hemlock that it once did.

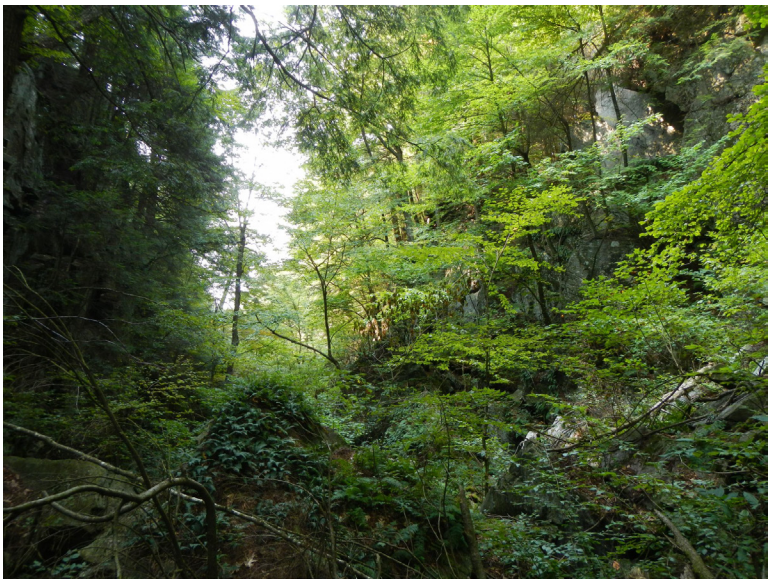
The cove forests of the southern Appalachian Mountains are some of the most biologically diverse ecosystems in the coterminous United States. When grouped together in a map class spanning the majority of mesophytic and northern hardwoods in the southern AT corridor, the result is a map class

with a wildly variable signature. While generally dominated by hardwoods, this map class can also contain as much as 75% canopy cover of eastern white pine (*Pinus strobus*) and eastern hemlock (alive or standing dead), though rather uncommon. Crown morphology is similarly variable with many different shapes and textures and colors of red, orange, yellow, tan, pink, and white commonly intermixed, though monotypic stands, especially of tuliptree (*Liriodendron tulipifera*), are common. Oaks are generally absent from this map class, but northern red oak (*Quercus rubra*) may make as much as 25% of the canopy cover in a few instances. Topographic position is somewhat more indicative of this map class below 1,050 m elevation with sheltered locations favoring mesophytic cove forests, but this map class can climb up to the crest of ridges and up the slopes of mountains to nearly 1,890 m elevation. At the highest elevations, this map class can cover broad north facing slopes to the exclusion of other map classes. Overall, this map class proves to have a highly-variable signature and landscape position.

The AA results indicate that FSAH was mapped with a users' accuracy of 67% (90% confidence interval of 58–76%) and a producers' accuracy of 83%. The AA discloses several instances where FSAH was mapped either too aggressively (to nine map classes) or too conservatively (from six map classes). The users' errors focus on three themes of overly aggressive application—over estimating hardwood canopy cover in oak forest map classes, misinterpreting the hardwood species in hardwood forest map classes, and over estimating the degree of recovery in ruderal hardwood forest map classes. The producers' errors focus on the two themes of misinterpreting the hardwood species in hardwood forest map classes and underestimating the hardwood canopy cover in mixed conifer-hardwood forest map classes and of misinterpreting the hardwood species in hardwood forest map classes.

The 90% confidence interval for the users' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower users' accuracy for the FSAH map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Four examples of the FSAH map class showing associations CEGL004973 (upper left), CEGL007285 (upper right), CEGL007543 (lower left), and CEGL007710 (lower right). All examples show a closed hardwood canopy over a variety of different shrub and herb layers.



FCHH – Central Appalachian Hemlock - Hardwood Forest

The Central Appalachian Hemlock - Hardwood Forest (FCHH) map class represents two associations in the USNVC—the *Tsuga canadensis - Betula alleghaniensis - Prunus serotina / Rhododendron maximum* Forest (CEGL006206) and the *Tsuga canadensis - Acer saccharum - Fagus grandifolia / Dryopteris intermedia* Forest (CEGL006639). The forest associations that make up this map class occur in the AT corridor from central Virginia north to the Connecticut River in Vermont. The FCHH map class is common within the corridor covering 574.4 ha (0.5% of APPA).

This mixed eastern hemlock (*Tsuga canadensis*) and northern hardwood forest is rarely on protected slopes above 800 elevation m in central Virginia but is commonly on flats below 600 m elevation in northern Vermont. Though the same map class, the large geographic variation allows this map class to occur in very different settings at the ends of its range. A further confusing factor is that when this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the southern range of this map class while leaving the species untouched in the northern portions.

Generally, the FCHH map class presents as a mixed closed-canopy hemlock-hardwood forest. The hemlocks, when alive, have dark-purple fluffy conical crowns and the hardwoods have pink, tan, white, and yellow fuzzy crowns. Topographic position varies greatly across this map class.

The AA results indicate that FCHH was mapped with a users' accuracy of 65% (90% confidence interval of 49–80%) and a producers' accuracy of 87% (90% confidence interval of 73–101%). The AA discloses several instances where FCHH was mapped either too aggressively (to seven map classes) or too conservatively (to the FPHD map class). The majority of the overly aggressive application results from over estimating the amount of eastern hemlock cover, while the overly conservative application results from the complexity of the signature over this map class over the broad range of this map class.

An example of the FCHH map class showing a mix of hemlock and northern hardwoods.

FCHP – Central Appalachian Hardwood - White Pine Forest

The Central Appalachian Hardwood - White Pine Forest (FCHP) map class represents the following four associations in the USNVC:

- *Acer saccharum* - *Pinus strobus* / *Acer pensylvanicum* Forest (CEGL005005),
- *Pinus strobus* - *Quercus* (*rubra*, *velutina*) - *Fagus grandifolia* Forest (CEGL006293),
- *Quercus* (*rubra*, *velutina*, *alba*) - *Betula lenta* - (*Pinus strobus*) Forest (CEGL006454), and
- *Pinus strobus* - *Quercus alba* - *Quercus prinus* / *Vaccinium stamineum* Forest (CEGL008539).

This map class represents a very diverse mix of eastern white pine (*Pinus strobus*) forest mixed with codominant oaks (*Quercus* spp.) and northern hardwoods within the AT corridor from southern Virginia north to the Connecticut River in Vermont. The FCHP map class is uncommon within the corridor covering 368.2 ha (0.3% of APPA).

The FCHP map class is a complex mix of mesic to dry-mesic mixed eastern white pine, oak, and northern hardwood trees at mid- to low-elevations with maximum elevation steadily decreasing from 1,040 m in the southern portion of the range to 640 m in the northern portion of the range. Generally, this is an older, larger-crowned map class because of the broad application of the FXWP map class throughout the AT corridor on younger, more ruderal eastern white pine-dominated forests. The FCHP map class generally presents as a mix of broad and diffusely branching emergent (super canopy) dark-purple eastern white pine intermingled with crisp, red and pink-crowned oaks and a variety of northern hardwoods with white, pink, tan, orange, and yellow fuzzy crowns. The mix of trees will depend on the location and the specific vegetation association; association CEGL006293 is the most common association, but all associations are tied together by the mature super canopy of eastern white pine.

The AA results indicate that FCHP was mapped with a users' accuracy of 81% and a producers' accuracy of 76% (90% confidence interval of 64–89%). The AA discloses three instances where FCHP was mapped either too aggressively (to seven map classes) or too conservatively (from six map classes). The users' error is broad with each error accounting for one site indicating no clear trend, while the producers' error indicates a general trend of underestimating eastern white pine cover.

An example of the most common association in the FCHP map class, association CEGL006293, showing a mix of eastern white pine and oak.

FHHO – Hemlock - Hardwood - Oak Forest

The Hemlock - Hardwood - Oak Forest (FHHO) map class represents two associations in the USNVC—the *Tsuga canadensis - Fagus grandifolia - Quercus rubra* Forest (CEGL006088) and the *Quercus rubra - Tsuga canadensis - Liriodendron tulipifera* / *Hamamelis virginiana* Forest (CEGL006566). The forest associations that make up this map class occur in the AT corridor from New Jersey north to the terminus in Maine. The FHHO map class is common within the corridor covering 1,071.3 ha (1.0% of APPA).

Codominated to dominated (25-75% canopy cover) by eastern hemlock (*Tsuga canadensis*) with codominant (greater than 25% canopy cover) northern red oak (*Quercus rubra*) and a variable mix of associated (less than 25% canopy cover) northern hardwood tree species, this map class rarely occurred above 610 m elevation and was most common below 300 m elevation. The FHHO map class generally presents as a very mixed forest of eastern hemlock, with dark-purple fluffy conical crowns; of northern red oak, with crisp, bright-red broadly branching crowns; and of northern hardwoods, with fuzzy crowns of white, tan, and pink. In the southern portion of the map class, the presence of tuliptree (*Liriodendron tulipifera*), with its conical pink and crisp crown, helped to discern FHHO from other map classes, particularly FHNH. Often, the eastern hemlock crowns were only barely visible through the larger oak crowns and, therefore, relying on ancillary leaf-off imagery was necessary to estimate the eastern hemlock cover in a forest.

A complicating factor is that when this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the southern-most range of this map class while leaving the species untouched in the northern portions.

The AA results indicate that FHHO was mapped with a users' accuracy of 78% (90% confidence interval of 67–88%) and a producers' accuracy of 75% (90% confidence interval of 64–86%). The AA discloses several instances where FHHO was mapped either too aggressively (to seven map classes) or too conservatively (from six map classes). The errors come from both the over and underestimation of hemlock cover in oak forest and hardwood forest map classes, the underestimation of hemlock cover in mixed hemlock forest map classes, and the under estimation of wetland influence in one swamp forest map class.

Two examples of the FHHO map class showing association CEGL006088, with the left example having a more mixed canopy than the right example that is almost entirely hemlock.

FHNH – Hemlock - Northern Hardwood Forest

The Hemlock - Northern Hardwood Forest (FHNH) map class represents the *Tsuga canadensis* - *Betula alleghaniensis* - *Acer saccharum* / *Dryopteris intermedia* Forest Association (CEGL006638) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from the Connecticut River in New Hampshire north to the terminus in Maine. The FHNH map class is uncommon within the corridor covering 117.2 ha (0.1% of APPA).

Codominated to dominated (25-75% canopy cover) by eastern hemlock (*Tsuga canadensis*) with codominant (greater than 25% canopy cover) northern hardwood tree species, this map class rarely occurred above 550 m elevation and was most common below 430 m elevation. Generally restricted to sheltered lower slopes, this map class lacks the eastern white pine (*Pinus strobus*) or red spruce (*Picea rubens*) in drier, higher, and more northerly hemlock map classes. Additionally, this map class is most common in southern New Hampshire and becomes increasingly rare as low-elevation red spruce becomes more common northward.

The FHNH map class generally presents as a very mixed forest of eastern hemlock, with dark-purple fluffy conical crowns and of northern hardwoods, with fuzzy crowns of white, tan, yellow, orange, and pink. Often, the eastern hemlock crowns were only barely visible through the larger oak crowns and, therefore, relying on ancillary leaf-off imagery was necessary to estimate the eastern hemlock cover in a forest.

The AA results indicate that FHNH was mapped with both a users' and producers' accuracy of 80%. The AA discloses three instances where FHNH was mapped either too aggressively (to the FPHD map class) or too conservatively (from the FHSH map class). These errors come from an over estimation of hardwood cover, in the case of FPHD, or from an overly conservative application among FHSH, where spruce is present.

An example of the he FHNH map class showing a mixed canopy of eastern hemlock and northern hardwood. The lack of a shrub or herb layer is common in this map class.

FHSH – Hemlock - Spruce - Hardwood Forest

The Hemlock - Spruce - Hardwood Forest (FHSH) map class represents the *Tsuga canadensis* - (*Betula alleghaniensis*) - *Picea rubens* / *Cornus canadensis* Forest Association (CEGL006129) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from the Connecticut River in New Hampshire north to the terminus in Maine. The FHSH map class is common within the corridor covering 1,183.8 ha (1.1% of APPA).

Codominated to dominated by eastern hemlock (*Tsuga canadensis*), with 25-75% canopy cover; by red spruce (*Picea rubens*), with less than 50% cover; and with codominant (greater than 25% canopy cover) northern hardwood tree species, this map class presents an interesting and complex elevation pattern across its range. Constrained to 550–670 m elevation in Massachusetts, the elevation profile gradually widens as red spruce moves downslope with examples between 330 and 640 m elevation in Vermont, but constricting again as eastern hemlock becomes constrained to lower elevations in Maine, where the range is below 490 m elevation and then only common below 360 m elevation.

The FHSH map class generally presents as a mixed conifer-hardwood forest of eastern hemlock, with dark-purple fluffy conical crowns; of red spruce, with dark-purple flat conical crowns; and of northern hardwoods, with fuzzy crowns of white, tan, yellow, orange, and pink. Often, little to no red spruce was visible in the canopy of northern examples of this map class; however, the presence of red spruce was assumed because of the ubiquity of this species in the north.

The AA results indicate that FHSH was mapped with a users' accuracy of 70% (90% confidence interval of 55–85%) and a producers' accuracy of 88%. The AA discloses several instances where FHSH was mapped either too aggressively (to five map classes) or too conservatively (from three map classes). The majority of the users' errors come from an overly aggressive application among co-occurring spruce and hemlock forest map classes, with a secondary confusion with the FRHS swamp forest map class. The majority of the producers' errors come from an overly conservative application among co-occurring spruce forest map classes.

An example of the FHSH map class showing a mixed canopy of eastern hemlock, red spruce, and northern hardwood.

FHWO – White Pine - Hemlock - Oak Forest

The White Pine - Hemlock - Oak Forest (FHWO) map class represents the following three associations in the USNVC:

- *Pinus strobus* - *Tsuga canadensis* / *Rhododendron maximum* - (*Leucothoe fontanesiana*) Forest (CEGL007102),
- *Pinus strobus* - *Quercus alba* - (*Carya alba*) / *Gaylussacia ursina* Forest (CEGL007517), and
- *Pinus strobus* - *Quercus* (*coccinea*, *prinus*) / (*Gaylussacia ursina*, *Vaccinium stamineum*) Forest (CEGL007519).

This map class primarily represents eastern white pine (*Pinus strobus*) - mixed oak (*Quercus* spp.) forests in the AT corridor from Springer Mountain in Georgia north to very southern Virginia. The FHWO map class is uncommon within the corridor covering 153.6 ha (0.1% of APPA).

When originally conceived, the FHWO map class was three separate map classes. The first collapse happened during verification when the model predicting where mesic association CEGL007517 and dry-mesic association CEGL007519 occur was ineffective. The second collapse happened during the mapping phase when the determination was made that association CEGL007102 with a dead or hidden eastern hemlock (*Tsuga canadensis*) canopy appeared indistinguishable from the eastern white pine - mixed oak associations with a hidden oak canopy.

The FHWO map class is generally on a variety of aspects, slopes, and topographic positions between 550 and 1,100 m elevation. Codominated (each 25–75% canopy cover) by emergent (super canopy) eastern white pine, with broad and diffusely branching dark-purple canopies and by mixed oaks, with crisp, tan, orange, and pink-colored and broad-crowned canopies, the FHWO is a very distinctive map class.

A complicating factor is that when this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the range of this map class. As a consequence, this map class now contains only a fraction of the eastern hemlock that it once did, though the eastern white pine were generally healthy.

The AA results indicate that FHWO was mapped well with a users' accuracy of 83% and a producers' accuracy of 90%. The AA discloses several instances where FHWO was mapped either too aggressively (to three map classes) or too conservatively (from three map classes). The errors were widely scattered and inconsistent, but indicate some confusion in estimating oak, eastern white pine, and eastern hemlock canopy cover on this very mixed forest map class.

Two examples of the FHWO map class showing association CEGL007102 with nearly complete conifer canopy over a very sparse understory (left) compared to association CEGL007519 with a much more mixed canopy and understory and an obvious super canopy of eastern white pine (right).

FCWH – Central Appalachian White Pine - Hemlock Forest

The Central Appalachian White Pine - Hemlock Forest (FCWH) map class represents the following three associations in the USNVC:

- *Pinus strobus - Tsuga canadensis* / *Acer pensylvanicu*m / *Polystichum acrostichoides* Forest (CEGL006019),
- *Tsuga canadensis* / *Rhododendron maximum* / *Sphagnum* spp. Swamp Forest (CEGL006279), and
- *Liriodendron tulipifera - Pinus strobus - Tsuga canadensis - Quercus rubra* / *Polystichum acrostichoides* Forest (CEGL006304).

This map class primarily represents upland eastern hemlock (*Tsuga canadensis*) - eastern white pine (*Pinus strobus*) forests in the AT corridor from central Virginia north to the Delaware River in Pennsylvania. The FCWH map class is rare within the corridor covering 78.9 ha (0.07% of APPA).

When originally conceived, the FCWH map class represented the two upland associations, CEGL006019 and CEGL006304. During the mapping phase of the Central Appalachian project area, however, the determination was made that low-land CEGL006019 or CEGL006304 would appear identical to association CEGL006279, so this map class was created. However, CEGL006279 subsequently are present in the Lower New England project area in extensive swamp forest complexes. Following poor AA results, CEGL006279 was joined to the FAHS. As a result, the decidedly upland FCWH and decidedly wetland FAHS share occurrences of the quite rare CEGL006279.

The FCWH map class was generally restricted to sheltered location below 550 m elevation, but a few instances occur up to 1,220 m elevation and may represent other vegetation types mapped incorrectly. Dominated (greater than 75% canopy cover) by mature eastern hemlock with a dark-purple conical canopy, emergent (super canopy) eastern white pine with a broad and diffusely branching dark-purple canopy, or a mix of the two, FCWH was a very distinctive and often highly degraded map class. When this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor; however, as the project progressed, various non-native insects nearly eliminated this species in the range of this map class. As a consequence, this map class now contains only a fraction of the eastern hemlock that it once did, though the eastern white pine were generally healthy.

The AA results indicate that FCWH was mapped with a users' accuracy of 67% (90% confidence interval of 50–83%) and a producers' accuracy of 86%. The AA discloses several instances where FCWH was mapped either too aggressively (to seven map classes) or too conservatively (from three map classes). Both the users' and producers' errors fail to indicate a consistent pattern for mapping errors, with errors widely and lightly spread among map classes defined by oak forest, mixed oak-conifer forest, mixed hardwood-conifer forest, ruderal conifer forest, hardwoods swamp forest, dry conifer-oak woodlands, and dry conifer woodland.

An example of the FCWH map class showing surrounding association CEGL006304 with a small herbaceous seep in the middle.

FLSF – Low-Elevation Spruce - Fir Forest

The Low-Elevation Spruce - Fir Forest (FLSF) map class represents two associations in the USNVC—the *Picea rubens - Abies balsamea - Betula papyrifera* Forest (CEGL006273) and the *Picea mariana - Picea rubens / Pleurozium schreberi* Swamp Forest (CEGL006361). The forest associations that make up this map class occur in the AT corridor from northern Massachusetts north to the terminus, but are only common in Maine. The FLSF map class is common within the corridor covering 1,904.0 ha (1.7% of APPA).

Dominated (greater than 50% canopy cover) by red spruce (*Picea rubens*), the FLSF map class often approaches 100% red spruce canopy; can have associated balsam fir (*Abies balsamea*) or black spruce (*Picea mariana*); and generally lacks (less than 25% canopy) northern hardwood tree species, eastern hemlock (*Tsuga canadensis*), and eastern white pine (*Pinus strobus*). This canopy composition was potentially identical to FMSF, so an elevation cutoff of 550 m elevation and below, but up to 670 m based on landscape context, was utilized to split these two map classes. This map class generally presented as sea of red spruce with dark-red to purple pointy cone-shaped crowns of similar size and height interspersed with the fuzzy white, yellow, and pink cone-shaped crowns of northern hardwoods.

While the swamp forest association CEGL006361 is included in this upland map class, in practice CEGL006361 presents an identical signature to association CEGL006273 because CEGL006361 is not a basin forest, but forms on extensive flats where shallow water sits close to the surface over an extended area. No usable indication of ponding or flowing water was visible in the project imagery, and the topographic variations were too slight to reliably split apart these associations.

The AA results indicate that FLSF was mapped with a users' accuracy of 86% and a producers' accuracy of 57% (90% confidence interval of 37–77%). The AA discloses several instances where FLSF was mapped either too aggressively (to two map classes) or too conservatively (from five map classes). The errors come either from an overly aggressive application among eastern hemlock forest map classes or from an overly conservative approach among three co-occurring mixed hardwood - red spruce swamp forest map classes.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the FLSF map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FLSF map class showing a version on a flat (left) and a version on a slope (right).

FPHD – Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest

The Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest (FPHD) map class represents the *Pinus strobus - Tsuga canadensis* Lower New England-Northern Piedmont Forest Association (CEGL006328) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from the Connecticut River in New Hampshire north to the terminus in Maine. The FPHD map class is uncommon within the corridor covering 147.7 ha (0.1% of APPA).

Codominated to dominated (25–75% canopy cover, each) by eastern hemlock (*Tsuga canadensis*) and eastern white pine (*Pinus strobus*), this low-elevation conifer forest is nearly identical to the FPHS map class except that FPHD lacks red spruce (*Picea rubens*) while FPHS has red spruce (at least 5% canopy). In practice, this small amount of red spruce is difficult to directly detect, but the geographic and elevational range of the red spruce became indicative of how to reliably split these two map classes. The presence of any red spruce in the canopy was diagnostic for FPHS rather than FPHD.

The FPHD map class generally presents as a mixed forest of eastern hemlock, with dark-purple fluffy conical crowns and of eastern white pine, with a broad and diffusely branching dark-purple crown emergent (super canopy) from the hemlock.

The AA results indicate that FPHD was mapped with a users' accuracy of 67% (90% confidence interval of 50–83%) and a producers' accuracy of 86%. The AA discloses several instances where FPHD was mapped either too aggressively (to three map classes) or too conservatively (from three map classes). The majority of the users' errors come from an overly aggressive application among co-occurring eastern hemlock and eastern white pine forest map classes, while the producers' error indicates no clear pattern.

An example of the FPHD map class showing a mixed canopy of eastern hemlock below emergent eastern white pine. The lack of a shrub or herb layer is common in this map class.

FPHS – White Pine - Hemlock - Red Spruce Forest

The White Pine - Hemlock - Red Spruce Forest (FPHS) map class represents the *Pinus strobus* - *Tsuga canadensis* - *Picea rubens* Forest Association (CEGL006324) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from northern Massachusetts north to the terminus in Maine. The FPHS map class is common within the corridor covering 635.1 ha (0.6% of APPA).

Codominated to dominated (25–75% canopy cover, each) by eastern hemlock (*Tsuga canadensis*), eastern white pine (*Pinus strobus*), and red spruce (*Picea rubens*), this low- to mid- elevation conifer forest is nearly identical to the FPHD map class except that FPHS has red spruce (*Picea rubens*) while FPHD lacks red spruce (less than 5% canopy). In practice, this small amount of red spruce is difficult to directly detect, but the geographic and elevational range of the red spruce became indicative of how to reliably split these two map classes. The presence of any red spruce in the canopy was diagnostic for FPHD rather than FPHS. On occasion, eastern white pine was sparse or even absent.

The FPHS map class generally presents as a mixed forest of eastern hemlock, with dark-purple fluffy conical crowns; of red spruce, with dark-red to purple pointy cones; and of eastern white pine, with a broad and diffusely branching dark-purple crown emergent (super canopy) from the hemlock.

The AA results indicate that FPHS was mapped with a users' accuracy of 67% (90% confidence interval of 47–86%) and a producers' accuracy of 74% (90% confidence interval of 54–93%). The AA discloses several instances where FPHS was mapped either too aggressively (to six map classes) or too conservatively (from four map classes). The majority of the users' errors come from an overly aggressive application among co-occurring red spruce forest map classes, while the producers' errors come from an overly conservative application among co-occurring mixed-conifer forest map classes.

An example of the FPHS map class showing a mixed canopy of eastern hemlock and red spruce below emergent eastern white pine. The lack of a shrub or herb layer is common in this map class.

FRWP – White Pine - Red Pine Forest

The White Pine - Red Pine Forest (FRWP) map class represents the *Pinus strobus - Pinus resinosa / Cornus canadensis* Forest Association (CEGL006253) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from the Connecticut River in New Hampshire north to the terminus in Maine. The FRWP map class is rare within the corridor covering 24.9 ha (0.02% of APPA).

Codominated to dominated by both red pine (*Pinus resinosa*) and eastern white pine (*Pinus strobus*) and occasionally completely dominated by red pine, this map class only occurred below 430 m elevation within the AT corridor and was then most common below 300 m elevation.

The FRWP map class generally presents as a mixed conifer forest of red pine, with compact and spherical tan-pink to tan-red crowns and of eastern white pine, with broad and diffusely branching dark-purple crowns. Often, eastern hemlock (*Tsuga canadensis*), red spruce (*Picea rubens*), and mixed northern hardwoods were also present in the canopy, but never greater than 25% total canopy cover.

The AA results indicate that FRWP was mapped well with a users' accuracy of 100% and a producers' accuracy of 89%. The AA discloses one instance where FRWP was mapped too conservatively from the FPHS map class where the cover of red pine was underestimated.

An example of the FRWP map class showing a mixed canopy of red pine and eastern white pine. The thick duff layer shown in the example is characteristic in this map class.

WCNH – Calcareous Northern Hardwood Talus Woodland

The Calcareous Northern Hardwood Talus Woodland (WCNH) map class represents two associations in the USNVC—the *Acer saccharum - Tilia americana - Fraxinus americana* / *Ostrya virginiana* / *Geranium robertianum* Woodland (CEGL005058) and the *Acer saccharum - Fraxinus americana - Juglans cinerea* / *Staphylea trifolia* / *Adlumia fungosa* Forest (CEGL006577). The forest and woodland associations that make up this map class occur within the AT corridor at only three locations in New Jersey, Massachusetts, and Vermont. The WCNH map class is exceptionally rare within the corridor covering 9.1 ha (0.008% of APPA).

Based on vegetation plot data and conversations with ecologists, the WCNH map class was a "map known locations" map class, which means that only confirmed locations were mapped, but because of confusing plot data and similar signatures, the two associations were grouped into a single map class. For WCNH, that means four polygons were mapped with two adjacent to each other in New Jersey and one each in Massachusetts and Vermont. These locations were supported either by vegetation plots or by field reconnaissance visits prior to mapping. The sites generally present as open, mixed northern hardwood forests on steep slopes with talus or boulders often visible and the northern hardwoods having fluffy white, orange, tan, and pink crowns. This signature is similar to potential signatures in the FNAH map class; therefore, the possibility exists for other examples of WCNH on the landscape, but no others are known.

The WCNH map class was mapped very consistently. The AA process discovered no new instances of the WCNH map class, and no instances of WCNH were confused with a different map class.

Two examples of the WCNH map class showing the more open-canopied association CEGL005058 (left) and the more closed-canopy association CEGL006577 (right). Both show a northern hardwood canopy over talus or boulders.

WCRS – Piedmont-Central Appalachian Sycamore - River Birch Floodplain Forest

The Piedmont-Central Appalachian Sycamore - River Birch Floodplain Forest (WCRS) map class represents the *Platanus occidentalis* - *Betula nigra* - *Salix* (*caroliniana*, *nigra*) Floodplain Forest Association (CEGL003896) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor in larger floodplains from southern Virginia to central Pennsylvania. The WCRS map class is exceptionally rare within the corridor covering 1.0 ha (0.0009% of APPA).

This mixed hardwood floodplain forest is along the larger rivers of this section of the AT corridor and generally has a very short, very open canopy. Generally, this map class presents as a hardwood woodland or open forest with small, round, tan to yellow crowns of American sycamore (*Platanus occidentalis*) speckled over a short herb layer in the most active portion of the floodplain.

The AA results indicate that WCRS was mapped with a users' accuracy of 100% and a producers' accuracy of 50% (90% confidence interval of -4–104%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where WCRS was mapped too conservatively from the FFCR map class because of the underestimation of both American sycamore cover in the canopy and the amount of openness in the canopy.

An example of the WCRS map class showing an open, scrubby woodland of American sycamore in the active floodplain of the Potomac River in Virginia.

WDMP – Blue Ridge Mixed Pine Dry Woodland

The Blue Ridge Mixed Pine Dry Woodland (WDMP) map class represents two associations in the USNVC—the *Pinus virginiana* / *Vaccinium pallidum* / *Schizachyrium scoparium* - *Carex pensylvanica* Woodland (CEGL003624) and the *Pinus pungens* - *Pinus rigida* - (*Quercus prinus*) / *Kalmia latifolia* - *Vaccinium pallidum* Woodland (CEGL007097). This map class represents a mix of dry (yellow) pine woodland and open forest mixed with occasional dry oak within the AT corridor from Springer Mountain in Georgia north to southern Virginia. The WDMP map class is uncommon within the corridor covering 152.3 ha (0.1% of APPA).

The WDMP map class is defined by Virginia, Table Mountain, and pitch pine (*Pinus virginiana*, *P. pungens*, and *P. rigida*), commonly called yellow pine, dominated sites on hot and dry topographic positions. Often, hardwood tree species adapted to dry, acidic sites, such as red maple (*Acer rubrum*), black gum (*Nyssa sylvatica*), sourwood (*Oxydendrum arboreum*), and scarlet; and, chestnut oak (*Quercus coccinea* and *Q. prinus*) codominated, but never dominated, the canopy with the yellow pine. Occasionally present up to 1,220 m elevation, this map class was most common below 910 m elevation. The WDMP map class generally presents as an open canopy of dark-pink to purple small and tight-crowned conifers intermixed with white, tan, and, occasionally, orange and yellow fluffy-crowned hardwood trees.

The AA results indicate that WDMP was mapped with a users' accuracy of 69% (90% confidence interval of 55–84%) and a producers' accuracy of 89%. The AA discloses several instances where WDMP was mapped either too aggressively (to three map classes) or too conservatively (from two map classes). The users' errors come from an overly aggressive application among the co-occurring FCOM and WMDP map classes. The producers' errors come from an underestimation of recovery in the co-occurring FXVP map class, and an underestimation of recovery and yellow pine canopy cover in the co-occurring SXBG map class.

Two examples of the WDMP map class showing the Virginia pine dominated association CEGL003624 (left) and the mixed yellow pine dominated association CEGL007097 (right). Both examples show a mix of open and closed canopy.

WHOT – Hardwood - Oak Talus Woodland

The Hardwood - Oak Talus Woodland (WHOT) map class represents two associations in the USNVC—the *Alnus viridis* ssp. *crispa* - *Spiraea alba* / *Solidago macrophylla* Shrubland (CEGL006064) and the *Betula alleghaniensis* - *Quercus rubra* / *Polypodium virginianum* Woodland (CEGL006584). This map class primarily represents northern hardwood dominated talus slopes within the AT corridor from the Connecticut River in New Hampshire, to the northern terminus in Maine. The WHOT map class is rare within the corridor covering 46.2 ha (0.04% of APPA).

Originally only association CEGL006584 defined the WHOT map class, but the AA process discovered association CEGL006064 in several areas mapped as WHOT, so CEGL006064 was added to the map class.

The WHOT map class is defined by northern hardwood trees and scrub, generally yellow birch (*Betula alleghaniensis*), over talus and boulders on steep slopes. Occasionally, northern red oak (*Quercus rubra*) was present but rarely codominated. Confined to steep slopes below 1,000 m elevation, this map class generally presents an open canopy of pink, tan, and white-crowned, short- to medium-statured trees with talus and boulders visible through the canopy gaps.

The AA results indicate that WHOT was mapped with a users' accuracy of 79% (90% confidence interval of 63–95%) and a producers' accuracy of 86%. The AA discloses several instances where WHOT was mapped either too aggressively (to four map classes) or too conservatively (from three map classes). Both the users' and producers' errors are spread widely across co-occurring map classes indicating an occasional misestimation of oak canopy cover, total canopy cover, and canopy species composition.

Two examples of the WHOT map class showing the very rare association CEGL006064 (left) compared to the more common association CEGL006584 (right). Both examples show a northern hardwood canopy over rocky substrate on a steep slope.

WJPR – Jack Pine Heath Barrens

The Jack Pine Heath Barrens (WJPR) map class represents the *Pinus banksiana* / *Kalmia angustifolia* - *Vaccinium* spp. Woodland Association (CEGL006041) in the USNVC. The woodland association that makes up this map class only occurs within the AT corridor at one site in north-central New Hampshire. The WJPR map class is exceptionally rare within the corridor covering only 0.3 ha (0.0003% of APPA), making WJPR one of the rarest map classes within APPA.

Based on conversations with ecologists, the WJPR map class was a "map known locations" map class, which means that only confirmed locations were mapped. For WJPR, that means a single polygon is mapped in north-central New Hampshire on the steeply sloping, very exposed, south facing slope of Crawford Notch above the Saco River. Prior to AA, this location was supported only by conversations with ecologists. The site generally presents as a dry (yellow) pine dominated cliff face of conifers with dark-pink compact crowns over heath-covered rocky terrain. This far north, the jack pine (*Pinus banksiana*) is the only yellow pine possible.

The WJPR map class was mapped very consistently. The AA process discovered no new instances of the WJPR map class, and no instances of WJPR were confused with a different map class.

An example of the WJPR map class over the Saco River in north-central New Hampshire.

WMBH – Montane Basic Hardwood - Red-cedar Woodland

The Montane Basic Hardwood - Red-cedar Woodland (WMBH) map class represents the *Carya* (*glabra*, *alba*) - *Fraxinus americana* - (*Juniperus virginiana* var. *virginiana*) Woodland Association (CEGL003752) in the USNVC. The woodland association that makes up this map class only occurs within the AT corridor in northern Georgia on warm slopes over calcareous bedrock. The WMBH map class is rare within the corridor covering 40.3 ha (0.04% of APPA).

This dry, calcareous hardwood woodland map class is on south-facing slopes and exfoliating domes up to 1,340 m elevation within the AT corridor. Supporting a diverse array of herbaceous species, the canopy of WMBH can be similarly diverse with a mix of hickory (*Carya* spp.), white ash (*Fraxinus americana*), and occasionally eastern redcedar (*Juniperus virginiana* var. *virginiana*). Presenting as a short and open canopy of white, pink, and yellow hardwoods intermixed with the short, dense, dark-purple conical conifer crowns of eastern redcedar, the hardwood were always present in this map class and generally dominant; however, on occasion, the conifer did become dominant. In the most open examples, inclusions of the HALD map class were common.

The AA results indicate that WMBH was mapped well with a users' accuracy of 88% and a producers' accuracy of 100%. The AA discloses two instances where WMBH was mapped too aggressively to the FCOM and WMDP map classes because of misinterpretation of the dominant canopy species and their canopy cover.

An example of the WMBH map class showing a rich and diverse herbaceous layer mixed with an open canopy of, in this instance, hickory.

WMDP – Appalachian Mixed Pine - (Oak) Dry Woodland

The Appalachian Mixed Pine - (Oak) Dry Woodland (WMDP) map class represents the following four associations in the USNVC:

- *Pinus* (*pungens*, *rigida*) - *Quercus prinus* / (*Quercus ilicifolia*) / *Gaylussacia baccata* Woodland (CEGL004996),
- *Pinus virginiana* - *Pinus* (*rigida*, *echinata*) - (*Quercus prinus*) / *Vaccinium pallidum* Forest (CEGL007119),
- *Pinus virginiana* - (*Pinus rigida*, *Pinus pungens*) / *Schizachyrium scoparium* Forest (CEGL008500), and
- *Quercus prinus* - *Pinus virginiana* - (*Pinus pungens*) / *Schizachyrium scoparium* - *Dichanthelium depauperatum* Woodland (CEGL008540).

This map class represents a mix of dry (yellow) pine woodland and open forest mixed with occasional dry oak within the AT corridor Within the corridor, this map class represents a mix of dry (yellow) pine woodland and open forest mixed with occasional dry oak that rarely exists in southern Virginia and is becoming more common northward to east-central Pennsylvania. The WMDP map class is common within the corridor covering 961.3 ha (0.9% of APPA).

The WMDP map class is mapped to the known locations of associations CEGL007119 and CEGL008500 in Tennessee and North Carolina and then as the standard yellow pine woodland from southern Virginia north to east-central Pennsylvania.

The WMDP map class is defined by Virginia, Table Mountain, short leaf, and pitch pine (*Pinus virginiana*, *P. pungens*, *P. echinata*, and *P. rigida*), commonly called yellow pine, dominated sites on hot or dry and often steep topographic positions. Often, hardwood tree species adapted to dry, acidic sites, such as red maple (*Acer rubrum*), black gum (*Nyssa sylvatica*), sourwood (*Oxydendrum arboreum*), and scarlet; and, chestnut oak (*Quercus coccinea* and *Q. prinus*) codominated, but never dominated, the canopy with the yellow pine. Occasionally present at up to 1,040 m elevation, this map class was most common below 850 m elevation and, interestingly, would often be on north-facing step slopes with very shallow soils. The WMDP map class generally presents as an open canopy of dark-pink to purple small and tight-crowned conifers intermixed with white, tan, and, occasionally, orange and yellow fluffy-crowned hardwood trees.

The AA results indicate that WMDP was mapped with a users' accuracy of 93% and a producers' accuracy of 72% (90% confidence interval of 62–83%). The AA discloses several instances where WMDP was mapped either too aggressively (to three map classes) or too conservatively (from eight map classes). The users' errors are spread widely across co-occurring map classes indicating an occasional misestimation of yellow pine canopy cover, total canopy cover, and degree of disturbance. The producers' errors focus on two issues with the first being a consistent underestimation of recovery in the co-occurring FXVP map class and the second being a consistent misidentification of the dominant canopy species and their cover in the co-occurring WPOS and WDMP map classes.

Four examples of the WMDP map class showing associations CEGL004996 (upper left), CEGL007119 (upper right), CEGL008500 (lower left), and CEGL008540 (lower right). All examples show an open to closed canopy of yellow pine over a variety of different shrub and herb layers.

WPOS – Central Appalachian Pine - Oak Xeric Shale Woodland

The Central Appalachian Pine - Oak Xeric Shale Woodland (WPOS) map class represents two associations in the USNVC—the *Pinus virginiana* - *Quercus prinus* / *Quercus ilicifolia* / (*Hieracium greenii*, *Viola pedata*) Woodland (CEGL008525) and the *Quercus prinus* / *Quercus ilicifolia* / *Danthonia spicata* Woodland (CEGL008526). This map class represents a dry pine and dry oak woodland and open forest over shale within the AT corridor only in central Virginia. The WPOS map class is rare within the corridor covering 11.6 ha (0.01% of APPA).

Based on vegetation plot data and conversations with ecologists, the WPOS map class is a "map known locations" map class, which means that only confirmed locations are mapped. The primary reason that only confirmed locations are mapped is that insufficient data are available to reliably distinguish shale bedrock from all other bedrock. Consequently, four distinct locations are in central Virginia where FPOS is mapped based on the existing vegetation plot and field reconnaissance data. These locations generally present as chestnut oak (*Quercus prinus*) and Virginia pine (*Pinus virginiana*) woodlands on steeply sloping, warm-site exfoliating hillsides below 790 m elevation. The oak in the map class generally present as crisp and compact tan crown while the pine will have dark-pink to purple small and tight crowns.

The AA results indicate that WPOS was mapped with a users' accuracy of 43% (90% confidence interval of 5–81%) and a producers' accuracy of 75% (90% confidence interval of 27–123%). Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals. The AA discloses three instances where WPOS was mapped either too aggressively (to the FAOH and WMDP map classes) or too conservatively (from the FCWH map class). These errors likely result from the misidentification of the bedrock type and overestimation of Virginia pine canopy cover.

An example of the WPOS map class showing the Virginia pine dominated canopy over shale bedrock.

WSTS – Red Spruce Talus Slope Woodland

The Red Spruce Talus Slope Woodland (WSTS) map class represents the *Picea rubens* / *Ribes glandulosum* Woodland Association (CEGL006250) in the USNVC. The woodland association that makes up this map class occurs within the AT corridor from the Connecticut River in New Hampshire north to Mount Katahdin in Maine. The WSTS map class is rare within the corridor covering 23.8 ha (0.02% of APPA).

The WSTS map class is on steep slopes and hillsides below 1,000 m elevation where talus and boulders are at the surface in the AT corridor. Often exclusively dominated by red spruce (*Picea rubens*), which present as dark-red to purple pointy cones of similar size and height, this map class is generally an open and patchy woodland with large areas of open talus visible in the canopy gaps.

The AA results indicate that WSTS was mapped well with a users' accuracy of 100% and a producers' accuracy of 81%. The AA discloses two instances where WSTS was mapped too conservatively from the FMSF and WHOT map classes because of an underestimation of the openness of the canopy and an underestimation of red spruce canopy cover, respectively.

An example of the red spruce dominated woodland over bedrock that defines the WSTS map class.

WTRR – Traprock Ridge

The Traprock Ridge (WTRR) map class represents the *Juniperus virginiana - Fraxinus americana* / *Danthonia spicata - Poa compressa* Woodland Association (CEGL006002) in the USNVC. The woodland association that makes up this map class occurs within the AT corridor over calcareous bedrock from DEWA north to northwestern Connecticut. The WTRR map class is rare within the corridor covering 46.8 ha (0.04% of APPA).

This dry, calcareous hardwood woodland is on south-facing slopes and ridge lines up to 460 m elevation within the AT corridor. Supporting a diverse array of herbaceous species, the canopy of WTRR can be similarly diverse with a mix of hickory (*Carya* spp.), white ash (*Fraxinus americana*), and eastern redcedar (*Juniperus virginiana* var. *virginiana*). Presenting as a short and open canopy of white, yellow, and yellow-green hardwoods intermixed with the short, dense, dark-purple conical conifer crowns of eastern redcedar, this map class was distinct within its range.

The AA results indicate that WTRR was mapped with a users' accuracy of 71% (90% confidence interval of 36–107%) and a producers' accuracy of 100%. (Because of the rarity of this map within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where WTRR was mapped too aggressively to the FOHG and WROT map classes. These errors come from overestimation of eastern redcedar cover in the canopy and total canopy cover.

An example of the WTRR map class showing a rich and diverse herbaceous layer mixed with an open canopy of, in this instance, hickory.

FAMA – Appalachian Montane Alluvial Forest

The Appalachian Montane Alluvial Forest (FAMA) map class represents the *Platanus occidentalis* - *Liriodendron tulipifera* - *Betula* (*alleghaniensis*, *lenta*) / *Alnus serrulata* - *Leucothoe fontanesiana* Forest Association (CEGL004691) in the USNVC. This forest association only occurs in the AT corridor in the southern portion along rocky riparian zones at lower elevation (below 900 m elevation). The FAMA map class is rare within the corridor covering 11.6 ha (0.01% of APPA).

This mixed-species deciduous forest always is associated with riparian zones on rocky soils and generally is limited to a very narrow band along the waterway. Present only at the lower elevations, FAMA was confined to riparian zones below 600 m elevation along large streams and small rivers. Additionally, this map class often exists on riparian islands in these water ways. In the APPA imagery set, FAMA tended to appear as a mixed hardwood forest in long, narrow bands on the flats along riparian zones. In several instances, the band of FAMA, while present, was too narrow and small to warrant mapping.

The AA results indicate that FAMA was mapped with a users' accuracy of 100% and a producers' accuracy of 78% (90% confidence interval of 49–106%). The AA discloses one instance where FAMA was mapped too conservatively from one other map class. The map class was the SRBS map class, a riparian shrub map class that allows some tree cover.

Two examples of the FAMA map class showing an open understory (left) and a closed, densely shrubbed understory (right), both over thin, rocky soils.

FFAW – Ash - Willow Floodplain Forest

The Ash - Willow Floodplain Forest (FFAW) map class represents the following three associations in the USNVC:

- *Acer saccharum* - *Fraxinus* spp. - *Tilia americana* / Matteuccia struthiopteris - *Ageratina altissima* Floodplain Forest (CEGL006114),
- *Fraxinus pennsylvanica* - (*Juglans nigra*, *Platanus occidentalis*) Floodplain Forest (CEGL006575), and
- *Salix nigra* - (*Populus deltoides*) Floodplain Forest (CEGL006629).

The forest associations that make up this map class primarily represent ruderal hardwood floodplain forest in the AT corridor from northern New Jersey north to the Connecticut River in Vermont. The FFAW map class is rare within the corridor covering 34.1 ha (0.03% of APPA).

The FFAW map class was initially composed of only associations CEGL006575 and CEGL006629, but association CEGL006114 was discovered in this map class at five locations during the AA process. Initially, CEGL006114 was not recognized in the range of FFAW; however, after the AA, CEGL006114 was justified to be included in the map classes FFAW and FFTH. The AA indicated no other confusion between the other vegetation associations in FFTH and FFAW because CEGL006575 and CEGL006629 do not occur in the range of the FFTH map class.

This mixed hardwood tree species ruderal floodplain forest map class is dominated by young hardwood tree species growing in the active floodplain of low-gradient large streams and rivers below 270 m elevation. Generally, the FFAW map class presents as an open-canopied, young, hardwood forest with a mixed crown morphology of sizes and shapes ranging in color from white to tan to orange to pink. With FFAW always on flat ground directly adjacent to low-gradient streams and rivers, consistently and accurately splitting this map class from the surrounding upland hardwood map classes of FNAH and FXCH and the non-ruderal large-river floodplain forest map class of FMHF proved difficult. The upland-floodplain split was accomplished by viewing the aerial imagery three-dimensionally to look for slight elevation changes or the presences of a bench or levee in the floodplain to indicate a switch to the upland. The split with the non-ruderal FMHF map class was based on crown morphology, canopy closure, perceived degree of disturbance, and a general lack of silver maple (*Acer saccharinum*).

The AA results indicate that FFAW was mapped well with a users' accuracy of 80% and a producers' accuracy of 100%. The AA discloses three instances where FFAW was mapped too aggressively to both another co-occurring hardwood floodplain forest map class and to two upland hardwood forest map classes.

Two examples of the FFAW map class showing associations CEGL006575 (left) and CEGL006629 (right). Both examples show a mixed-species canopy floodplain forest generally lacking silver maple.

FFCR – Piedmont-Central Appalachian Rich Floodplain Forest

The Piedmont-Central Appalachian Rich Floodplain Forest (FFCR) map class represents the *Platanus occidentalis - Acer negundo - Juglans nigra* / *Asimina triloba* / *Mertensia virginica* Floodplain Forest Association (CEGL004073) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor in larger floodplains from southern Virginia to central Pennsylvania. The FFCR map class is rare within the corridor covering 35.8 ha (0.03% of APPA).

This mixed hardwood floodplain forest is along the larger rivers of this section of the AT corridor and generally has a very tall canopy. Generally, the FFCR map class presents as a hardwood forest with a super canopy of eastern cottonwood (*Populus deltoides*), with very broad and tall, bright-pink crowns over a canopy of shorter, yet still broad and tall tan to yellow American sycamore (*Platanus occidentalis*) over a very dense and diverse short-tree, tall-shrub layer. The American sycamore signature is the most important signature for defining this map class.

The AA results indicate that FFCR was mapped well with a users' accuracy of 91% and a producers' accuracy of 100%. The AA discloses one instance where FFCR was mapped too aggressively to the WCRS map class, which is a co-occurring hardwood floodplain woodland map class.

An example of the FFCR map class showing a very thick understory of box elder with an emergent eastern cottonwood in the background.

FFHH – High-gradient Hardwood Floodplain Forest

The High-gradient Hardwood Floodplain Forest (FFHH) map class represents the *Acer saccharum* / *Ostrya virginiana* / *Brachyelytrum erectum* Floodplain Forest Association (CEGL006504) in the USNVC. The forest association that makes up this map class occurs in the AT corridor along low-elevation high-gradient streams from north of the Connecticut River in New Hampshire to the terminus in Maine. The FFHH map class is rare within the corridor covering 41.2 ha (0.04% of APPA).

This mixed northern hardwood tree species riparian map class is dominated by sugar maple (*Acer saccharum*) growing over rocky substrate in the active floodplain of high-gradient small streams below 490 m elevation. Generally, this map class presents as a hardwood forest with a mixed crown morphology of sizes and shapes ranging in color from white to tan to orange to pink. With FFHH always on flat ground directly adjacent to high-gradient streams and rivers, to consistently and accurately split this map class from the surrounding upland hardwood map classes of FNAH and FXNH, and the low-gradient floodplain forest map class of FFTH proved difficult. The upland-floodplain split was accomplished by viewing the aerial imagery three-dimensionally to look for slight elevation changes or the presence of a bench or levee in the floodplain to indicate a switch to the upland. The low- to high-gradient split was based on gauging the gradient of the stream using local topography and looking for areas of consistent riffling or whitewater to indicate a high-gradient stream.

The AA results indicate that FFHH was mapped with a users' accuracy of 79% (90% confidence interval of 63–95%) and a producers' accuracy of 95%. The AA discloses a few instances where FFHH was mapped either too aggressively (to the FTHS and FNAH map classes) or too conservatively (from the FAHS map class). The errors come from confusion with hardwood upland map classes because hydrology was gaged incorrectly as drier (users' error) or wetter (producers' error) than it was.

An example of the FFHH map class showing the active floodplain dominated by sugar maple.

FFTH – Terrace Hardwood Floodplain Forest

The Terrace Hardwood Floodplain Forest (FFTH) map class represents the *Acer saccharum* - *Fraxinus* spp. - *Tilia americana* / *Matteuccia struthiopteris* - *Ageratina altissima* Floodplain Forest Association (CEGL006114) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor from north of the Connecticut River in New Hampshire to the terminus in Maine along low-elevation low-gradient rivers. The FFTH map class is exceptionally rare within the corridor covering 10.9 ha (0.0099% of APPA).

This mixed northern hardwood tree species riparian map class is dominated by northern hardwood tree species growing in the active floodplain of low-gradient large streams and rivers below 300 m elevation. Generally, this map class presents as a hardwood forest with a mixed crown morphology of sizes and shapes ranging in color from white to tan to orange to pink. With FFTH always on flat ground directly adjacent to low-gradient streams and rivers, to consistently and accurately split this map class from the surrounding upland hardwood map classes of FNAH and FXNH and the high-gradient floodplain forest map class of FFHH proved difficult. The upland-floodplain split was accomplished by viewing the aerial imagery three-dimensionally to look for slight elevation changes or the presence of a bench or levee in the floodplain to indicate a switch to the upland. The low- to high-gradient split was based on gauging the gradient of the stream using local topography and looking for large areas of smooth water to indicate a low-gradient stream.

As a complicating factor, association CELG006114 is also mapped in the FFAW map class because of because association CEGL006114 was discovered in FFAW at five locations during the AA process. Initially, CEGL006114 was not recognized in the range of FFAW; however, after the AA, CEGL006114 was justified to be included in FFTH and in FFAW. The AA indicated no other confusion between the other vegetation associations in FFTH and FFAW because associations CEGL006575 and CEGL006629 do not occur in the range of the FFTH map class.

The AA results indicate that FFTH was mapped with a users' accuracy of 86% and a producers' accuracy of 67% (90% confidence interval of 35–98%). The AA discloses three instances where FFTH was mapped either too aggressively (to the FTHS map class) or too conservatively (from two map classes). The users' errors come from an overly aggressive application among the FTHS map class while the producers' errors come from an overly conservative application with a co-occurring wetland forest (FAHS) and with a co-occurring hardwood floodplain forest (FMHF).

An example of the FFTH map class showing the active floodplain dominated by northern hardwood tree species over a consistent layer of ostrich fern (*Matteuccia struthiopteris*).

FMEF – Midwestern Silver Maple - Elm Floodplain Forest

The Midwestern Silver Maple - Elm Floodplain Forest (FMEF) map class represents the *Acer saccharinum - Fraxinus pennsylvanica - Ulmus americana* Floodplain Forest Association (CEGL002586) in the USNVC. This map class is limited to the AT corridor as FMEF crosses the floodplain of the Delaware River from Pennsylvania to New Jersey. The FMEF map class is exceptionally rare within the corridor covering 5.3 ha (0.005% of APPA).

This map class was taken directly from the DEWA vegetation mapping project map as explained in the mapping section. In the APPA project imagery, this map class presents the classic broadly branching (deliquescent) fluffy pink crowns characteristic of silver maple (*Acer saccharinum*) in the active floodplain of the Delaware River.

Because this map class was not directly mapped or modified by the APPA project, AA was not completed on FMEF. For information on the accuracy of the FMEF map class, consult Perles et al. (2007) on their classification and mapping of vegetation for the DEWA.

No visual example is available for the FMEF map class in the AT corridor.

FMHF – Silver Maple - Hardwood Floodplain Forest

The Silver Maple - Hardwood Floodplain Forest (FMHF) map class represents the following five floodplain forest associations in the USNVC:

- *Acer saccharinum* - *Ulmus americana* / *Onoclea sensibilis* Floodplain Forest (CEGL006001),
- *Acer saccharinum* - (*Populus deltoides*) / *Matteuccia struthiopteris* - *Laportea canadensis* Floodplain Forest (CEGL006147),
- *Acer saccharinum* / *Onoclea sensibilis* - *Boehmeria cylindrica* Floodplain Forest (CEGL006176),
- *Acer saccharinum* - *Acer negundo* / *Ageratina altissima* - Laportea canadensis - (*Elymus virginicus*) Floodplain Forest (CEGL006217), and
- *Acer saccharum* - *Fraxinus americana* / *Carpinus caroliniana* / *Podophyllum peltatum* Forest (CEGL006459).

This map class occurs in the AT corridor in the floodplains of small to large rivers from central Virginia north to the Penobscot River in Maine. The FMHF map class is rare within the corridor covering 97.0 ha (0.09% of APPA).

The FMHF map class represents maple (*Acer* spp.) and mixed hardwood dominated floodplain forest along the northern two-thirds of the AT corridor. Originally two map classes, one defined by silver maple (*Acer saccharinum*) and the other sugar maple (*Acer saccharum*), the AA process indicated consistent confusion between these two map classes necessitating the collapse into a single maple-defined floodplain forest map class. Generally dominated by a variable mix of hardwood tree species, the uniting characteristics for this map class are occurring in the active floodplain and lacking oak (*Quercus* spp.) and American sycamore (*Platanus occidentalis*). This map class presents as an open- to closed-canopy forest of mixed tree species with a variety of canopy shapes and colors, though the broadly branching (deliquescent) fluffy pink crowns characteristic of silver maple were commonly present.

The AA results indicate that FMHF was mapped well with a users' accuracy of 83% and a producers' accuracy of 92%. The AA discloses several instances where FMHF was mapped either too aggressively (to five map classes) or too conservatively (from two map classes). The errors for both the users' and producers' accuracy come from wide and rare confusion across a variety of different map classes with no consistent pattern.

Two examples of the FMHF map class showing association CEGL006217 (left), which is completely dominated by silver maple at this site, compared to association CEGL008459 (right), which is a much more mixed forest, but with obvious sugar maple in the canopy.

FPOF – Pin Oak Small River Floodplain Forest

The Pin Oak Small River Floodplain Forest (FPOF) map class represents the *Quercus palustris* - *Acer rubrum* / *Carex grayi* - *Geum canadense* Wet Forest Association (CEGL006185) in the USNVC. The forest association that makes up this map class only occurs in the AT corridor along the Wallkill River at the New York-New Jersey border and along the Housatonic River in Massachusetts. The FPOF map class is exceptionally rare within the corridor covering 4.4 ha (0.004% of APPA).

This mixed pin oak (*Quercus palustris*) - red maple (*Acer rubrum*) floodplain forest occurs on flat, wet ground on low-gradient and large rivers where impounded water can remain for an extended period. Generally, the FPOF map class presents as an open- to closed-pin oak dominated canopy, with the oaks having crisp, bright-red, and broad crowns, intermixed (generally less than 40% canopy cover) with other hardwood floodplain tree species.

The AA results indicate that FPOF was mapped with a users' accuracy of 60% (90% confidence interval of 14–106%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where FPOF was mapped too aggressively to the FXCH and FMHF map classes. Because data are scarce, reasons for these errors are difficult to determine; however, the errors likely are because of an overly aggressive application of FPOF in areas perceived to be oak-dominated floodplain forest.

An example of the FPOF map class showing the active floodplain dominated by pin oak and other floodplain hardwood tree species.

FAHS – Acidic Hardwood Swamp Forest

The Acidic Hardwood Swamp Forest (FAHS) map class represents the following six associations in the USNVC:

- *Quercus rubra - Betula alleghaniensis* / *Osmunda cinnamomea* Forest (CEGL006000),
- *Acer rubrum - Nyssa sylvatica - Betula alleghaniensis* / *Sphagnum* spp. Forest (CEGL006014),
- *Acer rubrum* / *Nemopanthus mucronatus - Vaccinium corymbosum* Forest (CEGL006220),
- *Tsuga canadensis* / *Rhododendron maximum* / *Sphagnum* spp. Forest (CEGL006279),
- *Acer rubrum* / *Alnus incana - Ilex verticillata* / *Osmunda regalis* Woodland (CEGL006395), and
- *Acer rubrum - Fraxinus* (*pennsylvanica*, *americana*) / *Lindera benzoin* / *Symplocarpus foetidus* Forest (CEGL006406).

This map class primarily represents a very diverse mix of hardwood tree swamp forests in the AT corridor from DEWA and north to the terminus in Maine. The FAHS map class is uncommon within the corridor covering 266.0 ha (0.2% of APPA).

The FAHS map class presents a complex mix of acidic swamp and wet forest resulting from map-class collapses that occurred post-mapping. The FAHS map class was initially conceived as an acidic hardwood swamp forest map class to cover all the acidic hardwood swamp forests from DEWA north. However, during the AA process consistent confusion between two additional map classes north of DEWA, representing associations CEGL006000 and CEGL006279. An additional layer of complexity results from rare occurrences of associations CEGL006014 and CEGL006406 in the FCAS map class and of CEGL006279 in the FCWH map class south of DEWA. For the confusion with FCWH, the layer of complexity is with an upland eastern hemlock (*Tsuga canadensis*)-eastern white pine (*Pinus strobus*) forests map class with rare wet pockets of the very rare CEGL006279.

The signature and landscape position of FAHS proved reliable because this map class is a basin or seepage swamp forest dominated by hardwood trees with occasional conifers. These hardwoods were some of the earliest to senesce in the project imagery; therefore, the detection of these hardwoods was reliable. Often, this map class would present as a diffuse, fuzzy canopy of yellow-, orange-, and red-crowned hardwood trees sometimes intermixed and sometimes only a single color. Conifers, especially red spruce (*Picea rubens*), were occasionally present towards the northern end of the AT corridor, but conifers were not required. The confusion with CEGL006279 likely results from dying or recently dead northern hemlock (*Tsuga canadensis*) appearing as leaf-off hardwood trees.

The AA results indicate that FAHS was mapped with a users' accuracy of 72% (90% confidence interval of 63–80%) and a producers' accuracy of 82%. The AA discloses several instances where FAHS was mapped either too aggressively (to 12 map classes) or too conservatively (from 7 map classes). None of the confusion was consistent to one map class, but broke into two major groups—confusion with upland hardwood map classes and confusion with wetland hardwood map classes.

Four examples of the FAHS map class showing associations CEGL006014 (upper left), CEGL006220 (upper right), CEGL006395 (lower left), and CEGL006406 (lower right). All examples show a hardwood swamp forest with varying degrees of canopy closure.

FCAS – Central Appalachian Swamp Forest

The Central Appalachian Swamp Forest (FCAS) map class represents the following four associations in the USNVC:

- *Acer rubrum* - *Nyssa sylvatica* - *Betula alleghaniensis* / *Sphagnum* spp. Swamp Forest (CEGL006014),
- *Acer rubrum* - *Fraxinus* (*pennsylvanica*, *americana*) / *Lindera benzoin* / *Symplocarpus foetidus* Swamp Forest (CEGL006406),
- *Acer rubrum* - *Nyssa sylvatica* / *Ilex verticillata* - Vaccinium fuscatum / *Osmunda cinnamomea* Seep Forest (CEGL007853), and
- *Acer rubrum* - *Fraxinus nigra* - *Betula alleghaniensis* / *Veratrum viride* - *Carex bromoides* Seep Forest (CEGL008416).

This map class primarily represents low-elevation hardwood tree swamp forests in the south-central portion of the AT corridor from southern Virginia north to the Delaware River in Pennsylvania. The FCAS map class is rare within the corridor covering 27.5 ha (0.02% of APPA).

The FCAS map class is defined by red maple (*Acer rubrum*) mixed with other hardwood tree species over a variety of deciduous shrub and herb species that are adapted to saturated soils. The signature and landscape position of FCAS proved reliable. The FCAS map class is generally in basin settings or in seepy areas along riparian zones at low elevation, with the highest example below 580 m elevation. The canopy generally presents as a mix of pink, yellow, orange, and white-crowned hardwood trees with diffuse canopies. Canopy closure ranged from open to closed.

The AA results indicate that FCAS was mapped with a users' accuracy of 59% (90% confidence interval of 36–81%) and a producers' accuracy of 77% (90% confidence interval of 54–100%). The AA discloses several instances where FCAS was mapped either too aggressively (to three map classes) or too conservatively (from two map classes). The errors come from confusion with hardwood upland map classes as hydrology was gaged incorrectly as wetter (users' error) or dryer (producers' error) than it was.

Four examples of the FCAS map class showing associations CEGL006014 (upper left), CEGL006406 (upper right), CEGL007853 (lower left), and CEGL008416 (lower right). All examples show an open- to closed-hardwood tree canopy over a variety of different wet shrub and herb layers.

FCMS – Red Spruce - Red Maple Acidic Swamp Forest

The Red Spruce - Red Maple Acidic Swamp Forest (FCMS) map class represents the *Picea rubens* - *Acer rubrum* / *Nemopanthus mucronatus* Swamp Forest Association (CEGL006198) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from northern New Jersey north to the terminus in Maine. The FCMS map class is rare within the corridor covering 92.0 ha (0.08% of APPA).

This mixed hardwood-hardwood swamp map class is generally in basins below 800 m elevation. Presenting as a mixed (25–75% each) red spruce (*Picea rubens*) and red maple (*Acer rubrum*) swamp with a mostly closed canopy, this swamp forest is generally short statured with purple, conical red spruce mixed with yellow and orange, fuzzy-crowned red maple. Other conifer and hardwood species can be present in FCMS, but generally have less than 25% canopy cover. This map class, while very rare and restricted in the southern parts of its range, becomes much more common and wide spread in the northern parts of its range.

The AA results indicate that FCMS was mapped with both a users' and producers' accuracy of 74% (90% confidence interval of 66–82%). The AA discloses several instances where FCMS was mapped either too aggressively (to five map classes) or too conservatively (from two map classes). The majority of the errors come from confusion among co-occurring swamp forest and woodland map classes where conifer species was misjudged, conifer tree cover was misestimated, or hardwood tree cover was misestimated.

An example of the FCMS map class showing a short-statured, moderately-closed canopy dominated by a mix of northern hardwood tree species and red spruce over wetland shrubs and herbs.

FRHS – Rich Hardwood Swamp Forest

The Rich Hardwood Swamp Forest (FRHS) map class represents the following three associations in the USNVC:

- *Acer rubrum - Fraxinus nigra* - (*Larix laricina*) / *Rhamnus alnifolia* Swamp Forest (CEGL006009),
- *Betula alleghaniensis - Acer rubrum* - (*Tsuga canadensis*, *Abies balsamea*) / *Osmunda cinnamomea* Swamp Forest (CEGL006380), and
- *Acer rubrum - Fraxinus nigra* - (*Tsuga canadensis*) / *Tiarella cordifolia* Swamp Forest (CEGL006502).

This map class primarily represents a very diverse mix of hardwood trees of enriched swamp forests in the AT corridor from southern New York north to the terminus in Maine. The FRHS map class is uncommon within the corridor covering 153.6 ha (0.1% of APPA).

The FRHS map class represents a complex mix of enriched swamp and wet forest that is generally dominated by hardwood tree species; however, FRHS can be mixed with or even dominated by conifers, especially eastern hemlock (*Tsuga canadensis*), with eastern hemlock potentially dominant from New Hampshire northward. The landscape position of FRHS proved reliable because this map class exists as a basin or seepage swamp forest. The hardwood tree species in this map class were some of the earliest to senesce in the project imagery; therefore, the detection of this species and the associated conifers was reliable. Often, this map class presents as a diffuse, fuzzy canopy of yellow-, orange- and red-crowned hardwood trees sometimes intermixed and sometimes only a single color with the dark-red to purple conifers readily visible through the hardwood crowns.

The AA results indicate that FRHS was mapped with a users' accuracy of 53% (90% confidence interval of 36–71%) and a producers' accuracy of 56% (90% confidence interval of 38–73%). The AA discloses several instances where FRHS was mapped either too aggressively (to 10 map classes) or too conservatively (from 6 map classes). The majority of the users' errors come from an overly aggressive application among co-occurring upland mixed conifer-hardwood forest map classes, whereas the majority of the producers' errors come from an overly conservative application among co-occurring hardwood swamp forest map classes.

The 90% confidence interval for both the users' and producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a lower users' and producers' accuracy for the FRHS map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Four examples of the FRHS map class showing associations CEGL006009 with an open canopy and no eastern hemlock (upper left), CEGL006009 with a closed canopy and associated conifers (upper right), CEGL006380 with codominant eastern hemlock (lower left), and CEGL006502 with sparse conifers (lower right).

WMUM – Red Maple / Upright Sedge Wet Woodland

The Red Maple / Upright Sedge Wet Woodland (WMUM) map class represents the *Acer rubrum* / *Carex stricta* - *Onoclea sensibilis* Wet Woodland Association (CEGL006119) in the USNVC. This map class represents an open hardwood woodland swamp within the AT corridor in New Jersey and southern New York, with an outlying location in west-central New Hampshire. The WMUM map class is rare within the corridor covering 13.3 ha (0.01% of APPA).

The WMUM map class represents an open swamp woodland dominated by red maple (*Acer rubrum*) over an often thick herb layer dominated by upright sedge (*Carex stricta*). Examples of this map class were initially only known in New Jersey and southern New York, but during the mapping field reconnaissance, one additional disjunct occurrence of this association was discovered within the AT corridor in west-central New Hampshire.

The hardwood tree species in this map class were some of the earliest to senesce in the project imagery; therefore, the detection of this species and the associated upright sedge was reliable. Often, this map class presents as a diffuse, fuzzy canopy of yellow and white-crowned hardwood trees over the tussock-forming upright sedge that is readily visible through the open and sparse hardwood crowns.

The AA results indicate that WMUM was mapped with a users' accuracy of 88% and a producers' accuracy of 70% (90% confidence interval of 41–99%). The AA discloses three instances where WMUM was mapped either too aggressively (to the co-occurring FAHS map class when canopy openness was overestimated) or too conservatively (from the co-occurring FAHS and FPAF map classes when canopy openness was underestimated).

An example of the WMUM map class with the open red maple canopy, already senescing, over the nearly complete cover of upright sedge.

WNWF – Northern White-cedar Wooded Fen

The Northern White-cedar Wooded Fen (WNWF) map class represents the *Thuja occidentalis* - *Abies balsamea* / *Ledum groenlandicum* / *Carex trisperma* Swamp Woodland Association (CEGL006507) in the USNVC. The swamp woodland association that makes up this map class only occurs within the AT corridor in Maine. The WNWF map class is rare within the corridor covering 16.4 ha (0.01% of APPA).

The WNWF map class occurs at low elevation (below 670 m elevation) within the AT corridor on flat, wet ground and occasionally forms extensive complexes in association with other swamp map classes in depressional wetlands. This map class only occurs in Maine. Dominated by an open to very open canopy (10–25%, generally) of arborvitae (also known as northern white-cedar, *Thuja occidentalis*), this map class will often have extensive open areas dominated by herbs and short shrubs. The northern white-cedar in this map class generally present as short and soft, tannish-purple to mauve cone-shaped crowns over a flat and pink to orange herb and shrub layer.

The AA results indicate that WNWF was mapped with a users' accuracy of 90% and a producers' accuracy of 75% (90% confidence interval of 50–100%). The AA discloses several instances where WNWF was mapped either too aggressively (to the FNWS map class) or too conservatively (from three map classes). The majority of both the users' and producers' errors come from misestimation of northern white-cedar canopy cover in co-occurring wetland forest and woodland map classes.

An example of the WNWF map class showing a short and open canopy of northern white-cedar over a diverse mix of herbs and short shrubs.

WPAF – Pasture Fen

The Pasture Fen (WPAF) map class represents the *Juniperus virginiana* / *Dasiphora fruticosa* ssp. *floribunda* / *Carex flava* - *Carex tetanica* Fen Association (CEGL006357) in the USNVC. The association that makes up this map class only occurs within the AT corridor in New Jersey and New York. The WPAF map class is exceptionally rare within the corridor covering 2.3 ha (0.002% of APPA).

The WPAF map class occurs on flat or gently sloping, seepy ground with calcareous influence. The only examples present within the AT corridor were highly degraded by past land use and had closed canopies and degraded understories; therefore, the mappers relied on the distinctive and odd presence of eastern redcedar (*Juniperus virginiana*), with a dark-purple conical crown, in an otherwise wetland setting.

The AA results indicate that WPAF was mapped with a users' accuracy of 33% (90% confidence interval of -28–95%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where WPAF was mapped too aggressively to the FXTT and WMUM map classes. These errors likely result from an overestimation of hydrologic influence, recovery from past disturbance, and canopy cover of eastern redcedar at the sites.

An example of the WPAF map class showing a degraded wetland forest with eastern redcedar in the canopy.

FAWS – Inland Atlantic White-cedar Swamp Forest

The Inland Atlantic White-cedar Swamp Forest (FAWS) map class represents the *Chamaecyparis thyoides* - (*Tsuga canadensis*, *Betula alleghaniensis*) / *Clethra alnifolia* Swamp Forest Association (CEGL006189) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor at one site in southern New York. The FAWS map class is exceptionally rare within the corridor covering 3.8 ha (0.003% of APPA).

Almost exclusively dominated by old and large Atlantic white cedar (*Chamaecyparis thyoides*) over saturated soils, this amazing forest represents a remnant of a once-common forest in the northeastern United States. Presenting a very unique signature of dark-purple evergreen crowns with a distinct rounded shape, this forest is unmistakable.

The FAWS map class was mapped very consistently. The AA process discovered no new instances of the FAWS map class, and no instances of FAWS were confused with a different map class.

An example of the FAWS map class showing the dominance of short-statured American beech with an open canopy of Atlantic white cedar allowing for a rich herb layer to develop.

FBSB – Black Spruce Open Bog Woodland

The Black Spruce Open Bog Woodland (FBSB) map class represents the *Picea mariana* / *Ledum groenlandicum* / *Carex trisperma* / *Sphagnum* spp. Open Bog Woodland Association (CEGL002485) in the USNVC. The open woodland swamp association that makes up this map class only occurs in the AT corridor north of the Connecticut River. The FBSB map class is rare within the corridor covering 40.4 ha (0.04% of APPA).

The FBSB map class is possible on any flat ground below 1,340 m elevation from the Connecticut River northward; the map class becomes more common further north along the AT corridor. This map class is defined by a short-statured open to closed canopy of black spruce (*Picea mariana*) over sphagnum moss (*Sphagnum* spp.). This map class generally presents as an open canopy of short conifers over a bog mat that has a distinctive flat orange appearance. Often, the conifers in this map class also have an open branching pattern, which suggests continually stressed tress because of poor growing conditions.

The AA results indicate that FBSB was mapped well with a users' accuracy of 67% (90% confidence interval of 49–106%) and a producers' accuracy of 100%. The AA discloses several instances where FBSB was mapped too aggressively to five map classes. Of these map classes, four are other co-occurring conifer swamps and one is a co-occurring conifer upland.

An example of the FBSB map class showing the open canopy dominated by black spruce over a floating mat of sphagnum moss and other acidophilic plants.

FHHS – Hemlock - Hardwood Swamp Forest

The Hemlock - Hardwood Swamp Forest (FHHS) map class represents the *Tsuga canadensis* - *Betula alleghaniensis* / *Ilex verticillata* / *Sphagnum* spp. Swamp Forest Association (CEGL006226) in the USNVC. The forest association that makes up this map class occurs in the AT corridor from northern New Jersey north to northcentral Massachusetts. The FHHS map class is rare within the corridor covering 25.7 ha (0.02% of APPA).

Codominated to dominated (25–75% canopy cover) by eastern hemlock (*Tsuga canadensis*) with a variable mix of northern hardwood tree species, this map class rarely occurred above 550 m elevation and was most common below 300 m elevation. The FHHS map class generally presents as a mixed hemlock-hardwood basin swamp with eastern hemlock, with dark-purple fluffy conical crowns and generally overtopped by northern hardwoods, with fuzzy crowns of white, tan, yellow, and pink. Occasionally, relying on ancillary leaf-off imagery was necessary to estimate the eastern hemlock cover in a forest because of overtopping hardwoods.

A complicating factor is that when this project initiated, eastern hemlock was healthy in the southern portion of the AT corridor. As the project progressed, however, various non-native insects nearly eliminated this species in the southern-most range of this map class, but left the species untouched in the northern portions.

The AA results indicate that FHHS was mapped with a users' accuracy of 50% (90% confidence interval of 24–76%) and a producers' accuracy of 78% (90% confidence interval of 49–106%). The AA discloses several instances where FHHS was mapped either too aggressively (to two map classes) or too conservatively (from two map classes). All the errors come with other co-occurring forest wetland map classes likely relating to both over and under estimation of hemlock canopy cover, especially with the FAHS map class.

The 90% confidence interval for the users' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower users' accuracy for the FHHS map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

An example of the FHHS map class showing association CEGL006226 with an almost entirely hemlock canopy over a wetland herbaceous layer.

FMSS – Mixed Spruce Swamp Forest & Woodland

The Mixed Spruce Swamp Forest & Woodland (FMSS) map class represents two associations in the USNVC—the *Picea mariana* / (*Vaccinium corymbosum*, *Gaylussacia baccata*) / *Sphagnum* sp. Swamp Woodland (CEGL006098) and the *Picea rubens - Abies balsamea* / *Gaultheria hispidula* / *Osmunda cinnamomea* / *Sphagnum* spp. Swamp Forest (CEGL006312). The open woodland swamp associations that make up this map class occur in the AT corridor from northern-most Connecticut north to the terminus in Maine. The FMSS map class is uncommon within the corridor covering 186.4 ha (0.2% of APPA).

The FMSS map class can occur at almost any elevation or topographic position that can support a basin that perennially holds water, but FMSS is generally below 1,100 m elevation and then is most common below 915 m elevation. Less than MMU examples of this map class are common in the AT corridor and interface broadly with the FMSF, FMFS, and FLSF map classes. Presenting as a red spruce (*Picea rubens*) dominated depression in a generally conifer-driven landscape, the spruce in these depressions were generally small and short crowned with a darker-purple cast than the surrounding upland red spruce.

The AA results indicate that FMSS was mapped with a users' accuracy of 56% (90% confidence interval of 33–78%) and a producers' accuracy of 71% (90% confidence interval of 48–95%). The AA discloses several instances where FMSS was mapped either too aggressively (to three map classes) or too conservatively (from three map classes). The errors come from confusion with conifer upland map classes because hydrology was gaged incorrectly and with other conifer wetland map classes because conifer species and dominance were misinterpreted.

The 90% confidence interval for the users' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower users' accuracy for the FMSS map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FMSS map class showing association CEGL006312, having an open canopy over mixed shrubs (left) and open canopy over mixed herbs (right). Both examples are dominated by red spruce.

FNWS – Northern White-cedar Swamp Forest

The Northern White-cedar Swamp Forest (FNWS) map class represents two associations in the USNVC—the *Thuja occidentalis* / *Sphagnum* (*girgensohnii*, *warnstorfii*) Swamp Forest (CEGL006007) and the *Thuja occidentalis* - (*Picea rubens*) / *Tiarella cordifolia* Swamp Forest (CEGL006175). The swamp associations that make up this map class occur in the AT corridor only in Maine, with one disjunct location in central Vermont. The FNWS map class is uncommon within the corridor covering 142.0 ha (0.1% of APPA).

This map class occurs at low elevation (below 550 m elevation) within the AT corridor on flat, wet ground and occasionally forms extensive complexes in association with other swamp map classes in depressional wetlands. With one confirmed exception in central Vermont, this map class only occurs in Maine. Dominated by arborvitae (also known as northern white-cedar, *Thuja occidentalis*), this map class will often have other swamp conifers and northern hardwoods associated or even codominant (less than 50% canopy cover). The northern white-cedar in this map class generally present soft, tannish-purple to mauve cone-shaped crowns that often form a completely closed canopy.

The AA results indicate that FNWS was mapped well with a users' accuracy of 94% and a producers' accuracy of 83%. The AA discloses several instances where FNWS was mapped either too aggressively (to two map classes) or too conservatively (from five map class). The majority of both the users' and producers' errors come from confusion with co-occurring conifer dominated wetland forest and woodland map classes.

Two examples of the FNWS map class showing association CEGL006007 with sphagnum (left) and the somewhat drier association CEGL006175 with more development in the shrub and herb layer (right) under a northern white-cedar canopy.

FXAH – Appalachian Ruderal Hardwood Forest

The Appalachian Ruderal Hardwood Forest (FXAH) map class represents two associations in the USNVC—the *Liriodendron tulipifera* - *Acer rubrum* - *Robinia pseudoacacia* Ruderal Forest (CEGL007219) and the *Acer rubrum* var. *rubrum* - *Betula lenta* - *Magnolia fraseri* / (*Rhododendron maximum*, *Kalmia latifolia*) Ruderal Forest (CEGL008558). The forest associations that make up this map class primarily represent ruderal hardwood forest within the AT corridor from the Springer Mountain in Georgia north to the Virginia State Highway 16 crossing. The FXAH map class is common within the corridor covering 1,017.9 ha (0.9% of APPA).

Initially, mappers attempted to map the two associations in FXAH apart based on elevation and shrub cover, with association CEGL007219 being lower elevation with deciduous shrub and association CEGL008558 being higher elevation with evergreen shrub. Because leaf-off ancillary aerial imagery was unavailable for the entire range of this map class, splitting relied upon canopy gaps in the project imagery to ensure a consistent application of the mapping concepts. However, the AA process uncovered confusion between the two associations, with the result being the FXAH map class.

The FXAH map class presents a variable signature in the project imagery that is related to the conditions present when the site was colonized by trees, but in all instances this map class is a younger, very disturbed forest. The uniting factor is that these are ruderal forest stands dominated by a variety of hardwood tree species and not dominated (less than 50% canopy cover) by tuliptree (*Liriodendron tulipifera*). In general, the hardwoods in this map class present as small, short fuzzy crowns of white, yellow, orange, and pink (and occasionally leafless) intermixed with tuliptree with a pink (sometimes white, orange, or red) conical crown. Additionally, this map class can have associated (less than 25% canopy cover, each) ruderal oak (*Quercus* spp.) or ruderal pine (*Pinus* spp.), which provides a further level of confusion and complexity.

Potentially located on any landscape position below 1,520 m elevation, this map class occurred broadly across disturbed southern portion of the AT corridor.

The AA results indicate that FXAH was mapped with a users' accuracy of 85% and a producers' accuracy of 78% (90% confidence interval of 68–87%). The AA discloses several instances where FXAH was mapped either too aggressively (to six map classes) or too conservatively (from eight map classes). The majority of the users' errors come from an overly aggressive application among co-occurring oak forest map classes, while the producers' errors come from an overly conservative view of how much non-ruderal forests had recovered and an overly conservative estimate of the amount of hardwood tree cover in a ruderal shrub map class (SXBG).

Two examples of the FXAH map class showing the mixed ruderal hardwood forest canopy over sparse herb and deciduous shrub of association CEGL007219 (left) versus the mixed ruderal hardwood forest canopy over dense evergreen shrub of association CEGL008558 (right).

FXBL – Ruderal Black Locust Forest

The Ruderal Black Locust Forest (FXBL) map class represents the *Robinia pseudoacacia* Ruderal Forest Association (CEGL007279) in the USNVC. The forest association that makes up this map class only occurs within the AT corridor in the southern most portion and is generally associated with old agricultural areas. The FXBL map class is exceptionally rare within the corridor covering 2.5 ha (0.002% of APPA).

Dominated by a monotypic stand of black locust (*Robinia pseudoacacia*), the FXBL map class occurs on the borders of old fields where black locust is readily able to spread through root sprouting. This characteristic presented the mappers with a unique signature that appears as a mound of identical trees, with the tallest trees in the middle and progressively shorter trees as the edge of the stand is approached. Additionally, black locust has a unique, light and fuzzy signature caused by the small, diffuse leaves on the trees that senesce early in the fall. Black locust is very common in disturbed forests in the southern portion of the AT corridor and numerous instances of black locust clones existed in the area. However, only two black locust clones were large enough to map.

The AA results indicate that FXBL was mapped with both a users' and producers' accuracy of 80%. The AA discloses two instances where FXBL was mapped either too aggressively (to the FXAH map class when black locust canopy cover was overestimated) or too conservatively (from the SXBG map class when black locust canopy cover was underestimated).

An example of the FXBL map class showing the characteristically diffuse canopy of black locust over a ruderal herb layer.

FXCH – Central Appalachian Ruderal Hardwood Forest

The Central Appalachian Ruderal Hardwood Forest (FXCH) map class represents the following four associations in the USNVC:

- *Prunus serotina - Liriodendron tulipifera - Acer rubrum - Fraxinus americana* - (*Robinia pseudoacacia*) Ruderal Forest (CEGL006599),
- *Ailanthus altissima* Ruderal Forest (CEGL007191),
- *Juglans nigra* / *Verbesina alternifolia* Ruderal Forest (CEGL007879), and
- *Betula lenta - Acer rubrum* / *Lycopodium annotinum - Dennstaedtia punctilobula* Ruderal Forest (CEGL008503).

The forest associations that make up this map class primarily represents ruderal hardwood forest within the AT corridor from the Virginia State Highway 16 crossing north to the Connecticut-Massachusetts border. The FXCH map class is very common within the corridor covering 6,744.5 ha (6.1% of APPA).

The FXCH map class presents one of the most variable signature in the project imagery. This signature is related to the highly variable conditions present when the site was recolonized by trees, but in all instances this map class is a very young, very disturbed forest. The uniting factor is that these are ruderal forest stands dominated by a variety of hardwood tree species and not dominated (less than 50% canopy cover) by tuliptree (*Liriodendron tulipifera*). In general, the hardwoods in this map class present as small, short fuzzy crowns of white, yellow, orange, and pink (and occasionally leafless) intermixed with tuliptree with a pink (sometimes white, orange, or red) conical crown. Additionally, this map class can have associated (less than 25% canopy cover, each) ruderal oak (*Quercus* spp.) or ruderal pine (*Pinus* spp.), which provides a further level of confusion and complexity.

Potentially located on any landscape position below 1,340 m elevation, this map class is broadly disturbed across the central portion of the AT corridor.

The AA results indicate that FXCH was mapped with a users' accuracy of 58% (90% confidence interval of 40–76%) and a producers' accuracy of 33% (90% confidence interval of 20–46%). The AA discloses many instances where FXCH was mapped either too aggressively (to 8 map classes) or too conservatively (from 15 map classes). Although both broad and deep, the errors in this map class represent a systemic difference in how this ruderal forest map class appeared in the project imagery versus how the map class appeared on the ground over this portion of the AT corridor. Lacking further investigation, these errors, while many, represent too variable a group of map classes to provide clear insight as to why the FXCH map class was mapped so poorly.

The 90% confidence interval for both the users' and producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a much lower users' and producers' accuracy for the FXCH map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Four examples of the FXCH map class showing associations CEGL006599 (upper left), CEGL007191 (upper right), CEGL007879 (lower left), and CEGL008503 (lower right). All examples show a highly ruderal canopy over a highly ruderal shrub and herb layer with evidence of active or recent disturbance.

FXHO – Southern & Central Appalachian Ruderal Hawthorn Forest

The Southern & Central Appalachian Ruderal Hawthorn Forest (FXHO) map class represents the *Crataegus punctata* - *Crataegus flabellata* Ruderal Forest Association (CEGL004184) in the USNVC. The forest association that makes up this map class occurs within the southern one-half of the AT corridor, but is only mapped in the southern-most portion because no mappable areas were discovered further north. Generally associated with old agricultural areas, this ruderal forest appears to be the result of historic grazing and fire suppression in high-elevation oak forests. The FXHO map class is rare within the corridor covering 17.7 ha (0.02% of APPA).

Dominated by a monotypic stand of hawthorn (*Crataegus* spp.), the FXHO map class does occasionally have a more mixed composition that includes some northern red oak (*Quercus rubra*) and yellow buckeye (*Aesculus flava*). Occurring at high elevation near or above 1,400 m, FXHO is often closely associated with the FROH map class. The appearance of this map class is very distinct. The hawthorns are almost always completely senesced, presenting circular, short, gray mounds or a patchwork of fuzzy, gray short-statured trees.

The FXHO map class was mapped very consistently. The AA process discovered no new instances of the FXHO map class, and no instances of FXHO were confused with a different map class.

Two examples of the FXHO map class showing the characteristic hawthorn canopy completely closed (left) and when hawthorn presents a more woodland or “orchard” appearance (right).

FXNH – Ruderal Northern Hardwood Forest & Woodland

The Ruderal Northern Hardwood Forest & Woodland (FXNH) map class represents two associations in the USNVC—the *Populus* (*tremuloides*, *grandidentata*) - *Betula* (*populifolia*, *papyrifera*) Ruderal Woodland (CEGL006303) and the *Acer saccharum* - *Betula* spp. - *Fagus grandifolia* Ruderal Forest (CEGL006628). The forest associations that make up this map class primarily represents ruderal northern hardwood forest within the AT corridor from the Connecticut-Massachusetts border north to the terminus in Maine. The FXNH map class is very common within the corridor covering 3,177.6 ha (2.9% of APPA).

The FXNH map class presents a variable signature in the project imagery. This signature is related to the conditions present when the site was recolonized by trees, but in all instances this map class is a younger forest. The uniting factor is that these are ruderal forest stands dominated by a variety of northern hardwood tree species. In general, the northern hardwoods in this map class present as small- to medium-fuzzy crowns of white, yellow, orange, and pink, though the trees are occasionally leafless. Additionally, this map class can have associated (less than 25% canopy cover, each) young northern red oak (*Quercus* rubra) or young conifers that include eastern hemlock (*Tsuga canadensis*), eastern white pine (*Pinus strobus*), red spruce (*Picea rubens*), and balsam fir (*Abies balsamea*), which provides a further level of confusion and complexity. The most difficult aspect of this map class was splitting it from the identical, yet non-ruderal, FNAH. This splitting was accomplished using canopy closure and age in combination with landscape cues such as remnant logging roads and log landing areas, which tend to persist on the landscape for a few decades.

Potentially located on any landscape position below 1,000 m elevation and then only common below 760 m elevation, the FXNH map class occurs broadly across disturbed landscapes. The map class, however, is most common in association with forestry practices.

The AA results indicate that FXNH was mapped with a users' accuracy of 94% and producers' accuracy of 61% (90% confidence interval of 49–74%). The AA discloses several instances where FXNH was mapped either too aggressively (to 2 map classes) or too conservatively (from 12 map classes). The users' errors come from an overly aggressive application among co-occurring non-ruderal hardwood forest map classes. The producers' errors are spread widely across the co-occurring non-ruderal oak, hardwood, and wetland forest map classes, indicating an overly conservative application of this ruderal forest map class across its range.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the FXNH map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the FXNH map class showing associations CEGL006303 (left) and CEGL006628 (right). Both examples show a ruderal canopy over a native, if young, shrub and herb layer with evidence of active or recent disturbance.

FXOM – Northeastern Ruderal Oak - Red Maple Forest

The Northeastern Ruderal Oak - Red Maple Forest (FXOM) map class represents the *Quercus rubra - Acer rubrum - Betula* spp. - *Pinus strobus* Ruderal Forest Association (CEGL006506) in the USNVC. The forest association that makes up this map class primarily represents ruderal oak forest within the AT corridor from the Connecticut-Massachusetts border north to the terminus in Maine. The FXOM map class is very common within the corridor covering 938.9 ha (0.8% of APPA).

The FXOM map class presents a variable signature in the project imagery. This signature is related to the conditions present when the site was recolonized by trees, but in all instances this map class is a younger, more disturbed forest. The uniting factor is that these are ruderal forest stands codominated or dominated by young northern red oak (*Quercus rubra*), with crisp, bright-red or pink crowns that vary from small and compact on the youngest trees to large and broad on the oldest trees. Associated to codominant (25–50% canopy cover, each) with the northern red oak are young northern hardwood tree species, with small- to medium-fuzzy crowns of white, yellow, orange, and pink (and occasionally leafless) and eastern white pine (*Pinus strobus*), with dark-purple, broadly branching crowns.

The most difficult aspect of this map class was splitting it from the potentially identical, yet non-ruderal, FCNO. This splitting was accomplished using canopy closure and age in combination with landscape cues such as remnant logging roads and log landing areas, which tend to persist on the landscape for a few decades, and the amount of northern hardwood tree species and eastern white pine in the canopy, which tend to be sparse to absent in FNCO.

Only present below 700 m elevation within the AT corridor and then only common below 490 m elevation, this map class favors warm slopes and lowlands in the southern range of the map class and becomes restricted to the warm slopes and lowlands in the northern range of the map class.

The AA results indicate that FXOM was mapped with a users' accuracy of 66% (90% confidence interval of 49–82%) and a producers' accuracy of 79% (90% confidence interval of 63–95%). The AA discloses several instances where FXOM was mapped either too aggressively (to five map classes) or too conservatively (from five map classes). The users' error primarily comes from an overly aggressive estimation of oak canopy cover in ruderal hardwood forest map classes, whereas the producers' error is too widely spread and sparse to determine a consistent conclusion.

Two examples of the FXOM map class with both showing association CEGL006506 as a very young stand probably less than 30-years old (left) versus a more mature stand probably greater than 60-years old (right).

FXTT – Ruderal Tuliptree Forest

The Ruderal Tuliptree Forest (FXTT) map class represents two associations in the USNVC—the *Liriodendron tulipifera* / (*Cercis canadensis*) / (*Lindera benzoin*) Ruderal Forest (CEGL007220) and the *Liriodendron tulipifera* - *Quercus* spp. Ruderal Forest (CEGL007221). The forest associations that make up this map class occur within the AT corridor from Springer Mountain in Georgia to north of the Hudson River crossing in New York; however, the associations are most common south of Pennsylvania. The FXTT map class is common within the corridor covering 2,200.3 ha (2.0% of APPA).

The FXTT map class presents a variable signature in the project imagery that is related to the conditions present when the site was colonized by tuliptree (*Liriodendron tulipifera*). This signature results in stands that range from even-aged greater than 200-year old groves of tuliptree to young, pole-stage mixed-species stands dominated by tuliptree. The uniting factor is that these stands are ruderal forest stands dominated by tuliptree. The signature and landscape position of tuliptree proved difficult to concisely constrain, but in general, tuliptree presented as a pink (sometimes white, orange, or red) conical (except in very large individuals where the crown becomes broken) tree. For FXTT this often meant an extensive area of pink conical trees all the same height and size. Additionally, FXTT was mapped primarily at lower elevations with the majority of sites less than 1,100 m elevation.

The AA results indicate that FXTT was mapped with a users' accuracy of 70% (90% confidence interval of 60–79%) and a producers' accuracy of 84% (90% confidence interval of 75–93%). The AA discloses several instances where FXTT was mapped either too aggressively (to 10 map classes) or too conservatively (from 7 map classes). The users' error primarily comes from an overly aggressive estimation of tuliptree canopy cover in co-occurring oak forest map classes, with a secondary cause of overly aggressive application among co-occurring ruderal mixed forest map classes. The producers' error is widely spread, but indicates a somewhat conservative estimation of both the cover of tuliptree and the degree of disturbance on the landscape.

Two examples of the FXTT map class showing a more mixed canopy with some shrub and herb layer (left) versus a more monotypic tuliptree canopy with little shrub and herb layer development (right).

FXER – Northeastern Ruderal Red-cedar Forest

The Northeastern Ruderal Red-cedar Forest (FXER) map class represents the *Juniperus virginiana* Ruderal Forest Association (CEGL006024) in the USNVC. The forest association that makes up this map class occurs within the AT corridor from southern Virginia north to northern Connecticut and is generally associated with old agricultural areas. The FXER map class is rare within the corridor covering 60.3 ha (0.05% of APPA).

Dominated or codominated by stands of eastern redcedar (*Juniperus virginiana*), the FXER map class occurs in abandoned fields likely subject to past grazing and can have an open to closed canopy (25–100% canopy cover). This characteristic presented the mappers with a unique signature of short, dense, dark-purple conical conifers often intermixed with sparse hardwood tree species and ruderal deciduous shrubs.

The AA results indicate that FXER was mapped with a users' accuracy of 70% (90% confidence interval of 54–87%) and a producers' accuracy of 100%. The AA discloses three instances where FXER was mapped too aggressively, but the majority of these instances are limited to a single map class, FXVP. These results are from an overly aggressive estimation of eastern redcedar canopy cover in the FXVP map class and from the potential misidentification of Virginia pine (*Pinus virginiana*) and eastern redcedar when Virginia pine canopy cover approached less than 60%.

An example of the FXER map class showing an open canopy of eastern redcedar over a ruderal herb and shrub layer.

FXSF – Successional Mixed Spruce - Fir - Hardwood Forest

The Successional Mixed Spruce - Fir - Hardwood Forest (FXSF) map class represents the *Picea rubens* - *Abies balsamea* - *Betula* spp. - *Acer rubrum* Forest Association (CEGL006505) in the USNVC. The forest association that makes up this map class occurs within the AT corridor from central Massachusetts north to the terminus, but is only common north of the White Mountains in New Hampshire. The FXSF map class is common within the corridor covering 2,250.0 ha (2.0% of APPA).

Dominated (greater than 50% canopy cover, together) by red spruce (*Picea rubens*) and balsam fir (*Abies balsamea*), this map class often approaches 100% conifer canopy, but can have associated or codominant (less than 50% canopy cover) northern hardwood tree species. South of the Connecticut River, this map class is confined to 550–790 m elevation, but this elevation profile widens north of the Connecticut River to –180–1,070 m elevation. This map class generally presents as red spruce, with dark-red to purple pointy cones of similar size and height and as balsam fir, with red and rounded crowns, interspersed with the fuzzy white, yellow, and pink crowns of northern hardwood tree species.

This canopy composition was potentially identical to the non-ruderal FTHS, FLSF, and FMSF map classes, so care was taken to split the ruderal FXSF out. This splitting was accomplished using canopy closure and age in combination with landscape cues such as remnant logging roads and log landing areas, which tend to persist on the landscape for a few decades, and the amount of northern hardwood tree species in the canopy, which tend to be more common in FXSF.

The AA results indicate that FXSF was mapped with a users' accuracy of 77% (90% confidence interval of 64–91%) and a producers' accuracy of 73% (90% confidence interval of 59–87%). The AA discloses several instances where FXSF was mapped either too aggressively (to six map classes) or too conservatively (from six map classes). Both the users' and producers' errors primarily comes from slight confusion between what is a ruderal forest and what is not a ruderal forest, with the errors widely spread among the co-occurring red spruce and balsam fir forest map classes.

Two examples of the FXSF map class showing a very young version (left) and a more mature version (right).

FXVP – Ruderal Virginia Pine Forest

The Ruderal Virginia Pine Forest (FXVP) map class represents the *Pinus virginiana* Ruderal Forest Association (CEGL002591) in the USNVC. The forest association that makes up this map class occurs within the AT corridor from Georgia north to northeastern Pennsylvania. The FXVP map class is uncommon within the corridor covering 149.5 ha (0.1% of APPA).

Dominated or codominated by stands of Virginia pine (*Pinus virginiana*), the FXVP map class occurs in areas likely subject to severe fire, clearcutting, or some other disturbance that allowed a single clade of Virginia pine to regenerate over a significant area. This characteristic presented the mappers with a unique signature of a dense, single-aged and single-height, dark-purple flat-crowned conifer canopy, often intermixed (generally less than 25% canopy cover, each) with sparse hardwood tree species with fluffy white, yellow, and orange crowns and dry-site oaks with crisp, narrow, tan and pink crowns.

The AA results indicate that FXVP was mapped with a users' accuracy of 71% (90% confidence interval of 56–86%) and a producers' accuracy of 73% (90% confidence interval of 58–88%). The AA discloses several instances where FXVP was mapped either too aggressively (to six map classes) or too conservatively (from three map classes). The users' error primarily comes from an overly aggressive estimation of the degree of disturbance in non-ruderal Virginia pine – mixed dry pine woodland map classes, while the producers' error primarily comes from an overly conservative estimation of Virginia pine cover in the co-occurring FXER map class.

An example of the FXVP map class showing a younger, single-age canopy of Virginia pine.

FXWP – Ruderal Eastern White Pine Forest

The Ruderal Eastern White Pine Forest (FXWP) map class represents the *Pinus strobus* Ruderal Forest Association (CEGL007944) in the USNVC. The forest association that makes up this map class occurs throughout the AT corridor. The FXWP map class is common within the corridor covering 888.8 ha (0.8% of APPA).

The FXWP map class ranges from codominance to complete dominance of eastern white pine (*Pinus strobus*) of a ruderal, but non-planted, nature. Generally, this map class presents as even-aged stands of mature eastern white pine covering a subcanopy of oaks and hardwoods because of the faster growth rate and taller stature of eastern white pine. Mature eastern white pine are readily distinguishable in the project imagery because of their large size and distinct branching pattern of perpendicular to the trunk branches.

The AA results indicate that FXWP was mapped with a users' accuracy of 91% and a producers' accuracy of 76% (90% confidence interval of 63–88%). The AA discloses several instances where FXWP was mapped either too aggressively (to two map classes) or too conservatively (from six map classes). The users' error primarily comes from an overly aggressive estimation disturbance in co-occurring non-ruderal eastern white pine-mixed hardwood forest map classes, while the producers' error primarily comes from an overly conservative estimation of both the cover of eastern white pine and the degree of disturbance in co-occurring mixed conifer forest map classes.

Two examples of the FXWP map class showing both a more monotypic even-aged eastern white pine canopy (left) versus a more mixed canopy still dominated by ruderal eastern white pine (right).

HAWM – Alpine Herbaceous Wet Meadow

The Alpine Herbaceous Wet Meadow (HAWM) map class represents the *Trichophorum caespitosum* - *Carex scirpoidea* - *Carex bigelowii* Alpine Snowbed Association (CEGL006424) in the USNVC. This wet herbaceous alpine map class occurs within the AT corridor in the alpine zone in New Hampshire and Maine. The HAWM map class is exceptionally rare within the corridor covering 6.3 ha (0.006% of APPA).

The HAWM map class is defined by a very short and dense herbaceous layer on saturated ground with less than 25% shrub cover in the alpine zone (above 1,280 m elevation for this map class). The HAWM map class presents as a lumpy grey, tan, and pink herbaceous field with evident soil saturation on generally flat ground intermixed with areas of bleached-out sparsely vegetated rock and small patches of darker shrub heath.

The AA results indicate that HAWM was mapped well with a users' accuracy of 100% and a producers' accuracy of 83%. The AA discloses one instance where HAWM was mapped too conservatively from the SMCK map class where alpine herb cover and hydrologic influence were both underestimated.

An example of the HAWM map class on Mount Washington in New Hampshire showing the typical combination of mixed wet herbaceous areas and shallow open water.

HBAM – Bigelow's Sedge Alpine Meadow

The Bigelow's Sedge Alpine Meadow (HBAM) map class represents the *Carex bigelowii* Alpine Meadow Association (CEGL006081) in the USNVC. This herbaceous alpine map class occurs within the AT corridor in the alpine zone in New Hampshire and Maine. The HBAM map class is rare within the corridor covering 33.9 ha (0.03% of APPA).

The HBAM map class is defined by a very short and flat herbaceous layer on dry ground with less than 25% shrub cover in the alpine zone (above 1,520 m elevation for this map class). The HBAM map class presents as a flat light- to dark-tan herbaceous field on dry sites with intermixed areas of bleached-out sparsely vegetated rock and small patches of darker shrub heath and krummholz.

The AA results indicate that HBAM was mapped with a users' accuracy of 63% (90% confidence interval of 42–84%) and a producers' accuracy of 100%. The AA discloses two instances where HBAM was mapped too aggressively to the SAHM and VAFB map classes. The majority of the users' errors come from an overly aggressive estimation of alpine herb cover in the alpine shrub map class SAHM.

An example of the HBAM map class on Mount Washington in New Hampshire showing the typical combination of mixed sedge-dominated uplands with interspersed areas of sparsely vegetated rock.

HMSF – Northern Appalachian Alpine Bulrush Cliff

The Northern Appalachian Alpine Bulrush Cliff (HMSF) map class represents the *Trichophorum caespitosum* - *Calamagrostis pickeringii* Alpine Snowbed Association (CEGL006423) in the USNVC. This wet herbaceous alpine map class occurs within the AT corridor only in the alpine zone in New Hampshire and Maine. The HMSF map class is exceptionally rare within APPA covering 3.5 ha (0.003% of APPA).

The HMSF map class is defined by a very short and dense herbaceous layer on saturated ground with less than 25% shrub cover on steep to very steep slopes in the alpine zone (above 1,370 m elevation for this map class). This map class presents as a very flat, tan to ruddy-brown herbaceous layer on steep slopes intermixed with areas of bleached-out, sparsely vegetated rock and small patches of darker shrub heath.

The AA results indicate that HMSF was mapped with a users' accuracy of 50% (90% confidence interval of -33–133%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where HMSF was mapped too aggressively to the SAHM map class where wetland herbaceous cover and hydrology were overestimated.

An example of the HMSF map class on Mount Katahdin in Maine showing the wet herbaceous alpine fen on a very steep slope.

SAHM – Alpine Heath Meadow

The Alpine Heath Meadow (SAHM) map class represents two associations in the USNVC—the *Vaccinium uliginosum - Harrimanella hypnoides - Loiseleuria procumbens* Dwarf-shrubland (CEGL006155) and the *Vaccinium uliginosum - Rhododendron lapponicum* / *Juncus trifidus* Dwarf-shrubland (CEGL006298). This mixed evergreen alpine dwarf-shrub map class occurs within the AT corridor only in the alpine zone in New Hampshire and Maine. The SAHM map class is uncommon within the corridor covering 191.0 ha (0.2% of APPA).

The SAHM map class is defined by a very short and dense canopy of evergreen alpine dwarf shrubs and trees only a few centimeters tall on rocky terrain in the alpine zone. The alpine zone is not a specific elevation cut for this map class, but varies by mountain range and topographic position with the zone starting near 920 m elevation on some ranges and near 1,280 m elevation on other ranges. The SAHM map class presents as a very flat and compact shrubland of mixed grey, tan, and dull pink with large areas of bleached-out sparsely vegetated rock and small patches of dark-purple conifer krummholz intermixed.

The AA results indicate that SAHM was mapped well with a users' accuracy of 94% and a producers' accuracy of 82%. The AA discloses several instances where SAHM was mapped either too aggressively (to two map classes) or too conservatively (from two map classes). The users' error is too widely spread and sparse to determine a consistent conclusion, while the producers' error primarily comes from an overly conservative estimation of shrub cover in the HBAM map class.

An example of the SAHM map class on Mount Washington in New Hampshire showing association CEGL006155 intermixed with association CEGL006298.

SCTH – Cold Air Talus Heathland

The Cold Air Talus Heathland (SCTH) map class represents the *Picea mariana* / *Ledum groenlandicum* - *Empetrum nigrum* / *Cladina* spp. Dwarf-shrubland Association (CEGL006268) in the USNVC. This mixed evergreen alpine dwarf-shrub map class occurs within the AT corridor only in the alpine zone at one location in the White Mountains of New Hampshire. The SCTH map class is exceptionally rare within the corridor covering 1.6 ha (0.002% of APPA).

Based on vegetation plot data and conversations with ecologists, the SCTH map class was a "map known locations" map class, which means that only confirmed locations were mapped. For SCTH, that means two polygons were mapped next to each other in the White Mountains of New Hampshire on a steeply sloping, sheltered, talus slope. This location was supported by a vegetation plot prior to mapping and, because of its remoteness, was not visited during the mapping field reconnaissance.

The SCTH map class presents as a very flat, pink and red shrubland intermixed with large areas of bleached-out talus and small patches of dark-purple conifer krummholz.

The SCTH map class was mapped very consistently. The AA process discovered no new instances of the SCTH map class, and no instances of SCTH were confused with a different map class.

An example of the SCTH map class showing a very steep slope dominated by dwarf shrubs and trees over talus.

SSSB – Subalpine Slope Bog

The Subalpine Slope Bog (SSSB) map class represents the *Kalmia angustifolia* - *Chamaedaphne calyculata* / *Rubus chamaemorus* / *Cladina* spp. Dwarf-shrubland Association (CEGL006425) in the USNVC. This mixed evergreen dwarf-shrub swamp map class occurs within the AT corridor only in the alpine zone in New Hampshire and Maine. The SSSB map class is exceptionally rare within the corridor covering 0.8 ha (0.0007% of APPA).

The SSSB map class is defined by a very short canopy of primarily evergreen shrubs rooting on a saturated mat of sphagnum (*Sphagnum* spp.) moss. Present only in seepage areas on slopes in the alpine zone above 1,040 m elevation, this map class presents a characteristic flat orange to pink signature on slopes otherwise dominated by conifers.

The SSSB map class was mapped very consistently. The AA process discovered no new instances of the SSSB map class, and no instances of SSSB were confused with a different map class.

An example of the SSSB map class showing a wet slope surrounded by a conifer forest in the alpine zone.

SWAR – Windswept Alpine Ridge

The Windswept Alpine Ridge (SWAR) map class represents the *Diapensia lapponica* Dwarf-shrubland Association (CEGL006322) in the USNVC. This mixed evergreen alpine dwarf-shrub map class only occurs within the AT corridor in New Hampshire and Maine in the alpine zone. The SWAR map class is exceptionally rare within the corridor covering 5.3 ha (0.005% of APPA).

This map class is defined by an exceptionally short and dense covering of the evergreen pincushion plant (*Diapensia lapponica*), which is never greater than a few centimeters tall, on very exposed and rocky topographic positions above 1,340 m elevation. The SWAR map class presents as a bright-pink to red, nearly flat vegetation draping over the terrain on exposed ridge lines. Generally, the area consists of significant areas of open ground and rock and, occasionally, some taller patches of other alpine shrub map classes.

The SWAR map class was mapped very consistently. The AA process discovered no new instances of the SWAR map class, and no instances of SWAR were confused with a different map class.

An example of the SWAR map class on Mount Washington in New Hampshire showing association CEGL006322 intermixed with association CEGL006298.

SWEB – Black Crowberry Wet Alpine Bog

The Black Crowberry Wet Alpine Bog (SWEB) map class represents the *Empetrum nigrum* - *Vaccinium uliginosum* - *Vaccinium oxycoccos* / *Rubus chamaemorus* Dwarf-shrubland Association (CEGL006140) in the USNVC. This mixed evergreen dwarf-shrub swamp map class only occurs within the AT corridor in New Hampshire and Maine in acidic basin settings at high elevation. The SWEB map class is exceptionally rare within the corridor covering 1.8 ha (0.002% of APPA).

The SWEB map class is defined by a very short and dense canopy of primarily evergreen shrubs rooting on a saturated mat of sphagnum (*Sphagnum* spp.) moss. Present only in seepage basins above 1,000 m elevation, this map class presents a characteristic flat to lumpy orange signature with areas of open water often present and an obvious rise in the elevation of the vegetation towards the edge of the basin.

The AA results indicate that SWEB was mapped well with a users' accuracy of 100% and a producers' accuracy of 83%. The AA discloses one instance where SWEB was mapped too conservatively from the SDBF map class because of a misinterpretation of which dwarf shrub species dominated the bog.

An example of the SWEB map class on Saddleback Mountain in Maine.

HALD – Appalachian Low-Elevation Granitic Dome

The Appalachian Low-Elevation Granitic Dome (HALD) map class represents the *Selaginella rupestris* - *Schizachyrium scoparium* - *Hypericum gentianoides* - *Bulbostylis capillaris* Herbaceous Vegetation Association (CEGL007690) in the USNVC. This herbaceous association only occurs within the AT corridor in the southern most portion on rocky, granitic dome; despite the name, this map class may occur anywhere below 1,350 m elevation. The HALD map class is exceptionally rare within the corridor covering 5.3 ha (0.005% of APPA).

This mixed-species herbaceous map class is always associated with very thin (to absent) soils over monolithic granite on a slope too steep to allow substantial soil formation. These conditions prevented the development of much vegetation beyond small patches, with cracks or depressions surrounded by lichens. This combination of characteristics presented mappers with a unique signature of very steep, very sparsely-vegetated areas, with a generally washed-out, overexposed signature because of the reflectance of the rocky surfaces.

The HALD map class was mapped very consistently. The AA process discovered no new instances of the HALD map class, and no instances of HALD were confused with a different map class.

Two examples of the HALD map class showing a moderately well-vegetated site (left) and a much more sparsely-vegetated site (right).

HBGF – Graminoid & Forb Bald

The Graminoid & Forb Bald (HBGF) map class represents four associations in the USNVC:

- *Carex pensylvanica* Grassland (CEGL004094),
- *Danthonia compressa* - (*Sibbaldiopsis tridentata*) Grassland (CEGL004242),
- *Saxifraga michauxii* - *Carex misera* - *Oclemena acuminata* - *Solidago glomerata* Grassland (CEGL004277), and
- *Saxifraga michauxii* - *Carex misera* - *Danthonia spicata* - *Krigia montana* Grassland (CEGL004279).

The herbaceous associations that make up this map class occur only within the AT corridor in the southern portion at the highest elevations and are limited to three natural balds—the Whitetop Mountain area (southern Virginia), the Carvers Gap - Roan Mountain area (Tennessee/North Carolina), and Big Bald (Tennessee/North Carolina). The herbaceous areas at Grayson Highlands State Park (Virginia) present a special case because these areas mimic the species in the HBGF map class associations, but the areas are specifically anthropogenic in origin. The HBGF map class is rare within the corridor covering 65.4 ha (0.06% of APPA).

The HBGF map class is highly constrained by elevation and land-use history. This map class naturally occurs only at the highest elevations, known only to area above 1,500 m elevation. Project ecologists put the additional constraint on this map class of only occurring at the three natural balds locations within the AT corridor to remove potential confusion with all other high-elevation herbaceous vegetation. Generally, the HBGF map class favored southern exposures at the top of the highest peaks within the corridor and appeared as tan to light-pink, very short-statured herbaceous vegetation. Small patches of shrubs were common within this map class, especially in areas lacking recent management.

The AA results indicate that HBGF was mapped well with both a users' and producers' accuracy of 97%. The AA discloses three instances where HBGF was mapped either too aggressively (to the SBAB map class) or too conservatively (from the SHBT map class). The errors come from a misestimation of herb cover in the co-occurring SBAB (overestimation) and SHBT (underestimation) map class.

Four examples of the HBGF map class showing the general interface between the highest-elevation forest and herbaceous vegetation, along with the active-management needed to maintain these associations (upper left), the Appalachian Trail heading through the bald on Whitetop Mountain in Virginia (upper right), the potential for shrubs (here, blackberry species [*Rubus* spp.]) mixing in with the herbaceous vegetation (lower left), and a close-up of the vegetation on Whitetop Mountain in Virginia (lower right).

HCAB – Central Appalachian Wooded Herbaceous Barrens

The Central Appalachian Wooded Herbaceous Barrens (HCAB) map class represents two associations in the USNVC—the *Juniperus virginiana* - *Fraxinus americana* / *Carex pensylvanica* - *Cheilanthes lanosa* Open Woodland (CEGL006037) and the *Fraxinus americana* / *Physocarpus opulifolius* / *Carex pensylvanica* - *Allium cernuum* - (*Phacelia dubia*) Wooded Grassland (CEGL008529). This herbaceous map class exists only within the AT corridor in central Virginia. The HCAB map class is rare within the corridor covering 15.5 ha (0.01% of APPA).

This map class is defined by areas of open sloping bedrock with sparse herbaceous vegetation and even sparser woody vegetation. Generally, the HCAB map class presents as open exposed bedrock slopes on warm aspects below 1,070 m elevation, with patches of brown and grey vegetation following cracks in the rock and the occasional pink shrub.

The AA results indicate that HCAB was mapped well with a users' accuracy of 90% and a producers' accuracy of 100%. The AA discloses one instance where HCAB was mapped too aggressively to the WMDP map class where exposed rock and herbaceous cover were overestimated.

An example of the HCAB map class showing the exposed bedrock with intermixed patches of primarily herbaceous vegetation (association CEGL008529 in this instance).

HHGB – High-Elevation Greenstone Barrens

The High-Elevation Greenstone Barrens (HHGB) map class represents the *Diervilla lonicera* - *Solidago simplex* var. *randii* - *Deschampsia flexuosa* - *Hylotelephium telephioides* - *Saxifraga michauxii* Grassland Association (CEGL008536) in the USNVC. This herbaceous barrens map class occurs in the AT corridor only in Virginia on greenstone bedrock (Catoctin Formation). The HHGB map class is exceptionally rare within the corridor covering 3.8 ha (0.003% of APPA).

The HHGB map class is defined by a very short and flat herbaceous layer on very thin soils over greenstone bedrock, with less than 25% shrub cover above 880 m elevation on dry ground. This map class presents as a primarily rock-dominated area with patches of short, light-tan and pink herbaceous vegetation with intermixed sparse shrubs and scrubby oaks (*Quercus* spp.).

The AA results indicate that HHGB was mapped with a users' accuracy of 60% (90% confidence interval of 14–106%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where HHGB was mapped too aggressively to the WMDP and SXCN map classes where herbaceous cover and the presence of greenstone were overestimated.

An example of the HHGB map class showing the very short herbaceous vegetation over the greenstone bedrock.

HLMO – Low- to Mid-Elevation Little Bluestem - Poverty Oatgrass Outcrop Opening

The Low- to Mid-Elevation Little Bluestem - Poverty Oatgrass Outcrop Opening (HLMO) map class represents the *Schizachyrium scoparium* - *Danthonia spicata* - *Carex pensylvanica* / *Cladonia* spp. Grassland Association (CEGL006544) in the USNVC. This herbaceous openings map class occurs in the AT corridor from New Jersey north into Vermont. The HLMO map class is exceptionally rare within the corridor covering 9.6 ha (0.009% of APPA).

The HLMO map class is defined by a very short and flat herbaceous layer on thin soils or in the cracks of acidic bedrock with less than 25% shrub cover. Often on warm aspects, this map class is also typically located on very steep slopes below 700 m elevation. This map class presents as a primarily rock-dominated area, with patches of short, light-tan and ruddy-brown herbaceous vegetation growing in cracks along with intermixed sparse shrubs and scrubby oaks (*Quercus* spp.).

The AA results indicate that HLMO was mapped with a users' accuracy of 100% and a producers' accuracy of 63% (90% confidence interval of 28–97%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where HLMO was mapped too conservatively from the VEAC map class where herbaceous cover was underestimated.

An example of the HLMO map class showing the very short herbaceous vegetation over bedrock with sparse and scrubby shrubs and trees.

SBAA – Southern Appalachian Alder Bald

The Southern Appalachian Alder Bald (SBAA) map class represents the *Alnus viridis* ssp. *crispa* / *Carex pensylvanica* Shrubland Association (CEGL003891) in the USNVC. The shrub association that makes up this map class only occurs on one mountain in the southern portion of the AT corridor—Roan Mountain on the Tennessee-North Carolina border above 1,700 m elevation. This location is the only know location for this vegetation type in the corridor. The SBAA map class is exceptionally rare within the corridor covering 8.7 ha (0.008% of APPA). More of this association occurs outside the corridor on Roan Mountain.

The SBAA map class is defined by the dominance of mountain alder (*Alnus viridis* ssp. *crispa*). In restored examples, mountain alder becomes very dominant, whereas in unrestored versions, the map class often is significantly invaded by other woody species such as blackberry (*Rubus* spp.), blueberry (*Vaccinium* spp.), and laurel (*Rhododendron* spp.). Mountain alder presented a unique and readily identifiable signature of pale grey-green in the project imagery. This signature proved very easy to identify, especially when compared to the very different signatures of blackberry, blueberry, and laurel.

The AA results indicate that SBAA was mapped with a users' accuracy of 100% and a producers' accuracy of 71% (90% confidence interval of 36–107%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where SASB was mapped too conservatively from the SBAH map class where mountain alder cover was underestimated.

Two examples of the SBAA map class showing recently restored, primarily dominated mountain alder (left) and mountain alder significantly invaded by other woody species and being restored with the use of goats protected by dogs (right).

SBAB – Southern Appalachian Blackberry Bald

The Southern Appalachian Blackberry Bald (SBAB) map class represents the *Rubus allegheniensis* - *Rubus canadensis* / *Carex pensylvanica* Shrubland Association (CEGL003892) in the USNVC. The shrub association that makes up this map class is a naturally occurring, blackberry-dominated (*Rubus* spp.) shrub bald present at high elevation within the AT corridor in the southern portion only on the three natural balds—the Whitetop Mountain area (southern Virginia), the Carvers Gap - Roan Mountain area (Tennessee/North Carolina), and Big Bald (Tennessee/North Carolina). The SBAB map class is exceptionally rare within the corridor covering 5.9 ha (0.005% of APPA).

This map class is defined by shrub dominance, specifically blackberry above 1,500 m elevation on natural balds. Often, the SBAB map class was present as less than MMU patches within the matrix HBGF map class on natural balds. Generally, SBAB presented as a flat, dark-tan to brownish-red area in the tan to light-pink, very short-statured herbaceous vegetation that defines the HBGF map class. This signature was sufficiently distinct from other common shrub map classes at this elevation to allow for the consistent mapping of SBAB.

The AA results indicate that SBAB was mapped well with a users' accuracy of 100% and a producers' accuracy of 83%. The AA discloses one instance where SBAB was mapped too conservatively from the HBGF map class where blackberry cover was underestimated.

Two examples of the SBAB map class showing a blackberry-dominated site (left) compared to a mixed shrub-herb site (right).

SBAH – Southern Appalachian Heath Bald

The Southern Appalachian Heath Bald (SBAH) map class represents the *Rhododendron carolinianum - Rhododendron catawbiense - Leiophyllum buxifolium* Shrubland Association (CEGL007876) in the USNVC. The shrub association that makes up this map class only occurs at the highest elevation within the AT corridor in North Carolina and Tennessee. The SBAH map class is rare within the corridor covering 30.1 ha (0.03% of APPA).

The SBAH map class is defined by the diverse mix of evergreen and deciduous shrub, especially sandmyrtle (*Leiophyllum buxifolium*); the presence of exposed rock; and the highly limited range elevational range of above 1,490 m elevation. This combination of factors and the distinct short and dense red signature of sandmyrtle around bleached-out bare rock, made for generally consistent mapping.

The AA results indicate that SBAH was mapped with both a users' and producers' accuracy of 64% (90% confidence interval of 40–89%). The AA discloses several instances where SBAH was mapped either too aggressively (to three map classes) or too conservatively (from four map classes). The users' error primarily comes from an overly aggressive application among co-occurring high-elevation shrub map classes, whereas the producers' error primarily comes from an overly conservative estimation of shrub cover in co-occurring high-elevation spruce-fir map classes.

Two examples of the SBAH map class showing the short shrubland covering a very steep mountain side in GRSM (left) versus a close-up view (right).

SBCH – Southern Appalachian Catawba Rosebay Heath Bald

The Southern Appalachian Catawba Rosebay Heath Bald (SBCH) map class represents the *Rhododendron catawbiense* Shrubland Association (CEGL003818) in the USNVC. This primarily evergreen shrub map class generally occurs throughout the southern portion of the AT corridor above 1,400 m elevation. The SBCH map class is rare within the corridor covering 26.9 ha in the corridor (0.02% of APPA).

The SBCH map class is defined by the combination of evergreen shrub dominance, specifically Catawba rhododendron (*Rhododendron catawbiense*), and high elevation, which excludes other evergreen shrub map classes. Often, deciduous trees and shrubs were mixed in with the Catawba rhododendron; however, determining the dominance of this map class was relatively easy because of the vibrant-red signature of rhododendron.

The AA results indicate that SBCH was mapped with a users' accuracy of 63% (90% confidence interval of 40–86%) and a producers' accuracy of 100%. The AA discloses several instances where SBCH was mapped too aggressively (to five map classes). The users' error primarily comes from an overly aggressive application of the SBCH map class among co-occurring high-elevation shrub map classes.

Two examples of the SBCH map class showing the dense rhododendron from below (left) and the solid rhododendron canopy from above with several additional shrub and short-tree species mixed in (right).

SBDH – Southern Appalachian Deciduous Heath Bald

The Southern Appalachian Deciduous Heath Bald (SBDH) map class represents the *Menziesia pilosa* - *Vaccinium* (*erythrocarpum*, *simulatum*, *corymbosum*) - *Sorbus americana* Shrubland Association (CEGL004819) in the USNVC. The shrub association that makes up this map class only occurs within the AT corridor on the Mount Rogers - Whitetop massif of the southern Virginia Blue Ridge above 1,450 m elevation. The SBDH map class is rare within the corridor covering 25.9 ha (0.02% of APPA).

The SBDH map class is defined by the diverse mix of acid-tolerant shrub, especially minniebush (*Menziesia pilosa*); the presence of exposed rock; and the highly limited range. These factors combined well with the distinct raised brown signature of minniebush and blueberry (*Vaccinium* spp.) around bleached-out bare rock.

The AA results indicate that SBDH was mapped well with a users' accuracy of 93% and a producers' accuracy of 82%. The AA discloses three instances where SBDH was mapped either too aggressively (to the FABF map class) or too conservatively (from the SBCH and SHBT map classes). The users' error is caused by an overly aggressive estimation of shrub cover in the FABF map class, whereas the producers' error is caused by and overly conservative application among co-occurring high-elevation shrub map classes.

Two examples of the SBDH map class on Mount Rogers in Virginia showing the mix of shrubs on a boulder field (left) and covering a solid rock knob (right).

SBGB – Blueberry Granite Barrens

The Blueberry Granite Barrens (SBGB) map class represents the *Vaccinium angustifolium* - *Sorbus americana* / *Sibbaldiopsis tridentata* Dwarf-shrubland Association (CEGL005094) in the USNVC. This shrub map class is within the AT corridor on bedrock at mid-elevations in New Hampshire and Maine. The SBGB map class is rare within the corridor covering 13.9 ha (0.01% of APPA).

The SBGB map class is defined by areas of open and sparsely vegetated bedrock with distinct areas of short shrubland dominated by lowbush blueberry (*Vaccinium angustifolium*). Present between 240 and 820 m elevation, this map class is usually on warm and exposed topographic positions. Generally, SBGB presents as areas of sometimes extensive unvegetated bedrock interspersed with areas of orange and pink, flat and short shrubland.

The AA results indicate that SBGB was mapped with a users' accuracy of 50% (90% confidence interval of 15–85%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where SBGB was mapped too aggressively to the WHOT and SMCK map classes, with the users' errors primarily comes from an overly aggressive application of SBGB in the elevation range where SBGB and SMCK co-occur.

An example of the SBGB map class showing a patch associated with open granite, with lowbush blueberry growing in the crevices.

SBOB – Ridgetop Bear Oak Barrens

The Ridgetop Bear Oak Barrens (SBOB) map class represents the *Quercus ilicifolia - Prunus pumila* Shrubland Association (CEGL006121) in the USNVC. This shrub map class is within the AT corridor on bedrock at mid-elevations from New Jersey to northern Massachusetts. The SBOB map class is rare within the corridor covering 41.9 ha (0.04% of APPA).

The SBOB map class is defined by a tall shrubland dominated by bear oak (*Quercus ilicifolia*) with areas of open and sparsely vegetated bedrock interspersed. Existing between 300 and 670 m elevation, this map class usually occurs on warm and exposed topographic positions. Generally, this map class presents as areas of sometimes extensive tan to orange, dense and tall shrubland interspersed with areas of unvegetated bedrock and occasional tall, dark-purple pitch pine (*Pinus rigida*).

The AA results indicate that SBOB was mapped well with a users' accuracy of 94% and a producers' accuracy of 100%. The AA discloses one instance where SBOB was mapped too aggressively to the FXOM map class where young regenerating oak were mistaken for SBOB.

An example of the SBOB map class showing the dense and tall bear oak with sparse pitch pine.

SCAB – Central Appalachian Blueberry Dwarf-shrubland

The Central Appalachian Blueberry Dwarf-shrubland (SCAB) map class represents the *Vaccinium* (*angustifolium*, *myrtilloides*, *pallidum*) Central Appalachian Dwarf-shrubland Association (CEGL003958) in the USNVC. This shrub map class is within the AT corridor on bedrock at mid-elevations in northern New Jersey and southern New York. The SCAB map class is rare within the corridor covering 27.9 ha (0.03% of APPA).

This map class is defined by a dense and very short shrub layer dominated by blueberry (*Vaccinium* spp.) intermixed with areas of bedrock. Existing between 300 and 550 m elevation, this map class is usually on warm and exposed topographic positions. Generally, SCAB presents as areas of very short and flat tan to orange to pink shrub intermixed with crisp, bright-northern red oak (*Quercus* spp.) and areas of sometimes extensive sparsely vegetated bedrock.

The SCAB map class was mapped very consistently. The AA process discovered no new instances of the SCAB map class, and no instances of SCAB were confused with a different map class.

An example of the SCAB map class showing a very short blueberry shrubland mixed with open bedrock and a few oak.

SCHB – Central Appalachian Heath Barrens

The Central Appalachian Heath Barrens (SCHB) map class represents the *Kalmia latifolia* - *Gaylussacia baccata* - *Vaccinium* (*angustifolium*, *pallidum*) - *Menziesia pilosa* Shrubland Association (CEGL003939) in the USNVC. The shrub association that makes up this map class only occurs within the AT corridor over a very limited range in northern Virginia. The SCHB map class is exceptionally rare within the corridor covering 3.9 ha (0.004% of APPA).

The SCHB map class is defined by the diverse mix of evergreen and deciduous shrub, the presence of exposed rock, the geographic constraint of northern Virginia, and the limited elevational range of above 1,000 m elevation. This combination of factors and the mix of dull-tan deciduous shrub next to bright-red evergreen shrub around bleached-out bare rock, made for generally consistent mapping.

The AA results indicate that SCHB was mapped with a users' accuracy of 75% (90% confidence interval of 27–123%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where SCHB was mapped too aggressively to the SHOB map class because of a misinterpretation of the dominant shrub species and underlying bedrock composition.

An example of the SCHB map class showing the mixed evergreen and deciduous short shrubs next to substantial sparsely vegetated rock outcrops.

SHBT – High-Elevation Blackberry Thicket

The High-Elevation Blackberry Thicket (SHBT) map class represents the *Rubus canadensis* - (*Rubus idaeus* ssp. *strigosus*) / *Athyrium filix-femina* - *Solidago glomerata* Shrubland Association (CEGL003893) in the USNVC. This shrubland is a blackberry-dominated (*Rubus* spp.) ruderal map class throughout the AT corridor from the Springer Mountain in Georgia north to the Virginia State Highway 16 crossing. The SHBT map class is rare within the corridor covering 38.6 ha (0.03% of APPA).

This map class is defined by shrub dominance, specifically blackberry, at below 1,370 m elevation and not in association with natural balds. Most commonly, the SHBT map class was present where extensive soil modification had occurred, which is believed to have resulted from grazing, landslides, or severe fire. Additionally, patches of SHBT were often associated with forest openings. Generally, SHBT presented as a flat, dark-tan to brownish-red area, very similar or identical to the SBAB signature. However, location and land-use history were used to split the two apart.

The AA results indicate that SHBT was mapped well with a users' accuracy of 83% and a producers' accuracy of 87%. The AA discloses several instances where SHBT was mapped either too aggressively (to three map classes) or too conservatively (from three map classes). The errors are widely spread, but either relate to misestimation of shrub cover (both over and under) or to misidentification of shrub species.

Two examples of the SHBT map class showing a patch associated with fir die-off (left) and a patch associated with a modified high-elevation grassland (right).

SHOB – High-Elevation Outcrop Barrens (Black Chokeberry Igneous / Metamorphic Type)

The High-Elevation Outcrop Barrens (Black Chokeberry Igneous / Metamorphic Type) (SHOB) map class represents the *Photinia melanocarpa* - *Gaylussacia baccata* / *Carex pensylvanica* Shrubland Association (CEGL008508) in the USNVC. The shrub association that makes up this map class only occurs within the AT corridor over a very limited range in northern Virginia. The SHOB map class is exceptionally rare within the corridor covering 2.4 ha (0.002% of APPA).

The SHOB map class is defined by the diverse mix of deciduous shrubs, the presence of exposed rock, the limited geographic range in northern Virginia, and the limited elevational range of above 850 m elevation. This combination of factors and the dull-tan deciduous shrub, lack of evergreen shrub, and intermixed bleached-out bare rock, made for generally consistent mapping. In most occurrences of this map class, short oak (*Quercus* spp.) were scattered about with crisp, tan to pink canopies.

The AA results indicate that SHOB was mapped well with a users' accuracy of 100% and a producers' accuracy of 80%. The AA discloses one instance where SHOB was mapped too conservatively from the SCHB map class because of an overly conservative estimation of deciduous shrub cover.

An example of the SHOB map class (foreground) showing the short deciduous shrubs with intermixed sparsely vegetated rock outcrops.

SMBT – Mixed Shrub Bald & Thicket

The Mixed Shrub Bald & Thicket (SMBT) map class represents two associations in the USNVC—the *Kalmia latifolia - Rhododendron catawbiense* - (*Gaylussacia baccata*, *Pieris floribunda*, *Vaccinium corymbosum*) Shrubland (CEGL003814) and the *Rhododendron maximum* Upland Shrubland (CEGL003819). This mixed evergreen-deciduous shrub map class generally occurs between 1,100 and 1,600 m elevation and is present throughout the southern portion of the APPA project. The SMBT map class is rare within the AT corridor covering 33.9 ha (0.03% of APPA).

Initially, these two associations were mapped apart based on the mix of species and degree of disturbance, but the AA indicated consistent confusion between the two associations and they were collapsed into a single map class. The SMBT map class is defined by the combination of evergreen and deciduous shrubs and mid- to high-elevation. This generally excludes the map class from the other shrub classes, though examples dominated by only mountain laurel (*Kalmia latifolia*), great laurel (*Rhododendron maximum*), or Catawba rosebay (*Rhododendron catawbiense*) exist and added some level of confusion in mapping. Often, deciduous trees were mixed in with the shrubs, but because of the vibrant-red signature of the evergreen shrubs mixed with the dull to leaf-off signature of the deciduous shrubs, the map class was easy to determine.

The AA results indicate that SMBT was mapped with a users' accuracy of 78% (90% confidence interval of 59–97%) and a producers' accuracy of 58% (90% confidence interval of 40–77%). The AA discloses several instances where SMBT was mapped either too aggressively (to three map classes) or too conservatively (from five map classes). The majority of these errors fall into either a misestimation of canopy cover (both over and under) or a misidentification of the dominant shrub species. A final source of error was an overly conservative application of SMBT in the more disturbed SXBG map class.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the SMBT map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the SMBT map class showing the solid mixed-shrub canopy from above with several short-tree species mixed in (left) and the dense evergreen shrub stems from below (right).

SMCK – Mixed Conifer Krummholz

The Mixed Conifer Krummholz (SMCK) map class represents two associations in the USNVC—the (*Picea mariana*, *Abies balsamea*) / *Kalmia angustifolia* - *Ledum groenlandicum* Dwarf-shrubland (CEGL006031) and the *Picea mariana* - *Abies balsamea* / *Sibbaldiopsis tridentata* Shrubland (CEGL006038). This mixed conifer alpine shrubland map class occurs in the AT corridor only at the higher elevations in New Hampshire and Maine. The SMCK map class is uncommon within the corridor covering 450.1 ha (0.4% of APPA).

The SMCK map class is defined by a very short and dense canopy of black spruce (*Picea mariana*) and balsam fir (*Abies balsamea*) less than 2 m tall (and often less than 20 cm tall) because of the extreme climate and shallow soil. Although this combination of characteristics becomes progressively more common at higher elevation, extreme conditions bring the SMCK map class down to 670 m elevation in a few instances within the AT corridor. Conifer cover ranged from 25% (often in association with other alpine shrub and herb map classes) to 100% (often as SMCK intergrades with lower elevation conifer forest map classes).

The SMCK map class presents as a very flat and compact shrubland of dark-purple conifer trees. These trees can be intermixed with large areas of bleached-out, sparsely vegetated rock; grey, tan, and pink alpine shrub vegetation; and small patches of dark-purple conifer greater than 2 m tall.

The AA results indicate that SMCK was mapped well with a users' accuracy of 93% and a producers' accuracy of 88%. The AA discloses several instances where SMCK was mapped either too aggressively (to two map classes) or too conservatively (from two map classes). The users' errors come from an overly aggressive estimation of shrub cover among co-occurring alpine herb and sparsely vegetated map classes, while the producers' errors come from a misidentification of dominant shrub species in co-occurring shrub map classes.

Two examples of the SMCK map class comparing a very short version (left) versus a very tall version (right).

HXCM – Cultivated Grassland

The Cultivated Grassland (HXCM) map class represents the *Lolium* (*arundinaceum*, *pratense*) Ruderal Grassland Association (CEGL004048) in the USNVC. This herbaceous association only occurs within the AT corridor in the southern portion on occasionally-managed herbaceous fields below 915 m elevation. The HXCM map class is rare within the corridor covering 22.5 ha (0.02% of APPA).

This mixed-species herbaceous map class requires continual management to prevent succession into woody vegetation and, generally, is closely associated with human-dominated landscapes. Additionally, the species composition between HXCM and HXFM is otherwise indistinguishable in the project imagery, but is elevation dependent; therefore, an elevation-cutoff of 915 m was used to split the two map classes. This map class presented mappers with a bright-pink or red signature of managed herbaceous fields associated with human-dominated landscapes, which often meant square or rectangular areas in otherwise forested landscapes.

The AA results indicate that HXCM was mapped well with a users' accuracy of 93% and a producers' accuracy of 100%. The AA discloses one instance where HXCM was mapped too aggressively (to the FXAH map class) because of an overly aggressive estimation of total herbaceous cover.

Two examples of the HXCM map class showing an herb-dominated managed area without mowing (left) and with mowing (right).

HXFM – Grazed Montane Grassland / Fire Meadow

The Grazed Montane Grassland / Fire Meadow (HXFM) map class represents the *Phleum pratense* - *Bromus pubescens* - *Helenium autumnale* Ruderal Meadow Association (CEGL004018) in the USNVC. This herbaceous association only occurs in the AT corridor in the southern portion of the corridor on occasionally-managed herbaceous fields above 915 m elevation. The HXFM map class is uncommon within the corridor covering 362.7 ha (0.3% of APPA).

This mixed-species herbaceous map class requires occasional management to prevent succession into woody vegetation and, generally, is closely associated with human-dominated landscapes or indicative of past human management that has been since abandoned. Additionally, the species composition between HXFM and HXCM is otherwise indistinguishable in the project imagery, but is elevation dependent; therefore, an elevation-cutoff of 915 m was used to split the two map classes. This map class presented mappers with a bright-pink or red signature of managed herbaceous fields associated with human-dominated landscapes or indications of prior extensive human management, which often meant square or rectangular areas in otherwise forested landscapes.

The AA results indicate that HXFM was mapped well with a users' accuracy of 97% and a producers' accuracy of 91%. The AA discloses two instances where HXFM was mapped either too aggressively (to the SHBT map class where herbaceous cover and disturbance were overestimated) or too conservatively (from the SXBG map class where herbaceous cover was underestimated).

Two examples of the HXFM map class showing herb-dominated areas at higher elevations without mowing (left) and with grazing (right).

HXNE – Northeastern Ruderal Grassland

The Northeastern Ruderal Grassland (HXNE) map class represents the following three associations in the USNVC:

- *Andropogon virginicus* var. *virginicus* Ruderal Grassland (CEGL004044),
- *Dactylis glomerata* - *Phleum pratense* - *Festuca* spp. - *Solidago* spp. Ruderal Meadow (CEGL006107), and
- *Schizachyrium scoparium* - (*Andropogon virginicus*) - *Solidago* spp. Ruderal Meadow (CEGL006333).

This herbaceous map class occurs within the AT corridor in disturbed uplands from southern Virginia north to the terminus in Maine. The HXNE map class is common within the corridor covering 1,086.8 ha (1.0% of APPA).

This map class is defined by open, ruderal, and often actively managed herbaceous areas of a highly variable composition with sparse shrubs and trees (less than 25% cover, each). The HXNE map class presents a highly variable signature of very short to tall herbaceous uplands of white, tan, brown, orange, pink, and red, with sparse shrubs and trees. In many instances, evidence of mowing, haying, or grazing were visible, and the square corners, straight edges, and fences indicative of past management also were visible.

The AA results indicate that HXNE was mapped well with a users' accuracy of 96% and a producers' accuracy of 94%. The AA discloses three instances where HXNE was mapped either too aggressively (to the HXSC map class where upland herb species were overestimated) or too conservatively (from the SXCN and SXHE map classes where herbaceous cover was underestimated).

Two examples of the HXNE map class showing a heavily grazed and graminoid-dominated association CEGL006107 (left) compared to a rarely managed forb-dominated association CEGL006107 (right).

SXBG – Ruderal Blackberry - Greenbrier Shrub Thicket

The Ruderal Blackberry - Greenbrier Shrub Thicket (SXBG) map class represents the *Rubus* (*argutus*, *trivialis*) - *Smilax* (*glauca*, *rotundifolia*) Ruderal Shrubland Association (CEGL004732) in the USNVC. The ruderal shrub association that makes up this map class within the AT corridor primarily represents highly disturbed lands regenerating into shrub and short trees from Springer Mountain in Georgia north to the Virginia State Highway 16 crossing. The SXBG map class is rare within the corridor covering 94.7 ha (0.09% of APPA).

The SXBG map class is a highly variable mix of native and non-native ruderal herb, shrub, and tree species with at least 25% shrub cover and less than 25% tree cover, though trees were only counted as trees if they were taller than 5 m. Both deciduous and evergreen shrubs were allowed in the map class. Originally applied to managed rights-of-way, such as power-line corridors, the concept was expanded to include abandoned agriculture, forestry activities, and other landscape modifications that interrupt natural succession.

The SXBG map class presents a highly variable signature in the project imagery that is related to the conditions present when the site was recolonized by shrubs, but in all instances this map class is in very disturbed areas. The uniting factor is that these are ruderal shrub stands dominated by a variety of shrub species and not dominated (less than 50% cover) by native evergreen heath shrubs such as great laurel (*Rhododendron maximum*), Catawba rhododendron (*Rhododendron catawbiense*), or mountain laurel (*Kalmia latifolia*).

Potentially located on any landscape position below 1,590 m elevation, this map class occurs broadly across disturbed sections of the AT corridor.

The AA results indicate that SXBG was mapped with a users' accuracy of 50% (90% confidence interval of 33–67%) and a producers' accuracy of 100%. The AA discloses five instances where SXBG was mapped too aggressively. The errors mainly divide into two group. The first group is from misestimation of ruderal shrub cover in co-occurring ruderal forest (underestimation) and ruderal herbaceous (overestimation) map classes. The second group is from overestimation of deciduous shrub cover in the co-occurring SMBT map class.

The 90% confidence interval for the producers' accuracy remains below the standard. Decisions with APPA staff resulted in accepting a slightly lower producers' accuracy for the SXBG map class instead of merging more map classes together to boost accuracy results. Information on this decision is in "Appendix K: Accuracy Assessment Reconciliation."

Two examples of the SXBG map class showing a location repeatedly returned to an herb or shrub condition by active management (left) and a location maturing from a shrubland into a young ruderal forest (right).

SXCN – Central & Northern Ruderal Shrubland

The Central & Northern Ruderal Shrubland (SXCN) map class represents two associations in the USNVC—the *Elaeagnus umbellata - Cornus racemosa - Rosa multiflora - Juniperus virginiana* Ruderal Shrubland (CEGL006451) and the *Gaylussacia baccata - Vaccinium pallidum - Vaccinium corymbosum* Shrubland (CEGL006622). The ruderal shrub associations that make up this map class in the AT corridor primarily represent highly disturbed lands regenerating into shrub and short trees from the Virginia State Highway 16 crossing north to the southern foothills of the White Mountains in New Hampshire. The SXCN map class is common within the corridor covering 566.9 ha (0.5% of APPA).

The SXCN map class is a highly variable mix of native and non-native ruderal herb, shrub, and tree species with at least 25% shrub cover and less than 25% tree cover, though trees were only counted as trees if they were taller than 5 m. Both deciduous and evergreen shrubs were allowed in the map class. Originally applied to managed rights-of-way, such as power-line corridors, the concept was expanded to include abandoned agriculture, forestry activities, and other landscape modifications that interrupt natural succession.

As a potentially confusing factor, both the SXCN and SXHE map classes contain association CEG006622; however, the map classes do not overlap geographically. In SXCN, rare examples of association CEGL006622 exist south of the Delaware River in Pennsylvania, whereas in SXHE, association CEGL006622 occurs from New Hampshire north.

The SXCN map class presents a highly variable signature in the project imagery that is related to the conditions present when the site was recolonized by shrubs, but in all instances this map class is in very disturbed areas. The uniting factor is that these are ruderal shrub stands dominated by a variety of shrub species.

Potentially located on any landscape position below 1,340 m elevation, this map class occurs broadly across disturbed sections of the AT corridor and becomes much more common below 610 m elevation.

The AA results indicate that SXCN was mapped well with a users' accuracy of 92% and a producers' accuracy of 89%. The AA discloses several instances where SXCN was mapped either too aggressively (to the HXNE map class) or too conservatively (from three map classes). The majority of both the users' and producers' errors come from misestimation of ruderal shrub cover in co-occurring ruderal forest and ruderal herbaceous map classes.

Two examples of the SXCN map class showing a location repeatedly returned to an herb or shrub condition by active management (left) and a location maturing from a shrubland into a young ruderal forest (right).

SXHE – Successional Heath Shrubland

The Successional Heath Shrubland (SXHE) map class represents the *Gaylussacia baccata* - *Vaccinium pallidum* - *Vaccinium corymbosum* Shrubland Association (CEGL006622) in the USNVC. The ruderal shrub association that makes up this map class within the AT corridor primarily represents disturbed lands regenerating into heath shrub north of the southern foothills of the White Mountains in New Hampshire. The SXHE map class is common within the corridor covering 25.4 ha (0.02% of APPA).

The SXHE map class is a mix of native ruderal heath shrubs with at least 25% shrub cover and less than 25% tree cover, though trees were only counted as trees if they were taller than 5 m. Both deciduous and evergreen heath shrubs were allowed in the map class. Originally applied to managed rights-of-way, such as power-line corridors, the concept was expanded to include forestry activities and other landscape modifications that interrupt natural succession.

As a potentially confusing factor, both the SXHE and SXCN map class contain association CEG006622; however, the map classes do not overlap geographically. In SXCN, rare examples of association CEGL006622 exist south of the Delaware River in Pennsylvania, whereas in SXHE, association CEGL006622 occurs from New Hampshire north.

The SXHE map class presents as a consistent crisp, bright-red (for evergreen) and dull pink (for deciduous) low shrubland intermixed with tan herbaceous areas and the occasional tree.

Present on dry and warm position below 1,040 m elevation, this map class occurs broadly across disturbed sections of the AT corridor and is more common below 490 m elevation.

The AA results indicate that SXHE was mapped with a users' accuracy of 73% (90% confidence interval of 51–95%) and a producers' accuracy of 100%. The AA discloses three instances where SXHE was mapped too aggressively (to co-occurring ruderal map classes because of because of either the misestimation of ruderal shrub cover or the misestimation of heath cover in the non-heath ruderal SXCN map class).

An example of the SXHE map class showing a power-line right-of-way dominated by blueberry (*Vaccinium* spp.) and other heath shrubs.

SXKV – Ruderal Kudzu Vineland

The Ruderal Kudzu Vineland (SXKV) map class represents the *Pueraria montana* var. *lobata* Vine-Shrubland (CEGL003882) vegetation association in the USNVC. This vining woody vegetation map class occurs and is mapped in approximately the southern one-third of the AT corridor. The SXKV map class is exceptionally rare within the corridor covering 1.5 ha (0.001% of APPA).

The kudzu vine (*Pueraria montana* var. *lobata*) is a highly-invasive non-native woody vine that is widely dispersed across the landscape and poses a significant management challenge. In the very few instances where areas of kudzu were of MMU size, the vegetation was a mat-forming monoculture that smothered all other vegetation. This characteristic provided the mappers with a very consistent, vibrant red signature that looked like a sheet was draped over the landscape of hills, trees, and shrubs. Many more examples of this map class exist outside the AT corridor.

The SXKV map class was mapped very consistently. The AA process discovered no new instances of the SXKV map class, and no instances of SXKV were confused with a different map class.

An example of the SXKV map class showing a kudzu-smothered landscape.

SXMW – Ruderal Mixed Wet Shrub Swamp

The Ruderal Mixed Wet Shrub Swamp (SXMW) map class represents two associations in the USNVC—the *Salix nigra* / *Phalaris arundinacea* - *Apocynum cannabinum* Wet Shrubland (CEGL006065) and the *Cornus* (*amomum*, *sericea*) - *Viburnum dentatum* - *Rosa multiflora* Ruderal Shrub Swamp (CEGL006576). The ruderal shrub associations that make up this map class within the AT corridor primarily represent wetlands regenerating to shrub and short trees from central Pennsylvania north to the southern foothills of the Green Mountains in Vermont. The SXMW map class is rare within the corridor covering 20.3 ha (0.02% of APPA).

The SXMW map class is a highly variable mix of native and non-native ruderal herb, shrub, and tree species adapted to wetlands with at least 25% shrub cover and less than 25% tree cover, though trees were only counted as trees if they were taller than 5 m. Occasionally associated with old agricultural practices, this map class was more common in relation to rights-of-way.

The SXMW map class presents a highly variable mix of low white, tan, and pink fuzzy shrubs intermixed with tan and pink ruderal wetland herbaceous vegetation and occasional patches of wet ground or open water. This map class is generally in a basin setting; however, the map class can also occur in highly disturbed floodplain and backwater settings.

The AA results indicate that SXMW was mapped with a users' accuracy of 70% (90% confidence interval of 41–99%) and a producers' accuracy of 88%. The AA discloses two instances where SXHE was mapped either too aggressively (to the co-occurring HXSC ruderal map classes because of the overestimation of ruderal shrub cover) or too conservatively (from the co-occurring SAST because of the underestimation of disturbance in this non-ruderal wet shrubland).

Two examples of the SXMW map class showing association CEGL006065 (left) and association CEGL006576 (right). Both examples show the patchwork of ruderal wetland shrub and herb that define this map class.

HCRB – Central Appalachian Herbaceous Riverbank

The Central Appalachian Herbaceous Riverbank (HCRB) map class represents the following four associations in the USNVC:

- *Carex torta* Riverbed Vegetation (CEGL004103),
- *Verbesina alternifolia* - *Elymus riparius* - *Solidago gigantea* - (*Teucrium canadense*) Riverbar Wet Meadow (CEGL006480),
- *Eupatorium serotinum* - *Polygonum* (*lapathifolium*, *punctatum*, *pensylvanicum*) Riverbar Wet Meadow (CEGL006481), and
- *Eragrostis hypnoides* - *Ludwigia palustris* - *Lindernia dubia* - *Cyperus squarrosus* Riverbar Wet Meadow (CEGL006483).

The herbaceous associations that make up this map class occur within the AT corridor only along the Potomac and Shenandoah Rivers near the West Virginia-Maryland border. The HCRB map class is exceptionally rare within the corridor covering 0.4 ha (0.0003% of APPA), making HCRB one of the rarest map classes within APPA.

Based on vegetation plot data and conversations with ecologists, the HCRB map class was a “map known locations” map class, which means that only confirmed locations were mapped. For HCRB, that means two polygons were mapped around the confluence of the Shenandoah and Potomac Rivers. This location was supported by vegetation plots prior to mapping. The map class generally presents as an area of tall pink and tan herbaceous vegetation with sparse shrubs and short trees (less than 25% cover, each) within the active riparian zone.

The HCRB map class was mapped very consistently. The AA process discovered no new instances of the HCRB map class, and no instances of HCRB were confused with a different map class.

An example of the HCRB map class showing the open and sparse canopy over a diverse mix of herbaceous floodplain species.

HCRM – Common Rush Marsh

The Common Rush Marsh (HCRM) map class represents the *Juncus effusus* Marsh Association (CEGL004112) in the USNVC. This wet herbaceous map class occurs in the AT corridor only in disturbed wetlands in Connecticut and Vermont. The HCRM map class is exceptionally rare within the corridor covering 1.9 ha (0.002% of APPA).

The HCRM map class is defined by open, disturbed wetlands where common rush (*Juncus effusus*) dominates (greater than 50% cover). Because small areas can easily be dominated by common rush, less than MMU patches of this map class are likely in any disturbed wetland setting, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of this association occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

The HCRM map class generally presents as a flat, light- to bright-pink herbaceous field on regularly inundated areas and along the margins deeper water.

The AA results indicate that HCRM was mapped with a users' accuracy of 75% (90% confidence interval of 27–123%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where HCRM was mapped too aggressively to the HXSC map class because of an overly aggressive estimation of common rush cover.

An example of the HCRM map class showing an extensive area dominated by common rush within a more mixed wetland.

HECM – Eastern Cattail Marsh

The Eastern Cattail Marsh (HECM) map class represents the *Typha* (*angustifolia*, *latifolia*) - (*Schoenoplectus* spp.) Eastern Marsh (CEGL006153) in the USNVC. This wet herbaceous map class occurs within the AT corridor in wetlands from New Jersey north into Maine. The HECM map class is rare within the corridor covering 25.6 ha (0.02% of APPA).

The HECM map class is defined by wetlands where cattail (*Typha* spp.) dominates (greater than 50% cover, often greater than 90% cover). Because small areas can easily be dominated by cattail, less than MMU patches of this map class are likely in any disturbed wetland setting, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of this association occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

The HECM map class generally presents as a tall, lumpy, dull- to bright-tan herbaceous wetland with dark patches of open water and occasional wetland shrubs mixed in.

The AA results indicate that HECM was mapped well with a users' accuracy of 93% and a producers' accuracy of 100%. The AA discloses one instance where HECM was mapped too aggressively to the HXSC map class because of an overly aggressive estimation of cattail cover.

An example of the HECM map class showing an extensive area dominated by cattail wedged between deep open water and the upland forest.

HGFM – Graminoid & Forb Wet Meadow & Marsh

The Graminoid & Forb Wet Meadow & Marsh (HGFM) map class represents the following five associations in the USNVC:

- *Carex utriculata* - *Carex lacustris* - (*Carex vesicaria*, *Carex stricta*) Wet Meadow (CEGL002257),
- *Calamagrostis canadensis* - *Carex* spp. Laurentian & Northeast Wet Meadow (CEGL005448),
- *Pontederia cordata* - *Peltandra virginica* - *Sagittaria latifolia* Marsh (CEGL006191),
- *Bidens cernua* - *Verbena hastata* - *Polygonum* spp. Marsh (CEGL006446), and
- *Calamagrostis canadensis* - *Scirpus* spp. - *Dulichium arundinaceum* Wet Meadow (CEGL006519).

The wet herbaceous associations that make up this map class occur within the AT corridor from New Jersey north to the terminus in Maine. The HGFM map class is rare within the corridor covering 58.0 ha (0.05% of APPA).

The HGFM map class is defined by mixed graminoid and forb marshes with no clearly dominant species in the herb layer and by sparse wetland shrubs and trees (less than 25% cover, each). Initially, mappers attempted to parse the graminoid-dominated marsh from forb-dominated marsh; however, because AA indicated consistent confusion between the two marshes, they were joined.

Because the associations within this map class represent such a diverse array of herbaceous vegetation, the associations often intermixed, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of these five associations occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

Generally, the HGFM map class presents as an open herbaceous marsh with medium-height and often lumpy vegetation in a patch matrix of grey, tan, pink, and red, with occasional areas of open water or meandering streams and sparse wetland shrubs and trees.

The AA results indicate that HGFM was mapped well with a users' accuracy of 87% and a producers' accuracy of 82%. The AA discloses several instances where HGFM was mapped either too aggressively (to three map classes) or too conservatively (from three map classes). The users' error primarily comes from an overly aggressive application of HGFM among co-occurring herbaceous wetland map classes, whereas the producers' error primarily comes from an overly conservative estimation of mixed herbaceous cover and habitat recovery in the ruderal HXSC map class.

Four examples of the HGFM map class showing associations CEGL002257 (upper left), CEGL005448 (upper right), CEGL006519 (lower left), and CEGL006446 (lower right). In each case, the marsh is a diverse mix of herbaceous wetland vegetation.

HMSM – Mixed Sedge Fen & Wet Meadow

The Mixed Sedge Fen & Wet Meadow (HMSM) map class represents two associations in the USNVC—the *Myrica gale* - *Chamaedaphne calyculata* / *Carex* (*lasiocarpa*, *utriculata*) - *Utricularia* spp. Fen (CEGL006302) and the *Carex stricta* - *Carex vesicaria* Wet Meadow (CEGL006412). The wet low-shrub and herbaceous associations that make up this map class occur within the AT corridor from New Jersey north to the terminus in Maine. The HMSM map class is rare within the corridor covering 26.9 ha (0.02% of APPA).

The HMSM map class is defined by mixed sedge (*Carex* spp.) and low-shrub marshes that may or may not have greater than 25% shrub cover below the sedges. Because the shrub layer can be completely covered by the overarching sedges, separating these two associations became impossible, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of association CEGL006412 occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV, whereas association CEGL006302 does not, because CEGL006302 only occurs in the AT corridor north of the range of XBMV.

Generally, the HMSM map class presents as an open herbaceous marsh with medium-height and mostly flat and soft-looking vegetation in a patchy mix of grey, tan, and pink, with occasional patches of open water or meandering streams and sparse wetland shrubs and trees.

The AA results indicate that HMSM was mapped well with a users' accuracy of 100% and a producers' accuracy of 83%. The AA discloses three instances where HMSM was mapped too conservatively. In all cases, these errors result from an overly conservative estimation of total sedge cover.

Two examples of the HMSM map class showing association CEGL006302 with low shrubs hidden under tall sedges (left) and association CEGL006412 with a dense sea of sedge (right).

HRGS – Graminoid & Scour Riverbank

The Graminoid & Scour Riverbank (HRGS) map class represents the following three associations in the USNVC:

- *Triantha glutinosa* - *Carex garberi* Riverscour Wet Meadow (CEGL006142),
- *Prunus pumila* / *Andropogon gerardii* - *Sorghastrum nutans* Riverscour Wet Meadow (CEGL006518), and
- *Carex torta* - *Apocynum cannabinum* - *Cyperus* spp. Riverbed Vegetation (CEGL006536).

The herbaceous associations that make up this map class only occur within the AT corridor along large streams and rivers in Maine. The HRGS map class is exceptionally rare within the corridor covering 2.3 ha (0.002% of APPA).

This map class is defined by narrow bands of herbaceous vegetation in the active riparian zone of large streams and small rivers, with sparse shrubs and trees. The HRGS map class generally presents as an area of tall tan, orange, and pink herbaceous vegetation (less than 25% cover of shrubs and short trees, each) within the active riparian zone.

The HRGS map class was mapped very consistently. The AA process discovered no new instances of the HRGS map class, and no instances of HRGS were confused with a different map class.

An example of the HRGS map class showing association CEGL006536.

HTSM – Southern New England Threeway Sedge Fen

The Southern New England Threeway Sedge Fen (HTSM) map class represents the *Dulichium arundinaceum* / *Sphagnum* spp. Fen Association (CEGL006131) in the USNVC. This wet herbaceous map class only occurs within the AT corridor in one wetland in Massachusetts. The HTSM map class is exceptionally rare within the corridor covering 0.1 ha (0.0001% of APPA), making HTSM one of the rarest map classes within APPA.

Based on vegetation plot data and conversations with ecologists, the HTSM map class was a "map known locations" map class, which means that only confirmed locations were mapped. For HTSM, that means a single polygon was mapped in central Massachusetts in a beaver-impacted wetland. This location was supported by a field reconnaissance visit prior to mapping. Though well below the standard MMU, this site was deemed sufficiently unique to warrant mapping.

The HTSM map class is defined by very low and diffuse wetlands where three-way sedge (*Dulichium arundinaceum*) dominates (greater than 50% cover). Because small areas can easily be dominated by three-way sedge, less than MMU patches of this map class are likely in any disturbed wetland setting, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of this association occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

The HTSM map class presents as a very flat greenish-tan to gold wet herbaceous field along the margin of a larger wetland.

The AA results indicate that HTSM was mapped with a users' accuracy of 100% and a producers' accuracy of 50% (90% confidence interval of -33–133%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where HTSM was mapped too conservatively from the SLBS map class where a mappable area of HTSM was discovered. As a "map known locations" map class, the discovery of an additional example of the HTSM map class indicates that additional examples are likely within the corridor.

An example of the HTSM map class showing a wetland margin dominated by three-way sedge.

HWBS – Water-willow Rocky Bar and Shore

The Water-willow Rocky Bar and Shore (HWBS) map class represents the *Justicia americana* Riverbed Vegetation (CEGL004286) in the USNVC. This herbaceous riparian vegetation map class is within the AT corridor from eastern most West Virginia to southern Pennsylvania. The HWBS map class is exceptionally rare within the corridor covering 2.3 ha (0.002% of APPA).

This map class is defined by dense beds of American water-willow (*Justicia americana*) along the edges and in the active channel of large streams and rivers. The HWBS map class generally presents as open to dense beds of bright-red herbaceous vegetation in the active riparian zone, often with patches of dark, open water or channels of flowing water present in the vegetation.

The HWBS map class was mapped very consistently. The AA process discovered no new instances of the HWBS map class, and no instances of HWBS were confused with a different map class.

An example of the HWBS map class showing a dense bed of American water-willow along the Potomac River in Maryland.

HXCR – Eastern Ruderal Common Reed Marsh

The Eastern Ruderal Common Reed Marsh (HXCR) map class represents the *Phragmites australis* ssp. *australis* Eastern Ruderal Marsh Association (CEGL004141) in the USNVC. This wet herbaceous map class occurs within the AT corridor in disturbed wetlands from eastern Pennsylvania north to the Connecticut River in Vermont. The HXCR map class is rare within the corridor covering 31.9 ha (0.03% of APPA).

The HXCR map class is defined by open, disturbed wetlands where European common reed (*Phragmites australis* ssp. *australis*) dominates (greater than 50% cover, often greater than 90% cover). Because small areas can easily be dominated by European common reed, less than MMU patches of this map class are likely in any disturbed wetland setting, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of this association occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

The HXCR map class generally presents as a very tall and clonal, light-tan to bright-pink herbaceous wetland. Often, patches in wetlands have a distinctive circular shape.

The AA results indicate that HXCR was mapped well with a users' accuracy of 88% and a producers' accuracy of 82%. The AA discloses several instances where HXCR was mapped either too aggressively (to the HXSC map class) or too conservatively (from three map classes). The majority of both the users' and producers' errors come from misestimation of European common reed cover.

An example of the HXCR map class showing an extensive area dominated by European common reed.

HXSC – Ruderal Steeplebush - Reed Canarygrass Marsh

The Ruderal Steeplebush - Reed Canarygrass Marsh (HXSC) map class represents two associations in the USNVC—the *Phalaris arundinacea* Eastern Ruderal Marsh (CEGL006044) and the *Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland (CEGL006571). This mixed herbaceous and shrub wetland vegetation map class is within the AT corridor from southern Virginia north to the terminus in Maine. The HXSC map class is rare within the corridor covering 83.2 ha (0.08% of APPA).

As a concurrent and confusing factor, less than MMU examples of association CEGL006571 occur in areas with ongoing American beaver (*Castor canadensis*) activity in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV. The vegetation in association CEGL006044 does not occur in XBMV because CEGL006044 only occurs in the AT corridor south of the range of XBMV.

The HXSC map class is defined by ruderal wetlands with only occasional inundation where reed canarygrass (*Phalaris arundinacea*) dominates or can codominate with ruderal wetland shrubs. Generally, the HXSC map class presents as dense tan to pink "wormy" wetland herbaceous vegetation with evident wetter pockets intermixed. The shrub layer, when present, was mostly invisible under the over-arching herbaceous layer, but occasional emergent shrubs and sparse trees (less than 25% cover) are possible.

The AA results indicate that HXSC was mapped with a users' accuracy of 84% and a producers' accuracy of 78% (90% confidence interval of 67–88%). The AA discloses several instances where HXSC was mapped either too aggressively (to three map classes) or too conservatively (from seven map classes). The users' error primarily comes from by an overly aggressive of disturbance in the HGFM map class, while the producers' error primarily comes from an overly conservative application of HXSC among other co-occurring ruderal herb and shrub map classes.

Two examples of the HXSC map class showing association CEGL006044 where a wet ruderal field is completely dominated by reed canarygrass (left) and association CEGL006571 where a mix of wetland is a mix of herbaceous and shrub vegetation (right).

SABR – Southern Appalachian Bog (Rhododendron Type)

The Southern Appalachian Bog (Rhododendron Type) (SABR) map class represents the *Rhododendron maximum* / *Sphagnum* spp. Seepage Shrubland Association (CEGL003849) in the USNVC. This evergreen shrub swamp map class occurs within the AT corridor only in the southern most portion in Georgia. The SABR map class is exceptionally rare within the corridor covering 0.7 ha (0.0007% of APPA).

The SABR map class is defined by dense great laurel (*Rhododendron maximum*) over wet and flat or concave ground, with a stream channel or other indicators of moisture used to refine the mapping; therefore, SABR, generally is excluded from the other evergreen shrub classes. Generally, this map class presents as vibrant-red evergreen shrubs mixed with white or yellow to completely senesced hardwood trees in a topographic basin.

The AA results indicate that SABR was mapped with a users' accuracy of 100% and a producers' accuracy of 50% (90% confidence interval of -4–104%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where SABR was mapped too conservatively from the SMBT map class because of the underestimation of the hydrologic influence.

An example of the SABR map class showing the solid great laurel canopy over wet ground.

SASB – Southern Appalachian Shrub Bog (Long Hope Valley Type)

The Southern Appalachian Shrub Bog (Long Hope Valley Type) (SASB) map class represents the *Rhododendron* (*maximum*, *catawbiense*) - *Ilex collina* - *Salix sericea* / *Eriophorum virginicum* Seepage Shrubland Association (CEGL003913) in the USNVC. This evergreen shrub swamp map class occurs within the AT corridor only in southern Virginia. The SASB map class is exceptionally rare within the corridor covering 3.1 ha (0.003% of APPA).

This map class is defined by an open canopy of evergreen shrub over wet and flat or concave ground, with abundant wet herbaceous openings. This map class is confined to the AT corridor in the area around Grayson Highlands State Park in southern Virginia above 1,300 m elevation. Generally, this map class presents as vibrant-red evergreen shrubs mixed with areas of tan and orange, low and flat herbaceous vegetation in a topographic basin.

The AA results indicate that SASB was mapped with a users' accuracy of 100% and a producers' accuracy of 71% (90% confidence interval of 36–107%). (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where SASB was mapped too conservatively from the SBCH and SHBT map classes where hydrologic influence was underestimated.

An example of the SASB map class showing the open evergreen shrub canopy surrounded by wetland herbs.

SAST – Alder Shrub Thicket & Swamp

The Alder Shrub Thicket & Swamp (SAST) map class represents two associations in the USNVC—the *Alnus incana* Shrub Swamp (CEGL002381) and the *Alnus incana* - *Cornus* (*amomum*, *sericea*) / *Clematis virginiana* Shrub Swamp (CEGL006062). This deciduous wet shrub swamp map class occurs over the northern one-half of the AT corridor from New Jersey north to the terminus in Maine. The SAST map class is uncommon within the corridor covering 149.1 ha (0.1% of APPA).

The SAST map class is defined by an open to closed canopy of gray alder (*Alnus incana*) over wet ground in basin or riparian settings below 790 m elevation and then only common below 550 m elevation. Although association CEGL002381 is generally a basin swamp and association CEGL006062 is generally a riparian swamp, the two types were often intermixed with no clear line in the imagery to distinguish them, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of these two associations occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

Generally, the SAST map class presents as a basin or riparian swamp dominated by a short to tall fluffy tannish-pink to bright-pink deciduous shrub with hardwood and conifer trees sparsely intermixed. Shrub cover was generally over 75%, but occasionally was as low as 25%, with larger areas of herbaceous wetland vegetation, dead and downed trees, and open water intermixed.

The AA results indicate that SAST was mapped well with a users' accuracy of 97% and a producers' accuracy of 83%. The AA discloses several instances where SAST was mapped either too aggressively (to the SXWM map class) or too conservatively (from three map classes), and in all instances, SAST relates to the misestimation of grey alder cover.

Two examples of the SAST map class showing the more basin-based association CEGL002381 (left) and the more riparian-based association CEGL006062 (right).

SBBT – Blueberry Peatland Thicket

The Blueberry Peatland Thicket (SBBT) map class represents two associations in the USNVC—the *Vaccinium corymbosum* / *Sphagnum* spp. Acidic Peatland (CEGL006190) and the *Vaccinium corymbosum* - *Rhododendron viscosum* - *Clethra alnifolia* Acidic Peatland (CEGL006371). This deciduous wet shrub swamp map class occurs within the AT corridor in acidic basin settings from northern Pennsylvania to central Massachusetts. The SBBT map class is uncommon within the corridor covering 13.9 ha (0.01% of APPA).

The SBBT map class is defined by an open to closed canopy of highbush blueberry (*Vaccinium corymbosum*) over wet ground in basin settings below 600 m elevation and then only common below 490 m elevation. This map class can be somewhat ruderal in appearance, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of these two associations occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

Generally, the SBBT map class presents as a basin swamp dominated by short to tall, fluffy tan or orange deciduous shrubs, with hardwood trees sparsely intermixed. Shrub cover was generally over 75%, but occasionally as low as 25%, with larger areas of flat, tan-colored herbaceous wetland vegetation.

The AA results indicate that SBBT was mapped well with a users' accuracy of 88% and a producers' accuracy of 100%. The AA discloses one instance where SBBT was mapped too aggressively to the HGFM map class where highbush blueberry cover was overestimated.

Two examples of the SBBT map class showing a more closed canopy version of association CEGL006190 (left) versus a more open canopy version of association CEGL006371 (right). Note the dominance of highbush blueberry in both shrublands.

SDBF – Dwarf-shrub Peatland

The Dwarf-shrub Peatland (SDBF) map class represents two associations in the USNVC—the *Kalmia angustifolia* - *Chamaedaphne calyculata* - (*Picea mariana*) / *Cladina* spp. Acidic Peatland (CEGL006225) and the *Rhododendron canadense* - *Chamaedaphne calyculata* Acidic Peatland (CEGL006514). This mixed evergreen dwarf-shrub swamp map class occurs within the AT corridor in acidic basin settings in New Hampshire and Maine. The SDBF map class is exceptionally rare within the corridor covering 1.5 ha (0.001% of APPA).

The SDBF map class is defined by a very short and dense canopy of evergreen shrubs rooting on a floating mat of sphagnum (*Sphagnum* spp.) moss. Present only in seepage basins below 975 m elevation, this map class presents a characteristic flat, orange signature with areas of open water often present and an obvious rise in the elevation of the vegetation towards the edge of the basin. Many examples of this map class below the 0.25 ha MMU were encountered during the field reconnaissance, but only four locations were large enough to map.

The AA results indicate that SDBF was mapped with a users' accuracy of 33% (90% confidence interval of -28–95%) and producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses two instances where SDBF was mapped too aggressively to the SWEB and SSLF map classes because of an overly aggressive application of this map class among co-occurring dwarf-shrub swamp map classes.

An example of the SDBF map class showing a dwarf shrubland on a floating mat of Sphagnum moss with intermixed dwarf trees.

SLBS – Swamp-Loosestrife & Buttonbush Shrub Swamp

The Swamp-Loosestrife & Buttonbush Shrub Swamp (SLBS) map class represents two associations in the USNVC—the *Decodon verticillatus* Shrub Swamp (CEGL005089) and the *Cephalanthus occidentalis - Decodon verticillatus* Shrub Swamp (CEGL006069). This deciduous wet shrub swamp map class is within the AT corridor from northern Pennsylvania to southern New York. The SLBS map class is exceptionally rare within the corridor covering 1.0 ha (0.001% of APPA).

The SLBS map class is defined by an open to closed canopy of common buttonbush (*Cephalanthus occidentalis*) over water in basin or riparian settings. Although association CEGL006069 is generally confined to shallower water than association CEGL005089, the two intermixed in a mosaic that made parsing the associations impossible, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of these two associations occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

Generally, the SLBS map class presents as a basin swamp dominated by a tall and diffuse shrub layer, with a grey and red mottled appearance over open water. Shrub cover was generally over 75%, but occasionally as low as 25%, with larger open water areas intermixed.

The AA results indicate that SLBS was mapped with a users' accuracy of 67% (90% confidence interval of 5–128%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where SLBS was mapped too aggressively to the HTSM map class because of an overestimation of shrub cover.

An example of the SLBS map class showing a very thick shrub layer of buttonbush of association CEGL006069. At the time this image was captured, the basin was dry because of a drought.

SNAS – Northern Appalachian High-Elevation Seepage Shrubland

The Northern Appalachian High-Elevation Seepage Shrubland (SNAS) map class represents the *Prunus virginiana - Acer spicatum - Ribes triste* / *Angelica atropurpurea - Heracleum maximum* Seepage Shrubland Association (CEGL006583) in the USNVC. This deciduous wet shrub map class occurs within the AT corridor only at high-elevation below the alpine zone in New Hampshire and Maine. The SNAS map class is exceptionally rare within the corridor covering 3.4 ha (0.003% of APPA).

Limited to two distinct areas in the Green Mountains in Vermont and to one area in the White Mountains in New Hampshire, this map class is defined by a medium to tall deciduous shrub canopy over a lush herbaceous layer. Present only in seepage areas on moderate slopes below 1,220 m elevation, this map class presents a characteristic greyish-tan signature. In the project imagery, the shrub layer was completely senesced with the bare branches of the shrubs evident in the imagery.

The SNAS map class was mapped very consistently. The AA process discovered no new instances of the SNAS map class, and no instances of SNAS were confused with a different map class.

An example of the SNAS map class showing a wet slope surrounded by a conifer forest below the alpine zone.

SRBS – Rocky Bar and Shore (Alder - Yellowroot Type)

The Rocky Bar and Shore (Alder - Yellowroot Type) (SRBS) map class represents the *Alnus serrulata* - *Xanthorhiza simplicissima* Wet Shrubland Association (CEGL003895) in the USNVC. This deciduous wet shrub swamp map class occurs over the northern one-half of the AT corridor from New Jersey north to the terminus in Maine. The SRBS map class is exceptionally rare within the corridor covering 1.8 ha (0.002% of APPA).

The SRBS map class is defined by an open to closed canopy of hazel alder (*Alnus serrulata*) in riparian settings. Generally, the SRBS map class presents as an open riparian shrubland with short to tall, fluffy tannish-pink to bright-pink deciduous shrub surrounded by mixed herbaceous floodplain and, potentially, as rocks and cobble. Shrub cover was generally over 50%, but occasionally as low as 25%, with larger areas of herbaceous riparian vegetation and rock and cobble.

The AA results indicate that SRBS was mapped with a users' accuracy of 50% (90% confidence interval of -4–104%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where SRBS was mapped too aggressively because of an overly aggressive estimation of shrub cover in the riparian forest FAMA map class.

An example of the SRBS map class showing an open, riparian shrubland.

SSLF – Sweetgale - Leatherleaf Fen

The Sweetgale - Leatherleaf Fen (SSLF) map class represents two associations in the USNVC—the *Myrica gale - Spiraea alba - Chamaedaphne calyculata* Fen (CEGL006512) and the *Chamaedaphne calyculata / Eriophorum virginicum / Sphagnum rubellum* Acidic Peatland (CEGL006513). This mixed evergreen shrub swamp map class occurs within the AT corridor in acidic basin settings from northern Massachusetts north to the terminus in Maine. The SSLF map class is rare within the corridor covering 69.9 ha (0.06% of APPA).

The SSLF map class is mapped in only two locations south of the Connecticut River based on field data, but SSLF is common north of the Connecticut River. Located below 1,150 m elevation, this map class is most common below 610 m elevation. This map class is defined by a short and dense canopy of evergreen and deciduous shrubs with the evergreen leatherleaf (*Chamaedaphne calyculata*) being the most characteristic. This map class presents a characteristic lumpy pink signature in basin swamps, often intermixed with flat, tan wetland herbs, and in open water. In lacustrine settings this map class will often form a ring between the open water and the upland.

The AA results indicate that SSLF was mapped well with a users' accuracy of 85% and a producers' accuracy of 97%. The AA discloses several instances where SSLF was mapped either too aggressively (to five map classes) or too conservatively (from the SDBF map class). The majority of the users' errors come from a misestimation of shrub cover (both over and under), while producers' errors come from confusion with SDBF where the specific percent cover of acidic swamp shrub species was misestimated.

An example of the SSLF map class showing a leatherleaf-dominated wet shrub swamp that is characteristic of association CEGL006513.

SSNB – Southern New England Bog

The Southern New England Bog (SSNB) map class represents the *Chamaedaphne calyculata* - (*Gaylussacia dumosa*) - *Decodon verticillatus* / *Woodwardia virginica* Acidic Peatland Association (CEGL006008) in the USNVC. This mixed evergreen shrub swamp map class occurs within the AT corridor in acidic basin settings from northern Massachusetts north to the terminus in Maine. The SSNB map class is exceptionally rare within the corridor covering 2.5 ha (0.002% of APPA).

The SSNB map class is mapped in two disjunct groups within the AT corridor—one group in southern New York and the other group in central Vermont. In both instances, the mapping is based on field notes and vegetation plot data with an expansion of the "map known locations" concept. In both locations, this map class is in a lacustrine environment along the shore at the wetland-upland interface. The SSNB map class is defined by a short- to medium-height dense canopy of evergreen and deciduous shrubs, with the evergreen leatherleaf (*Chamaedaphne calyculata*) being the most characteristic. This map class presents a characteristic lumpy dark-pink signature, often intermixed with flat, tan wetland herbs, and in open water.

The AA results indicate that SSNB was mapped well with a users' accuracy of 80% and a producers' accuracy of 100%. The AA discloses one instance where SSNB was mapped too aggressively because of the overestimation of leatherleaf cover in the HXSC map class.

An example of the SSNB map class showing a leatherleaf-dominated wet shrub swamp.

HAFV – Aquatic Floating Vegetation

The Aquatic Floating Vegetation (HAFV) map class represents two associations in the USNVC—the *Nuphar advena* - *Nymphaea odorata* Aquatic Vegetation (CEGL002386) and the *Elodea canadensis* - *Potamogeton* spp. Eastern Aquatic Vegetation (CEGL006431). This herbaceous aquatic vegetation map class is within the AT corridor from central Pennsylvania north to the terminus in Maine. The HAFV map class is rare within the corridor covering 81.2 ha (0.07% of APPA).

The HAFV map class is defined by open water with floating and submerged aquatic vegetation covering greater than 1%. Because association CEGL002386 can occur above association CEGL006431 in the water column, the two intermix in a mosaic that left parsing the associations impossible, especially in areas with ongoing American beaver (*Castor canadensis*) activity. As a concurrent and confusing factor, less than MMU examples of these two associations occur in the XBMV map class as part of the 20 wetland herb and shrub associations that define XBMV.

Generally, the HAFV map class presents as open water with patches of tan, pink, and red floating and submerged vegetation covering at least 1% of the area. Although 1% vegetation cover seems low, this level of vegetation indicates substantial additional vegetation is present.

The AA results indicate that HAFV was mapped well with a users' accuracy of 100% and a producers' accuracy of 90%. The AA discloses two instances where HAFV was mapped too conservatively from the HGFM and SSFL map classes where the cover of vegetation was underestimated.

Two examples of the HAFV map class showing the floating emergent vegetation of association CEGL002386 (left) and the submerged vegetation of association CEGL006431 (right) that will often intermix.

HEDP – Eastern North America Duckweed Pond

The Eastern North America Duckweed Pond (HEDP) map class represents the *Lemna* spp. Eastern North American Aquatic Vegetation Association (CEGL005451) in the USNVC. This floating herbaceous map class occurs within the AT corridor only in ponds in Virginia. The HEDP map class is exceptionally rare within the corridor covering 0.6 ha (0.0006% of APPA).

This map class is defined by ponds covered in the small floating plant, duckweed (*Lemna* spp.). The HEDP map class presents as a completely flat, light-pink to magenta layer painted directly on to the surface of the water, with small areas of dark open water intermixed.

Initially, mappers were not provided with a vegetation association for this map class and, therefore, made HEDP a park-special vegetation map class. Because park-special map classes are not tested during AA, this map class was not added to the AA process in Virginia. Following the completion of AA in Virginia, a vegetation association, CEGL005451, was provided for this map class bringing HEDP in line with other AA-tested map classes, although too late to complete AA on the HEDP map class. As such, HEDP was never tested for accuracy.

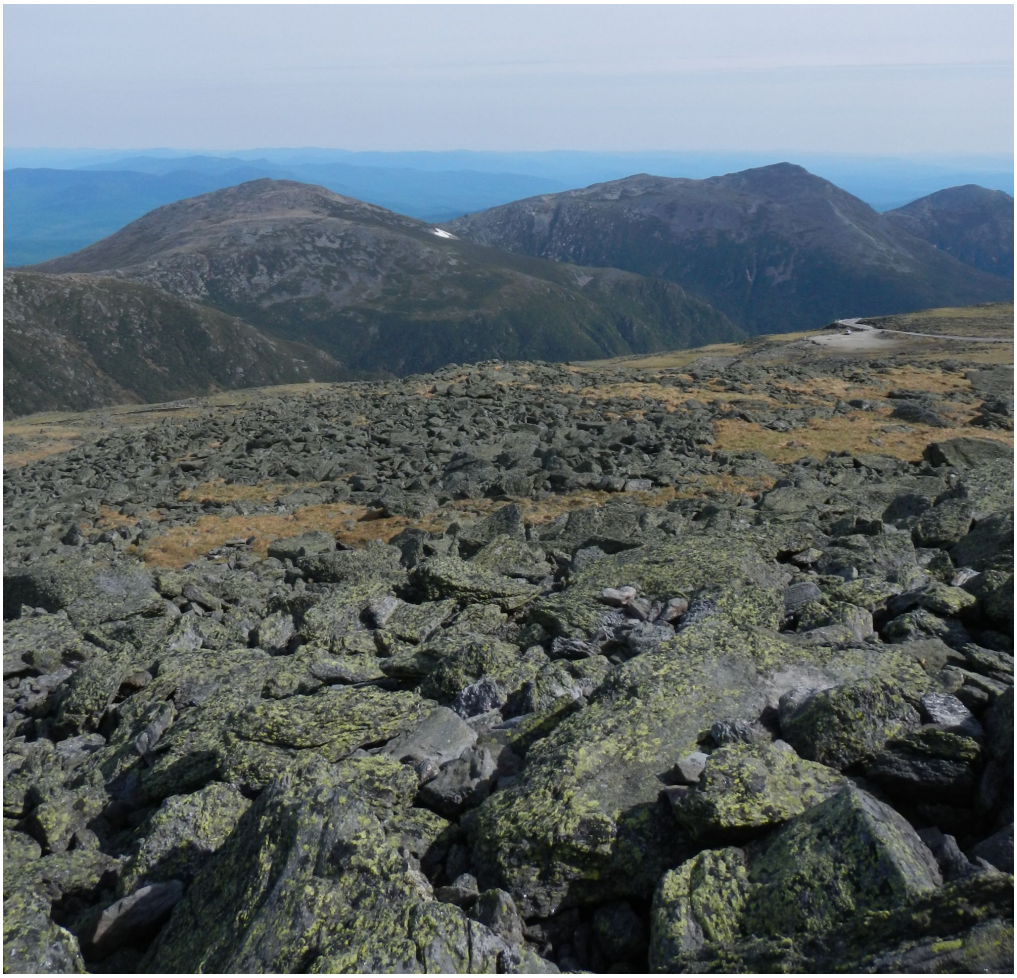
No visual example is available for the HEDP map class.

HEVP – Eastern Woodland Vernal Pool

The Eastern Woodland Vernal Pool (HEVP) map class represents the Eastern Woodland Vernal Pool Association (CEGL006453) in the USNVC. This wooded herbaceous map class is only mapped within the AT corridor as a legacy map class within DEWA in New Jersey. The HEVP map class is exceptionally rare within APPA covering 0.3 ha (0.0003% of APPA), making HEVP one of the rarest map classes within APPA.

This map class is a legacy map class only occurring in the DEWA portion of APPA where the original DEWA mapping was used without modification. For the remainder of the AT corridor, HEVP was not mapped, because no reliable way was devised to map or test this map class. By definition, this map class contains seasonally flooded pools under a closed forest canopy.

Because the DEWA polygons were not mapped as part of this project and because the DEWA polygons were tested during the DEWA AA, no AA sites were placed within the DEWA boundary of the AT corridor. Because the occurrence of this map class is within the DEWA portion of APPA, an AA was not completed on this map class.



An example of HEVP map class showing association CEGL006453 in southeastern New York showing the seasonal flooded pool, now dry with wetland indicators (note the moss line on the boulder, image right), under a closed forest canopy.

VAFB – Alpine Fell-field & Bald

The Alpine Fell-field & Bald (VAFB) map class represents two associations in the USNVC—the *Arctoparmelia centrifuga* - *Rhizocarpon geographicum* Nonvascular Vegetation (CEGL006420) and the *Vaccinium uliginosum* / *Sibbaldiopsis tridentata* Sparse Vegetation (CEGL006533). This sparse vegetation map class occurs within the AT corridor only in the alpine zone and other exposed broken rocky areas in New Hampshire and Maine. The VAFB map class is rare within the corridor covering 91.3 ha (0.08% of APPA).

The VAFB map class is defined by extensive areas of broken rock interspersed with occasional patches of vegetation. Generally occurring above 1,220 m elevation, some examples exist down to nearly 610 m elevation. The VAFB map class presents as an open area of broken boulders and talus with a very bright, washed out signature, with small inclusions of other map classes, especially in the alpine zone, covering less than 10% of the area.

The AA results indicate that VAFB was mapped well with a users' accuracy of 100% and a producers' accuracy of 91%. The AA discloses three instances where VAFB was mapped too conservatively from co-occurring alpine map classes because of the underestimation of rock cover.

An example of the VAFB map class (foreground) on Mount Washington in New Hampshire.

VBAC – Near-Boreal Alkaline Cliff

The Near-Boreal Alkaline Cliff (VBAC) map class represents the *Carex scirpoidea* Alkaline Cliff Sparse Vegetation Association (CEGL006526) in the USNVC. Within the AT corridor, this sparse vegetation map class occurs only on the side of Sugarloaf Mountain in Maine. The VBAC map class is exceptionally rare within the corridor covering 7.6 ha (0.007% of APPA).

Based on vegetation plot data and conversations with ecologists, the VBAC map class was a "map known locations" map class, which means that only confirmed locations were mapped. For VBAC, that means four polygons were mapped next to each other on the west flank of Sugarloaf Mountain in Maine on a steep south facing slope. This location was supported by a vegetation plot (which was potentially displaced) prior to mapping and, because of its remoteness, was not visited during the mapping field reconnaissance.

This map class is defined by a sheer cliff face of dark-colored alkaline exposed bedrock interwoven with patches of vegetation. The VBAC map class presents as an open area of dark bedrock with small patches of light-pink herbaceous vegetation and gray-pink conifers.

The AA results indicate that VBAC was mapped well with a users' accuracy of 83% and a producers' accuracy of 100%. The AA discloses one instance where VBAC was mapped too aggressively to the WHOT map class because of an overestimation of bedrock cover.

An example of the VBAC map class (foreground) on Sugarloaf Mountain in Maine.

VCAB – Central Appalachian Acidic Boulderfield

The Central Appalachian Acidic Boulderfield (VCAB) map class represents the *Lasallia* (*papulosa*, *pensylvanica*) - *Dimelaena oreina* - (*Melanelia culbersonii*) Nonvascular Vegetation Association (CEGL004142) in the USNVC. Within the AT corridor, this sparse vegetation map class occurs on talus and boulder fields from central Virginia north to southern New Jersey. The VCAB map class is rare within the corridor covering 18.3 ha (0.02% of APPA).

This map class is defined by extensive areas of broken acidic rock with patches of vegetation sparsely interwoven. Possible at any elevation, this map class is most common below the crests of ridges and along steep slopes. The VCAB map class presents as an open area of broken boulders and talus with a very bright, washed out signature, with small inclusions of other map classes covering less than 10% of the area.

The VCAB map class was mapped very consistently. The AA process discovered no new instances of the VCAB map class, and no instances of VCAB were confused with a different map class.

An example of the VCAB map class showing an extensive talus field with almost no vegetation.

VCMB – Central Appalachian Mafic Boulderfield

The Central Appalachian Mafic Boulderfield (VCMB) map class represents the *Lasallia papulosa* - *Stereocaulon glaucescens* - *Chrysothrix chlorina* Nonvascular Vegetation Association (CEGL004143) in the USNVC. Within the AT corridor, this sparse vegetation map class was limited to a very small area in the northern portion of SHEN in Virginia. The VCMB map class is exceptionally rare within the corridor covering 0.8 ha (0.0007% of APPA).

Based on vegetation plot data and conversations with ecologists, the VCMB map class was a "map known locations" map class, which means that only confirmed locations were mapped. For VCMB, that means three polygons were mapped in the northern portion of SHEN. These locations were supported by a vegetation plot, geology data, and mapping field reconnaissance prior to mapping (Young et al. 2009).

This map class is defined by extensive areas of broken mafic rock interwoven with occasional patches of vegetation. The VCMB map class presents as an open area of broken boulders and talus with a very bright, washed out signature, with small inclusions of other map classes covering less than 10% of the area.

The VCMB map class was mapped very consistently. The AA process discovered no new instances of the VCMB map class, and no instances of VCMB were confused with a different map class.

An example of the VCMB map class showing an extensive talus field with almost no vegetation.

VEAC – Eastern Temperate Acidic Cliff

The Eastern Temperate Acidic Cliff (VEAC) map class represents the *Juniperus virginiana* / *Corydalis sempervirens* Cliff Sparse Vegetation Association (CEGL006422) in the USNVC. Within the AT corridor, this sparse vegetation map class occurs on acidic bedrock outcrops from northern Pennsylvania to southern New York. The VEAC map class is exceptionally rare within the corridor covering 4.2 ha (0.004% of APPA).

This map class is defined by extensive areas of solid bedrock interwoven with occasional patches of vegetation. The VEAC map class presents as an open area of solid, very-bright bedrock with a washed out signature; with small, bright-pink vegetated areas in the cracks and fissures of the bedrock covering less than 10% of the area.

The AA results indicate that VEAC was mapped with a users' accuracy of 40% (90% confidence interval of -6–86%) and a producers' accuracy of 100%. (Because of the rarity of this map class within the AT corridor, the number of potential AA sites were restricted; thus, resulting in a wide range in confidence intervals.) The AA discloses one instance where VEAC was mapped too aggressively to the co-occurring HLMO map classes because of an overestimation of bedrock cover.

An example of the VEAC map class (foreground) on Bear Mountain in New York with some minor inclusions of more heavily vegetated map classes.

VNBC – Northern Appalachian Barrens & Cliff

The Northern Appalachian Barrens & Cliff (VNBC) map class represents the *Polypodium* (*virginianum*, *appalachianum*) Cliff Sparse Vegetation Association (CEGL006528) and the *Polypodium* (*virginianum*, *appalachianum*) / Lichens Nonvascular Vegetation Association (CEGL006534) in the USNVC. Within the AT corridor, this sparse vegetation map class occurs only on exposed solid bedrock in New Hampshire and Maine. The VNBC map class is rare within the corridor covering 12.4 ha (0.01% of APPA).

This map class is defined by extensive areas of solid bedrock interwoven with occasional patches of vegetation. Generally occurring below 920 m elevation, some examples exist up to nearly 1,340 m elevation. The VNBC map class presents as an open area of solid, very-bright bedrock with a washed out signature; with small, bright-pink vegetated areas in the cracks and fissures of the bedrock covering less than 10% of the area.

The AA results indicate that VNBC was mapped with a users' accuracy of 100% and a producers' accuracy of 75% (90% confidence interval of 44–106%). The AA discloses two instances where VNBC was mapped too conservatively from the FNAH and WHOT map classes. These errors were because of an underestimation of bedrock cover.

An example of the VNBC map class (foreground) with some inclusions of more heavily vegetated map classes above.

VNRR – Northern Riverscour Rock Outcrop

The Northern Riverscour Rock Outcrop (VNRR) map class represents the *Andropogon gerardii* - *Campanula rotundifolia* - *Solidago simplex* Riverscour Sparse Vegetation Association (CEGL006284) in the USNVC. Within the AT corridor, this sparse vegetation map class occurs only in northern Connecticut along the Housatonic River. The VNRR map class is exceptionally rare within the corridor covering 1.3 ha (0.001% of APPA).

Based on vegetation plot data and conversations with ecologists, the VNRR map class was a "map known locations" map class, which means that only confirmed locations were mapped. For VNRR, that means three polygons directly adjacent to one another were mapped in the active floodplain of the Housatonic River in Connecticut. This location was supported by mapping field reconnaissance prior to mapping.

This map class is defined by extensive areas of sparsely vegetated bedrock in the active floodplain with areas of open flowing water. The VNRR map class presents as an open area of bedrock with a very bright, washed out signature, with many pockets of water and rivulets and as the occasional area of sparse vegetation, with small inclusions of other map classes covering less than 10% of the area.

The VNRR map class was mapped very consistently. The AA process discovered no new instances of the VNRR map class, and no instances of VNRR were confused with a different map class.

An example of the VNRR map class showing the water-scoured bedrock, with small areas of open water and sparse vegetation in cracks and fissures.

XBMV – Beaver Meadow Vegetation Complex

The Beaver Meadow Vegetation Complex (XBMV) map class is a park-special vegetation map class and represents vegetation of wetlands impacted by active or historic American beaver (*Castor canadensis*) habitation. This map class includes a mosaic of less than MMU examples of the following 20 wetland herb and shrub associations in the USNVC:

- *Carex utriculata* - *Carex lacustris* - (*Carex vesicaria*, *Carex stricta*) Wet Meadow (CEGL002257),
- *Alnus incana* Shrub Swamp (CEGL002381),
- *Nuphar advena* - *Nymphaea odorata* Aquatic Vegetation (CEGL002386),
- *Juncus effusus* Marsh (CEGL004112),
- *Phragmites australis* ssp. *australis* Eastern Ruderal Marsh (CEGL004141),
- *Decodon verticillatus* Shrub Swamp (CEGL005089),
- *Calamagrostis canadensis* - *Carex* spp. Laurentian & Northeast Wet Meadow (CEGL005448),
- *Phalaris arundinacea* Eastern Ruderal Marsh (CEGL006044),
- *Alnus incana* - *Cornus* (*amomum*, *sericea*) / *Clematis virginiana* Shrub Swamp (CEGL006062),
- *Cephalanthus occidentalis* - *Decodon verticillatus* Shrub Swamp (CEGL006069),
- *Dulichium arundinaceum* / *Sphagnum* spp. Fen (CEGL006131),
- *Typha* (*angustifolia*, *latifolia*) - (*Schoenoplectus* spp.) Eastern Marsh (CEGL006153),
- *Vaccinium corymbosum* / *Sphagnum* spp. Acidic Peatland (CEGL006190),
- *Pontederia cordata* - *Peltandra virginica* - *Sagittaria latifolia* Marsh (CEGL006191),
- *Vaccinium corymbosum* - *Rhododendron viscosum* - *Clethra alnifolia* Acidic Peatland (CEGL006371),
- *Carex stricta* - *Carex vesicaria* Wet Meadow (CEGL006412),
- *Elodea canadensis* - *Potamogeton* spp. Eastern Aquatic Vegetation (CEGL006431),
- *Bidens cernua* - *Verbena hastata* - *Polygonum* spp. Marsh (CEGL006446),
- *Calamagrostis canadensis* - *Scirpus* spp. - *Dulichium arundinaceum* Wet Meadow (CEGL006519), and
- *Spiraea tomentosa* - *Rubus* spp. / *Phalaris arundinacea* Ruderal Wet Shrubland (CEGL006571).

This park-special vegetation map class occurs in the AT corridor from southern New York north to the Connecticut River in Vermont. This park-special map class is rare within the corridor covering 27.0 ha (0.02% of APPA).

This map class is defined by areas with ongoing American beaver activity as defined by lodges and dams. The presentation of this map class is highly variable, but in all instances, evidence of active or historic American beaver influence and a mosaic of less than MMU patches of the different vegetation associations listed above were required for this map class. Patches of open water and

meandering streams were common. Areas of greater than MMU vegetation occurring in these wetland were mapped separately.

Because the XBMV map class was specifically designed to map USNVC vegetation associations with a particular concept in mind, XBMV was tested during the AA, unlike other park-special vegetation map classes. The concept of the map class was not built into the vegetation key, but rather each data sheet from an AA site in an XBMV polygon was reviewed for issues with classification relating from less than MMU vegetation patches and evidence of American beaver activity. If these issues were present, then the scenario was considered a match, and in all XBMV AA sites, one or both of these conditions were met.

An example of a recently dewatered beaver pond showing the classic mosaic of less than MMU examples of different remnant and recovering wetland herb and shrub associations.

XCMC – Constructed Wetland Ruderal Vegetation Complex

The Constructed Wetland Ruderal Vegetation Complex (XCMC) map class is a park-special vegetation map class and represents vegetation of created and managed wetlands at the Liberty Marsh in the Wallkill River National Wildlife Refuge along the New Jersey-New York border within the AT corridor. This park-special map class is rare within the corridor covering 40.1 ha (0.04% of APPA).

This map class is defined by areas of created wetland specifically and actively managed for wildlife. Because of this management, the vegetation within the marsh varies seasonally and yearly and would readily classify to different USNVC vegetation associations at different times of the year. This precluded reliable classification during the mapping field reconnaissance. Additionally, because of the active management, the determination was made with near certainty that the classification would differ by the time AA was completed.

Because the XCMC map class is a park-special vegetation map class, XCMC was not assessed for accuracy.

An example of the Liberty Marsh complex and the XCMC map class at the Wallkill River National Wildlife Refuge along the New Jersey-New York border.

XPLM – Palmerton Smelter Ecological Restoration Area

The Palmerton Smelter Ecological Restoration Area (XPLM) map class is a park-special vegetation map class and represents vegetation for the area undergoing ecological restoration within the AT corridor from the from the smelting pollution near Palmerton, Pennsylvania. This park-special map class is rare within the corridor covering 40.1 ha (0.04% of APPA).

The boundary of the XPLM map class is defined by the severe ecological disturbance and ongoing remediation and ecological restoration occurring on the ridgeline south of Palmerton, Pennsylvania. Because of the degree, severity, and randomness of the disturbance in this area, classification of the vegetation was impossible. No existing USNVC vegetation associations for APPA presented any usable options for classification of this area.

Because the XPLM map class is a park-special vegetation map class, XPLM was not assessed for accuracy.

An example of the XPLM map class on the heavily disturbed and often denuded ridgetop south of Palmerton, Pennsylvania.

XPRO – Potomac River Outcrops

The Potomac River Outcrops (XPRO) map class is a park-special vegetation map class and represents vegetation of vegetated bedrock outcrops in the Potomac River within the AT corridor along the Maryland-Virginia border. This park-special map class is exceptionally rare within the corridor covering 1.7 ha (0.002% of APPA).

This map class is defined by areas of exposed and vegetated bedrock in the main channel of the Potomac River. Exposed to repeated flooding and scour, this map class is a mosaic of small patches of aquatic, riparian, and sparse upland vegetation. Ecologists were unable to access these sites prior to the AA, so no classification was ever developed and lacking a classification, these sites could not be tested during the AA. To maintain the map class and this unique and mappable vegetation, mappers determined that these sites (four are mapped) should be represented by a park-special vegetation map class until sufficient data exist to classify them.

Because the XPRO map class is a park-special vegetation map class, XPRO was not assessed for accuracy.

An example of the XPRO map class on an area of vegetated river rock outcrop in the Potomac River along the Maryland-Virginia border.

XRBL – Recently Burned Landscape

The Recently Burned Landscape (XRBL) map class is a park-special vegetation map class and represents vegetation of area disturbed by intense fire within the AT corridor directly prior to the acquisition of aerial imagery; this map class only occurs in central Virginia. This park-special map class is exceptionally rare within the corridor covering 10.9 ha (0.0098% of APPA).

This map class is defined by areas of recently charred landscape that had not yet begun to regenerate in any meaningful manner precluding classification. Only two separate instances of this map class were encountered within the AT corridor, with both instances in central Virginia.

Because the XRBL map class is a park-special vegetation map class, XRBL was not assessed for accuracy.

An example of a recently and intensely burned hillside within the AT corridor where vegetation regeneration remains insufficient to accurately classify the vegetation beyond the XRBL map class.

CHAV – Herbaceous Agricultural Vegetation

The Herbaceous Agricultural Vegetation (CHAV) map class represents fields planted to agricultural crops. This map class is primarily present in the lower elevations of the AT corridor. This cultural map class is uncommon within the corridor covering 372.6 ha (0.3% of APPA).

This map class is defined by areas planted and managed for agricultural crops. During the field reconnaissance effort, corn, soybeans, wheat, and oats were noted with each crop presenting a different signature in the mapping imagery. What ties this map class together is the consistent presentation of a monoculture of similar-aged plants occurring in rows, which denotes active agriculture. Many fields within the AT corridor rotate between row crops, hay, and fallow fields, so all fields were mapped per their presentation at the date of imagery. Consequently, areas mapped as CHAV could now be HXCM or HXNE and vice-versa, depending on where in the fallow-planted cycle the field is.

Because the CHAV map class is a cultural vegetation map class, CHAV was not assessed for accuracy.

Two examples of the CHAV map class showing different aspects of this map class with a freshly-plowed field west of Carlisle, Pennsylvania, (left) and an oat field south of Mount Moosilauke in New Hampshire (right).

CMCP – Eastern North American Temperate Forest Plantation

The Eastern North American Temperate Forest Plantation (CMCP) map class represents managed forests planted to a monoculture of conifer trees. This map class is present throughout the AT corridor, sometimes in large blocks. This cultural map class is uncommon within the corridor covering 168.8 ha (0.2% of APPA).

This map class is defined by areas of conifer actively managed to produce timber, which includes plantations of red pine (*Pinus resinosa*), eastern white pine (*Pinus strobus*), hemlock (*Tsuga canadensis*), Norway spruce (*Picea abies*), and various combinations of these plantations. These areas likely include areas that are no longer actively managed but maintain the visual aspects of active management.

Because the CMCP map class is a cultural vegetation map class, CMCP was not assessed for accuracy.

Two examples of the CMCP map class showing a hemlock plantation in Connecticut (left) and a eastern white pine plantation in Vermont (right).

CNHP – Native Northern Hardwood Plantation

The Native Northern Hardwood Plantation (CNHP) map class represents managed forests planted to native hardwood tree species. Only two instances of this map class were mapped within the AT corridor, with the first instance in southern Virginia and the second instance in western Massachusetts. This cultural map class is exceptionally rare within the corridor covering 2.1 ha (0.002% of APPA).

This map class is defined by areas of hardwood trees actively managed to produce timber or as nursery stock.

Because the CNHP map class is a cultural vegetation map class, CNHP was not assessed for accuracy.

No visual example is available for the CNHP map class.

CORC – Tropical & Temperate Fruit Orchard

The Tropical & Temperate Fruit Orchard (CORC) map class represents trees planted to produce fruit. Although the official name includes a broad array of tree species, the examples within the AT corridor are temperate in location with only two instances of this map class. The first instance is in west central Connecticut and the second instance in west central Massachusetts. This cultural map class is exceptionally rare within the corridor covering 1.9 ha (0.002% of APPA).

This map class is defined by areas of hardwood tree planted in rows and actively managed to produce fruit.

Because the CORC map class is a cultural vegetation map class, CORC was not assessed for accuracy.

An example of one of the two orchards mapped within the AT corridor that define the CORC map class. This example contains apples and cherries.

CSFP – Native Northern Spruce-Fir Plantation

The Native Northern Spruce-Fir Plantation (CSFP) map class represents native conifer trees planted for use as timber, Christmas trees, or nursery stock. This map class is only in northeastern Tennessee within the AT corridor. This cultural map class is exceptionally rare within the corridor covering 4.8 ha (0.004% of APPA).

This map class is defined by areas of native conifer trees, often Fraser fir (*Abies fraseri*), planted in rows and actively managed to produce Christmas trees or nursery stock.

Because the CSFP map class is a cultural vegetation map class, CSFP was not assessed for accuracy.

An example of the CSFP map class showing planted Fraser fir at a Christmas tree farm.

CVNY – Tropical & Temperate Grape Vineyard

The Tropical & Temperate Grape Vineyard (CVNY) map class represents vines planted to produce fruit. Although the official name could include a broad array of vine species, the examples within the AT corridor are temperate in location and limited to grapes (Vitus spp.), with only one instance of this map class, located in western Virginia. This cultural map class is exceptionally rare within the corridor covering 1.2 ha (0.001% of APPA).

This map class is defined by areas of vines planted in rows on trellises and actively managed to produce fruit.

Because the CVNY map class is a cultural vegetation map class, CVNY was not assessed for accuracy.

No visual example is available for the CVNY map class.

CBRN – Barren Land

The Barren Land (CBRN) map class represents unvegetated lands disturbed by human activity. This map class is widely scattered within the AT corridor. This cultural map class is rare within the corridor covering 24.9 ha (0.02% of APPA).

This map class is defined by areas actively undergoing development or modification that leaves large areas denuded of vegetation (which will not be planted to a crop). The CBRN landscape is generally transitory in nature because it is being actively modified for some sort of human activity, such as construction. Several instances of new areas of CBRN that were not captured in the project aerial imagery were noted during the field reconnaissance process. Likewise, instances of CBRN captured in the aerial imagery but had already been revegetated or converted to more intense uses were noted.

Because the CBRN map class is a cultural vegetation map class, CBRN was not assessed for accuracy.

An example of the CBRN map class showing an area undergoing significant recent human activity, in this case, mining and landfilling.

CDVH – Developed Area - High Intensity

The Developed Area - High Intensity (CDVH) map class represents unvegetated lands where impervious surfaces account for 80–100% of the total cover. This map class is widely scattered within the AT corridor. This cultural map class is uncommon within the corridor covering 223.7 ha (0.2% of APPA).

This map class is defined by developed areas where people reside or work in high numbers. This map class is generally permanent in nature, though management choices to reduce impervious surface coverage could be initiated.

Because the CDVH map class is a cultural vegetation map class, CDVH was not assessed for accuracy.

Two examples of the CDVH map class showing different aspects of this map class with the Waterville Power Station in North Carolina (left) and the Bear Mountain Bridge in New York (right).

CDVL – Developed Area - Low Intensity

The Developed Area - Low Intensity (CDVL) map class represents areas primarily dominated by single-family housing units, smaller roads, some types of parking, and paved pathways that still maintain open vegetated areas where impervious surfaces account for 20–49% of the total cover. This map class is widely scattered within the AT corridor. This cultural map class is common within the corridor covering 574.4 ha (0.5% of APPA).

This map class is defined by areas where people reside, work, or recreate, but open space is still maintained. This map class is generally permanent in nature, though management choices to reduce impervious surface coverage could be initiated. Because the CDVL map class is a cultural vegetation map class, CDVL was not assessed for accuracy.

Two examples of the CDVL map class showing different aspects of this map class with a substation and power lines near Falls Village, Connecticut (left) and Hosner Mountain Road and power-line corridor in New York (right).

CDVM – Developed Area - Medium Intensity

The Developed Area - Medium Intensity (CDVM) map class represents areas primarily dominated by constructed materials or paved surfaces that still maintain some open vegetated areas where impervious surfaces account for 50–79% of the total cover. This map class is widely scattered within the AT corridor. This cultural map class is common within the corridor covering 629.1 ha (0.6% of APPA).

This map class is defined by significantly developed areas. This map class is generally permanent in nature, though management choices to reduce impervious surface coverage could be initiated.

Because the CDVM map class is a cultural vegetation map class, CDVM was not assessed for accuracy.

Two examples of the CDVM map class showing different aspects of this map class with abandoned light-industry along the Trail near Unionville, New York (left) and the Mount Washington Cog Railway in New Hampshire (right).

CDVO – Developed Area - Open Space

The Developed Area - Open Space (CDVO) map class represents areas consisting mostly of vegetation in the form of maintained lawns, but also have a mixture of some constructed materials where impervious surfaces account for less than 20% of the total cover. This map class is widely scattered within the AT corridor. This cultural map class is uncommon within the corridor covering 511.2 ha (0.46% of APPA).

This map class is defined by areas where people primarily recreate with abundant maintained open space. This map class is generally permanent in nature, though management choices to reduce impervious surface coverage could be initiated.

Because the CDVO map class is a cultural vegetation map class, CDVO was not assessed for accuracy.

Two examples of the CDVO map class showing different aspects of this map class with a picnic area at Bear Lake State Park in New York (left) and a cemetery along the Trail near Dartmouth, New Hampshire (right).

ZOSR – Open Water Stream & River

The Open Water Stream & River (ZOSR) map class represents unvegetated streams and rivers. Streams and rivers with an open canopy are possible along any portion of the AT corridor from Georgia to Maine. This open water map class is common within the corridor covering 558.4 ha (0.5% of APPA).

This map class is defined by streams and rivers large enough to not be completely covered by overarching vegetation. Wetland vegetation—aquatic and emergent—may be present (usually in shallow waters close to shorelines), but the vegetation should contribute less than 1% cover; however, small areas (less than MMU) of wetland vegetation having greater than 10% cover—including herbaceous vegetation, shrubs, and trees—may be present. Because of the very low reflectivity of water, this map class generally presents as a very dark and usually linear feature. In instances of shallow or clear water the riverbed is often visible.

Because the ZOSR map class is an open water map class, ZOSR was not assessed for accuracy.

Two examples of the ZOSR map class comparing the Cooper Brook in Maine (left) to the Hudson River in New York (right).

ZOWL – Open Water Lake

The Open Water Lake (ZOWL) map class represents unvegetated lakes larger than 8 ha. Lakes larger than 8 ha are possible along any portion of the AT corridor from Georgia to Maine. This open water map class is common within the corridor covering 937.1 ha (0.8% of APPA), though the majority of this area is comprised of a few large waterbodies in Maine.

This map class is defined by areas of generally non-flowing open water over 8 ha in area that have less than 1% cover of wetland or aquatic vegetation. Wetland vegetation—aquatic and emergent—may be present (usually in shallow waters close to shorelines), but the vegetation should contribute less than 1% cover; however, small areas (less than MMU) of wetland vegetation having greater than 10% cover—including herbaceous vegetation, shrubs, and trees—may be present. Because of the very low reflectivity of water, this map class generally presents as a very dark and completely flat area. When wetland vegetation is distinct from the immediate surroundings, wetland vegetation types occurring in patches less than the size of the standard MMU were mapped.

Because the ZOWL map class is an open water map class, ZOWL was not assessed for accuracy.

An example of the ZOWL map class as represented by Church Pond in Maine. Church Pond is actually well over 8 ha in area despite its moniker.

ZOWP – Open Water Pond

The Open Water Pond (ZOWP) map class represents unvegetated lakes smaller than 8 ha. Ponds smaller than 8 ha are possible along any portion of the AT corridor from Georgia to Maine. This open water map class is rare within the corridor covering 90.7 ha (0.08% of APPA).

This map class is defined by areas of generally non-flowing open water under 8 ha in area that have less than 1% cover of wetland or aquatic vegetation. Wetland vegetation—aquatic and emergent—may be present (usually in shallow waters close to shorelines), but the vegetation should contribute less than 1% cover; however, small areas (less than MMU) of wetland vegetation having greater than 10% cover—including herbaceous vegetation, shrubs, and trees—may be present. Because of the very low reflectivity of water, this map class generally presents as a very dark and completely flat area. When wetland vegetation is distinct from the immediate surroundings, wetland vegetation types occurring in patches less than the size of the standard MMU were mapped.

Because the ZOWP map class is an open water map class, ZOWP was not assessed for accuracy.

An example of the ZOWP map class as represented by Lake of the Clouds on Mount Washington in New Hampshire. Lake of the Clouds is actually well under 8 ha in area despite its moniker.

Table F–2. Map-classification listing, sorted alphabetically by map-class code, used for the Appalachian National Scenic Trail vegetation mapping project.

Map-Class Code	Map-Class Name
CBRN	Barren Land
CDVH	Developed Area - High Intensity
CDVL	Developed Area - Low Intensity
CDVM	Developed Area - Medium Intensity
CDVO	Developed Area - Open Space
CHAV	Herbaceous Agricultural Vegetation
CMCP	Eastern North American Temperate Forest Plantation
CNHP	Native Northern Hardwood Plantation
CORC	Tropical & Temperate Fruit Orchard
CSFP	Native Northern Spruce-Fir Plantation
CVNY	Tropical & Temperate Grape Vineyard
FABF	Southern Appalachian Boulderfield Forest (Currant & Rockcap Fern Type)
FAHS	Acidic Hardwood Swamp Forest
FAMA	Appalachian Montane Alluvial Forest
FAMO	Appalachian Mixed Oak Forest
FAOH	Central Appalachian Oak - Hickory Forest
FARB	Southern Appalachian Hardwood Rich Boulderfield Forest
FAWS	Inland Atlantic White-cedar Swamp Forest
FBGP	Southern Appalachian Beech Gap
FBHH	Blue Ridge Hemlock - Northern Hardwood Forest
FBSB	Black Spruce Open Bog Woodland
FCAB	Central Appalachian High-Elevation Boulderfield Forest
FCAO	Central Appalachian Oak Forest
FCAS	Central Appalachian Swamp Forest
FCHH	Central Appalachian Hemlock - Hardwood Forest
FCHO	Central Appalachian Hemlock - Chestnut Oak Forest
FCHP	Central Appalachian Hardwood - White Pine Forest
FCHW	Central Appalachian Hardwood Forest & Woodland
FCMS	Red Spruce - Red Maple Acidic Swamp Forest
FCNO	Central & Northern Oak Forest
FCOH	Chestnut Oak / Heath Forest
FCOM	Chestnut Oak - Mixed Oak Forest
FCRO	Central Appalachian Northern Red Oak Forest
FCWH	Central Appalachian White Pine - Hemlock Forest
FFAW	Ash - Willow Floodplain Forest
FFCR	Piedmont-Central Appalachian Rich Floodplain Forest
FFFS	Fraser Fir / Shrub Forest
FFHH	High-gradient Hardwood Floodplain Forest
FFTH	Terrace Hardwood Floodplain Forest
FHHO	Hemlock - Hardwood - Oak Forest
FHHS	Hemlock - Hardwood Swamp Forest
FHNH	Hemlock - Northern Hardwood Forest
FHSH	Hemlock - Spruce - Hardwood Forest
FHWO	White Pine - Hemlock - Oak Forest
FLSF	Low-Elevation Spruce - Fir Forest
FMCO	Appalachian Sugar Maple - Chinquapin Oak Limestone Forest
FMEF	Midwestern Silver Maple - Elm Floodplain Forest
FMFB	Montane Balsam Fir - Birch Forest
FMHF	Silver Maple - Hardwood Floodplain Forest

Table F–2 (continued). Map-classification listing, sorted alphabetically by map-class code, used for the Appalachian National Scenic Trail vegetation mapping project.

Map-Class Code	Map-Class Name
FMSF	Montane Spruce - Fir Forest
FMSS	Mixed Spruce Swamp Forest & Woodland
FNAH	Northern Appalachian Hardwood Forest
FNWS	Northern White-cedar Swamp Forest
FOHG	Oak - Hickory Forest & Woodland
FOTM	Oak - Tuliptree - Maple Forest
FPHD	Lower New England-Northern Piedmont White Pine - Hemlock Dry-Mesic Forest
FPHS	White Pine - Hemlock - Red Spruce Forest
FPOF	Pin Oak Small River Floodplain Forest
FRHS	Rich Hardwood Swamp Forest
FROH	High-Elevation Red Oak Forest
FRVL	Southern Appalachian Limestone Rich Cove Forest
FRWP	White Pine - Red Pine Forest
FSAH	Southern Appalachian Hardwood Forest
FSCO	Lower New England High Slope Chestnut Oak Forest
FSFD	Red Spruce - Fraser Fir Forest (Deciduous Shrub Type)
FSFE	Red Spruce - Fraser Fir Forest (Evergreen Shrub Type)
FSHH	Red Spruce - Northern Hardwood Forest (Herb Type)
FSHS	Spruce - Hardwood / Shrub Forest
FSMC	Sugar Maple - Chinquapin Oak / Sedge Forest
FTHS	Transitional Northern Hardwood - Red Spruce Forest
FXAH	Appalachian Ruderal Hardwood Forest
FXBL	Ruderal Black Locust Forest
FXCH	Central Appalachian Ruderal Hardwood Forest
FXER	Northeastern Ruderal Red-cedar Forest
FXHO	Southern & Central Appalachian Ruderal Hawthorn Forest
FXNH	Ruderal Northern Hardwood Forest & Woodland
FXOM	Northeastern Ruderal Oak - Red Maple Forest
FXSF	Successional Mixed Spruce - Fir - Hardwood Forest
FXTT	Ruderal Tuliptree Forest
FXVP	Ruderal Virginia Pine Forest
FXWP	Ruderal Eastern White Pine Forest
HAFV	Aquatic Floating Vegetation
HALD	Appalachian Low-Elevation Granitic Dome
HAWM	Alpine Herbaceous Wet Meadow
HBAM	Bigelow's Sedge Alpine Meadow
HBGF	Graminoid & Forb Bald
HCAB	Central Appalachian Wooded Herbaceous Barrens
HCRB	Central Appalachian Herbaceous Riverbank
HCRM	Common Rush Marsh
HECM	Eastern Cattail Marsh
HEDP	Eastern North America Duckweed Pond
HEVP	Eastern Woodland Vernal Pool
HGFM	Graminoid & Forb Wet Meadow & Marsh
HHGB	High-Elevation Greenstone Barrens
HLMO	Low- to Mid-Elevation Little Bluestem - Poverty Oatgrass Outcrop Opening
HMSF	Northern Appalachian Alpine Bulrush Cliff
HMSM	Mixed Sedge Fen & Wet Meadow
HRGS	Graminoid & Scour Riverbank

Table F–2 (continued). Map-classification listing, sorted alphabetically by map-class code, used for the Appalachian National Scenic Trail vegetation mapping project.

Map-Class Code	Map-Class Name
HTSM	Southern New England Threeway Sedge Fen
HWBS	Water-willow Rocky Bar and Shore
HXCM	Cultivated Grassland
HXCR	Eastern Ruderal Common Reed Marsh
HXFM	Grazed Montane Grassland / Fire Meadow
HXNE	Northeastern Ruderal Grassland
HXSC	Ruderal Steeplebush - Reed Canarygrass Marsh
SABR	Southern Appalachian Bog (Rhododendron Type)
SAHM	Alpine Heath Meadow
SASB	Southern Appalachian Shrub Bog (Long Hope Valley Type)
SAST	Alder Shrub Thicket & Swamp
SBAA	Southern Appalachian Alder Bald
SBAB	Southern Appalachian Blackberry Bald
SBAH	Southern Appalachian Heath Bald
SBBT	Blueberry Peatland Thicket
SBCH	Southern Appalachian Catawba Rosebay Heath Bald
SBDH	Southern Appalachian Deciduous Heath Bald
SBGB	Blueberry Granite Barrens
SBOB	Ridgetop Bear Oak Barrens
SCAB	Central Appalachian Blueberry Dwarf-shrubland
SCHB	Central Appalachian Heath Barrens
SCTH	Cold Air Talus Heathland
SDBF	Dwarf-shrub Peatland
SHBT	High-Elevation Blackberry Thicket
SHOB	High-Elevation Outcrop Barrens (Black Chokeberry Igneous / Metamorphic Type)
SLBS	Swamp-Loosestrife & Buttonbush Shrub Swamp
SMBT	Mixed Shrub Bald & Thicket
SMCK	Mixed Conifer Krummholz
SNAS	Northern Appalachian High-Elevation Seepage Shrubland
SRBS	Rocky Bar and Shore (Alder - Yellowroot Type)
SSLF	Sweetgale - Leatherleaf Fen
SSNB	Southern New England Bog
SSSB	Subalpine Slope Bog
SWAR	Windswept Alpine Ridge
SWEB	Black Crowberry Wet Alpine Bog
SXBG	Ruderal Blackberry - Greenbrier Shrub Thicket
SXCN	Central & Northern Ruderal Shrubland
SXHE	Successional Heath Shrubland
SXKV	Ruderal Kudzu Vineland
SXMW	Ruderal Mixed Wet Shrub Swamp
VAFB	Alpine Fell-field & Bald
VBAC	Near-Boreal Alkaline Cliff
VCAB	Central Appalachian Acidic Boulderfield
VCMB	Central Appalachian Mafic Boulderfield
VEAC	Eastern Temperate Acidic Cliff
VNBC	Northern Appalachian Barrens & Cliff
VNRR	Northern Riverscour Rock Outcrop
WCNH	Calcareous Northern Hardwood Talus Woodland
WCRS	Piedmont-Central Appalachian Sycamore - River Birch Floodplain Forest

Table F–2 (continued). Map-classification listing, sorted alphabetically by map-class code, used for the Appalachian National Scenic Trail vegetation mapping project.

Map-Class Code	Map-Class Name
WDMP	Blue Ridge Mixed Pine Dry Woodland
WHOT	Hardwood - Oak Talus Woodland
WJPR	Jack Pine Heath Barrens
WMBH	Montane Basic Hardwood - Red-cedar Woodland
WMDP	Appalachian Mixed Pine - (Oak) Dry Woodland
WMUM	Red Maple / Upright Sedge Wet Woodland
WNWF	Northern White-cedar Wooded Fen
WPAF	Pasture Fen
WPOS	Central Appalachian Pine - Oak Xeric Shale Woodland
WPPS	Pitch Pine Rocky Summit
WROT	Red Oak Talus Woodland
WSFR	Northern Appalachian Red Spruce Rocky Ridge
WSTS	Red Spruce Talus Slope Woodland
WTRR	Traprock Ridge
XBMV	Beaver Meadow Vegetation Complex
XCMC	Constructed Wetland Ruderal Vegetation Complex
XPLM	Palmerton Smelter Ecological Restoration Area
XPRO	Potomac River Outcrops
XRBL	Recently Burned Landscape
ZOSR	Open Water Stream & River
ZOWL	Open Water Lake
ZOWP	Open Water Pond

Appendix G: Map Classification by Map-Class Category

Explanation of Map-Classification Table

Table G–1 lists the map classification for the Appalachian National Scenic Trail vegetation mapping project for the National Park Service Vegetation Mapping Inventory Program from a map classification perspective and lists the vegetation types in the U.S. National Vegetation Classification (USNVC) that are assigned to each map class. For a listing of the map classification from a vegetation classification perspective, see "Appendix H: Map Classification by U.S. National Vegetation Classification."

The presentation of the map classification in Table G–1 is organized by map-class categories to group similar kinds of map classes. Each map class is listed with its map-class code followed by its map-class name. Listed below each map class is the vegetation type in the USNVC (USNVC Database 2016) that the map class represents (except for Open Water and some Park Special Vegetation map classes). Some map classes represent more than one USNVC type. The USNVC types listed below map classes are association-level types unless otherwise stated. Associations are listed with their scientific name followed by their Community Element Global code (i.e., CEGL00####). Associations represented by more than one map class are denoted with an asterisk (*).

Table G–1. Map classification and crosswalk to vegetation types in the U.S. National Vegetation Classification (USNVC) for the Appalachian National Scenic Trail vegetation mapping project.

[The bold headings within the table (above the map classes) are map-class categories to organize the map classes.]

Map-Class Category Map-Class Code - Name USNVC Scientific Association Name (Code)[t]
High-Elevation Deciduous Forest & Woodland
FABF - Southern Appalachian Boulderfield Forest (Currant & Rockcap Fern Type)
Betula alleghaniensis / *Ribes glandulosum* / *Polypodium appalachianum* Forest (CEGL006124)
FBGP - Southern Appalachian Beech Gap
Fagus grandifolia / *Carex pensylvanica* - *Ageratina altissima* var. *roanensis* Forest (CEGL006130)
FCAB - Central Appalachian High-Elevation Boulderfield Forest
Betula alleghaniensis / *Sorbus americana* - *Acer spicatum* / *Polypodium appalachianum* Forest (CEGL008504)
FCRO - Central Appalachian Northern Red Oak Forest
Quercus rubra - (*Quercus alba*) / *Ilex montana* / *Dennstaedtia punctilobula* - *Lysimachia quadrifolia* Forest (CEGL008506)
FROH - High-Elevation Red Oak Forest
Quercus rubra / *Carex pensylvanica* - *Ageratina altissima* var. *roanensis* Forest (CEGL007298)
Quercus rubra / (*Kalmia latifolia*, *Rhododendron catawbiense*, *Rhododendron maximum*) / Galax *urceolata* Forest (CEGL007299)
Quercus rubra / (*Vaccinium simulatum*, *Rhododendron calendulaceum*) / (*Dennstaedtia punctilobula*, *Thelypteris noveboracensis*) Forest (CEGL007300)
WROT - Red Oak Talus Woodland
Quercus prinus / *Rhus* spp. / *Deschampsia flexuosa* Woodland (CEGL006074)
Quercus rubra - (*Quercus prinus*) / *Vaccinium* spp. / *Deschampsia flexuosa* Woodland (CEGL006134)
Betula lenta - *Quercus prinus* / *Parthenocissus quinquefolia* Woodland (CEGL006565)*
Quercus rubra - *Betula lenta* / *Polypodium virginianum* Woodland (CEGL006585)*
High-Elevation Mixed Deciduous-Conifer Forest
FBHH - Blue Ridge Hemlock - Northern Hardwood Forest
Betula alleghaniensis - (*Tsuga canadensis*) / *Rhododendron maximum* / (*Leucothoe fontanesiana*) Forest (CEGL007861)
FMFB - Montane Balsam Fir - Birch Forest
Abies balsamea - (*Betula papyrifera* var. *cordifolia*) Forest (CEGL006112)
FSHH - Red Spruce - Northern Hardwood Forest (Herb Type)
Picea rubens - (*Betula alleghaniensis*, *Aesculus flava*) / *Viburnum lantanoides* / *Solidago glomerata* Forest (CEGL006256)
FSHS - Spruce - Hardwood / Shrub Forest
Picea rubens - (*Betula alleghaniensis*, *Aesculus flava*) / *Rhododendron* (*maximum*, *catawbiense*) Forest (CEGL004983)
Picea rubens - (*Tsuga canadensis*) / *Rhododendron maximum* Forest (CEGL006152)
FTHS - Transitional Northern Hardwood - Red Spruce Forest
Betula alleghaniensis - *Picea rubens* / *Dryopteris campyloptera* Forest (CEGL006267)
High-Elevation Conifer Forest & Woodland
FFFS - Fraser Fir / Shrub Forest
Abies fraseri / *Viburnum lantanoides* / *Dryopteris campyloptera* - *Oxalis montana* / *Hylocomium splendens* Forest (CEGL006049)
Abies fraseri / (*Rhododendron catawbiense*, *Rhododendron carolinianum*) Forest (CEGL006308)
FMSF - Montane Spruce - Fir Forest
Picea rubens - *Abies balsamea* / *Sorbus americana* Forest (CEGL006128)

Table G–1 (continued). Map classification and crosswalk to vegetation types in the U.S. National Vegetation Classification (USNVC) for the Appalachian National Scenic Trail vegetation mapping project.

[The bold headings within the table (above the map classes) are map-class categories to organize the map classes.]

Map-Class Category Map-Class Code - Name USNVC Scientific Association Name (Code)[t]
FSFD - Red Spruce - Fraser Fir Forest (Deciduous Shrub Type)
Picea rubens - (*Abies fraseri*) / *Vaccinium erythrocarpum* / *Dryopteris campyloptera* / *Hylocomium splendens* Forest (CEGL007131)
FSFE - Red Spruce - Fraser Fir Forest (Evergreen Shrub Type)
Picea rubens - (*Abies fraseri*) / (*Rhododendron catawbiense*, *Rhododendron maximum*) Forest (CEGL007130)
WPPS - Pitch Pine Rocky Summit
Pinus rigida / (*Quercus ilicifolia*) / *Photinia melanocarpa* / *Deschampsia flexuosa* Woodland (CEGL006116)
WSFR - Northern Appalachian Red Spruce Rocky Ridge
Picea rubens / *Vaccinium angustifolium* / *Sibbaldiopsis tridentata* Woodland (CEGL006053)
Low-Elevation Oak Forest
FAMO - Appalachian Mixed Oak Forest
Quercus rubra - Acer rubrum / *Pyrularia pubera* / *Thelypteris noveboracensis* Forest (CEGL006192)
Quercus alba - Quercus (*rubra*, *prinus*) / *Rhododendron calendulaceum* - (*Gaylussacia ursina*) Forest (CEGL007230)
Quercus alba - Quercus rubra - Carya ovalis / *Acer saccharum* / *Polystichum acrostichoides* Forest (CEGL007233)
Quercus alba - Quercus coccinea - Quercus falcata / *Kalmia latifolia - Vaccinium pallidum* Forest (CEGL007691)
Quercus alba - Quercus rubra - Quercus prinus / *Collinsonia canadensis - Podophyllum peltatum* Forest (CEGL007692)
Quercus rubra - Tilia americana var. *heterophylla* - (*Halesia tetraptera* var. *monticola*) / *Collinsonia canadensis - Prosartes lanuginosa* Forest (CEGL007878)
FAOH - Central Appalachian Oak - Hickory Forest
Quercus rubra - Quercus prinus - Carya ovalis / (*Cercis canadensis*) / *Solidago caesia* Forest (CEGL008514)
Quercus alba - Quercus prinus - Carya glabra / *Cornus florida* / *Vaccinium pallidum* Forest (CEGL008515)
Quercus prinus - Quercus rubra - Carya ovalis / *Carex pensylvanica* - (*Calamagrostis porteri*) Forest (CEGL008516)
Quercus rubra - Acer saccharum / *Ostrya virginiana* / *Cardamine concatenata* Forest (CEGL008517)
Quercus rubra - Carya ovata - Fraxinus americana / *Actaea racemosa - Hydrophyllum virginianum* Forest (CEGL008518)
FCAO - Central Appalachian Oak Forest
Quercus prinus - Quercus rubra / *Hamamelis virginiana* Forest (CEGL006057)
Quercus prinus - Quercus rubra / *Vaccinium pallidum* - (*Rhododendron periclymenoides*) Forest (CEGL008523)
FCHO - Central Appalachian Hemlock - Chestnut Oak Forest
Tsuga canadensis - Quercus prinus - Betula lenta Forest (CEGL006923)
FCNO - Central & Northern Oak Forest
Quercus (*velutina*, *alba*) / *Vaccinium pallidum* / *Pteridium aquilinum* High Allegheny Plateau, Western Allegheny Plateau Forest (CEGL006018)
Acer saccharum - Quercus rubra / *Hepatica nobilis* var. *obtusa* Forest (CEGL006046)
Quercus prinus - Quercus (*rubra*, *velutina*) / *Vaccinium* (*angustifolium*, *pallidum*) Forest (CEGL006282)*
Quercus (*alba*, *rubra*, *velutina*) - *Carya* spp. / *Viburnum acerifolium* Forest (CEGL006336)

Alnus viridis ssp. *crispa* - *Spiraea alba* / *Solidago macrophylla* Shrubland (CEGL006064)
Betula alleghaniensis - *Quercus rubra* / *Polypodium virginianum* Woodland (CEGL006584)

Table G–1 (continued). Map classification and crosswalk to vegetation types in the U.S. National Vegetation Classification (USNVC) for the Appalachian National Scenic Trail vegetation mapping project.

[The bold headings within the table (above the map classes) are map-class categories to organize the map classes.]

Map-Class Category Map-Class Code - Name USNVC Scientific Association Name (Code)[t]
WJPR - Jack Pine Heath Barrens
Pinus banksiana / *Kalmia angustifolia* - *Vaccinium* spp. Woodland (CEGL006041)
WMBH - Montane Basic Hardwood - Red-cedar Woodland
Carya (*glabra*, *alba*) - *Fraxinus americana* - (*Juniperus virginiana* var. *virginiana*) Woodland (CEGL003752)
WMDP - Appalachian Mixed Pine - (Oak) Dry Woodland
Pinus (*pungens*, *rigida*) - *Quercus prinus* / (*Quercus ilicifolia*) / *Gaylussacia baccata* Woodland (CEGL004996)
Pinus virginiana - *Pinus* (*rigida*, *echinata*) - (*Quercus prinus*) / *Vaccinium pallidum* Forest (CEGL007119)
Pinus virginiana - (*Pinus rigida*, *Pinus pungens*) / *Schizachyrium scoparium* Forest (CEGL008500)
Quercus prinus - *Pinus virginiana* - (*Pinus pungens*) / *Schizachyrium scoparium* - *Dichanthelium depauperatum* Woodland (CEGL008540)
WPOS - Central Appalachian Pine - Oak Xeric Shale Woodland
Pinus virginiana - *Quercus prinus* / *Quercus ilicifolia* / (*Hieracium greenii*, *Viola pedata*) Woodland (CEGL008525)
Quercus prinus / *Quercus ilicifolia* / *Danthonia spicata* Woodland (CEGL008526)
WSTS - Red Spruce Talus Slope Woodland
Picea rubens / *Ribes glandulosum* Woodland (CEGL006250)
WTRR - Traprock Ridge
Juniperus virginiana - *Fraxinus americana* / *Danthonia spicata* - *Poa compressa* Woodland (CEGL006002)
Floodplain Forest
FAMA - Appalachian Montane Alluvial Forest
Platanus occidentalis - *Liriodendron tulipifera* - (*Betula alleghaniensis*) / *Alnus serrulata* - *Leucothoe fontanesiana* Floodplain Forest (CEGL004691)
FFAW - Ash - Willow Floodplain Forest
Acer saccharum - *Fraxinus* spp. - *Tilia americana* / *Matteuccia struthiopteris* - *Ageratina altissima* Floodplain Forest (CEGL006114)*
Fraxinus pennsylvanica - (*Juglans nigra*, *Platanus occidentalis*) Floodplain Forest (CEGL006575)
Salix nigra - (*Populus deltoides*) Floodplain Forest (CEGL006629)
FFCR - Piedmont-Central Appalachian Rich Floodplain Forest
Platanus occidentalis - *Acer negundo* - *Juglans nigra* / *Asimina triloba* / *Mertensia virginica* Floodplain Forest (CEGL004073)
FFHH - High-gradient Hardwood Floodplain Forest
Acer saccharum / *Ostrya virginiana* / *Brachyelytrum erectum* Floodplain Forest (CEGL006504)
FFTH - Terrace Hardwood Floodplain Forest
Acer saccharum - *Fraxinus* spp. - *Tilia americana* / *Matteuccia struthiopteris* - *Ageratina altissima* Floodplain Forest (CEGL006114)*
FMEF - Midwestern Silver Maple - Elm Floodplain Forest
Acer saccharinum - *Fraxinus pennsylvanica* - *Ulmus americana* Floodplain Forest (CEGL002586)
FMHF - Silver Maple - Hardwood Floodplain Forest
Acer saccharinum - *Ulmus americana* / *Onoclea sensibilis* Floodplain Forest (CEGL006001)
Acer saccharinum - (*Populus deltoides*) / *Matteuccia struthiopteris* - *Laportea canadensis* Floodplain Forest (CEGL006147)
Acer saccharinum / *Onoclea sensibilis* - *Boehmeria cylindrica* Floodplain Forest (CEGL006176)

Table G–1 (continued). Map classification and crosswalk to vegetation types in the U.S. National Vegetation Classification (USNVC) for the Appalachian National Scenic Trail vegetation mapping project.

[The bold headings within the table (above the map classes) are map-class categories to organize the map classes.]

Map-Class Category Map-Class Code - Name USNVC Scientific Association Name (Code)[t]
Acer saccharinum - Acer negundo / *Ageratina altissima - Laportea canadensis* - (*Elymus virginicus*) Floodplain Forest (CEGL006217)
Acer saccharum - Fraxinus americana / *Carpinus caroliniana* / *Podophyllum peltatum* Forest (CEGL006459)
FPOF - Pin Oak Small River Floodplain Forest
Quercus palustris - Acer rubrum / *Carex grayi - Geum canadense* Wet Forest (CEGL006185)
Deciduous & Mixed Deciduous-Conifer Wetland Forest & Woodland
FAHS - Acidic Hardwood Swamp Forest
Quercus rubra - Betula alleghaniensis / *Osmunda cinnamomea* Forest (CEGL006000)
Acer rubrum - Nyssa sylvatica - Betula alleghaniensis / *Sphagnum* spp. Swamp Forest (CEGL006014)*
Acer rubrum / *Nemopanthus mucronatus - Vaccinium corymbosum* Swamp Forest (CEGL006220)
Tsuga canadensis / *Rhododendron maximum* / *Sphagnum* spp. Swamp Forest (CEGL006279)*
Acer rubrum / *Alnus incana - Ilex verticillata* / *Osmunda regalis* Woodland (CEGL006395)
Acer rubrum - Fraxinus (*pennsylvanica*, *americana*) / *Lindera benzoin* / *Symplocarpus foetidus* Swamp Forest (CEGL006406)*
FCAS - Central Appalachian Swamp Forest
Acer rubrum - Nyssa sylvatica - Betula alleghaniensis / *Sphagnum* spp. Swamp Forest (CEGL006014)*
Acer rubrum - Fraxinus (*pennsylvanica*, *americana*) / *Lindera benzoin* / *Symplocarpus foetidus* Swamp Forest (CEGL006406)*
Acer rubrum - Nyssa sylvatica / *Ilex verticillata - Vaccinium fuscatum* / *Osmunda cinnamomea* Seep Forest (CEGL007853)
Acer rubrum - Fraxinus nigra - Betula alleghaniensis / *Veratrum viride - Carex bromoides* Seep Forest (CEGL008416)
FCMS - Red Spruce - Red Maple Acidic Swamp Forest
Picea rubens - Acer rubrum / *Nemopanthus mucronatus* Swamp Forest (CEGL006198)
FRHS - Rich Hardwood Swamp Forest
Acer rubrum - Fraxinus nigra - (*Larix laricina*) / *Rhamnus alnifolia* Swamp Forest (CEGL006009)
Betula alleghaniensis - Acer rubrum - (*Tsuga canadensis*, *Abies balsamea*) / *Osmunda cinnamomea* Swamp Forest (CEGL006380)
Acer rubrum - Fraxinus nigra - (*Tsuga canadensis*) / *Tiarella cordifolia* Swamp Forest (CEGL006502)
WMUM - Red Maple / Upright Sedge Wet Woodland
Acer rubrum / *Carex stricta - Onoclea sensibilis* Wet Woodland (CEGL006119)
WNWF - Northern White-cedar Wooded Fen
Thuja occidentalis - Abies balsamea / *Ledum groenlandicum* / *Carex trisperma* Swamp Woodland (CEGL006507)
WPAF - Pasture Fen
Juniperus virginiana / *Dasiphora fruticosa* ssp. *floribunda* / *Carex flava - Carex tetanica* Fen (CEGL006357)
Conifer Wetland Forest & Woodland
FAWS - Inland Atlantic White-cedar Swamp Forest
Chamaecyparis thyoides - (*Tsuga canadensis*, *Betula alleghaniensis*) / *Clethra alnifolia* Swamp Forest (CEGL006189)
FBSB - Black Spruce Open Bog Woodland
Picea mariana / *Ledum groenlandicum* / *Carex trisperma* / *Sphagnum* spp. Open Bog Woodland (CEGL002485)

Table G–1 (continued). Map classification and crosswalk to vegetation types in the U.S. National Vegetation Classification (USNVC) for the Appalachian National Scenic Trail vegetation mapping project.

Alpine Herbaceous & Shrub
HAWM - Alpine Herbaceous Wet Meadow
Trichophorum caespitosum - *Carex scirpoidea* - *Carex bigelowii* Alpine Snowbed (CEGL006424)
HBAM - Bigelow's Sedge Alpine Meadow
Carex bigelowii Alpine Meadow (CEGL006081)
HMSF - Northern Appalachian Alpine Bulrush Cliff
Trichophorum caespitosum - *Calamagrostis pickeringii* Alpine Snowbed (CEGL006423)
SAHM - Alpine Heath Meadow
Vaccinium uliginosum - *Harrimanella hypnoides* - *Loiseleuria procumbens* Dwarf-shrubland (CEGL006155)
Vaccinium uliginosum - *Rhododendron lapponicum* / *Juncus trifidus* Dwarf-shrubland (CEGL006298)
SCTH - Cold Air Talus Heathland
Picea mariana / *Ledum groenlandicum* - *Empetrum nigrum* / *Cladina* spp. Dwarf-shrubland (CEGL006268)
SSSB - Subalpine Slope Bog
Kalmia angustifolia - *Chamaedaphne calyculata* / *Rubus chamaemorus* / *Cladina* spp. Dwarf-shrubland (CEGL006425)
SWAR - Windswept Alpine Ridge
Diapensia lapponica Dwarf-shrubland (CEGL006322)
SWEB - Black Crowberry Wet Alpine Bog
Empetrum nigrum - *Vaccinium uliginosum* - *Vaccinium oxycoccos* / *Rubus chamaemorus* Dwarf-shrubland (CEGL006140)
Upland Herbaceous & Shrub
HALD - Appalachian Low-Elevation Granitic Dome
Selaginella rupestris - *Schizachyrium scoparium* - *Hypericum gentianoides* - *Bulbostylis capillaris* Rocky Grassland (CEGL007690)
HBGF - Graminoid & Forb Bald
Carex pensylvanica Grassland (CEGL004094)
Danthonia compressa - (*Sibbaldiopsis tridentata*) Grassland (CEGL004242)
Saxifraga michauxii - *Carex misera* - *Oclemena acuminata* - *Solidago glomerata* Grassland (CEGL004277)
Saxifraga michauxii - *Carex misera* - *Danthonia spicata* - *Krigia montana* Grassland (CEGL004279)
HCAB - Central Appalachian Wooded Herbaceous Barrens
Juniperus virginiana - *Fraxinus americana* / *Carex pensylvanica* - *Cheilanthes lanosa* Open Woodland (CEGL006037)
Fraxinus americana / *Physocarpus opulifolius* / *Carex pensylvanica* - *Allium cernuum* - (*Phacelia dubia*) Wooded Grassland (CEGL008529)
HHGB - High-Elevation Greenstone Barrens
Diervilla lonicera - *Solidago simplex* var. *randii* - *Deschampsia flexuosa* - *Hylotelephium telephioides* - *Saxifraga michauxii* Grassland (CEGL008536)
HLMO - Low- to Mid-Elevation Little Bluestem - Poverty Oatgrass Outcrop Opening
Schizachyrium scoparium - *Danthonia spicata* - *Carex pensylvanica* / *Cladonia* spp. Grassland (CEGL006544)
SBAA - Southern Appalachian Alder Bald
Alnus viridis ssp. *crispa* / *Carex pensylvanica* Shrubland (CEGL003891)
SBAB - Southern Appalachian Blackberry Bald
Rubus allegheniensis - *Rubus canadensis* / *Carex pensylvanica* Shrubland (CEGL003892)

ZOSR - Open Water Stream & River
Open Water (Non-USNVC)
ZOWL - Open Water Lake
Open Water (Non-USNVC)
ZOWP - Open Water Pond
Open Water (Non-USNVC)

[t]Or the lowest hierarchical classification in the USNVC mapped to.

*Vegetation association also represented by another map class.

Appendix H: Map Classification by U.S. National Vegetation Classification

Explanation of Map-Classification Table

Table H–1 lists the map classification for the Appalachian National Scenic Trail vegetation mapping project for the National Park Service Vegetation Mapping Inventory Program from a vegetation classification perspective and lists how the map classes relate to the U.S. National Vegetation Classification (USNVC) in hierarchical order. For a listing of the map classification from a map classification perspective, see "Appendix G: Map Classification by Map-Class Category."

The presentation of the map classification in Table H–1 is organized by the hierarchical classification in the USNVC (USNVC Database 2016). Each map class is listed with its map-class code followed by its map-class name and is nested within the hierarchical levels of classification in the USNVC for the vegetation type that the map classes represent. Map classes are nested in the USNVC at the lowest hierarchical level that the map class represents, which for natural vegetation types is at the Association level of the USNVC. Each hierarchy-level classification in the USNVC is listed with its classification code followed by its classification name, including the hierarchy-level name (e.g., Macrogroup, Association, and Cultural Subtype). Some map classes represent more than one USNVC type and are denoted with an asterisk (*), signifying that those map classes are elsewhere in the table. Some map classes do not represent vegetation types recognized in the USNVC, which include open-water and park-special vegetation map classes.

Table H–1. Map classification set into the hierarchy of the U.S. National Vegetation Classification (USNVC) for the Appalachian National Scenic Trail vegetation mapping project.

Appendix I: Accuracy Assessment Site Form

NPS VEGETATION MAPPING PROGRAM: ACCURACY ASSESSMENT SITE FORM

Park: **APPA** Map Area: **SBR/CAP/LNE/NAP** State:____ AA Site Code**:**_____ GPS Site Code:_____

Survey Date ___/____/_____ **AA Site Time:** _____ am/pm **Field Team**_____

Photo of Form Y / N Photo #s _____[*Photo of Form, N, E, S, W, then 1or more representative of MMU*]

NAD83 UTM ZONE 18 [*All GPS units set to this*] **WAAS enabled? Y N Averaging? Y N Accuracy (m)** _____

UTM X __ __ __ __ __ __ m E **UTM Y** __ __ __ __ __ __ __ m N **#of sats**:_____ **iterations/GPS score**_____

If GPS Point is an *intentional* offset from the AA Site, circle the explanation & illustrate relationships in sketch below:

a. **Physical constraints in reaching waypoint** (*list direction and estimated distance from new GPS point to the area observed and describe any other relevant details)*:
b. **Other** (*explain in notes below*):

ENVIRONMENTAL DESCRIPTION

1. Elevation _____**(m) Elevation Source**: GPS/DRG/other:_____

2. Unvegetated Surface Substrate
(*estimate percentage of applicable covers;* ***should total 100%***):
____ bedrock
____ loose boulders and stones
____ leaf litter / organic matter
____ decaying wood
____ water
____ mineral soil / sand
____ other (*specify*)

3. Slope _____
A – 0-3% (0-2^0) (level or nearly level)
B – 3-9% (2-5^0) (gentle)
C – 9-16% (5-9^0) (sloping/rolling)
D – 16-31% (9-17^0) (moderate/hilly)
E – 31-65% (17-33^0) (steep)
F – 65-75% (33-37^0) (very steep)
G – 75%+ (>37^0) (extremely steep)

4. Aspect _____
F (flat)
V (variable)

N 338-22^0	NE 23-67^0
E 68-112^0	SE 113-157^0
S 158-202^0	SW 203-247^0
W 248-292^0	NW 293-337^0

5. Environmental Comments: (*Characteristics that affect vegetation –e.g., if site is a wetland, indicate type of hydrology, e.g., seepage wetland, temporarily flooded stream bottom, seasonally flooded pond, etc.; topographic position, landform, evidence of natural and human disturbance, successional status, stand maturity, etc.*)

6. SKETCH OF OBSERVATION AREA
(aerial view or transect view or both): indicate north arrow, where GPS positions were collected, whether an offset point was needed, locations and bearings of photopoints, plot orientation, roads, trails, as well as distinctive features of the vegetation, e.g., transitions to different vegetation types, or landscape features , etc. Use the symbols in the key below for GPS points and photos. *Site need not be circular if constrained by map guidelines.*

⊗	GPS position
○→	Photo # and direction

VEGETATION STRUCTURE: AA Site Code: _____

Stratum	Strata max. height (select one from right)	Cover values by strata (upper value of range = 5, 10, 20, 30, 40, 50, 60, 70, 80, 90, or 100%)	Strata Heights (max. defaults)
Canopy			20 m, 35 m, or > 35 m
Subcanopy			10 m, 20m
Shrub			2 m, or 5 m
Herbaceous			0.5 m, 1 m, or 2 m
Aquatic or NonVascular *(circle one)*			

VEGETATION COMPOSITION: (list all dominant and diagnostic species for each stratum (one species per row)
Record total cover, then record the cover class for each species in all strata in which that species is dominant or diagnostic.
Use the following cover classes for all cover estimates: **P < 5%; 01 = 5-15%; 02 = 15-25%; 03 = 25-35%; 04 = 35-45%; 05 = 45-55%; 06 = 55-65%; 07 = 65-75%; 08 = 75-85%; 09 = 85-95%; 10=>95%**

SPECIES Write out full name or use code from approved list *E.g.:* CORNFLO [= *Cornus florida*]	Diagn. species (X)	Total cover for assessed area	Tree Canopy layer	Subcanopy layer	Shrub layer	Herb layer	Specimen Collected (Y), Confidence in ID (C, P, U)
Plants Reference: USDA Plants							

SITE ASSESSMENT: Is the **MMU 0.25 ha or 0.5 ha**: (circle one) *consult map for MMU size at this site*

Representativeness: Is the area of the vegetation being assessed at least equivalent to 1 MMU? **Y N**
Is the vegetation homogeneous, very patchy, or does it appear to be transitional between two types? (circle one)
Please note adjacent vegetation communities.

Fit (does MMU key easily to an association?): **H M L** Your **confidence** in determination: **H M L**
Provide additional comments about problems or ease applying the key at this site, rationale for choice of association, if there was doubt, etc.

FIELD CLASSIFICATION: Primary Field Call (*Name & Code in Key*):_____ **CEGL00**_____
Secondary Field Call *(if there is doubt about first call)*:_____ **CEGL00**_____

OFFICE CLASSIFICATION: Reviewer Name: Review Date: **Final CEGL00**
Final Common Name:_____ If final call differs from original, give reason why:

A. THE BASIC FRAMEWORK FOR VEGETATION DESCRIPTION

Vegetation Physiognomy, Floristics, and Environment

The U.S. National Vegetation Classification (USNVC) is a vegetation classification that integrates floristic and physiognomic criteria, along with some environmental criteria, to define vegetation units. Physiognomy plays a role in defining and organizing units, which are evaluated at multiple levels within the USNVC hierarchy. At lower levels (i.e., the alliance and association levels), floristic composition is the primary criteria. Environmental factors such as macroclimate are used at higher levels, while more local site factors, such as hydrology or substrate, are used at lower levels. The field-sampling design emphasizes collecting data on all three sets of criteria. Field teams gather data on (1) dominant species, (2) dominant growth forms, and (3) environmental factors. Physiognomic and structural information are needed for the dominant and uppermost layers of vegetation. Location and environmental data are needed to confirm or explain floristic classification decisions.

Floristic information is the leading criteria for the USNVC association units (vegetation communities) that are being used to check the vegetation map of the Appalachian National Scenic Trail (APPA, also referred to as the "AT corridor" for Appalachian Trail corridor). These vegetation communities are based on total species composition of a stand, as represented by a sampling unit. Thus, floristics and physiognomy must be described across all strata (or layers) of vegetation. Information on dominant and diagnostic species is collected across these layers to confirm the classification of the vegetation at accuracy assessment (AA) observation sites.

B. PROJECT AND FIELD SAMPLING OVERVIEW

This section provides field teams with general instructions and guidelines for completing fieldwork for a given APPA project area (also referred as map area). The information gives the "how-to" for decision making in collecting data. Detailed, field-by-field coding conventions are provided for the AA site forms.

Field Sampling Considerations

Field sites are pre-selected and supplied to the field crews on hard-copy maps as well as a set of digital coordinates to be uploaded to global positioning system (GPS) units. Between 5 and 30 AA sites will be selected per vegetation map class with more abundant map classes having more AA sites. Only natural and semi-natural vegetation map classes are targets for AA. Accessibility, including factors such as slope steepness, distance from roads, and private vs. public land, is considered in selecting AA sites. These are estimated from a geographic information system (GIS) model and conditions on the ground may be different; therefore, the final decision on whether it is safe to get to an AA site is left to the crew.

Guidelines for Sites of Concern

All AA sites are to be sampled as near as possible to the coordinates of each site. Some AA sites might not be accessible because the site or the routes to the site pose a safety risk to the field crew, or there is some other unforeseen factor to restrict the crew from accessing (e.g., the AA site is on private property). If the field crew cannot get to an AA site, the crew should determine whether they can still gather enough accurate data to classify the site from a distance. This is preferable to abandoning the AA site, since re-selecting a site to make up for an abandoned site can be

complicated and inefficient. A pair of binoculars is very helpful in these situations. If an AA site is deemed unsafe and/or inaccessible and is not sampled, please provide the RndID number for the site to the project manager as soon as possible (that night when you get out of the field if possible) so a replacement site can be issued as soon as possible. Replacement sites will be chosen randomly and may occur in areas the field crew has already completed AA sites. The sooner a replacement site can be issued the less chance it will occur in an area the crew has already worked in. Replacement AA sites will be provided sparingly. Field crews should be prepared for some long days of getting very few AA sites and other days of getting many AA sites that are clustered closely together.

MMU Considerations

Field crews will navigate to the pre-selected AA sites, assess an area roughly equal to the minimum mapping unit (MMU) for the map class, record environmental, physiognomic, and floristic information about the AA site area, and assign a vegetation classification to the AA site.

The MMU for APPA varies based on the map class; most map classes are 0.5 hectares (ha) (~1.2 acres) while others are 0.25 ha (~0.6 acres). These MMU areas correspond to a circle 40 meters (m) and 28 m in radius, respectively. The mapping team will not map vegetation units at scales smaller than these MMUs and thus it is critical that the AA field team does not consider smaller vegetation units, either. If the field team evaluates an area substantially different from the MMU, then the validity of comparing field data and map data is reduced. Not every AA site area will be circular in shape since vegetation associations may be narrow linear or irregular shaped polygons. The AA site maps will show polygon lines where they are within the standard MMU buffer. That is, if an AA site is chosen for a map class that normally has a 28-m radius, but the selected polygon is only 20 m wide, the mapped boundaries of polygons within 28 m will be shown so the field crew will know approximately how to limit their assessment. Vegetation associations found at an AA site that are below the MMU for the site in question are to be considered inclusions to the surrounding dominant vegetation association (for example, a forested seep community will be considered an inclusion within the matrix upland forest community). Once the field crew is at the correct AA site and has scouted out an area equal to the MMU, the crew will begin to collect field data.

It is helpful to remember that map classes are not necessarily the same thing as vegetation associations. Map polygons are drawn and AA sites are selected based on map classes. The field crew will assess the vegetation at an AA site and assign it to a vegetation association based on the field key to vegetation associations of APPA. For the APPA vegetation mapping project, map classes often include more than one vegetation association. In most cases, this difference will not be important, or even apparent, to the field crews. One possible result of the difference that will affect the crews is that AA sites may include more than one vegetation association. If a map class is composed of two similar vegetation associations, an AA site may be chosen that falls entirely within that single map class but includes parts of two vegetation associations. In this event, field crews should not move the AA site but should record data as normal and note that two vegetation associations are present, or field crews should note that the site is intermediate between two associations and that crews are not confident only one association fits the site best

Recognizing Strata and Growth Forms

A comprehensive vegetation description requires information on physiognomy, floristics, and environment. To standardize the collection of physiognomic information, information is collect on the main strata of vegetation, including a list of species present in those strata. Because of the importance of using a standard approach to sampling vegetation strata, the issue is discussed in some detail here to ensure that subsequent discussions of field data collection are clear. A stratum is a layer of vegetation that includes all plant growth forms that occur within it. Plants are assigned to strata based on their predominant position or height in the stand, not by their taxonomy or mature growth form. Consequently, a tree species that has both seedlings and saplings in an AA site will be listed in several strata. In describing the vegetation physiognomy of an AA site for classification purposes, it is only necessary to capture the main features of the often-complex stand conditions rather than to describe the layering in the greatest possible detail.

In terrestrial environments, four basic vegetation strata should be recognized whenever they are present: tree, shrub, herb, and moss (sensu Fosberg 1961; the ground layer of mosses, liverworts, lichens, and algae). In aquatic environments, floating and submerged strata should be recognized where present. These six strata are needed to convey both the vertical distribution of overall cover and the predominant growth forms. Additionally, the six strata may be used to convey the abundance of each species in each stratum so as to provide a more detailed record of vegetation composition by strata. The six strata are defined as follows (see Figure J–1 for an example):

Tree stratum includes tall trees (single-stemmed woody plants, generally more than 5 m in height at maturity under optimal growing conditions). Very tall shrubs with tree-like form may also be included here, as may other growth forms such as lianas and epiphytes. For this project, two sub-strata are distinguished within the tree stratum. These are the Tree Canopy and Subcanopy sub-strata:

- Tree Canopy: the main layer of tree canopy, composed of trees whose crowns form the upper predominant canopy; includes dominant, codominant trees.
- Subcanopy: trees greater than 5 m in height that do not reach the main canopy; they may form a distinct secondary layer or may consist of suppressed trees that are wholly beneath the main canopy.

Shrub stratum includes shrubs (multiple-stemmed woody plants, generally less than 5 m in height at maturity under optimal growing conditions) and shorter trees (saplings) less than 5 m in height. As with the tree stratum, other growth forms present in this stratum may also be included; however, herbaceous growth forms should be excluded, as their stems often die back annually and do not have as consistent a height as woody growth forms. Where dwarf-shrubs (i.e., shrubs less than 0.5 m in height) form a distinct stratum (either as part of a series of strata, such as in a forest, or as the top stratum of more open vegetation, such as in tundra), they should be treated as a low version of the shrub stratum. In many vegetation types, dwarf-shrubs may occur as one growth form component of the herb stratum (see below).

Herb stratum (also referred to as field or ground stratum) includes herbs (plants without woody stems and often dying back annually) often in association with low creeping semi-shrubs, dwarf-shrubs, vines, and nonwoody brambles (such as raspberries), as well as tree or shrub seedlings. Where herbs are entirely absent, it is still possible to recognize this stratum if other very low woody or semi-woody growth forms are present.

Nonvascular stratum (also referred to as moss, bryoid, or ground stratum): is defined entirely by mosses, lichens, liverworts, and alga. Ground-creeping vines, prostrate shrubs, and herbs should be treated in the herb stratum.

Floating aquatic stratum includes rooted or drifting plants that float on the water surface (e.g., duckweed, water-lily).

Submerged aquatic stratum includes rooted or drifting plants that by-and-large remain submerged in the water column or on the aquatic bottom (e.g., pondweed). The focus is on the overall strata arrangement of these aquatic plants. Note that emergent plants in a wetland should be placed in the strata listed above (e.g., cattail or sedges would be placed in the herb stratum, bald cypress or black ash in the tree stratum).

Epiphytes, vines, and lianas are treated where they are present within the strata defined above, not as separate strata.

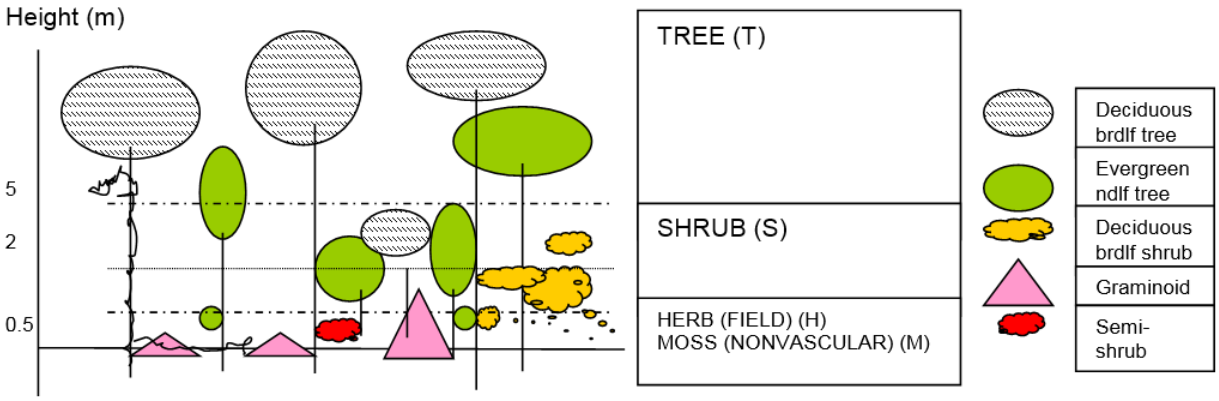

Figure J–1. Major strata (layers) recognized in terrestrial vegetation. Shown here are typical strata found in forests. Additional strata within stands of aquatic vegetation are floating aquatic and submerged aquatic.

Measuring Species Abundance and Strata Using Percent Cover

Percent cover is a meaningful attribute for nearly all plant growth forms and allows their abundances to be evaluated in comparable terms. Percent cover can be defined generically as "the vertical projection of the crown or shoot area to the ground surface expressed as … percent of the reference area" (Mueller-Dombois and Ellenberg 1974). For the NPS Vegetation Mapping Inventory Program, percent cover based on crown or shoot area is applied as canopy cover. Canopy cover is the percentage of ground covered by a vertical projection of the outermost perimeter of the natural spread of foliage of plants. Small openings within the canopy are ignored and their area included in the canopy cover.

Canopy cover is the preferred method of collecting cover because it better estimates the "area that is directly influenced by the individuals of each species" (Daubenmire 1968), is easier than foliar cover to estimate from aerial photographs (or imagery), and is more likely to correlate with satellite image analysis. A classification based on canopy cover is better suited for mapping vegetation than one based on foliar cover. Strata cover and individual taxa should always be estimated on an absolute or total basis, i.e., the actual proportion of the sampled area (e.g., if the total tree stratum cover is 50%, and northern red oak (*Quercus rubra*) tree cover is 30%, the cover should be recorded as the 25-35% cover class, not 60%).

C. FIELD PREPARATION AND DATA COLLECTION

Before Leaving

Before leaving for the site... check that the field team has all the materials needed to complete the fieldwork. Ideally, the week before site visits, plan the week out in terms of the routes to take, access sites, the need for overnight camping, and the use of two cars for shuttling to make the field days as efficient as possible. This will save the field team a large amount of time during the week. Consult with the main NatureServe contact to get advice about the week's work and what seems realistic. Plan for visiting 45 AA sites each week to build in a buffer for future weeks when fewer than 40 sites a week are visited.

Park specific research permits will be provided by NatureServe to each field crew for work on National Park Service (NPS) lands. Prior to beginning work NPS lands, each field team will notify the NPS staff identified on the NPS research permit of the upcoming visit. This is a good time to ask for keys to gates, additional park maps, and request help from the park if needed (perhaps a pick up at the end of the day).

Prior to beginning fieldwork, the field ecologists should review the ecological classification, field key, and list of relevant diagnostic and characteristic plant species for the AT corridor, and be prepared to identify diagnostic species and relevant natural communities. Also, the field ecologists should review field map and target AA site locations to prepare an efficient route for data collection.

Every morning... check the GPS receiver to make sure it is set to North American Datum of 1983 (NAD 83) and Universal Transverse Mercator (UTM), Zone 18 (EVEN IF YOU ARE NOT IN THIS UTM ZONE!!-these are the official project coordinates so all field teams from Georgia to Maine need to set their units for this setting), for a sufficient supply of replacement batteries, and that there is sufficient storage memory for the day's work. Check the camera to ensure there is sufficient storage memory and replacement batteries for the day's work. If the field team will be in the backcountry for several nights, the team should have sufficient supplies and an idea of where to camp along the AT corridor. Do NOT rely on having access to AT shelters since thru-hikers can be numerous and may already have claimed all spaces inside the shelter before you arrive at day's end. Confirm the AA sites that the field team will be visiting for the day and consult with maps and access sites to determine the most efficient route and order of AA sites.

List of Field Materials

- Maps of AA sites
- Road/trail maps (will also be included on the maps of AA sites)
- Site inventory checklist where the field team will record AA sites assessed and any comments about the target AA sites. Submit weekly to NatureServe for project tracking
- Research permits
- GPS receiver (checked daily to ensure that it is set right (to NAD 83, UTM Zone 18)
- Compass/clinometer
- Camera and batteries/memory card (allow at least 6 exposures per AA site)
- Baggies
- Pencils/pens/permanent markers
- AA site forms, including write-in-the-rain AA site forms
- Plant list with species codes
- Classification report for the project
- Vegetation field key
- Botanical manuals

Getting There

For APPA, there are between 5 and 30 AA sites per map class. The AA field team will be provided a series of hard-copy maps with the AA sites to visit and sample. The maps will contain a digital raster graphic (DRG) background; roads, trails, and private land will be noted on the maps, also. Image-interpreted polygons will not be on the maps unless the boundaries are within 40 m of the AA site (28 m for map classes with 0.25-ha MMU) so as not to bias the field team's classification decisions. An exception to this is small or linear polygons for which the AA site buffer cannot be accommodated; in these cases polygon boundaries within the standard buffer distance will be indicated, giving AA field crews a general idea as to the direction/orientation of the polygon in question. The field crew navigates to each selected area using road and trail maps, the AA site map, and/or GPS.

Location of the AA site... navigate to the exact coordinates of the target AA GPS coordinate as possible (generally within 1–2 m of the target UTM X and UTM Y coordinates). On the AA site form and in the GPS, record the coordinates the field team navigated to, as read from the GPS, whether they are exactly the same as the target coordinates or not. If it is not practical or safe to get to the exact coordinates, get as close as possible, record the UTM coordinates of the position the field team reaches, and then record the offset. The offset should be recorded as a direction (azimuth) and distance from the UTM coordinate of the field crew's location to the target location the field crew was originally aiming for (as given in the GPS).

It is very important that the field crew ensure that they either have a high degree of accuracy in their GPS reading or, if the GPS accuracy is low, be confident that the vegetation is very homogenous in the area surrounding them. When the vegetation is homogenous, some flexibility in the exact site location is acceptable (e.g., if the field crew is within 10 m of an assigned AA site location, they are

definitely close enough.); however, it is not appropriate to shift the location of an AA site to ensure a more homogenous assessment area.

When GPS reception is favorable, it is recommended that the AA site coordinate be averaged up to 100% confidence (for Garmin units) or averaged until site data is complete (for Juno Trimble units). However, if using averaging will cause a significant time delay, it is acceptable not to use averaging or average a much smaller number of measurements. The recorded GPS precision will need to reflect this information on the field form. If WAAS enabled units are not receiving WAAS signals, and data collection is slow, disabling WAAS may increase collection speed. Be sure to enable WAAS again after taking a GPS coordinate with WAAS disabled.

In some extreme cases, it is possible that the topography of the AT corridor may prevent collection of AA site location data by GPS. If this situation is encountered, but the field crew is confident in their location using the topographic map only and able to safely navigate to the pre-assigned AA site, then the field crew should note on the "Site Inventory Checklist" that no GPS data were collected for that AA site and document the AA site location clearly on a paper map, which then should be attached to the field form.

Once There—The Basic Procedures for Field Data Collection

Upon reaching the assigned AA site, the field crew will need to assess the vegetation community in the vicinity of the site and determine the dominant vegetation association using the appropriate APPA project area vegetation field key the AA site. The field crew should survey an approximately 0.5-ha area (40-m radius circle) or 0.25-ha area (28-m radius circle) surrounding each AA point coordinate after consulting the field map to identify the correct size of the assessment area. These correspond to the MMUs used in the vegetation mapping. Sites may be linear or irregular rather than circular. Field crews are to complete the Accuracy Assessment Site Form (fields on the AA site form are defined in the section at the end of this field manual).

Determine and Record the AA Site Location

Using the GPS receiver, field teams determine the UTM Zone 18 coordinates and record the coordinates under the **UTM X** and **UTM Y** blanks on the AA site form. Field teams also record the GPS error. If the field team cannot get a GPS reading with sufficient accuracy (~10 m), they should mark the location they were at as precisely as they can on the AA site map. The field team can use these marked locations to estimate UTMs later. Note on the AA site form that this method is used. In addition, save the GPS reading on your Trimble or Garmin GPS unit so that the exact metadata behind all the measurements can be uploaded later.

Recording Species Cover

Having decided on the strata, record the species information in the following manner:

1. Begin by listing the dominant 1–4 species observed in each of the main layers.
2. Collect any unknown dominant species (see details below) and label each bag or sheet containing the specimen with the AA site code and a unique identifier corresponding to the code on the AA site form (e.g., *Carex* #1, *Fern* #2).
3. When the list appears complete, begin estimating cover. For each stratum
   a. Estimate total cover of the stratum (Tree Canopy, Subcanopy, etc.);
   b. Estimate individual species covers across the entire assessed area and in each stratum for which that species is dominant or diagnostic.
   c. Add up species covers within the stratum, compare to total stratum cover. Sort out any discrepancies, recognizing that overlap can occur between species and layers and that you are only recording cover of dominant species (e.g., cover of minor species will not appear on the data sheet).
4. Check the list of species to be sure that each is clearly written out. Whenever possible, use the species names that match the taxonomic authority for your project.

Some guidance on estimating cover

The percent cover of the stratum is the total vertical projection of the canopy cover of all species collectively on the ground, not the sum of the individual covers of all species in the stratum. Therefore, the total percent cover of the stratum will never exceed 100% (whereas, adding up the individual cover of species within the stratum could well exceed 100% since species usually overlap in their cover). The chart in Figure J-2 can be used to estimate percent cover.

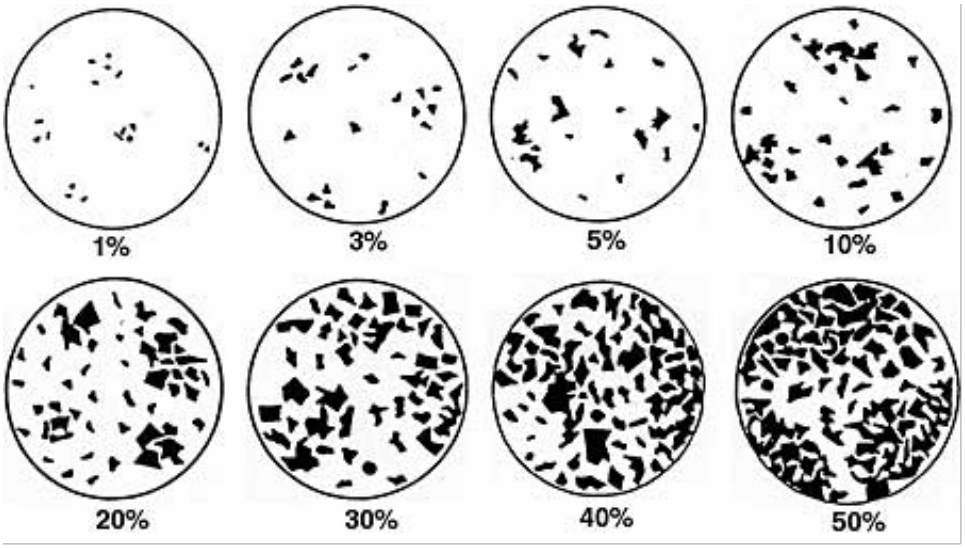

Figure J-2. Percent cover chart.

Plants are assigned to strata based on their predominant position or height in the stand, not by their taxonomy or mature growth form. Consequently, a tree species that has both seedlings and saplings in an AA site could be listed in several strata.

The herb stratum (or field stratum) includes all low woody, semi-woody plants, and creeping vines, where these woody plants and vines overlap in height with the herbs. This inclusion is a compromise among strata based strictly on height versus growth form. More specific measures of growth form composition (forbs, grasses, dwarf-shrubs) within the herb stratum can be recognized either directly in the field or can be estimated later by assigning species within a stratum to a growth form category and calculating an approximate percent cover of the growth form. Field teams may find it helpful to create a checklist of dwarf-shrubs, semi-woody shrubs, or vines that are to be recorded along with herbaceous plants as part of the herb stratum.

The nonvascular stratum (sometimes called moss, bryoid, or ground stratum) is reserved strictly for cryptogams (mosses, lichens, liverworts, algae, and bacteria), even where herbs or woody plants may be reduced to very short heights.

Collecting Specimens

Minimize plant collection for later identification and do not allow a significant backlog of plant specimens to accumulate. If this is unavoidable, let the project supervisor know. Field teams should have sufficient botanical expertise to identify most plant species encountered with the project. If botanical expertise is not possible, an expert taxonomist should be identified early in the project. A large backlog of unidentified pressed plant specimens should be avoided because storing and curating large numbers of specimens becomes inefficient. A judgment must be made by the field crew early on regarding plant species that should be identified in the field at the AA site or identified later using a collected specimen. Common plants recurring in many AA sites are best keyed in the field, whereas those encountered rarely or at low cover may be keyed later when manuals are likely to be readily accessible. A quick prioritization of what to key and what to press may be made based on the recurrence of the species in samples and on the cover-class estimate of the species in a particular AA site.

If the team cannot identify a plant to species, they should record it on the AA site form as “unknown species 1,” “unknown species 2,” “unknown *Carex* sp. 1,” etc. They can record associated cover class and other data for the unknown as they would for any other species. They can then do one of two things:

a) If the team needs the plant species identified right away because it appears to be dominant or diagnostic (they will be seeing it all over the place or it’s much more common in this particular vegetation type than in others), they can take a sample of the species with as much of the plant as possible, especially intact flower or fruiting parts, if present. Place the sample in a bag or on a sheet and label the bag or sheet with the AA site code and the name used on the AA site form (e.g., *Carex* sp.1). A member of the team should then try to key it out.

b) If plant specimens must be saved for identification beyond a few days, they must be dried and pressed. Mosses and lichens are not required to be identified to species level for many communities in this project but can be very important in determining certain boulderfield associations, so particular attention should be given to nonvasculars in that habitat. Aquatic plants should be handled by placing a mounting sheet at the bottom of a deep tray of water. Suspend the plant in the basin and arrange it as needed, then carefully remove from the basin. Place between blotters to dry. Mark the pressed specimen with the AA site code and the name used on the AA site form.

If possible, store specimens in a cool, dry place. Bagged specimens will keep fresh longer in the refrigerator or ice chest until pressed or identified. Field teams should mark the specimen tag with its cover-class estimate and any notes helpful in identification such as "tall shrub" or "wetland plant", as well as its unique identifying number for the vegetation sample.

Classifying the AA Site

Once all data have been collected at an AA site, the field team needs to provide a classification name for the vegetation. Field teams will have a vegetation field key to work through to decide on the classification. Typically, physiognomy, floristics, and environmental setting will be important to place a community within the USNVC. Any confusion about how to classify the AA site should be noted on the AA site form in the "Fit" field. If the vegetation present in the AA area is not included in the vegetation field key or vegetation classification, the field crew should report this on the Site Inventory Checklist and also assign the AA site to the vegetation association that it best fits using the vegetation field key. If a vegetation association is known (though not included in the field key or classification), record the known vegetation association on the AA site form, on the Site Inventory Checklist, and report these immediately to the NatureServe contact.

Before Leaving Each AA Site

Before heading off, be sure to check the AA site forms to be sure all of the essential categories have been completed. In particular:

1. Look over the various strata and check that there are cover values and heights for all strata.
2. Look over the dominant species lists to be sure none were missed that were called out or observed.
3. Verify that field photographs have been taken and photographs information recorded on the AA site form. Verify that UTM coordinates have been accurately recorded.
4. Review the descriptive fields that summarize the overall impression of the stand (representativeness, observation notes, successional status, stand maturity, homogeneity). If these have not been filled out, now is a good time.
5. Check the equipment list to be sure nothing is left behind and all flagging or other markers have been cleaned up.

D. POSTCOLLECTION TIMETABLE

It is required that completed and reviewed AA site forms and associated data be received by Upper Midwest Environmental Science Center (UMESC) staff on a bi-weekly basis (i.e., after two weeks of data collection, the completed and reviewed AA site forms, field photographs, and GPS shapefile are to be sent to UMESC staff). Information on who will perform the review of completed AA site forms, including information regarding the individuals who will send in the completed forms, should be finalized before the field collection portion of the AA process begins.

Specific procedures will need to be followed each week. Field teams must work with Ery Largay of NatureServe to identify an efficient process for keeping the data collection on track.

Within one week following the completion of the previous week of fieldwork, field teams should (1) review the AA site forms to ensure completeness, (2) deliver all original forms and supporting information, such as the Site Inventory Checklist (make copies of all data prior to mailing and keep copies until originals are received by the recipient), and (3) deliver GPS data and high-resolution copies of all AA field photograph images (digital photograph images can be copied to CD to be mailed or they can be posted to the web for download). All GPS data should be delivered as an Esri shapefile and include, at a minimum, the .SHP, .DBF, .SHX, PRJ and metadata (.XML) files. All digital GPS data must include at a minimum, the assessment area identifier (AA site), coordinates, datum, date, and type of GPS unit.

E. ACCURACY ASSESSMENT SITE FORM

Filling out the data sheet.

LOCATION INFORMATION

Map Area
SBR: Springer Mtn. Georgia north to Dickey Gap, Virginia.
CAP: Dickey Gap, Virginia north to the southern boundary of Delaware Water Gap National Park, Pennsylvania.
LNE: Delaware Water Gap, Pennsylvania north to through Vermont.
NAP: New Hampshire and Maine.

State Name
Provide state name or code.

AA Site Code
Number for the AA site, from AA map or from pre-loaded list in the GPS unit. In the GPS unit, these are called RndID projected in NAD 83, UTM Zone 18.

GPS Site Code
Code for the coordinates saved in the GPS. These coordinates are usually near the coordinates from the pre-loaded list of AA sites in the GPS but may be substantially different if the field crew cannot access the pre-loaded site.

Survey Date
Record the date the survey was taken; month, day, year.

AA Point Time
Record the time data collection was started at the site.

Field Team
Record the names of surveyors, with team leader listed first. The team leader is the person most responsible for the quality of the data recorded on the AA site form and the first person to which questions about the data will be addressed. Full names should be recorded (full first and last name).

Photo of Form
Circle whether photos were taken of the first page of the AA site form.

Photo #s
Record the individual photograph numbers or range of photograph numbers, as listed in the camera, taken at each specific site. There should be at least six photographs collected, and can be more. The first six photographs are, in order, (1) the first page of the AA form after at least the site number, UTM, and date have been recorded, (2) in cardinal directions from the GPS site clockwise starting with north (N, E, S, W), and (3) one or more photographs that best represent the assessed area.

Datum/UTM Zone
For the APPA project, this should be NAD 83. For the purposes of recording UTM coordinates, **ALL SITES IN THE APPA PROJECT ARE TO BE IN UTM ZONE 18. The coordinates pre-loaded in the GPS assume the crew is using UTM Zone 18, as well.**

WAAS Enabled
Is the WAAS system available and enabled on your GPS unit? Wide Area Augmentation System (WAAS) is an air navigation aid developed by the Federal Aviation Administration to augment the GPS, with the goal of improving its accuracy, integrity, and availability.

GPS Accuracy
Note the accuracy of your GPS unit (in meters) and whether GPS averaging was used.

UTM X
Record UTM X coordinates, also called “easting”, using GPS if at all possible. If a GPS reading cannot be collected, estimate coordinates from a topo map and note on the AA site form that this method was used.

UTM Y
Record UTM Y coordinates, also called “northing” using GPS if at all possible. If a GPS reading cannot be collected, estimate coordinates from a topo map and note on the AA site form that this method was used.

No. of Satellites
Record the number of satellites available to your GPS unit when reaching the site location.

Iterations/GPS Score

Averaging points is generally advisable. When averaging, please do so ideally for 100 iterations.

GPS Point is Intentionally Offset

If the crew cannot reach the pre-set coordinates of the AA site, note the reason (e.g., dangerous slope, water, private property) then record the azimuth and estimated distance to the pre-set coordinates. If the assessment area around the original coordinates is visible and the field crew thinks they can accurately classify the vegetation (binoculars may be useful for this), they should continue with the assessment and AA site form.

ENVIRONMENTAL DESCRIPTION

Elevation and Elevation Source

Record the elevation in meters at which the GPS coordinate was recorded. Note the source used to calculate elevation. The GPS unit is preferred as a source for elevation over the DRG maps, but the latter can be used if necessary.

Unvegetated Surface Substrate

Estimate ground or surface cover to the nearest percentage by each category, including woody stem basal area (Table J–1). For surface features not provided on this list, use the "other" category and note the feature. Cover estimates should sum to 100%. In cases where moss, lichen, sand or litter thinly covers the rock, ignore the less significant cover and record the total cover of rock. Rock and sand definitions are from Brady and Weil (2002).

Table J–1. Percent value descriptions to record unvegetated surface values within an accuracy assessment site.

[mm, millimeter; cm, centimeter]

Value	Description
Percent Bedrock	Percent of surface that is exposed bedrock
Percent Loose Boulders and Stone	Percent of surface that is exposed gravel/pebble (2–75 mm), cobble (75–256 mm) and stone/boulder (>256 mm).
Percent Leaf Litter / Organic Matter	Percent of surface that is litter
Percent Decaying Wood	Percent of surface that is wood >1 cm diameter
Percent Water	Percent of surface that is covered in water
Percent Mineral Soil / Sand	Percent of surface that is occupied by bare mineral soil or eolian or alluvial sand deposits (0.05 mm to 2.0 mm)
Other	–

Slope

Measure the slope in degrees using a clinometer or estimate using a compass that contains a slope-measuring device. Circle the appropriate slope degree that best describes each site.

Aspect

Measure the slope aspect using a compass (be sure to correct for the magnetic declination). Note: all compasses should be pre-set to an average declination for the park and thus, readings from the

compasses carried by the field teams may be directly noted. Circle the aspect that best describes the site along with the best-fit degree measurements.

Environmental Comments
Enter any additional noteworthy comments on the environmental setting. This field can be used to describe stand history such as fire events (date since last fire or evidence of severity), as well as other disturbance or stand regeneration factors. On the AA site form it states, "(*Characteristics that affect vegetation—e.g., if the site is a wetland, indicate type of hydrology, e.g., seepage wetland, temporarily flooded stream bottom, seasonally flooded pond, etc.; topographic position, landform, evidence of natural and human disturbance, successional status, stand maturity, etc.*)"

Sketch of Observation Area
Draw a sketch of the observation area using aerial view or transect view, or both, Indicate north arrow, where GPS coordinates were collected, whether an offset coordinate was needed, locations and bearings of photograph locations, AA site orientation, roads, trails, and any other distinctive features of the vegetation (e.g., transitions to different vegetation types, landscape features). The AA site need not be circular if constrained by map guidelines.

VEGETATION STRUCTURE
Stratum, Strata Maximum Height, Cover Values by Strata
For all of the strata that are present, record the average height and total cover. Use the Height Scale and Cover Scale on the AA site form. Estimate the stratum heights to the nearest height from the options provided.

Record the maximum cover class for each vertical vegetation stratum indicated on the table. The heights in the right column indicate the maximum height accepted for each stratum. The lowest stratum contains all woody plants less than 0.5 m tall and all herbaceous plants, regardless of height. Choose a default height for each stratum.

VEGETATION COMPOSITION
List the most abundant species in each stratum. Generally, this list should be of the one to four most common species in each stratum, but in cases where strata have several species of approximately equal cover, then list more. List additional species which are present at lower cover if they are deemed to be diagnostic of a particular association. Write the species in the left column and indicate whether a diagnostic species for the purpose of classification was considered. Note if a specimen was collected for further identification work. Note the total cover and mark the cover class in the stratum layer where that species is one of the most abundant species. Record species cover in the following cover classes:

P <5%, 01 = 5-15%, 02 = 15-25%, 03 = 25-35%, 04 = 35-45%, 05 = 45-55%, 06 = 55-65%, 07 = 65-75%, 08 = 75-85%, 09 = 85-95%, 10 = >95%

Species
Record the full taxon name.

Diagnostic Species
Place a check mark or X if the taxon is diagnostic of the vegetation community. A diagnostic taxon is any species whose relative constancy or abundance differentiates one vegetation type from another.

Total Cover for Assessed Area
Record the total cover of the taxon in all strata combined over the assessed area.

Tree Canopy Layer
Record the total cover of the taxon in the tree canopy over the assessed area.

Subcanopy Layer
Record the total cover of the taxon in the subcanopy over the assessed area.

Shrub Layer
Record the total cover of the taxon in the shrub stratum over the assessed area.

Herb Layer
Record the total cover of the taxon in the herbaceous layer over the assessed area.

Specimen Collected
Place a "Y" if a specimen was collected for this species.

Confidence in ID
Note the confidence in the identification of the taxon as C = Confident, P = Probable, U = Uncertain.

SITE ASSESSMENT
Representativeness
Is the area of the vegetation being assessed around the AA site at least equivalent to one MMU? Indicate whether the vegetation is homogeneous, very patchy, or transitional between two types. Note whether there are other vegetation communities within or near the assessment area.

Fit
Rated as HIGH, MEDIUM, or LOW – record both how easily the vegetation at the AA site was keyed to a vegetation community AND how confident the field crew is that the vegetation communities they keyed the site to actually fits the vegetation at the site. Vegetation at a site may fit the vegetation field key well but the final classification may not match the community well or vice versa. If MEDIUM or LOW is chosen, record how well the vegetation field key worked to classify the vegetation in the AA site. Especially important is to note any difficulties or questions encountered in classifying the AA site, either because of confusion with the vegetation field key or disturbance/heterogeneity around the AA site.

Primary Field Call
This is the vegetation community that best fits the AA site based on the vegetation field key. Please use the Common Name of the vegetation association as listed in the vegetation field key and record the ELCODE (i.e. CEGL00XXXX) of association that best fits the AA site.

Secondary Field Call

If the vegetation of the area at the AA site seems intermediary between two types or if there are two associations prominent within the assessment area, record the second best fit in this field and record the ELCODE (i.e. CEGL00XXXX) and common name of that association as listed in the vegetation field key. Small inclusions of a second association in the assessment area are ignored.

Explanation of Accuracy Assessment Reconciliation

This appendix presents the steps used to reconcile the vegetation map layer following the accuracy assessment (AA) analysis for the Appalachian National Scenic Trail (APPA) vegetation mapping project. This process involved presenting to National Park Service (NPS) staff from APPA and the Northeast Temperate Network Natural Resource Inventory and Monitoring (I&M) Program a review of how and why vegetation map classes did not meet NPS Vegetation Mapping Inventory (VMI) Program standards, providing a suggestion for how to remedy the issue, and explaining the benefits and consequences from accepting the suggestion.

The standard set by the NPS VMI Program is that a map class be at least 80% accurate within the 90% confidence interval for the map class; the upper limit 90% confidence interval is abbreviated as (UL–CI). The following table (Table K–1) presents a list of the map classes referenced in this appendix and what became of them to help understand the process and maintain continuity with the final map classification for APPA. Please reference Table K–1 for map-class acronyms in this appendix only.

Table K–1. Original map-class codes, accuracies, and U.S. National Vegetation Classification association codes that existed prior to accuracy assessment map reconciliation, linked to current map-class codes and accuracy.

A. WTMP and WVPS

Confusion between dry (yellow) pine map classes in the southern end of the corridor

Problem: The southern-most dry (yellow) pine (*Pinus* [*echinata*, *pungens*, *rigida*, *virginiana*]) map classes showed general confusion with each other.

Suggestion: Collapse WTMP and WVPS into a single map class. While the accuracy for WTMP is sufficient for it to remain alone, the accuracy of WVPS combined with its general rarity warrants merging into WTMP.

Consequences: This final map class would reduce the ability to distinguish the rare yellow pine woodland vegetation types found in the rarer map classes, but given the inaccuracy of the existing map classes, that ability does not really exist. The new map class will much more accurately provide the location for dry pine vegetation in southern APPA.

Park Staff Decision: Accept collapsing WTMP and WVPS into a single map class.

B. SFWPO and SFWPH

Confusion between eastern white pine dominated map classes in the southern end of the corridor

Problem: There was general confusion between the southern-most eastern white pine (*Pinus strobus*) - oak species (*Quercus spp*.) and eastern white pine - hemlock (*Tsuga canadensis*) map classes. This results from the eastern white pine - hemlock map class allowing more oak than original thought and the eastern white pine - oak map class having a significant amount of "invisible" eastern hemlock canopy obscured by overtopping eastern white pine and oak.

Suggestion: Collapse SFWPO and SFWPH into a single map class.

Consequences: Collapsing these two map classes will result in a poorer resolution of exactly where on the landscape hemlock forests may still occur in southern APPA, but that accuracy would be below 50% without collapse. Collapsing these two map classes together will result in a more cohesive map class.

Park Staff Decision: Accept collapsing SFWPO and SFWPH into a single map class.

C. FCOD and FCOM

Confusion between xeric and dry-mesic chestnut oak forests in the southern corridor and continued low accuracy

Problem: Initially, mappers expected to be able to distinguish the most xeric chestnut oak (*Quercus prinus*) map class based on canopy structure and landscape position, but the AA process found generalized confusion between FCOD and FCOM. This indicates that there are extenuating conditions dictating the locations for these map classes not perceived by the mappers. Additionally, FCOD and FCOM were both generally undermapped. Instances of FCOD and FCOM were found by AA in 10 other map classes, which results in producers' accuracy UL–CI of 70%, below VMI Program standards even after merging. Bringing accuracy above 80% would not be possible short of

collapsing two or three other important, ecologically different map classes, with each map class covering thousands of hectares.

Suggestion: Collapse FCOD and FCOM into a single map class and accept a lower producers' accuracy to preserve other well-mapped map classes.

Consequences: Collapsing these into a single map class will reduce the resolution of the map for different types of chestnut oak map classes in the southern most section of the corridor, but greatly increase the ability of the map to resolve locations of chestnut oak in the southern portion of the map.

Park Staff Decision: Accept collapsing FCOD and FCOM into a single map class.

D. FOHL, FOHM, and FROM

Confusion between dry-mesic and mesic oak forests in southern corridor

Problem: Initially, mappers expected to be able to distinguish non-chestnut oak dry-mesic to mesic mixed oak map class from mesic to wet-mesic mixed oak map class based on canopy structure, landscape position and non-oak hardwood tree cover. However, AA found generalized confusion between the FOHL, FOHM, and FROM map classes, indicating that there are extenuating conditions dictating the locations for these map classes not perceived by the mappers. An additional problem is the general undermapping of both FROM and FOHM and overmapping of FOHL.

Suggestion: Collapse FOHL, FOHM, and FROM into a single map class.

Consequences: Collapsing these map classes would result in some loss of resolution amongst the mesic oaks in southern APPA.

Park Staff Decision: Accept collapsing FOHL, FOHM, and FROM into a single map class.

E. Low FROH Producers' Accuracy

FROH has a producers' accuracy slightly below VMI Program standards

Problem: The high-elevation red oak (*Quercus rubra*) forests found in the southern portion of the corridor have an UL–CI producers' accuracy of 74%, which is below the VMI Program standard. This results from a general undermapping of the FROH map class caused by "high-elevation" forests being found at lower elevations than mappers expected. Instances of FROH are spread across six (postcollapse) different forest map classes with these map classes being primarily tied to lower elevations.

Suggestion: Accept a slightly lower producers' accuracy for FROH in order to maintain the locational information for the majority of the FROH occurrences.

Consequences: Map users will need to understand that additional examples of the FROH map class are sometimes found in the lower-elevation oak forests surrounding FROH polygons.

Park Staff Decision: Leave FROH as an independent map class and accept a lower producers' accuracy.

F. FXHR and FXMH

Confusion of southern ruderal hardwood forests

Problem: Initially, mappers believed these two map classes would easily separate based on elevation and evergreen shrub cover. However, AA determined these characteristics to be unreliable for splitting apart these map classes. The intersection of these two map classes is found in FXMH polygons dominated by red maple (as FXMH may be dominated by several species or a mix). In instances where forests were dominated by red maple mappers routinely confused these two map classes and consistently called forests FXMH when they were FXHR.

Suggestion: Collapse FXHR and FXMH into a single map class.

Consequences: Collapsing these map classes will result in very little loss to the map's ability to display ruderal forests in the southern end of the corridor as both map classes are composed of native species. There will be some loss in resolution of where ruderal forests with an evergreen shrub layer occur.

Park Staff Decision: Accept collapsing FXHR and FXMH into a single map class.

G. FNHV, FNHC, and SFCVM and Low Users' Accuracy

Confusion between southern non-oak hardwood forests and a below-standard final users' accuracy

Problem: There are two different sources of confusion to consider here. The first is elevation based, where mappers believed that SFCVM would split from FNHV/FNHC based on elevation. This was true below the established elevation split with no FNHV/FNHC found in polygons mapped as SFCVM, but failed consistently above the elevation split with AA finding SFCVM in areas mapped as FNHV/FNHC. The second is the topographical location of FNHV and FNHC at higher elevations. Mappers believed that FNHV would occur primarily on exposed and flat topographic positions while FNHC would occur primarily in sheltered locations, but AA found this theory to be correct only about two-thirds of the time, well below VMI Program standards. A final issue is that following collapse, the users' accuracy will still be below VMI Program standards with an UL–CI of 74% due to a general overmapping of the "hardwood cove" concept. Instances of this final collapsed map class are spread across nine (postcollapse) different forest map classes with the only clear options for additional collapse being with oak-dominated forests that are in no way confined to sheltered topography.

Suggestion: Collapse the FNHV, FNHC, and SFCVM into a single map class and accept the lower producers' accuracy to preserve other well-mapped map classes.

Consequences: Collapsing these three map classes would result in some diminishment of the ability to see exactly where the richest, most diverse communities along the corridor occur, but this information is still somewhat captured in the vegetation plots and AA data. Additionally, it will remove the line between lower- and upper-elevation non-oak hardwood forests, but AA results show this distinction is much muddier than expected. Accepting the lower accuracy will prevent the

collapse of this non-oak sheltered topography map class into a wide-spread oak map class found across the southern part of the corridor.

Park Staff Decision: Accept collapsing FNHV, FNHC, and SFCVM into a single map class.

H. SBML, SXRD, and SXBB

Confusion between low-elevation shrub balds and ruderal shrublands

Problem: There are two interrelated, but independent concepts to consider here. The first is the confusion between SBML and SXRD. For this the species of ericaceous shrub were confused along with the degree of disturbance, and for this pair of map classes the confusion was mutual with both confused as the other.

The second is the confusion between SBML and SXBB. Numerous areas mapped as the ruderal nonericaceous SXBB shrubland were of sufficient quality and ericaceous shrub cover to qualify as SBML. The mappers suspect it resulted from a miscommunication on the degree of disturbance and amount of nonericaceous shrub that the SBML map class could accept. The result is that there is significant confusion between these map classes. No areas mapped as SBML were found by AA to be SXBB; all the confusion rests with areas mapped as SXBB found to be SBML by AA.

Suggestion: While AA results suggest that SBML and SXRD should be collapsed, they are somewhat inconclusive for the collapse of SXBB into the SBML/SXRD map class. Given the degree of difference found in the vegetation and landscape history for the SXBB compared to SBML/SXRD, it may warrant accepting a lower accuracy to preserve the integrity of the SBML/SXRD map class. This decision rests with the park based on management needs.

Consequences: For the collapse of SBML and SXRD, the map would lose some resolution for species of ericaceous shrub, but the ability to distinguish natural ericaceous balds would remain largely intact. For the collapse of SXBB into SBML/SXRD, the ability to distinguish ericaceous balds would be greatly diminished along with the ability to distinguish successional nonericaceous shrublands.

Park Staff Decision: Accept collapsing SBML and SXRD into a single map class and leave SXBB as an independent map class.

I. FDMO and Low Producers' Accuracy

Confusion between south-central mixed oak and mixed oak-hickory forests and continued low producers' accuracy

Problem: There is generalized undermapping of the FDMO map class, with it found in 10 (postcollapse) map classes resulting in a producers' accuracy below VMI Program standards. This is primarily caused by areas mapped as one of several oak-heath map classes classified as having a nonheath understory during AA. As FDMO is the primary nonheath-oak map class, these nonheath-dominated areas were classified as FDMO. The final producers' accuracy is below VMI Program standards with an UL–CI of 61% and no clean collapse option to bring the accuracy up. User's accuracy is well within VMI Program standards with an UL–CI of 88%.

Suggestion: Accept a lower producers' accuracy.

Consequences: Accepting the lower producers' accuracy will preserve other heath-dominated oak map classes from collapsing into this one.

Park Staff Decision: Leave FDMO as an independent map class and accept a lower producers' accuracy.

J. FOHS and Low Producers' Accuracy

Confusion between south-central mixed oak and mixed oak-hickory forests and continued low producers' accuracy

Problem: There is generalized undermapping of the FOHS map class, with it found in nine (postcollapse) map classes resulting in a producers' accuracy below VMI Program standards. This is primarily caused by areas mapped as one of several oak map classes classified as having an oak-hickory canopy, and due to several areas mapped as one of several hardwood map classes classified as an "oakless" oak-hickory forest during AA. As FOHS is the primary oak-hickory map class, these oak-hickory forests were classified as FOHS. The final producers' accuracy is below VMI Program standards with an UL–CI of 66% and no clean collapse option to bring the accuracy up. User's accuracy is well within VMI Program standards with an UL–CI of 85%.

Suggestion: Accept a lower producers' accuracy.

Consequences: Accepting the lower producers' accuracy will preserve other oak map classes lacking hickory from collapsing into this one.

Park Staff Decision: Leave FOHS as an independent map class and accept a lower producers' accuracy.

K. CFCVM, FNHN, and CWTAL

Confusion of south-central hardwood forests and overmapping of central talus woodland

Problem: The are two issues to examine here. The first is a consistent mapping of CFCVM as FNHN due to CFCVM occurring at a greater elevation than initially expected by the mappers. Over one-quarter of FNHN sites tested during AA were determined to be CFCVM. The second is the chronic overmapping of CWTAL. Of the CWTAL sites tested during AA, over one-third of them were determined to be CFCVM or FNHN. This is likely caused by some of the U.S. National Vegetation Classification associations in CFCVM or FNHN being early-senescing hardwood tree forests that occur over broken rocky substrate, which AA suggests looks like CWTAL in the aerial imagery.

Suggestion: Collapse CFCVM, FNHN, and CWTAL into a single map class.

Consequences: The map will lose the ability to discern the high-elevation hardwood tree forests from the lower-elevation hardwood tree forests, but this ability was not highly reliable to begin with. Additionally, the map will lose the ability to provide the location of true talus woodlands, but many of those now classified as talus woodlands are either CFCVM or FNHN.

Park Staff Decision: Accept collapsing CFCVM, FNHN, and CWTAL into a single map class.

L. Low C/LFCHO Users' Accuracy

C/LFCHO has a users' accuracy slightly below VMI Program standards

Problem: The users' accuracy UL–CI for the C/LFCHO map class is 79% while the UL–CI producers' accuracy is 84%. This results from a slight overmapping of the C/LFCHO map class spread among three (postcollapse) other map classes.

Suggestion: While an artificial collapse for C/LFCHO could be engineered, this map class very nearly meets VMI Program standards and collapsing it would result in degrading an otherwise well-mapped map class.

Consequences: None

Park Staff Decision: Leave C/LFCHO as an independent map class and accept a lower users' accuracy.

M. FROS/FOTH and FHTT and Low Users' Accuracy

Confusion between north-central oak-tuliptree forests and accept a lower users' accuracy

Problem: First, note that FROS/FOTH is a single map class; as an artifact of different project area names there was an initial confusion on the U.S. National Vegetation Classification association that defines this map class. The issue here is the chronic overmapping of FROS/FOTH and undermapping of FHTT. Both map classes are defined by the occurrence of tuliptree (*Liriodendron tulipifera*) at the northern end of its range. During mapping, no areas were mapped as FHTT, but AA found this map class exclusively in the FROS/FOTH map class. Regarding the chronic overmapping of FROS/FOTH, this likely results from a combination of mappers over-weighting the cover of tuliptree in polygons and the AA teams' under-weighting the cover of tuliptree at AA sites. During AA reconciliation there were several AA sites in FROS/FOTH polygons that showed tuliptree in the field photograph images, but did not note tuliptree on the data sheet. As the species composition of the AA data sheet cannot be modified, these AA sites were classified as errors and this pushed the accuracy below VMI Program standards. Postcollapse UL–CI users' accuracy would be 71%.

Suggestion: Collapse FROS/FOTH and FHTT into a single map class and accept a lower users' accuracy. This will preserve much of the northern extent information of the occurrence of tuliptree along the corridor.

Consequences: There is very little consequence from collapsing FROS/FOTH and FHTT as both are moderately rich hardwood forests with tuliptree near the northern extent of its' range. Accepting a lower users' accuracy will preserve much of the northern extent occurrence information for tuliptree along the corridor.

Park Staff Decision: Accept collapsing FROS/FOTH and FHTT into a single map class.

N. Low FHHS Users' Accuracy

FHHS has a users' accuracy slightly below VMI Program standards

Problem: The users' accuracy for the map class is slightly below VMI Program standards with an UL–CI of 76%. All of the confusion for this swamp forest map class is with other swamp forest map classes, with the difference being that FHHS is generally dominated by eastern hemlock. One reason for the apparent overmapping of the FHHS map class may be caused by eastern hemlock decline and mortality between the date of imagery and date of AA.

Suggestion: Accept a slightly lower users' accuracy.

Consequences: Map users' will need to note that there are instances of other swamp forest map classes within the FHHS map class.

Park Staff Decision: Leave FHHS as an independent map class and accept a lower users' accuracy.

O. C/LFWPO and FHWP

Confusion between north-central oak-eastern white pine and hardwood-eastern white pine forests

Problem: While C/LFWPO is mapped consistently, the much rarer FHWP map classes were often found to be C/LFWPO during AA. Both map classes represent eastern white pine - mixed-hardwood tree forests with C/LFWPO having more oak and FHWP having more non-oak hardwoods. Both are nonruderal forests.

Suggestion: Collapse C/LFWPO and FHWP into a single map class.

Consequences: There will be a diminished ability of the map to present the locations for the rare FHWP map class, but the locations for mature eastern white pine - mixed-hardwood tree will be much better.

Park Staff Decision: Accept collapsing C/LFWPO and FHWP into a single map class.

P. Low FXNE Producers' Accuracy

FXNE was mapped poorly and has low producers' and users' accuracy

Problem: The FXNE map class was mapped poorly. Reasons for this vary, but users' errors are spread across 8 (postcollapse) map classes while producers' errors are spread across 16 (postcollapse) map classes. The UL–CI for users' is approaching VMI Program standards at 76%, but the producers' accuracy shows a chronic undermapping with the UL–CI at 39%. It generally suggests that the landscape where this map class occurs is much more disturbed and ruderal in nature than the map presents it as. Given the broad and deep confusion found within this map class, there is no option for collapse that will bring producers' accuracy anywhere near VMI Program standards. It might be possible to come near VMI Program standards with the collapse of four or five map classes with FXNE, but each of those map classes would be a very common map class covering hundreds to thousands of hectares each and this would result in a final map lacking detail throughout the range of FXNE.

Suggestion: Accept the low accuracy of FXNE in order to preserve other well-mapped map classes.

Consequences: Map users will need to understand that over the range of the FXNE map class, the map is generally more disturbed and ruderal in nature than the map presents it as.

Park Staff Decision: Leave FXNE as an independent map class and accept a lower producers' accuracy.

Q. Low FXNH Producers' Accuracy

FXNH has a producers' accuracy slightly below VMI Program standards

Problem: The producers' accuracy UL–CI for the FXNH map class is 77% while the straight users' accuracy is 94%. This results from a slight undermapping of the FXNH map class. This suggests (similarly to section P) that over the range of the FXNH map class, the map is generally more disturbed and ruderal in nature than the map presents it as.

Suggestion: While an artificial collapse for FXNH could be engineered, this map class nearly meets VMI Program standards and collapsing it would result in degrading an otherwise well-mapped map class.

Consequences: Map users will need to understand that over the range of the FXNH map class, the map is slightly more disturbed and ruderal in nature than the map presents it as.

Park Staff Decision: Leave FXNH as an independent map class and accept a lower producers' accuracy.

R. FAHS/FRMS, FHLS, and FTOH

Confusion between north-central swamp forests and the forested upland - swamp interface

Problem: There are two separate problems to consider here. The first is chronic overmapping of FHLS, an eastern hemlock swamp. Of the locations tested during AA, three-quarters of them were classified as FAHS/FRMS, a deciduous forest swamp. This indicates that FHLS, while present on the landscape, generally looks too much like FAHS/FRMS to reliably map alone. The second is the chronic overmapping of FTOH, an already confusing map class. The FTOH map class is defined as the forest that interfaces between drier oak forests and deciduous forest swamps. Mapped as narrow bands between drier oak forests and deciduous forest swamps in the map, AA found many of the tested FTOH polygons to be either drier oak forests or, more commonly, deciduous forest swamps. This could result from either poor mapping or AA teams unprepared to "split the difference" between the upland and wetland forest, which the FTOH map class was designed to do.

Suggestion: Collapse FAHS/FRMS, FHLS, and FTOH into a single map class.

Consequences: Collapsing these map classes will result in a poorer resolution of the different hardwood swamp types, but will provide a much clear presentation of deciduous swamp across the landscape. This collapse will result in deciduous swamp polygons directly interfacing with deciduous upland forest polygons, but AA results show that reliably mapping the interface between these types is not possible for this project.

Park Staff Decision: Accept collapsing FAHS/FRMS, FHLS, and FTOH into a single map class.

S. SMSF and SLBN

Confusion between emergent shrub wetlands in the north-central corridor

Problem: Initially, mappers believed these two map classes would split based on general species composition and how robust the vegetation was. Both SMSF and SLBN are shrub swamps with SMSF being sweetgale (*Myrica gale*) dominated and SLBN being leatherleaf (*Chamaedaphne calyculata*) dominated, though both may have the other species. On the surface, both map classes meet VMI Program standards, but on closer inspection, it is apparent that there is a generalized and consistent confusion between these two map classes.

Suggestion: Collapse SMSF and SLBN into a single map class.

Consequences: Resolution of different emergent shrub wetlands in the northern portion of the corridor will be slightly degraded, but the overall ability to differentiate these wetlands from other shrub wetlands will be increased.

Park Staff Decision: Accept collapsing SMSF and SLBN into a single map class.

T. FSMF and FHFS

Confusion between hardwood floodplain forests in the north-central corridor

Problem: Initially, mappers believed these two map classes would split based on landscape position and canopy composition. Both FSMF and FHFS are deciduous forested floodplain map classes with FSMF being silver maple (*Acer saccharinum*) dominated, and FHFS being mixed-hardwood tree dominated. The FSMF map class was mapped very well, but the FHFS map class was highly overmapped. This overmapping is spread among four (postcollapse) map classes with FSMF being the most logical place to collapse FHFS into.

Suggestion: Collapse FSMF and FHFS into a single map class.

Consequences: Resolution of different hardwood tree floodplain forest types in the northern portion of the corridor will be slightly degraded, but the overall ability to differentiate hardwood tree floodplain forests from nonfloodplain forests will be increased.

Park Staff Decision: Accept collapsing FSMF and FHFS into a single map class.

U. Low FXOH Users' Accuracy

FXOH has a users' accuracy slightly below VMI Program standards

Problem: The users' accuracy UL–CI for the FXOH map class is 79%, while the straight producers' accuracy is 86%. This results from a slight overmapping of the FXOH map class spread among five (postcollapse) other map classes.

Suggestion: While an artificial collapse for FXOH could be engineered, this map class very nearly meets VMI Program standards and collapsing it would result in degrading an otherwise well-mapped map class.

Consequences: None.

Park Staff Decision: Leave FXOH as an independent map class and accept a lower users' accuracy.

V. Low FNHW Producers' Accuracy

FNHW has a producers' accuracy slightly below VMI Program standards

Problem: The producers' accuracy UL–CI for the FNHW map class is 75%, while the straight users' accuracy is 84%. This results from a slight undermapping of the FNHW map class spread among 10 (postcollapse) other map classes.

Suggestion: While an artificial collapse for FNHW could be engineered, this map class nearly meets VMI Program standards and collapsing it would result in degrading an otherwise well-mapped map class.

Consequences: None.

Park Staff Decision: Leave FNHW as an independent map class and accept a lower producers' accuracy.

W. FHBO and FOTC

Confusion between central eastern hemlock - mixed-hardwood forests

Problem: Initially mappers believed these two similar map classes, both composed of northern red oak and eastern hemlock, could be split based on the presence of either American beech (*Fagus grandifolia*) or tuliptree. However, AA determined that undermapped FHBO and overmapped FOTC crossed, and that there was sufficient confusion to warrant merging these relatively similar map classes.

Suggestion: Collapse FHBO and FOTC into a single map class.

Consequences: A slight reduction in the ability for the map to resolve different types of northern red oak - eastern hemlock forests, but an increased ability for the map to resolve northern red oak - eastern hemlock forest in general.

Park Staff Decision: Accept collapsing FHBO and FOTC into a single map class.

X. FMCS and FMFS and Low Users' Accuracy

Confusion between northern hardwood - conifer swamps and users' accuracy slightly below VMI Program standards

Problem: Initially, mappers expected to be able to separate these two swamp map classes based on relative conifer cover in each, as both map classes have some degree of conifer cover, but the overlap proved to be too great. An additional issue is that both map classes were initially overmapped, which is exacerbated by their collapse, leaving the final users' accuracy UL–CI at 74%. This wide overmapping of the combined map class would spread among 11 (postcollapse) other map classes with no logical additional collapse option that would rectify this over-mapping. An alternative is to leave FMCS and FMFS separate. Both map classes have accuracy problems, but all UL-CI's are 73% or better, similar to the proposed collapsed map class.

Suggestion: Determine whether the map will benefit more from a generalized conifer swamp map class or two more specific conifer map classes.

Consequences: Collapsing FMCS and FMFS provides only a marginal improvement in the map accuracy at the expense of the ability to differentiate different swamp forests in the northern part of the corridor while leaving them separate does provide a better ability to differentiate swamp forests in the northern part of the corridor at the expense of a slightly more accurate map.

Park Staff Decision: Leave FMCS and FMFS as independent map classes and accept a lower users' accuracy.

Y. FOHN, FMHO, and FMOH and Low Users' Accuracy

Confusion between north-central mixed oak and oak-hickory forests and a slightly below-standard final users' accuracy

Problem: Initially, mappers believed they could separate these three map classes based on the presence and relative dominance or absence of various hardwood tree species, including hickory and sugar maple (*Acer saccharum*). However, AA determined this was insufficiently consistent and that this resulted in the general undermapping FMOH to FOHN and FMHO. This was likely caused by instances of FMOH that contained significant hardwood tree cover that was inappropriate for FOHN or FMHO. The end result is confusion between the three dry-mesic to mesic oak forests found in the northern portion of the corridor. Additionally, the producers' accuracy is still slightly below VMI Program standards postcollapse with an UL–CI of 79%.

Suggestion: Collapse FOHN, FMHO, and FMOH into a single map class and accept a slightly lower producers' accuracy.

Consequences: Collapsing FOHN, FMHO, and FMOH will decrease the resolution of different oak-dominated forests in the northern portions of the corridor, but increase the ability to discern oak forests in general.

Park Staff Decision: Accept collapsing FOHN, FMHO, and FMOH into a single map class.

Z. FSFL and Low Users' Accuracy

FSFL has a producers' accuracy below VMI Program standards

Problem: The producers' accuracy UL–CI for the FSFL map class is 69% while the straight users' accuracy is 86%. This results from two problems. The first is slight undermapping of the FSFL map class spread among 5 (postcollapse) other map classes; of these five FPHS has the greatest degree of confusion with FSFL. The second is an artifact of the AA sample design that resulted in only 14 AA sites being sampled for this map class, rather than the expected 30. This results in an amplification of producers' error as compared to the commonness of the map class across the landscape.

Suggestion: Accept a lower users' accuracy for FSFL. While an artificial collapse for FSFL could be engineered, this map class would likely meet VMI Program standards with a correct sample size and collapsing it would result in degrading an otherwise well-mapped map class.

Consequences: While collapsing FPHS and FSFL would provide a more reliable presentation of where lower-elevation conifer forests occur in the northern portion of the corridor, the collapsed map class would result in a reduced capacity for the map to show the northern-most extent of eastern hemlock.

Park Staff Decision: Leave FSFL as an independent map class and accept a lower producers' accuracy.

AA. FWCS and FCPS

Confusion between northern white-cedar forest in the northern portion of the corridor

Problem: Both FWCS and FCPS are northern white-cedar (*Thuja occidentalis*) dominated swamps that generally occupy different locations in the landscape. Mappers believed they could use this difference to split them apart, but AA found that the locational concept was not sufficiently accurate and FWCS was overmapped to FCPS. While FWCS could stand alone, FCPS cannot and near half the sites determined to be FCPS during AA are mapped as FWCS.

Suggestion: Collapse FWCS and FCPS into a single map class.

Consequences: There will be a reduction in the ability to differentiate northern white-cedar swamp forest types in the map, but a much better ability to differentiate northern white-cedar swamp forest in general.

Park Staff Decision: Accept collapsing FWCS and FCPS into a single map class.

AB. Low L/NFSFS Users' Accuracy

L/NFSFS has a users' accuracy slightly below VMI Program standards

Problem: The users' accuracy UL–CI for the L/NFSFS map class is 79% while the straight producers' accuracy is 85%. This results from a slight overmapping of the L/NFSFS map class.

Suggestion: While an artificial collapse for L/NFSFS could be engineered, this map class very nearly meets VMI Program standards and collapsing it would result in degrading an otherwise well-mapped map class.

Consequences: Map users will need to understand that over the range of the L/NFSFS map class, the map is slightly less common than the map indicates.

Park Staff Decision: Leave L/NFSFS as an independent map class and accept a lower users' accuracy.

AC. SXBM and HXRC

Confusion between reed canarygrass wetlands in the northern portion of the corridor

Problem: Mappers initially believed they would be able to reliably split the two reed canarygrass (*Phalaris arundinacea*) dominated map classes apart based on shrub cover, but AA found that many of the sites mapped as HXRC had sufficient shrub cover to be SXBM. This likely relates from an inability to reliably gauge low shrub cover in mainly herbaceous marshes, which is still sufficient to qualify as an herbaceous shrub marsh.

Suggestion: Collapse SXBM and HXRC into a single map class.

Consequences: As both map classes represent ruderal reed canarygrass marshes the ability to reliably discern this vegetation in the map will increase. However, this increased reliability will be at the expense of discerning the shrubbier versions, which may be later-successional in nature.

Park Staff Decision: Accept collapsing SXBM and HXRC into a single map class.

AD. WSRH and LWTAL

Confusion between oak woodlands in the north-central portion of the corridor

Problem: Initially, mappers believed that the degree of canopy cover and landscape position would differentiate LWTAL from WSRH, but AA found LWTAL to be consistently overmapped to WSRH.

Suggestion: Collapse LWTAL and WSRH into a single map class.

Consequences: Collapsing LWTAL and WSRH will have minimal impact as both are oak woodlands over open rocky substrate.

Park Staff Decision: Accept collapsing LWTAL and WSRH into a single map class.

AE. NWTAL, NVBAC, and CEGL006064

Discovery of CEGL006064 in NWTAL and NVBAC

Problem: During the AA process, two instances of the association CEGL006064 were discovered. Mappers created a map class for CEGL006064 (SAST), but never found any area they believe sufficiently large to map. The AA process found one instance in NVBAC and one instance in NWTAL that AA determined to be equal to or greater than the minimum mapping unit of 0.5 ha. This association now needs to go somewhere and there are two options. The better option seems to be NWTAL, which is a woodland map class, rather than NVBAC, which is a sparsely vegetated map class, though placing CEGL006064 in either NWTAL or NVBAC is possible.

Suggestion: Add CEGL006064 to NWTAL rather than NVBAC.

Consequences: Having a rare shrubland in a woodland map class if added to NWTAL.

Park Staff Decision: Add CEGL006064 into the NWTAL map class.

The Department of the Interior protects and manages the nation's natural resources and cultural heritage; provides scientific and other information about those resources; and honors its special responsibilities to American Indians, Alaska Natives, and affiliated Island Communities.
