I honestly thought all went thru when I got the web site to work on Sunday. I don't think it was labeled a draft anymore. Is there anyway you can check this. If it is anything like the stuff we do for the state, it is not a good idea to submit reports more than necessary.

Following is the only info. we have from the sampling:

Bushkill Creek Macro-invertebrate sampling Sept. 15, 2017.

Submitted by Roger Spotts Monroe County Conservation District.

This was a very informal sampling by students from East Stroudsburg High School. The students used a kick net and sampled at various locations at the mouth of the Bushkill Creek. The parameters were fairly loose with no set number of samples and no measured area for the sampling. Students captured Macro-invertebrates and sorted them by family groups to give an indicator on water quality. The samples included the following:

Mayflies,

Stoneflies,

Caddisflies,

Dragonflies,

Water pennies

No counts were done and in the end the student s determined the water quality in the Bushkill Creek was good. All species were returned to the creek.

Please let me know what if anything I still need to do,

Pat Bixler
