

Data Store User Guide

What's New in Data Store 2.6.1?

- **Changes on the Reference – Unit and Geography tab**

The Unit Link has been split into **Producing Unit Link(s)** and **Content Unit Link(s)**:

Producing Unit Link(s) are the units most directly involved in creating the reference content and responsible for it as a product. Another way of considering this field is which unit or office should be contacted if there is a question about the product? This is applicable only to content created by or for the NPS.

Content Unit Link(s) are the units relevant to the reference content. Another way of considering this field is which units are explicitly mentioned in the reference content or need to be connected to the reference for discoverability reasons? Existing Unit Links associated with each reference are stored under the **Content Unit Links** and may require review and/or cleanup.

- **‘Subjects and Keywords’ tab is now ‘Keywords and Categories’ and we’ve expanded the category options**

We renamed the ‘Subjects and Keywords’ tab to ‘Keywords and Categories’. We also expanded the category list beyond the existing ‘Ecological Framework’ options:

NPS.gov Subject Site – A way to tag Data Store content as relevant to any of the 200+ NPS.gov Subject sites. Content will not automatically be shared on NPS.gov, but this should allow for future integration.

Data Package Type – A way to tag references as having a Tabular or Darwin Core Archive data packages. Data packages are a specific, structured way of organizing data and metadata and have been the focus of the Long-term Data Management Governance Board. Over time tagged data packages will benefit from additional functionality within Data Store.

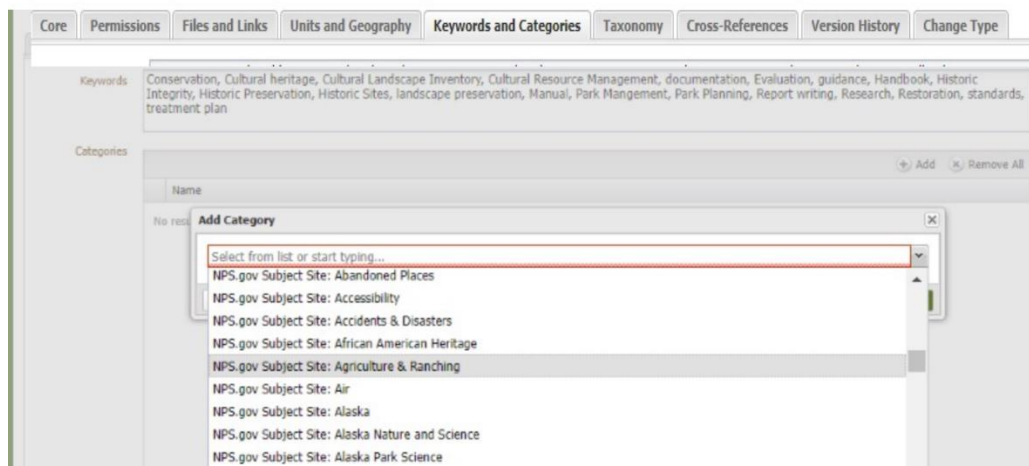

Figure 2. Data Store Reference Keywords and Categories Tab

- **New reference type “Script”**

We had requests to upload static version of their analysis code, and realized that a new reference type was needed. Examples of a Script include PowerShell, R, or python scripts and packages.

- **Digital Object Identifiers on additional references**

We heard you! Digital Object Identifiers help with discoverability and persistence, so we added the DOI field to several more reference types. If you need to assign an NPS Digital Object Identifier to your reference, contact irma@nps.gov. For now this process is being handled manually, but future updates will make reserving a DOI a smoother process. The following Reference Types now have the Digital Object Identifier field enabled:

- | | |
|-----------------------|-------------------|
| ▪ Published Report | ▪ Raster Dataset |
| ▪ Data Release Report | ▪ Script |
| ▪ Generic Dataset | ▪ Tabular Dataset |
| ▪ Geospatial Dataset | ▪ Vector Dataset |

- **Owners of references with an NPS Digital Object Identifier are retained, but some tabs are locked**

Prior to this release, when an NPS DOI was added to a reference and activated, the existing reference owners were removed. While this helped to ensure stability for references with DOIs, it took away the ability to make even minor changes, such as adding new keywords or adding a new version. With Data Store 2.6.1, reference owners will be able to edit all the metadata on the following tabs:

- Permissions
- Units and Geography
- Keywords and Categories
- Taxonomy
- Version History

The 'Core' and 'Files and Links' tabs will remain visible, but they will have an R/O next to the tab name which indicates that they are Read Only and cannot be edited. Reach out to irma@nps.gov if you need to make a change on the locked tabs.

We would like to hear from you!

We value your opinion! If you have an idea or suggestion on how we can improve Data Store, let us know. An email to IRMA@nps.gov is always the best way to contact us.

Thank you!

The Data Store Team
