Lenexa, Kansas 66219

25 APR 2016

Mr. John Mitchell, Director
Kansas Department of Health and Environment
Division of Environment
1000 S.W. Jackson Street, Suite 540
Topeka, Kansas 66612-1368

Dear Mr. Mitchell:

On March 29, 2016, the Kansas Department of Health and Environment submitted the 2016 Kansas Section 303(d) List as required by § 303(d)(1) of the Clean Water Act. With today's letter, the EPA has completed review of the 2016 Kansas § 303(d) List of water quality-limited water bodies still requiring Total Maximum Daily Loads.

The KDHE's submission is formatted consistent with the EPA guidance regarding "integrated reporting" and, therefore, contains five separate categories of listing waters. There are 1,264 water body segments and 2,577 impairments within Category 5 of Kansas' integrated report which constitutes Kansas' list of water quality-limited segments still requiring TMDLs subject to the EPA's approval.

Based on its review, the EPA has determined that the KDHE's list of water quality-limited segments and their impairments still requiring TMDLs meets the requirement of Section 303(d) of the CWA and the EPA's implementing regulations. The EPA is therefore approving Kansas' 2016 CWA, Section 303(d) List, as described in the enclosed Decision Document.

I congratulate you and your staff for the completion of the list development and submission process. This process requires a significant amount of staff resources and involves a complex evaluation and assessment of water quality data. We look forward to working with the KDHE on the development of the 2018 Section 303(d) List in the near future.

If you would like to further discuss the EPA's action, please contact me at (913) 551-7782, or John DeLashmit, Chief, Water Quality Management Branch, at (913) 551-7821.

Sincerely,

A handwritten signature in blue ink that reads "Karen A. Flournoy".

Decision Document of the 2016 Kansas Clean Water Act, Section 303(d) List Water Quality Limited Segments Still Requiring TMDLs

I. Executive Summary

On March 29, 2016, the Kansas Department of Health and Environment (KDHE) submitted a 2016 update to the state's Clean Water Act (CWA) Section 303(d) List which was received on April 4, 2016 by the United States Environmental Protection Agency (EPA) for review. Following its review of Kansas' complete submittal, the EPA is approving the state's removal of 32 monitoring station/pollutant combinations representing 190 water body segment/pollutant combinations and the addition of 50 monitoring station/pollutant combinations representing 311 water body segment/pollutant combinations to the state's CWA Section 303(d) List. As a result, the 2016 Kansas Section 303(d) List consists of 1264 water bodies representing 2577 water body segment/pollutant combinations. This document summarizes the EPA's review and the basis for its decision.

Section 303(d)(1) of the CWA directs states to identify those waters within their jurisdictions for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard (referred to as 'water quality-limited segments' defined in 40 CFR § 130.7), and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The CWA Section 303(d) listing requirement applies to water quality-limited segments impaired by pollutant loadings from both point and/or nonpoint sources. After a state submits its CWA Section 303(d) List to the EPA, the Agency is required to approve or disapprove that list pursuant to Section 303(d)(2) and 40 CFR § 130.7(d)(2).

Kansas' 2016 submittal is an update to the state's most recently approved CWA Section 303(d) List, approved by EPA on April 30, 2014 (i.e., the state's 2014 CWA Section 303(d) List). In its submittal, the KDHE included its assessment methodology used to identify waters that do not meet the state's EPA-approved water quality standards and, therefore, are required to be included on CWA Section 303(d) List. This 2016 assessment methodology includes revisions to the methodology used to develop the 2016 CWA Section 303(d) List for Kansas. These revisions address the state's priority vision for TMDL development. It identifies which specific water bodies monitored by specific stations will receive TMDLs for the current 303(d) cycle. The methodology establishes specific protocols and thresholds for assessing water bodies, in addition to data sufficiency and data quality requirements. The methodology contains procedures for assessing both aquatic life use support and human health use support.

All waters which were included in Kansas' approved 2016 CWA Section 303(d) List will remain on the state's CWA Section 303(d) List, unless the KDHE removes a water body from a subsequent list and the EPA approves the removal. The KDHE's submittal for the EPA's review includes an updated list reflecting, among other things:

- Additional water bodies which the KDHE determined to be water quality-limited segments pursuant to the state's EPA-approved water quality standards and the state's listing methodology and, therefore, included in the update of the CWA Section 303(d) List submitted to the EPA for review; and
- Water bodies included on Kansas' previously approved 2014 CWA Section 303(d) List which were determined not to need Total Maximum Daily Loads (TMDLs) pursuant to the state's EPA-approved water quality standards and the state's listing methodology and,

therefore, removed from the update of the CWA Section 303(d) List submitted to the EPA for review.

While the guidelines, protocols, and requirements in state statute and the state's methodology might be useful tools for the KDHE to use in identifying impaired waters, they are not part of the state's water quality standards. Hence, the EPA did not rely solely on the state's statutes or the methodology in reviewing Kansas' list. Instead, the EPA reviewed all available information including any information excluded under the state's methodology, to determine if the state's list was developed consistent with the underlying EPA-approved state water quality standards. The EPA's review process generally followed a two-step analysis:

- (1) The EPA reviewed the state's listing methodology, including data collection and data assessment requirements, to determine whether, based on Kansas' EPA-approved water quality standards, the methodology was a reasonable method for identifying water quality-limited segments; and
- (2) Where the EPA was unsure whether the methodology was a reasonable method for identifying water quality-limited segments, the EPA requested additional information from the KDHE to conduct further water body and data analysis.

Following the EPA's decision on Kansas' 2016 submission, the current CWA Section 303(d) List in the state of Kansas contains:

- An approved 2016 CWA Section 303(d) List;
- Approved additions to the 2014 CWA Section 303(d) List; and
- Approved removals from the 2014 CWA Section 303(d) List

The statutory and regulatory requirements relevant to CWA Section 303(d) Lists, and the EPA's review of Kansas' compliance with each requirement, are described in detail below. The EPA's approval of Kansas' Section 303(d) list extends to all water bodies on the list with the exception of those waters that may be located within Indian Country, as defined in 18 U.S.C. Section 1151. The EPA is taking no action to approve or disapprove the State's list with respect to those waters at this time. The EPA, or eligible Indian Tribes, as appropriate, will retain responsibilities under Section 303(d) for those waters. In addition, the EPA approval actions of State CWA Section 303(d) lists do not constitute a finding of State and/or Tribal jurisdiction over particular waters.

II. Statutory and Regulatory Background

A. Identification of Water Quality-limited Segments for Inclusion on the CWA Section 303(d) List

Section 303(d)(1) of the CWA directs states to identify those waters within its jurisdiction for which effluent limitations required by Section 301(b)(1)(A) and (B) are not stringent enough to implement any applicable water quality standard, and to establish a priority ranking for such waters, taking into account the severity of the pollution and the uses to be made of such waters. The Section 303(d) listing requirement applies to waters impaired by point and/or nonpoint sources, pursuant to the EPA's long-standing interpretation of Section 303(d).

The EPA regulations at 40 CFR § 130.7(b)(1) provide that states need to list waters where the following controls are not adequate to implement applicable standards:

- Technology-based effluent limitations required by the CWA;
- More stringent effluent limitations required by state or local authority; and
- Other pollution control requirements required by state, local, or federal authority.

B. Consideration of Existing and Readily Available Water Quality-Related Data and Information

In developing Section 303(d) Lists, states are required to assemble and evaluate all existing and readily available water quality related data and information, including, at a minimum, consideration of existing and readily available data and information about the following categories of waters (see 40 CFR § 130.7(b)(5)):

- Waters identified as partially meeting or not meeting designated uses, or as threatened, in the state's most recent Section 305(b) report;
- Waters for which dilution calculations or predictive modeling indicate non-attainment of applicable standards;
- Waters for which water quality problems have been reported by governmental agencies, members of the public, or academic institutions; and
- Waters identified as impaired or threatened in any Section 319 nonpoint assessment submitted to the EPA.

States are also required to consider any other data and information that is existing and readily available. The EPA's 2002 *Recommended Framework for EPA Approval Decisions on 2002 State Section 303(d) List Submissions* describes categories of water quality related data and information that may be existing and readily available. While states are required to evaluate all existing and readily available water quality-related data and information, states may decide to rely or not rely on particular data or information in determining whether to list particular waters.

In addition to requiring states to assemble and evaluate all existing and readily available water quality-related data and information, the EPA regulations at 40 CFR § 130.7(b)(6) require states to include as part of their submissions to the EPA, documentation to support decisions to rely or not to rely on particular data and information and decisions to list or not to list waters. Such documentation needs to include, at a minimum, the following information:

- A description of the methodology used to develop the list;
- A description of the data and information used to identify waters;
- A rationale for any decision to not use any existing and readily available data and information; and
- Any other reasonable information requested by the EPA.

The state published a notice in the Kansas Register on November 12, 2015, requesting data covering the time period of January 1, 2000 through September 30, 2015. The request was for information on water quality problems in the state and made particular request for data in the Lower Arkansas and Kansas Lower Republican river basins. These two basins are part of the states rotating basin plan for assessment and implementation priority.

C. Priority Ranking

The EPA regulations also codify and interpret the requirement in Section 303(d)(1)(A) of the CWA, that states establish a priority ranking for listed waters. The regulations at 40 CFR § 130.7(b)(4) require states to prioritize waters on their Section 303(d) Lists for TMDL development, and also to identify those water quality-limited segments targeted for TMDL development in the next two years. In prioritizing and targeting waters, states must, at a minimum, take into account the severity of the pollution and the uses to be made of such waters (see, CWA Section 303(d)(1)(A)). As long as these factors are taken into account, the Act provides that states establish priorities. States may consider other factors relevant to prioritizing waters for TMDL development, including immediate programmatic needs, vulnerability of particular waters as aquatic habitats, recreational, economic, and aesthetic importance of particular waters, degree of public interest and support, and state or national policies and priorities (see 57 FR 33040, 33045 [July 24, 1992], and EPA's 1991 Guidance).

The state of Kansas identified its priority waters within its TMDL Vision Strategy. This strategy prioritizes waters for TMDL development from 2014 through 2022. For 2016, Kansas River segments in the eight digit Hydrological Unit Codes of 10270101, 10270102 and 10270104 are targeted for TMDLs to address phosphorus. For 2017, Kansas and Arkansas rivers HUC8s of 10270104, 10270102, 11030010, 11030012 and 11030013 will be targeted for TMDLs to address phosphorus impairments.

III. Kansas' Approach to Identifying Waters for the 2016 Section 303(d) List

A. Kansas' 2016 Integrated Report Format

The EPA guidance for states in meeting the requirements of CWA Section 303(d) recommends a format which integrates the requirements of both CWA Sections 303(d) and 305(b) in creating a five category "integrated report" format. The 2016 Kansas submission under CWA Section 303(d) is the fifth submission by the state of Kansas using this "integrated report" format. Category 5 of the 2016 integrated report (IR) constitutes Kansas' list of impaired waters for purposes of CWA Section 303(d), and is subject to the EPA's review and approval. The EPA is taking action only on Category 5 which includes water quality-limited segments still requiring TMDLs. The following describes the five categories constituting Kansas' IR and the number of water bodies assigned to each category by the KDHE. Under Kansas' five category system, some water bodies are assigned to more than one category for different pollutants.

Category 1 consists of 10 monitoring stations and their associated lakes and water body segments attaining all designated uses and no use is threatened. Kansas also requires that a water body never have been 303(d) listed to be placed in this category.

Category 2 consists of 270 monitoring stations and their associated lakes and water body segments for which some, but not all, designated uses are attained and none are threatened. Attainment status of the remaining designated uses is unknown because data are insufficient to categorize a water body consistent with the state's listing methodology.

Category 3 consists of 129 monitoring stations and their associated lakes and water body segments for which there are insufficient or no data and information to determine, consistent with the state's listing methodology, if any designated use is attained.

Category 4 consists of 405 monitoring stations and their associated lakes and water body segments for which one or more designated uses are impaired or threatened but establishment of a TMDL is not required.

Category 5 consists of 303 stations representing 1264 waters for which one or more pollutants has caused, is suspected of causing, or is projected to cause an impairment or threat of impairment of one or more designated uses and the establishment of a TMDL is required. This category also includes those segments for which impairment is indicated, but the cause or source is unknown. Only water body segments within Category 5 are subject to the EPA's approval.

The state's IR format also incorporated an expansion of Category 4 into three sub-categories. Sub-Category 4a includes waters that are threatened or impaired, but for which a TMDL has been completed and approved. Sub-Category 4b includes waters that are threatened or impaired, but for which "other required control measures are expected to result in the attainment of water quality standards." Sub-Category 4c includes waters where the "threat or impairment is not caused by a pollutant." Sub-categories 4a through 4c are recognized within the EPA guidance for the development of an integrated report. The EPA's review of the state categories and sub-categories was conducted within the context of whether or not a water body segment should be listed within Category 5 based on existing and readily available data and information.

B. Kansas 2016 Methodology

Kansas' *METHODOLOGY FOR EVALUATION AND DEVELOPMENT OF THE 2016 SECTION 303(D) LIST OF IMPAIRED WATER BODIES FOR KANSAS*, (February 18, 2016), guides the KDHE's evaluation of "existing and readily available water quality-related data and information" (40 CFR § 130.7(b)(5)) and identification of "water quality-limited segments still requiring TMDLs" (40 CFR § 130.7(a)). As described earlier, Category 5 of the 2016 List constitutes Kansas' list of impaired waters for purposes of CWA Section 303(d) and is subject to the EPA's review and approval. The EPA is taking action only on Category 5 which consists of water quality-limited segments still requiring TMDLs.

According to the state's "Listing Methodology," data sources used to assess water quality conditions in Kansas for purposes of Section 305(b) reporting and to aid in developing the state's 303(d) list include:

- 1) 2014 303(d) List;
- 2) 2016 305(b) Report's waters that are not meeting a designated beneficial use;
- 3) Clean Water Act 319 nonpoint source and Watershed Restoration and Protection Strategy assessments;
- 4) Drinking water source water assessment under Section 1453 of the Safe Drinking Water Act;
- 5) The KDHE's fish consumption advisories; and

- 6) Data, information, and water quality problems reported from local, State, or Federal agencies (especially USGS water quality studies), Tribal governments, the public, and academic institutions.

IV. EPA Analysis of Kansas' Approach to Listing Waters for the 2016 List

The EPA is approving Kansas' 2016 CWA Section 303(d) List, based on the requirements of Section 303(d) of the CWA and 40 CFR § 130.7. The EPA's action is based on its analysis of whether the KDHE reasonably identified all water quality-limited segments requiring listing. In determining whether the KDHE reasonably identified all water quality-limited segments still needing a TMDL, the EPA first looked at the KDHE's use support determinations as documented in the state's submitted database.

Kansas' 2016 assessment methodology identifies a general "cutoff date" as December 15, 2015, for data collection in support of the KDHE's water quality data assessment. The EPA guidance recognizes the appropriateness of a reasonable data collection cutoff date allowing states to initiate actual data assessment and list preparation. Data not considered for the 2016 assessment should be considered for the 2018 submission. Despite the application of a "cutoff date" by Kansas for the development of the 2016 list, the KDHE considered data submitted as part of the state's public notice and comment period from February 18, 2016 through March 23, 2016. The EPA believes the KDHE complied with the requirements of federal regulations at 40 CFR § 130.7(b)(5) regarding the assembly and evaluation of all existing and readily available water quality-related data and information.

The 2016 assessment methodology also discusses the KDHE's treatment of water quality-related data collected more than 10 years prior to the current assessment period for permanent monitoring stations. Federal regulations and guidance recognize that, in some instances, older data might not reflect current water quality conditions. Where the state demonstrates "good cause" for not including older data in the derivation of its list, federal regulations at 40 CFR § 130.7(b)(6)(iv) provide for the state not including a water or waters on its list. However, a demonstration of "good cause" relies on the state showing that there are changes in condition in the watershed or water body which result in older data not being representative of current water quality status. Data age alone is not considered an acceptable reason for not using that data in a state's assessment of a water body to determine if it is meeting water quality standards.

To confirm that the KDHE's CWA Section 303(d) List was developed in a manner compliant with the requirements at 40 CFR § 130.7 (regarding the assembly and evaluation of "all existing and readily available water quality-related data and information"), the EPA reviewed the information contained in the KDHE's March 29, 2016, submittal for waters listed in Kansas' Integrated Report Category 5, and all waters proposed for delisting. These submittals included an assessment/tracking database and supplemental data files containing water quality data used in Kansas' assessment.

V. EPA Analysis of KDHE's Changes to the State's CWA Section 303(d) List

The EPA compared waters listed in Category 5 of the state's 2014 IR with waters listed in Category 5 of the state's 2016 IR to determine whether waters were removed from the list, pollutants identified as causing impairment were changed, or water body descriptions had changed. In each case, such changes could constitute a change to the state's CWA Section 303(d) List requiring the EPA's approval. As described earlier in this document, Kansas' 2016 CWA Section 303(d) List is a part of the state's IR.

The IR format is consistent with the EPA guidance and includes five categories of waters. Category 5 of the state's IR constitutes the state's 2016 CWA Section 303(d) List.

In its review of the state's 2016 list, the EPA has reviewed Kansas' description of the data and information the state relied upon in developing its list, its methodology for identifying water bodies and the KDHE's responses to public comments. In accordance with 40 CFR § 130.7(d)(2), the EPA is approving Kansas' 2016 CWA Section 303(d) List (Category 5 of their 2016 IR), consisting of a total of 1264 water bodies with 2577 water body/pollutant combinations.

Waters proposed by the KDHE for exclusion from Category 5 of Kansas' 2016 CWA Section 303(d) List or for changes in their listing status which could be considered as a change to the CWA Section 303(d) List (e.g., typographical errors, water quality improvement, listed causal pollutant changed) are identified below.

As a result of the KDHE's changes to the list of water bodies which were modified or removed from Kansas' CWA Section 303(d) List, the EPA initiated its review of 172 water bodies to determine whether the KDHE had "good cause" for modifying or not including these waters on its 2016 CWA Section 303(d) List.

A. Waters Removed by the KDHE from Kansas CWA Section 303(d) List and Approved by EPA

The EPA is approving the modification to or removal of 32 stations with 172 water body/pollutant combinations from the state's 2016 CWA Section 303(d) List consistent with the requirements of federal regulations at 40 CFR § 130.7(b)(6)(iv). Section 40 CFR 130.7(b)(6)(iv) provides for the exclusion of waters from the state's CWA Section 303(d) List. These regulations require that the state demonstrate "good cause" for not including a water or waters on the list. The reasons for each delisting were included in the submittal, and additional details were provided to the EPA in the form of a database in the final Section 303(d) List submittal. The following are the general reasons cited for removal of water bodies from the Section 303(d) List:

- Recent data collected from a 303(d) listed segment indicated that a listed pollutant is no longer a potential cause of water quality impairment.
- Changes in water quality standards and/or assessment methods resulted in changes in the use support status of listed segments.
- The state review identified flaws in original listings, attributable to errors associated with segment identifiers, or the use of inapplicable criteria.

The rationale supporting the removal of these 172 water body/pollutant combinations from the state's list can be grouped into three general categories and are also identified in Attachment 1.

1. Waters with Approved TMDLs

Twenty-two monitoring stations representing 96 water body/pollutant were removed from the state's list because TMDLs have been developed for those waters and approved by the EPA. In each instance, a TMDL has been developed for the listed pollutant or condition or the KDHE and the EPA have agreed that the TMDL will address the listed pollutant or condition. For some waters, they continue to be listed in Kansas' Category 5 for another pollutant or condition, or

they are listed in another Category within Kansas' IR based on other water quality data. These waters are included in Attachment 1 with information regarding each TMDL described in the last column. Each water body and the rationale for moving it from Category 5 are listed below.

Kansas – Lower Republican River Basin

Milford Lake (LM019001) - A TMDL for dissolved oxygen and eutrophication was approved by the EPA on July 7, 2014. The water body is now listed in Category 4a for dissolved oxygen and eutrophication on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of Milford Lake because this water body no longer requires the development of a TMDL for dissolved oxygen or eutrophication, consistent with 40 CFR § 130.7(b).

Lower Arkansas River Basin

Little Arkansas River at Alta Mills (SC246) - A TMDL for total suspended solids was approved by the EPA on August 4, 2014. The monitoring station and seven associated stream segments are now listed in Category 4a for total suspended solids on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Little Arkansas River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total suspended solids, consistent with 40 CFR § 130.7(b).

Little Arkansas River at Valley Center (SC282) - A TMDL for total suspended solids was approved by the EPA on August 4, 2014. The monitoring station and 11 associated stream segments are now listed in Category 4a for total suspended solids on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Little Arkansas River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total suspended solids, consistent with 40 CFR § 130.7(b).

Turkey Creek near Alta Mills (SC533) – A TMDL for total suspended solids was approved by the EPA on August 4, 2014. The monitoring station and five associated stream segments are now listed in Category 4a for total suspended solids on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of Turkey Creek and the associated stream segments because these water bodies no longer requires the development of a TMDL for total suspended solids, consistent with 40 CFR § 130.7(b).

Kisiwa Creek near Halstead (SC703) – A TMDL for total suspended solids was approved by the EPA on August 4, 2014. The monitoring station and one associated stream segment is now listed in Category 4a for total suspended solids on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of Kisiwa Creek and the associated stream segment because this water body no longer requires the development of a TMDL for total suspended solids, consistent with 40 CFR § 130.7(b).

Black Kettle Creek near Halstead (SC705) – A TMDL for total suspended solids was approved by the EPA on August 4, 2014. The monitoring station and one associated stream segment is now listed in Category 4a for total suspended solids on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of Black Kettle Creek and the associated stream segments because these water bodies no longer requires the development of a TMDL for total suspended solids, consistent with 40 CFR § 130.7(b).

Little Arkansas River at Wichita (SC728) - A TMDL for total suspended solids was approved by the EPA on August 4, 2014. The monitoring station and four associated stream segments are now listed in Category 4a for total suspended solids on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Little Arkansas River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total suspended solids, consistent with 40 CFR § 130.7(b).

Neosho River Basin

Cottonwood River near Emporia (SC274) - A TMDL for total phosphorus was approved by the EPA on August 5, 2015. The monitoring station and six associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Cottonwood River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Lake Kahola (LM043401) - A TMDL for eutrophication was approved by the EPA on September 29, 2014. The lake is now listed in Category 4a for eutrophication on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of Lake Kahola because this water body no longer requires the development of a TMDL for eutrophication, consistent with 40 CFR § 130.7(b).

Neosho River at Neosho Rapids (SC273) - A TMDL for total phosphorus was approved by the EPA on August 5, 2015. The monitoring station and five associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Neosho River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Neosho River near Parkerville (SC637) - A TMDL for total phosphorus was approved by the EPA on June 17, 2015. The monitoring station and five associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Neosho River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Shoal Creek near Galena (SC212) - A TMDL for total phosphorus was approved by the EPA on January 8, 2016. The monitoring station and two associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Shoal Creek and the associated stream segment because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Short Creek near Galena (SC570) - A TMDL for total phosphorus was approved by the EPA on January 8, 2016. The monitoring station and associated stream segment is now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Short Creek because this water body no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Walnut River Basin

Augusta City Lake (LM040001) - A TMDL for eutrophication was approved by the EPA on September 30, 2015. The lake is now listed in Category 4a for eutrophication on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of Augusta City Lake because this water body no longer requires the development of a TMDL for eutrophication, consistent with 40 CFR § 130.7(b).

Eightmile Creek near Douglas (SC704) – A TMDL for dissolved oxygen and total phosphorus was approved by the EPA on August 19, 2015. The monitoring station and one associated stream segment is now listed in Category 4a for dissolved oxygen and total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Eightmile Creek and the associated stream segment because this water body no longer requires the development of a TMDL for dissolved oxygen or total phosphorus, consistent with 40 CFR § 130.7(b).

Fourmile Creek near Gordon (SC744) - A TMDL for total phosphorus was approved by the EPA on August 19, 2015. The monitoring station and two associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Fourmile Creek and the associated stream segments because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Walnut River at Gordon (SC106) - A TMDL for total phosphorus was approved by the EPA on August 19, 2015. The monitoring station and eight associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Walnut River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

Walnut River near El Dorado (SC279) - A TMDL for dissolved oxygen and total phosphorus was approved by the EPA on August 19, 2015. The monitoring station and five associated stream segments are now listed in Category 4a for dissolved oxygen and total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Walnut River and the associated stream segments because these water bodies no longer requires the development of a TMDL for dissolved oxygen or total phosphorus, consistent with 40 CFR § 130.7(b).

Whitewater River at Towanda (SC038) - A TMDL for total phosphorus was approved by the EPA on August 19, 2015. The monitoring station and 22 associated stream segments are now listed in Category 4a for total phosphorus on the 2016 Kansas IR. In today's action, the EPA is approving the delisting of the Whitewater River and the associated stream segments because these water bodies no longer requires the development of a TMDL for total phosphorus, consistent with 40 CFR § 130.7(b).

2. New Data Supports Change in Listing

Ten stations representing 76 stream water body/pollutant combinations are being removed from the state 303(d) list to Category 2 or 3 based on new water quality data which indicate the use is supported with regard to the previously specified pollutants.

Kansas/Lower Republican River Basin

Big Blue River near Oketo (SC233) - New water quality data indicate this monitoring station is meeting water quality standards for copper. The monitoring station and two associated stream segments are now listed in Category 2 for copper in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of the Big Blue River because this water body no longer requires the development of a TMDL for copper, consistent with 40 CFR § 130.7(b).

Peats Creek near Clifton (SC649) - New water quality data indicate this monitoring station is meeting water quality standards for atrazine. The monitoring station and two associated stream segments are now listed in Category 2 for atrazine in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Peats Creek because this water body no longer requires the development of a TMDL for atrazine, consistent with 40 CFR § 130.7(b).

Rose Creek near Narka (SC712) - New water quality data indicate this monitoring station is meeting water quality standards for cadmium. The monitoring station and one associated stream segment is now listed in Category 2 for cadmium in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Rose Creek because this water body no longer requires the development of a TMDL for cadmium, consistent with 40 CFR § 130.7(b).

Lower Arkansas River Basin

Chikaskia River near Corbin (SC529) - New water quality data indicate this monitoring station is meeting water quality standards for copper. The monitoring station and 13 associated stream segments are now listed in Category 2 for copper in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Chikaskia River because this water body no longer requires the development of a TMDL for copper, consistent with 40 CFR § 130.7(b).

Marais Des Cygnes River Basin

Marais des Cygnes River near Quenemo (SC720) - New water quality data indicate this monitoring station is meeting water quality standards for copper. The monitoring station and 16 associated stream segments are now listed in Category 2 for copper in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of the Marais des Cygnes River because this water body no longer requires the development of a TMDL for copper, consistent with 40 CFR § 130.7(b).

Middle Creek near New Lancaster (SC697) - New water quality data indicate this monitoring station is meeting water quality standards for zinc. The monitoring station and four associated stream segments are now listed in Category 2 for zinc in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Middle Creek because this water body no longer requires the development of a TMDL for zinc, consistent with 40 CFR § 130.7(b).

Neosho River Basin

Mined Land Lake 22 (LM036801) - New water quality data indicate this monitoring station is meeting water quality standards for perchlorate. The monitoring station is now listed in Category 2 for perchlorate in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Mined Land Lake 22 because this water body no longer requires the development of a TMDL for perchlorate, consistent with 40 CFR § 130.7(b).

Lightning Creek near Oswego (SC565) - New water quality data indicate this monitoring station is meeting water quality standards for temperature. The monitoring station and 10 associated stream segments are now listed in Category 2 for temperature in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Lightning Creek because this water body no longer requires the development of a TMDL for temperature, consistent with 40 CFR § 130.7(b).

Smoky Hill/Saline River Basin

Smoky Hill River near Trego (SC550) - New water quality data indicate this monitoring station is meeting water quality standards for cadmium. The monitoring station and 18 associated stream segments are now listed in Category 2 for cadmium in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Smoky Hill River because this water body no longer requires the development of a TMDL for cadmium, consistent with 40 CFR § 130.7(b).

Upper Republican River Basin

Walnut Creek near Heizer (SC597) - New water quality data indicate this monitoring station is meeting water quality standards for nitrate. The monitoring station and nine associated stream segments are now listed in Category 2 for nitrate in the Kansas 2016 IR. In today's action, the EPA is approving the delisting of Walnut Creek because this water body no longer requires the development of a TMDL for nitrate, consistent with 40 CFR § 130.7(b).

The EPA concludes that the state properly assembled and considered all existing and readily available data and information for the water bodies identified above proposed for delisting, including all of the existing and readily available data and information relating to the categories of waters specified in 40 CFR 130.7(b)(5). Therefore, EPA concludes that the state's decisions regarding the above waters identified in its listing submittal are consistent with federal listing requirements.

VI. Priority Ranking in KDHE's CWA Section 303(d) List

The KDHE's listing methodology describes how the state will prioritize water bodies for purposes of establishing TMDLs. Kansas' submission of its 2016 CWA Section 303(d) List included a priority ranking of each water body as required in Section 303(d)(1)(A) of the CWA and 40 CFR 130.7(b)(4) of the EPA's implementing regulations.

The state of Kansas identified its priority waters within its TMDL Vision Strategy. This strategy prioritizes waters for TMDL development from 2014 through 2022. For 2016, Kansas River segments in the eight digit Hydrological Unit Codes of 10270101, 10270102 and 10270104 are targeted for TMDLs

to address phosphorus. For 2017, Kansas and Arkansas rivers HUC8s of 10270104, 10270102, 11030010, 11030012 and 11030013 will be targeted for TMDLs to address phosphorus impairments.

VII. Kansas' Public Participation Process

The KDHE public noticed its 2016 draft CWA Section 303(d) List from February 18 through March 23, 2016. The KDHE also convened two public hearings during that period. The KDHE received and responded to comments from the EPA. No other comments were received in the public notice period that led to changes in the list as it was proposed. The final version of the Kansas Section 303(d) List was submitted to the EPA on March 29, 2016.

The EPA has reviewed Kansas' public participation process and has concluded that the state provided adequate public notice and opportunity for the public to comment on its decision regarding the CWA Section 303(d) List in compliance with federal requirements.

is a good idea to have a good idea of the situation before you start. This is especially true if you are not familiar with the area.

It is also a good idea to have a good idea of the situation before you start. This is especially true if you are not familiar with the area.

It is also a good idea to have a good idea of the situation before you start. This is especially true if you are not familiar with the area.

It is also a good idea to have a good idea of the situation before you start. This is especially true if you are not familiar with the area.

Attachment 1: 2016 Kansas Section 303(d) List

Attachment 1 lists each modification or water body approved for the addition to, or removal from, the state's CWA Section 303(d) List and the supporting rationale for each. Attachment 2 represents the EPA approved 2016 Kansas CWA Section 303(d) List by station. Attachment 3 is provided as a lookup table in which individual water body segments can be identified based on the watershed method of listing used by Kansas in its CWA Section 303(d) listing process. The following terms are used in the tables and defined below.

Br	Branch
Cat	Category
Co.	County
Cr	Creek
CUSEGA	Catalog Unit Segment Number Alpha
<i>E. Coli</i>	<i>Escherichia coli</i>
Fk	Fork
HUC	Hydrologic Unit Code
LM	Lake Monitoring station
NPDES	National Pollutant Discharge Elimination System
NWR	National Wildlife Refuge
PCB	Polychlorinated biphenyls
R	River
SB	Stream Biology monitoring station
SC	Stream chemistry monitoring station
SFL	State Fishing Lake
USGS	United States Geological Survey
W.A.	Wildlife Area

Changes to the EPA-Approved 2014 KS Section 303(d) List

RIVER BASIN	HUC8	STATION NAME	POLLUTANT	STATION ID	EXPLANATION FOR CHANGE
