The Architectural Inventory for the City of Pittsburgh, Allegheny County, Pennsylvania, was made possible with funding provided by the Pennsylvania State Historic Preservation Office (PA SHPO), the City of Pittsburgh, and the U.S. Department of the Interior National Park Service Certified Local Government program.

The contents and opinions contained in this document do not necessarily reflect the views or policies of the Department of the Interior. This program receives federal financial assistance for identification and protection of historic properties. Under Title VI of the Civil Rights Act of 1964, Section 504 of the Rehabilitation Act of 1973, and the Age Discrimination Act of 1975, as amended, the U.S. Department of the Interior prohibits discrimination on the basis of race, color, national origin, disability, or age in its federally assisted programs. If you believe you have been discriminated against in any program, activity, or facility as described above, or if you desire further information, please write to: Office of Equal Opportunity, National Park Service; 1849 C Street N.W.; Washington, D.C. 20240.

Abstract

This architectural inventory for the City of Pittsburgh (Planning Sector 4: West End and Elliott Neighborhoods) is in partial fulfillment of Preserve Policy 1.2, to **Identify and Designate Additional Historic Structures, Districts, Sites, and Objects** (*City of Pittsburgh Cultural Heritage Plan, 2012*). This project is the sixth phase of a larger undertaking which aims ultimately to complete the architectural survey for all of Pittsburgh's Planning Sectors. The scope of this project provided for a complete inventory of Pittsburgh's West End and Elliott Neighborhoods in Planning Sector 4.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for National Register of Historic Places (NRHP) listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

All previously surveyed resources within the West End and Elliott neighborhoods were field checked and an updated survey record was prepared. In addition, project historians re-evaluated the most recent (1996) proposed boundaries of the West End Valley Historic District (PA SHPO Key No. 101760; determined eligible 1993) and this report provides recommendations on revised boundaries, period of significance, and contributing and non-contributing properties within the West End Valley Historic District.

Project historians surveyed the following resources:

PREVIOUSLY SURVEYED

- 60 Previously Surveyed Extant Resources
- 2 Previously Surveyed Resources – Now Demolished and replaced with a new building
- 8 Previously Surveyed Resources – Now Demolished and not replaced
- **70** **TOTAL** Previously Surveyed Properties *Resurveyed*

NEWLY SURVEYED

- 1,616 **TOTAL** Newly Surveyed Resources

TOTAL SURVEYED

- 1,686 **TOTAL** Resources

ELIGIBILITY RECOMMENDATIONS

- 3 Previously Surveyed Resources – Previously Determined Individually Eligible for the NRHP
 - 7 Previously Surveyed Resources – Without an individual NRHP eligibility determination
 - 2 Previously Surveyed Resources – Previously Determined Not Individually Eligible for the NRHP, but which project historian felt could be re-evaluated in the future if additional research is done.
 - 10 Newly Surveyed Resources – Recommended Potentially Individually Eligible for the NRHP
-
- **22 Eligible or Potentially Eligible Resources** Recommended for Intensive-Level Survey

The three (3) resources in the survey area previously determined individually eligible for the NRHP include the Corliss Street Tunnel (PA SHPO Key No. 100109) and segments of two railroad corridor historic districts: the Pittsburgh & Lake Erie Railroad (PA SHPO Key No. 116800) and the Pittsburgh and Steubenville Railroad (aka Pennsylvania Railroad: Panhandle Division; PA SHPO Key No. 100105). In addition, the survey area contains one (1) resource that is individually listed in the NRHP, the West End-North Side Bridge, and two (2) resources that have been listed as City of Pittsburgh Landmarks: Thaddeus Stevens Elementary School and the West End Branch Carnegie Library. No potential historic districts were identified in the West End or Elliott neighborhoods other than the aforementioned West End Valley Historic District, which was determined eligible for listing in the NRHP in 1993, and still appears to meet eligibility requirements for listing in the NRHP.

This project was administered by the City of Pittsburgh with support from PA SHPO staff. Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Consulting firms include Michael Baker International, Inc., Clio Consulting, and Cosmos Technologies, Inc.

This project was funded in part by a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant, the program guidelines of which can be found at http://www.portal.state.pa.us/portal/server.pt/community/grants/3794/certified_local_government_grant_program/417950.

Introduction

In 2013, the City of Pittsburgh received a Pennsylvania Historical and Museum Commission Certified Local Government (CLG) grant for partial funding of an architectural inventory of Pittsburgh neighborhoods. The first phase of the Pittsburgh Architectural Inventory focused on the Planning Sector 1 neighborhood of Troy Hill and was completed in October 2014. The second phase focused on the Spring Garden and Spring Hill-City View neighborhoods and was completed in February 2015. The third phase focused on the Planning Sector 12 neighborhood of Larimer and was completed in September 2016. The fourth phase focused on the Planning Sector 5 neighborhood of Carrick and was completed in October 2016. The fifth phase focused on the Planning Sector 5 neighborhood of Brookline and was completed in September 2017. The present survey (phase six of the Pittsburgh Architectural Inventory) focuses on the Planning Sector 4's West End and Elliott neighborhoods. The survey was conducted in August 2018, and the report was compiled in September 2018.

The City of Pittsburgh is divided into 16 planning sectors. Each sector contains a number of neighborhoods and is delineated based on a number of factors, including neighborhood and ward boundaries and topographical features. The City chose to focus the sixth phase of its architectural inventory on the West Pittsburgh neighborhoods of the West End and Elliott for three main reasons: 1) to document changes to the West End Valley Historic District since that district was last revised 22 years ago; 2) to document hillside resources in Elliott, which are among the area's earliest dwellings but are at risk for abandonment and demolition; and 3) to gain a comprehensive understanding of the development and extant historic-age resources in Elliott, which has not been previously studied in detail. After nine days of survey work, the three project historians surveyed 1,686 resources, of which 1,616 were newly surveyed and 70 were previously surveyed (Appendix B, Figures 1-2). This represents a complete survey of all parcels in the West End and Elliott neighborhoods. All pre-1976 properties with medium or high integrity were recorded using the PA SHPO minimum survey requirements (see Appendix A). Survey data were uploaded in real time to the City's Geographic Information Systems (GIS) database via tablet computers. These data were later reformatted and transmitted to PA SHPO in a Microsoft Excel file in accordance with PA SHPO's Cultural Resources Geographic Information System (CRGIS) requirements.

This *Report of Findings and Recommendations* presents survey results and recommendations. Recommendations pertain to 1) the eligibility of various resources for NRHP listing; 2) the use of survey data by the City of Pittsburgh; 3) resources prioritized for intensive level survey; and 4) a review of this survey effort's methodology, with emphasis on lessons learned and recommended modifications for future surveys.

Qualifications

Professionals who designed this project, conducted the fieldwork, and wrote the report meet the *Secretary of the Interior's Standards and Guidelines for Professional Qualifications Standards* (36CFR61) for history and/or architectural history. Project historians included Jesse Belfast and Justin Greenawalt,

of Michael Baker International, Inc., and Angelique Bamberg of Clio Consulting. Project maps were compiled by James Brown of Cosmos Technologies, Inc.

Goals and Objectives

In 2012, the City of Pittsburgh Department of City Planning released its Cultural Heritage Plan as a component of its first comprehensive plan. Resulting from the plan, the need to document historic architectural resources was identified with the goal to:

Document the City’s cultural and historic resources in ways that are accurate, meaningful, comprehensive, and useful to the City and the general public.

The Cultural Heritage Plan noted that the Historic Resources Inventory should be a “dynamic, comprehensive list of the City’s historic resources.” Further, according to the plan, the existing inventory of historic resources (over 13,500 parcels identified as being historic on some level) “needs to be field checked and continually updated as physical conditions change and additional resources are listed in the National Register of Historic Places or designated under the City’s Historic Preservation Ordinance” (Cultural Heritage Plan, 112).

To realize these goals, the City prepared policies with corresponding action items in the historic preservation plan. This current field survey is in partial fulfillment of those items, including:

PRESERVE POLICY 1.2 - Identify and Designate Additional Historic Structures, Districts, Sites, and Objects

PRESERVE 1.2-A: Conduct a Citywide Reconnaissance Survey (cursory visual inspection).

Identify areas that are potentially eligible for new listings as City-Designated Historic Districts and NRHP Historic Districts. Focus on areas that:

- Have been previously identified as potentially eligible (see Cultural Heritage Plan Appendix B).
- Have a high percentage of structurally-sound and architecturally significant pre-1940 buildings.

Identify individual structures and sites outside of City-Designated and NRHP historic districts that are potentially eligible for individual nomination as a City-Designated historic resource and/or for listing in the NRHP of Historic Places. Focus on structurally-sound resources that:

- Would not otherwise be part of an eligible historic district.
- Are significant or unique for their architecture and/or engineering.
- Would severely and adversely impact the neighborhood's form, character, or economic growth potential if demolished or negatively altered. (Consider existing and former

schools, religious buildings, and civic or quasi-civic spaces such as libraries, parks, fire stations, community centers, etc.).

Therefore, this current survey effort represents the City's second effort to identify previously unsurveyed historic resources within Sector 4's West End and Elliott neighborhoods, in partial fulfillment of the above-mentioned goal. In addition, the City intends to use this project to further develop and refine the methodology for conducting architectural surveys that was used in the first through fifth phases of the Pittsburgh Architectural Inventory (October 2014/February 2015/September 2016/October 2016/September 2017).

Methodology

Background Research

Prior to initiating fieldwork, the project team conducted background research and reviewed published literature to identify and obtain sources of information regarding the history and architecture of the West End and Elliott neighborhoods. A review of existing Pittsburgh history texts helped to predict the types of properties that should be expected in the survey area; historic mapping illustrated patterns of development and periods of growth in the neighborhoods. The West End History collection at the West End branch of the Carnegie Library and Historic Pittsburgh provided many pertinent resources.

Reconnaissance Survey

Project historians conducted a windshield survey before beginning the building-by-building survey to develop priorities for data collection. The team decided to begin by surveying the entire West End in order to re-evaluate the boundaries and integrity of the NRHP-eligible West End Valley Historic District. The team then directed its efforts to Elliott, focusing first on the major thoroughfares (Steuben Street and Chartiers and Lorenz avenues) and areas of the neighborhood known from research to contain older buildings. Project historians were able to completely survey both neighborhoods within the period allotted for field work. Previously identified resources were checked and updated in the course of this survey.

The survey team consisted of three architectural historians who spent approximately nine days in the field with tablet computers. The tablets were pre-programmed with county property parcel maps and a fillable database of attribute fields developed by the project team to satisfy CRGIS database requirements (see Appendix A).

Consistent with previous surveys, the survey team decided to photograph all non-vacant parcels (i.e. those with buildings, structures, objects, or landscape features such as parking lots or gardens), regardless of age or integrity, in areas that had historic district potential because it required minimal effort when the surveyor was entering information on integrity anyway; moreover, the photographs would enable project historians to review the condition and integrity assessments after the fieldwork was completed in order to assure consistency in integrity assessments among surveyors. Such additional photographic data provide an overall view of an area's integrity and the nature of intrusions in a potential historic district. In the future, this photographic documentation will provide a complete snapshot of a particular area and be a rich source of archival data to document change over time in Pittsburgh's neighborhoods.

Members of the survey team found it critical to establish consistency in the use of certain fields at the beginning of the survey. Use of the following fields is explained:

- **Potential Individual Eligibility:** Surveyors entered "Yes" for a select few properties discovered through background research to have been significant in the historical context of the community and for properties whose architecture and integrity was outstanding, suggesting

- that further research on their history was warranted. Previously-surveyed resources were re-evaluated in the field and marked as “Yes” only if their architecture, integrity, and/or historical associations warranted.
- **Potential District Eligibility:** A historic district had been determined eligible for the NRHP in the West End in the past, and one of the tasks of the survey was to re-evaluate the integrity and boundaries of this district. Therefore, in the West End, the survey team completed this field only for properties that have the potential to be within the revised West End Valley Historic District boundaries. This field was not used for properties in Elliott because the windshield survey did not reveal a strong potential for a historic district in that neighborhood. Instead, the project team decided to analyze potential district boundaries in Elliott after the field survey was completed and integrity maps of the surveyed areas had been generated. This methodology was consistent with that of previous surveys in which no historic district or potential district was identified prior to survey work.
 - **Integrity:** For this field, broad categories of “High,” “Medium,” and “Low” were utilized. Resources in the survey area were judged to have some integrity if, despite some alterations, their original character was discernible. A property which had artificial siding but all original trim, windows, and doors intact might be given a rating of “High.” “Medium” was assigned to those which exhibited artificial siding and replacement windows and/or doors, but which retained their original size, scale, rhythm and proportion of openings, and possibly some original ornamentation. “Low” was used for properties with drastically altered façades, openings, massing, and/or materials, such that their original character had been obscured.
 - **Style:** Correspondingly, where a resource’s original style was evident in its massing, extant detail (such as brackets or window design), and/or characteristic feature (such as battered porch piers), that style was entered in this field. Resources with no remaining features of their original style were assigned a value of “No Style,” even if context suggested a specific era of construction. “No Style” was also used for vernacular properties with no ornamentation or other stylistic gestures. “Mixed” was entered for transitional buildings which appeared to have had characteristics of more than one style when built. For buildings which exhibited an original style and a later one associated with additions or alterations, these styles were entered separately in the “Style” and “Secondary Style” fields. “Other” was used primarily for mid-twentieth century resources that were not described by any of the standard PA SHPO style categories, such as ranch houses, Cape Cods, and split levels.
 - **Vacant parcels and properties constructed post-1975** were noted with a “Yes” in those fields. Additional fields and photographs were not recorded for vacant properties except in the West End Valley Historic District, where “No” was entered in the “Potential District Eligible” field. For post-1975 buildings, sites, objects, and structures, photographs were taken and the current function was recorded. Parcels that were not occupied by a building but that were in use (such as parking lots, parks, and gardens) were entered as “sites” and assigned a relevant function from the CRGIS-supplied drop-down list; such sites were also photographed.

- The “Historic Use” and “Current Use” fields allowed only one use to be selected. For mixed-use buildings, such as those on S. Main and Steuben streets with storefronts on their ground floors and apartments or offices above, the first-floor use was entered.
- The “Year Built” fields were entered during the field survey and were estimated based on materials, method of construction, style, and context. Historic maps, loaded onto surveyors’ tablets, were cross-referenced when possible.
- Several fields allowed surveyors to record addresses and other locational information that was different or missing from the pre-loaded county property information. The “Address Discrepancy” field was used to record street addresses that differed from the addresses in the county database. “Location” was used to record the address, parcel, or descriptive location of resources added by the survey team in the field—for example, structures such as retaining walls or billboards. A new field added to the menu for this survey, “Skip,” allowed surveyors to note that a data point was redundant with another already completed for a property. For example, in a condominium building, a county address point is present for each unit, but only one record usually needs to be completed for the building. In this case, surveyors would fill out one record for the whole property, note the range of addresses in the Comments field, then select “Yes” in the “Skip” field for each redundant address point.
- Separate records were completed for individual addresses in attached rows of identical party-wall dwellings, however. In the Comments field, the notation “Rel” was used to record related addresses in the row. Separate records were not completed for multiple commercial storefronts within one building, and an address range was indicated for the building when applicable.
- The “Comments” field was used by surveyors to record any additional features of note or unusual circumstances.

Database Management

Once the reconnaissance survey was complete, the City GIS department uploaded the results from the platform software to Microsoft Excel. Spreadsheet data were reviewed for accuracy and completeness. PA SHPO Key Numbers and Inventory ID numbers were manually entered for all 1,686 surveyed resources. After the Excel File was complete, it was used to generate mapping (Appendix B) and tables (Appendix C). The Excel File was sent back to the City for re-upload into the City’s GIS system so that the City would have the most accurate and complete data from the survey. The GIS data concluded the deliverable for the City to incorporate into its Historic Resources Inventory.

The PA SHPO required a slightly modified spreadsheet to update its CRGIS database. A copy of the City’s database spreadsheet was modified by removing irrelevant data fields, by reformatting column headings to use CRGIS naming conventions, and by adding primary (i.e. common) Inventory ID records for grouped resources that share a CRGIS Key Number. Information included in the primary record for the resource group included such fields as an address range, architectural styles, and materials. The primary Inventory

ID number consists of the CRGIS Key Number plus the suffix .0001, and related resources are numbered sequentially beginning with the suffix .0002. Thus, for a grouped resource with Key Number 123456, the primary record's Inventory ID would be 123456.0001 and the first related resource's Inventory ID would be 123456.0002.

Historical Context/Background History

Introduction

West End and Elliott are located approximately two miles west of downtown Pittsburgh in City Planning Sector 4, West Pittsburgh. The umbrella terms “West End” and “West End Valley” are often used to refer to both the West End neighborhood and, more broadly, to the floor and western slope of the Saw Mill Run valley near the creek’s outlet to the Ohio River. In this context, the West End and the adjacent neighborhood of Elliott share a geography, much history, and community identity, and are often referred to together as West End-Elliott. This study encompasses both of these neighborhoods.

West End-Elliott are bordered by the western banks of the Ohio River to the northeast; by the City neighborhoods of Esplen, Sheraden, and Crafton Heights to the west; and by Westwood and Ridgemont to the south (see Appendix B Figure 1). All of these neighborhoods are also part of Sector 4. To the West End’s east is the neighborhood of Duquesne Heights, which is part of Planning Sector 6, Mt. Washington and Hilltop West.

The Saw Mill Run stream valley was historically an advantageous location. It provided water power for the mills that gave the stream its name, natural resources such as salt, timber, and coal, proximity to the Ohio River for water transportation, and—because the stream valley provides a level entry through the elevated plateau of the South Hills—one of the earliest feasible routes for land transportation from Pittsburgh to points south. Roads and railroads have been laid parallel to Saw Mill Run since the early nineteenth century, and the West End is still an important transportation nexus.

West End and Elliott are the oldest neighborhoods in Sector 4 and contain West Pittsburgh’s traditional commercial areas dating from the nineteenth and early-twentieth centuries. These lie along Steuben, S. Main, and Wabash streets in West End—an area now known as the West End Village—and Chartiers and Lorenz avenues in Elliott. The Pennsylvania Historic Resource Survey Form for the West End Valley Historic District, determined eligible for the NRHP in 1993, notes, “The West End retains an unusual village atmosphere through its small-scale commercial core, brick and wood urban rowhouses, and nineteenth century villas and cottages situated on the hilltops above” (Davis, 7.1). Many of these are accessed by steep streets and flights of city steps. The more westerly neighborhoods in Sector 4—those farther from the Ohio River—were not built out until after World War II and display more suburban-style development patterns. The predominant building type in West End-Elliott is residential.

History

Native Americans are not thought to have made permanent settlements at the mouth of Saw Mill Run, preferring the estuary of a creek to the north at what later became McKees Rocks (Lawrence, 1). The area’s first recorded settlers were the Elliott family, who once owned substantial Ohio River frontage including the banks of Saw Mill Run. Two large grants known as “Elliott’s Design” and “Elliott’s Delight,” both surveyed in 1784 and totaling 640 acres, were patented to Daniel Elliott in 1785 and 1787, respectively. Before the construction of bridges across the Ohio River, Daniel Elliott ran a ferry to

Pittsburgh from the foot of Saw Mill Run. Beginning in 1788, he and/or his son West Elliott operated a saw mill, presumably near the ferry landing; this was the first of many saw and grist mills that were powered by the stream and which gave it its name. Combined with an abundant supply of local timber, plus logs floated down the Allegheny River from Pennsylvania's northern forests, the saw mills of Saw Mill Run made the West End an important early supplier of lumber to the growing Pittsburgh region.

Other early industries were glass-making and the mining of salt and coal. In 1797, Col. James O'Hara constructed a glass works on S. Main Street between Alexander and Mill (now Sanctus) streets; this later moved to River Road (now W. Carson Street) and became the O'Hara and Craig Glass Company, but the West End site continued to be occupied by glassmakers through the first decade of the twentieth century. Of longest duration was the Eclipse Glass Works, which operated a factory on the block from 1867 to about 1910. A salt well straddled Saw Mill Run at its juncture with the Ohio beginning in the 1820s, and the Pittsburgh Iron Works was established on River Road in 1833. Bituminous coal also began to be mined nearby in the Mt. Washington-Duquesne Heights ridge, which became known as "Coal Hill," and in the hills of Westwood and Banksville. West Elliott advanced the coal industry by devising a better method for shipping—downriver by boat rather than overland by wagon—and the business of extraction and transport of coal along Saw Mill Run boomed, fueling the iron and, later, steel industries of Pittsburgh and beyond.

By 1820, two private toll roads, the Washington Turnpike and the Steubenville Turnpike, followed the streambed from the West End through the Saw Mill Run valley. The Steubenville Pike followed the general alignment of Steuben Street (a former Indian Trail) through the West End, Chartiers Township, and the Chartiers Valley toward Ohio. Commercial development in the West End Valley began along the Steubenville Pike. A group of stone foundations, wells, and other features along Steuben Street near the juncture of Saw Mill Run and the Ohio River occupy a site associated with early development in the neighborhood. PA SHPO determined this site NRHP eligible and it was deemed a contributor to the West End Valley Historic District, though it lies largely outside the 1996 and present revision to the boundaries of the historic district (Davis, 7.1).

The Washington Pike (Greentree Road) followed River Road (W. Carson Street), turned south into the Saw Mill Run valley, and continued to Washington, PA. The Monongahela Bridge (later the Smithfield Street Bridge) carried wagons and horses from Pittsburgh across the Monongahela River to Birmingham, where they could pick up the River Road. At 434 Greentree Road stands the Old Stone Inn, the oldest building in the West End and one of the oldest in Pittsburgh. It occupies the site of an early-nineteenth century tollgate on the former Washington Pike. Its date of construction has not been definitively determined, but it is estimated to be between 1756 (the date engraved on a cornerstone) and 1800.

The earliest residents of Elliott were English, Welsh, and Irish farmers. As the area industrialized, its hillsides provided an attractive site for the homes of German and Irish millworkers who wished to live above the polluted air of the industrial riverbanks. Elliott's elevated areas were built up earlier than other hilltops in the Pittsburgh area, partly because of the accessibility of nearby jobs, and partly because—unlike other hilltops southwest of the Point—Elliott was not undermined (Lawrence, 22). The local sawmills supplied much of the lumber for the construction of West End-Elliott's frame houses, but there

was also a brickyard on property owned by Richard Knowlson at the southwest corner of Lakewood and Lorenz avenues until about 1880. In her “History of Elliott,” Beatty states that there was another brickyard on Azalia Street between Steuben and Chartiers, and that after this brickyard closed, the property was converted to the “oat field,” a horse-racing track. These uses are not shown on historic maps but may have predated 1872 (date of the earliest map reviewed for this study) or been omitted. Maps show that this area of Elliott was part of the Lorenz estate and was subdivided by the Lorenz heirs about 1890. In “The West End and Elliott: A Geographical History,” Lawrence also mentions a “small, informal” horse racing track, but does not specify its location (Lawrence, 26).

In 1835, Isaac Warden, John Alexander, and James Craft purchased a 96-acre parcel from the estate of West Elliott that would become the West End neighborhood. Craft sold his share to Warden and Alexander, who filed a plan of lots for the Village of Temperanceville in what was then St. Clair Township, Allegheny County, in 1839 (Plates 1-3). The name Temperanceville reflects the popularity of the Temperance movement of the 1830s, which caught on in Allegheny County when the number of taverns neared 300 (Davis, 8.1). Warden and Alexander sold property with a deed stipulation that no liquor could be sold on the premises or the land would revert back to them, though “there is no record that the agreements were kept” (Leland D. Baldwin, *Pittsburgh, the Story of a City* [Pittsburgh, 1937], 247, in Crawford, 101).

In the mid-nineteenth century, Temperanceville developed similarly to neighboring cities Pittsburgh, Allegheny, and Birmingham, but on a smaller scale, with industry taking advantage of the natural mineral resources and water power of the Saw Mill Run valley. The town expanded to the south along Wabash Street, which became lined with brick rowhouses and commercial buildings. Among Temperanceville’s largest employers were Painter’s Mill (built 1833) and the Sheffield Iron Works, built adjacent to the Pittsburgh Iron Works on River Road in 1848. The Eagle Rolling Mill occupied a site at Steuben and West Carson streets beginning in 1850. Oil refineries operated on Wabash Street with oil brought by river from northern Pennsylvania wells. Natural gas, discovered in the area in 1830, led to an industry producing illuminating gas in the town. A plow factory operated at the current site of St. James Church on the corner of S. Main and Sanctus streets; this may have served the needs of the farms then located nearby in Elliott. By 1841, in addition to its industries, Temperanceville had two churches and several schools (*Directory of Pittsburgh and Allegheny Cities*, 1841, in Crawford, 101). Another early church, the 11th Presbyterian Church of 1849, has been incorporated into the current building at 510 S. Main Street.

Transportation developments kept pace with Temperanceville’s growth in industry and population. The Temperanceville and Noblestown Plank Road Company was incorporated in 1849 and soon after began construction on the Noblestown Pike, later known as Mansfield Road and Noblestown Road. This remained a narrow, steep plank road until 1925 (Lawrence, 7).

Temperanceville was incorporated as a borough in 1860. After the Civil War, railroads and street railways were built and expanded, until by the early twentieth century, the West End was bounded and crossed by railroads (Lawrence, 17). Several small lines were built in the West End to connect its natural resources to the area’s larger trunk lines, the Pennsylvania Railroad and the Baltimore and Ohio Railroad. The Coal Hill Railroad, which delivered coal mined in the South Hills to West Carson Street via an incline, crossed

Saw Mill Run on a trestle. It was extended upstream in 1861 and sold to the Pittsburgh and Castle Shannon Railroad in 1871. The Little Saw Mill Run Railroad (LSMRRR) replaced a horse-drawn tramway for hauling coal three miles from the mines in Banksville to Temperanceville in 1853; a single car on the train also provided passenger service. In Temperanceville, an incline above Woodville Avenue opposite Shaler Street brought coal from the mines of Hailman's Hill in Westwood to 12 beehive ovens on Woodville, which converted some of that coal to coke, while the rest was delivered to other factories and mills. In 1897, the LSMRRR merged into the West Side Belt Railroad. This important line extended 21 miles along the length of Saw Mill Run and beyond, connecting with all the trunk lines entering the city from that side. In the West End, the alignment followed what had been a section of the Washington Turnpike. The Pittsburgh and Wabash crossed Greentree Road and the Saw Mill Run valley on trestles before entering the Wabash Tunnel beneath Mt. Washington.

The Pittsburgh and Steubenville, a subsidiary of the Pennsylvania Railroad, was chartered in 1849 to complete a section of the Pittsburgh, Cincinnati, Chicago, and St. Louis Railroad from Pennsylvania across the Midwest. The Pittsburgh and Steubenville line ran west to Steubenville, Ohio, crossing the panhandle of West Virginia. After numerous construction delays, the line was completed in 1865, but these delays and construction costs resulted in the foreclosure of the Pittsburgh and Steubenville and its takeover by the Pan Handle Railroad in 1868. A seven-mile section of the route from W. Carson Street to Carnegie is listed in the NRHP as the Pan Handle Historic District. It contains 34 contributing structures, including the railroad right-of-way itself, retaining walls, and bridges in the West End.

As the Pittsburgh and Steubenville blasted a route for its tracks along the hillside above the Ohio, it inadvertently altered the geography of the area. An explosion set by a track crew dislodged part of the crest of the hill, which slid halfway down, then settled. This became known as "Barney's Level" after one of the first to settle on the new grade. Another was John Esplen, who built a house on the corner of the bluff with a panoramic view of the city and its rivers. A later Esplen family house (ca. 1900) still stands, much altered and enlarged, at 616 Angle Street.

Development generally spread west from the West End Village. By 1872, house lots had been platted (though many remained unimproved) in Elliott to Marlow Street; north of Uvilla Street, development extended to Lorenz Avenue (Plate 4).

In 1873, Temperanceville was annexed to Pittsburgh as the 36th Ward and renamed the West End. The next year, heavy rainfall caused a catastrophic flood of Saw Mill Run, smashing numerous buildings, drowning 30 people, and causing landslides on the hills. But several events, all transportation-related, spurred a robust recovery in West End-Elliott. In 1879, the Pittsburgh and Lake Erie Railroad opened, as did the Point Bridge, a toll bridge between the Point and a location near the Duquesne Incline. Two years later, the Pittsburgh and West End Passenger Railway Company began its horse-drawn trolley line from downtown to the West End. The construction of bridges and railways coincided with the boom of the steel and coal industries and spurred the West End's most intensive period of development between about 1880 and 1900.

During this period, immigrants from Germany, the Austro-Hungarian Empire, Great Britain, Russia, Lithuania, and, especially, Poland increased the population of the 36th Ward by 30%. Two- and three-story wood tenements were built along Saw Mill Run and on the slopes adjacent to Steuben Street to house these new workers; they were crowded and unsanitary, with privies which emptied directly into the stream, causing waves of typhoid in the West End (Davis, 8.1; Lawrence, 18). Older buildings were also enlarged with wood additions or enclosed porches to provide room for boarders (Davis, 8.1). The building boom of the late nineteenth century also added many more substantial commercial buildings, churches, apartments, and houses to the neighborhood. Neighborhood landmarks constructed during this period include the Tranter Block at 419-427 S. Main Street, built in 1880 and enlarged in 1907; St. James Roman Catholic Church, on S. Main at Sanctus Street (1884); the Methodist Episcopal Church, 626 S. Main Street, designed by Longfellow, Alden, & Harlow (1888); the West End Branch of the Carnegie Library of Pittsburgh, 47 Wabash Street (1899); the Speaker Block at Wabash Street and Violet Way (ca.1900); and the Hershberger Block, 422 S. Main Street (1903) (Plate 5).

By 1890, virtually all of Elliott west to Ramona and Zahniser streets had been laid out, and over half the lots contained houses, most of them frame. Small farms remained at the south and west edges of the neighborhood. A grid of streets, the Robert Stevenson Plan, laid out on the Stevenson Estate bounded by Corliss, Rue Grande Vue, and Lakewood streets and Chartiers Avenue, was sparsely built out and remains so today (Plates 6-7).

By 1900, the valley's scattered small industries had largely given way to commercial buildings and commercial-residential blocks, particularly along S. Main and Wabash streets (Plate 8). The West End Board of Trade formed in 1896 and advocated for many civic improvements such as the paving of S. Main, Steuben, Noblestown, Walbridge, and Wabash streets with cobblestones (other streets remained dirt), installation of new water mains served by filtered water, construction of sanitary sewers, and the City's purchase of land for West End Park in 1895-6 (with additional parkland purchased in 1914). The West End Branch of the Carnegie Library of Pittsburgh opened in 1899 on the site of the former Taylor Salt and Chemical Works at Wabash and Neptune streets. It was the third in the City's system after the main library in Oakland and the Lawrenceville branch and the second (after Lawrenceville) to have open stacks.

In 1894, Elliott became a borough, and in 1905, it was annexed to the City of Pittsburgh, becoming part of the 20th Ward (Plates 9, 10 and 12). New churches established in the first decade of the twentieth century reflected the ethnic composition of the neighborhood. In 1911, the Polish Catholic Guardian Angels parish was established in the West End; the congregation purchased the ca. 1885 Emmanuel Ark Church of the Evangelical Association of North America in the 200 block of Steuben Street. The African American A.M.E. Zion Church built the current building at 35 Noblestown Road in 1916. The building at 162 Steuben Street, bearing a date stone of 1911, is the rectory of the imposing 1889 St. Martin Roman Catholic Church (demolished).

St. Martin and St. James, both Catholic churches, were the largest in the West End Valley. The St. Martin Church building also included a school and served the neighborhood's large German Catholic population. The building closed in 1958 and burned in 1960, leaving a vacant lot next to the parish house. St. Martin's Cemetery was established on Rue Grande Vue Street in 1887. The predominantly Irish St. James parish

was founded in 1853 and built the church at S. Main and Sanctus streets in 1884. The parish merged with the Guardian Angels and St. Martin parishes in 1994 and the church closed in 2004. Associated buildings include St. James School across S. Main from the church (1913) and St. James Convent at 87 Steuben Street (ca. 1860/1880). The convent occupied a five-bay, two-story early Italianate house which the church adapted by adding a large brick wing and enclosing the second story porch. Next to the convent, at the rear of the Artifacts building (110 S. Main Street), stands the chimney of the original St. James School, built in 1853.

Of the five public schools built in West End-Elliott during the latter half of the nineteenth century, none still stand. The current Thaddeus Stevens School at 824 Crucible Street was built in 1940 to replace an earlier Stevens School, designed by Frederick Osterling, built in 1894 on part of the former glass works site at the southwest corner of S. Main and Sanctus streets. The 1940 building was designed by the in-house architect of the Pittsburgh Board of Education, Marion Steen, and displays limestone relief sculptures by Charles Bradley Warren. Thaddeus Stevens School is a City-designated Historic Structure. It closed in 2012. The name stone of the former Westlake School (1885) at Lorenz Avenue and Crucible Street has been incorporated into the new building on that site.

West End-Elliott's population peaked at around the turn of the twentieth century. Census data show that the majority of residents rented their homes and a sizable percentage (between 10 and 20 percent, depending on ward) were foreign-born. Housing construction slowed in the West End in around 1895 while going strong in Elliott through around 1905, only tapering off significantly with the beginning of World War I. In the 25 years between 1886 and 1910, approximately 380 residential units were constructed in Elliott, nearly 90 percent of them single-family houses (Lawrence, 22).

Transportation and other civic improvements continued into the first decades of the twentieth century, even as industry that employed residents of the West End began to decline (Plate 11). Widening and regrading of W. Carson Street in 1912 and 1919 improved the roadway but hastened the closure of the Singer-Nimick and Painter's mills, whose property was partly taken, restricting the mills' potential for expansion. Also in 1912, a flood control project in the Saw Mill Run valley resulted in the City raising the beds of S. Main and Wabash streets to levels above the 24-foot level of the Ohio. At the same time, the streets were widened by taking one foot from the sidewalks on either side, and the sewer system was expanded, opening new areas on the outskirts of the valley to development. In the same year, the former Diebold Lumber yards south of the library on Wabash Street were converted to a city playground. In 1914, the Corliss Tunnel was constructed to the design of Stanley Roush, opening up a more direct route to the booming Sheraden community.

Noblestown Road underwent reconstruction, establishing its present grade and width, in 1925. As the popularity of automobile travel grew, the West End Board of Trade pressed for a modern boulevard "uniting the city and county road systems" (*Pittsburgh Dispatch*, Jan. 2, 1914, in Lawrence, 33). In 1929, Saw Mill Run Boulevard was paved and widened into a four-lane highway as part of Allegheny County's 1928 "City Beautiful" bond issue, which also created the Allegheny River, Ohio River, and Mosside Boulevards. In 1932, with the completion of the West End-North Side Bridge, the intersections of S. Main and Steuben streets with W. Carson Street were redesigned, resulting in the configuration of ramps and

traffic known as the West End Circle. This intersection has been modified and redesigned several times since then, most recently in 2010. An abandoned section the West End Circle remains, containing a concrete bridge over Saw Mill Run, as well as original railings and light posts.

With the shrinking and closure of nearby iron and steel works following World War II, the West End's population and business climate declined. Most of the neighborhood's wooden tenement buildings were demolished, though the middle-class housing on the hilltops of Elliott remained relatively stable. The West End continued to function as an important transportation connector. The West End Bypass, a 1.1-mile section of highway from the West End exit of the Penn Lincoln Parkway to the West End Circle, was completed in 1953. This achieved the goal of alleviating traffic congestion on the local streets of the West End Valley, but also served to expedite trips around and away from the West End to shop and conduct business elsewhere. West End-Elliott's retail storefronts suffered as customers were drawn to new automobile-oriented shopping centers in Crafton, Westwood, and McKees Rocks.

Meanwhile, the City administration sought to identify areas for industrial development accessible to highway and rail facilities. Anticipating further highway improvements in and around Saw Mill Run and the West End Bridge, in 1958 the City rezoned 78 acres of the West End Valley for light industrial uses. As a consequence of this as well as ongoing problems with flooding of the creek, banks became reluctant to make home improvement loans in the area, and the West End's population and building stock declined further.

In the 1960s, the City invested in Elliott through the funding and design of the West End Overlook. Located on a four-acre precipice extending from Rue Grande Vue Street to the lip of the ridge above the Ohio River, this consists of small park with access roads, a parking lot, and a concrete viewing platform, designed by the landscape architecture firm of Griswold, Winters, and Swain. The Overlook's construction was partly funded by the Allegheny Conference on Community Development.

The West End's zoning was changed again in 1973 and once more in 1998. By this time, years of flooding, disrupted traffic patterns, commercial vacancy, and deferred maintenance had taken their toll on the neighborhood's built environment. In recent years, however, some specialty businesses have begun to move into the West End, which branded its commercial district the "West End Village" in the 2000s. A master plan for the West End Village, completed by Chan Krieger in 2010, recommends building on the neighborhood's traditional urban village character and establishing safe pedestrian connections with downtown and the North Side.

Previously Identified Resources

West End:

The West End Valley Historic District was identified by the City of Pittsburgh in 1985 and determined eligible for the NRHP in 1993. The boundary of the eligible district was enlarged in 1996. The map of the district shows it roughly bounded by Dumas and Elliott Streets to the north, the Lincoln Highway to the west, Plank Street to the south, and Independence Street to the east. At the time of the determination of eligibility, the district contained 206 contributing buildings, one contributing site (the Steuben Street archaeological site, 36AL0356), and 19 non-contributing buildings. However, transportation projects over the last 25 years have caused several of these streets to be partially vacated, truncated, or realigned since the map was created, with corresponding demolition of buildings, so these boundaries needed to be re-evaluated.

The Pan Handle Historic District has been determined eligible for listing in the NRHP. This is a railroad corridor historic district following the former alignment of the Pan Handle Railroad along the banks of the Ohio River from the South Side to Carnegie. Part of the district runs through West End-Elliott.

The West End Branch of the Carnegie Library of Pittsburgh was designated as a City Historic Structure in 2004.

The Pittsburgh Register of Historic Places, a historic resources survey conducted by the Historic Preservation Office of the Department of City Planning in 1992, identified the West End Valley (1993 boundary) as a potential historic district and the following potentially individually significant buildings, structures, and sites:

- 434 Greentree Road (Old Stone Inn, ca. 1780)
- 47 Wabash Street (Carnegie Library West End Branch, 1899)
- 123 Steuben Street (former German Evangelical Church, 1864)
- 179 Steuben Street (Oddfellows Hall, 1863)

PreservePGH notes of the West End, “Architecturally significant commercial buildings line South Main and Steuben Streets, most of which were constructed after 1900 and several have been restored. Building from this success, additional investment in historic preservation projects can be attracted.... Portions of the West End Valley may be eligible for nomination to the National Register of Historic Places.” Nomination of the West End Valley Historic District to the NRHP is identified as a recommendation of the plan.

Elliott:

The West End-North Side Bridge (whose approaches are partly in Elliott) is listed in the NRHP.

The Pan Handle Historic District includes structures in Elliott related to the Pan Handle Railroad. The Pittsburgh & Lake Erie Railroad has been determined eligible for listing in the NRHP. This railroad corridor is located between W. Carson Street and the Ohio River. The Corliss Street Tunnel has been determined eligible for listing in the NRHP.

Thaddeus Stevens Elementary School is a City-Designated Historic Structure.

The Pittsburgh Register of Historic Places identified the following potentially individually significant buildings, structures, and sites in Elliott:

- 616 Angle Street (Esplen House)
- 725 Bucyrus Street (house, ca. 1875)
- Corliss at W. Carson Street (Corliss Street Tunnel, Stanley Roush/D.N. Sprague, 1914)
- 720 Crucible Street (house, ca.1875)
- 934-1010 Rue Grande Vue Street
- 735 Kerr Street (house and stable, ca. 1875)
- 916 Lorenz Avenue (church, 1906)
- 825 Neidel Street (house, ca. 1845)
- 623 S. Main Street (church, Longfellow, Alden, & Harlow, 1888)
- W. Carson Street retaining wall (1901)
- 705 Walbridge Street (house, ca. 1875)
- 715 Walbridge Street (house, ca. 1875)
- Walbridge at Herschel Streets (West End Park, 1896)

PreservePGH notes, “[Elliott] offers a mix of late 19th and early 20th century residential dwellings and commercial buildings on Chartiers and Steuben Streets. The historic integrity of Elliott is challenged by structural alterations that removed the original historic features of many buildings. There is an opportunity to use the West End Overlook as a catalyst for redevelopment and investment to restore the neighborhood’s commercial character.”

THIS PAGE INTENTIONALLY LEFT BLANK

Results

Summary of Findings

All of the West End and Elliott neighborhoods were surveyed during this effort, and surveyed properties were evaluated for integrity and given a “High,” “Medium,” or “Low” rating. Vacant parcels and those on which previously-known resources had been demolished were also notated in the tablets during the survey. Resulting data were used to re-evaluate a NRHP-eligible historic district in the West End and to investigate the presence of eligible resources in Elliott.

West End

The West End is a small, crescent-shaped neighborhood, naturally bounded by the Saw Mill Run waterway to the east and a steep hillside to the west. The narrowness of the neighborhood and the green hillsides surrounding it contribute to the West End’s secluded village feeling, belying its connectedness to downtown, the north and south sides, and the western suburbs. Yet the West End’s role as an important transportation corridor has had real impacts on the historic neighborhood since it was initially surveyed in the 1980s. Its northeastern section has been all but completely lost to highway ramp and interchange construction, and the West End’s busiest thoroughfares, such as Steuben Street and Noblestown Road, have a disproportionate number of vacant lots where buildings were abandoned and demolished.

The West End Valley Historic District was identified by the City of Pittsburgh in 1985, determined eligible for the NRHP in 1993, and expanded in 1996. This survey confirmed the eligibility and integrity of the West End Valley Historic District with minor revisions to its 1996 boundaries. Maps illustrating the proposed new district boundaries are shown in Appendix B, Figures 10-15. Appendix C, Table 4 lists contributing and non-contributing properties in the revised historic district boundaries, and Appendix B, Figure 16 shows the distribution of contributing and non-contributing properties in the district.

An archeological site identified in the 1990s, the Steuben Street site, lies largely outside the revised recommended boundaries of the district, which was evaluated in terms of the above-ground resources surveyed for this project. The Steuben Street Site should be evaluated for individual eligibility for the NRHP.

Elliott

The survey of Elliott revealed a neighborhood of predominantly vernacular frame dwellings constructed over a long period beginning in the mid-nineteenth century and lasting until the 1910s. Scattered infill construction continued in Elliott through the mid-twentieth century, resulting in occasional ranch, Cape Cod, or split-level houses, which are more likely to be of brick construction.

These buildings occupy a dense grid of residential streets laid out over steep hills almost without regard for topography. Elliott does not have a defined center, but the intersection of Chartiers and Lorenz avenues historically functioned as a small commercial node, and the neighborhood’s few civic and

religious buildings are located nearby. Parkland is located at Elliott's edges, reinforcing the feeling of density in the main part of the neighborhood. Several sets of city steps connect the upper and lower parts of Elliott. Even so, its hilly topography has resulted in pockets of the neighborhood that feel isolated: the ridge along Herschel Street; the former Stevenson estate at the northern end of Lakewood Street; and the area around Herndon, Attica, and Furley streets. Least integrated of all are the hillside streets above Steuben Street and below Fairview Avenue, which have an almost rural feel.

Elliott is a substantially intact neighborhood that has not been heavily affected by demolition or vacancy, except for in its isolated hillside areas. But, examples of noteworthy architecture or high integrity are rare, and the survey team did not find concentrations of buildings which shared potential significance. These findings do not support the establishment of a historic district in Elliott.

Potentially significant individual resources throughout the survey area are displayed in Appendix C, Table 2. Previously surveyed resources are shown and listed in Appendix B, Figures 2-3 and Appendix C, Table 3. Appendix C, Table 5 lists all newly surveyed resources.

Types of Properties

West End

The recent moniker "West End Village" is an appropriate one. The West End neighborhood, only three blocks deep at its widest point, contains a diverse array of building types and eras in its small area. These properties represent the growth and interdependent functions of a community, largely of European immigrants, that was socially insular, but economically connected to the larger city and region. Construction dates in the West End range from the beginning of the nineteenth to the middle of the twentieth century.

Substantial commercial blocks in the Italianate, Romanesque, Queen Anne, Classical Revival, and Art Deco styles line S. Main Street, defining a strong commercial core of high architectural interest. The buildings of S. Main Street reflect a period of prosperity from the late nineteenth through the early twentieth centuries; construction dates from the 1920s and 1930s demonstrate that the West End continued to develop even after its population began to decline after the turn of the twentieth century. On Steuben Street, Wabash Street, and Noblestown Road, smaller buildings with first-floor commercial storefronts are interspersed with civic, religious, and residential properties, some dating to the mid-nineteenth century.

Religious resources in the West End represent English, Welsh, Scottish, Irish, German, Polish, and African American communities. West End churches range from small and simple (the almost chapel-sized Deutsche Vereinige Evangelische Kirche of 1864 at Steuben and Sanctus streets; the former Guardian Angels Roman Catholic Church at 215 Steuben) to relatively large and elaborate (St. James Roman Catholic Church, S. Main and Sanctus streets, 1884; Longfellow, Alden and Harlow's Methodist Episcopal Church on S. Main Street, 1888). St. James Church is part of a complex that also includes a convent, converted from an Italianate house, and a school. The community's German Catholic church, St. Martins, no longer stands, but its 1911 parish hall at 162 Steuben Street is a fine example of Craftsman design with good

integrity. The Greek Revival West End Presbyterian Church of 1851 still stands at 17 Noblestown Road. It has lost considerable integrity in its conversion to an auto body shop but speaks to the resourcefulness of a community that began to experience considerable automobile traffic in the twentieth century. The oldest extant church in the West End, the 11th United Presbyterian Church of 1849, has been subsumed within the current building at 510 S. Main Street. A query to the owner revealed that no sign of the church is evident on the interior, either.

The West End has not had a public school building since 1940, when the former Thaddeus Stevens School at S. Main and Sanctus streets (now demolished) was replaced with the current Stevens School in Elliott. But an elegant Classical Revival branch of the Carnegie Library (Alden and Harlow, 1899) and a combined fire and police station on S. Main Street (John Brennan, 1925) are civic landmarks.

Near the southern end of the West End stands the its oldest resource, the Old Stone Tavern, a two-story, five-bay building, likely ca. 1800, which retains its historic symmetry amid a number of later alterations and additions. Nearby, around the intersection of Wabash and McCartney streets and Greentree Road, are a small cluster of late Victorian-era commercial buildings, another small red brick church (former St. George's Episcopal), and scattered industrial resources. Some, like the Pittsburgh Stained Glass Co., display notable architecture and high integrity, while others are of utilitarian and/or contemporary design.

Wabash Park, south of the Carnegie Library, provides a linear swath of public recreation space between Wabash Street and Saw Mill Run. The former service station at the intersection of S. Main Street and Noblestown Road was constructed by 1925 and signifies the dawn of the automobile era which would have significant impacts on the West End's urban geography.

A number of resources which contributed to the West End Valley Historic District in the 1990s are now demolished, leaving vacant lots. Vacant property is found mostly at the West End neighborhood's edges, such as the northern end of Steuben Street near the busy highway interchanges with Saw Mill Run Boulevard, W. Carson Street, and the West End Bridge. Vacant lots are also found along Noblestown Road and intermittently on Wabash Street, but to a lesser extent on S. Main Street; here, in the neighborhood's commercial center, the sites of demolished buildings are more likely to be maintained as parking lots or ad hoc pocket parks.

Elliott

Elliott consists overwhelmingly of modest, vernacular frame dwellings constructed during roughly three periods of development. The oldest of these is represented by individual houses built between about 1840 and 1870, when Elliott was still mostly farmland. These old farm houses of Elliott were then incorporated into the urban neighborhood, dominated by modest frame single-family houses, that was built up between about 1880 and 1910. "No Style" was entered for a great many nineteenth-century resources; either their original style had been lost to later alterations, and/or they had minimal stylistic detail to begin with. (see Appendix B, Figures 8-9 for a graphic depiction of the locations of unstyled buildings and the four most common styles of buildings).

Elliott's last phase of development stretched between about 1920 and 1960 and resulted in the infill of bungalows, foursquares, Cape Cods, and other small houses of the mid-twentieth century on individual lots. This sequence of development has resulted in a heterogeneous appearance to most streets despite Elliott's homogeneity of residential use. There are only a few instances in Elliott in which an entire street or block appears to have been built all at once. These include the 1000 block of Lakewood Street (ca. 1900), Valonia Street (ca. 1905), and Strahley Place (ca. 1923).

Of the houses from Elliott's pre-Civil War period that still stand in the neighborhood, only two have sufficient architectural character and integrity to be of potential individual significance. One is the small, elegant Greek Revival house at 825 Neidel Street, which is also notable for its brick construction. The other is the property at 805 Kerr Street, which consists of several related resources: a house, reputedly constructed in 1840 but substantially remodeled ca. 1900; a carriage house; summer kitchen; gazebo; and decorative wrought-iron fence.

A small number of buildings with commercial storefronts are found near the intersection of Chartiers and Lorenz avenues; these, too, are modest in scale and design. Several storefronts were added to older houses. Elliott's three churches, its firehouse, and its public school are all located within blocks of this intersection. The three brick churches were all built between 1907 and ca. 1940 in simple variants of the late Gothic Revival style. Engine Company No. 39 is of spare, symmetrical Classical Revival design. Thaddeus Stevens School, a City-Designated Historic Landmark, is Elliott's largest and most imposing non-residential building. It was constructed in 1940 to the Art Deco design of Pittsburgh Board of Education architect Marion Steen and features relief sculptures by Charles Bradley Warren.

Open space is present at the north and south ends of the neighborhood. West End Park (1896) is a landscaped park located at Elliott's southeastern corner and is one of the oldest neighborhood parks in Pittsburgh. Its landscape architecture, architecture (park shelter and bandstand, both 1913), and sculpture (a World War I monument by Frank Vittore) all contribute to its potential eligibility for NRHP listing and/or City historic designation. The park also contains the ruined foundation of a mid-nineteenth century, frame farmhouse built by the Kerr family (for whom nearby Kerr Street was named) that stood until at least World War II. Herschel Park is an active recreational park containing athletic fields, ball courts, and a ca. 1940 field house. At Elliott's northern edge, the West End Overlook Park was developed along the high ridge above the Ohio River in the 1960s.

Adjoining the park, along Ramona Street south of Rue Grande Vue Street, is St. Martin's Cemetery (1887). St. Martin's Roman Catholic Church was originally constructed between Mardo Way (earlier Ezra or Harmer Alley) and Lander and Balfour streets in 1869; the congregation moved to a new building on Steuben Street in the West End in 1889. The ruins of the original church are now part of the back yard of a former double house at 5-7 Lander Street. Nearby, at the corner of Lander and Balfour streets, is the ca. 1870 Italianate St. Martin's Rectory (1 Lander Street), which possesses high integrity. Other houses with good integrity from the 1870s-1880s are found on Crucible, Weaver, and Walbridge streets.

Integrity and Condition

The survey area has integrity of location and setting. Transportation improvement and flood control projects have resulted in the growth of Saw Mill Run Boulevard into a four-lane highway, the demolition of most buildings that historically stood along the creek banks, and the replacement of the northeastern section of the West End neighborhood with ramps and interchanges. But because vacant lots and highway infrastructure are found mainly at the West End's edges, they do not greatly impact the integrity of the NRHP-eligible historic district once boundaries are adjusted. The neighborhood west of Saw Mill Run retains its historic character as a small community of residences and associated institutions, businesses, and industries facilitated by nearby waterways and railroads. The historic development pattern of businesses and industries in the West End Valley and modest, single-family housing on the ridges and hillsides of Elliott has been maintained.

Integrity of materials, design, and workmanship are moderate throughout the survey area and generally weaker in Elliott than in the West End, likely due to the predominance of frame construction there. Individual resources which have been faithfully maintained or restored are few, particularly in Elliott. Overall, buildings possessing high integrity comprised only 6.3 percent of properties surveyed, while medium and low integrity buildings comprised 72 and 21.7 percent, respectively. Most properties have been altered in some way, most prevalently through the installation of artificial siding and/or the alteration of original openings and/or porches. The four most common wall materials are brick (32.3%), aluminum (31.2%), vinyl (21.5%), and wood (3.9%). Additions which alter massing are present in the survey area but less common due to the dense siting of most properties. The era of most of these alterations appears to be ca. 1940-1980 with many resources evincing deferred maintenance.

The presence of resources of many types from an exceptionally long period of the community's history contributes to the West End's strong integrity of feeling and association. These aspects of integrity are also present in Elliott but not as strong due to the lesser integrity of individual properties.

THIS PAGE INTENTIONALLY LEFT BLANK

Recommendations & Conclusions

Because this survey was designed to serve both the City of Pittsburgh and the PA SHPO, recommendations have been formulated for potential NRHP eligibility evaluations and for the use of survey data under the City of Pittsburgh's Historic Preservation Ordinance. We also bear in mind that successful historic preservation may take place independent of formal designation. Other recommendations pertain to properties meriting intensive level study, and the overall methodology of this survey effort, in general.

Eligibility of Resources for National Register and City Listing

The National Park Service defines a district as a type of resource that “possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development” (*National Register Bulletin: How to Apply the National Register Criteria for Evaluation*, 2002).

West End

The West End Valley Historic District was identified by the City of Pittsburgh in 1985 and determined eligible for the NRHP in 1993. The boundary of the eligible district was enlarged after a PA SHPO staff and board member visit in 1996 to include most of the West End neighborhood, plus some adjacent edges of the Elliott neighborhood. At the time of the determination of eligibility, the district contained 206 contributing buildings, one contributing site (the Steuben Street archaeological site)¹, and 19 non-contributing buildings; the district encompassed about 44.5 acres. This survey confirmed the eligibility and integrity of the West End Valley Historic District with minor revisions to its 1996 boundaries. The revised district encompasses 40.2 acres and contains a total of 268 inventoried resources, including 137 contributing resources (25 rated high integrity and 112 rated medium integrity). The 131 non-contributing resources include 19 buildings with low integrity; 2 buildings with high integrity and 11 buildings with medium integrity that post-date the district's 1839-1940 period of significance; 5 modern buildings constructed post-1975; 61 vacant lots; 2 non-contributing structures (a billboard and city stairs); 1 non-contributing object (a veteran's memorial); and 30 non-contributing sites, consisting of 24 parking lots, 3 gardens, 2 courtyards, and 1 side yard.

Following NRHP rules for counting resources in districts (which would exclude the 61 vacant parcels and 30 non-contributing sites from the resource count), the revised district would total 177 “countable” resources of which 137 resources (77%) are contributing and 40 (23%) are non-contributing. The 137 contributing resources consist of 135 buildings, 1 structure (the Alexander Street/Skid Way Bridge over Saw Mill Run), and 1 site (the Wabash Playground). The 40 non-contributing resources consist of 37 low integrity or post-period of significance buildings; 2 non-contributing structures (a billboard and a post-period of significance City staircase at Planet Street); and one non-contributing object (a post-period of

¹ Note: The Steuben Street Site was largely excluded from the 1996 historic district boundary and the same is true of the revised district boundaries.

significance veteran's memorial). Maps illustrating the proposed new district boundaries and the locations of contributing and non-contributing resources are located in Appendix B, Figures 10-16. Appendix C, Table 4 provides an inventory of all resources within the revised district boundaries.

The proposed new boundaries omit certain areas, such as much of the hillside between Steuben and Elliott streets and the western end of S. Main Street, whose integrity has been adversely affected by demolition and the presence of vacant lots. The proposed district boundaries also include some resources, such as the Alexander Street/Skid Way bridge and buildings in its vicinity, that were outside the boundaries drawn in the 1990s, but were determined by this survey to have contributing character. The proposed period of significance for the district is 1839-1940. The year 1839 is when Warden and Alexander filed their Plan of Lots for the Village of Temperanceville, and 1940 concluded the period of major construction in the district.

This survey recorded only above-ground resources. Identification and evaluation of archaeological resources was beyond the scope of the current project. Therefore, the Steuben Street archaeological site was not included in this survey. Its location among otherwise vacant lots lies largely outside this project's recommended boundaries of the West End Valley Historic District. The Steuben Street site should be evaluated for individual eligibility for listing in the NRHP.

There is currently no City-Designated Historic District in the West End. Because of the real restrictions on private property imposed by City Historic Designation, the City Planning Department usually does not initiate such designations unless requested to do so by the community itself. Should community leaders request City designation of a historic district in the West End, we would recommend focusing efforts on a smaller district concentrated on the commercial blocks of the West End: S. Main Street and related blocks of Steuben and Wabash streets.

Such a district would maximize the power of the City's Historic Preservation Ordinance to protect the neighborhood's most visible properties, many of its most architecturally distinctive buildings, and those with the highest integrity. This last is important because under the City's ordinance, replacement materials and features which are in place at the time of designation may be maintained and/or replaced in kind in perpetuity. Many of the commercial buildings in the West End currently have unsympathetically renovated storefronts, but storefronts are among the building attributes most likely to be replaced again in the near future, and City historic designation can ensure that the new designs are appropriate.

The West End's commercial buildings in this area are also the most closely related to the neighborhood's economic vitality and its public image. Both of these factors are already on the rise due to the recent investments of property and business owners attracted by the West End's architectural character and village feel. City historic designation of the West End's historic commercial core could work in tandem with the benefits of NRHP listing to protect these desirable qualities.

- 1. Recommend that the West End Valley Historic District be nominated to the NRHP.*
- 2. Recommend that the Steuben Street archaeological site be evaluated for individual eligibility for the NRHP.*
- 3. Recommend that a smaller West End Valley Commercial District be supported for designation as a City-Designated Historic District, if desired and instigated by the community.*

Elliott

This survey did not find the neighborhood of Elliott as whole, nor any smaller sectors of it, to possess the significance and integrity necessary for eligibility as a NRHP historic district. Nor is designation as a City Historic District likely to be an effective preservation tool for this neighborhood, as most of its buildings already have non-original materials or replacement features. Under the “grandfather clause” of the City of Pittsburgh Historic Preservation Ordinance, such materials and features extant at the time of historic district designation may be maintained and/or replaced in kind in perpetuity. Therefore, designation of a City Historic District in Elliott would have the effect largely of preserving building fabric that has already been altered.

Intensive Level Survey Recommendations

All of the resources in Appendix C, Table 2, “Potential Individually Eligible Resources,” are recommended for further study or intensive-level survey. Based on appearance and available background information, these resources have the potential to be eligible for listing in the NRHP and/or as individually-designated City Historic Landmarks.

- 4. Recommend resources identified in Table 2, “Potential Individually Eligible Resources” for Intensive-Level survey.*
- 5. Recommend resources identified in Table 2, “Potential Individually Eligible Resources,” with pre-existing Intensive-Level documentation, to be determined eligible for listing in the NRHP.*

Use of Survey Data by City of Pittsburgh

Eligibility for the NRHP is not determinative of eligibility for City historic designation. Moreover, it is not the policy or practice of the City of Pittsburgh to initiate nominations for city historic designation, but rather to evaluate and act upon nominations submitted by community members, organizations, and leaders. Therefore, recommendations for use of survey data by the City of Pittsburgh pertain to the

Historic Review Commission's responsibilities under the City of Pittsburgh Historic Preservation Ordinance, §1101.07(b), to:

- Carry on educational activities in furtherance of the purpose of [the Historic Preservation Ordinance];
- Act in an advisory role to City departments and agencies related to preservation matters;
- Act as a catalyst to expedite the flow of projects through departments and agencies;
- Facilitate the redevelopment of historic structures and districts in accordance with approved development plans of the city;
- Act as liaison on behalf of the City with preservation organizations, professional societies, community and other groups, private property owners, and interested citizens, concerning conservation of the historic resources of the city;
- Act as a liaison on behalf of the City with the state Historic Preservation Officer, agencies of the federal government, the National Advisory Council on Historic Preservation, and the National Trust for Historic Preservation, concerning the historic resources of the city;
- Prepare plans for the conservation and development of historic resources;
- Undertake or encourage and facilitate the documentation of the architecture and history of the City's historic resources.

In furtherance of these goals, it is understood that the Department of City Planning intends to fully integrate the list of Potential Individually Eligible Resources and other survey data into its Geographic Information Systems (GIS), so that it may serve as a tool in all aspects of implementing the City of Pittsburgh's comprehensive plan. Especially in Elliott, which does not have a tradition of historic preservation or an established identity as a location of historic resources, this will be important to highlight those potentially eligible resources until such time as any formal efforts are organized to maintain and preserve them.

In order to keep Architectural Inventory survey data up to date, it is recommended that the Department of City Planning coordinate with other city and county agencies to obtain and periodically update the Architectural Inventory database with information related to building construction or demolition. For example, on a regular basis data related to building demolitions and construction could be cross referenced with data from the Bureau of Building Inspection and Allegheny County Assessor. Such interim data updates could utilize City Planning interns and would not typically require field checking.

As the Department of City Planning completes surveys of Pittsburgh neighborhoods, it is recommended that the survey data be shared with other community stakeholders and the PA SHPO to ensure its long-term preservation. An electronic database file (such as Microsoft Access) could be created with essential building attribute fields and photographs and should be saved on disk. A second file should be created in

PDF format to ensure accessibility as computer programs and file compatibility change over time. Ideally, at least two paper copies of the survey data should be made. One paper copy would be kept in the City of Pittsburgh Archives and the other would be curated at a local independent archive. Possible community partners for data sharing are the Pittsburgh History and Landmarks Foundation, the Pennsylvania Department of the Carnegie Library of Pittsburgh and its West End branch, the Archives of Industrial Society at the University of Pittsburgh, the Architectural Archives at Carnegie Mellon University, and the archives maintained by Preservation Pittsburgh.

- 6. Recommend the Architectural Inventory survey data, which has been incorporated into the City's GIS, be utilized while planning for the city, and when implementing aspects of the comprehensive plan.***
- 7. It is recommended that Pittsburgh Department of City Planning develop best practices to keep the database and GIS files relevant and useful in the long term and ensure its archival stability.***

It is also recommended that the Department of City Planning, through its Historic Review Commission, Historic Preservation Planner, and relevant Neighborhood Planner, continue the practice—piloted in Sector 1—of sharing survey results with the survey community in a meeting. In areas which have not traditionally had a strong culture of preservation awareness or action, including West End-Elliott. The purpose will be to start a conversation about historic preservation in the surveyed community. In areas with established historic districts, the conversation may continue at a higher level about expansion of current preservation activities. Meetings should include a variety of stakeholders, including local community groups, preservation organizations, and residents and property owners, as well as Historic Review Commission representative(s), city officials, and PA SHPO staff. Ideally, the survey area's City Council representative would host the meeting at a location within the survey area. A typical meeting agenda might be:

- Introductory presentation about the benefits historic preservation (for “new” communities) or the accomplishments of historic preservation to date (for “experienced” communities);
- Summary overview of historic preservation tools and practices (NRHP, local designation, tax credits, etc.);
- Description of survey activity and presentation of results in that neighborhood or sector;
- Discussion of how City will use data and possibilities for how the community might use it;
- Question and answer.

- 8. Recommend the results of the Architectural Inventory and survey data be shared with subject neighborhoods at a neighborhood or district meeting.***

Methodology of the Project

Within the confines of the current project, surveyors gathered data on 70 previously-surveyed resources and 1,616 newly surveyed resources (see Table 1, below, for estimates of survey completion; Appendix C, Table 5 for a list of newly surveyed resources).

Table 1: Survey Completion			
	Surveyed Parcels to Date (Architectural Inventory Phases 1-6)	# Parcels City-wide	% Complete City-wide
Not Previously Surveyed	8,786	139,375	6.3%
Previously Surveyed	684*	13,385	5.1%
Total	9,470*	152,760	6.2%
* Previously Surveyed refers to parcels surveyed prior to the commencement of the Pittsburgh Architectural Inventory. This number excludes 53 previously surveyed resources in Sector 1 whose tax parcels have been abolished.			

Surveyed Properties

The survey of West End-Elliott is the sixth phase of an on-line, tablet-based data collection method piloted in City Planning Sector 1. It is the first phase to use new, PC-platform tablets purchased by Michael Baker after the City retired the iPads utilized for previous surveys. Survey team members also carried wireless hot spots (also purchased by Michael Baker) to ensure consistent wireless coverage needed to save and update data throughout the survey area. The same data collection application used in previous surveys, Collector for ArcGIS, was loaded onto the new tablets for use in the field.

During this survey, the project team experienced both familiar and new problems with hardware and software. A persistent hardware problem throughout all the City surveys has been the limited battery life (less than an 8-hour work day) of each tablet. In the past, the City had enough iPads to equip each member of the survey team with two tablets. Or, if a large team required the use of all the tablets at once, we were able to utilize portable battery packs to recharge in the field.

The new tablets are not compatible with mobile chargers, and there are not enough of them to assign two to each surveyor. The survey team relied on outlets in the restaurants where we ate lunch to recharge our tablets halfway through the day.

Two software problems emerged during this survey which interfered with the effectiveness of data collection. One was the inability, after the first day of field survey, to display property tax parcels in the Collector app. A workaround was to view the parcels via the internet browser on the tablets, but this required toggling back and forth between the app and the browser and was tedious and inefficient.

A second problem was that the photographs we took of each property failed to save for about 12% of total non-vacant resources surveyed. We discovered this problem only midway through the survey when, opening previously-completed records to edit them, we saw “No Attachment” in the Attachments field. This happened even though the photographs were taken and appeared to save successfully at the time the record was created. The failures happened unpredictably, making them difficult to catch, track, and correct in the field. Our review of the total data we collected at the end of the survey confirmed that 214 records for non-vacant properties lacked photographic attachments. An information technology expert at Michael Baker identified this as a known problem with the ArcGIS Collector application. The survey team will consult with Michael Baker’s technology support team and the City’s GIS department to see if this problem can be resolved for future survey efforts.

Other, persistent problems with survey methodology mostly pertain to gaps between data collection in the field and its accurate representation in tables and maps, which need to be created afterward in the office. Because mapping is generated on the basis of tax parcels, it cannot represent all the data collected in the field, for example: multiple addresses and/or multiple uses per parcel, and/or multiple uses in a single building, complex, or group of related buildings. A second “Use” field would allow the collection of more complete data but would not solve the issue of overly-simplistic mapping.

Appendix A: Attribute Fields – PA SHPO & City of Pittsburgh Survey Requirements

Attributes (for each address point surveyed)

As per City of Pittsburgh: Checkboxes for the following categories:

- Potentially Eligible Individual
- Potentially Eligible District
- Vacant – Not Surveyed
- Post 1975 – Not Surveyed
- Integrity LOW – Not Surveyed
- Integrity MED – Surveyed
- Integrity HIGH - Surveyed

As per PA SHPO Minimum Record for CRGIS:

- Historic Name, or blank if there is none
- Resource Type (NR category)
 - Building
 - Site
 - Object
 - Structure
 - District
- Tax Parcel (Allegheny County Lot-and-Block number)
- Location (when address and/or tax parcel is absent)
- USGS Quad
- UTM Zone
- Lat/Long. Coordinates for each address point
- Address
- City
- Municipality
- County
- Zip Code
- Owner Type (public, private, or corporate)
- Owner Name
- Number of resources
- Bays Wide
- Stories
- Key Number

- Inventory ID Number
- Associated Resources
- National Register Status
 - Undetermined
 - NR Listed
 - NR Eligible
 - NR Listed District
 - NR Eligible District
- Year Built 1
