OBJECTIVES AND METHODS

The U.S. Army Environmental Center (AEC) tasked the Mandatory Center of Expertise for the Curation and Management of Archaeological Collections (MCX) with the job of assisting Army installation personnel in complying with the requirements of the Native American Graves Protection and Repatriation Act (P.L. 101-601, NAGPRA). The MCX was asked to locate and assess archaeological collections derived from Army-owned lands, to identify the federally recognized Native American tribes most likely culturally affiliated with the collections, to draft Section 6 Summary Letters for each installation, and to conduct physical inventories of any collections that contain human skeletal remains. This report conveys the results of the collections research completed to assist the Iowa Army Ammunition Plant (Iowa AAP) in complying with the Section 6 Summary requirements of NAGPRA.

The MCX used a two-stage process to identify, locate, and assess the contents of archaeological collections from the installation. First, archival research was performed to review all archaeological site records and reports for the installation. Second, telephone interviews were conducted with personnel at installations, universities, museums, and archaeological contractors that were identified during the archival research as possible repositories of Army collections.

Archival research for the Iowa Army Ammunition Plant began with a search of the National Archeological Data Base (NADB) for references pertaining to the installation. This was followed by a thorough examination of all archaeological site forms and a literature review of all pertinent archaeological reports and manuscripts on file at the State Historical Society of Iowa, in Des Moines, Iowa. The records search was performed at the State Historical Society office in April 1995 and sought to identify any work on the installation that may have produced archaeological collections.

Subsequent telephone interviews to potential collections repositories ascertained whether the materials were present and the range of objects in each collection. Once the collections were located and assessed, MCX personnel identified federally recognized Native American tribes that are likely to be culturally affiliated with the materials in the collections. Draft Section 6 Summary letters are enclosed for each of these tribes (Appendix I), as well as a listing of the current tribal chairperson (Appendix II).

RESEARCH RESULTS

ARCHAEOLOGICAL INVESTIGATIONS AT IOWA ARMY AMMUNITION PLANT

Archaeological survey work was begun on Iowa Army Ammunition Plant in 1978 by the U.S. Army Corps of Engineers, Omaha District. In total, three agencies have conducted archaeological investigations there. These groups are:

U.S. Army Corps of Engineers (USACE), Omaha District, Omaha, Nebraska
U.S. Army Corps of Engineers, Rock Island District, Rock Island, Illinois
Augustana College Archaeology Lab, Augustana, South Dakota.

Investigations consisted of systematic surface surveys and shovel test excavations conducted for the purpose of cultural resource reconnaissance. The prehistoric period artifacts recovered included flaked stone chipping debris, flaked stone tools, cobbles, fire cracked rock, ceramic, and shell fragments, and are representative of Native American cultural items dating from the Paleo-Indian through Late Prehistoric archaeological periods (Winham, et al.:1991). The historic period materials recovered included metal, glass, bottles, tiles, brick, and ceramics (ironstone, earthenware, whiteware, and yellow ware) . No human remains were excavated.

SUMMARY OF ARCHAEOLOGICAL COLLECTIONS

A total of approximately 15 ft³ of boxed archaeological materials have been identified for the Iowa Army Ammunition Plant. As of the date of this report, they are located in the following repository:

Office of the State Archaeologist, Iowa City, Iowa

Additionally, records collections are located at USACE, Omaha District.

The attached *Summary of Current Locations of Collections* table (Appendix III) and the *IAAP Artifact Catalogue Sheets* (Appendix IV) provide detailed information about the collections derived as a result of archaeological investigations at Iowa Army Ammunition Plant. A collection consists of all of the materials, artifacts and associated documentation (e.g., field notes, maps, photos, data analyses, correspondence), produced as a result of an archaeological

investigation or project at a single site or multiple sites. In some cases, the same archaeological site may have been investigated by various individuals or organizations. Depending on where the resulting collections are curated, they may be stored and identified as separate collections or separate components of a single collection. In cases where the artifacts and records have become separated, we list the records collections repository as well.

Every attempt has been made to locate all collections cited on available archaeological site records or in published and unpublished references to archaeological investigations on the installation.

REFERENCES TO ARCHAEOLOGICAL INVESTIGATIONS

Two sets of references regarding archaeological work conducted on Iowa Army Ammunition Plant are attached: Appendix V contains the list of references reviewed by the MCX during its archival research and Appendix VI is the list of references contained in the National Archeological Data Base (NADB).

NATIVE AMERICAN TRIBES ASSOCIATED WITH IOWA ARMY AMMUNITION PLANT

Although no items in the collection can be historically connected to any specific Native American individuals or tribal groups, various historical records indicate that the Iowa and the Sak and Fox tribes occupied southeastern Iowa during the early period of Euroamerican contact, and an archaeological site in Van Buren county, Iowa, due west of Iowa AAP, has been recorded as a possible Iowa or Sak and Fox village (Walters:1991). Modern Iowa and Sak and Fox tribal descendants have also asserted aboriginal claim to the region (U.S.G.S. n.d.).

Additionally, the geographic location of Iowa AAP is consistent with the lands judicially established as the aboriginal territory of the Iowa and the Sak and Fox tribes (U.S.G.S.:n.d.).

SECTION 6 COMPLIANCE

P.L. 101-601 (NAGPRA) requires that federal agencies engage in active consultation with Native Americans of federally recognized tribes and/or lineal descendants who may be culturally affiliated with the archaeological collections from the installation. Enclosed are a draft NAGPRA Section 6 Summary letter (Appendix I) and a list of the tribal chairpersons from the federally recognized tribes which may be culturally affiliated with the collections (Appendix II).

Initial consultation should be conducted on a government-to-government basis. Refer to P.L. 101-601 (NAGPRA) for specifics on required Native American consultation and the legal definitions of items subject to NAGPRA.

APPENDIX I

DRAFT SECTION 6 SUMMARY LETTER FOR IOWA ARMY AMMUNITION PLANT, IOWA

[Installation Header]

[Tribal POC Name]

[Title]

[Address]

[City, State, Zip]

Dear [Name of POC]:

I am writing to inform you of collections held by Iowa Army Ammunition Plant that may contain Native American cultural items, as defined by the Native American Graves Protection and Repatriation Act (NAGPRA), that are, or are likely to be, culturally affiliated with the [Tribe]. Iowa Army Ammunition Plant has documented these archaeological collections in a Summary in accordance with the requirements of Section 6 of NAGPRA.

Iowa Army Ammunition Plant is responsible for collections that include approximately 15 cubic feet housed at the Office of the State Archaeologist in Des Moines, Iowa. These archaeological collections were generated from surveys and/or excavations conducted from 1978 to the present. The collections consist of stone chipping debris, flaked stone tools, cobbles, fire cracked rock, ceramics, shell fragments, and historic materials such as metal, glass, bottles, tiles, bricks, and ceramics, as well as associated documentation such as field notes, photographs, and correspondence. No human skeletal remains or associated funerary objects were identified in our review of the collection documentation.

We are notifying [Tribe] because some of these materials were found in, or around, the area thought to be part of the territory occupied or used aboriginally by the [Tribe]. In accordance with Section 6 of NAGPRA, we are inviting you to consult with us regarding these archaeological collections. Upon your written request, we will provide you access to review our records, catalogues, relevant studies, or other pertinent data for the purpose of determining the geographic origin, cultural affiliation, and basic facts surrounding acquisition and accession of these collections.

Please feel free to contact [Installation POC name] regarding any of these issues, at [telephone, address].

To facilitate discussions between Iowa Army Ammunition Plant and the [Tribe] on these matters, please forward the name and method of contacting your tribal representative, traditional religious leader, or preferred NAGPRA point of contact. We look forward to working with you.

Sincerely,

[Commander's signature]

APPENDIX III

SUMMARY OF CURRENT LOCATIONS OF ARCHAEOLOGICAL COLLECTIONS FROM IOWA ARMY AMMUNITION PLANT, IOWA

All collections information has been entered into a Paradox data base file and can be queried by any of the fields listed below, as well as by the name of the installation and by MACOM. The data base will be delivered by the MCX to the U.S. Army Environmental Center upon completion of the U.S. Army NAGPRA Compliance Project. Inquiries for additional information are welcome (MCX: 314-331-8865; U.S. Army Environmental Center NAGPRA Compliance Project: 410-671-1573). The data fields listed in the summary of collections contain the following information:

REPOSITORY:	The current location in which the collection is stored, as of the date of this report.
REPOSITORY POC:	The person contacted by the MCX, or the person to whom inquiries regarding the collection should be addressed.
TELEPHONE:	The telephone number for the repository POC.
COLLECTION ID:	The identifying unit used by the repository to store and/or locate the collection. This can be a unique accession number assigned by the repository, the archaeological site number or project name, the name of the collector of the collection, or another number or name assigned by the repository.
SITE NUMBERS:	The official site number or name only for those sites from which materials were collected. An investigator may have performed work at additional sites but did not collect any materials. Those site numbers are not included in this field.
FIELDWORK DATES:	The date(s) during which the investigation(s) occurred. This information is provided to differentiate between projects that may have investigated the same site repeatedly.
EXCAVATOR/COLLECTOR:	The individual and/or organization that conducted the investigation.

COLLECTION SIZE: The volume or number of objects in a collection, estimated by the repository POC or from project reports.

DESCRIPTION OF MATERIALS: General material classes of the objects in the collection derived from data provided on site records, in references, and/or by the Repository POC.

ANTIQUITY/ARCH. PERIOD: Chronological or cultural-historical designations recorded on site records or in references specific to the collection.

CULTURAL AFFILIATION: This column contains only those ethnic identifications found in the site records or references specific to the collection. This field is left blank if no such information was recorded.

BASIS OF DETERMINATION: Documents the source of the cultural affiliation information (e.g., site record, oral testimony, reference).

SECTION 5 MATERIALS: Describes the number and kind of human skeletal remains and associated funerary objects in the collection, as indicated by the site records, references, repository management documents, or information from repository POC. If these materials are present or are suspected to be present, NAGPRA Section 5 requires a physical inventory of the materials.

Cat. #	Specimen	No.	Location	Depth	Remarks
1	Projectile point: Snyders Point, base missing; exhibits softhammer reduction with some minimal final pressure flaking. Large fracture suggests it was broken in use; fossiliferous white Burlington Chert.	1	Area D	Surface	Collected 20 JUNE 1989
2	Drill base: midsection of proximal end of drill (tips of ears on base removed); diamond-shaped cross-section; broken during production at fossil inclusion, fossiliferous light gray Burlington Chert.	1	Area D	Surface	Collected 21 JUNE 1989
3	Adze: produced from large expanding flake, unifacial flaking on all margins; distal end exhibits heavy use and some silica polish, fusulinidic white Burlington Chert.	1	Area D	Surface	Collected 21 JUNE 1989
4	Biface: heavy expanding flake retaining platform; bifacial reduction all margins; discarded (internal cracks = step fractures), fossiliferous white Burlington Chert.	1	Area D	Surface	Collected 21 JUNE 1989
5	Projectile point base: proximal portion of a probable Paleoindian point; exhibits parallel oblique flaking and a constricted base, slight grinding on the left lateral basal margin, some on the right; basally indented. Right ear is sheared; possible impact fracture suggests point broke at haft. Heat-treated, pinkish-white Burlington Chert.	1	Area F	Surface	Collected 22 JUNE 1989
6	Scraper: large primary decortication flake, unifacially flaked on lateral and distal margins; proximal end retains portion of striking platform, fossiliferous white cherty limestone.	1	Area G	Surface	Collected 22 JUNE 1989
7	Biface fragment: midsection and tip of biface; discarded during production, fossiliferous white Burlington Chert.	1	Area H, "oats"	Surface	Collected 26 JUNE 1989
8	Biface fragment: discarded during production (broken at flaw), fossiliferous white Burlington Chert.	1	Area H, "oats"	Surface	Collected 26 JUNE 1989
9	Secondary reduction flake: exhibits previous flake removal scars; strong brown (7.5YR5/8) pebble-size chert geode.	1	Area I	Surface	Collected 20 JUNE 1989
10	Biface fragment: midsection and distal portion of biface produced from large flake; discard, very pale brown Burlington Chert.	1	Area I	Surface	Collected 20 JUNE 1989

11	Tertiary reduction flake (or sharpening flake) retaining platform and bulb; dorsal surface shows a glassy polish over several previous flake scars (silica polish?), light gray (10YR7/2) Burlington Chert.	1	Area I	Surface	Collected 23 JUNE 1989
12	Reduction flake: discarded bifacial reduction blank produced from a heavy reduction flake; retains platform; lateral and distal portions show bifacial reduction, fossiliferous white (10YR8/1) Burlington Chert.	1	Area I	Surface	Collected 28 JUNE 1989 Length: 69.7 mm Width: 41.8 mm Thickness: 13.9 mm
13	Tertiary reduction flake: exhibits slight bifacial reduction on proximal margin, fossiliferous very pale brown (10YR7/3) Burlington Chert.	1	Area I	Surface	Collected 28 JUNE 1989
14	Tabular shatter with bifacial reduction on distal and lateral margins; discarded due to internal fault, white (10YR8/2) Burlington Chert.	1	Area I	Surface	Collected 28 JUNE 1989 Length: 72.4 mm Width: 36.2 mm Thickness: 18.6 mm
15	Transverse scraper, produced from tertiary reduction flake; retains platform and bulb; unifacially flaked on distal and lateral margins, banded fusulinidic white Burlington Chert.	1	Area I	Surface	Collected 14 JULY 1989
16	Biface fragment: midsection, showing bifacial reduction on lateral margins; proximal and distal ends snapped off, fusulinidic white Burlington Chert.	1	Area J	Surface	Collected 22 JUNE 1989
17	Biface fragment: midsection and base of a biface broken in use, from inclusions; ground laterally (Paleo-Indian?), fossiliferous white Burlington Chert.	1	Area J	Surface	Collected 22 JUNE 1989
18	Bifacial reduction blank: discard, snapped midsection during production, mottled fossiliferous white (10YR8/2) Burlington Chert.	1	Area K	Surface	Collected 22 JUNE 1989 Length: 55.8 mm Width: 38.3 mm Thickness: 13.7 mm
19	Biface fragment: distal portion, fossiliferous white Burlington Chert.	1	Area K	Surface	Collected 22 JUNE 1989
20	Bifacial reduction blank: discarded during production; retains platform and portion of bulb, agatized very pale brown (10YR7/3) chert.	1	Area K	Surface	Collected 22 JUNE 1989
21	Tertiary reduction flake: banded white Burlington Chert.	1	Area K	Surface	Collected 22 JUNE 1989
22	Reduction flake or biface: discard; distal portion removed; retains platform and bulb on proximal end, fossiliferous white (10YR8/2) Burlington Chert.	1	Area K	Surface	Collected 22 JUNE 1989

APPENDIX V

MCX LIST OF REFERENCES

In addition to the references reviewed by MCX personnel at the archaeological site information center, every attempt was made to obtain references cited but not on file. Information taken from these references was coded for data relating to collections made from sites located on installation property (see attached sample of PD-C Bibliographic Data Sheet form) and entered into a data base for ease of manipulation.

Report titles were drawn directly from the title page of reports, and consist of the following fields:

FIELD	DATA ENTERED
Subject Property	Army Installation name
Last Name	Primary author's last name
First Name	Primary author's first name
Middle Initial	Primary author's middle initial
Secondary Authors	Names of secondary authors, <i>or</i> in instances where the author is a company rather than an individual, the company name is listed here
Title	Title of the reference. For letter reports, the person or agency to whom the correspondence is addressed is listed as the title.
Series	If the report is part of a publication series, the name and number are provided here.
Date	Date of publication or submission
Length	Report length in pages
Contract Number	Contract number and delivery order number, if applicable

The data for the next three fields are drawn directly from the report title page and reflect the hierarchy of contracting agencies involved in accomplishing the work. In some cases, the sponsoring agency is listed as the Army installation; in others, the intermediary contracting agent, (e.g., the Army Corps of Engineers or the National Park Service) is listed as the Sponsoring Agency.

Sponsoring Agency	Agency for which the report was prepared
Contractor	The agent contracted to perform the work
Subcontractor	The agent subcontracted to perform the work

The majority of the citations for archaeological investigations on Army land refer to unpublished reports prepared under contract with federal agencies, consequently the MCX printout was designed to address these reports. In instances where the author is a company rather than an individual, the company name is listed in the Secondary Authors field (due to the length of the field). For published references, the publisher is listed in the Sponsoring Agency field.
