MANAGEMENT SUMMARY

NYSHPO Project Review Number:	21PR01224
Phase of Survey:	Comprehensive Reconnaissance-Level Historic Resources Survey
Location Information:	City of Syracuse, Onondaga County
Phase III Survey Area:	Areas of the south and east of the City of Syracuse including the neighborhoods of Near Eastside, University Hill, Salt Springs, Westcott, Meadowbrook, University Neighborhood, Outer Comstock, South Campus, North Valley, and South Valley.
Historic Resources Survey Overview:	A total of 36 resources listed in the State and/or National Register of Historic Places (S/NRHP), including four districts, are located within the Phase III Survey Area. There are 63 resources within the Phase III Survey Area previously determined to be S/NRHP-eligible, including two historic districts, and 181 resources for which S/NRHP eligibility has not been formally determined. In addition, EDR identified 96 new individual resources and six historic districts that appear to meet S/NRHP eligibility criteria and re-evaluated one resource previously determined to be not S/NRHP-eligible, for a total of 383 resources evaluated in the survey. Of the 383 resources located within the Phase III Survey Area, 35 are listed in the S/NRHP (one previously S/NRHP-listed resource was found to be no longer extant). There are 204 resources located within the Phase III Survey Area that EDR is recommending eligible for listing on the S/NRHP (including eight historic districts [including the previously identified Westcott Historic District and SUNY ESF Historic District]), of which NYSHPO determined that 197 are S/NRHP-eligible (including seven historic districts) and six are not S/NRHP-eligible (including one historic district). There are 67 properties that EDR is recommending not eligible for listing on the S/NRHP, with which NYSHPO concurred. A total of 50 previously identified properties were determined to be no longer extant. A total of 27 errors in NYSHPO records were identified.
Report Authors:	Kristen Olson, Andrew Roblee, Grant Johnson
Date of Report:	September 2021

1.0 INTRODUCTION

1.1 Purpose of the Survey

On behalf of the City of Syracuse and the Syracuse-Onondaga County Planning Agency (SOCPA), Environmental Design & Research, Landscape Architecture, Engineering, & Environmental Services, D.P.C. (EDR) conducted Phase III of a three-phase comprehensive reconnaissance-level survey of historic resources in the City of Syracuse, Onondaga County, New York. The survey project was funded by a Certified Local Government (CLG) grant to the City of Syracuse by the New York State Office of Parks, Recreation and Historic Preservation, Division for Historic Preservation (NYSHPO).

The purpose of the survey is to:

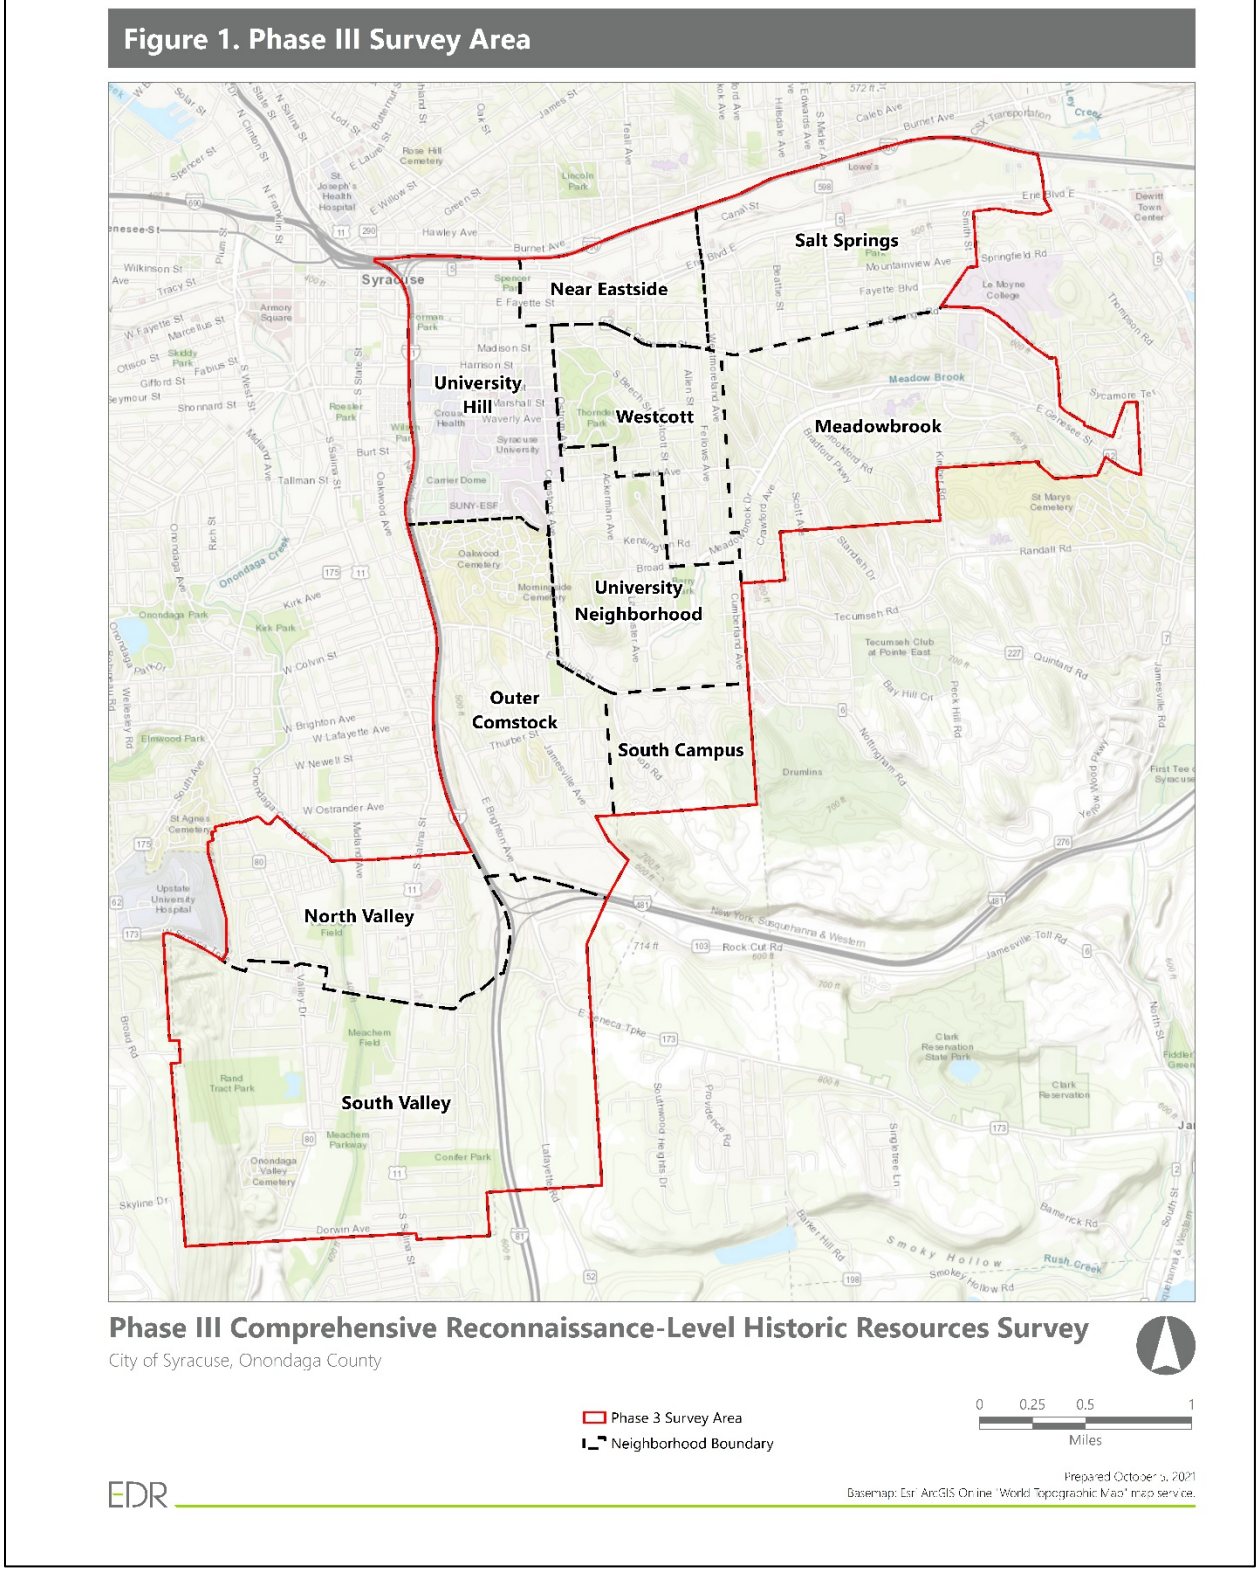

- Verify and update existing State- and National Register of Historic Places (S/NRHP) eligibility determinations as recorded in the NYSHPO Cultural Resources Information System (CRIS), including evaluating the eligibility of resources recorded in CRIS with an existing eligibility status of "undetermined" (i.e., S/NRHP eligibility has not been formally determined by NYSHPO);
- Identify and evaluate additional resources within the Phase III Survey Area (see Section 1.2) that, in the opinion of EDR's architectural historians, meet the National Register of Historic Places (NRHP) Evaluation Criteria (see Section 3.1); and
- Identify and evaluate clusters of resources that, in the opinion of EDR's architectural historians, may comprise historic districts that meet the S/NRHP Evaluation Criteria.

The information and recommendations included in this report are intended to aid in future planning efforts relative to historic preservation initiatives, including nominations for listing in the S/NRHP as individual properties or historic districts, S/NRHP multiple property submissions, and applications for State and Federal Historic Tax Credit (HTC) rehabilitations of qualifying properties.

1.2 Phase III Survey Area

The Survey Area for the Phase III comprehensive reconnaissance-level survey generally includes those areas of the City of Syracuse located south and east of Interstates 81 and 690 along with the North Valley and South Valley neighborhoods which lie west of Interstate 81 (see Figure 1). The Survey Area includes the neighborhoods of Near Eastside, University Hill, Salt Springs, Westcott, Meadowbrook, University Neighborhood, Outer Comstock, South Campus, North Valley, and South Valley, as defined by the Syracuse Urban Renewal Agency (SURA, 2018).

Figure 1. Phase III Survey Area

1.3 Stakeholder Consultation

The City of Syracuse CLG staff organized a Project Advisory Committee to guide the Phase III survey. The Advisory Committee included Kate Auwaerter, Preservation Planner/Public Art Coordinator, City of Syracuse; Jeffrey Romano, Syracuse Landmark Preservation Board; and James Finelli and Kathy Howe of NYSHPO. EDR met and consulted with the Project Advisory Committee organized by the City of Syracuse CLG staff throughout the duration of the Phase III survey to review survey results and to refine the survey approach. This consultation included:

- A meeting held on January 21, 2021, to review the scope of the Phase III survey, discuss groupings of resources with historic district potential, identify existing S/NRHP-eligible resources that would require additional survey, and define the appropriate level of detail for the field survey data collection. Minutes from this meeting are included as Appendix A;
- A memorandum prepared by EDR summarizing the historic context of the Phase III Survey Area, which was submitted to Kate Auwaerter and Jeffrey Romano on February 19, 2021;
- A memorandum prepared by EDR summarizing potential S/NRHP-eligible historic districts identified during the survey, which was submitted to the Project Advisory Committee on May 20, 2021;
- A site visit with members of the Project Advisory Committee on July 21, 2021, to review the boundaries of potential historic districts identified by EDR during the survey; and
- Ongoing telephone and electronic (email) consultation with City and NYSHPO staff during the course of the survey.

2.0 BACKGROUND

2.1 Historic Context of the Phase III Survey Area

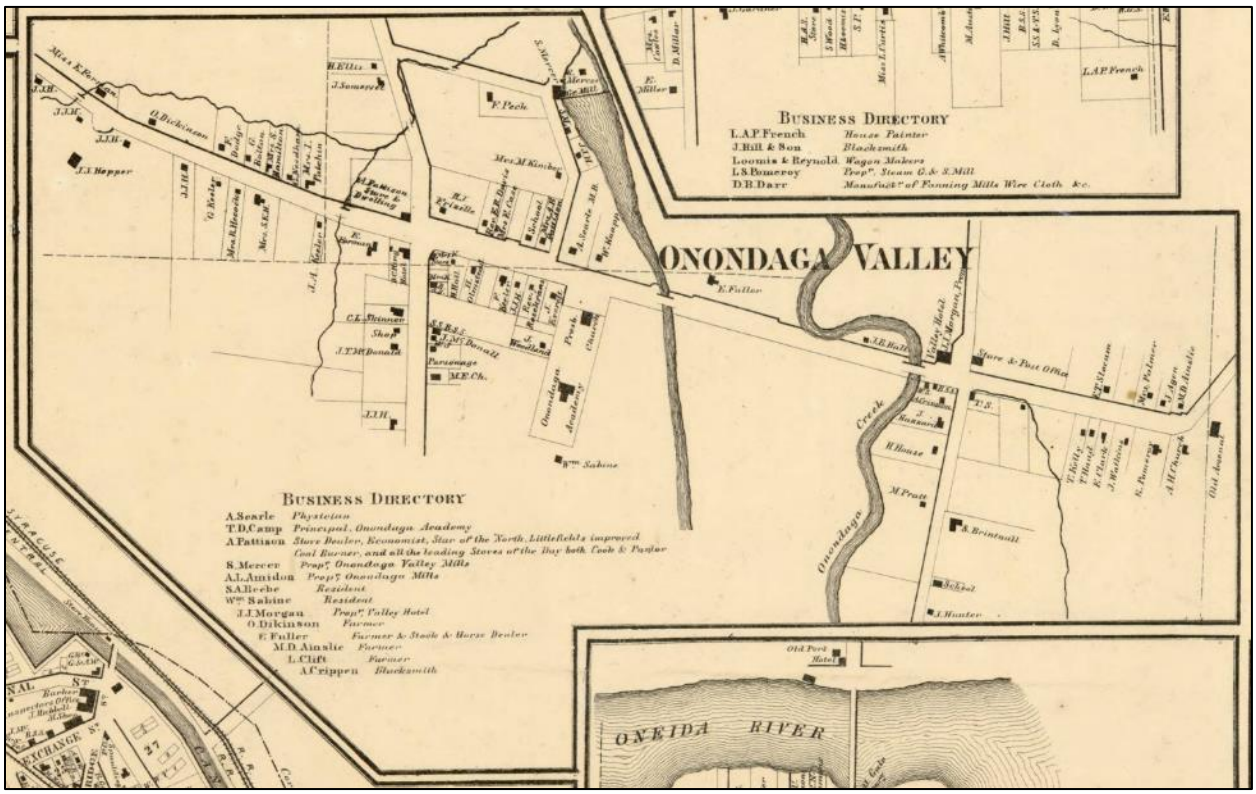

The Phase III Survey Area represents a broad range of Syracuse's historical development, from the earliest non-Native settlement, through the Erie Canal-era growth of manufacturing on the downtown periphery, the establishment and expansion of Syracuse University, turn-of-the-century streetcar suburbs, post-WWII tract housing, and the Urban Renewal era. The history and development of the City of Syracuse in the nineteenth and early twentieth centuries has been documented in detail through numerous county and city histories (Clark, 1849; Bruce, 1891; Beauchamp, 1908 are the most well-known examples). Therefore, the historic context below focuses specifically on the history and development of the Phase III Survey Area within the framework of the greater development of the city and is divided by period and themes to highlight the growth and significant changes within survey area neighborhoods, including those that are manifest within the built environment as seen in the present day.

Early Industry and Transportation, 1788-1870

Syracuse and its environs are part of the ancestral lands of the Onondaga Nation, one of the five (later, six) member nations of the Haudenosaunee Confederacy. The earliest permanent non-Native settlement within the Phase III Survey Area was at Onondaga Hollow (Later, Onondaga Valley), roughly around the present-day intersection of South Salina Street and Seneca Turnpike. Revolutionary War veteran and trader Ephraim Webster persuaded Comfort Tyler and General Asa Danforth to join him in settling there in May 1788. While Danforth, Tyler and Webster worked toward developing a viable community at Onondaga Hollow, the establishment of the Onondaga Salt Springs Reservation by New York State would soon lead to rapid settlement and production activity in the territory immediately surrounding the lake to the north (Bruce, 1896; Beauchamp, 1908; Munson, 1969).

Onondaga Valley developed into a typical nineteenth-century rural hamlet and included a grist mill, hotel, church, and an academy. Nineteenth-century residences were grouped along present-day Valley Drive, South Salina Street, and the Seneca Turnpike (Figure 2; Seneca Turnpike now forms the boundary between the North Valley and South Valley neighborhoods). The hamlet and its rural outlying areas remained outside of the City of Syracuse until they were annexed in 1926 (SOCPA, 1973).

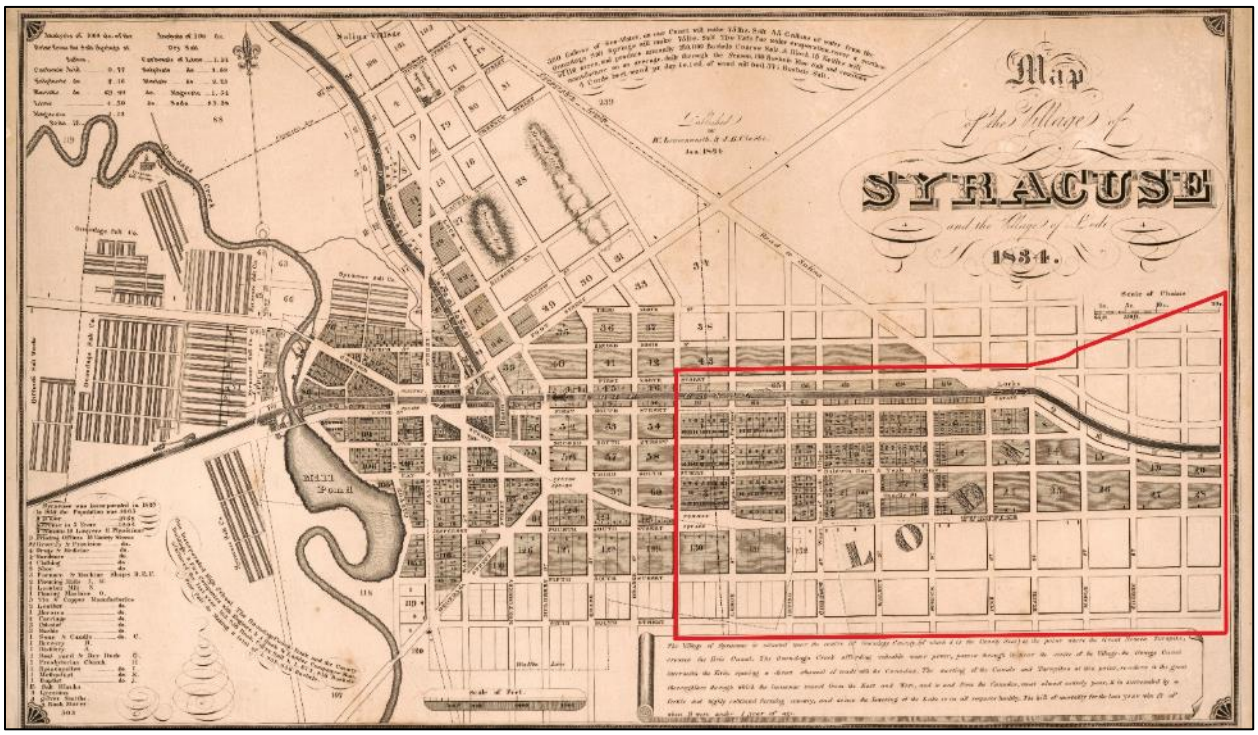

Figure 2. 1860 Sweet Map of Onondaga Co., New York

Many of the residences depicted on the 1860 Sweet map in the hamlet of Onondaga Valley are still extant (Sweet, 1860).

Proceeds from the sales of state-owned lands set aside for salt production helped to fund the construction of the Erie Canal, which allowed the shipment of salt and other products to more distant markets while greatly boosting the economy in New York State and beyond. The Village of Syracuse incorporated in the same year that the canal opened, as businesses established premises along the canal's banks to facilitate the transfer of raw materials and manufactured goods between canal boats and warehouses. Fueled by the success of the Erie Canal, the Village of Syracuse annexed much of the present-day Near Eastside, University Hill, and Westcott neighborhoods in 1835 (SOCPA, 1973). The population of Syracuse grew from 1,000 in 1825 to over 25,000 in 1855 (Connors, 2005).

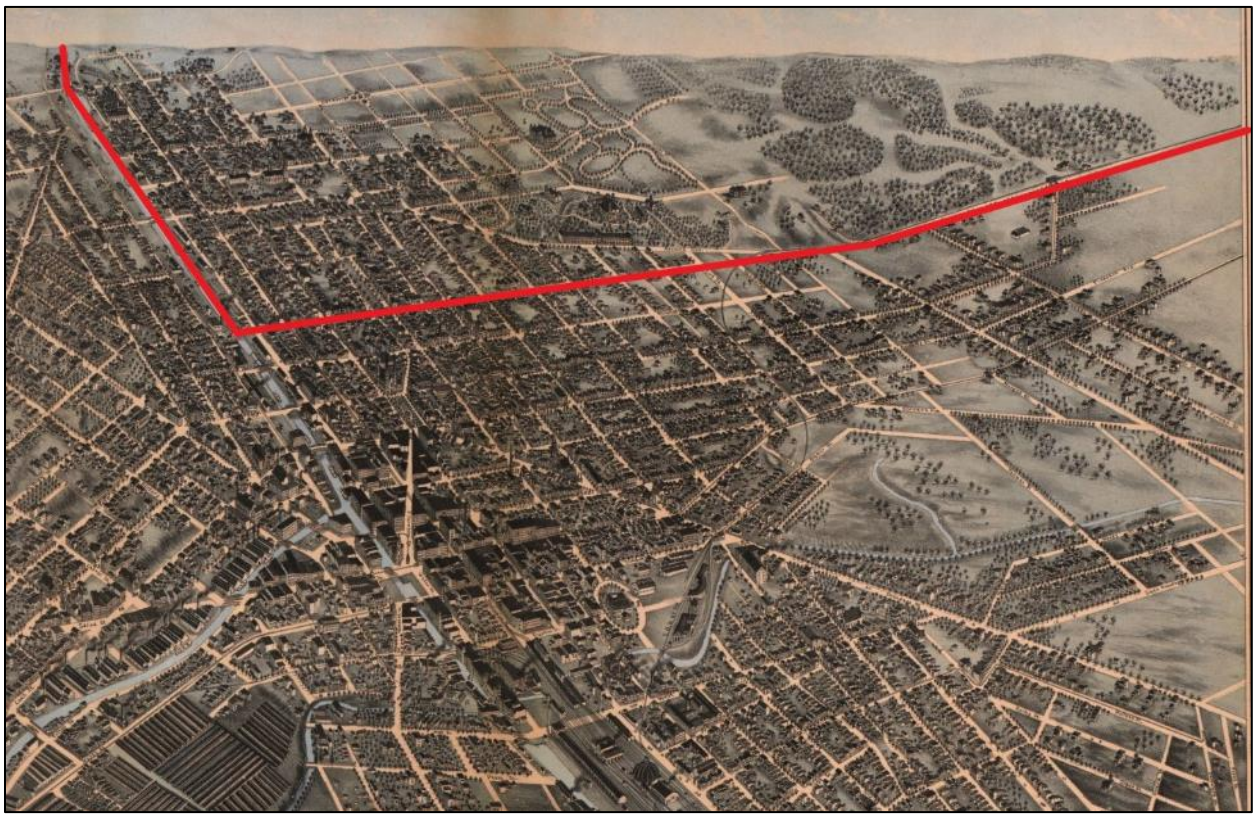

Figure 3. 1834 Leavenworth & Clarke Map of the Village of Syracuse and the Village of Lodi

The Leavenworth & Clarke map depicts the villages of Syracuse and Lodi at center (with a portion of the Phase III Survey Area shown in red), the Village of Salina to the north, and salt sheds to the west (Leavenworth & Clarke, 1834).

Rail lines were established through the Phase III Survey Area in the mid-nineteenth century, accelerating the development of commercial-industrial districts near the village center as well as residential development on the periphery. In 1839, the Auburn and Syracuse Railroad and the Syracuse & Utica Railroad opened, making Syracuse a hub for transportation in central New York (Hardin, 1993). By midcentury, several early rail lines had consolidated into the New York Central Railroad, which would eventually provide freight and passenger service throughout New York State and much of New England and the Midwest (Figure 4).

Figure 4. 1874 Bailey Birds Eye View of Syracuse, New York

The 1874 Bailey view shows a portion of the Phase III Survey Area (at the top of the image, in red). Oakwood Cemetery occupies the forested area at the upper right, and the newly completed Hall of Languages at Syracuse University is at the upper center (Bailey, 1874).

Firmly established as a regional center for shipping by canalboat and rail, the City of Syracuse incorporated in 1848. The city limits included the present-day neighborhoods of the Near Eastside, University Hill, Westcott, and much of what would become Oakwood Cemetery. At the time, the Near Eastside was a densely built mixed-use industrial and residential area with building stock consisting primarily of detached wood-frame residences interspersed with brick and wood frame manufacturing or warehousing buildings, with the blocks adjacent to the Erie Canal primarily serving as coal and lumber yards. The northern portion

of the University Hill neighborhood also developed as a residential area prior to the opening of Syracuse University in 1870, due to its proximity to the central business district (Bailey, 1874; Vose, 1892). Oakwood Cemetery was established in 1859, providing the largest open space in the city at that time and the first rural cemetery of its kind in the area.

City Expansion and Growth of Manufacturing Economy, 1870 – 1940

Syracuse grew rapidly in the second half of the nineteenth century, as manufacturing eclipsed salt production as the dominant industry in the city and neighboring villages. Metalworking shops which had produced kettles and pans for the salt industry began to produce agricultural implements and consumer goods, initiating a transition to general manufacturing as the leading economic driver. The city's population grew from 25,226 in 1855 to 137,249 by 1910 (Connors, 2005).

The City of Syracuse expanded physically during this time, adding to its tax base while providing public services and amenities to the growing residential neighborhoods on its periphery. The incremental annexation of the southern and eastern portions of the Phase III Survey Area are depicted on Figure 5. Although these areas did not comprise previously established villages as found in other parts of the city, two former hamlets were located in the Phase III Survey Area during the nineteenth and early twentieth centuries: DeWitt Center (where present-day Thompson Street crossed the Erie Canal; now in the Salt Springs neighborhood) and Onondaga Valley (split between the present-day North Valley and South Valley neighborhoods).

Horse-drawn trolleys began operating in 1860 and offered routes from downtown Syracuse to the Valley beginning in 1869 and along East Genesee Street the following year. Electric trolleys were introduced in 1888, and additional lines built over the ensuing decades spurred residential development in neighborhoods farther from the city center (OHA, 2021; Figure 6).

By the 1930s, streetcars served portions of each of the present-day neighborhoods within the Phase III Survey Area with the exception of Outer Comstock and South Campus. Several housing tracts within the Phase III Survey Area were developed as streetcar suburbs from the late nineteenth century through the first quarter of the twentieth century, with the most desirable including Berkeley Park in the University Neighborhood (1911) and Scottholm in the Meadowbrook neighborhood (1914) (Connors, 2005). The Westcott neighborhood, east of Syracuse University, developed largely between 1895 and 1925 as a streetcar suburb with its own small commercial district developing in the early twentieth century.

Streetcar access also led to residential development in the Salt Springs neighborhood, which previously had remained largely rural. The western half of the neighborhood was annexed in 1915 and partly built out by the mid-1920s (Hopkins, 1924; SOCPA, 1973). The eastern half of the neighborhood was annexed in 1928 but remained largely undeveloped until the mid-twentieth century (Hopkins, 1924, 1938).

Figure 5. 1973 Stages of Annexation: City of Syracuse Map

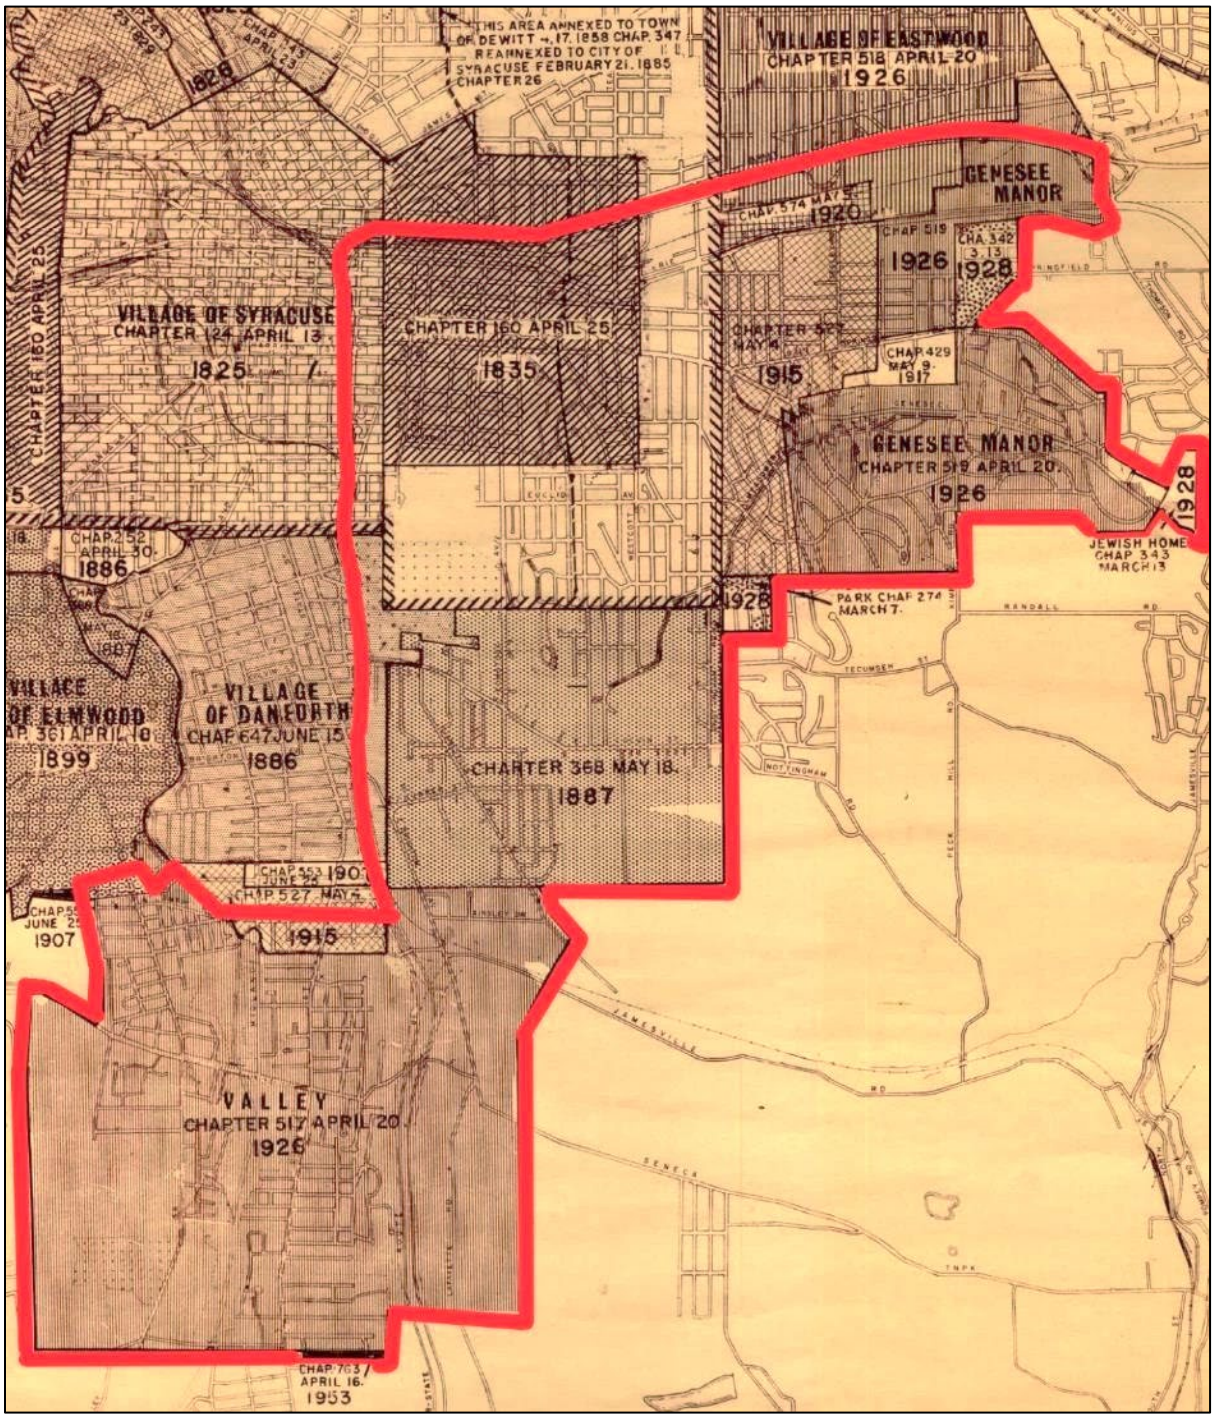

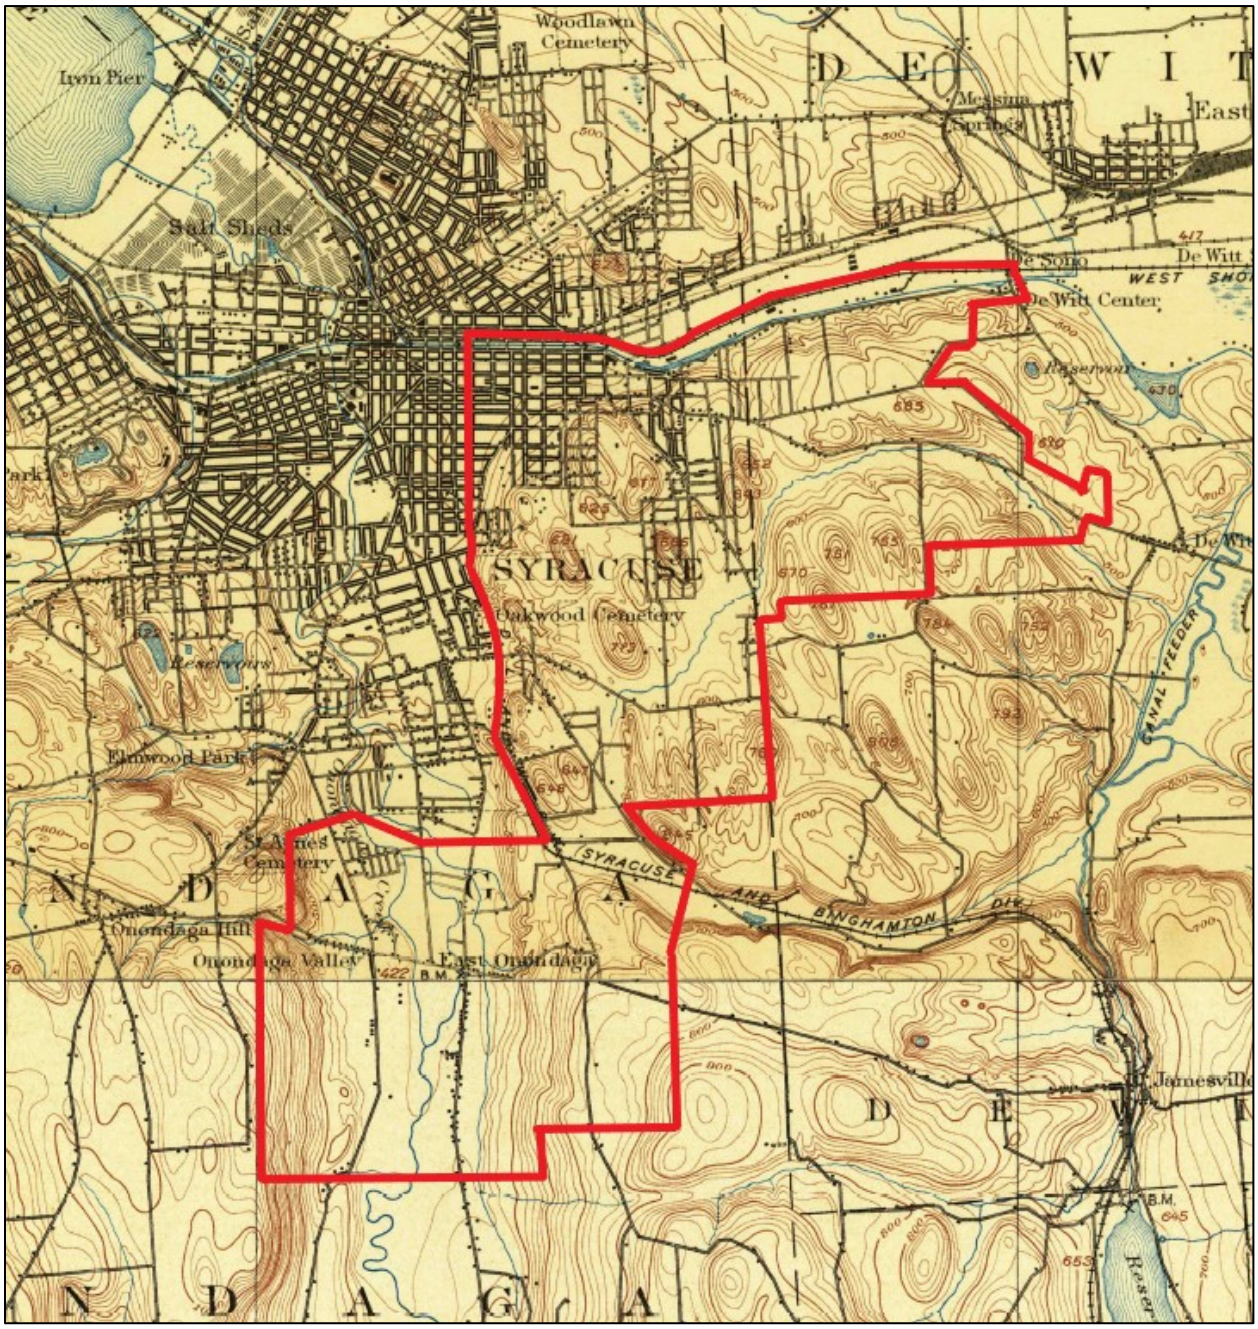

Figure 6. 1898 United States Geological Survey (USGS) Syracuse, New York and 1900 Tully, New York Topographical Quadrangles

The desirability of streetcar service can be clearly seen in the lag in development of housing tracts farther from the streetcar lines. A review of historic maps illustrates the speculative nature of the tract developments, as several planned developments never materialized or were substantially redesigned when they were eventually built (Vose, 1892; Hopkins, 1908, 1924, 1938). After about 1920, the mass adoption of the automobile enabled the residential development of housing on larger lots farther from public transportation networks in Syracuse and in communities throughout the United States. This decentralization also resulted in the movement of manufacturing and distributing centers to the city periphery (McClelland et. al., 2003).

Syracuse University (SU) was chartered in 1870 and a wave of development in adjacent areas quickly followed, as new residences were built to house students, faculty, and staff. By 1924, Crouse-Irving Hospital and Hospital of the Good Shepherd were built on Irving Avenue and Marshall Street, respectively, initiating the transition of the western portion of the University Hill neighborhood from residential (including student residential) use to a medical campus, a process which accelerated in the second half of the twentieth century. Southeast of SU, the University Neighborhood developed beginning in about 1900, with the residential streets closest to the SU campus built out by the 1920s. (Vose, 1892; Hopkins, 1924, 1938).

The Outer Comstock neighborhood experienced limited residential development during the early twentieth century. The most significant residential area within the neighborhood, the Empire State Tract, was platted prior to 1892 but lacked streetcar service, and very few residential lots were built upon prior to the Second World War. In addition to Oakwood Cemetery and Morningside Cemetery which dominate the northern part of the neighborhood, several smaller cemeteries were established in Outer Comstock along Jamesville Avenue from the mid-nineteenth century through the early twentieth century. With the exception of one Russian Orthodox cemetery, all of the Jamesville Avenue cemeteries were established by Jewish congregations and mutual aid organizations.

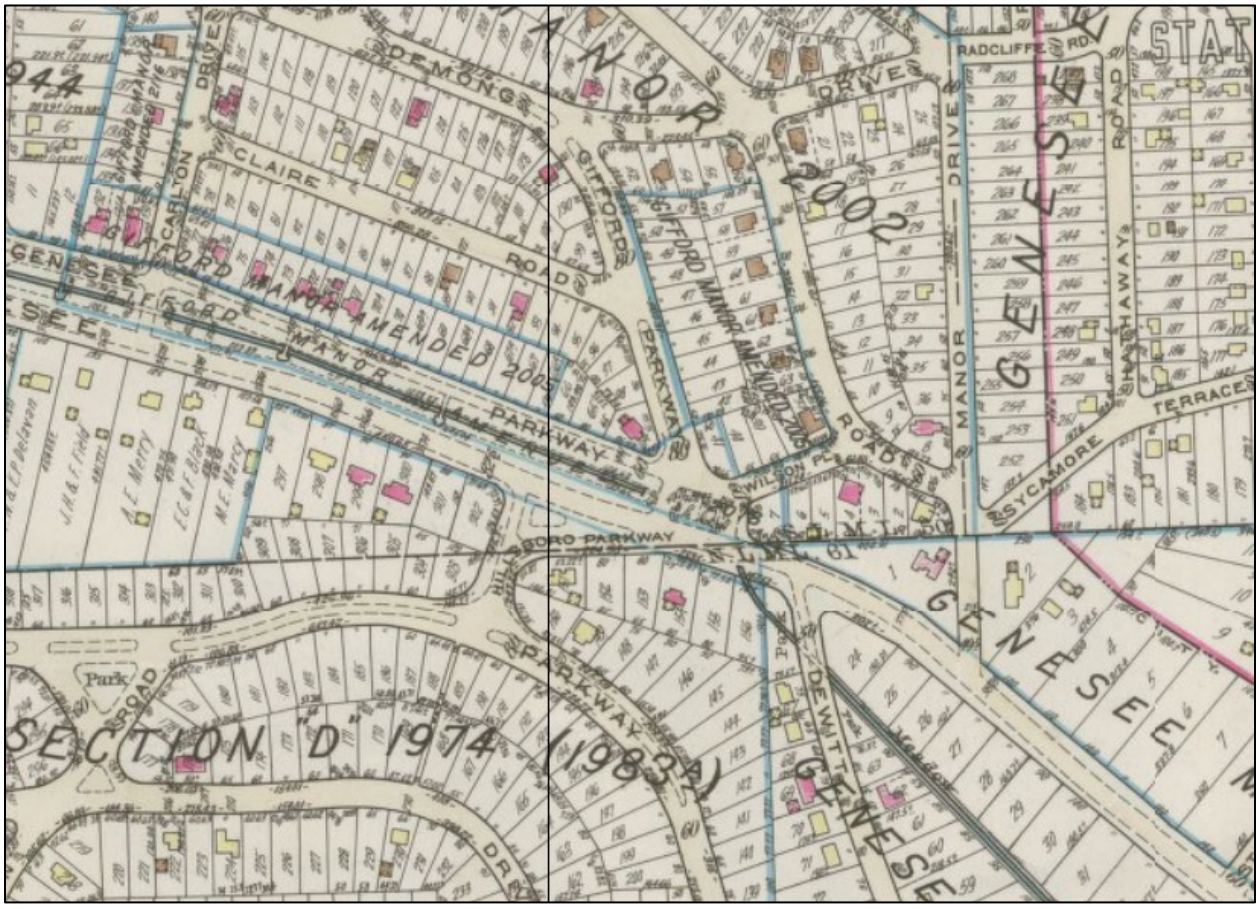

Virtually all of the Phase III Survey Area had been annexed to the City of Syracuse by 1928, although large tracts of land would remain un-platted and/or unbuilt until after the Second World War. A handful of residential tracts at the periphery were built out by the late 1930s, notably in the North Valley and South Valley neighborhoods which were served by the streetcar line on South Salina Street.

On May 15, 1918, the section of the Erie Canal that flowed through Syracuse was closed and the canal was re-routed outside of the city. Five years later, the city bought the canal property and filled it in to create Erie Boulevard (Carrington-Carter, 2009). The last solar salt works in the city closed in 1926. Although the era of salt making and the Erie Canal had ended in Syracuse, the city continued to grow as a manufacturing and transportation center. Among the manufacturers in the Near Eastside, within the Phase III Survey Area, were L.C. Smith & Corona Typewriters, the Continental Can Company, and International Harvester. Many of the wood frame residential and commercial buildings in the neighborhood were gradually replaced with brick manufacturing buildings from the late nineteenth century until World War II (Hopkins, 1924, 1938).

The impacts of the Great Depression are clearly seen in parts of the Phase III Study Area which were undergoing development in the 1920s. New residential construction was reduced dramatically as the City of Syracuse lost almost half of its industrial-manufacturing jobs between 1929 and 1933 (Connors, 2005).

Public works projects created thousands of jobs and many factories contributed to the war effort in the 1940s, but homebuilding would not recover until the postwar era. Several tracts within the Phase III Survey Area clearly illustrate the reduction in homebuilding between about 1930 and 1950, particularly the Scottholm, Bradford Hills, Gifford Manor, and Genesee Manor tracts, all of which are in the Meadowbrook neighborhood. These tracts are characterized by varying proportions of 1920s houses with later residences dating from the 1950s and 1960s (Figure 7). Meadowbrook consisted of farms and scattered residences until the early twentieth century. It was annexed to the City of Syracuse between 1915 and 1928, with the bulk of the neighborhood annexed in 1926 (SOCPA, 1973). While Salt Springs to the north and Westcott to the west generally exhibit a gridiron street pattern, the residential tracts in Meadowbrook were laid out with curvilinear streets and larger lot sizes.

Figure 7. Detail, 1938 Hopkins Atlas of the City of Syracuse, N.Y. and Suburbs

The Gifford Manor and Genesee Manor Tracts in the Meadowbrook neighborhood were partially built out in the 1920s but not completed until after the Second World War (Hopkins, 1938).

The Post-War Era

The dramatic changes to Syracuse's urban fabric and population from 1940 through the 1970s are typical of industrial cities in the northeast. After an economic recovery brought on by the boom in wartime production, Syracuse's population peaked in about 1950 (Connors, 2005). However, many manufacturers relocated out of state or abroad after the war, while upper- and middle-class residents abandoned urban neighborhoods for the new automobile suburbs. These changes are evident in the Phase III Survey Area in the development of post-war residential areas, the construction of elevated highways, urban renewal projects, and the loss of historic housing stock and industrial-manufacturing buildings. Several large factories which once stood in the Near Eastside were demolished. Meanwhile, an industrial district established before the war along the Delaware, Lackawanna, and Western Railroad in the present-day Outer Comstock neighborhood grew substantially during the second half of the twentieth century (Hopkins, 1938). Now benefitting from access to I-81 and I-481, the industrial district stretches along Ainsley Drive between Brighton Avenue and Jamesville Avenue.

Construction of large-scale housing and transportation projects impacted parts of the Phase III Survey Area in the twentieth century. During the late 1930s, four city blocks consisting of hundreds of residences in the 15th Ward were cleared for the Pioneer Homes, a public housing project completed in 1941 which was among the first in the United States. A portion of the development is within the Phase III Survey Area. Not long after the completion of the Pioneer Homes, two new interstate highway routes were built through the city. The routing of I-81 and I-690 through downtown Syracuse caused the destruction of hundreds of homes and businesses in the 15th Ward, which is partially within the Phase III Survey Area (Figures 9-10). The 15th Ward was home to the majority of Syracuse's Black residents after the turn of the twentieth century, when the Great Migration brought thousands of new residents to the city (Davis, 1980).

Elsewhere in the Phase III Survey Area, dozens of new housing tracts were built in the post-war period, while those developments which were partially built out before the war were infilled. Several new schools and churches were built during this time to meet the demand.

Figure 8. 1958 SUNY Upstate Medical Aerial Photograph

View to the northwest. In the late 1950s, Crouse Hospital and SUNY Medical Center were surrounded by dense residential blocks to the east and north, with Pioneer homes just to the west (SUNY Upstate Medical, 1958).

Figure 9. 1985 SUNY Upstate Medical Aerial Photograph

View to the northwest. By the mid-1980s, nearly all of the housing in the 1958 photograph had been replaced with new medical facilities, academic buildings, and surface parking (SUNY Upstate Medical, 1985).

Syracuse University expanded dramatically during and after the Second World War, resulting in the expansion of its main campus into formerly residential blocks, as well as leading to the redevelopment of South Campus (formerly a research farm) as student housing and support facilities. Although South Campus was annexed to the City of Syracuse in 1887, the area remained farmland, part of which served as SU's John Slocum Agricultural College, before being developed as a winter sports center in the early twentieth century. Temporary barracks built during the Second World War were later replaced, primarily with student housing (Hopkins, 1924, 1938; SOCPA, 1973; McCullough, 2020). Also related to SU's growth was the redevelopment of the dense residential neighborhood in the western part of the University Hill neighborhood as a medical campus which now includes SUNY Upstate Medical University and the Syracuse VA Medical Center. (Figures 8 and 9). To a much lesser extent than Syracuse University, LeMoyne College, founded in 1945 just to the east of Salt Springs in the Town of DeWitt, likely influenced residential development in Salt Springs in the post-war era.

The Phase III Study Area Today

Today, the Phase III Study Area includes a broad range of resource and land use types dating from the mid-nineteenth century through the early twenty-first century. In the Near Eastside, few buildings from the pre-war period remain in the western portion of the neighborhood, with the notable exception of several buildings along East Genesee Street. Most of the housing and manufacturing buildings were replaced with surface parking or empty lots, some of which were redeveloped in the late twentieth and early twenty-first centuries with commercial and institutional buildings. Farther east within the neighborhood, several pre-war residential buildings remain, including both detached houses and apartment buildings. The adjacent Salt Springs neighborhood contains a mix of early-twentieth-century streetcar suburban development, post-World War II housing tracts, and late-twentieth century commercial development, with a handful of mid-nineteenth-century residences along Salt Springs Road.

The University Hill neighborhood is a dense mix of buildings and uses including the historic core of SU's campus, ringed with postwar academic buildings and student housing interspersed with more recent construction; the medical campus located between SU and I-81; and nineteenth-century residential and commercial blocks to the north and east which now primarily serve SU students. To the east and southeast of the SU campus, the University neighborhood contains a mix of dense early-twentieth-century housing in the blocks closest to SU, with mid-twentieth-century residential streets, public parks, and SU athletic facilities dominating the south. South Campus consists entirely of SU student housing and related facilities, much of which dates from the 1960s (McCullough, 2020).

In the center of the Phase III Study Area, Westcott remains a highly intact, dense neighborhood of primarily nineteenth-century residences with an early-twentieth-century commercial district. In addition, a significant portion of the neighborhood is in the process of being nominated to the S/NRHP as a historic district (NYSHPO USN 06740.014740). To the east of Westcott, the Meadowbrook neighborhood is predominantly residential, with a number of housing tracts which were developed between about 1920 and 1970.

Interstate 481 divides the Outer Comstock Neighborhood into two sections. The northern part of the neighborhood includes Oakwood Cemetery (90PR05703; listed in the S/NRHP in 1990-1991), the postwar-

era Empire State Park Tract, and an industrial-manufacturing district. South of the I-481 interchange, land uses include late-twentieth and early-twenty-first-century commercial-office park and apartment complex development, as well as a substantial amount of undeveloped land.

West of Interstate 81 and the Outer Comstock neighborhood, the North Valley and South Valley neighborhoods consist of a mix of pre-war and post-war housing tracts interspersed with mid-nineteenth-century residences along older roads such as Valley Drive and South Salina Street. The neighborhoods also include commercial strip development along South Salina Street and Seneca Turnpike.

2.2 Previously Identified Historic Resources Within the Phase III Survey Area

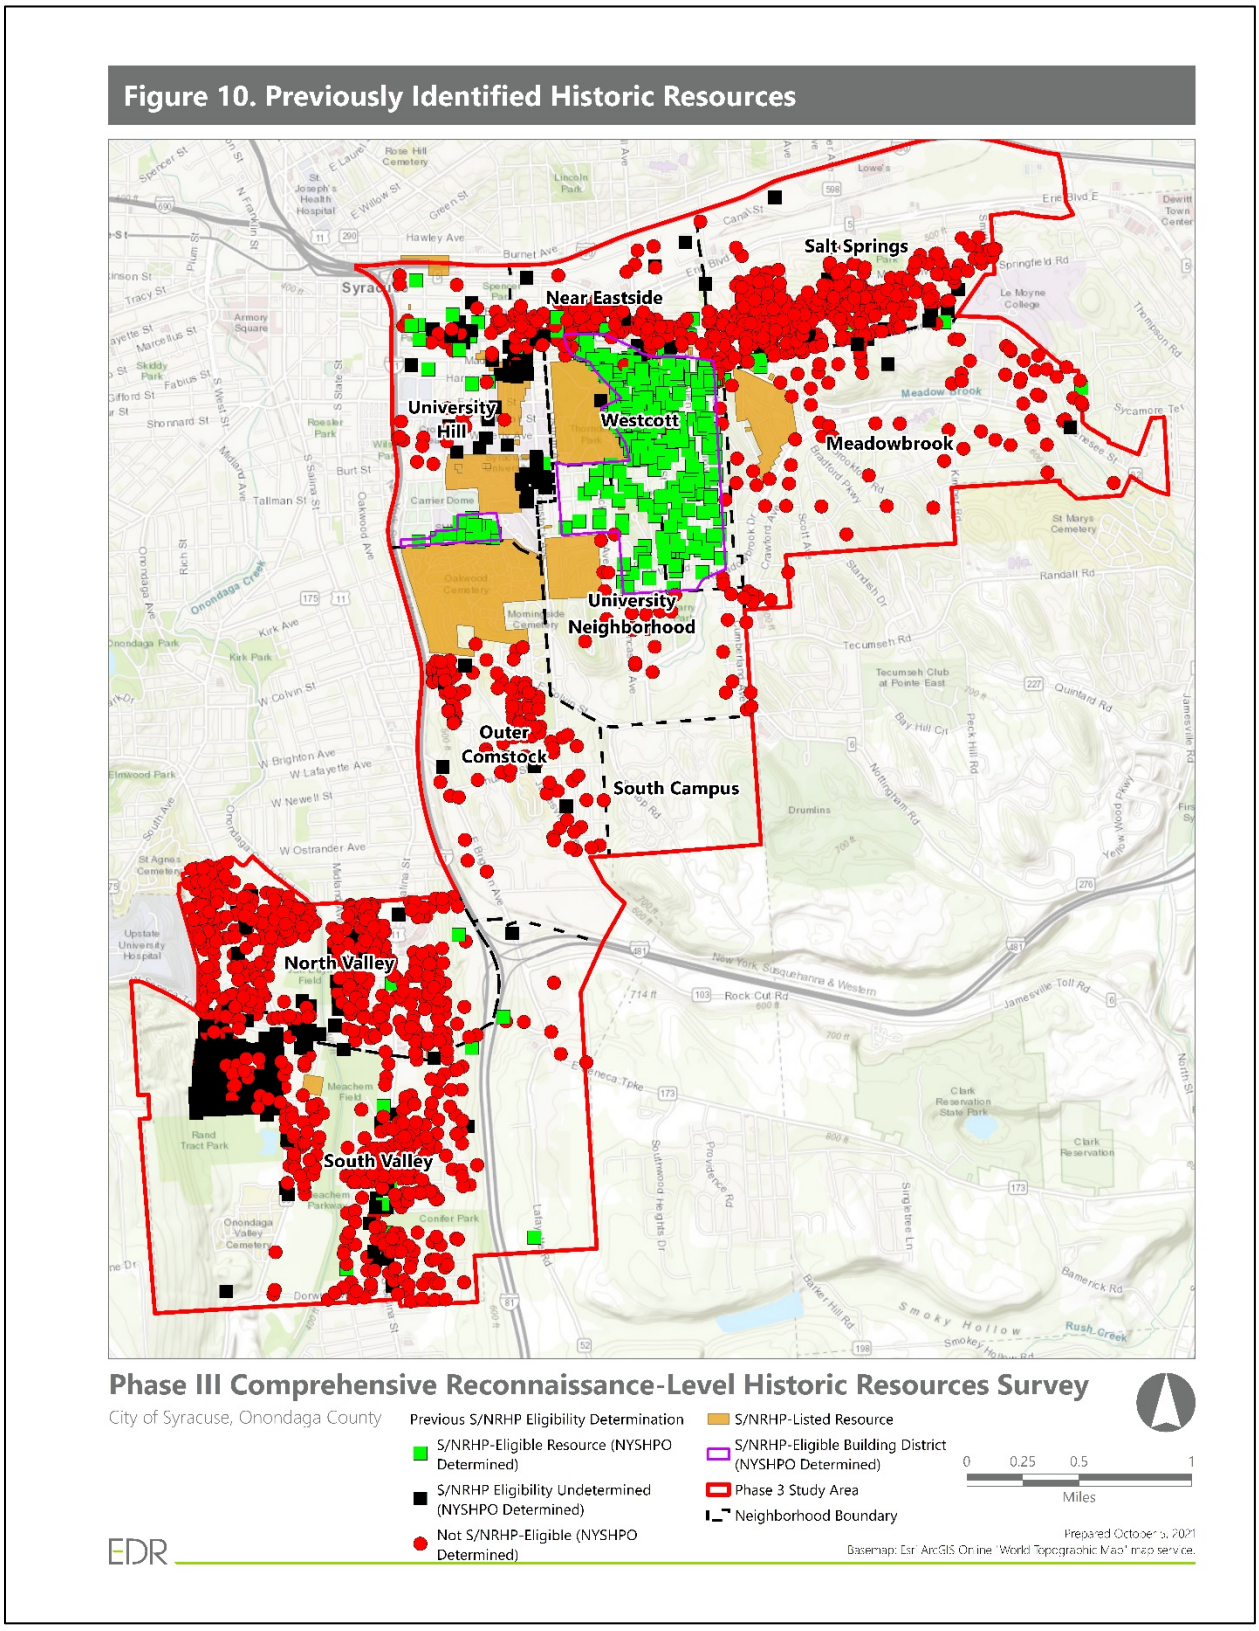

A total of 281 previously identified historic resources were identified within the Phase III Survey Area using the CRIS website, including:

- 36 S/NRHP-listed resources, including four historic districts;
- 63 S/NRHP-eligible resources, including two historic districts;
- 181 resources whose S/NRHP eligibility is undetermined; and
- 1 resource previously determined not to be S/NRHP-eligible was revaluated.

With the exception of resources and districts previously listed in the S/NRHP, and also excepting the S/NRHP-eligible Westcott Historic District and the Hopper-Merritt-Chaffee District (see Section 4.1.x), EDR staff surveyed each of these properties to document their current condition and evaluate their eligibility relative to S/NRHP eligibility criteria.

The locations of all previously identified resources are depicted on Figure 10.

Figure 10. Previously Identified Historic Resources

2.3 Previous Historic Resources Surveys within the Phase III Survey Area

Based on a review of CRIS as well as EDR files, at least eight previous historic resources surveys have been conducted within the Phase III Survey Area. The following surveys were reviewed for information regarding the overall types of cultural resources found within the Phase III Survey Area, and to identify historic resources not included on the CRIS website:

- The *Syracuse Historic Landscape Resources Survey* was completed in 1989 to identify and evaluate all publicly owned historic landscapes within the City of Syracuse (Walmsley & Company, Inc., 1989). The survey report defined a taxonomy of public parks and landscapes, and recommended nine sites for "landmark designation", including two within the Phase III Survey Area: Thornden Park and the Arsenal Site.
- A *City of Syracuse Intensive-Level Survey* completed in 1993 included intensive-level survey of the works of architects Archimedes Russell and Ward Wellington Ward (Landscape & Prospect, 1993). Six buildings designed by Russell and 45 designed by Ward within the Phase III Survey Area were identified by the survey.
- The *Historic Designed Landscapes of Syracuse, New York* National Register of Historic Places Multiple Property Documentation Form prepared in 1994 identified historic contexts and a taxonomy of designed landscapes, both public and private (Landscape & Prospect, 1994). The documentation form identified 13 historic designed landscapes that are located within the Phase III Survey Area,
- The *Industrial Resources in the City of Syracuse, Onondaga County, New York* National Register of Historic Places Multiple Property Documentation Form prepared in 2009 recommended 36 buildings as eligible for listing in the S/NRHP, including three within the Phase III Survey Area (Carter, 2009).
- A *City of Syracuse Historic Resources Survey: Religious Properties* (18SR56401) was conducted in 2014 and evaluated religious properties dating from the mid-nineteenth century to the 1960s, including both purpose-built and adaptively used structures (Harvey Research and Consulting and Samuel Gruber, 2014). The survey report identified three S/NRHP-eligible resources that are located within the Phase III Survey Area.
- A *Survey of Post-World War II and Urban Renewal Era Resources, Syracuse NY* (16SR00836) was conducted in 2016 and resulted in the preparation of a draft NRHP Multiple Property Nomination (Harvey Research and Consulting and Samuel Gruber, 2016). The survey identified four historic Post-World War II resources that are located within the Phase III Survey Area.
- The *Architectural Resources Survey: I-81 Viaduct Project* was prepared in 2016 to identify and evaluate historic resources within the Area of Potential Effect (APE) for the proposed I-81 Viaduct Project (McDonald, 2016). The survey report identified 12 S/NRHP-listed/eligible or recommended eligible resources that are located within the Phase III Survey Area.
- The Stickley House / Columbus Avenue Intensive-Level Survey was conducted in 2017 to document and evaluate 17 residential buildings within the Rosenbloom Tract located in the Westcott Neighborhood (SUNY-ESF, 2017).

3.0 PHASE III SURVEY METHODOLOGY

3.1 Criteria for Evaluating the Significance of Historic Resources

EDR evaluated historic resources within the Phase III Survey Area based on the National Register Criteria for Evaluation set forth by the National Park Service (36 CFR 60.4), which state that a historic building, district, object, structure, or site is significant (i.e., eligible for listing in the S/NRHP) if the property conveys (per CFR, 2020; NPS, 1990):

> *The quality of significance in American history, architecture, archeology, engineering, and culture is present in districts, sites, buildings, structures, and objects that possess integrity of location, design, setting, materials, workmanship, feeling, and association and:*
>
> *(A) that are associated with events that have made a significant contribution to the broad patterns of our history; or*
> *(B) that are associated with the lives of persons significant in our past; or*
> *(C) that embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or*
> *(D) that have yielded, or may be likely to yield, information important in prehistory or history.*

Most of the previously identified and newly identified historic resources within the Phase III Survey Area were anticipated to be potentially S/NRHP-eligible under National Register Criterion C, deriving their significance from being representative examples of architectural styles or typologies that retain their overall integrity of design and materials. The architectural integrity of historic resources throughout the Phase III Survey Area is variable, with many showing noticeable alteration to materials and form, thereby compromising their potential historic integrity and S/NRHP eligibility. Some previously identified and newly identified resources within the Phase III Survey Area were anticipated to be potentially S/NRHP-eligible under S/NRHP Criterion A for their association with events or patterns of history that have local or statewide significance.

3.2 Historic Resources Survey Methods

The historic resources survey was conducted by professionals who satisfy the qualifications criteria per the Secretary of the Interior's Standards for Historic Preservation (36 CFR 61). Fieldwork included site visits to review and evaluate previously identified historic resources as well as identify and evaluate potential historic resources within the Phase III Survey Area. Supplemental research on specific historic properties (including potential historic districts) was conducted as necessary. Historic resources survey fieldwork was conducted March 17, 2021, through May 19, 2021. The fieldwork included systematically walking and/or driving public roads and rights-of-way to evaluate the S/NRHP eligibility of each parcel within the Phase III Survey Area and to photograph newly identified and previously identified historic resources. When properties that

appeared to satisfy S/NRHP eligibility criteria were identified, the existing conditions of the property were documented by EDR's architectural historians using CRIS Trekker 2.0 and the CRIS Mobile Pro application. Photographs of the building(s) (and associated property when necessary) were recorded for each resource along with geospatial location data, the property's address, estimated date of construction, and associated outbuildings or landscape features. EDR's evaluation of historic resources within the Phase III Survey Area focused primarily on the physical condition and integrity (with respect to design, materials, feeling, and association) to assess the potential architectural significance of each resource.

Note that all properties included in the historic resources survey were photographed and assessed from public rights-of-way. The condition and integrity of all resources were evaluated based solely on the visible exterior of the structures. No inspections or evaluations requiring access to the interior of buildings, or any portion of private property, were conducted as part of this assessment. Buildings that were not sufficiently old (i.e., are less than 50 years in age), that lacked historic or architectural integrity, or have been evaluated by EDR's architectural historians as lacking historical or architectural significance were not included in or documented during the survey.

Based on consultation with NYSHPO staff, EDR recorded an exterior description for each resource that appeared to meet S/NRHP eligibility criteria. In addition, EDR updated addresses to reflect current parcel data obtained from the Syracuse-Onondaga County Planning Agency's online GIS mapping application. In general, historic districts that were previously individually listed in the S/NRHP were not photographed or documented using CRIS Mobile Pro; however, individually S/NRHP-listed resources generally were photographed in the field in order to provide updated photographs of these resources. Based on consultation with the Project Advisory Committee, resources within the S/NRHP-eligible Westcott Historic District (USN 06740.014740) were not included in the current survey (see Appendix A).

A total of 189 resources in the area bounded by West Seneca Turnpike, Valley Drive, Chaffee Avenue, and Hopper Road are identified in CRIS but have not been formally evaluated by NYSHPO in terms of S/NRHP eligibility. These resources include a mix of single-story and two-story detached residences and small apartment buildings primarily dating to the post-World War II era. The resources do not appear to meet S/NRHP eligibility criteria as individual resources nor as a district. EDR surveyed these resources but did not document them individually during the historic resources survey fieldwork; instead, EDR took representative photographs of groups of buildings and documented the area as a non-S/NRHP-eligible historic district (see Section 4.1.x and Appendix E).

4.0 PHASE III SURVEY RESULTS

As part of the Phase III comprehensive reconnaissance-level survey, EDR evaluated a total of 383 historic resources, including 281 previously identified resources (S/NRHP-listed, S/NRHP-eligible, or eligibility undetermined), and 102 newly identified resources.[1] Of these resources, EDR recommends that 203 resources meet eligibility criteria for individual listing in the S/NRHP. EDR identified six new historic districts recommended to meet S/NRHP eligibility criteria, five of which NYSHPO concurred with. A summary of survey results by geographic distribution and resource type is included below. The results of the historic resources survey are listed in table form in Appendix B. These results include updated recommendations of S/NRHP eligibility for previously identified historic resources, as well as recommendations of eligibility for newly surveyed properties. The locations of all resources surveyed are depicted on a map included as Appendix C. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D. Completed CRIS Trekker survey forms, including photographs and resource descriptions, are included as Appendix E.

4.1 Phase III Survey Results by Neighborhood

i) Near Eastside

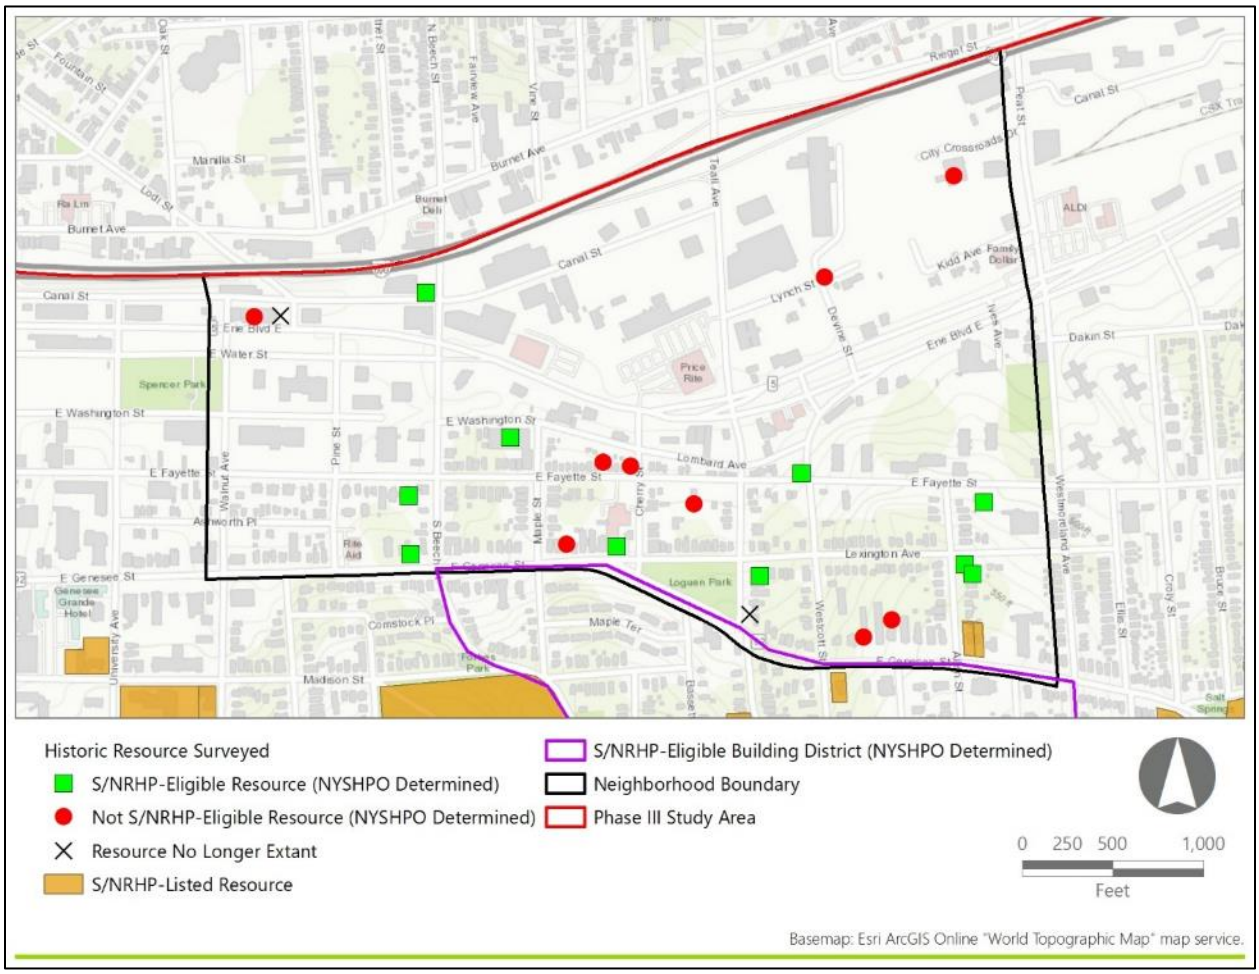

A total of 19 previously identified resources were evaluated within the Near Eastside neighborhood, and four newly identified resources. Of these 23 resources, EDR recommended that 11 meet National Register eligibility criteria, 10 of which NYSHPO concurred with. A total of eight resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. In addition, two resources were determined to be no longer extant. Survey results within the Near Eastside neighborhood are summarized in Table 1 and depicted on Figure 11.

Table 1. Historic Resources Survey Results - Near Eastside Neighborhood

S/NRHP-Listed Resources	S/NRHP-Eligible Resources (NYSHPO Determined)	Not S/NRHP-Eligible Resources (NYSHPO Determined)	Resources No Longer Extant	**Total**
2	10	9	2	**23**

[1] Over the course of completing the historic resources survey and report, some inconsistencies were noted in CRIS regarding USNs are other property data. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D.

Figure 11. Historic Resources Survey Results - Near Eastside Neighborhood

ii) Salt Springs

A total of 16 previously identified resources are located in the Salt Springs neighborhood, including two resources listed in the S/NRHP, four S/NRHP-eligible resources (NYSHPO determined), and 11 resources whose S/NRHP eligibility had not been formally evaluated.

A total of 20 resources were evaluated within the Salt Springs neighborhood, including 16 previously identified resources and four newly identified resources.[2] Of these 20 resources, EDR recommended that 12 meet National Register eligibility criteria, and six resources which NYSHPO concurred with. A total of six resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. Survey results within the Salt Springs neighborhood are summarized in Table 2 and depicted on Figure 12.

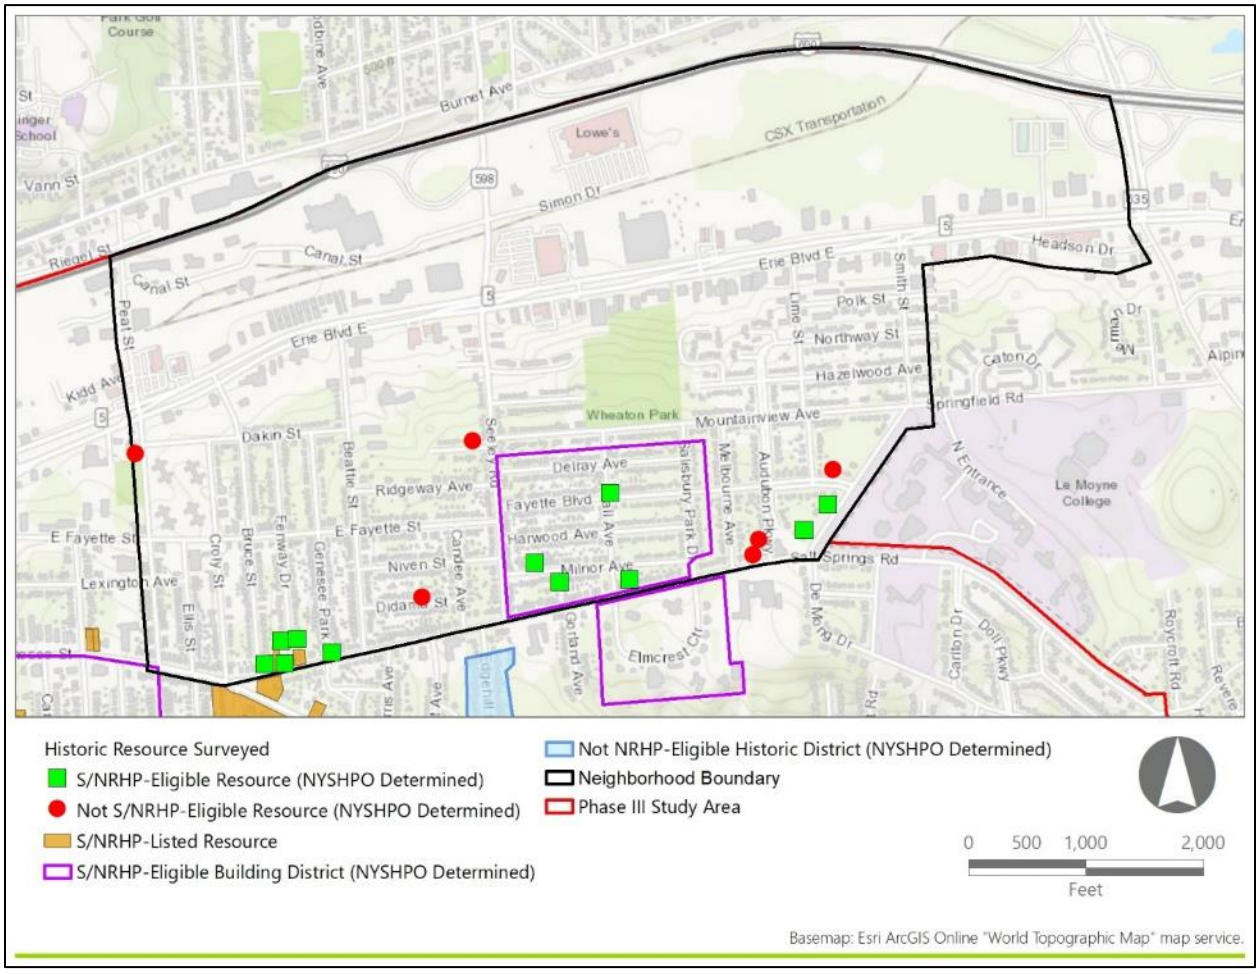

[2] A total of one previously identified resource was found to be an error. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D.

In addition, EDR identified one proposed historic district within the Salt Springs neighborhood which appears to meet S/NRHP eligibility criteria; the proposed district is described below.

Table 2. Historic Resources Survey Results – Salt Springs Neighborhood

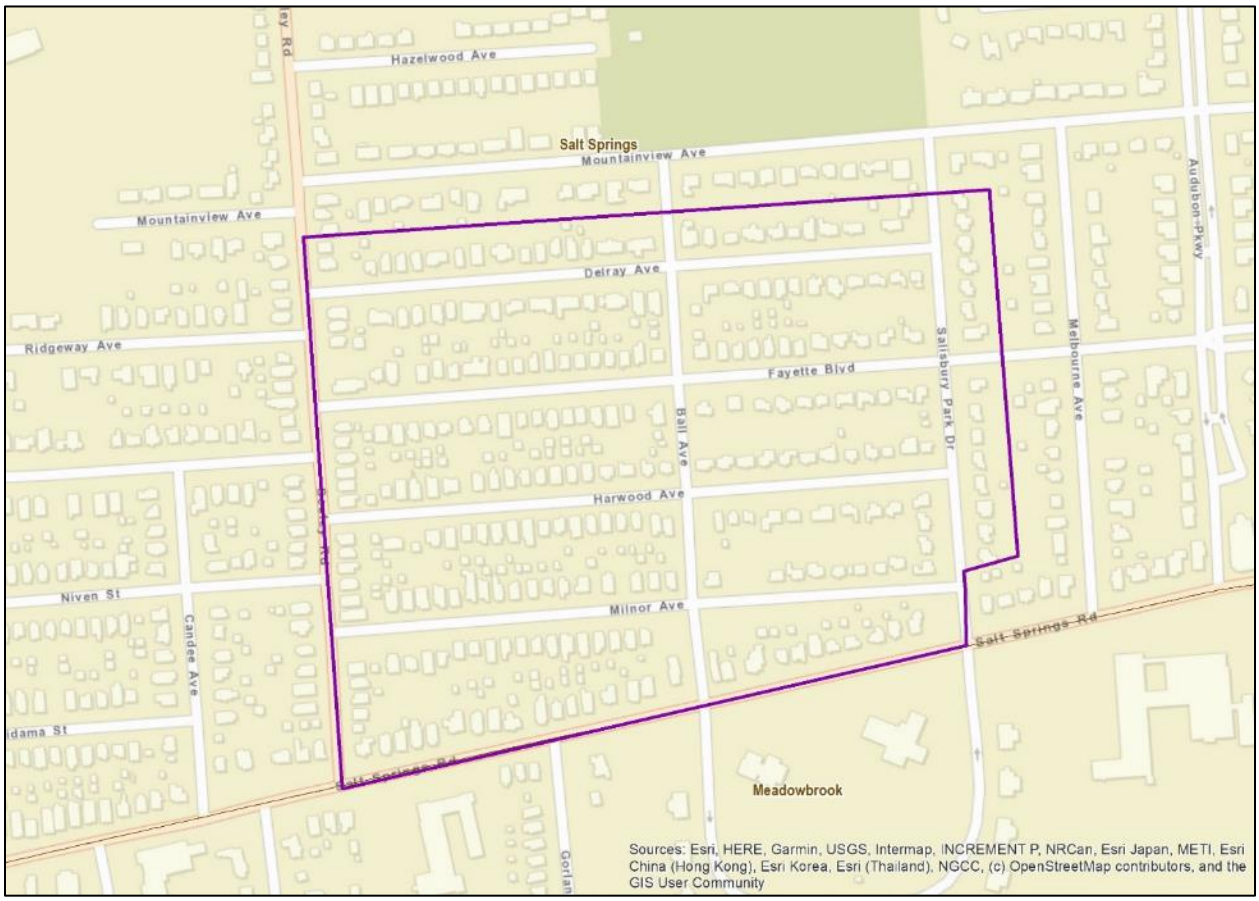

Figure 12. Historic Resources Survey Results – Salt Springs Neighborhood

Montclair-Salisbury Farms Historic District

The proposed Montclair-Salisbury Farms Historic District includes Ball Avenue, Delray Avenue, Fayette Boulevard, Harwood Avenue, Milnor Avenue, Seeley Avenue and Salisbury Park Drive. It is roughly bounded by Seeley Road, Delray Avenue, Salisbury Park Drive, and Salt Springs Road (Figure 13).

Figure 13. Boundary of the proposed Montclair-Salisbury Farms Historic District.

The potential district consists of a densely built collection of similar, and in some cases nearly identical, Cape Cod-style houses, along with numerous mail-order kit homes (Figures 14 and 15). These building types and their arrangement within the district is evocative of the rapid residential development of the city of Syracuse in the early twentieth century. The two portions of the proposed district feature two different distinct building styles. In the Montclair Tract portion, the homes are primarily 1 ½-story Bungalow type houses, or other smaller, mail-order single-family houses. In the Salisbury Farm Tract portion, the houses are primarily 1 ½-story Cape Cod-style homes. They are considered part of the same district because of their shared historic legacy as a concentrated development of small, single-family homes constructed during the early twentieth century, and are visibly distinct from the surrounding neighborhoods. In addition, a historical marker at the corner of Salisbury Park Drive and Salt Springs Road marks the former location of the Wyborn Cemetery (1818-1877), also known as the Salt Springs Cemetery, which was demolished in 1928 (Find A Grave, 2021).

Figure 14. View along Harwood Avenue.
Representative collection of Cape Cod-style houses.

Figure 15. View along Milnor Avenue.
Representative collection of one-and-one-half-story single-family houses.

The preliminary boundary of this district encompasses a neighborhood of mostly small, single-family homes constructed from mail-order kit designs or in a repetitive Cape Cod style. The houses along Salt Springs Road are more varied in their forms and typologies. They include the Italianate-style Ball Estate House and some Greek Revival-style homes. This section of the street also includes the 1 ½-story Bungalows and Cape Cod-style homes, all in varying states of modification, which link to and justify its inclusion within the district boundary. The houses along the east side of Seeley Avenue are more aligned with the smaller types of homes found throughout the district, while those on the west side of the street are larger and more aligned with the types of houses found to the west of the district boundary. This also follows the historic boundary of the Montclair Tract. In addition, the houses on the east side of Salisbury Park Drive are included because they consist primarily of the same Cape Cod-style homes found in the Salisbury Farms Tract portion of the district.

The surrounding streets and blocks are initially excluded due to the difference in the building types and density. For example, to the west of the proposed district the representative building types are larger, consisting of more duplexes and in some instances more decorative homes, while to the east, split-level and late-twentieth-century homes are most prevalent.

Currently the district consists of a collection of small, single-family homes constructed as part of a rapidly developed early-twentieth-century neighborhood. Review of historic maps and aerial photography indicates that the oldest extant house in the proposed district is the recommended S/NRHP-eligible Italianate Ball Estate House at 909 Salt Springs Road, which first appears on Sweet's 1874 *Atlas of Onondaga County* (Sweet, 1874). The development of lots in the district began in the early 1920s, first in the Montclair Tract along Salt Springs Road, Seeley Road, and sporadic buildings erected on the interior streets of Milnor, Harwood and Fayette (Figure 16). During this time, frequent land subdivisions and transactions in this area are recorded in local newspapers (SPS, 1917; Syracuse Journal, 1931). By the late 1930s, the Montclair Tract was more densely developed, and buildings were being constructed in the Salisbury Farms Tract, particularly along Fayette Boulevard (Figure 17). By the mid-1950s, the neighborhood had been fully developed and has remained mostly unchanged since that time.

The Montclair-Salisbury Farms Historic District may be potentially eligible for listing in the S/NRHP under Criteria A and C as an example of an early-twentieth-century residential development of specific building typologies associated with the sustained growth of Syracuse's middle class during the Great Depression era, and as a collection of mail-order homes designed for moderate incomes of the period. The buildings within the district range from the late-nineteenth century (the ca. 1870 Ball Estate House) to the mid-1950s. Therefore, the period of significance is 1870-1955, considering the range of construction of the contributing buildings in the district.

The proposed district consists of a total of 274 properties. Of these 274 properties:

- A total of one property has previously been determined by NYSHPO to be S/NRHP-eligible;
- A total of two properties have not been given a formal determination of S/NRHP eligibility by NYSHPO; and

- A total of 71 properties have previously been determined to not be eligible in CRIS.

There are approximately 224 contributing and 50 non-contributing buildings.

Figure 16. Detail of the Montclair and Salisbury Farms tracts, 1924 Hopkins Atlas of the City of Syracuse, N.Y. and Suburbs.

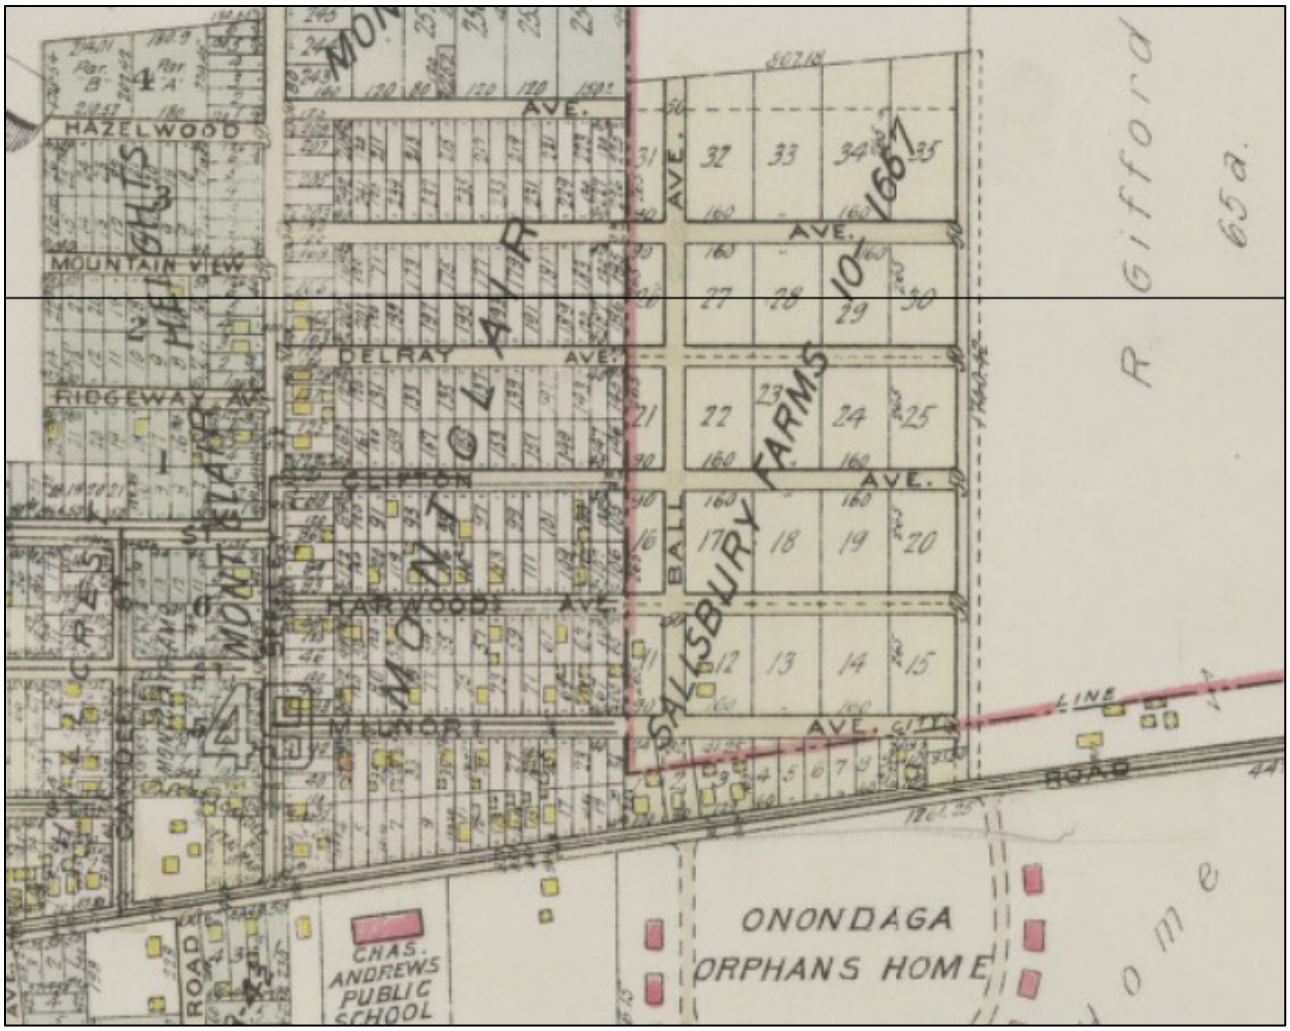

Figure 17. Detail of the Montclair and Salisbury Farms tracts, 1938 Hopkins Atlas of the City of Syracuse, N.Y. and Suburbs.

iii) University Hill

A total of 114 previously identified resources are located in the University Hill neighborhood, including 11 S/NRHP-listed resources (including two historic districts), 29 S/NRHP-eligible resources (NYSHPO determined; including one historic district), and 74 resources whose S/NRHP eligibility had not been formally evaluated.

A total of 132 resources were evaluated within the University Hill neighborhood, including 114 previously identified resources and 22 newly identified resources.[3] Of these 132 resources, EDR recommended that 59 meet National Register eligibility criteria (including the SUNY ESF Historic District, USN 06740.014825), which NYSHPO concurred with. A total of 23 resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. In addition, 39 resources were determined to be

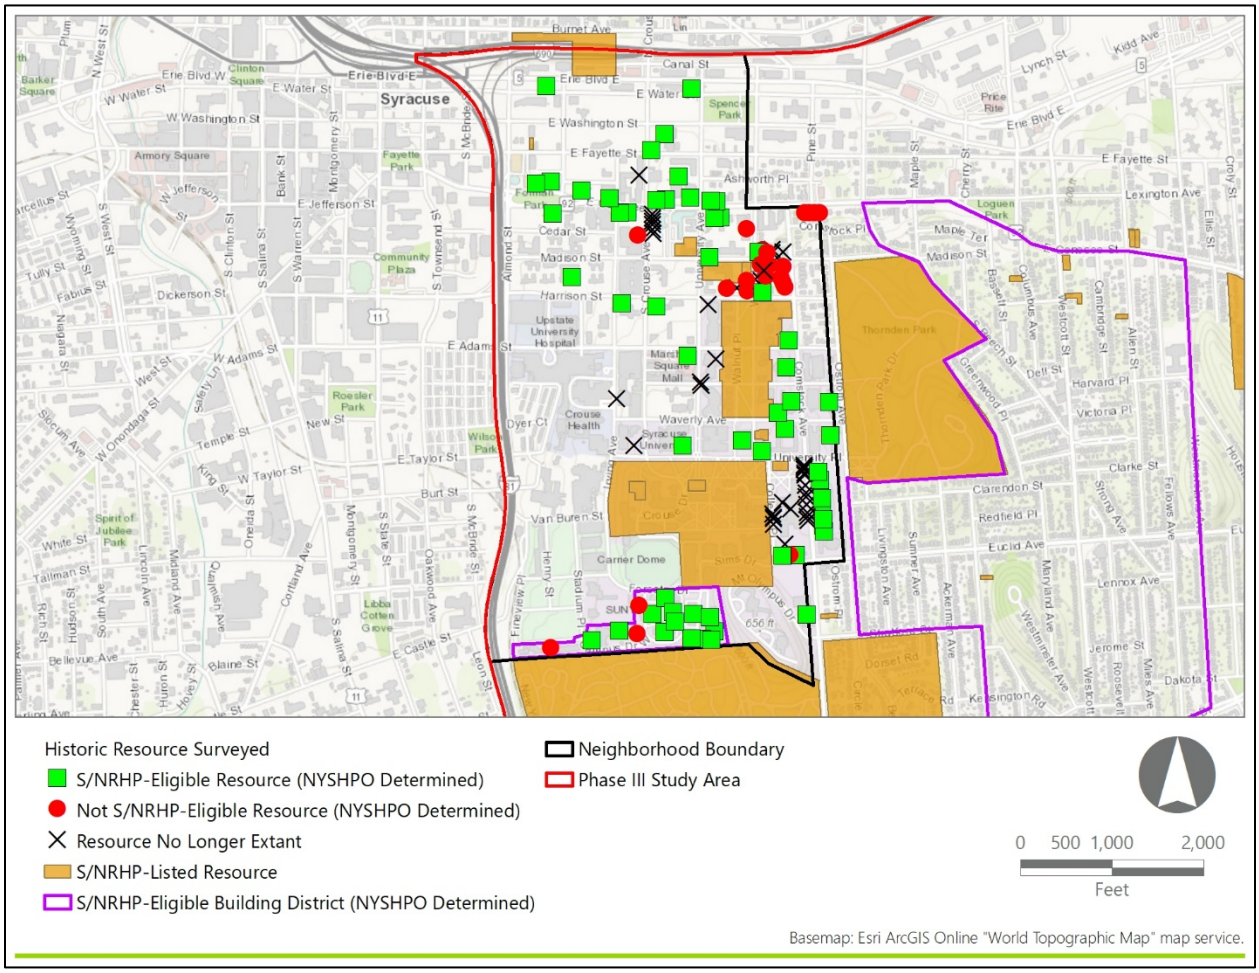

[3] A total of four previously identified resources were found to be errors. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D.

no longer extant. Survey results within the University Hill neighborhood are summarized in Table 3 and depicted on Figure 18.

Table 3. Historic Resources Survey Results – University Hill Neighborhood

S/NRHP-Listed Resources	S/NRHP-Eligible Resources (NYSHPO Determined)	Not S/NRHP-Eligible Resources (NYSHPO Determined)	Resources No Longer Extant	**Total**
11	59	23	39	**132**

Figure 18. Historic Resources Survey Results – University Hill Neighborhood

iv) Westcott

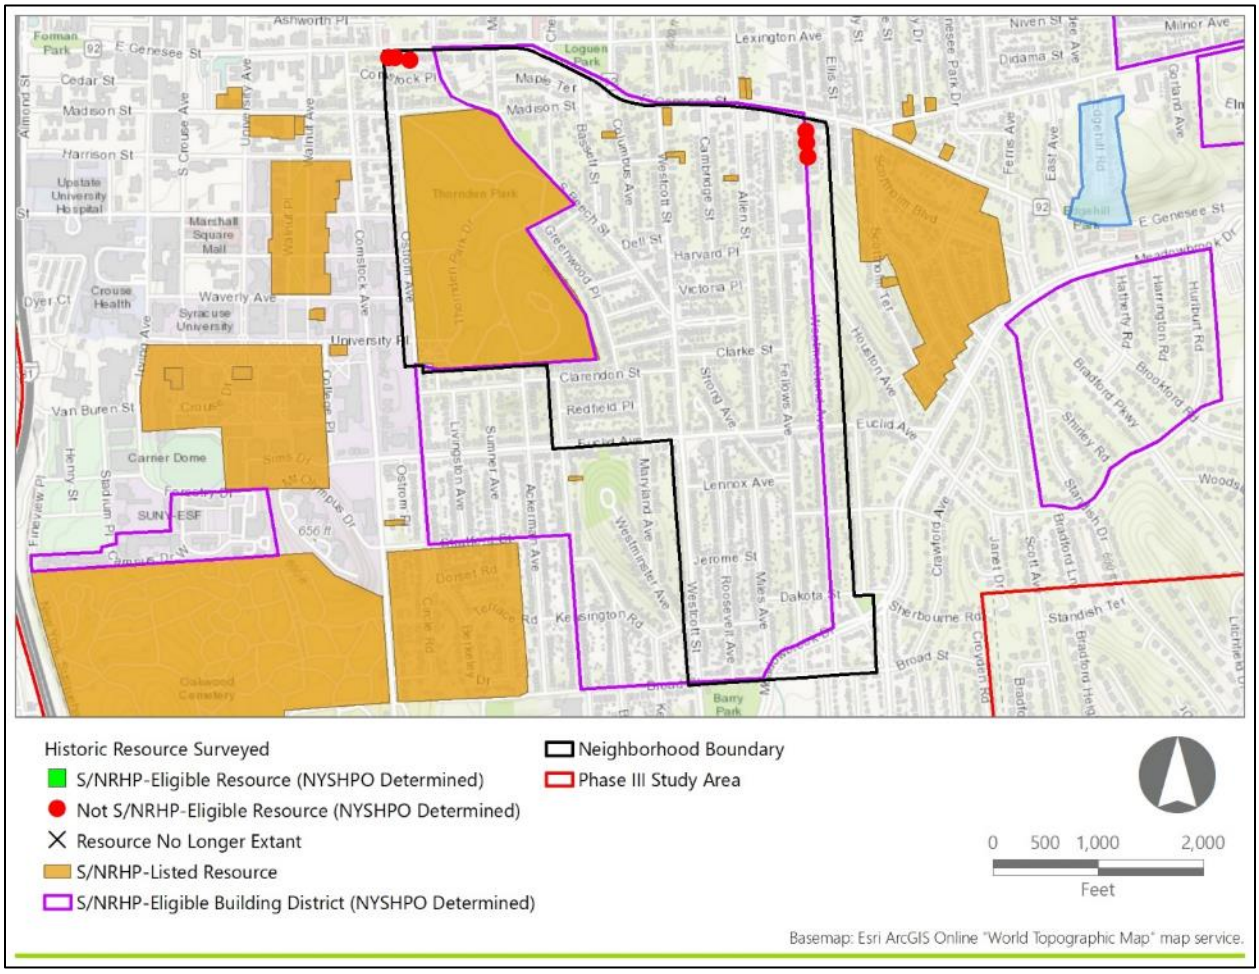

A total of 12 previously identified resources are located in the Westcott neighborhood, including five S/NRHP-listed resources (including one historic district), and five S/NRHP-eligible resources (including one historic district), and two resources whose S/NRHP eligibility had not been formally evaluated. As stated in Section 3.2, based on consultation with the Project Advisory Committee, all previously identified resources within the Westcott neighborhood which are contributing to the S/NRHP-eligible Westcott Historic District were not surveyed by EDR.

A total of 12 resources were evaluated within the Westcott neighborhood.[4] Of these 12 resources, EDR recommended that one met National Register eligibility criteria (the Westcott Historic District), which NYSHPO concurred with. A total of six resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. Survey results within the Westcott neighborhood are summarized in Table 4 and depicted on Figure 19.

Table 4. Historic Resources Survey Results – Westcott Neighborhood

Figure 19. Historic Resources Survey Results – Westcott Neighborhood

[4] A total of two previously identified resources were found to be errors. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D.

v) Meadowbrook

A total of 13 previously identified resources are located in the Meadowbrook neighborhood, including seven S/NRHP-listed resources (including one historic district), three S/NRHP-eligible resources (NYSHPO determined), and three resources whose S/NRHP eligibility had not been formally evaluated.

A total of 52 resources were evaluated within the Meadowbrook neighborhood, including 13 previously identified resources and 39 newly identified resources.[5] Of these 52 resources, EDR recommended that 43 meet National Register eligibility criteria, including three proposed historic districts. NYSHPO concurred with a total of 39 of these resources, including two of EDR's proposed historic districts. A total of two resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. Survey results within the Meadowbrook neighborhood are summarized in Table 5 and depicted on Figure 20.

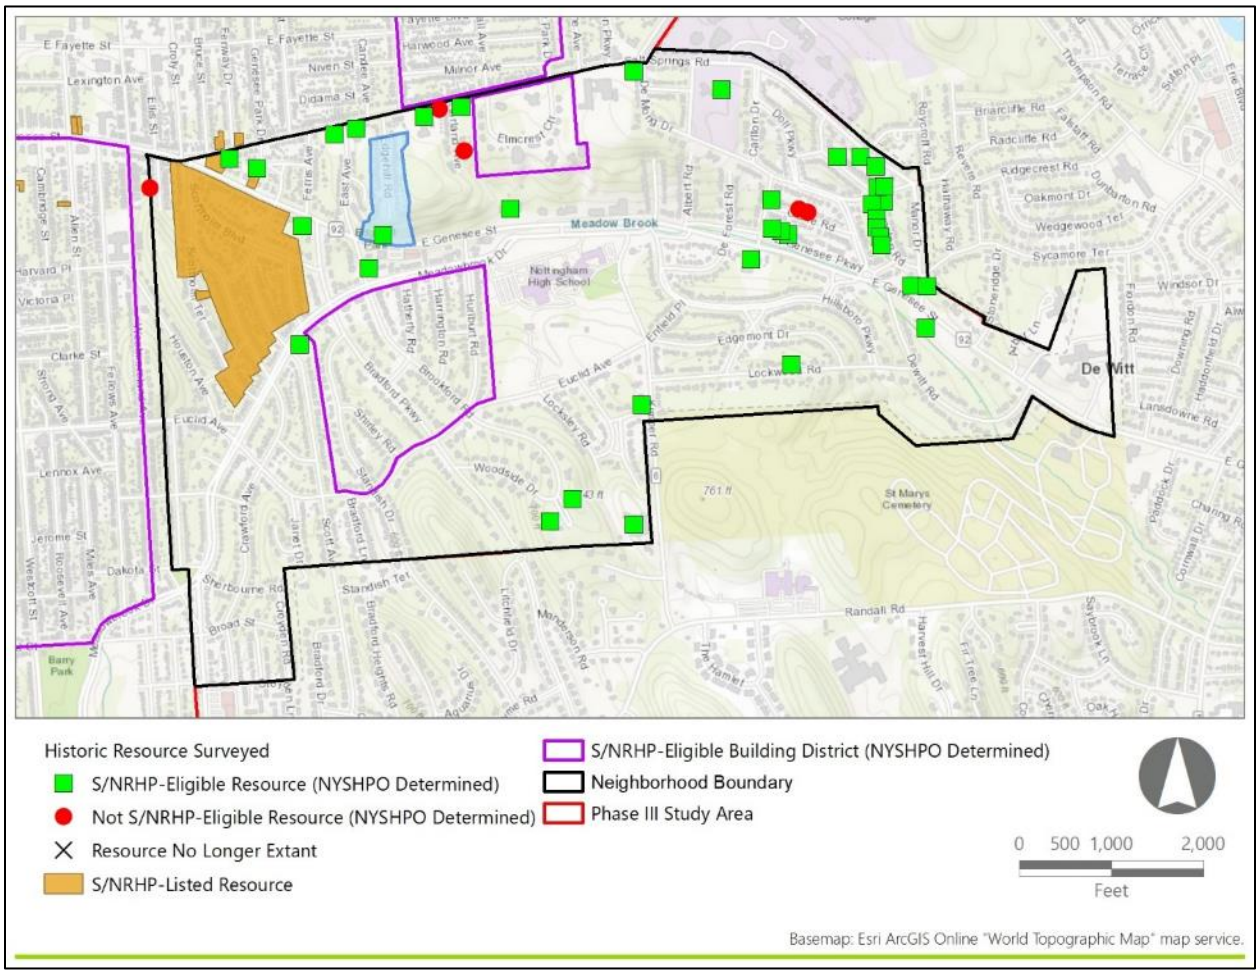

EDR identified two proposed historic districts within the Meadowbrook neighborhood which appear to meet S/NRHP eligibility criteria; the proposed districts are described below.

Table 5. Historic Resources Survey Results – Meadowbrook Neighborhood

Figure 20. Historic Resources Survey Results – Meadowbrook Neighborhood

Onondaga Orphan's Home Historic District

The proposed Onondaga Orphan's Home Historic District is located at 960 Salt Springs Road. The district boundaries are wholly within the parcel owned by Elmcrest Children's Home within the Meadowbrook neighborhood. It consists of the buildings historically related to the Onondaga Orphan's Home situated around Elmcrest Children's Center Road (Figure 21). It is bounded by Salt Springs Road to the north, and lightly forested areas to the east, south, and west.

This proposed historic district consists of a collection of 13 two-story Colonial Revival-style residence halls, a one-story administrative support building organized around a semicircular driveway (Elmcrest Children's Center Road), and two modern one-story office buildings located along Salt Springs Road. A one-story metal pole barn is also on the property, located off a spur from Elmcrest Children's Center Road. The property also features athletic fields and open spaces. The Colonial Revival-style residence halls are similar in form but vary slightly in the expression of architectural details from one building to another. Of the 13 Colonial Revival-style buildings, nine of them are nearly identical two-story buildings with five bays on the façade and three bays at each side elevation. These nine buildings all feature the same limestone door

surround, triple windows on the first story, and tripartite, flat-roofed dormers at the center of the façade-side slope. Building 8, which has a large gymnasium addition to its south, features pilasters and a fanlight above a pair of windows that appear to have once been a doorway. The Sam Schneier Administration building features a balcony above the entrance. The Wieting-Johnson Memorial Hospital (currently the Elmcrest School), located on a spur off Elmcrest Children's Center Road, features a slightly more stylized version built in brick, with an arched door surround, a row of top lights above the entrance, and limestone keystones above each window. The modern administration buildings are one-story, modern commercial structures.

Figure 21. Boundary of the proposed Onondaga Orphan's Home Historic District.

The Onondaga Orphan's Home was founded in 1835 as the Syracuse Free School, an organization that raised funds to educate poor children. Ten years later the mission shifted, and the organization occupied a building at the corner of Salina and East Onondaga Streets as the Syracuse Orphan's Asylum. In 1922, the organization moved to the current location on Salt Springs Road. Review of the 1924 Hopkins *Atlas of the City of Syracuse* (Figure 22) indicates the buildings currently along Elmcrest Children's Center Road were constructed between 1922 and 1924 and were designed by Syracuse Architect Gordon Almond Wright. The Saul Schneier Administrative Building is depicted as two separate buildings at oblique angles at the southeast corner of the collection of buildings. The Onondaga Orphan's Home experienced a high level of occupancy during the Great Depression, as families left their children to be cared for during periods of

extreme poverty (Croyle, 2020). In 1931, the Wieting-Johnson Memorial Hospital (Elmcrest School) was built, designed by architect Melvin King (Syracuse American, 1931). By the 1938 Hopkins *Atlas of the City of Syracuse* (Figure 23), a third portion of the Saul Schneier Administrative Building had been constructed. In the post-World War II-era the organization responded to the expansion of social services and foster programs by offering services to children with specific emotional or behavioral issues. The three main blocks of the Saul Schneier Administration building were connected by a central addition ca. 1985. The H. Thomas and Carroll A. Clark Early Childhood Education Center, on Salt Spring Road opposite Salisbury Park Drive, was constructed ca. 2000, and the building opposite Ball Avenue was built in 2010. The period of significance is between 1922 and 1931, the years during which the contributing buildings were originally constructed.

The district is potentially eligible for listing in the S/NRHP under Criteria A and C as an extant historic site dedicated to the 186-year legacy of education and care of disadvantaged children in Onondaga County, and as a collection of Colonial Revival-style buildings with a relatively high degree of integrity attributed to two noted Syracuse Architects, Melvin King and Gordon A. Wright.

Figure 22. Detail of the Onondaga Orphan's Home, 1924 Hopkins Atlas of the City of Syracuse, N.Y. and Suburbs.

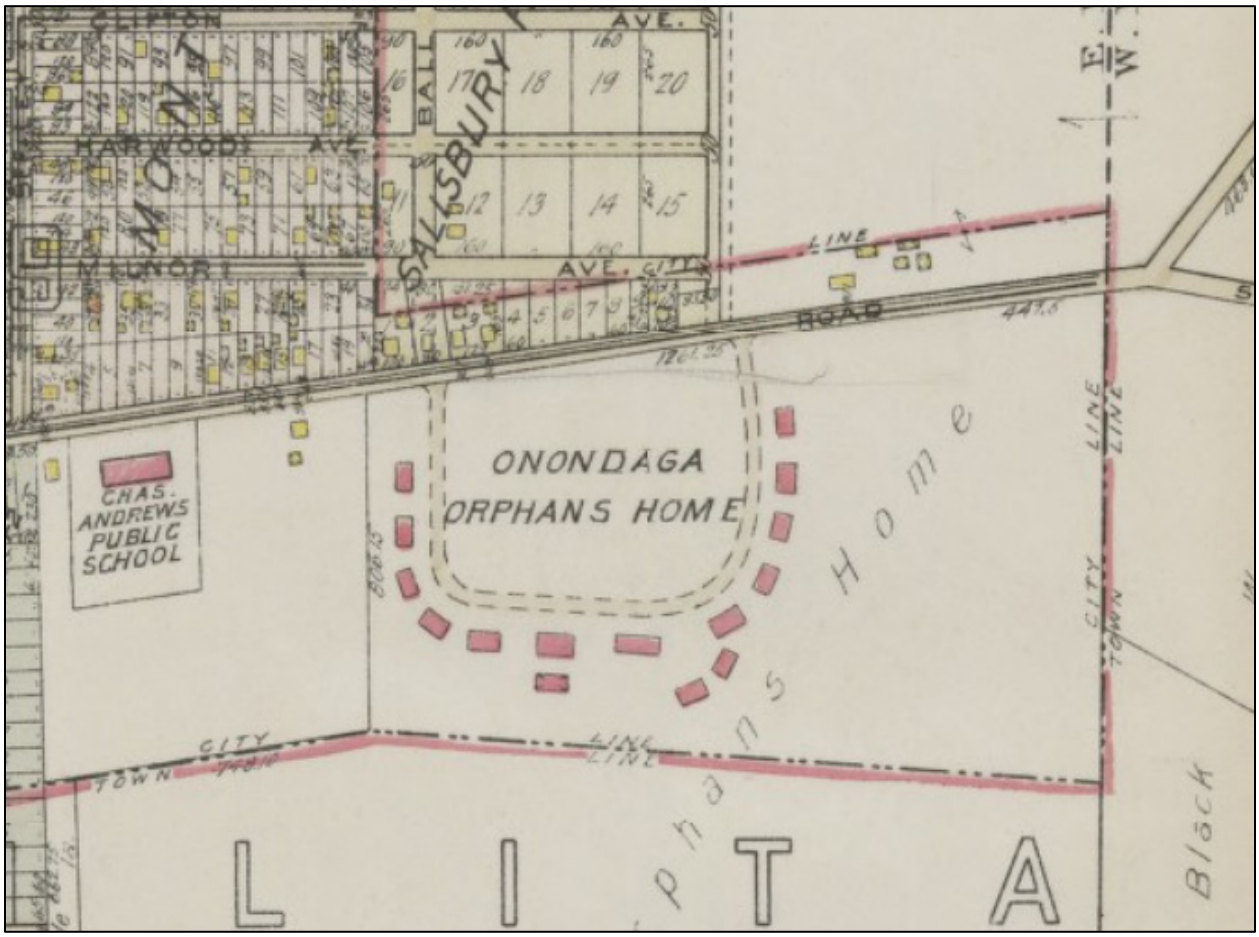

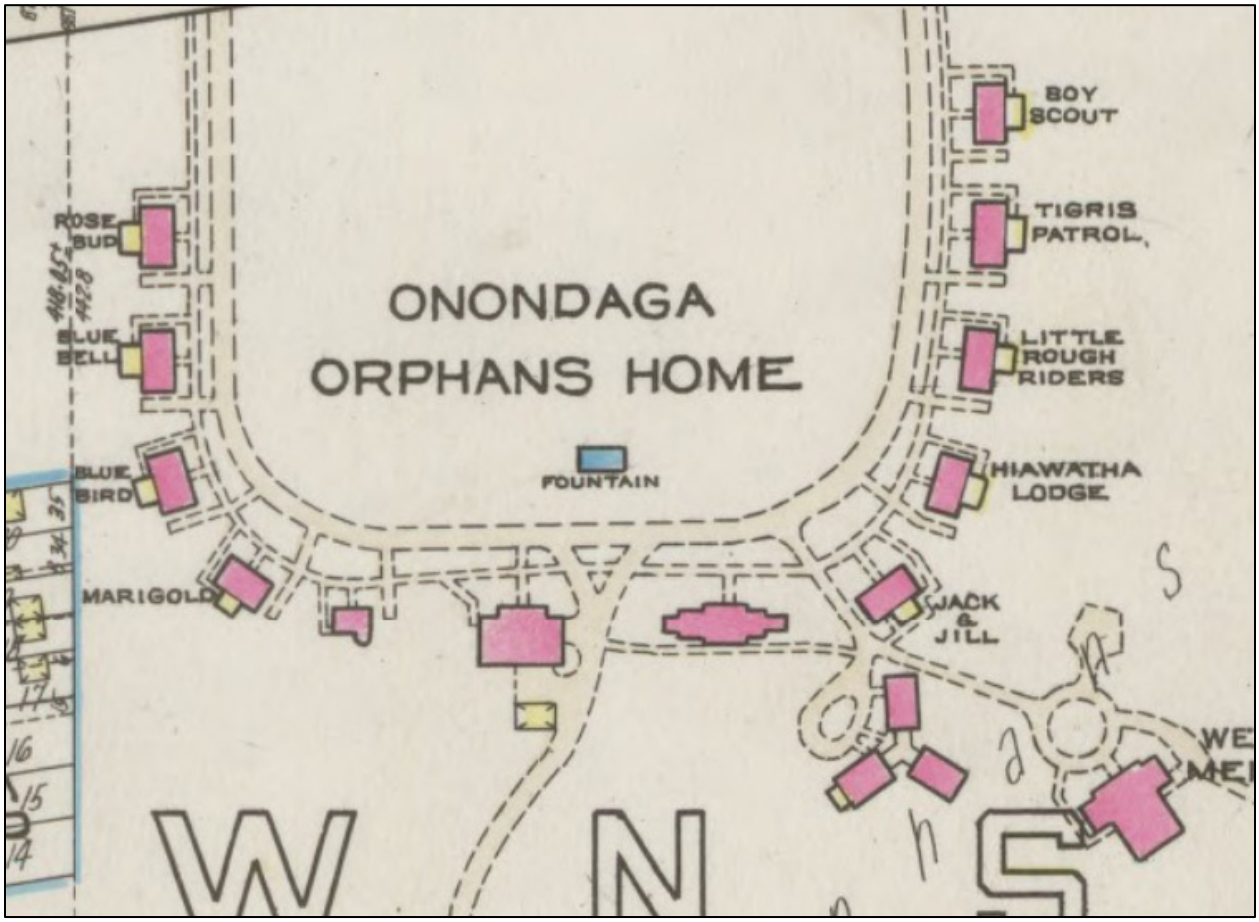

Figure 23. Detail of the Onondaga Orphan's Home, 1938 Hopkins Atlas of the City of Syracuse, N.Y. and Suburbs.

Bradford Hills Historic District

The proposed Bradford Hills Historic District encompasses Sections A and B of the Bradford Hills Tract, bounded by Standish Drive, Meadowbrook Drive, Euclid Avenue, and Hurlburt Road (Figure 24).

The proposed district consists of a planned residential neighborhood platted in the late 1920s with residences built both before and after the Second World War. The layout of the Bradford Hills Tract followed the pattern of gently curving streets established in the Scottholm Tract to the west. Bradford Parkway was established as the main boulevard and is divided by a median where it intersects with Meadowbrook Drive. The district is characterized by generous lot sizes (several houses occupy double or triple lots) and deep setbacks, with streetscape amenities including curbs, sidewalks, and streetlamps. Tudor Revival, Colonial Revival, Ranch, and Raised Ranch style homes predominate (Figures 25 and 26). The district retains the feeling of a planned upscale suburban neighborhood of the mid-twentieth century.

Figure 24. Boundary of the Proposed Bradford Hills Historic District.

The Bradford Hills Tract was developed between about 1928 and 1965 on the former Ambrose Kimber farm. Building lots were sold by Hills & Company from an "English" style office on the corner of Harrington and Winthrop (later renamed Brookford) Roads. Hurlburt, Harrington, and Winthrop Roads were paved in 1928, while Euclid Avenue was still under construction. Home sites were sold as early as June of that year, when the *Syracuse American* noted that several lots had recently been sold "to persons who expect to build elaborate homes, plans for which must be approved by the Bradford Hills Corp" (Syracuse American, 1928).

It appears that the developer sold lots directly to individual homeowners, rather than build houses on speculation. Early houses in the tract were in the Tudor Revival and Colonial Revival styles, and many were designed by notable local architects including Merton Granger (SUL, 2021). A few dozen homes were built before construction presumably halted or slowed significantly during the Great Depression (Figure 27). As a result, the neighborhood today contains a mix of pre-war and post-war housing. Residences built after the Second World War are generally Ranch or Raised Ranch style homes. Roughly two thirds of lots in the district were built out by 1953 (Sanborn, 1953; Figure 28). Onondaga County Real Property records indicate that most of the remaining lots were developed by 1965 (Onondaga County, 2021).

Bradford Hills residents formed Syracuse's first incorporated neighborhood association, the Bradford Hills Property Owners' Association, Inc., in 1943. The association raised funds and organized activities and improvement projects. A 1946 newspaper article noted that the group had recently re-activated an "architectural committee" to "see that any future homes conform to specifications established when the tract was started" (SPS, 1946). Unlike modern-day homeowners' associations in which membership is often mandatory for residents of planned developments, membership in the Bradford Hills Property Owners' Association was optional.

The district appears to meet National Register Criteria A and C as an intact example of a planned residential development of the mid-twentieth century containing notable examples of Tudor Revival and Colonial Revival style houses of the 1920s and notable examples of Ranch style houses of the post-WWII era. The district also contains many typical examples of Ranch and Raised Ranch style houses. The differences in architectural styles between the pre-war and post-war homes clearly illustrates the impact of the Great Depression and Second World War on the homebuilding industry locally and nationally. The district may also be significant for its association with the development of neighborhood associations. Further research may yield additional information in this area. The proposed period of significance is 1925 to 1965. The proposed district boundary includes sections A and B of the Bradford Hills Tract. Sections C through E of the tract were largely undeveloped until after the Second World War; as a result, they lack the amenities of the earlier sections (such as sidewalks and streetlights) and are of a different architectural character.

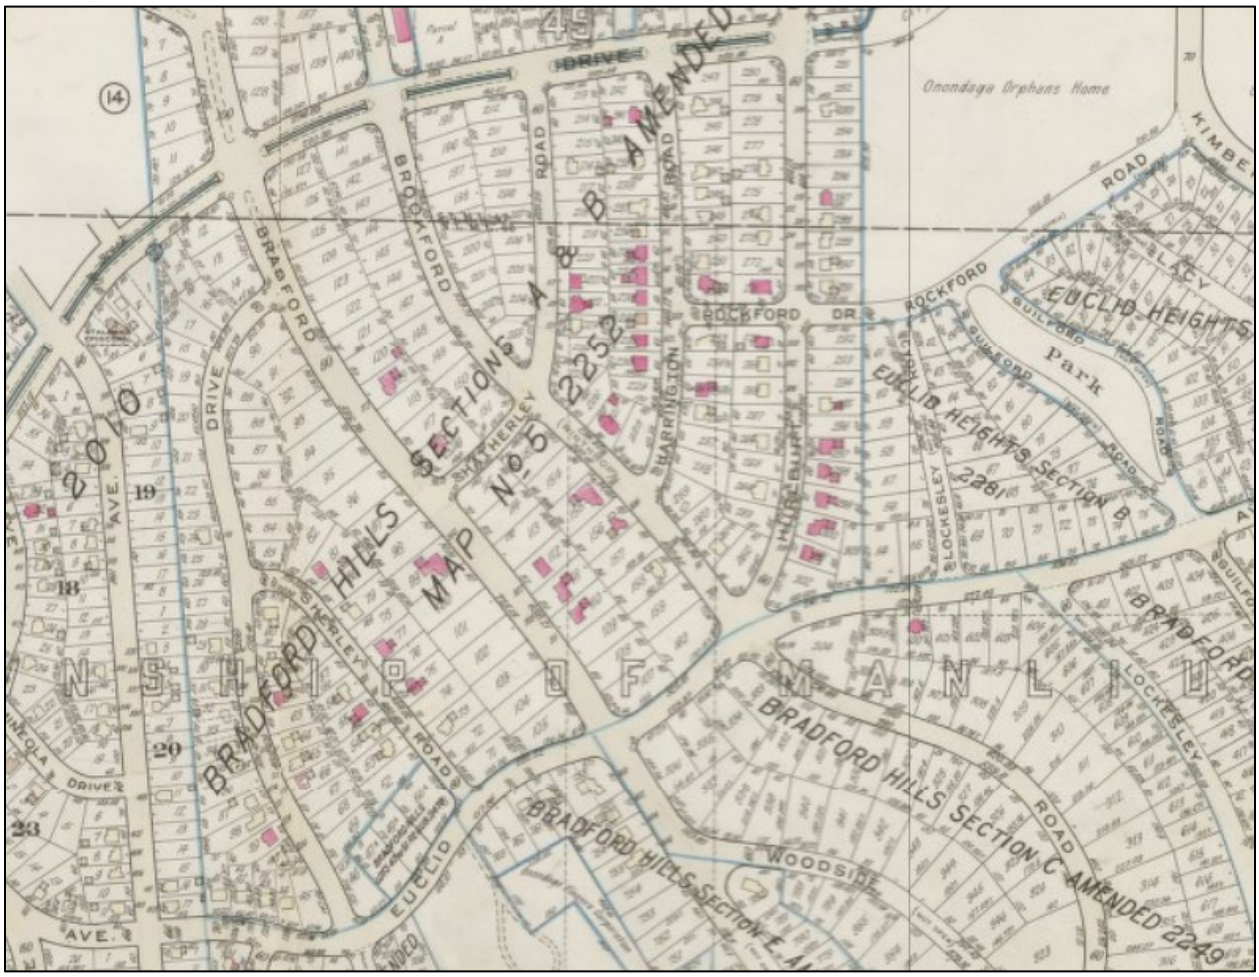

Figure 25. View to the Northeast along Bradford Road.

Figure 26. 101 Standish Drive.

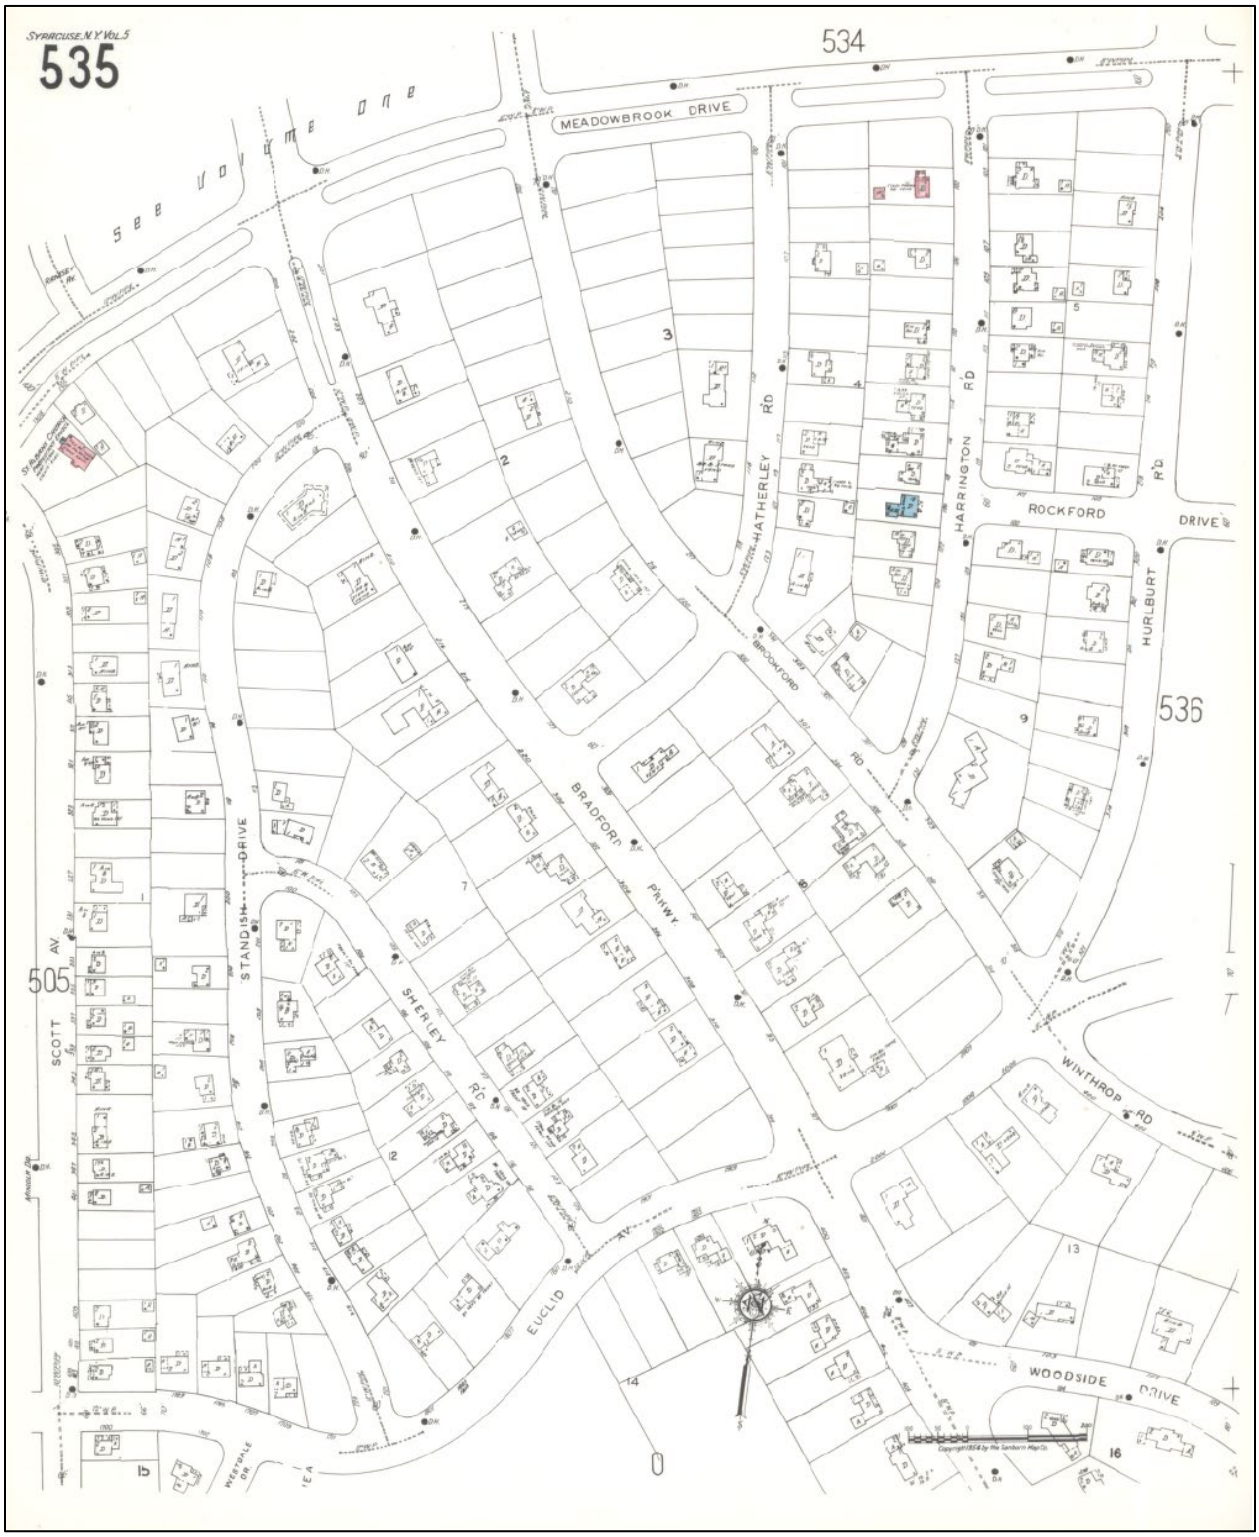

Figure 27. Detail of the Bradford Hills Tract, 1938 Hopkins Atlas of the City of Syracuse, N.Y. and Suburbs.

Several dozen houses were built in sections A and B by 1938, but many vacant lots remained. Sections C through E are to the south and east.

Figure 28. Detail of Sections A and B the Bradford Hills Tract, 1953 Sanborn Fire Insurance Map from Syracuse, Onondaga County, New York.

Roughly one third of the lots within the proposed district remained unbuilt in 1953.

vi) University Neighborhood

A total of six previously identified resources are located in the University neighborhood, including five S/NRHP-listed resources (including one historic district), and one S/NRHP-eligible historic district (NYSHPO determined).

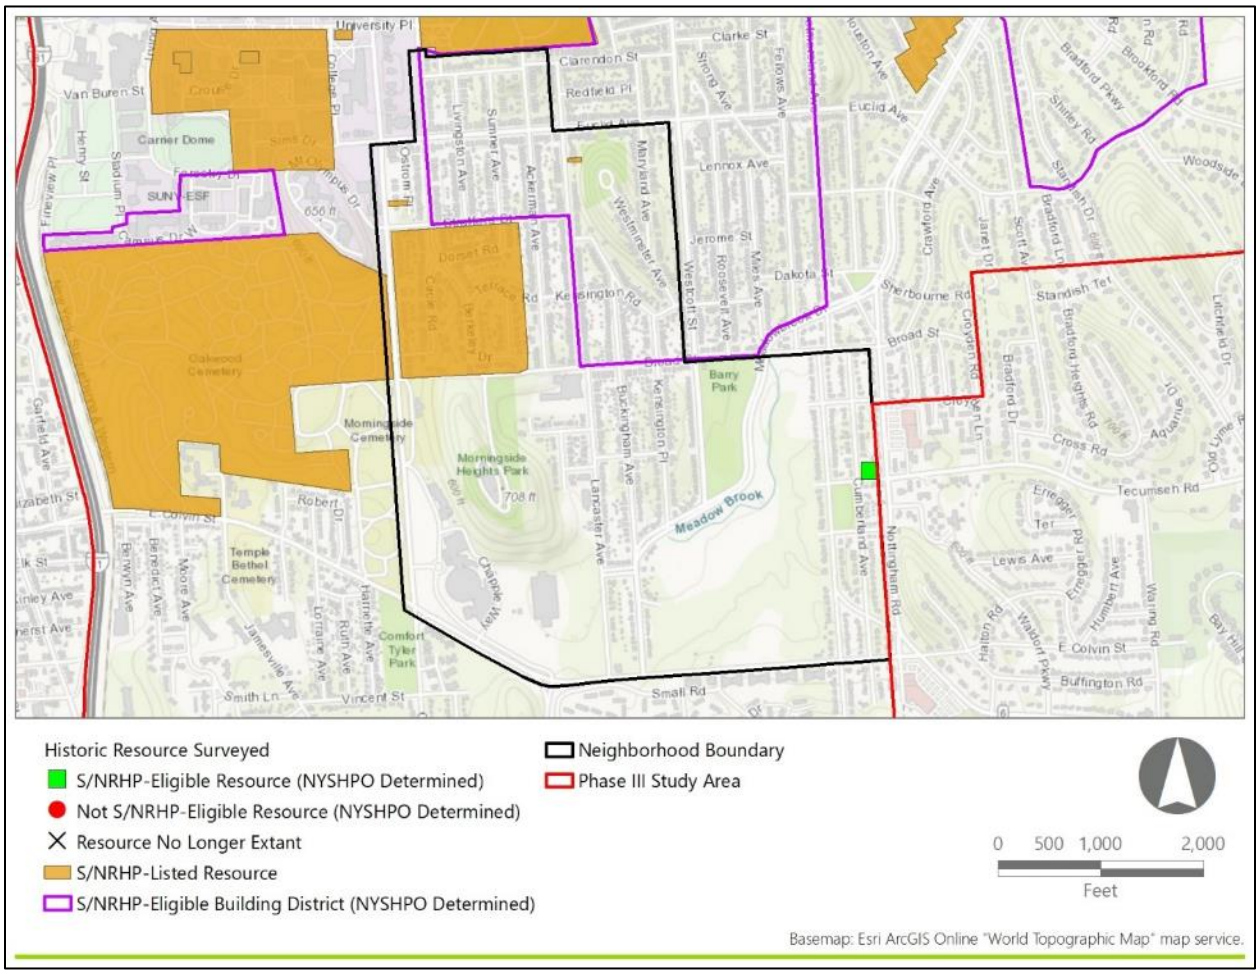

A total of seven resources were evaluated within the University Neighborhood, including five previously identified resources and one newly identified resource. EDR recommended that the one newly identified resource met National Register eligibility criteria, which NYSHPO concurred with. Survey results within the University Neighborhood are summarized in Table 6 and depicted on Figure 29.

One S/NRHP-eligible historic district, the Westcott Historic District, is partially within the University Neighborhood. As stated in Section 3.2, based on consultation with the Project Advisory Committee, all previously identified resources within the University Neighborhood which are contributing to the S/NRHP-eligible Westcott Historic District were not surveyed by EDR.

Table 6. Historic Resources Survey Results – University Neighborhood

5	1	-	-	**6**

Figure 29. Historic Resources Survey Results – University Neighborhood

vii) South Campus

No previously identified resources are located in the South Campus neighborhood. EDR did not identify any S/NRHP-eligible resources in the neighborhood.

viii) Outer Comstock

A total of six previously identified resources are located in the Outer Comstock neighborhood, including one S/NRHP-listed historic district, and five resources whose S/NRHP eligibility had not been formally evaluated.

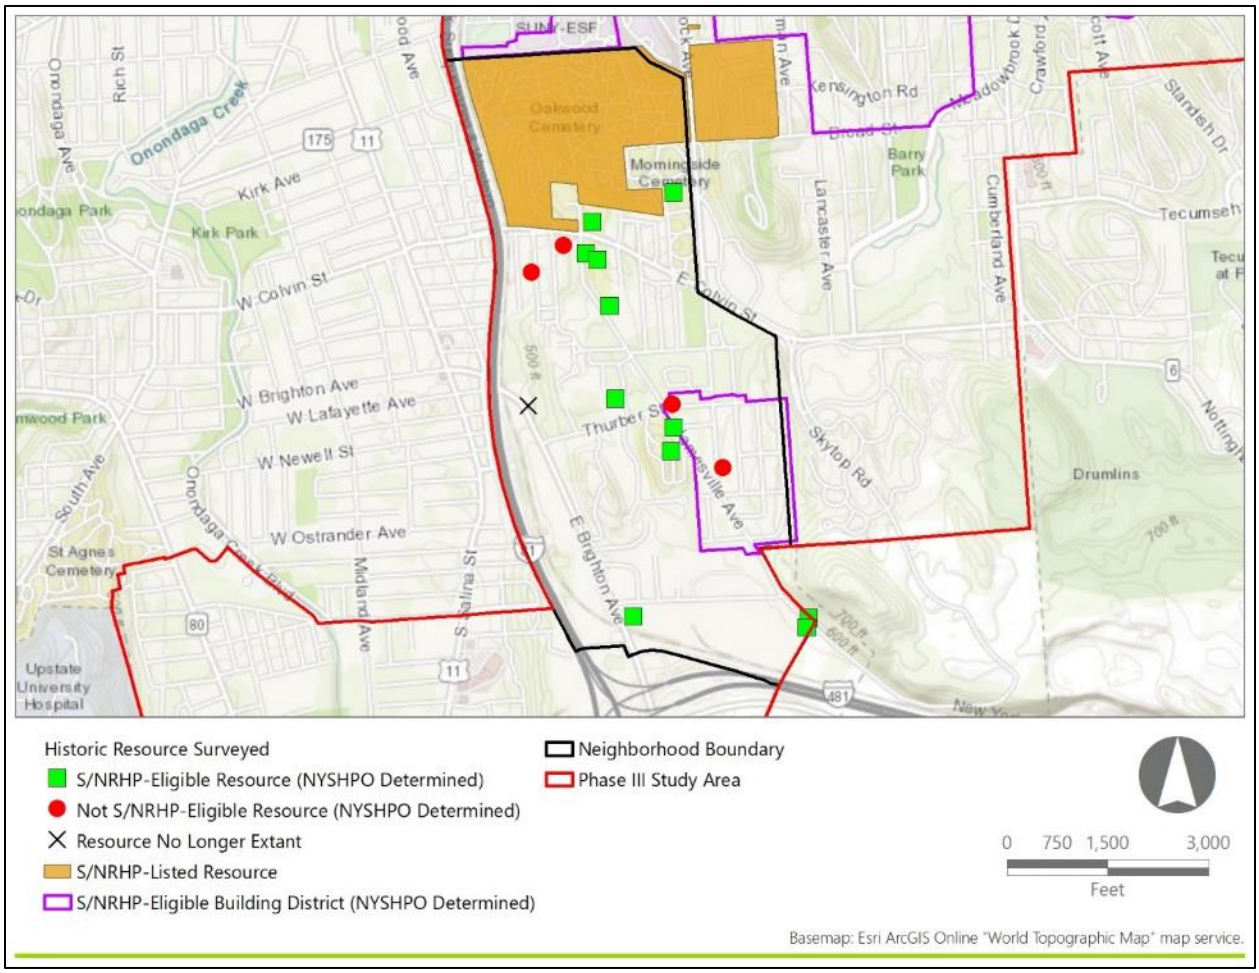

A total of 18 resources were evaluated within the Outer Comstock neighborhood, including six previously identified resources and 12 newly identified resources. Of these 18 resources, EDR recommended that 12 meet National Register eligibility criteria, which NYSHPO concurred with. A total of four resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. In addition, one resource was determined to be no longer extant. Survey results within the Outer Comstock neighborhood are summarized in Table 7 and depicted on Figure 30.

In addition, EDR identified one proposed historic district within the Outer Comstock neighborhood which appears to meet S/NRHP eligibility criteria; the proposed district is described below. Several of the newly identified S/NRHP-eligible resources within the Outer Comstock neighborhood are cemeteries established in the late nineteenth and early twentieth centuries by Jewish congregations and secular Jewish organizations. EDR identified these cemeteries as a potential non-contiguous S/NRHP-eligible historic district; NYSHPO concurred that the cemeteries are individually S/NRHP-eligible but recommended further research into the cemeteries and into the viability of a non-contiguous historic district, which is outside the purview of this survey. Because of their thematic relationship, these cemeteries are described as a group below.

Table 7. Historic Resources Survey Results – Outer Comstock Neighborhood

Figure 30. Historic Resources Survey Results – Outer Comstock Neighborhood

Empire State Park Tract Historic District

A potential historic district in the Outer Comstock neighborhood bounded by Jamesville Avenue, Diana Avenue, Thurber Street, Roe Avenue, Jean Avenue, and Tejah Avenue (Figure 31).

Figure 31. Boundary of the proposed Empire State Park Tract Historic District.

The district consists of modestly scaled, one- and two-story detached residences built from the late 1940s to about 1980. Midcentury Modern, Ranch, Split Level, and Raised Ranch style homes are predominant (Figures 32 and 33), with a handful of modest Queen Anne style houses which were built in the early twentieth century. Houses built in the late 1940s and early 1950s are generally single-story, asymmetrical compositions with low shed roofs and deep eave overhangs, prominent chimneys, and attached garages. Later houses in the Ranch, Raised Ranch, or Split-Level styles typically have gable or hipped roofs, contrasting wall materials (often, brick and clapboard or shingle), and attached garages. The proposed district retains the look and feeling of a post-WWII planned neighborhood with relatively few noncontributing buildings. The houses retain an overall high degree of integrity, with few major alterations.

Much of the Empire State Park Tract was platted by 1892 but development stalled and the overwhelming majority of lots remained unbuilt until after the Second World War (Vose, 1892; Hopkins, 1938). The earliest homes (late 1940s to early 1950s) appear to have been exclusively designed by Gordon P. Schopfer and built by Mayer and Rebhahn Builders (SPS, 1949).

Several of the homes were "qualified" by the Revere Quality House institute. The institute was established by Revere Copper and Brass, Inc. of Rome, New York in 1938 to promote quality design and construction of single-family homes (as well as to promote the use of the company's products). Like many companies, Revere Copper and Brass pivoted in the late 1940s from wartime production to the manufacture of building materials, which contributed to the development of new building forms and materials in the postwar era. By 1949, the Revere Quality House institute had become a division of the Southwest Research Institute. The house at 449 Thurber Avenue was designed by Gordon P. Schopfer and selected as one of 10 outstanding single-story homes in 1949 by the institute. The house was opened to the public as an exhibition house sponsored by the local Junior Chamber of Commerce (Jaycees) along with the builders and architect to promote the Empire State Park Tract and to raise funds for the Jaycees' charitable activities (SPS, 1949; Figure 35).

The proposed period of significance for the Empire State Park Tract is circa 1946 to 1970. Further research may yield a more focused period of significance. The proposed district boundary largely reflects the boundary of the Empire State Park Tract at the time it was developed.

Collectively, the houses of the Empire State Park Tract appear to meet National Register Criteria A and C as an example of a planned neighborhood built in the post-WWII era to satisfy a growing demand for suburban style housing. The district derives additional significance from its association with the Revere Quality House division of the Southwest Research Institute, which helped to promote the construction of quality affordable homes in communities throughout the United States.

Copper adds to the Value

OF THE REVERE QUALITY HOUSE

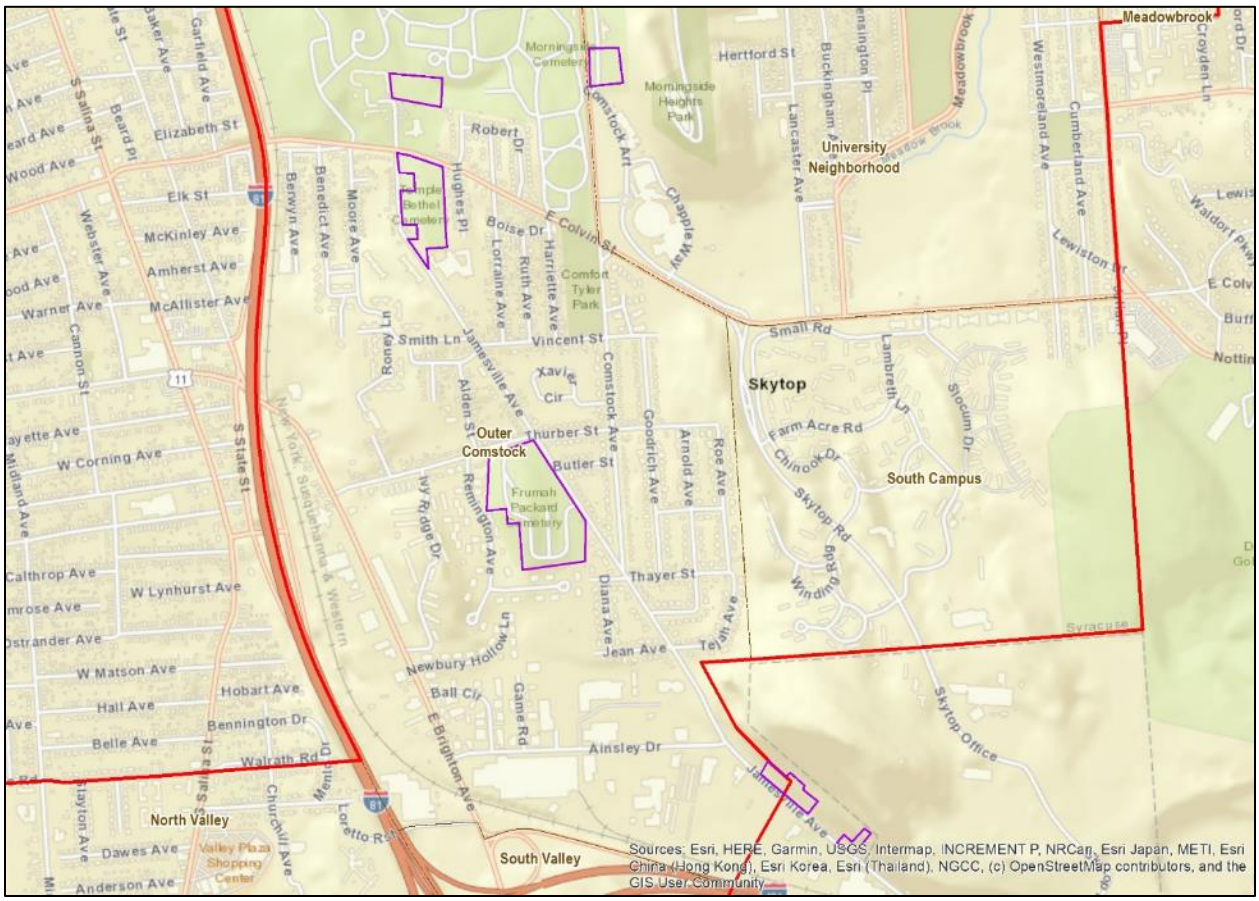

MOST of the features that make the Revere Quality House exceptionally high in value are easily seen. But as you go through this interesting house, remember that there are unseen values too—particularly in copper. Hot and cold water lines are all Revere Copper Water Tube, the tube that cannot rust and always supplies a full, free flow of sparkling clear water. And here's another high quality feature: all the vital joints in the roof, at the chimney, and over all windows and exterior doors are flashed with Revere Copper, the solid, rustless metal that seals out water, protects the building and its contents. Wise builders use copper for permanent value because even a small leak will cost much more to fix than to prevent.

Floor plan of the Revere Quality House on Thurber Street in the Empire State Park Tract. House designed by Gordon P. Schopfer, A.I.A., architect, 1220 Comstock Ave., Syracuse. Builders (who give veterans preference) Mayer and Rebhahn, 203 Roycroft Road, Syracuse.

Jewish Cemeteries of Syracuse's Eastside

A total of 13 separate Jewish cemeteries are located along Jamesville Avenue, East Colvin Street, and Comstock Avenue between Oakwood Cemetery and Skytop Road (Figure 36).

Figure 36. Locations of Jewish Cemeteries of Syracuse's Eastside.

The 13 cemeteries occupy 16 separate tax parcels generally ranging in size from less than half an acre to over 3.5 acres. Together, these 16 parcels form six contiguous tracts which are sometimes occupied by more than one congregation. For example, the large cemetery at the southeast corner of Jamesville Avenue and East Colvin Street collectively referred to as "Mt. Sinai" contains the Beth Israel, Rosenbloom, Beth El, Linas Hatzedek, and Poiley Tzedek Cemeteries and comprises eight tax parcels (Old Rose Cemetery, an earlier non-Jewish cemetery in use from about 1844 to 1904, occupies two additional tax parcels on the site). Two of the cemeteries appear to have been established as reserved sections within the larger Oakwood and Morningside Cemeteries.

The 13 Jewish Cemeteries of Syracuse's Eastside include:

- Beth Sholom-Chevra Shas Cemetery (also known as Section T of Oakwood Cemetery), located on the east side of Comstock Avenue, established following the merger of Beth Sholom and Chevra Shas congregations;
- Young Israel-Shaarei Torah Cemetery (also known as Sections 129 and 130 of Oakwood Cemetery), located on the southern edge of Oakwood Cemetery;
- Rosenbloom Cemetery, 810-812 East Colvin Street, formerly known as Adath Jeshurun Cemetery, founded in 1864 (Figure 37);

- Beth El Cemetery, 830-834 East Colvin Street, established Temple Beth El, formed in 1965 by the merger of Beth Israel and Poiley Tzedek;
- Beth Israel Cemetery, 225 Jamesville Avenue;
- Linas Hatzedek Cemetery (also known as Zedeck Va'emes Society Cemetery, established by a Jewish aid society not affiliated with a particular congregation), 241 Jamesville Avenue;
- Poiley Tzedek Cemetery, 255 Jamesville Avenue;
- Frumah Packard Cemetery, 828 Jamesville Avenue, not affiliated with a congregation;
- Temple Adath Yeshurun Cemetery, 924 Jamesville Avenue;
- Workmen's Circle Cemetery, 1415 Jamesville Avenue, established by the Syracuse Jewish Workmen's Circle, a local chapter of a national mutual aid society;
- Anshe Sfard Cemetery, 1421 Jamesville Avenue, established by the Anshe Sfard congregation founded in 1907 and merged with Temple Beth El in 1974;
- Ahavath Achim Cemetery, 1487 Jamesville Avenue; and
- Chevra Shas Cemetery, 1587 Jamesville Avenue.

The layouts of the cemeteries generally follow a rectilinear grid of rows and paths, a typical spatial organization of Jewish cemeteries which is in contrast with the Rural Cemeteries established in the same period, such as Oakwood Cemetery. Several of the cemeteries include a small chapel and/or ornamental gates and fencing (Figures 38 and 39). The styles of gravestones vary widely, reflecting changing tastes in memorial art from the mid-nineteenth century to the present; however, in general, overly large monuments and excessive ornamentation are absent, reflecting the Jewish belief that all people are equal in death (Historic England, 2020). Many of the gravestones include Jewish symbols and/or Hebrew inscriptions.

Jewish cemeteries were established in the present-day Outer Comstock neighborhood beginning in about 1864 with the establishment of Temple Adath Jeshurun Cemetery on land purchased by businessman Solomon Rosenbloom. The cemeteries which followed were established independently by various Jewish congregations and organizations, and some of their names have changed through the years to reflect the creation of new congregations and the merging of older ones (Figure 40). With the exception of Beth Sholom-Chevra Shas and Young Israel-Shaarei Torah Cemeteries, which are managed by Oakwood Cemetery, all of the cemeteries are managed by the Syracuse Jewish Cemetery Association (SJCA). The SJCA was formed in the 1970s for the care and maintenance of Syracuse's Jewish cemeteries. The cemeteries' concentration along Jamesville Avenue may have been due to the limited availability of large tracts of land elsewhere in the city, as well as the movement of Jewish families and institutions out of the 15th Ward and into the neighborhoods east of downtown during the early twentieth century. The area north of present-day Jean Avenue was annexed to the city of Syracuse in 1887, while the area to the south was annexed in 1926. Collectively, the cemeteries were referred to as the "Jamesville Gate Cemetery" well into the twentieth century, for example, in obituaries. According to Robin Meltzer, co-founder and moderator of the "Jewish Community of the 15th Ward, Syracuse, New York" Facebook group, the term "Jamesville Gate Cemetery/Cemeteries" was used from the late 1910s onward by personnel in the Onondaga County Clerk's office who had difficulty spelling and pronouncing the names of the individual cemeteries; this was also confirmed by Marty Birnbaum of Birnbaum Funeral Service (Meltzer, 2021; Birnbaum, 2021).

Together and individually, the 13 Jewish cemeteries of Syracuse's Eastside appear to meet National Register Criteria Consideration D for their artistic merit and for their association with Syracuse's Jewish congregations and societies in the nineteenth and twentieth centuries. Grave markers within the cemeteries include iconography specific to Jewish traditions which are not well represented in Syracuse's large, nonsectarian cemeteries. Likewise, the density of burials and circulation patterns within the cemeteries contrasts with the more open, parklike settings of other cemeteries within the city. Many of the cemeteries were established by Jewish congregations which are no longer active, or which merged to form other congregations; as a result, these 13 cemeteries reflect the evolution of Syracuse's multifaceted Jewish community over more than a century.

ix) North Valley

A total of 25 previously identified resources are located in the North Valley neighborhood, including one S/NRHP-listed resource, two S/NRHP-eligible resources (NYSHPO determined), and 22 resources whose S/NRHP eligibility had not been formally evaluated.

A total of 29 resources were evaluated within the North Valley neighborhood, including 25 previously identified resources and four newly identified resources.[6] Of these 29 resources, EDR recommended that 17 meet National Register eligibility criteria, which NYSHPO concurred with. A total of nine resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. In

[6] A total of three previously identified resources were found to be errors. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D.

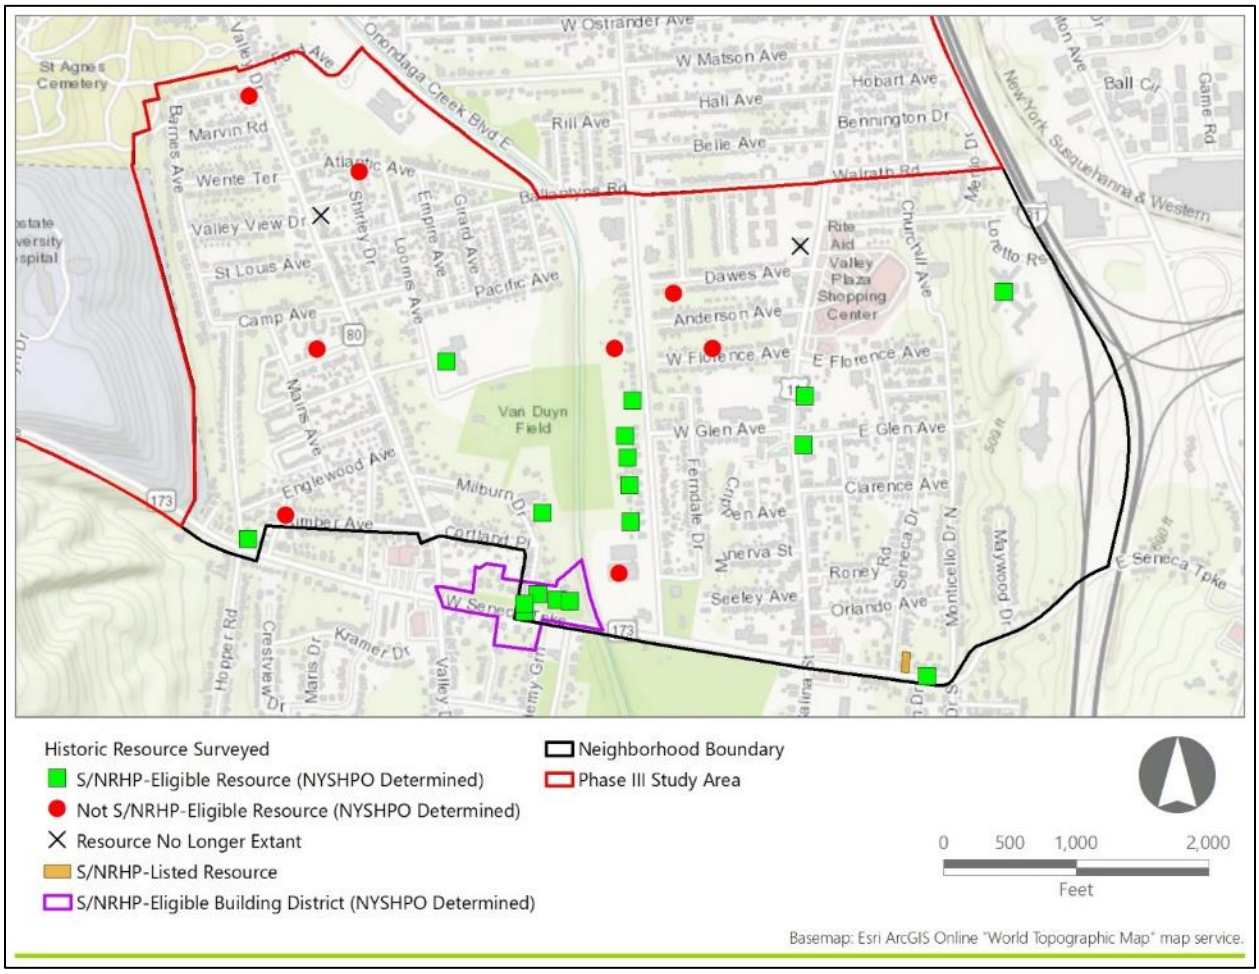

addition, two resources were determined to be no longer extant. Survey results within the North Valley neighborhood are summarized in Table 8 and depicted on Figure 41.

In addition, EDR identified one proposed historic district partially within the North Valley neighborhood which appears to meet S/NRHP eligibility criteria; the proposed district is described below. The district is partially located in the North Valley neighborhood and partially located in the South Valley neighborhood.

Table 8. Historic Resources Survey Results – North Valley Neighborhood

1	17	9	2	**29**

Figure 41. Historic Resources Survey Results – North Valley Neighborhood

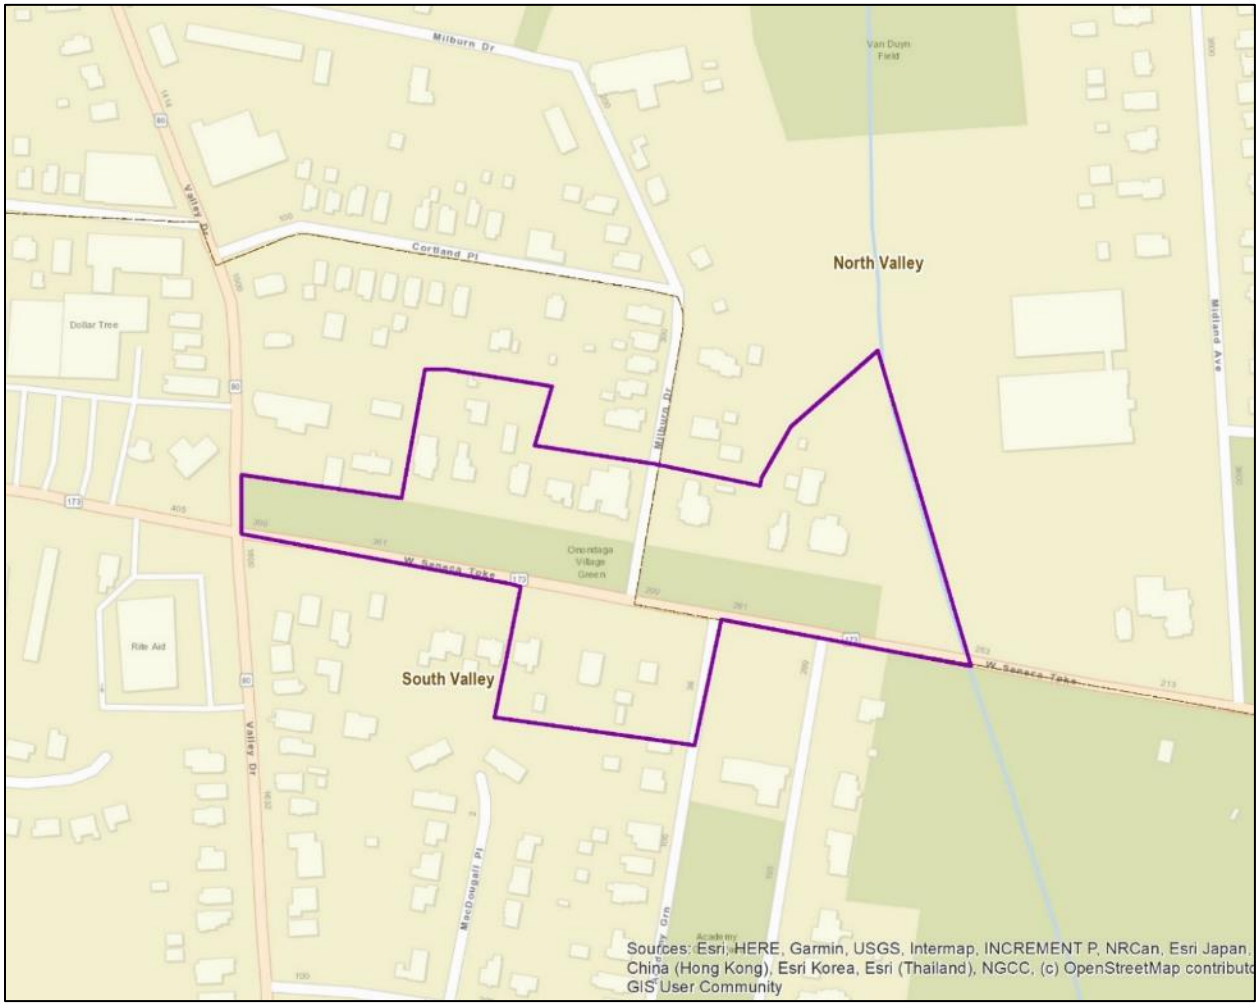

Onondaga Green Historic District

The proposed Onondaga Green Historic District is located along West Seneca Turnpike and primarily consists of early-nineteenth-century to early-twentieth-century residences and one church organized

around a village green in the former hamlet of Onondaga Hollow (later, Onondaga Valley). The irregular district boundary includes buildings on the north and south sides of West Seneca Turnpike around where it intersects with Milburn Drive (Figure 42).

Figure 42. Tentative boundary of the proposed Onondaga Green Historic District.

The proposed historic district includes 11 residences (many with associated contributing outbuildings) and one church located along Onondaga Green. Together, these buildings convey the feeling of a nineteenth-century hamlet organized around a village green. The earliest residences (290, 305, 313, 327, and 328 West Seneca Turnpike) combine elements of the Federal, Greek Revival, and Gothic Revival styles (Figure 43). Later residences (276, 318, and 334 West Seneca Turnpike) and the church with its attached parsonage (300-306 West Seneca Turnpike; Figure 44) were built in the Queen Anne and Colonial Revival styles. The buildings within the proposed district generally retain their historic form and exterior elements; however, several buildings have lost some architectural integrity due to alterations including the introduction of vinyl or aluminum siding and replacement windows.

Onondaga Hollow was settled in the late eighteenth century and centered around the present-day intersections of Seneca Turnpike, South Salina Street, and Valley Drive. A grist mill was constructed on

Onondaga Creek just north of the proposed historic district by 1813 and rebuilt in 1846 (still extant; USN 06740.000815). Before Syracuse emerged as the leading population center in the area with the opening of the Erie Canal, Onondaga Hollow had a newspaper, mills, stores, a school (the Onondaga Academy, established in 1812, replacing a 1795 log school) and a Presbyterian church organized in 1810 (Bruce, 1896; Figure 45). Several notable early residences of brick or stone are located within or in the vicinity of the former hamlet, including the William H. Sabine House (09NR06043), Gridley House (90NR02111), and Samuel Forman House (S/NRHP-eligible; USN 06740.000840). The Queen Anne style former St. Paul's Methodist Church was built in 1884 and renovated in 1915. Onondaga Valley was annexed to the City of Syracuse in 1926, by which time residential and commercial development was altering the character of the former hamlet.

The proposed period of significance is 1810 to 1915. The proposed district boundary includes buildings on both the north and south sides of West Seneca Turnpike which date to the proposed period of significance. The proposed district appears to meet National Register Criteria A and C as an intact village green lined with primarily nineteenth-century buildings (many of them good examples of the Federal and Greek Revival styles) and for its association with the early history and development of Onondaga Hollow, an early hamlet which flourished in the nineteenth century before it was annexed to the city of Syracuse.

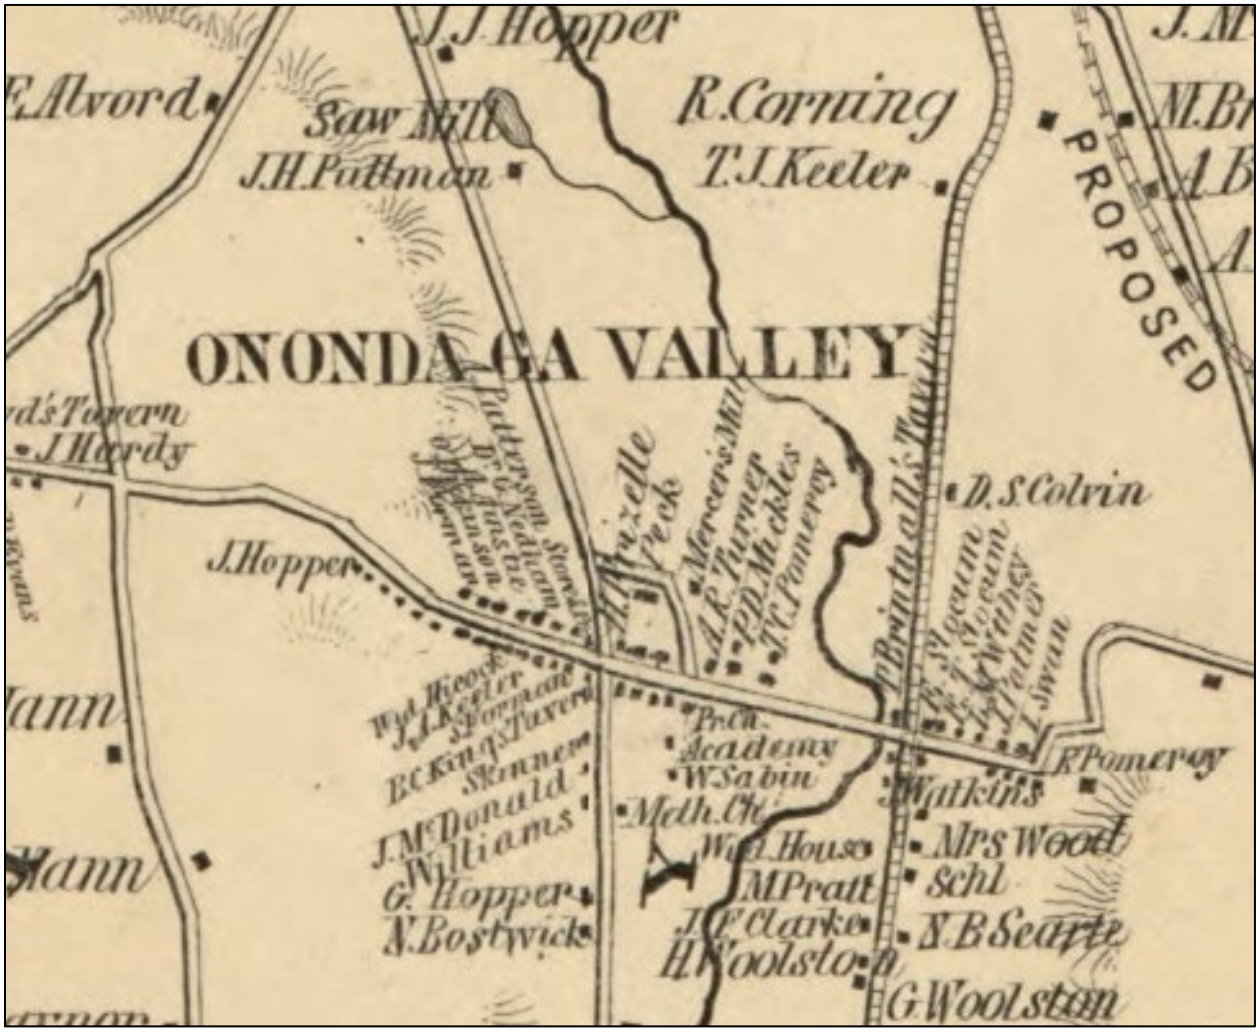

Figure 43. Nineteenth-century residences at 305, 313, and 327 West Seneca Turnpike.

Figure 44. View to the northwest along Onondaga Green.

Figure 45. Detail showing Onondaga Valley on the 1852 Fagan Map of Onondaga County, New York.

x) South Valley

A total of 47 previously identified resources are located in the South Valley neighborhood, including two S/NRHP-listed resources, 10 S/NRHP-eligible resources (NYSHPO determined), and 35 resources whose S/NRHP eligibility had not been formally evaluated.

A total of 60 resources were evaluated within the South Valley neighborhood, including 47 previously identified resources and13 newly identified resources.[7] Of these 60 resources, EDR recommended that 44 meet National Register eligibility criteria, which NYSHPO concurred with. A total of nine resources were recommended by EDR to not meet National Register eligibility criteria, which NYSHPO concurred with. In addition, six resources were determined to be no longer extant, including the S/NRHP-listed Polaski King

[7] A total of 14 previously identified resources were found to be errors. A table of duplicate USNs and other CRIS data errata found as the result of this survey are included as Appendix D.

House (90NR02114/06740.000173). Survey results within the South Valley neighborhood are summarized in Table 9 and depicted on Figure 46.

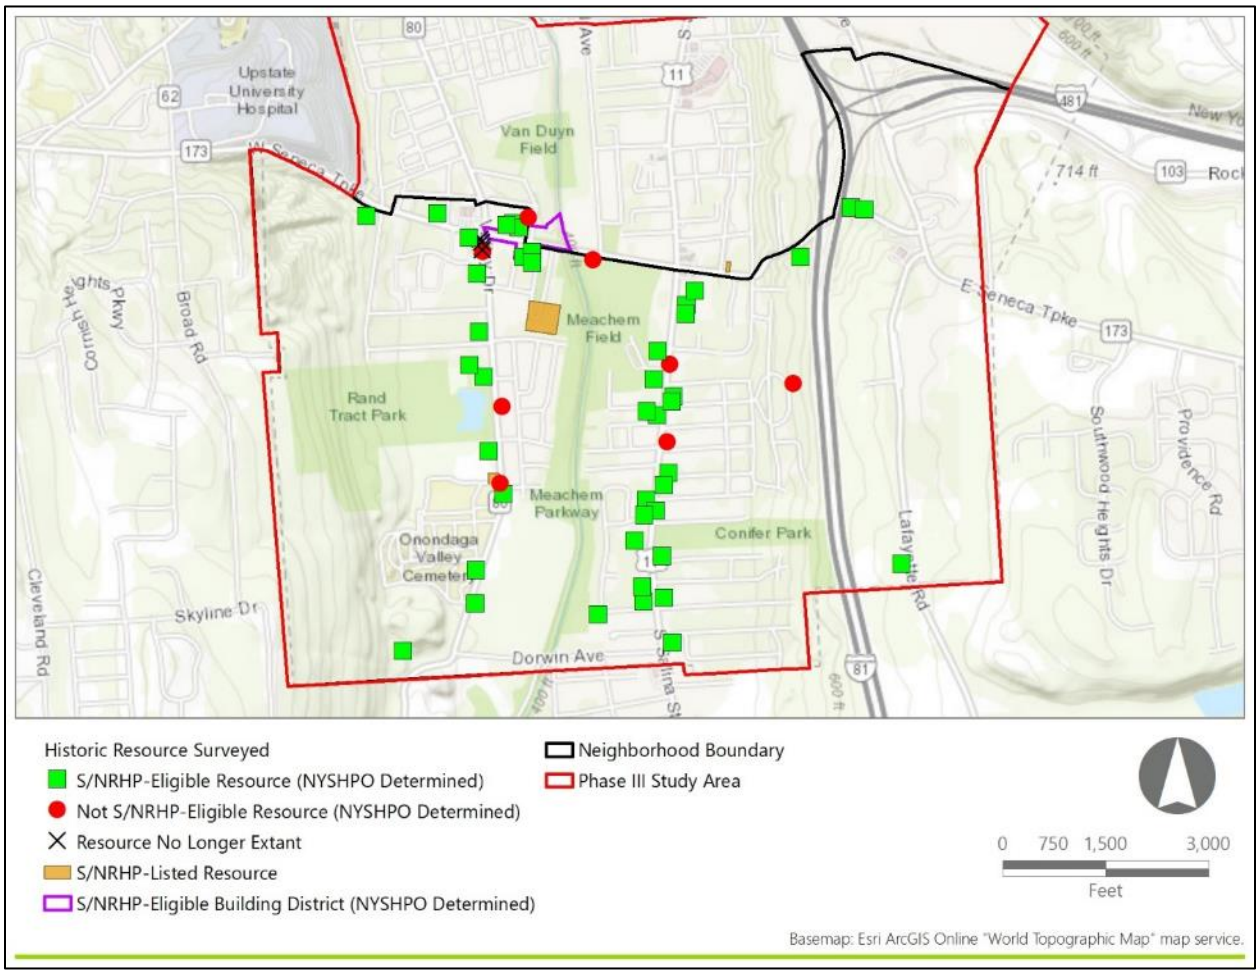

In addition, EDR identified one proposed historic district partially within the South Valley neighborhood which appears to meet S/NRHP eligibility criteria (described above under Section 4.1.ix) and one district which does not appear to satisfy S/NRHP eligibility criteria.

As stated in Section 3.2, approximately 189 resources in the area bounded by West Seneca Turnpike, Valley Drive, Chaffee Avenue, and Hopper Road in the South Valley neighborhood are identified in CRIS but have not been formally evaluated by NYSHPO in terms of S/NRHP eligibility. Collectively evaluated as the Hopper-Merritt-Chaffee District, the resources do not appear to meet S/NRHP eligibility criteria individually nor as an S/NRHP-eligible historic district. The Hopper-Merritt-Chaffee District was developed in a piecemeal fashion from the mid-1920s through about 1970. As a result, the character of the streets and residences within the district is varied, ranging from rectilinear streets with 1920s Colonial Revival and Bungalow residences to curvilinear streets with Ranch and Split Level residences. Many of the residences exhibit loss of architectural integrity as a result of alterations using modern materials. Due to a lack of historic or architectural significance, the district does not appear meet National Register eligibility criteria.

Table 9. Historic Resources Survey Results – South Valley Neighborhood

Figure 46. Historic Resources Survey Results – South Valley Neighborhood

4.2 Resource Types

The resources that appear to meet S/NRHP eligibility criteria within the Phase III Survey Area fall within several resource types, including residences, primary and secondary schools, higher education buildings, religious and institutional buildings, industrial buildings, commercial buildings, municipal parks, public buildings, and cemeteries.

i) Residences

Residences, including both single-family and multi-family buildings, represent the greatest proportion of S/NRHP-eligible resources identified in the Phase III Survey Area. Single-family houses, duplexes, and larger apartment buildings within the Phase III Survey Area are typically S/NRHP-eligible under National Register Criterion C as representative examples of residential architectural types and styles, most commonly, the Greek Revival, Gothic Revival, Italianate, Queen Anne, Tudor Revival, Craftsman, Colonial Revival, and Ranch styles. The majority of the S/NRHP-eligible and S/NRHP-listed residences within the Phase III Survey Area are eligible as contributing resources to residential historic districts. Several residences are also eligible under Criterion C as examples of the work of noteworthy local and regional architects (Figure 47).

Figure 47. The 1911 Dr. Jacob Levy Residence, 1029 East Genesee Street.

The Dr. Jacob Levy residence is S/NRHP-eligible as the work of notable Syracuse architect Ward Wellington Ward.

Residences within the Phase III Survey Area which meet S/NRHP eligibility criteria can generally be grouped into three eras: 1810-1869, 1870-1919, and 1920-1970. The date range of 1810-1869 encompasses the settlement-era development of Onondaga Valley and pre-annexation era construction of rural residences along early transportation routes including Valley Drive, South Salina Street, East Genesee Street, Salt Springs Road, Beech Street, Brighton Avenue, and Jamesville Avenue. Many extant residences from this era meet National Register Criterion C as examples of Greek Revival, Gothic Revival, and Italianate domestic architecture (Figure 48).

Figure 48. The circa-1850 residence at 5513-15 South Salina Street.

This residence meets National Register Criterion C as an example of a transitional Greek Revival - Italianate residence.

The 1870-1920 period corresponds to the development of streetcar suburbs within the Phase III Survey Area. The vast majority of the S/NRHP-eligible residences dating from this period meet National Register Criterion C as contributing resources to residential historic districts, including the Walnut Park Historic District (90PR05104), the Westcott Historic District (USN 06740.014740), and the Berkeley Park Subdivision Historic District (01NR01881). The Walnut Park Historic District is a planned residential neighborhood laid out in 1870 surrounding a linear park. The residences within the district were constructed between 1897 and 1930, representing the initial development of upscale private residences and a subsequent wave of conversions or redevelopments for SU student residential use and Greek letter chapter houses (Harwood, 1983). The district was listed in the S/NRHP in 1983. The S/NRHP-eligible Westcott Historic District includes over 300 buildings constructed in the late nineteenth and early twentieth centuries. The neighborhood developed following the opening of SU in 1870 and includes a mix of upscale, middle-class, and duplex residences (Syracuse Then and Now, 2021). The Berkeley Park Subdivision was laid out in 1911 by architect and developer Clarence S. Congdon although many of the residences were completed in the 1920s or later (Carrington, 2001). It was listed in the S/NRHP in 2001-2002. A handful of individually eligible residences from this period are located within the Phase III Survey Area and are generally S/NRHP-eligible as examples of popular architectural styles or as the work of notable architects (Figure 49).

Figure 49. The circa-1880 residence at 1111 East Genesee Street

This residence meets National Register Criterion C as an intact example of an Eastlake style residence.

The 1920-1970 period corresponds to the development of automobile suburbs within the Phase III Survey Area, with notable concentrations in the South Valley, Outer Comstock, and Meadowbrook neighborhoods. Residences constructed during this time include both high-style architect-designed homes and more modest homes representative of catalog/kit houses and speculative tract housing of the interwar and postwar periods. The vast majority of S/NRHP-eligible residences built between 1920 and 1970 within the Phase III Survey Area meet National Register Criterion C as contributing resources to historic districts, including the proposed Montclair-Salisbury Farms Historic District (see Section 4.1.ii), the proposed Bradford Hills Tract Historic District (see Section 4.1.v), and the proposed Empire State Park Tract Historic District (see Section 4.1.viii). The Walnut Park, Westcott, and Berkeley Park Subdivision Historic Districts were also fully built-out during this period. Several individually S/NRHP-eligible residences from this era are located in the Phase III Survey Area and are generally eligible under Criterion C as noteworthy examples of an architectural style (Figure 50).

Figure 50. The 1929 Frank T. Miller House at 501 Brookford Road.

The Frank T. Miller residence meets National Register Criterion C as an outstanding example of Tudor Revival style domestic architecture.

Multifamily housing within the Phase III Survey Area ranges from duplexes to large apartment buildings. Duplex houses built in the decades around the turn of the twentieth century are common throughout Syracuse. Several intact examples are S/NRHP-eligible as contributing resources to the Westcott Historic District (USN 06740.014740). They are also common in the Near Eastside and Salt Springs neighborhoods, with varying degrees of architectural integrity.

S/NRHP-eligible apartment buildings within the Phase III Survey Area are concentrated in the University Hill neighborhood and immediately to the north in the Near Eastside neighborhood. They range from two to six stories in height and typically include ornamentation in the popular styles of the era such as Tudor Revival, Colonial Revival, and Neoclassical. Some, like the Sylvester (20NR00022) at 900-906 East Fayette Street or the Irving Flats at 827-833 East Genesee Street, include ground-floor retail storefronts (Figure 51).

Figure 51. The circa-1930 Plaza apartment building at 1108 East Genesee Street.

The Plaza apartment building meets National Register Criterion C as an example of an early-twentieth-century apartment building in the Neoclassical style.

A number of S/NRHP-eligible Greek letter organization chapter houses are located in the Phase III Survey Area, primarily along Comstock Avenue east of the historic core of the SU campus, and within the S/NRHP-listed Walnut Park Historic District (90NR02120) north of the SU campus. These resources include purpose-built fraternity and sorority chapter houses as well as formerly private residences converted to chapter houses and were primarily built between 1897 and 1940 (Figure 52).

Figure 52. The circa-1930 Kappa Kappa Gamma sorority house at 743 Comstock Avenue.

The Kappa Kappa Gamma house meets National Register Criterion C as an example of a purpose-built Greek letter chapter house in the Colonial Revival style.

ii) Primary and Secondary Schools

Several historic public schools were identified in the Phase III Survey Area (see Section 4.2.iv for parochial schools). These resources meet National Register Criterion C as representative examples of educational architecture in the forms and styles common to their era of construction and/or as the work of notable local and regional architects. The S/NRHP-eligible schools in the Phase III Survey Area were built between 1920 and 1930, a period of significant expansion for Syracuse public schools. Three of the schools, the Madison School (1921; Figure 53), the Washington Irving School (1926), and the Percy M. Hughes School (1929; now, Syracuse Latin) were designed by James A. Randall, perhaps the most prolific designer of public schools in Syracuse. The Onondaga Academy (1923) was designed by notable local architect Melvin L. King.

Figure 53. The 1921 Madison School, 917 Madison Street.

The Madison School meets National Register Criterion C as an example of a public school in the Collegiate Gothic style and as the work of regional architect James A. Randall.

iii) Higher Education Buildings

The Phase III Survey Area includes the adjoining campuses of Syracuse University (SU) and the State University of New York College of Environmental Science and Forestry (SUNY-ESF) as well as additional non-contiguous SU property and facilities, notably the South Campus area. The historic core of the SU campus is listed in the S/NRHP as the Syracuse University-Comstock Tract Buildings historic district (90NR02117) and the SUNY-ESF campus is a S/NRHP-eligible historic district (06740.014825). Several additional SU buildings were identified during the Phase III survey which meet National Register Criteria A and C for their association with the post-World War II expansion of SU and as examples of campus buildings in the Modern style. They include academic buildings and dormitories (Figure 54). Additionally, a small portion of the LeMoyne College campus is located within the Phase III Survey Area. Saint Mary's Hall (1963) meets National Register Criteria A and C as the first residence hall for women at LeMoyne College and as an example of a Midcentury Modern residence hall (Figure 55).

Figure 54. The Newhouse I and Newhouse II academic buildings on the campus of SU.

Newhouse I (center; 1963, I.M. Pei) and Newhouse II (left; 1972, Skidmore, Owings, and Merrill) meet National Register Criteria A and C for their association with SU's postwar expansion and as notable examples of Brutalist educational buildings designed by internationally renowned firms.

Figure 55. Saint Mary's Hall, 1320 Salt Springs Road.

Saint Mary's Hall was completed in 1963 and was the first women's residence hall at LeMoyne College.

iv) Religious and Institutional Buildings

Several S/NRHP-listed and S/NRHP-eligible religious buildings are located in the Phase III Survey Area, representing a range of faiths and denominations and spanning the mid-nineteenth to the mid-twentieth centuries. Several churches and temples are part of larger complexes including a school, meeting hall, and/or parsonage. Religious buildings are generally eligible under National Register Criterion C as examples of ecclesiastical architecture and/or as the work of notable local and regional architects. Geographically, S/NRHP-eligible religious buildings are found throughout the Phase III Survey Area.

The oldest S/NRHP-eligible religious building in the Phase III Survey Area is the Gothic Revival style University United Methodist Church (formerly, University Avenue Methodist Episcopal Church), completed in 1871 and substantially rebuilt after 1914 (Figure 56). Gothic Revival was the predominant style for ecclesiastical architecture in the mid-nineteenth century.

Figure 56. The University Avenue Methodist Episcopal Church as it appeared in about 1900.

The church was substantially rebuilt following a fire in 1914 (Unknown, c. 1900).

Three religious buildings within the Phase III Survey Area date from the interwar era and represent two popular styles of the 1920s, the Byzantine Revival and Neoclassical. The vast majority of S/NRHP-eligible religious buildings within the Phase III Survey Area date from the postwar era and were designed in various interpretations of the Midcentury Modern style.

The former First Church of Christ Scientist (Figure 57) was designed by local architect Gordon A. Wright and completed in 1923. It meets National Register Criteria A and C for its association with the late-nineteenth-century and early-twentieth-century metaphysical spiritual movement and as an outstanding example of a Neoclassical religious building.

The Midcentury Modern style Temple Adath Yeshurun (Figure 58) was designed by noted synagogue architect Percival Goodman and completed in 1971. Like many religious campuses of the twentieth century, it includes an event hall, childcare center, and other support spaces.

Figure 57. The former First Church of Christ Scientist at 728 East Genesee Street.

Figure 58. Temple Adath Yeshurun, 450 Kimber Road.

One S/NRHP-eligible building within the Phase III Survey Area represents a charitable building type. The Loretto Rest Home, completed in 1926, meets National Register Criteria A and C as an intact example of an early-twentieth-century senior living facility and as an example of a Colonial Revival-style institutional building (Figure 59).

Figure 59. Loretto Rest Home, 312 Fillmore Avenue.

v) Industrial Buildings

The S/NRHP-eligible manufacturing and warehousing buildings within the Phase III Survey Area are concentrated along the former Erie Canal, former rail lines, and mid-twentieth-century interstate highways that partly form the boundaries of the Near Eastside and Outer Comstock neighborhoods. These resources typically meet National Register Criterion C as representative examples of industrial buildings of the late-nineteenth and early-twentieth centuries; some also meet Criterion A for their association with Syracuse's industrial and commercial development.

One S/NRHP-eligible industrial building within the Phase III Survey Area is noteworthy as a surviving grist mill associated with the early development of the hamlet of Onondaga Valley. Mercer's Mill (06740.000815) was built in about 1845, replacing an 1813 mill that had been destroyed by fire (Figure 60). Most of the S/NRHP-eligible industrial buildings within the Phase III Survey Area were built between about 1910 and 1930, and together they represent several key early-twentieth-century Syracuse industries including wholesale baking, metalworking, and warehousing (Figure 61).

Figure 60. Mercer's Mill, 207 Milburn Drive.

Figure 61. The former Standard Oil Company warehouse, 103 North Beech Street.

vi) Commercial Buildings

Although substantial commercial corridors exist within the Phase III Survey Area along Seneca Turnpike, South Salina Street, and Erie Boulevard East as well as in the Near Eastside and University Hill neighborhoods, many commercial buildings in these locations do not meet National Register eligibility criteria due to their age, lack of integrity, or lack of historic/architectural significance. With the exception of commercial buildings within the Westcott Historic District, S/NRHP-eligible commercial buildings within the Phase III Survey Area are nearly all located along East Genesee Street. These resources were built between about 1890 and 1930, and generally meet National Register Criterion C as representative examples of their typologies and styles (Figure 62).

Figure 62. The National Casket Company building (1930), 719 East Genesee Street.

Two commercial buildings within the Phase III Survey Area also meet National Register Criterion A as rare examples of commercial automotive garages designed by Syracuse Architect Ward Wellington Ward (Figure 63).

Figure 63. The James Corbett commercial garage, 805 East Genesee Street.

The James Corbett commercial garage was completed in 1919 and served as an automobile showroom.

vii) Municipal Parks and Public Buildings

One S/NRHP-listed municipal park, Thornden Park (90NR01699), is located within the Phase III Survey Area. Additional S/NRHP-eligible public resources within the Phase III Survey Area include libraries, firehouses, and an armory (Figure 64). These resources generally meet National Register Criterion C as representative examples of their typologies; some are additionally significant as the work of notable local or regional architects.

Figure 64. The former Engine Company Number 19 firehouse, 1146-1154 Salt Springs Road.

The former Engine Company Number 19 firehouse was built in about 1930. It meets National Register Criterion C as an intact example of an early-twentieth-century firehouse in the Tudor Revival style.

viii) Cemeteries

One S/NRHP-listed cemetery (Oakwood Cemetery; 90NR03310) is located within the Phase III Survey Area. Several additional cemeteries meeting National Register eligibility criteria were identified during the survey. Two S/NRHP-eligible cemeteries begun in the early nineteenth century are located within the Phase III Survey Area. The 29-acre Onondaga Valley Cemetery was begun circa 1810 and meets National Register Criteria Consideration D for age and for artistic and design qualities (Figure 65) The one-half-acre Old Rose Cemetery was begun 1844 and meets National Register Criteria Consideration D for its association with a nineteenth-century community of Scottish-American market gardeners.

Figure 65. Onondaga Valley Cemetery, Valley Drive.

Onondaga Valley Cemetery includes many early- and mid-nineteenth-century burials and additionally includes an architecturally significant Craftsman style office building constructed in 1904.

Most of the S/NRHP-eligible cemeteries within the Phase III Survey Area are small cemeteries founded in the late nineteenth and early twentieth centuries by Jewish congregations or secular Jewish organizations. They are located along Jamesville and Comstock Avenues. They meet National Register Criteria Consideration D as examples of Jewish cemeteries reflecting distinct cultural traditions, as well as for their association with Syracuse's Jewish community in the late nineteenth and early twentieth centuries (Figure 66; see Section 4.1.viii).

Figure 66. Anshe Sfard Cemetery, 1421 Jamesville Avenue.

The cemetery was established in the early twentieth century by the Anshe Sfard congregation which formed in 1907.

5.0 CONCLUSION

5.1 Summary of Historic Resources Survey

EDR conducted Phase III of a three-phase comprehensive reconnaissance-level survey of historic resources in the City of Syracuse, Onondaga County, New York in order to aid the City of Syracuse and the Syracuse-Onondaga County Planning Agency in future planning efforts relative to historic preservation initiatives.

A total of 383 resources were inventoried as part of the Phase III historic resources survey. The results of the survey are summarized as follows:

- No change in status is recommended for 35 resources individually listed in the S/NRHP; NYSHPO concurred with that recommendation;
- One previously S/NRHP-listed resource, the Polaski King House (90NR02114/06740.000173), was determined to be no longer extant;
- Of the 63 properties previously determined by NYSHPO to be individually S/NRHP-eligible, EDR recommends 47 as S/NRHP-eligible and 11 as not S/NRHP-eligible (all of which NYSHPO concurred with), while one resources was found to be no longer extant, and four were determined to be duplicates in the CRIS system;
- Of the two historic districts previously determined by NYSHPO to be S/NRHP-eligible, EDR recommends no change in status and NYSHPO concurred with that recommendation;
- Of the 181 properties which were documented in CRIS with a S/NRHP eligibility of "undetermined," EDR recommended 53 as S/NRHP-eligible and 57 as not S/NRHP-eligible (all of which NYSHPO concurred with), while 48 resources were found to be no longer extant, and 23 were determined to be duplicates in the CRIS system;
- EDR identified 96 new resources which are recommended as S/NRHP-eligible, of which NYSHPO determined 92 are S/NRHP-eligible and four are not S/NRHP-eligible;
- EDR recommended one resource as S/NRHP-eligible which was previously determined by NYSHPO to be not S/NRHP-eligible (which NYSHPO concurred with); and
- EDR identified six new S/NRHP-eligible historic districts which are recommended as S/NRHP-eligible, of which NYSHPO determined five are S/NRHP-eligible and one is not S/NRHP-eligible.

The complete results of the historic resources survey are provided in table format in Appendix B. These results include updated recommendations of S/NRHP eligibility for previously identified historic resources, as well as recommendations of eligibility for newly surveyed properties. The locations of all resources surveyed are depicted on a map included as Appendix C. Inventory forms created in Trekker 2.0, including photographs and resource descriptions, are included as Appendix E.

In addition to the documentation provided in this report, photographs for each historic property identified in the survey and narrative descriptions for selected resources have been entered in to NYSHPO's online Trekker 2.0 application for review by NYSHPO staff.

5.2 Recommendations

i) Historic Designation

In keeping with a reconnaissance-level historic resources survey, EDR's evaluation of historic resources within the Phase III Survey Area focused primarily on the physical condition and integrity to assess the potential architectural significance of each resource. Therefore, newly identified historic resources typically meet National Register Criterion C as representative examples of particular building typologies and/or styles, and/or as examples of the work of notable local and regional architects. Several resources were identified that additionally meet National Register Criterion A, for their relationship to significant events or broad patterns of history. Further research may reveal additional historic significance under Criteria A or B for historic resources that do not also meet Criterion C.

Several S/NRHP-eligible residences and commercial/industrial buildings designed by Ward Wellington Ward were identified within the Phase III Survey Area. EDR recommends that these resources meet the criteria for listing on the S/NRHP as identified in the Ward Wellington Ward Multiple Property Submission (MPS).

EDR also recommends that the City of Syracuse evaluate which properties within the Phase III Survey Area may be best suited for designation as Local Protected Sites in order to meet the objectives of the Syracuse Historic Preservation Plan (City of Syracuse, 2014).

ii) Historic Tax Credits

Owners of S/NRHP-listed resources within the Phase III Survey Area with the potential to be rehabilitated for commercial use, including multifamily residential buildings, may be eligible to receive state and federal tax credits through the New York State Historic Commercial Properties Tax Credit program and the Federal Investment Tax Credit Program for Income Producing Properties. A building must be located in a qualifying census tract in order to receive the New York State credit (Preservation League of New York State, 2021). Owner-occupied residences may be eligible for state tax credits through the New York State Historic Homeowner Tax Credit Program if they are S/NRHP-listed individually or as part of a district, or if they are within a locally designated historic district that is certified to participate in the tax credit program (NYSHPO, 2021a). To be eligible to receive the credit, a home must be in a qualifying census tract or be within a city with a population of less than 1,000,000 with at least a 15 percent poverty threshold (NYSHPO, 2019); all of the Phase III Survey Area meets the latter qualification. EDR recommends that S/NRHP-eligible historic districts within the Phase III Survey Area be nominated to the S/NRHP or designated as local historic districts and certified by NYSHPO in order to encourage the appropriate rehabilitation of resources within those districts. EDR also recommends that the City of Syracuse identify individual S/NRHP-eligible resources within the Phase III Survey Area with the potential for commercial rehabilitation, particularly former industrial/manufacturing buildings and multifamily residential buildings and conduct outreach to encourage utilization of state and federal tax credits for their rehabilitation.

meeting minutes

Project:	City of Syracuse Comprehensive Reconnaissance Survey Phase 3	**EDR Project No:**	21008
Date:	January 21, 2021, 12:00 p.m.		
Persons Present:	City of Syracuse – Kate Auwaerter Syracuse Landmark Preservation Board – Jeffrey Romano New York State Office of Parks, Recreation and Historic Preservation (NYSHPO) – James Finelli, Kathy Howe Environmental Design and Research (EDR) – Grant Johnson, Patrick Heaton, Andrew Roblee, Kristen Olson		

Comments:

Meeting began at 12:00 p.m.

1. Introductions
    - Grant Johnson shared the agenda for the meeting, which included a review/lessons learned from the Phase 2 survey, review of the Phase 3 scope of work, and schedule.
2. Review/lessons learned from Phase 2 survey
    - James Finelli noted that one lesson learned in the Phase 2 survey is the importance of utilizing the Trekker application efficiently and effectively, and in particular:
        - EDR should be cognizant of the tendency to document the "best" house on a street, which often leads to a determination by SHPO that the resource is not eligible, resulting in skewed or incomplete data in CRIS.
        - EDR and SHPO should communicate about the status of Trekker data and its readiness for review, in order to avoid determinations made based on incomplete data.
    - Mr. Finelli also suggested that potential historic districts should be identified as early as possible in the survey process. Grant Johnson concurred, noting that several areas of interest within the Phase 3 survey area have already been identified.
    - Kathy Howe suggested that EDR utilize the Proposed District form in the Trekker application to communicate proposed boundaries to Mr. Finelli.
    - Mr. Finelli noted that EDR should make recommendations of eligibility for the National Register of Historic Places (NRHP) with the understanding that SHPO's determinations of eligibility may change over time as additional information becomes available.
    - Mr. Johnson asked if the City of Syracuse would prefer a final survey report including both EDR's recommendations of NRHP eligibility and SHPO's final determinations of NRHP eligibility of properties surveyed, as opposed to only SHPO's final determinations.

- Kate Auwaerter responded that she would prefer the report to reflect both EDR's recommendations of NRHP eligibility and SHPO's determinations of NRHP eligibility, if possible.
- Patrick Heaton clarified that one goal of the final report is to memorialize the review process and consultation record with SHPO.

- Mr. Finelli recommended that EDR consider resources 45 years of age and older, particularly for buildings that are part of larger complexes such as religious buildings, keeping in mind that resources identified during the Phase 3 survey may have reached 50 years of age by the time they are nominated to the State and National Register of Historic Places.
- Mr. Finelli noted that for groups of related resources such as religious or industrial complexes (which may or may not be contiguous), EDR should utilize the district form in Trekker as well as submit individual forms for each building within the complex.
- Ms. Howe noted that EDR and SHPO may wish to utilize communication features in Trekker to consult about resources and/or potential districts during the survey process.
- Andrew Roblee noted that the statuses of some resources within the Phase 2 survey were changed in CRIS during the course of the survey. Mr. Finelli advised EDR to track any changes made during the survey and communicate them with SHPO.
- Mr. Johnson noted that more resources than anticipated were identified during the Phase 2 survey and that resource descriptions took longer than anticipated. Mr. Johnson asked for clarification on what level of detail is required for individual resource descriptions.
  - Mr. Finelli replied that a couple of sentences and a statement regarding a recommendation of NRHP eligibility will generally suffice for residences; resources such as religious or industrial complexes require more information; and business uses/tenants over time (not necessarily an exhaustive list) should be provided for commercial buildings where that information is available. Mr. Finelli noted that he typically conducts additional desktop research to confirm details and refine arguments for eligibility.
- Mr. Heaton asked whether there are any recent surveys which present data in a particularly effective way which EDR might use as a model. Ms. Howe and Mr. Finelli replied that no surveys came to mind.

3. Review of the Phase 3 survey scope of work
   - Mr. Johnson showed a map of the survey area and noted that it is larger both in geographic area and in the number of resources than the Phase 2 survey area. Mr. Johnson asked if there are any areas of interest for potential historic districts that have already been identified.
     - Ms. Auwaerter replied that a National Register historic district nomination currently underway of resources in the Westcott neighborhood will remove about 1,500 resources from the Phase 3 survey area.
     - Ms. Auwaerter noted that areas of interest include:
       - Bradford Hills in the Meadowbrook neighborhood, a relatively young (most buildings 45 years or older) but cohesive and potentially large district.
       - Outer Comstock, which has some good 1950s housing stock.

        - South Valley, which has some of the oldest building stock in the city, a number of which are likely individually eligible, and/or may form a potential multiple property listing.
    - Jeffrey Romano concurred that the Bradford Hills area is of interest, noting the area was originally home to a golf course. Mr. Romano also identified the following areas of interest:
        - A collection of 1920s and 1930s Colonial Revival residences near Lemoyne College, near the eastern boundary of the city with the Town of Dewitt.
        - Tracts of bungalows and transitional style residences of the 1910s-1940s in the North Valley and South Valley areas.
        - Sears homes in the Outer Comstock neighborhood.
- Mr. Johnson asked whether it is the expectation of the City of Syracuse or SHPO that EDR collect individual building data for each building in a proposed district.
    - Mr. Finelli replied that only proposed boundaries, justification, and representative photographs are needed, unless any property stands out as individually NRHP eligible. The expectation is that intensive level survey of potential historic districts would take place in the future.
- Mr. Johnson concurred in general with the areas of interest identified by Ms. Auwaerter and Mr. Romano. Mr. Johnson requested confirmation that resources in the Westcott area will not be included in the Phase 3 survey area; Ms. Auwaerter confirmed this.

4. Schedule
    - Mr. Johnson asked when Mr. Finelli would like to make a site visit to review and discuss potential historic districts. Mr. Finelli replied that he will be available to make a site visit once potential districts have been identified and submitted through the Trekker application.
    - Ms. Auwaerter reminded EDR to conduct a historic context review and submit a memorandum for review (per Task 2 in EDR's proposal).
    - Mr. Johnson requested that Ms. Auwaerter share shapefiles related to the project with EDR.
    - Mr. Johnson confirmed that the end date for the project is September 30, 2021.
    - Mr. Johnson noted that the next step will be to set up the survey in Trekker.
    - Meeting adjourned at 12:55 p.m.

Copies To: All present

These meeting minutes have been prepared by Kristen Olson of EDR. If there are any discrepancies, please notify our office within three business days of receipt.
