

Supplemental Materials 1: Gulf Islands Shoreline Change

SM 1. Shoreline change is calculated as the change in meters per year from a fixed location (Florida) or as meters per year in island width (Mississippi). Fort Pickens and Perdido Key are presented first, followed by Petit Bois, West Petit Bois, and Horn Islands, starting on page 7. This document is part of the report: "Coastal Dynamics Monitoring at Gulf Islands National Seashore, Mississippi and Florida: 2018-2024".
