

Butterflies and Moths (Lepidoptera) of CRMO

Butterflies and moths are some of the most widely-distributed and recognizable insects. They are found worldwide in nearly every habitat, comprising an estimated 174,250 species. About 700 butterflies and 11,000 moths are found in North America. Over 300 species of Lepidoptera have been documented on Craters of the Moon (CRMO) another 250 may occur here.

Edith's Checkerspot

Lepidopterans feed primarily on nectar from flowers but may derive nourishment from pollen, tree sap, rotting fruit, dung or decaying flesh, and they can get dissolved minerals from wet sand or dirt. Many, however, do not feed at all as adults. They are important as pollinators and are capable of moving pollen over great distances.

Weidemeyer's Admiral

Lepidopterans have a four stage life cycle consisting of the egg, larva (caterpillar) and chrysalis (cocoon) before finally emerging as fully formed adults. They employ just about every strategy to avoid winter. Some migrate long distances, others hibernate and some completely die off leaving only the eggs to survive winter and begin the next generation.

This list is a work in progress, with so many species in this insect order, it likely always will be! Your observations, pictures and collected specimens (already dead only please) are welcomed and encouraged so that we may continue to build our knowledge of these diverse species.

Melissa Blue

All species on this list have been either documented on CRMO, in one (or more) of the 5 counties CRMO overlaps or elsewhere on the Snake River Plain. Species not specifically documented on CRMO are marked with an L (for Likely) or P (for Possibly) occurs. "Likely" was given to a species when CRMO contains suitable habitat for the species. "Possible" was given to those species for which suitable habitat would be limited on CRMO or when habitat needs are not fully understood.

- Strawberry Crown Moth -- (*Synanthedon bibionipennis*) ^H
- Buckwheat Borer Moth -- (*Synanthedon polygona*) ^H

Ermine Moths (Family Yponomeutidae)

Subfamily Argyresthiinae

- An Ermine Moth -- (*Argyresthia* sp.) ^H

Strawberry Crown Moth

Many-plumed Moths (Family Alucitidae)

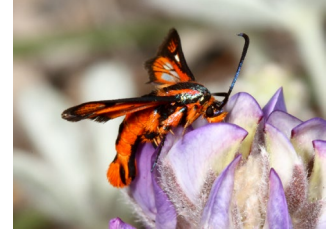

- A Many-plumed Moth -- (*Alucita sp.*)^{H Si}

Ribbed Cocoon Makers (Family Bucculatricidae)

- A ribbed cocoon maker -- (*Bucculatrix tridenticola*)^H

Leaf Blotch Miner Moths (Family Gracillariidae)

- A leaf blotch miner moth -- (*Protolithocolletis lathyri*)^{M BMNA}

Buckwheat Borer Moth

Protolithocolletis lathyri

Occurrence Definitions

L - Likely to occur on CRMO. The species is documented in at least one of the 5 CRMO counties, or elsewhere on the Snake River Plain and it utilizes habitat or plant species that can be found on CRMO. List is not all inclusive of species which may occur.

P - Possibly occurs on CRMO. The Species is documented in one of the five CRMO counties or on Snake River Plain but habitat on CRMO is limited, habitat requirements are not fully understood, there is some uncertainty about the CRMO record, or the species may be a rare migrant.

U – Unconfirmed record. A record for the species exists, however there is reason to doubt the record or taxonomical changes have occurred that make it likely the species identification is out of date.
