

What's New in DataStore 4.2

DataStore patch release 4.2 provides bug fixes, clarifications, and new features.

Bug Fixes

- On the Project Edit page, Products tab, the link to download the product list is now functional
- An issue where search results persisted after clearing the search has been addressed

User Interface

- Reference landing pages have a new tab on the left navigation bar titled 'Collections' that provides information about any collections linked to that reference.

A screenshot of the DataStore web application interface. At the top, it shows "Resource Brief (Code: 2311239) - Active" and four action buttons: "Export Citation", "Add To Collection", "Clone", and "Edit". Below this is a title bar for the resource: "Anuran Monitoring in Southeast Coast Network Parks: 2012 Data Summary for Kennesaw Mountain National Battlefield Park". The main content area is divided into a left sidebar and a right pane. The sidebar has a "Collections (1)" tab selected, which is highlighted in orange. The right pane shows a table with the heading "Collections (1)". The table has two columns: "ID" and "Collection Title". There is one row with ID "9227" and the title "SECN Vocal Anuran Data Summaries". Below the table, the "Collection Owners" are listed as "mthynds@nps.gov".

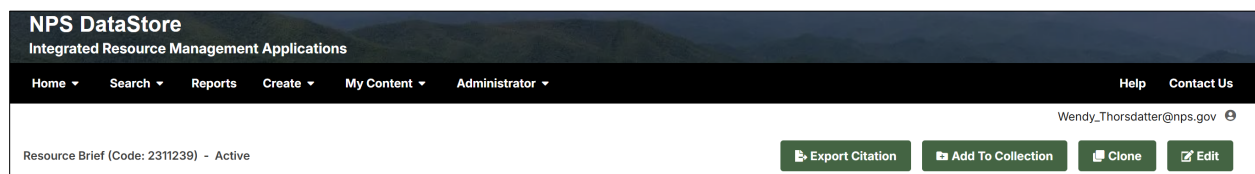

- As part of the ongoing effort to reduce reference types and curate series references, the following reference types are no longer available for selection when creating a reference:

- Thesis
- Dissertation
- Aerial Photograph Series
- Newspaper

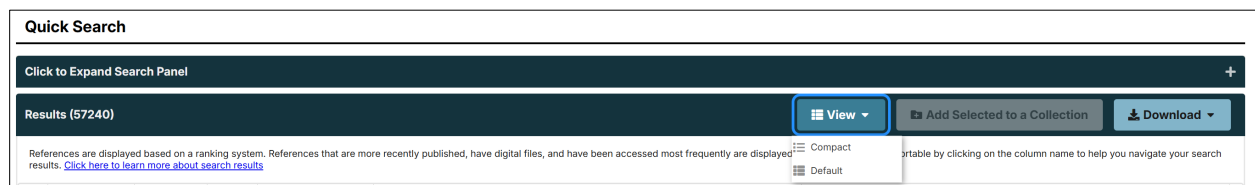

Note that references previously designated as Thesis or Dissertation can now be found under the 'Academic' reference type. Keywords have been with the original reference type. Saved searches utilizing reference type Thesis or Dissertation have been updated.

The metadata from existing newspaper reference types has been migrated to the child 'Newspaper Article' reference. Newspaper articles added to DataStore post 4.2 will have a field to add the newspaper name and publisher in the article reference and will no longer require a 'Newspaper' parent reference.

- A new feature was added to 'Export Citation' in .ris format for import into citation management software. The initial functionality is for limited reference types. Additional formats may be added after evaluation of the use of this feature.

- The ability to toggle between 'Default' and 'Compact' view is available in the search results grid for Quick Search, Advanced Search, and Search by Reference.

- Third party intercept warnings will no longer be displayed for DOI links that route back to DataStore.
- Search results grids now sort authors by the order they appear in the reference

API

- A new endpoint has been added to update a reference's producing unit

New Administrator Tools for Bulk Updates

There are new admin tools available to assist with bulk curation of legal authorities and associated contact information. If you have a large list of references with the default legal authority assigned, please reach out to NRSS_DataStore@nps.gov
