APPENDICES

Appendix 1. Data archiving.

As in Sowls et al. (1980), a section describing what materials have been archived, how they have been archived and where materials have been deposited will be included in the final report. Many decisions still need to be made with regard to data archiving.

Appendix 2. **Summary of raw census data obtained for each subcolony used to derive estimates of the numbers of breeding birds for each species at each colony in California in 1989-1991.**

The following data have been made available in DBase III Plus or Ascii formats on 5.25 inch computer diskettes (see Appendix 1). However, we have provided a printed copy of this data for those users who will not have ready access to a computer. To facilitate use of this appendix, we have ordered all colonies from north to south, according to the Colony Code (F2). Within each colony, records are ordered by Species Code (F13), then Subcolony Number (F9), and then by Census Date (F5).

Below, we have documented the codes used in this data set within each of the 17 data fields (F1 to F17):

Record Number: This number served as an index to this appendix only, allowing direct reference to specific raw data.

Field 1 (F1): California (CA) colony number (see "How to use maps and tables" section of the report for description).

Field 2 (F2): Colony code. Starting at the Oregon border, all colonies were numbered in order. Numbers run sequentially from north to south or west to east moving down the coast. Colonies in San Francisco Bay were inserted as a group and codes run clockwise around the whole estuary system, starting at the north end of the Golden Gate Bridge. In the Channel Islands, colonies were numbered running clockwise around islands, starting at the northwest corner of each island.

Field 3 (F3): U.S. Fish and Wildlife Service (USFWS) colony number (see "How to use maps and tables" section of this report for description).

Field 4 (F4): Colony name. We retained the names of colonies used by Sowls et al. (1980) for all previously-known colonies, except when those colonies had been divided into smaller colonies in a number of places. New or redefined colonies were assigned new names.

Field 5 (F5): Census date. Month/day/year of census.

Field 6 (F6): Census time. All times were Pacific Daylight Time (PDT) using the 24-hour clock "military time".

Field 7 (F7): Census observers. Each observer or specific group of observers were assigned a three-digit numeric code as follows:

Field 8 (F8): Census method. Seabird census techniques were described under the Methods and "How to use maps and tables" sections. Census methods were coded as follows:

01	Boat census
02	Mainland census
03	Landed on island (including boat census)
04	Aerial photo count
05	Burrow/crevice count
06	Boat, mainland, and/or landed on island
07	Mist netting
08	Plot increases over 1988
09	Partial boat census
10	Heard at night only
11	Partial mainland rooftop count
12	Complete mainland rooftop count

Appendix 2. Continued.

13	Mist-netting, landed on island and/or burrow count
14	Captured by hand on ground
15	Partial aerial photo count

Field 9 (F9): Subcolony number. Within colonies, we recorded the locations of specific nesting areas in the field and kept separate notes for these areas. These nesting areas were identifiable as separate islands, small groups of islands, or small portions of mainland coast (with or without small islands included). Whenever separate notes were kept, we assigned a two-digit subcolony number from north to south or west to east down coast within a colony. A code of 99 was assigned when subcolony location was not known or to refer to the whole colony.

For WEGU and BLOY, we did not assign a specific subcolony site unless either a nest (or site) was noted or if other nesting species were present. For PECO, "roosting birds only" were usually not considered to be breeding at the roost-subcolony site. However, in a few cases, we denoted subcolonies where there were abandoned PECO nests only. We did include numbers of PECO seen at a subcolony without nests if PECO were noted at nests there on a later or earlier censuses. For PIGU, we did not identify a specific subcolony site unless birds were observed on land (either in potential nesting areas or roosting intertidally), were flying around potential nesting areas, nests were found, or other nesting species were present. There were a few exceptions made where large numbers were seen on water near potential nesting bluffs (but none were seen on land) and there were not other possible nesting areas nearby. For RHAU, we denoted the nearest subcolony area for birds seen on the water, even though they may not have nested at some of these subcolonies.

Field 10 (F10): Subcolony name. We used actual topographic map names whenever possible for subcolonies but substituted our field data numbers or names when no other name was available.

Field 11 (F11): Subcolony habitat. We coded habitats as follow:

01	Offshore rock or island	18	Other fill
02	Mainland cliffs	19	Sand fill
03	Sides of buildings	20	Sewage pond island
04	Offshore rocks or mainland cliffs	21	Salt pond island
05	Unknown	22	Eucalyptus trees
06	Rooftops	23	Boat
07	Piling	24	Air field
08	Light pilings	25	Residential Area
09	Breakwater	26	Sand dunes
10	Wharf or pier	27	Offshore rock or island and various artificial habitat
11	Bridge		
12	Mooring	28	Artificial habitat (other)
13	Duck Blind	29	Pier and rooftops
14	Salt pond dike	30	Beach
15	Power tower	31	Mainland cliffs and/or sea caves
16	Rip-rap	32	Top of island
17	Marsh		

Field 12 and 13 (F12 and F13): Species numeric codes and four-letter codes.

01	FTSP	Fork-tailed Storm-petrel	19	ROTE	Royal Tern
02	LHSP	Leach's Storm-petrel	20	ELTE	Elegant Tern
03	ASSP	Ashy Storm-petrel	21	BLTE	Black Tern
04	BLSP	Black Storm-petrel	22	CATE	Caspian Tern
05	WHPE	White Pelican	23	BLSK	Black Skimmer
06	BRPE	Brown Pelican	24	COMU	Common Murre
07	DCCO	Double-crested Cormorant	25	PIGU	Pigeon Guillemot
08	BRCO	Brandt's Cormorant	26	MAMU	Marbled Murrelet
09	PECO	Pelagic Cormorant	27	XAMU	Xantus' Murrelet
10	BLOY	Black Oystercatcher	28	CAAU	Cassin's Auklet
11	GWGU	Glaucous-winged Gull	29	RHAU	Rhinoceros Auklet
12	WEGU	Western Gull	30	TUPU	Tufted Puffin
13	CAGU	California Gull	31	UNPE	Unidentified petrel
14	RBGU	Ring-billed Gull	32	UNCO	Unidentified cormorant
15	HEEG	Heermann's Gull	33	UNAL	Unidentified alcid
16	GBTE	Gull-billed Tern	34	BAOY	Black X American Oystercatcher (hybrid)
17	FOTE	Forster's Tern			
18	LETE	Least Tern	99	ZERO	No nesting birds

Field 14 (F14): Number of nests counted (see "How to use maps and tables" section for description).

Appendix 2. Continued.

Field 15 (F15): Number of birds counted (see "How to use maps and tables" section for description).

Field 16 (F16): Number of sites counted (see "How to use maps and tables: section for description).

Field 17 (F17): Best data to use for estimating the total number of breeding birds? Y = yes; N = no; A = possible alternate choice for Y.

Appendix 2. Continued.

China Pt. Isl.	LA-CLI-01	29-30 May	2030-0500	1	-	0	0	-	ND	ND	ND	ND

1 No birds banded.
2 Does not include two birds captured earlier in the same night.
3 Two tape players used, often with two tapes playing simultaneously.
4 One bird captured the same night at site no. 11.
5 Bird originally captured at Sutil Island (site no. 15), 13-14 April 1991.
6 One bird originally captured at Sutil Island (site no. 15), 13-14 April 1991.
7 Bird originally captured at Santa Barbara Island (site no. 2), 19-20 May 1991.
8 One bird originally captured at Santa Barbara Island (site no. 2), 19-20 May 1991; one bird originally captured on 16-17 July 1991 at Santa Barbara Island (site no. 04); one bird possibly captured originally at Prince Island (SB-SMI-07) on 9-10 July 1991 (band may have been misread).

Appendix 5. Summary of MAMU transects and other observations between the Oregon border and Point Conception, California, from April to September 1989. Some transects where murrelets were specifically searched for but not found are included. Non-transect observations of MAMU from boats are indicated by TL = 0 and TW = 0. ND indicates that no data were available. Specific transect locations are recorded on archived topographic maps (see Appendix 1).
